Oscar Wilde – Thank you dear Ernesta, as a matter of fact, I had quite a dilemma choosing between the reveillon dinner at our Hotel d’Alsace and yours, but ultimately I’ve decided to come because of the excellent guests that you have invited - so many artists and composers, Caruso, Puccini, and even my compatriots Shaw and one which I have invited, Henry James, the famous American/English author, a good friend of Zola, who recently published one of the novels I like most, The Turn of the Screw. He is here with his young friend the Norwegian/American sculptor who lives in Rome Hendrik Christian Andersen, don’t confuse him with the Danish Andersen. It is no secret why I have left forever England and the hypocrite Victorian society, only in France one can feel truly free and I enjoy every moment of my stay, although my health is quite precarious after the long years in jail which I have described in The Ballad of Reading Gaol, which only recently was attributed to me. If you ask me what do I wish for the next 120 years it is that in 2020 people will disclose overtly their sexual orientations and still succeed as prime ministers, authors, actresses, musicians, kings...

But seeking justice for homosexuals does not turn me into a ferocious fighter for social justice or for justice to Dreyfus. Very few of the human rights campaigners stood by me at the time

of my conviction. As a matter of fact Zola, a strict moralist, had refused to sign a petition on my behalf when I was sentenced to jail. And I reciprocated by refusing to co-operate with him against Esterhazi. You might wonder how come that I associate with such dubious people as Esterhazi, but since my release from Reading Gaol, I am attracted to thieves, liars and assassins, as I find them more interesting than honest men, something to do with the seduction of sin and the kingdom of the wicked. Esterhazi confessed to me at a dinner one night that he had been selling secret military intelligence to the Germans. I have nothing against this Esterhazi, whom I find unkempt and a crook, but he admired my witticisms, and very few do so lately. You may be shocked that I feel largely indifferent to the poor Dreyfus and to anti-Semitism in general and I care very little for the Dreyfusards. I don't agree with Marx that all those who are wronged by the bourgeois society should unite, on the contrary let each one seek to achieve his own justice. So I was unperturbed by Esterhazi's confession, he was drunk anyhow, but not so Chris Healy who was with me and contacted Zola. Zola contacted journalists and events at last were set in train that would expose and destroy the whole rotten edifice that had been built in the case of Captain Dreyfus. La morale de cette histoire is, dear Ernesta, that ultimately I was pivotal in obtaining justice for Dreyfus, reluctantly, without my cooperation, but nevertheless my dinner with Esterhazi changed the face of history.

This is what I believe, not obtaining justice or equality, as you do, Emile and Georges, because it is absurd to divide people into good and bad. People are either charming or tedious, there is no such thing as a moral or an immoral book. Books are well written, or badly written. That is all. Yet, I am a dreamer. For a dreamer is one who can only find his way by moonlight, and his punishment is that he sees the dawn before the rest of the world. Otherwise I am not too optimistic about the fate of humanity, as I know that a good friend will always stab you in the front and hearts are made to be broken. But if I don't believe in the future, what is left for us if not death. Death must be so beautiful. To lie in the soft brown earth, with the grasses waving above one's head, and listen to silence. To have no yesterday, and no tomorrow. To forget time, to forgive life, to be at peace. But cheer up, a new century is born!

Ernesta asked me to read for you the last stanzas of my poem The Ballad of Reading Gaol qui fait fureur and was sold in thousands of copies. I told her it was too gloomy but she insisted.

(We watch on the screen photos of poverty, jails & violence in Victorian England & Ireland, photos of imperialistic wars, while we hear Wilde reading from The Ballad of Reading Gaol)

Oscar Wilde -

In Reading gaol by Reading town
There is a pit of shame,
And in it lies a wretched man
Eaten by teeth of flame,
In a burning winding-sheet he lies,
And his grave has got no name.

And there, till Christ call forth the dead,
In silence let him lie:
No need to waste the foolish tear,
Or heave the windy sigh:
The man had killed the thing he loved,
And so he had to die.

And all men kill the thing they love,

By all let this be heard,
 Some do it with a bitter look,
 Some with a flattering word,
 The coward does it with a kiss,
 The brave man with a sword.

Jacque Corot (aside) – Yes, dear Oscar, you were right, it took more than 50, more than 100 years, until the prime ministers of Iceland and Serbia were lesbians, of Luxembourg, Belgium and Ireland were gays. Even gay and lesbian marriages are allowed in many important countries, and yet they have to fight for recognition in most countries of the world.

Ernesta Stern – As we have tonight tens of guests I present each one of you and we hold our conversation in French, that all of you know perfectly well, and some of you are really polyglots speaking most of the cultural languages of Europe, as we cannot truly understand the subtleties of *The Importance of Being Earnest*, dear Oscar, if we don't master English, as you need also to understand Italian in order to fully appreciate Gabriele d'Annunzio's *La città morta*, although the premiere of your play, *Gabriele*, was only in Paris last year at the Theatre de la Renaissance, with you Sarah Bernhardt. It was a brilliant idea to write a play following the public interest on archeology, after the successful excavations of Troy and Mycenae by the German Heinrich Schliemann. The flavor of the original is lost as can tell you here our Spanish friend Jose Echegaray with his play *El Gran Galeoto*, translated into English for the Shaftesbury production a decade ago. Dear Anton Chekhov, I read in Russian your most recent play *Дядя Ваня*, *Dyádyá Ványa*, *Uncle Vanya*, which was premiered last month at the Moscow Art Theater and received favorably. I think it is a masterpiece and you'll have much success in France and over the world, but of course nothing can compare to the sadness and melancholy in the Russian original. You were so kind to bring with you here the director and actor Konstantin Stanislavski and the brilliant actress Olga Knipper. My Austrian friend Arthur Schnitzler let me read yesterday his new play *Reigen* in German, it is not even printed and of course was not published or staged. *La Ronde* or *Reigen* is a round dance, portrayed in the English rhyme *Ring a Ring o'Roses*, as you can tell us dear Oscar. This sensational play scrutinizes the sexual morality and class ideology of our times through successive encounters between pairs of characters before or after sexual encounters. By choosing characters across all levels of society, the play offers social commentary on how sexual contact transgresses class boundaries. Believe me, the play will be sensational and I foresee for it a tremendous success provided that brave theaters will have the courage to stage it, if not today maybe in 20 years from now, although the German acerbic sense of humor might be lost in the translation. And the same reservations apply to Henrik Ibsen's *En Folkefiende*, whom you heard before. Believe me, it is worthwhile to learn Norwegian or Danish just to understand better this extraordinary and revolutionary play, and you should explain to me dear Henrik what is the difference between written Danish and Norwegian if there is any at all. And how can you appreciate *Cyrano* if you don't master French? You have mentioned your compatriots, dear Oscar, and I am so pleased to have here at our dinner George Bernard Shaw, whose play *Arms and the Man* is my favorite, and also has to be read and seen in English. He befriended Zola in his London exile, as they share similar social values. Shaw was delighted to come to Paris and meet so many friends in the legion of social fighters – Zola, Ibsen, Clemenceau...

George Bernard Shaw – I don't share with Emile only political and social views, we denounce together as well Victorien Sardou's plays, although he is extremely popular in your country, especially after the tremendous success of *Madame Sans-Gêne*. He exalts the mechanics of playmaking at the expense of honest characterization and serious content, which I call "Sardoodledom". He writes well-made plays, creates an illusion of life, exactly the opposite

of the realistic elements of Zola's novels and my plays. Yet Sardou was elected to the Academie Francaise and Emile was not, what an aberration. When shall we understand that without art, true art, the crudeness of reality would make the world unbearable, as you use a glass mirror to see your face; but you use works of art to see your soul. Literature's purpose is to improve our lives, not only to entertain us, we have a social mission on earth, to denounce hypocrisy, bigotry, injustice, poverty, racism, tyranny. But I am not a blind supporter of democracy, as democracy is just a device that ensures we shall be governed no better than we deserve. And the people may elect presidents who will rule even worse than absolute kings. We shall arrive to the conclusion what is the best form of government by trial and error, as a life spent making mistakes is not only more honorable, but more useful than a life spent doing nothing. Success does not consist in never making mistakes but in never making the same one a second time. And if I have a wish it is that within 50 years, if I am still alive, England and France will achieve the welfare of their population, but not only them - the whole of Europe!

Jacque Corot (aside)— Yes George, you managed to live as wished until 1950 and at the age of 94 you could witness European welfare state, based on Leon Blum's reforms, and Clement Attlee's aim to maintain full employment, a mixed economy and a greatly enlarged system of social services provided by the state. You were a prophet and changed the attitude of society.

Ernesta Stern – We have here another guest from London – it is our friend Claude Monet, who spends most of his time in London with his son nowadays but agreed to come just for the holidays to Paris. Well, actually, to tell the truth he divides his time between his lovely house and garden at Giverny, which I visited. Maybe Claude you can tell us what are you painting?

Claude Monet – First of all, as a fervent Dreyfusard, I want to congratulate all of you on your successes, and especially you dear Emile who have returned from exile. A few months ago I began painting in Giverny the water lilies, you can ask what is the purpose of painting over and over water lilies, but I see there an extraordinary opportunity to paint their alternating light and mirror-like reflections and it quite concurs with what I am painting now in London where I paint Charing Cross Bridge, with the same concept of light and impressions, as with the Rouen Cathedral, the Poplars and the water lilies. Color is my day-long obsession, joy and torment. I would like to paint the way a bird sings. It's on the strength of observation and reflection that one finds a way. So we must dig and delve unceasingly. Every day I discover more and more beautiful things. It's enough to drive one mad. I have such a desire to do everything, my head is bursting with it. The essence of the motif is the mirror of water, whose appearance alters at every moment. Nevertheless, my work is quite different from Matisse's works, Cezanne's or Gauguin's. I think that I am the modernist, but I may be mistaken. And who knows, if I started to decompose light tomorrow a young painter would decompose a nude, maybe he has even started working, here in Paris, and will expose his works tomorrow.

Jacque Corot (aside) – You were so right Claude. Pablo Picasso, who is only 19 will come within a few months to Paris and in 1907 will expose his famous Les demoiselles d'Avignon, which revolutionized modern art. But the friendship between the two Dreyfusards – Monet and Clemenceau resulted in building one of the most exhilarating museums, the Orangerie, to host Monet's Water Lilies, as Monet is also a precursor of Modern Art, no less than Picasso.

Ernesta Stern – I have brought here at our Salon some of Claude's latest masterpieces that you can watch. He is the painter that I love most and is the accomplished artist and humanist. While you watch Monet's paintings, Debussy will play for us on the piano his Arabesques.

(We can watch Monet's paintings on the screen, while we hear Debussy's piano Arabesques)

Ernesta Stern – Many of you are over 50, except Sarah Bernhardt who is forever young, but we have also some young artists, as our dear Claude Debussy, another Claude. I like so much his music, which is quite the opposite of Wagner's cacophony whom I abhor, not only because he was such an anti-Semite. Debussy is impressionism in music, poetry. He revolutionized music with *Prelude a l'apres-midi d'un faune*, and he played now *Arabesques*.

Claude Debussy – I agree with what you said Monet, that there is much in common between us, as there is nothing more musical than a sunset. Music is the arithmetic of sounds as optics is the geometry of light, music is the silence between the notes, music is the expression of the movement of the waters, the play of curves described by changing breezes, I wish to sing of my interior visions with the naive candour of a child. I love music passionately. And because I love it I try to free it from barren traditions that stifle it. Some people wish above all to conform to the rules, I wish only to render what I can hear. There is no theory. You have only to listen. Pleasure is the law. Extreme complication is contrary to art. Works of art make rules; rules do not make works of art. Composers aren't daring enough. They're afraid of that sacred idol called 'common sense', which is the most dreadful thing I know - after all, it's no more than a religion founded to excuse the ubiquity of imbeciles! Beauty must appeal to the senses, must provide us with immediate enjoyment, must impress us or insinuate itself into us without any effort on our part. Some people call me a revolutionary, but if we look at the works of Bach ... on each page we discover things which we thought were born only yesterday, from delightful arabesques to an overflowing of religious feeling greater than anything we have since discovered. How much has to be explored and discarded before reaching the naked flesh of feeling. The sound of the sea, the curve of a horizon, wind in leaves, the cry of a bird leave manifold impression in us. And suddenly, without our wishing it at all, one of these memories spills from us and finds expression in musical language... I want to sing my interior landscape with the simple artlessness of a child. So what we do common, dear Monet, is to collect impressions and we are not in a hurry to write them down.

Jacque Corot (aside) – I am speechless from the dissertation of Debussy, which is a verbatim account of what he has said in his lifetime, word by word. The two Claudes – Monet and Debussy – have sung and painted an ode to minimalism, condensing the essence of expression in art, as opposed to the huge canvases of Gericault and endless operas of Wagner.

Ernesta Stern – Allow me, dear friends, to present now a flamboyant composer, Giacomo Puccini, we all thought that he reached the peak of art with his *La Boheme*, with *Manon Lescaut*, all based on French themes and authors, as Giacomo you may be Italian by birth, but you are one of us, more French than the Frenchmen. And this time he told me that his new opera *Tosca* is on an Italian theme, but is based on a work by a French author. We all were at Victorien Sardou's premiere of his play *La Tosca*, 12 years ago at the Theatre de la Porte Saint-Martin with the one and only Sarah Bernhardt who is with us tonight. I enjoyed it despite negative reviews from the Paris critics, and we just heard by Shaw why he and Zola don't like too much Sardou. It was a most successful play and Sarah toured with it throughout the world for a few years, but she has another surprise for us that she'll disclose later on. Nevertheless, I managed to convince our dear Puccini who is now rehearsing his new opera at the Teatro Costanzi in Rome, to come to Paris for a couple of days, because cultural Paris is the place to be at the dawn of the new century, the last one of the second millennium. Actually, he still didn't want to come, so I told him that as we are compatriots, being born in Trieste in December, I'll not tell you how many years ago, this would be my birthday present!

Giacomo Puccini – My dear friends, it is indeed such a pleasure to be here at your Salon, I invite you all to the premiere that shall be held within a few days in Rome. Don't pay

attention to the warnings of an anarchist bombing of the theatre, the premiere will be attended by Queen Margherita, Luigi Pelloux our prime minister, and even my rivals as Mascagni and Cilea will come. This time I am attempting a foray into verismo, with a realistic depiction of many facets, including violence. I wanted very much to adapt Sardou's play since I saw it a decade ago. I felt that it was the opera I needed, with no overblown proportions, no elaborate spectacle, no excessive amount of music. I do assure you, dear Ernesta, that as you abhor Wagner, I was not influenced by him in my new opera, and if I employ musical signatures for the opera's characters and emotions, it does not mean that I have adopted his leitmotifs, this opera is a pure Puccini opera, no more no less. I only have two regrets, that I couldn't take Arturo Toscanini to conduct my opera, being fully engaged at La Scala in Milan and that the young Enrico Caruso whom I wanted to create the role of Cavaradossi in my opera was passed over in favor of a more experienced singer, but I have brought them with me, and Caruso will sing for you some of the most beloved arias. I'll say just one word of warning – when Caruso auditioned for me in 1897, I exclaimed: "Who sent you to me? God himself?"

Enrico Caruso – Nobody expects to hear my insights at such a young age, but I was asked what the secret of my singing is. I had always sung, as far back as I can remember, for the pure love of it. My voice was contralto, and I sang in a church in Naples from fourteen till I was eighteen. To become a singer requires work, work, and again, work! I know that I am a singer and an actor, yet in order to give the public the impression that I am neither one nor the other, but the real man conceived by the author, I have to feel and to think as the man the author had in mind. I never step upon a stage without asking myself whether I will succeed in finishing the opera. The fact is that a conscientious singer is never sure of himself or of anything. He is ever in the hands of Destiny. And, finally, I know that I have to save my voice in order to sing a few more times in my career. But when I go before the audience, when I hear the music and begin to sing, I cannot hold back. I give the best there is in me. I give all!

I'll sing for you tonight first of all, and it is a surprise for you caro Puccini, E lucevan le stele from Tosca, so at least here I'll be Cavaradossi, then I'll sing from La Boheme as Rodolfo Che gelida manina and O Soave fanciulla with a young and talented Mimi, and finally from Puccini's repertoire – Donna non vidi mai, as Chevalier from Manon Lescaut. Then, I'll sing some arias from my Verdi's repertoire – La donna e mobile as the Duke from Rigoletto of course, Libiamo ne lieti calici/Brindisi as Alfredo with another talented Violetta, from La Traviata, and Celeste Aida as Radames from Aida. To finish my Italian repertoire I'll sing Una furtive lagrima as Nemorino in Donizetti's L'Elisir d'amore, and from Paglacci Ridi Pagliaccio as Canio. You probably met Ruggero Leoncavallo from the years he lived in Paris and he has of course also a French wife Berthe Rambaud. And this brings me to the final part of my performance, unless there is time also for Italian songs, the French arias – from Bizet's Carmen – as Jose – La fleur que tu m'avais jetee, Nadir's aria je crois entendre encore in Les pecheurs de perles, and from Gounod's Faust, as Faust, the aria Salut demeure chaste et pure.

(We see and hear the original Caruso on the screen, then we hear 12 opera arias by the actor)

Jacque Corot (aside) – What a treat! Caruso and Puccini, Monet and Debussy, what a fine artistic taste has this beloved Ernesta, I just need to hear Sarah Bernhardt as Rostand's L'Aiglon, and it might become the most exhilarating cultural night of my first 80 years.

Ernesta Stern – I promised you a surprise, I'll let our young friend Edmond Rostand, whom you all know after the unforgettable premiere of Cyrano, to tell you about it de vive voix.

Edmond Rostand – I have a problem! A couple of years ago, when I was only 29, most of you here were present at one of the most astounding successes in French Theater, the premiere of

my *Cyrano de Bergerac* with Constant Coquelin, here with us. It came as a total surprise for me as well as for everybody. It took me 18 days to write the play, the rehearsals were chaotic, yet the audience at the Theatre de la Porte Saint-Martin was exhilarated and a full hour after the curtain fell, they still applauded. Since then it was played all over the world for hundreds of times, in Paris only for 300 consecutive nights. Dear Sarah Bernhardt who was playing on the night of the premiere in another play came only for the last act. She made me promise that she'll have a leading role on my next play. We started to collaborate in 1895 when she created the role of Melisandre in my *La princesse lointaine* at the Theatre de la Renaissance. When she performed it in London later the same year it received a bad review by you George Bernard Shaw, but we forgive you as you are biased only for realistic plays. Sarah, undeterred asked me to write another play for her. She created the role of Photine in *La Samaritaine* in April 1897 at the same theater, and I felt satisfied that I had proven to the public that I am more than a writer of comedies. And of course right after that came *Cyrano*. So I had two challenges – to prove that I can surpass myself in my next play and even more important – to write a play where our dear Sarah will have the role of her life. And all of you know how difficult it is, especially after Sarah triumphed recently as Hamlet. But that gave me an idea, why not create for her a role of a young man, as in Hamlet but a Frenchman, and who is more French than the son of Napoleon – L'Aiglon, the young eagle, the Duke of Reichstadt. This would be the ideal role for Sarah Bernhardt. She was enthusiastic and I started to write the play in six acts – 4 hours long that will premiere within a few weeks and that we are rehearsing at the Theatre Sarah Bernhardt, the new name of the Theatre Lyrique, but she'll tell you all about it in a few moments and, surprise, she will play some monologues of our new play. What can I add? That I hope that my new play will be better and more successful than *Cyrano*, if not for my humble talent at least for the formidable performance of Bernhardt.

As for the future, I just hope that when I am aged 50 my plays will still be performed, and that L'Aiglon in 1950 will be performed successfully from Paris to Cairo, from London to New York, *Cyrano* in 2000 will be performed from Moscow to Palestine, from Buenos Aires to Tokyo, maybe also as an opera, a ballet, or even a film in this new media. What might happen in 2020, as you asked dear Ernesta? I hope that by then the world will not be ruined by world wars, as it almost happened last year because of the Fashoda Incident, or a war with Germany, Turkey, Russia, or even a pandemic, a flu of some sort, that can kill me and millions others, but these may happen in 1920, in 1940, or 1914, or 1918. I am not so optimistic as Zola here who wants to live and create until 90, I'll be happy if I can create until I reach your age Emile of 60. I noticed that I spoke too much, but what can I do if I'm used to write 6-acts plays?

Jacque Corot (aside) – It is true that you write 4 hours-long plays and in verse on top of that, but unlike Sardou's plays your plays are immortal and *Cyrano* is probably the most popular play in the world because of his eternal themes. Every time that I see *Cyrano* or L'Aiglon I am thrilled as in the first time, and last but not least – *Cyrano* died at the age of 36, L'Aiglon died at the age of 21, and you, dear Edmond, will die at the age of 50 from the Spanish Flu.

Sarah Bernhardt - What can I say? If I was ten years younger, at the age of Edmond Rostand, I would seduce him, but I am too old for him, he loves too much his young wife Rosemonde Gerard. And how can I compete with a poetess as talented as you dear Rosemonde who wrote at the age of 18 the immortal lines: "For, you see, each day I love you more, Today more than yesterday and less than tomorrow." Immediately after that he married you. I plan to make a record of this poem *Les Vieux*, whenever I find the time to do it, imagine, a 18 youngster writes a poem on lovers who grow older together. Maybe you don't know but we once played together as Rosemonde was Roxane and I was *Cyrano*. But seriously, Edmond and I are a winning couple at least on the theater and together we'll surpass Rostand's success

of Cyrano with our new play L'Aiglon. What could be more successful than this play to be performed during the Exposition Universelle in Paris, a patriotic subject about Napoleon, and I can tell you a story or two about that, as I was intimately involved with Napoleon's family as you all know, although not with Napoleon himself, as those who maintain that I am old are joking about. Anyhow, Edmond didn't want me to work too hard and he distributed the roles evenly with many other actors. I hope that this role will become one of my signature roles, maybe my magnum opus, and not just a gimmick of an old lady playing a 21 years-old man.

This year I opened my own theater with a revival of Sardou's La Tosca (yes Puccini, what a small world!), as well as revivals of my major successes – Phedre, Theodora, Gismonda, La Dame aux Camélias, Dalila, and Rostand's La Samaritaine. I had an unprecedented success with Hamlet, in a prose adaptation which I had commissioned from Eugene Morand and Marcel Schwob. I didn't play Hamlet as most of the other players, but in a direct, natural and very feminine way, as Hamlet's question To be or not to be, may well be To be or not to be a man or a woman. And as usual the British critics were not pleased with my interpretation of their hero, but unlike you my dear George that I cannot be cross with you, as all the women succumb to your charm, I told this despicable Max Beerbohm what I truly think of him.

Oscar Wilde – All these long speeches make me dizzy, I am too weak to suffer them, can I at least smoke? And by the way, are you sure, dear Sarah, about Hamlet's sexual identity?

Sarah Bernhardt – I don't mind if you smoke and I don't care if you burn, and don't interfere anymore when I speak! I could volunteer to Max and George even more acerbic critics, as "Bernhardt is too prone to exaggerate her powers; she wants to play Hamlet when her appearance is more suitable to King Lear." Or "Bernhardt is so fond of playing male parts, as it is not male parts but male brains that she prefers". Anyhow, I need someone here to teach me the walk and posture of young cavalry officers to impersonate the young Duke. I have a problem as Marie-Louise is allegedly younger than me, although I am ageless, and how can I play her son? But I promise you that by the premiere the critics will say that I died (in the play not in real life, as I intend to outlive all of you) so I died as dying angels would die if they were allowed to. And the play will be so successful during the Exposition and after that it will run for years, and a standing-room place will cost as much as 600 gold francs. The play will inspire the creation of Bernhardt souvenirs, statuettes, medallions, fans, perfumes, postcards, pastries, cakes. As for the forecasts in 1950, 2000, 2020, I don't have to make any forecasts, as I intend to live until 2020 and experience personally what will happen to humanity!

Jacque Corot (aside) – Mark Twain said: "There are five kinds of actresses: bad actresses, fair actresses, good actresses, great actresses— and then there is Sarah Bernhardt". Rostand called her "the queen of the pose and the princess of the gesture", while Hugo praised her "golden voice". She made theatrical tours around the world, was one of the first prominent actresses to make sound recordings and to act in motion pictures. This summarizes quite well who Sarah Bernhardt was, as she personified (and lived) perfectly our century in all its aspects.

Ernesta Stern – Sarah has agreed to play in avant-premiere parts of her role in L'Aiglon. Coquelin, come here and be useful, you'll just have to say the replica "Vive l'Empereur!" Our dear Coquelin is forever linked to Bergerac, as he now plays in Plus que reine by Emile Bergerat and he is scheduled to tour in America with Sarah Bernhardt at Broadway's Garden Theatre in a production of Cyrano de Bergerac with Bernhardt playing Roxane. The Americans are planning to film with him the duel scene from Cyrano with sound recording on phonograph cylinder and it will have both color and sound, imagine! On their return to France both will continue to appear in L'Aiglon at Theatre Sarah Bernhardt. What a busy schedule!

(We watch Sarah Bernhardt in films, hear her voice from records, then the actress starts to recite Duke Reichstadt's monologues from Edmond Rostand's avant-premiere play L'Aiglon)

LE DUC Eh bien ! moi, sans pouvoir, sans titre, sans royaume, Moi qui ne suis qu'un souvenir dans un fantôme ! Moi, ce duc de Reichstadt qui, triste, ne peut rien Qu'errer sous les tilleuls de ce parc autrichien En gravant sur leurs troncs des N dans la mousse, Passant qu'on ne regarde un peu que lorsqu'il tousse ! Moi qui n'ai même plus le plus petit morceau De la moire rouge, hélas ! dans mon berceau ! Moi dont ils ont en vain constellé l'infortune ! (Il montre les deux plaques de sa poitrine.) Moi qui ne porte plus que deux croix au lieu d'Une ! Moi malade, exilé, prisonnier je ne peux Galoper sur le front des régiments pompeux En jetant aux héros des astres ! Mais j'espère, J'imagine... il me semble enfin que, fils d'un père Auquel un firmament a passé par les mains, Je dois, malgré tant d'ombre et tant de lendemains, Avoir au bout des doigts un peu d'étoile encore... Jean-Pierre-Séraphin Flambeau, je te décore !

LE DUC Régner !... Régner ! — C'est dans ton vent, dont le parfum de gloire Commence à me rapatrier Qu'au moment de partir je devais venir boire Wagram, le coup de l'étrier ! Régner ! Qu'on va pouvoir servir de grandes causes Et se dévouer à présent ! Reconstruire, apaiser, faire de belles choses ! Ah ! Prokesch, que c'est amusant ! Prokesch, tous ces vieux rois dont les âmes sont sourdes, Oh ! comme ils doivent s'ennuyer ! J'ai les larmes aux yeux. Je me sens les mains lourdes Des grâces que je vais signer ! Peuple qui de ton sang écrivis la Légende, Voici le fils de l'Empereur ! Oh ! toute cette gloire, il faut qu'il te la rende. Et qu'il te la rende en bonheur ! Peuple, on m'a trop menti pour que je sache feindre ! J'ai trop souffert pour t'oublier ! Liberté, Liberté, tu n'auras rien à craindre D'un prince qui fut prisonnier ! La guerre, désormais, ce n'est plus la conquête, Mais c'est le droit que l'on défend ! (Ah ! Je, vois une mère, au-dessus de sa tête Élever vers moi son enfant !) D'autres noms, désormais, je veux qu'on s'émerveille Que Wagram et que Rovigo Mon père aurait voulu faire prince Corneille Je ferai duc Victor Hugo ! Je ferai... je ferai... je veux faire... je rêve... (Il va et vient, s'enivrant, s'enfiévrant ; on s'écarte avec respect.) Ah ! je vais régner ! J'ai vingt ans ! Une aile de jeunesse et d'amour me soulève ! Ma Capitale, tu m'attends ! Soleil sur les drapeaux ! multitudes grisées ! Ô retour, retour triomphal ! Parfum des marronniers de ces Champs-Élysées Que je vais descendre à cheval ! Il m'acclamera donc, ce grand Paris farouche ! Tous les fusils seront fleuris ! On doit croire embrasser la France sur la bouche Lorsqu'on est aimé de Paris ! Paris ! j'entends déjà tes cloches !

LE DUC Et tous ces bras ! tous ces bras que je vois ! Tous ces poignets sans mains, toutes ces mains sans doigts ! Monstrueuse moisson qu'un large vent qui passe Semble coucher vers moi pour me maudire !... (Et défaillant, jetant en avant des mains suppliantes.) Grâce ! Grâce, vieux cuirassier qui tends en gémissant D'atroces gants crispins aux manchettes de sang ! Grâce, pauvre petit voltigeur de la Garde Qui lèves lentement cette face hagarde ! — Ne me regardez pas avec ces yeux ! — Pourquoi Rampez-vous, tout d'un coup, en silence, vers moi ? Dieu ! vous voulez crier quelque chose, il me semble !... Pourquoi reprenez-vous haleine tous ensemble ? Pourquoi vous ouvrez-vous, bouches pleines d'horreur ? (Et courbé par l'épouvante, voulant fuir, ne pas entendre :) Quoi ? Qu'allez-vous crier ? Quoi ?

TOUTES LES VOIX Vive l'Empereur !

LE DUC, tombant à genoux. Ah ! oui ! c'est le pardon à cause de la gloire ! (Il dit doucement et tristement à la Plaine :) Merci. (Et se relevant :) Mais j'ai compris. Je suis expiatoire. Tout n'était pas payé. Je complète le prix. Oui, je devais venir dans ce champ. J'ai compris. Il fallait qu'au-dessus de ces morts je devinsse Cette longue blancheur, toujours,

toujours plus mince, Qui, renonçant, priant, demandant à souffrir, S'allonge pour se tendre, et mincit pour s'offrir ! Et lorsque entre le ciel et le champ de bataille, Là, de toute mon âme et de toute ma taille, Je me dresse, — je sens que je monte, je sens Qu'exhalant ses brouillards comme un énorme encens, Toute la plaine monte afin de mieux me tendre Au grand ciel apaisé qui commence à descendre, Et je sens qu'il est juste et providentiel Que le champ de bataille ainsi me tende au ciel, Et m'offre, pour pouvoir, après cet Offertoire, Porter plus purement son titre de victoire ! (Il se dresse en haut du tertre, tout petit dans l'immense plaine, et se détachant les bras en croix, sur le ciel.) Prends-moi ! prends-moi, Wagram ! et, rançon de jadis, Fils qui s'offre en échange, hélas, de tant de fils, Au-dessus de la brume effrayante où tu bouges, Élève-moi, tout blanc, Wagram, dans tes mains Il le faut, je le sais, je le sens, je le veux, rouges ! Puisqu'un souffle a passé ce soir dans mes cheveux, Puisque par des frissons mon âme est avertie, Et puisque mon costume est blanc comme une hostie ! (Il murmure comme si quelqu'un seulement devait l'entendre.) Père ! à tant de malheur que peut-on reprocher ? Chut !... J'ajoute tout bas Schoenbrunn à ton rocher ! (Il reste un moment les yeux fermés, et dit :) C'est fait !... (L'aube commence à poindre... Il reprend d'une voix forte :) Mais à l'instant où l'aiglon se résigne À la mort innocente et ployante d'un cygne, Comme cloué dans l'ombre à quelque haut portail, Il devient le sublime et doux épouvantail Qui chasse les corbeaux et ramène les aigles ! Vous n'avez plus le droit de crier, champs de seigles ! Plus d'affreux rampements sous ces bas arbrisseaux : J'ai nettoyé le vent et lavé les ruisseaux ! Il ne doit plus rester, plaine, dans tes rafales, Que les bruits de la Gloire et les voix triomphales ! (Tout se dore. Le vent chante.) Oui ! j'ai bien mérité d'entendre maintenant Ce qui fut gémissant devenir claironnant !... (De vagues trompettes sonnent. Une rumeur fière s'élève. Les Voix, qui gémissaient tout à l'heure, lancent maintenant des appels, des ordres ardents.) De voir ce qui traînait de triste au ras des chaumes S'enlever tout d'un coup en galops de fantômes ! (Des brumes qui s'envolaient semblent galoper. On entend un bruit de chevauchée.) LES VOIX, au loin. En avant !

LE DUC Le berceau dont Paris m'a fait don ! Mon splendide berceau, dessiné par Prudhon ! J'ai dormi dans sa barque aux balustres de nacre, Bébé dont le baptême eut la pompe d'un sacre ! — Approchez ce berceau du petit lit de camp Où mon père a dormi dans cette chambre, quand La Victoire éventait son sommeil de ses ailes ! (Le berceau est maintenant contre le petit lit.) Plus près, — faites frôler le drap par les dentelles ! Oh ! comme mon berceau touche mon lit de mort ! (Il met la main entre le berceau et le lit en murmurant.) Ma vie est là, dans la ruelle...

Ernesta Stern – Sarah wanted to recite some pages from my books as well – Au fil des pensées, Autour du Coeur, Quinze jours à Londres, but I've spared you this ordeal and I'll just hand you some copies of my books before you leave our modest home. In sharp contrast to L'Aiglon, I invite my friend Louis Lumière to speak about his invention - cinematography.

Louis Lumière – Well, dear Ernesta, this is a cultural evening and I am flattered that you agreed to speak to this distinguished audience about the curiosity of the Cinématographe. We didn't invent it of course, my brother Auguste and me, we just perfected an apparatus that took, printed and projected film here in Paris, at Salon Indien du Grand Café, exactly 5 years ago. We are pioneers only as we were the first to present projected, moving, photographic pictures to paying audience, 10 very short films, that you'll see in a moment and I hope that you'll enjoy them. There was quite a riot, as 2000 people wanted to watch the films and only 33 people were allowed to the premiere, one of them was you, dear Ernesta, who saw the tremendous potential of the industry. In the last few years movie theaters were open all over in France, in Italy, in Brussels and even in London. A lot of progress was done also in the United States, were Thomas Edison showed his improved Vitascope projector in 1896, the

first commercially successful projector in the US. I really don't know what will become from our invention, will it remain a curiosity, will it grow to be an art, what will happen in 10, 20, 50 years from now – will we watch films of two or four hours as your plays and operas with plays written especially for this media, of course films will need to be talking not silent as they are now, maybe also in colour, possibly with music, imagine what are the possibilities that culture will be spread all over the world, not just entertainment, that we'll watch Rostand's *Cyrano* in Bombay & Rio de Janeiro, Zola's *L'Argent* in New York, hear Puccini's *La Bohème* in Capetown & Peking, with translations into the local languages as well...

Jacque Corot (aside) – Not even in their wildest dreams the people gathered in Ernesta Stern's salon could imagine that within just a few years cinema will become the most popular entertainment all over the world, and will raise to be an art within one or two decades, eclipsing theater and opera, becoming the most important vehicle of culture to the masses.

Ernesta Stern – To accompany Lumiere's films which are silent of course we need modern music, but not classical music, something completely different. And I received recently from an American friend ragtime music, a completely bizarre music, composed by a young American named [Scott Joplin](#), whose father was a slave, and I am told that it is based on rhythms coming from African music with a modification of the march style popularized by [John Philip Sousa](#), with us tonight and who will be with us at the World Exposition in Paris. We'll hear two piano medleys, *qui font fureur aux Etats Unis*, they are called *Original Rags* and *Maple Leaf Rag*. But this is not the end of surprises. I have asked our dear Joseph Joachim, who'll be playing later on in a unique recital with [Edvard Grieg](#), who could play for us this music and he suggested that his protégé, the young Polish [Arthur Rubinstein](#) could do it. This young pianist, he is not even 13, is a prodigy with a photographic memory. I was sure that the child would be thrilled by the exposure to French Society, but he said that he is a serious classic performer, and not a cabaret pianist. His reputation was at stake, as he'll make his debut with the Berlin Philharmonic in a few months, you understand, he has a reputation to maintain at the age of 12. Finally, after tough negotiations we compromised that he'll play the two medleys with the short films and after that he'll give us a short recital of piano compositions by Chopin, Brahms, and Mendelssohn. I heard him yesterday and I can assure you that he is unique. I invited this precocious teenager to move to Paris, I'm sure that he'll interact with the cream of our cultural society, composers, painters, authors and salonnières.

(While we watch the 10 short films by Lumiere, we hear Scott Joplin's ragtime piano music played by Arthur Rubinstein, 12, who continues with a short classical recital)

Ernesta Stern – I would like to introduce to you a dear friend who was completely anonymous until a few years ago, although he lived with us in Paris from 1892 to 1895, before he became the King of the Jews, and no need to say what happened to the last King of the Jews – Jesus. We met about five years ago in the courtyard of the Ecole Militaire in the Invalides, where our dear Alfred Dreyfus was formally degraded by having the rank insignia, buttons and braid cut from his uniform, his sword was broken, his heart was broken too, all that before silent ranks of soldiers, while a large crowd of onlookers around us shouted *Mort aux juifs!* Dreyfus cried out "I swear that I am innocent. I remain worthy of serving in the Army. Long live France! Long live the Army!" As a matter of fact no one knew if Dreyfus was really a traitor or not, but the incident proved how deep was anti-Semitism rooted in France. To me it was a personal shock as I was convinced that we the Jews were completely assimilated in France, but millions of Frenchmen didn't think so, and on the first occasion proved to us that we were Frenchmen as long that none of us is accused of a crime, conditional Frenchmen, *avec sursis*. Theodor Herzl was a correspondent of the Viennese *Neue Freie Presse* and followed the

Dreyfus Affair. He was standing near me, and we were probably the only Jews who dared to come, I noticed how he was flabbergasted, il a ete completement bouleverse, it shattered all his beliefs. We kept in touch in the following years, but he'll tell you better than me about that.

Theodor Herzl – As a matter of fact I met many French Jews when I lived in Paris, most of them did not admit that they were Jews, some of them converted to Catholicism, and you were Ernesta one of the few who were proud of your origins. But you were right it shattered by belief that an assimilation of Jews in Europe was possible and in February 1896 I published my book *Der Judenstaat* to immediate acclaim and controversy. The book argued that the Jewish people should leave Europe for Palestine, their historic homeland. Only through a Jewish State could they avoid anti-Semitism, express their culture freely and practice their religion. I met important people and received a warm support from the Kaiser's family and presented my proposal to the Turkish Grand Vizier. The Turks even granted me a medal - the Commander's Cross of the Order of the Medjidie. Among the Jews the Eastern Jews were mostly enthusiastic by my ideas and the Zionist movement grew rapidly. In 1897 I founded the First Zionist Congress of Basel and was elected president of the Congress, and I am still president after three stormy Congresses. So, this is the story in a nutshell and to tell you the truth I am not sure what will be the outcome of my endeavors. I hope to live for at least 50 more years, as I am not even 40, to witness the establishment of a Jewish state, as I am convinced that great dangers lie ahead of Jews and only in Israel we would be free & safe!

Ernesta Stern – Amen, dear Theodor, and I volunteer my house to be the seat of the Jewish embassy in Paris. Anyhow, I have a feeling that it will reside not far from here, maybe at rue Rabelais, a deux pas d'ici. Imagine what a cultural center your country could be with so many gifted authors, artists and musicians. The Jews who gave the world the Bible would found a state that will become a cultural magnet, a moral compass, a scientific and economic miracle!

Jacque Corot (aside) – Hold your horses Ernesta, Herzl's vision materialized within 50 years as he has forecasted but not in his lifetime as he died four years later in 1904. Israel has many merits, but is far from being a moral compass and a cultural magnet, as Europe has remained the leader of ethics, culture, welfare and prosperity - Scandinavia, Netherlands, Switzerland. But to tell the truth Israel did indeed fulfill most of Herzl's vision and is a formidable success.

Ernesta Stern – Jose Echegaray is a polymath, a Spanish civil engineer, mathematician, statesman and one of the leading Spanish dramatists. He became a member of the Society of Political Economy, helped to found the magazine *La Revista* and took a prominent part in propagating free trade doctrines in the press. If it was not enough, he was appointed Spanish Minister of Education, of Public Works and Finance Minister successively between 1867 and 1874. From that date on he became a playwright in a career which eclipsed all his other achievements. But I prefer that Jose would tell you more about his plays which thrill us.

Jose Echegaray – Theater has always been my love although I truly became a dramatist only in 1874 after I retired from politics. In my plays I try to convey above all a sense of duty and morality, which were the driving force of my whole life. Some critics maintain that I replicated the achievements of my predecessors of the Spanish Golden Age, but I would say that I am only a prolific playwright, writing about two plays each year. And I am still young, at least I feel at my advanced age which is more than twice as much as Edmond Rostand's age, and know that I'm too young to die, since I need at least 40 more years. You see, dear Zola, I am not so modest as you who requests additional 30 years. My most famous play *El Gran Galeoto*, written 18 years ago, deals also as many of your works, dear friends, on the poisonous effect that unfounded gossip has on our happiness. But I personally prefer my last plays – *Mariana*, *El estigma*, and *La duda*. While my early works were Romantic, I turned to

thesis drama, mainly under your influence my dear Ibsen. I show that honesty is condemned as madness by society, much like your *An Enemy of the people*, however it never achieved the same amount of success, as I lack the formidable dramatic force that you possess Henrik. But at least my friend here George Bernard Shaw admires my work and for me it is worth more than the triumphs of my plays in London, Paris, Berlin, Stockholm and Madrid.

Jacque Corot (aside) – Who ever heard of Echegaray in 2016, a hundred years after his death? Yet, he obtained the Nobel Prize in 1904, 5 years after our reveillon, as well as George Bernard Shaw, much later. But Zola didn't receive the Nobel Prize, which was awarded in its first year, 1901, to a compatriot Sully Prudhomme, Sully who? as he is completely forgotten...

Ernesta Stern – We are all thrilled by the Exposition Universelle of 1900, to be opened within a few months, and we have with us here a famous civil engineer, Gustave Eiffel, who built for another Exposition a decade ago a Tour, which was ridiculed by all the bien pensants, and today has become the emblem of Paris, with millions of tourists coming from all over the world to admire it. Gustave will tell us about his Tour, modern buildings, and the Exposition.

[Gustave Eiffel](#) – During my whole life I tried to explore new grounds and not to be confined to the conservative thinking of the epoch. This progressive spirit unifies most of us here, Zola, Clemenceau, Shaw, Tolstoy, Ibsen. But I had to fight preconceived ideas, as my tower had been a subject of controversy, attracting criticism both from those who did not believe it feasible and from those who objected on artistic grounds. Just as work began at the Champ de Mars, a dozen years ago, the Committee of the 300 (one member for each meter of the tower's height) was formed, with distinguished members as Charles Garnier, Adolphe Bouguereau, Guy de Maupassant, Charles Gounod and Jules Massenet. A petition was sent to Alphand, the Minister of Works, and was published by *Le Temps*. A kind of J'accuse but on the opposite grounds. They maintained that my "ridiculous tower" dominating Paris will crush under its barbaric bulk Notre Dame, Tour Saint-Jacques, the Louvre, the Dome of Les Invalides and the Arc de Triomphe. Well, dear friends, where are they now all those who signed this ridiculous petition, but the Tour Eiffel will exist forever, as well as my metal framework of the Statue of Liberty. They have become the symbol of the spirit of change, of liberty, of modernism, of the industrial, cultural and social revolution. La dame de fer was constructed in a record time from 1887 to 1889, is the cultural icon of France, one of the most recognizable structures in the world, as well as the tallest building, raising to 324 meters, based on a square measuring 125 meters on each side. But progress has not ceased with my tower, as the new Paris exposition of 1900 has brought new constructions that I was not involved in their construction – the Grand Palais, the Petit Palais, Pont Alexandre III, the Gare d'Orsay, new entrances to Metro stations, and plenty of palaces and pavilions – of electricity, of optics, of motion pictures, of industry, of agriculture, with 40 national pavilions, theaters and music halls, while the Grand & Petit Palais in an art nouveau style exhibit art, paintings, sculptures. Our dear Lumiere brothers present their films on a colossal screen in the Gallery of Machines. We will even hear and see motion pictures, with the image on the screen synchronized to the sound from phonographs. On the Cineorama of Raoul Grimoin Sanson we'll watch a simulated voyage in a balloon projected on a screen of 93 meters in circumference by ten synchronized projectors. And at the Mareorama we'll watch a simulated voyage by ship to Constantinople, with the viewers watching images of the cities and seascapes en route. The illusion will be aided by machinery that rocks the ship and fans which blows gusts of wind. Well, dear friends, this is the image that we present to the millions of tourists and tens of millions of visitors. It will give a tremendous boost to the economy, to the industry and to the culture of France, Paris, Europe and the world. This will epitomize the progress that we have achieved in the last decades and will be a magnificent entrance to the new 20th century.

Jacque Corot (aside) – Well spoken, my dear Eiffel, especially in view of the fact that nobody present mentioned the Panama scandal, where you were involved. In 1893 you were found guilty on the charge of misuse of funds, fined and sentenced to two years in prison, although you were acquitted on appeal. You resigned from the Board of Directors of the Compagnie des Etablissements Eiffel and abstained from any participation in any manufacturing business in the future. But that it was quite common in Parisian bourgeois society, even if it is progressive and Dreyfusard, as in the Salon of Ernesta Stern, it is not bon ton, es passt nicht, it is impolite to say the least. Because after all, as Zola has beautifully described in *L'Argent*, everyone is involved in one scandal or another, and if not – at least he has an extramarital affair, as Zola had with a mistress who bore him two children. Only Alfred Dreyfus has not transgressed any law or any moral code, he was completely innocent and honest, had an impeccable family life, and that is why he was sent to the end of the world to Devil's Island...

Ernesta Stern – Jules Cheret is a good friend, all of us admire his works, as he became the master of poster art. In 1890 the French government awarded him the Legion of Honour, citing his creation of an art form that advanced printing and served the needs of commerce.

Jules Cheret – I am a Parisian, all my life I live in Paris, except for seven years in my youth when I was trained in lithography in London. Yet, my work is influenced by the scenes of frivolity depicted in the works of Rococo artists. I expanded my business to providing advertisements for the plays of touring troupes, municipal festivals, and then for beverages and liquors, perfumes, soaps, cosmetics and pharmaceutical products. But I am particularly proud of my large posters displaying modestly free-spirited females and I am often called the "father of the women's liberation." The women in my posters are joyous, elegant and lively—'Cherettes', as they are popularly called, heralded a noticeably more open atmosphere in Paris, where women are able to engage in formerly taboo activities, such as wearing low-cut bodices and smoking in public. As I own my firm, it allows me to maintain artistic control and to establish an innovative design approach, a simple dynamic approach in which compositions are dominated by large central figures, prominent hand-lettered titles, simplified backgrounds and large areas of glowing colour and gestural textures. This is a combination of Watteau, Fragonard, Tiepolo, with the flat colour and stylized linear contours of Japanese prints.

Jacque Corot (aside) – What a fantastic combination of excellence in those times in Paris – painting, literature, music, inventions, architecture, engineering, theater, films, even posters.

Ernesta Stern – We have with us tonight the dancers and singers of the Moulin Rouge, with Jane Avril, that may be known as *L'etrange* and *Jane la folle*, but unlike her nicknames she is very serious and considers playing in your play *Peer Gynt* dear Ibsen. They'll perform for you their can-can show, which was very successful in London, as well as scenes from famous operettes, while you watch the exposition of Cheret's famous posters, photos of our Parisian monuments, buildings and bridges, photos of the plans and constructions of our forthcoming Exposition Universelle. We have invited the composer of *La fille de Madame Angot* Charles Lecocq, the composer of *Les cloches de Corneville* Robert Planquette, the composer of *Veronique* and *Les p'tites Michus* Andre Messager, and the librettist Ludovic Halevy of Jacques Offenbach's opera bouffes *Orphee aux enfers*, *Ba-ta-clan*, *Le pont des soupirs*, *Pomme d'api*, the librettist Jules Barbier, a fellow Dreyfusard, who wrote the libretti of Offenbach's *Les contes d'Hoffman* and of Victor Masse's – *Les noces de Jeannette*. You'll watch scenes from those operettes and others, with a lot of French can-can and bonne humeur.

(Photos and films of Paris around 1899, with sights of the monuments and expositions, and with Cheret's famous posters, are projected on the screen, and performance of a Moulin Rouge can-can show, and scenes from famous operettes by the best composers present there)

Ernesta Stern – And now I want to introduce a new friend, well, new if you think that 5 years is new, as Marcel Proust is an habitué of my Salon since 1894. He is young, only 28, takes notes all the time, but not only in my Salon, as he goes to most of the other Salons in Paris. I don't know where he takes time to write, but he published 3 years ago *Les plaisirs et les jours*, with a foreword by Anatole France and drawings by Mme Lemaire, a competitor Salonniere.

Marcel Proust – What you didn't mention my dear Ernesta is that I am a fervent Dreyfusard. But I don't only attend Salons, yours, Mme Straus, Madeleine Lemaire, Mme Arman de Caillavet, many others, where I take notes, as I plan to write a monumental novel, a kind of search of lost time, with the enigma of memory, the necessity of reflection, as leitmotifs. But I lack discipline to work on my novel and it may take ten or twenty more years until I finish it. My father whom you know Adrien Proust is a prominent pathologist and epidemiologist, studying cholera in Europe and Asia, he wrote numerous articles and books on medicine and hygiene and he hoped that I'll follow his path. To appease him, since he insisted that I pursue a career, any career, I obtained a volunteer position at Bibliotheque Mazarine in the summer of 1896, but I obtained a sick leave which is indefinite and I still live in my parents' apartment, what can I say I am an enfant gâté, blasé at the age of 28, what a loss for humanity.

I have abandoned a novel that I was working on, but I can share with you some insights that despite my young age or because of it I have arrived to. I believe that the real voyage of discovery consists not in seeking new landscapes, but in having new eyes. Remembrance of things past is not necessarily the remembrance of things as they were. Happiness is beneficial for the body, but it is grief that develops the powers of the mind, and not being so healthy deepens my sense of observation. But I have a problem, like many intellectuals, I am incapable of saying a simple thing in a simple way. Ultimately, I am a neurotic, everything great in the world is done by neurotics; they alone founded our religions and created our masterpieces. The only true voyage, the only bath in the Fountain of Youth, would be not to visit strange lands but to possess other eyes, to see the universe through the eyes of another, of a hundred others, to see the hundred universes that each of them sees, that each of them is, in your Salon my dear and in the other ones; and this we do, we do really fly from star to star.

Jacque Corot (aside) – You are not a total loss, dear Marcel, you are only a late bloomer, as you are about to write *A la recherche du temps perdu*, begun at last in 1909 and published from 1913 to 1927, 5 years after your death in 1922, at the age of 51, as Proust died from illness before he could edit the final parts of his work. Many of the ideas, motifs, in *In Search of Lost Time*, were anticipated in his unfinished novel *Jean Santeuil*, written in 1896 to 1899.

Ernesta Stern – You have probably noticed that there are very few women who contribute actively to culture in our times. We have of course the one and only Sarah Bernhardt, but so few female authors, painters and musicians. Well, at least we have today a young scientist, Marie Curie, a Polish and naturalized-French physicist and chemist, who conducts pioneering research, on what exactly I don't know and don't understand, as it is too complicated for me.

Marie Curie – I was born in Poland but moved to France in 1891. I immediately entered Sorbonne University in Paris where I read physics and mathematics – I had naturally discovered a love of the subjects through an insatiable appetite for learning. It was in Paris, in 1894, that I met Pierre Curie – a scientist working in the city – and we were married a year later. We became research workers at the School of Chemistry and Physics in Paris and there we began our pioneering work into invisible rays given off by uranium – a new phenomenon which had recently been discovered by Professor Henri Becquerel. In July 1898, my husband and I published a joint paper announcing the existence of an element we named "polonium",

and in December 1898, we announced the existence of a second element, which we named "radium", from the Latin word for "ray". But I am afraid that I am boring you already.

I would better tell you how I fell in love with Pierre my husband. He came to see me and showed a simple and sincere sympathy with my student life. Soon he caught the habit of speaking to me of his dream of an existence consecrated entirely to scientific research, and he asked me to share that life. During the year 1894, Pierre Curie wrote me letters that seemed to me admirable in their form. No one of them was very long, for he had the habit of concise expression, but all were written in a spirit of sincerity, with an evident anxiety to make the one he desired as a companion know him as he was. So, I fell in love, we married and we have now a daughter. I am afraid that you asked me on purpose to speak right after Marcel Proust, as you could not meet two more different people than the two of us, because I believe that we should be less curious about people and more curious about ideas, about nature.

We must have perseverance and above all confidence in ourselves. We must believe that we are gifted for something and that this thing must be attained. Nothing in life is to be feared. It is only to be understood. Now is the time to understand more, so that we may fear less. You cannot hope to build a better world without improving the individuals. To that end, each of us must work for our own improvement. And I was taught that the way of progress was neither swift nor easy. I am afraid that I sound like an old lady although I am only 32, but I have reached the conclusion that one never notices what has been done; one can only see what remains to be done. A scientist in his laboratory is not a mere technician: he is also a child confronting natural phenomena that impress him as though they were fairy tales, as the new sights of Nature make me rejoice like a child. We must believe that we are gifted for something, that this thing must be attained. Finally, I do believe that science has great beauty.

Jacque Corot (aside) – Dear Marie, so young and so wise, no wonder that you have become the role model for millions, especially women, in your quite way, you revolutionized the world of science, invented radioactivity, contributed so much to our health and medicine, but your inventions could also bring such havoc on humanity. Exactly, like Alfred Nobel, who died a few years before, and bequeathed his fortune to encourage scientists and authors, to promote peace, as his inventions were also multi faceted, as most of inventions are after all. Anyhow, Marie Curie was the first woman to win a Nobel Prize and the first person to win two Nobel Prizes, and the Nobel Prizes are largely associated with Marie Curie in history.

Ernesta Stern – How many of you have ever heard of the Nobel Prizes? But all of you have heard of Alfred Nobel, the famous Swedish chemist, engineer, inventor, businessman and philanthropist, who died 3 years ago. Nobel's will expressed a request that his money be used for prizes in physics, chemistry, peace, physiology or medicine and literature. As executors of his testamentary dispositions he appointed Ragnar Sohlman, here with us tonight, and Rudolf Lilljequist. Sohlman who is very young, not even 30, was occupied for several years with the task of establishing the Nobel Prizes, the regulations regarding selection of laureates and overcoming the problems with Nobel's relatives. Finally, he has managed to institute the Nobel Foundation that will be founded in a few months and manage the finances and administration of the Nobel Prizes, which will be the most prestigious prizes in the world and that will be distributed from 1901 onwards, and who knows, maybe you Zola, you Shaw, you Tolstoy and you Echegaray will be among the first to receive the Nobel Prize of Literature, and probably our dear Marie Curie will receive one of the first prizes on physics. It is a pity that prizes of arts and music will not be awarded otherwise you Monet and you Puccini would be receiving it, and maybe you Clemenceau will be awarded the Prize of Peace... after war.

Ragnar Sohlman – Indeed what a tremendous task has our dear Nobel bestowed on my humble and young shoulders. I am only a chemical engineer and all of a sudden I have to create the Nobel Foundation. But I was Nobel's assistant and he probably had enough confidence in me that I will carry on this arduous task successfully and Nobel's memory will be vivid also in 100 or 120 years from now. What Ernesta has not mentioned is the huge amount of each of the prizes – 150,000 Crowns, that will make each recipient a wealthy man. Let me emphasize just one facet of Nobel's will – he specifically mentioned that the Peace Prize will be awarded to the person who shall have done the most or the best work for fraternity among nations, for the abolition or reduction of standing armies and for the holding and promotion of peace congresses. He also emphasized that no consideration shall be given to the nationality of the candidates, so that the most worthy shall receive the prize, whether he be Scandinavian or not. Therefore, the prizes are not Scandinavians, they are for scientists and authors from all over the world, but if Nobel would have attended your gathering tonight, he would have decided possibly to award several prizes in each category, and in many more categories as well, as he would have l'embarras du choix with such distinguished celebrities.

Jacque Corot (aside) – Nobel Prizes will become the model for international recognition and will engender many more prizes in all the categories of culture. The award of the prizes on December 10 every year, date of death of Nobel, has become the climax of cultural events.

Ernesta Stern – Dear Sohlman, we have here another candidate for your new Nobel Prize – our friend Wilhelm Röntgen, a physicist who has discovered the X-rays, or Rontgen rays in many languages, over his great objection, as he is very modest, having renounced to receive patents for his discoveries. I have no doubt that even if he receives your Nobel Prize he'll donate it to the University of Wurzburg where he teaches. We are very curious to hear from you, our dear Rontgen, how indeed you discovered your famous rays, because our century is the century of innovation, pioneering in all fields – literature, arts, music, theater and science.

Wilhelm Röntgen – Our dear Marie Curie has not emphasized most on how she discovered polonium and radium, so I am afraid to bother you with my scientific terminology. As a matter of fact, unlike Descartes who said cogito ergo sum, I don't think – I experiment. Four years ago, I was working with a Crookes tube covered by a shield of black cardboard. A piece of barium platino-cyanide paper lay on the bench there. I had been passing a current through the tube, and I noticed a peculiar black line across the paper. ... The effect was one which could only be produced, in ordinary parlance, by the passage of light. No light could come from the tube, because the shield which covered it was impervious to any light known, even that of the electric arc. ... I did not think; I investigated. I assumed that the effect must have come from the tube, since its character indicated that it could come from nowhere else. I tested it. In a few minutes there was no doubt about it. Rays were coming from the tube which had a luminescent effect upon the paper. I tried it successfully at greater and greater distances, even at two metres. It seemed at first a new kind of invisible light. It was clearly something new, something unrecorded. Having discovered the existence of a new kind of rays, I of course began to investigate what they would do. It soon appeared from tests that the rays had penetrative power to a degree hitherto unknown. They penetrated paper, wood, and cloth with ease; and the thickness of the substance made no perceptible difference, within reasonable limits. The rays passed through all the metals tested, with a facility varying, roughly speaking, with the density of the metal. These phenomena I have discussed carefully in my report to the Würzburg society, and you will find all the technical results therein stated. I am not a prophet, and I am opposed to prophesying. I am pursuing my investigations, and as fast as my results are verified I shall make them public. We shall see what we shall see. We have the start now; the developments will follow in time. A few weeks after my discovery I took a

picture, a radiograph, using X-rays of my wife Anna Bertha's hand. When she saw her skeleton she exclaimed: "I have seen my death!" I published 3 papers on X-rays between 1895 and 1897, and the scientific community was thrilled at the possibilities of my invention, diagnostic radiology, the medical specialty which uses imaging to diagnose disease.

Jacque Corot (aside) – X-rays have become standard procedure in medicine, to identify pneumonia, lung cancer, intestinal obstruction, kidney stones, bone fractures, dental cavities. In airport security, border control, in World War I over a million wounded soldiers were treated with Marie Curie's X-ray units. The German Rontgen has contributed to humanity hugely, as well as the French Louis Pasteur, who died a few years before, and so many others.

Ernesta Stern – And who has made kind of X-rays to our brains, analyzing our subconscious, our dreams, if not our dear Sigmund Freud, who is with us tonight. A few months ago he published The Interpretation of Dreams in which, following a critical review of existing theory, Freud gives detailed interpretations of his own and his patients' dreams in terms of wish-fulfillments made subject to the repression and censorship of the "dream work". But before I mess up his revolutionary theories on human mind I prefer that he'll explain them.

Sigmund Freud – Actually, it is not so complicated. I just set out the theoretical model of mental structure (the unconscious, pre-conscious and conscious) on which this account is based. The interpretation of dreams is the royal road to a knowledge of the unconscious activities of the mind. Dreams are often most profound when they seem the most crazy. I seized the opportunity to come to Paris, as after Vienna it is my favorite city, since October 1885, when I lived in Paris on a three-month fellowship to study with Jean-Martin Charcot, a renowned neurologist who was conducting scientific research into hypnosis. This was a catalytic experience, as it turned me toward the practice of medical psychopathology. You all know how Charcot specialized in the study of hysteria and susceptibility to hypnosis, which he frequently demonstrated with patients on stage in front of an audience. It assisted me to develop my clinical method and set out my theory of the psychogenetic origins of hysteria, demonstrated in a number of case histories, in my Studies on Hysteria published in 1895.

But, eventually I abandoned hypnosis, and you'll not witness a séance tonight, having concluded that more consistent and effective symptom relief could be achieved by encouraging patients to talk freely, without censorship or inhibition, about whatever ideas or memories occurred to them. In conjunction with this procedure, which I called "free association", I found that patients' dreams could be fruitfully analyzed to reveal the complex structuring of unconscious material and to demonstrate the psychic action of repression which, I had concluded, underlay symptom formation. I use now the term "psychoanalysis" to refer to my new clinical method and the theories on which it is based. I even made "self-analysis" of my own dreams and memories of childhood. My explorations of my feelings of hostility to my father and rivalrous jealousy over my mother's affections led me to fundamentally revise his theory of the origin of the neuroses. But I have not invented anything new, as after reading in English Shakespeare throughout my whole life, I found how much he excelled in understanding human psychology. And if I even go further, my Jewish secular origins had a significant influence in the formation of my intellectual and moral outlook, especially with respect to my intellectual non-conformism, and to the substantial effect on the content of psychoanalytic ideas. But, enough of that, let me simplify my point.

The result of my research is that: Men are strong so long as they represent a strong idea they become powerless when they oppose it. That is the strong of my strength. Unlike the common belief, the ego is not master in its own house, we think we are, but from error to error one discovers the entire truth. I found that the mind is like an iceberg, it floats with one-seventh of

its bulk above water. So, one has to be honest with himself and not be afraid to talk about his problems, as it is a good exercise. You talked a lot about freedom, but most people do not really want freedom, because freedom involves responsibility, and most people are frightened of responsibility. In what I do concur with your ideas is that civilization began the first time an angry person cast a word instead of a rock. The first requisite of civilization is that of justice, in the Dreyfus Affair and anywhere else. Psychoanalysis helps us to acknowledge the fact that neurosis is the inability to tolerate ambiguity. A man should not strive to eliminate his complexes but to get into accord with them: they are legitimately what directs his conduct. Unexpressed emotions will never die. They are buried alive and will come forth later in uglier ways. So, you have to express your emotions as you heard me do about my childhood experience. Men are more moral than they think and far more immoral than they can imagine. My life has been until now a long series of struggles and I am afraid that in the future it will continue to be so. But, remember that one day, in retrospect, the years of struggle will strike you as the most beautiful. Finally, I am a European, completely so, even that America is the most grandiose experiment the world has seen, but, I am afraid, it is not going to be a success.

Jacque Corot (aside) – What is your secret, you revolutionary innovators, Freud, Tolstoy, Shaw, Zola, Ibsen, Curie, Eiffel, Monet, from what sources do you find the strength to develop your theories, your art? You are from different nationalities, different backgrounds, yet all of you are not conservative, nor religious, maybe the secret is in your childhood, in your dreams, maybe Freud has to psychoanalyze all of you in order to find your secret?

Ernesta Stern – You heard what our dear friend Freud said about America, so what do you answer Mark Twain, who are so American, although you are living now mostly in London.

Mark Twain – Actually, dear Ernesta, when I saw such a distinguished audience gathered here I was very glad because I hoped that you'll overlook me. It is better to keep your mouth closed and let people think you are a fool than to open it and remove all doubt. It usually takes me more than three weeks to prepare a good impromptu speech. I have not prepared a speech and now you'll know for sure that I am a fool. People might gather the wrong impression that there is an animosity between Freud and me. But it is quite the contrary, we are good friends and we share much in common, Freud attended one of my public readings in Vienna in February 1898. I also spoke a couple of years ago to the Concordia Press Club in Vienna and delivered a speech "Die Schrecken der Deutschen Sprache" on the horrors of German to the great amusement of the audience. Actually, during my stay in Germany in 1878 I had a dream, that maybe you can analyze my dear Sigmund, that all bad foreigners went to German heaven, couldn't talk and wished they had gone to hell. I have another dream, deeply rooted in the American dream that one day our nation will rise up and live out the true meaning of its creed – that all men are created equal. And then the most grandiose experiment that world has seen, dear Sigmund, America is really going to be a success and that the twentieth century will be the century of America. I am an anti-imperialist in the context of the schrecklich Philippine-American War, an adamant supporter of the abolition of slavery and the emancipation of slaves, a staunch supporter of women's rights and an active campaigner for women's suffrage. I am in favor of labor unions, support labor movement and am critical of organized religion. If Christ were here now there is one thing he would not be – a Christian. So, if America will adhere to its ideals, as I wish, the new century will indeed be American.

I would say even more, that probably within a decade or two America will prevail and the empires of Germany, Austria, Turkey and Russia will cease to exist. I quite doubt the future of Palestine dear Herzl that I visited in 1867, I found it dotted with nasty villages of miserable huts and the usual assemblage of squalid humanity, disfigured wretches fringed with filthy

rag and infested vermin, naked and sore-eyed children in all stages of mutilation and decay. But maybe when your pioneers, dear Herzl, will emigrate there the situation will improve.

I don't understand anything in psychology as Freud, but I have made some observations on human nature that I am willing to share with you instead of making a speech. I see here many aged people as I am, who might worry about old age. I can tell you that - Age is an issue of mind over matter. If you don't mind, it doesn't matter. Life would be infinitely happier if we could only be born at the age of eighty and gradually approach eighteen. And to you dear Ibsen I have an insight to Thomas Stockman - Whenever you find yourself on the side of the majority, it is time to pause and reflect. I hear Ernesta that the schooling system in France is excellent, as far as I experienced - I have never let my schooling interfere with my education. And to you dear Tolstoy I would say that the two most important days in a man's life are the day he is born and the day he finds out why. Dear Zola, who is always in search of the truth, I have found that if you tell the truth, you don't have to remember anything. Truth is the most valuable thing we have. Let us economize it. When in doubt tell the truth. Don't worry that you were not chosen to the Academie - It is better to deserve honors and not have them than to have them and not deserve them. I admire the inventiveness of Marie Curie and Rontgen but the greatest of all inventors in humanity is still - Accident. To you, Clemenceau I say that in America as in France, we have the best government that money can buy. You all love to travel and that is why you are so open-minded, as travel is fatal to prejudice, bigotry, and narrow-mindedness. Finally, do the right thing. It will gratify some people and astonish the rest. Don't expect too much from men - Man was made at the end of the week's work, when God was tired. Men's ideal life consists of good friends, good books and a sleepy conscience. When they argue - they get their facts first then they distort them as needed. When they die they can choose between Heaven for the climate and hell for the company. I found out that there are basically two types of people. People who accomplish things, and people who claim to have accomplished things. The majority belongs to the 2nd, but all of you belong to the 1st!

Jacque Corot (aside) - It is so refreshing to find a rare combination between wisdom, integrity and a vivid sense of humor. In too many cases ethicists and conscientious men and women take themselves so seriously, sometimes in a fundamentalism of extreme pacifism, human rights at all costs, equality equaling communism, being no less fanatic than bigots, neoliberals, racists and nationalists. One has to find the right proportion between the ideals, the middle way, and above all - doing it in humility, with a sense of humor, and empathy.

Ernesta Stern - I invite now the famous singer and actress Yvette Guilbert to sing some of her hits, we haven't seen her lately and I am glad that she seized the opportunity of the turn of the century to come and visit us. She is befriended to many of you, my dear guests, so welcome!

Yvette Guilbert - Thank you my dear Ernesta for inviting me. It is not a secret that since 1896 I am seriously ill and I am considering putting an end to my career shortly. But not only I am ill, France is also ill because of the Dreyfus Affair that divides families, friends and the whole French society in two between Dreyfusards and Antidreyfusards. We all know of your affinities dear Ernesta, and most of your friends and guests are Dreyfusards - Zola, Clemenceau, Monet, Sarah Bernhardt, Marcel Proust, Herzl, Freud... I personally was Antidreyfusard as I truly believed in Dreyfus' guilt. And I was in good company too, with most of the politicians, the government, the army, the press and public opinion, with prominent people as Paul Valery, Edgar Degas, Auguste Rodin, Renoir, Toulouse-Lautrec. You would say, yes, but the fiercest opponent to Dreyfus was Edouard Drumont the anti-Semite, whom I abhor. Not all of us are Drumonts, how can I be called an anti-Semite by believing that Dreyfus is guilty, while my husband whom I married in 1897 and cherishes

most Max Schiller is Jewish. He is an impresario and has suffered much because of the anti-Semitism that was acerbated after the Dreyfus Affair. All of you here present maintain that you are open-minded, liberals, that you love France, yet many of you have broken their relations with people like me just because of our divergence of opinions a propos Dreyfus. You stigmatize us as anti-Semites, and this is racism, exactly as stigmatizing all the Jews as God-murderers because one of them Judas Iscariot denounced Jesus to the Romans, as stigmatizing all the Jews as traitors because one of them Dreyfus was proven guilty by our tribunals. So, please don't accuse me and the majority of Frenchmen of anti-Semitism just because Drumont and many others of us are anti-Semites. Give us the credit of our beliefs, even if we are wrong, which we probably are according to the latest developments, but this was not done mischievously by most of us, and if truth was distorted by some people in the army or the government they should be punished. At the dawn of the new century, Frenchmen should reunite, France should recover again its position as humanity's conscience, and old friends should hug each other in a spirit of forgiveness, empathy, containment and tolerance.

(Yvette and Ernesta hug and kiss with tears in their eyes as guests applaud with enthusiasm)

Jacque Corot (aside) – Life is short, except mine of course, as I live now for 80, 120 years or maybe forever, being a virtual protagonist anyhow. All this evening, anyhow, existed or not, I don't know, or I made it up in my feverish mind. Anyhow, I fully concur with Yvette's insight that people should reconcile, not be fanatic, live in harmony, in fraternity, peacefully.

Yvette Guilbert reappears, she is dressed in bright yellow with long black gloves and stands perfectly still, gesturing with her long arms as she sings. She accompanies her songs with monologues, being called a "diseuse", her lyrics are raunchy, their subjects are tragedy, lost love and the Parisian poverty from which she had come. And the audiences love her, at Ernesta Stern's Salon, as well as in Paris, the French Riviera, in England, Germany, the US.

Yvette Guilbert – I am pleased to see here so many friends. Sigmund Freud who attended many of my performances, corresponds with me despite our divergence of opinions on the Affair, and has my signed photo on his desk. The first time we met was in August 1889 when he came to see me at the Eldorado, at the recommendation of Mme Charcot. Toulouse-Lautrec who made so many of my portraits and caricatures, even a whole book, and I forgave him on presenting me in a distorted and distasteful manner. George Bernard Shaw who wrote a favorable review highlighting what he perceived my novelty. I am surprised that you didn't invite the Prince of Wales to whom I performed also in a private party. But my dear friend Sarah Bernhardt is here and so is Marcel Proust, who wrote about me his first article in *Le Mensuel*. I met all of you at the Moulin Rouge, Le Chat Noir, at private Salons. I do my utmost to revive also traditional French folk songs, besides my original chansons, with their sharp anti-bourgeois and anti-establishment tone, you see, dear friends, I am not always a supporter of the establishment. I'll sing for you a repertoire of 10 songs – 5 original and 5 folk songs: *Nini peau d'chien* by Aristide Bruant, *Je suis pocharde* by Louis Byrec, *Le fiacre* by Leon Xanrof, *Fleur de berge* by Jean Lorrain, *D'elle a lui* by Paul Marinier. And from the classics – *Le temps des cerises*, *Plaisir d'amour*, *Fanfan la Tulipe*, *Au pres de ma blonde* and finally *Vive la rose*. I hope that you'll enjoy those songs, with the spirit of Paris and France.

(We see and hear Yvette Guilbert from old records and films on the screen, then the actress sings 10 French Belle Epoque songs from the end of the 19th century, and traditional songs)

Ernesta Stern – No need to introduce to you Henri de Toulouse-Lautrec, a painter, printmaker, draughtsman, caricaturist and illustrator, whose immersion in the colorful, theatrical and

cabaret life of Paris in this fin-du-siecle, produced a collection of enticing, elegant and provocative images of the modern, sometimes decadent, affairs of Paris and our times.

Henri de Toulouse-Lautrec – In the spirit of what our dear Yvette has just said, what I admire in you dear Ernesta is that you are not a fanatic, you are befriended with the pillars of social justice as Zola, Tolstoy, Shaw, Ibsen and Clemenceau, but you allow in your salon more frivolous and less moral libertines as my dear friend Oscar Wilde and me. As you know I am an anglophile and while in London I met and befriended Wilde. When he faced imprisonment in Britain I was among the few who became a very vocal supporter of him and I made a portrait of Wilde during his trial. You've probably heard that my father is a Count, we are descendants of the counts of Toulouse, but my tastes are far more popular, in women and in alcohol, and I am not ashamed of it. I won't plead that the reason for my lousy conduct is because I am mocked for my short stature and physical appearance. I hope, dear Ernesta, that within 50 or 100 years, handicapped people like me would be treated more fairly and not as curiosities fit for the circus. I am proud that I have achieved on my own quite a career, since I started in 1885 to exhibit my work at the cabaret Mirliton of [Aristide Bruant](#) here present. By the way, Bruant was last year a candidate for the workers' district of Belleville and received only 525 votes... I made several portraits of Suzanne Valadon and supported her ambition as an artist and you know how difficult it is for women to be painters and even writers. As I am a gentleman, so-called, I won't disclose what the nature of our relationship was, I would just say that I had a great admiration for her as an artist. Anyhow, I painted for Moulin Rouge and other cabarets not only depictions of our Yvette Guilbert, but of the dancer Louise Weber, better known as La Goulue who created the can-can, and of the dancer Jane Avril as well. After achieving recognition I took part from 1889 to 1894 in the Salons des Independants with landscapes of Montmartre. It was an honor for me to expose with Cezanne and Gauguin.

Still, my talent is nothing in comparison to the talent of Van Gogh, with whom I exhibited in Paris. I have much in common with your Cyrano, dear Rostand, not because both of us are so handsome, with my nose and his legs one could draw the ideal man, but because in 1890 during the banquet of the XX exhibition in Brussels, I challenged to a duel the artist Henri de Groux who criticized Van Gogh works and refused to have his works displayed in the same gallery as Van Gogh. You all know that de Groux apologized and the duel never took place because he was afraid of La Botte de Toulouse which is even more fatal than Paul Feval's La Botte de Nevers, especially taking into consideration the size of mes bottes or my boots. And as Feval's Le Bossu was not really a Hunchback, I am not really a midget, and at a duel I recover my true nature, just as Le Bossu and Cyrano. In a decade, who will ever know a de Groux existed while Van Gogh will be acknowledged as one of the greatest painters in history. What you don't know probably is that this de Groux moved to Paris, befriended Emile Zola, and during the social unrest resulting from the Dreyfus Affair, he acted as one of Zola's bodyguards. Which is a pity because if Zola had asked me I could act as his bodyguard and nobody would dare touch him. But, treve de plaisanteries, I am pleased that you returned to Paris, dear Zola, and that you are free again and your life is not in danger anymore.

Despite my collapse from exhaustion I recovered at the sanatorium and I returned to work at my studio. I work quietly in my corner, as I don't belong to any school, I paint things as they are, I don't comment, I record, even if things are ugly, as ugliness has its beautiful aspects, it is thrilling to discover them where nobody else has noticed them. I am just trying to do what is true and not ideal. For me only the human figure exists, landscape should be no more than an accessory. I don't try to do something because it is new, novelty is not a quality per se, it is seldom the essential, my purpose is only to make a subject better from its intrinsic value. I hope to live for many more years to come, as I have plenty to say, and to paint, to experience.

But if the Angel of Death will arrive sooner than I choose so, I'll duel with him (raises his cane, fencing with an invisible enemy), borrowing the lines from your *Cyrano*, dear Edmond:

Prince, demande a Dieu pardon!
 Je quarte du pied, j'escarmouche,
 Je coupe, je feinte... He ! la, donc !
 A la fin de l'envoi, je touche.

Jacque Corot (aside) – What a tragedy, what a waste, such a talent, and to die so young at the age of 36, after a life of debauchery, you and Van Gogh have become much famous, 50 and 120 years later, with your paintings sold at astronomical sums. You'll live forever, even if both of you had such a miserable life. A year after your death Zola was murdered after all, probably because you were not there to guard him with your famous talent as *escrimeur*. But the attitude towards handicapped will change drastically within 50 and 100 years from your death. They'll become an integral part of society, respected and encouraged to study, to pursue a career, ceasing to be ridiculed, and even at the Comedie Francaise, deaf people will be seated in stage boxes at half a price with acoustic devices and captions in front of them.

Ernesta Stern – The night is young, this would be a night to remember. We have with us many guests from all over Europe and I am extremely pleased to invite for a speech a dear guest, William Schwenck Gilbert, the English dramatist, librettist, poet and illustrator, best known for his collaboration with composer Arthur Sullivan, which produced fourteen comic operas.

W. S. Gilbert – If you expect me to contribute something new or witty or important to your guests dear Ernesta you are probably mistaken. Furthermore, if they hear me they will probably confirm the general opinion that I've an irritating chuckle, I've a celebrated sneer, I've an entertaining snigger, I've a fascinating leer. Each little fault of temper and each social defect in my erring fellow creatures I endeavor to correct. Life is a joke that's just begun. Darwinian man, though well-behaved, at best is only a monkey shaved. You have no idea what a poor opinion I have of myself and how little I deserve it. Anyhow, dear Zola, Clemenceau, Ibsen and Tolstoy, I'm really very sorry for you all, but it's an unjust world, and virtue is triumphant only in theatrical performances. We live in a world where everyone is somebody, but actually no one's anybody. I think therefore, that it is my duty to live up to my reputation. Those are my impressions on the world that I conveyed in my 14 comic operas composed by Arthur Sullivan, and that you have probably seen most of them – H.M.S. Pinafore, *The Pirates of Penzance*, *Princess Ida*, *The Yeomen of the Guard*, and *The Mikado*. I really cannot understand why distinguished playwrights as Oscar Wilde and George Bernard Shaw who are with us tonight maintain that I have inspired them, maybe to write quite the opposite of what I've written, as their works are by far superior to mine, I'm joking of course, I have just lyrical facility and a modest mastery of metre, and this probably has contributed to the poetical quality of comic opera to a position it have never reached before, which was low.

Jacque Corot (aside) – Gilbert and Sullivan's comic operas are still as popular as in their premieres all over the world, even at schools. Gilbert's sense of humor is so subtle, so modern, so relevant, that we can hear his operas time and again and always enjoy them as in the first time. He understands human nature as well as Moliere, Aristophanes, Wilde & Shaw.

Ernesta Stern – Gilbert brought with him 4 actors who will perform some of his comic operas most famous scenes, from *The Mikado*, *The Pirates of Penzance*, H.M.S. Pinafore, and more.

(We see on the screen settings of Gilbert and Sullivan's operas, while we hear the 4 actors who perform famous scenes from *The Mikado*, *The Pirates of Penzance*, H.M.S. Pinafore...)

Ernesta Stern – I love Jules Verne, I think that he is one of the best authors in France and in the world, and I know that I'll receive because of that a lot of criticism by Feinschmeckers. But Vox populi vox Dei, as his novels are best sellers, he is the most translated French novelist, and he is perceived by serious scientists as a futurist whose forecasts are realistic.

[Jules Verne](#) – Thank you dear Ernesta, I am not going to tell you anything new about my books *Around the World in Eighty Days*, *Twenty Thousand Leagues under the Seas*, *Journey to the Center of the Earth*, *Michel Strogoff*, *L'île mystérieuse*, *Cinq semaines en ballon*, *De la terre à la lune*, *Les enfants du capitaine Grant*, my plays, my essays, my poems. But to answer your question about our forecasts for the next 50 or 100 years, I'll tell you and your guests about a book that I've written in 1863 but my publisher Pierre-Jules Hetzel refused to publish because he thought it was too unbelievable. I'll let you and posterity judge who were right.

The book is called "Paris in the Twentieth Century", I would call it a science fiction novel. It presents Paris in August 1960, where society places value only on business and technology. I know dear Ernesta and Marie Curie how much you value culture and literature, although you belong to the business and scientific elites, but this will gradually vanish in the next decades and society will become extremely materialistic. Anyhow, 36 years have elapsed since I wrote the book and in many cases I notice that my forecasts were true, but probably your grandsons in 1960 or great grandsons in 2020 will judge me. Who knows, maybe if in 2000 my book will finally be published it will become a best seller, better than *A voyage to the moon*, which might happen by 1960. My main character, Michel searches in the library classic literature from the 19th century – Hugo and Balzac, but he finds there only books about technology.

And what kind of technology we'll have by then – cars powered by internal combustion engines, gas stations, paved asphalt roads, elevated and underground passenger train systems, high-speed trains powered by magnetism and compressed air, skyscrapers, electric lights that illuminate entire cities at night (remember that I wrote it in 1863), fax machines that I call picture-telegraphs, elevators, primitive computers which can send messages to each other as part of a network sending information across vast distances, the utilization of wind power, automated security system, the electric chair, and remotely-controlled weapon systems, as well as weapons destructive enough to make war unthinkable, maybe following your new invention of radioactivity, dear Marie Curie. My book predicts the growth of suburbs, of mass-produced higher education, department stores, maybe as you described so well, my dear Emile Zola, massive hotels, electronic music, a new musical instrument similar to a synthesizer, and the replacement of classical music performances with a recorded music industry, which will leave you, dear Joseph Joachim unemployed, unless you record your music. The entertainment industry would be dominated by lewd stage plays, often involving nudity and sexually explicit scenes. But on the other hand, feminism shall prevail in the new society, with women moving into the workplace, but with a rise in illegitimate births. I know that all those inventions are far-fetched, but so were my inventions in *Around the World in 80 days*, submarines, flights, and who knows trips to the moon and to the center of the earth.

Jacque Corot (aside) – Dear spectators of the play, I admit that I have given myself poetic license and described in modern terms what Verne said in different terms, but all the inventions are there in his book, and the book indeed became a best seller when it was discovered and published in 1994. Verne was a true futurist and he had a scientific vision unprecedented in literature. He was belittled by Zola and by most "serious" authors, but he was loved by the French public, and is still loved by the world, in books, films and plays.

Ernesta Stern – I am pleased to introduce to you a young dancer, Isadora Duncan, she is only 22 but she reinvented dance in a modern technique that is completely revolutionary. She

moved to London last year from her native California, she divides her time between London and Paris, but I believe that she'll settle finally here, as the French society is breaking convention. She performs in the Salons of the Parisian society and returns to the Greek roots of classic dance as can be seen in Greek vases and bas-reliefs in the British Museum and the Louvre. She'll be accompanied with his piano music, by our dear [Reynaldo Hahn](#), who with Marcel Proust, comes regularly to my Salon. He was born in Venezuela 25 years ago, but lives in Paris and is a composer. He is known for his beautiful songs and admires Isadora Duncan. In fact he said about her: "In those moments where beauty and emotion fuse and climax, something of the immortal floats about the dancer; she wanders in a divine ray, in a mist where all works of art circle in unison with her." Isadora dear, the floor is yours.

[Isadora Duncan](#) – I'll just say a few words about my conception of dancing. I imagine that I have traced dance to its roots as a sacred art. I developed from this notion a style of free and natural movements inspired by the classical Greek arts, folk dances, social dances, nature and natural forces as well as an approach to the new American athleticism which included skipping, running, jumping, leaping and tossing. Let the dancers come forth with great strides, leaps and bounds, with lifted forehead and far-spread arms, to dance. Let us focus on natural movement emphasized steps, such as skipping, outside of codified ballet technique. I think that each movement was born from the one that preceded it, that each movement gave rise to the next, and so on in organic succession. I believe that this philosophy will create modern dance, not rigid as ballet, but natural, restoring dance to a high art form instead of merely entertainment, as I strive to connect emotions and movement: I spent long days and nights in the studio seeking that dance which might be the divine expression of the human spirit through the medium of the body's movement. I believe dance is meant to encircle all that life has to offer—joy and sadness. This is exemplified in my costume of a white Greek tunic and bare feet. Inspired by Greek forms, my tunics also allow me a freedom of movement that corseted ballet costumes and pointe shoes does not. In a word – we were once wild, don't let them tame us. It has taken me years of struggle, hard work, and research to learn to make one simple gesture, and I know enough about the art of writing to realize that it would take as many years of concentrated effort to write one simple, beautiful sentence. I dance before you but I don't tell you what it means, because otherwise there would be no point in dancing it.

Movements are as eloquent as words. The dancer's body is simply the luminous manifestation of the soul. The wind? I am the wind. The sea and the moon? I am the sea and the moon. Tears, pain, love, bird-flights? I am all of them. I dance what I am. Sin, prayer, flight, the light that never was on land or sea? I dance what I am. To awaken human emotion is the highest level of art. People don't live nowadays: they get about ten percent out of life. I hope to prove you that a dancer, if she is great, can give to the people something that they can carry with them forever. They can never forget it, and it has changed them, though they may never know it. My motto is "sans limites", in dancing and in life, as you'll see in a few moments.

(We see on the screen Isadora Duncan dancing, as well as photos of her on stage, then we watch the dancing actress who dances, accompanied by the piano music of Reynaldo Hahn)

Jacque Corot (aside) – Isadora Duncan has become a legend in her life time, as she has reinvented dancing, she is perceived as the "Mother of Dance". Duncan also had a relationship with the poet and playwright [Mercedes de Acosta](#), as documented in numerous revealing letters they wrote to each other. In one, Duncan wrote, "Mercedes, lead me with your little strong hands and I will follow you – to the top of a mountain. To the end of the world."

Ernesta – Dear friend, I want to welcome our Portuguese friend, the author and diplomat Eça de Queirós, one of ours as he lives in Paris since 1888 and before he lived in England for a

similar period, he lived a couple of years in Havana, Cuba, visited Egypt, the United States, central America, Canada, all over the world. But he is mostly known by his naturalist novels, which are among the best, and Zola his friend maintained to me that he is better than Flaubert. But Eca de Queiros is one of us, a Dreyfusard, he knows the French society better than most.

[Eça de Queirós](#) – If I would have to sum up my career as a diplomat in one sentence, I would say: Politicians and diapers have one thing in common. They should both be changed regularly, and for the same reason, as human nature is the same all over the world. Except Englishmen, of course, a strange people, for whom it is out of the question that anyone can be moral without reading the Bible, and strong without playing cricket, and a gentleman without being English! That is why I asked to be appointed consul-general in Paris, the best position in the world. Unfortunately the cultural world has not read my novels *O crime do Padre Amaro*, *O primo Basilio*, or *A reliquia*, and it is a pity because the Portuguese Almeida Garrett and Julio Dinis, the Brazilian [Machado de Assis](#), author of *Dom Casmurro* who is with us tonight, and Jose de Alencar, have much to offer to the world cultural patrimony.

Maybe I am less known because I don't possess absolute beliefs on social justice, as Zola, Ibsen or Tolstoy. I believe that - Human effort may manage at its best to transform a starving proletariat into a well-fed bourgeoisie; but then a worse proletariat emerges from the bowels of society. Jesus was right, there will always be the poor among us. Which proves that this humanity is the greatest error that God ever committed. Perhaps one day, when socialism is the State religion, there will be niches in the temples, with a little lamp in front, and inside, images of the Fathers of the Revolution: Proudhon complete with glasses, Bacunin looking like a bear under his Russian pelts, Karl Marx leaning on his staff – symbolic of the shepherd of souls. Superior forms of thought have a fatal tendency of later becoming revealed law: and all philosophy ends, in its last stages, by becoming religion. And a religion needs not be Christian or Moslem, it can be socialist, capitalist, or nihilist as well. So, if I have to convey a message to future generations it is to be moderate, don't be a fanatic, don't believe too much in what you read in the press, as the publications are either news or politics, and you described it so well in your fantastic book *L'argent*, dear Zola. But I speak too much, nothing is more difficult than being clear and brief, it takes a genius, and what a pity, genius I am not,

Jacque Corot (aside) – The house of literature masterpieces is so crowded that you have to make a selection. By language as you prefer to read literature in the languages that you master, by quality as you prefer to read all the Zola's 20 books of *Rougon-Macquart* than read another naturalist author, and by diversity as you don't want to read only naturalist literature, but also romantic and modern literatures. So, in those selections you might overlook excellent authors as Eca de Queiroz. Actually, I discovered him only after I have learned Portuguese and I wanted to read the best authors in this language, but how many intellectuals study Portuguese unless it is their mother tongue? You tend to read first of all literature in the six more significant European cultures: in French, English, German, Spanish, Russian & Italian. And Portuguese literature comes in at a lower place, with Dutch, Norwegian or Czech literatures. Unless of course you are a giant as Ibsen, Strindberg, Andersen, Homer or Plautus.

Ernesta Stern – I am pleased to have with us tonight one of the most promising composers and conductors, the German Richard Strauss, who has given us in recent years some extraordinary masterpieces, such as *Till Eulenspiegel's Merry Pranks*, *Don Quixote*, Also sprach Zarathustra, *Ein Heldenleben*. He is principal conductor of the Staatskapelle Berlin at the Berlin State Opera. Many critics describe him as the successor of Wagner and Liszt.

[Richard Strauss](#) – Well, I am proud to be compared to another Richard – Wagner, and to another Strauss – Johann, but unfortunately I am not famous like the first and popular like the

second. Actually, if there is a comparison to be drawn, it is between Gustav Mahler and me, as both of us represent the late flowering of German Romanticism, while pioneering subtleties of orchestration combined with a modern harmonic style. I would like to further elaborate on the origins of a composer's muse - The melodic idea which suddenly falls upon me out of the blue appears in the imagination immediately, unconsciously, uninfluenced by reason. It is the greatest gift of the divinity and cannot be compared with anything else. It is better to conduct with the ear instead of with the arm: the rest follows automatically. But even greater composers – like in Mozart's melodies, Beethoven's symphonies, Schubert's songs and acts two and three of Wagner's *Tristan* are symbols in which are revealed the most profound spiritual truths. They are not "invented", but are "given in their dreams" to those privileged to receive them. In my opinion, Gustav Mahler's work is one of the most important and interesting products in the history of modern creative arts. Ultimately, my wife, my child, my music, Nature and the sun; they are my happiness. I fully concur with the beliefs of most of you and it is clear to me that the German nation will achieve new creative energy only by liberating itself from Christianity. But I abstain to speak publicly as declarations about war and politics are not fitting for an artist, who must give his attention to his creations and works.

Jacque Corot – Mann tracht und God lacht, dear Richard, as you cannot abstain to take a position about politics. Zola and Hugo did it and paid the price, while you tried to abstain from being involved with the Nazis, but when your Jewish daughter-in-law Alice Strauss was placed under house arrest in Garmisch-Partenkirchen in 1938, you used your connections in Berlin, including opera-house General Intendant Heinz Tietjen, to secure her safety. And you were accused of collaboration with the Nazis because in 1933, you replaced Arturo Toscanini, tonight with us, as director of the Bayreuth Festival after Toscanini had resigned in protest to the Nazi regime. The Nazis banned Debussy and Mahler, who are also with us, and most of the guests tonight, but you tried to overlook those bans, without much success. Toscanini said about you: "To Strauss the composer I take off my hat; to Strauss the man I put it back on again". But at least a cooperation came out of our evening, or so I prefer to believe, following your meeting with Oscar Wilde, you composed one of the best operas *Salome*, based on Wilde's play. The combination of the Christian biblical theme, the erotic and the murderous, which so attracted Wilde to the tale, shocked opera audiences from its first appearance.

Ernesta Stern – Camille Saint-Saens is undoubtedly a polymath, as not one in our century masters so many proficiencies as he does. He is not only one of the best composers, conductors, organists and pianists of our era, he is a writer as prolific in prose as in music, he is a poet, a philosopher, a playwright, a travel writer, an animal rights activist (what about women?), a critic, and has published a few months ago a masterpiece "Portraits et Souvenirs", with critic portraits of Berlioz, Liszt, Gounod, Bizet, a brilliant essay on Wagner's music. He is called the French Beethoven, and we love and admire him for his brilliant Introduction and Rondo Capriccioso, the Second Piano Concerto, the First Cello Concerto, Danse macabre, his opera *Samson and Delilah*, his Third Violin Concerto, Third Organ Symphony, and finally for his world-wide masterpiece *The Carnival of the Animals*. Camille has also a surprise for us.

[Camille Saint-Saens](#) – You mentioned, dear Ernesta, my personal reflections regarding the Wagner Illusion. Personally, I believe that so long as commentators confine themselves to describing the beauties of Wager's opera, I have no quarrel with them. But as soon as they get down to details, trying to explain how this differs from opera, lyric drama, why music drama must deal in symbols and legends, one no longer understands anything about the subject at all. I travel a lot, all over the world, and I even compose when I am abroad, when my popular Fifth Piano Concerto was composed in Louxor in Egypt, and that's why it is called *L'Egyptien*. You forgot to mention many more occupations, acoustic expert and astronomy

among others, and I published an article in the journal of the French Societe Astronomique. You all remember also how last year we premiered at the new arena of Beziers Dejanire, a performance of Louis Gallet's epic verse-drama Dejanire, with my score of accompanying symphonic music, choruses and ballet. Some of you were among the 12,000 spectators and witnessed the ecstatic reception of the choir of hundreds, massed military bands, and an orchestra with 18 harps and 25 trumpets. But my most exhilarating experience was a concert that I gave at Cambridge in June 1893, when Bruch, Tchaikovsky a few months before he died, and me performed at an event marking the award of honorary degrees to all three of us. I was not active as most of you during the Dreyfus Affair, but I gave money for the Dreyfus defense, and because of that I was surnamed Kahn. But don't expect me, dear friends, to talk about music, as nothing is more difficult, the strongest and subtlest minds go astray. I'll just say that I produce music as an apple tree produces apples and that I like good company but I like hard work better. Yet, tonight I made an exception, as it combines business with pleasure.

And this is the surprise – I was commissioned by the managing committee of the Exposition Universelle to write a work for the opening of the concerts that will perform there in a few months. The work is not finished but in avant-premiere I give you extracts from my cantata *Le Feu Celeste*, written to celebrate the glories of electricity. It is a work for soprano soloist, narrator, chorus, orchestra and organ, a kind of metaphorical music on the new fairy electricity, based on the famous poem by [Armand Silvestre](#) “Les fils de Promethee”, from his recueil “Le pays des roses”. Ernesta guaranteed Armand immunity to recite his poem, because as you all know, he is a member of the Ligue de la patrie francaise, founded this year, which however moderate is anti-Dreyfusarde. But some of the crème de la crème of French cultural pillars are also members, such as [José-Maria de Heredia](#), [François Coppée](#), [Jules Lemaître](#), [Maurice Barrès](#), [Juliette Adam](#), [Paul Bourget](#), [Léon Daudet](#), [Edgar Degas](#), [Vincent d'Indy](#), [Pierre Louÿs](#), [Charles Maurras](#), [Frédéric Mistral](#), [Albert Sorel](#), [Suzanne Valadon](#), [Jules Verne](#). But we are tonight in a spirit of friendship and reconciliation by art, let bygones be bygones.

Jacque Corot (aside) – Camille Saint-Saens had 3 faults: he was too good, too frank and too modest. He was the perfect cultural person of the Belle Epoque, a polymath, a traveler, a composer, a writer, who died at the age of 86 after a rewarding career, after giving us some of the best musical works ever composed – cello, piano and violin concerti, symphonies, operas, chamber music, piano and organ music, choral music, sacred vocal music, songs, incidental. Yet, he had a problem, because of his combative nature, unafraid of controversy, his love of polemics fueled debates, on top of that he had a reputation of being peu mondain, not a socialite, and so he did not befriend people in official positions of power. Actually, he was in a category of his own, not appreciated as much as he deserved, but he was one of the best.

Camille Saint-Saens - I'll accompany Silvestre in a special adaptation for piano four hands, and I'll be accompanied, with my rusty hands, by the young Arthur Rubinstein, not yet 13.

(Armand Silvestre recites his poem “Les fils de Promethee”, accompanied alternately by a special adaptation for piano four hands, at the avant-premiere of extracts from *Le feu celeste* by Camille Saint-Saens, performed by the composer and Arthur Rubinstein on the piano).

Armand Silvestre –

Armand Silvestre/ Les Fils de Prométhée

Eripuit cælo fulmen.

I

Devant les splendeurs d'un autre-âge,
 Les siècles longtemps prosternés
 Tendaient vainement leur courage
 Vers la gloire de leurs aînés.
 Les spectres de Rome et d'Athènes
 Voilaient, de leurs ailes lointaines,
 La route à la postérité
 Et l'avenir demeuré sombre,
 Cheminait, sans sortir de l'ombre
 De l'héroïque antiquité !

Soudain, comme un souffle s'élève
 Des bords pourprés de l'horizon,
 Ou comme luit l'éclair d'un glaive
 Sorti du fourreau, sa prison,
 Plus farouche qu'une épopée
 Et plus lumineux qu'une épée,
 L'esprit moderne a resplendi,
 Du bout de son aile sonore
 Secouant des clartés d'aurore
 Au front du vieux monde engourdi !

Quel réveil ! La science humaine,
 Levant son flambeau rajeuni,
 Par des chemins nouveaux ramène
 L'âme au chemin de l'infini :
 Tout navire emporte son hôte ;
 La toison d'or de l'Argonaute
 Se déchire aux mains des vainqueurs.
 L'homme fouille jusqu'en son être,
 Et la sainte ardeur de connaître
 Brûle en même temps tous les coeurs !

Tout est conquis dans la nature :
 Au ciel, restait à conquérir
 Sa flamme redoutable et pure,
 Le feu qui fait vivre et mourir !
 Aigle s'envolant de son aire,
 Volta lui ravit le tonnerre
 Et l'apporte à l'humanité.
 A servir l'homme condamnée,
 Par lui la foudre est enchaînée
 Et s'appelle Électricité !

Depuis ce jour que de merveilles
 Évoque ce nom triomphant !
 Quels trésors ont payé tes veilles,

Rival des dieux, humble savant !
 Cette flamme à l'azur volée
 Et, sous mille formes voilée,
 A tous nos vœux obéissant,
 Esclave douce et sans colère,
 Aux flancs du Monde qu'elle éclaire
 Circule comme un nouveau sang.

Par mille veines répandue
 A travers l'éther et le sol,
 Elle emporte dans l'étendue
 Votre âme attachée à son vol.
 Aux cordes d'une lyre immense,
 Par elle, sans fin recommence
 Le chant commencé dans nos cœurs :
 Temps et distance, tout est leurre !
 Devant elle, l'Espace et l'Heure
 Semblent fuir sur les fils vainqueurs.

II

De Phaéton brûlé magnifique folie !
 D'Icare aux flots tombant espoir audacieux !
 O rêves des vaincus ! Votre ère est accomplie :
 L'homme impie a tenté la profondeur des cieux !
 O grand voleur de feu, sublime Prométhée,
 Sous l'outrage des Temps relève enfin ton front !
 La race de tes fils, aux vents précipitée,
 Renaît dans l'air vengeur et lave ton affront !

Elle a, du firmament déchirant le mystère,
 Labouré l'infini de flamboyants sillons
 Et, de l'azur vaincu, fait pleuvoir sur la Terre
 L'or vibrant et poudreux des constellations !
 Grâce au germe éternel que son labeur féconde,
 D'une moisson de feu couvrant le sol dompté,
 Emprisonnant la foudre aux flancs meurtris du Monde
 Pour les envelopper d'un réseau de clarté,
 Tant d'éclairs jailliront de l'espace où nous sommes,
 Dans l'immensité morne où leur éclat s'enfuit,
 Que les Jours inquiets se diront que les hommes
 Ont volé leur clarté pour en parer la Nuit !

Et les astres jaloux, voyant dans l'étendue,
 Notre globe rouler dans ce nimbe vermeil,
 Croiront, qu'ayant repris leur puissance perdue,
 Les dieux ressuscités font un nouveau Soleil !

Ernesta Stern – We'll stay with classical music and welcome an old friend, one of the best musicians in the world, the Hungarian violinist Joseph Joachim. He was a close collaborator

of Johannes Brahms, and premiered his violin concerto, 20 years ago. But he started his career at the age of Arthur Rubinstein, not quite 13, with the London Philharmonic with Mendelssohn conducting, Joachim playing solo in Beethoven's Violin Concerto. Joachim studied with Mendelssohn himself his violin concerto. He was a friend of Liszt, Schuman and his wife Clara, and appeared with his own quartet as well as with Clara, Zerbini and Piatti. Our dear Shaw wrote that his popular concerts helped greatly to spread musical taste in England. So, when we say classical music in our century we mean the one and only Joachim.

[Joseph Joachim](#) – The tragic story of my career is that all the great composers that I was associated with are dead, except [Max Bruch](#), who is with us tonight. I still remember the first performance of his revised first violin concerto, which I helped him to complete, and performed in Bremen in 1868. It achieved a remarkable success and I thank him of dedicating to me his third violin concerto, after persuading him to expand a single movement into a full violin concerto. The Germans have four violin concertos and I have played them all. The greatest, most uncompromising is Beethoven's. The one by Brahms vies with it in seriousness. The most inward, the heart's jewel, is Mendelssohn's. But, the richest, the most seductive, was written by you my dear Max Bruch. Lesser known are of course my own compositions, as the Hebrew Melodies for viola and piano, and the Overture that I composed for the birthday of the Kaiser of Germany and that I performed 3 years ago. And of course, my three violin concerti, one of them performed on the opening day of the Karlsruhe Music Festival, with Franz Liszt conducting. I am a man of few words, so I'll just tell you that after [Edvard Grieg](#) has cancelled his concerts in France a few months ago in protest of the Dreyfus Affair, he said that he hoped France might soon return to the spirit of 1789 defending basic human rights, and he is not worried by the much French hate mail that he received. But after Dreyfus returned from the Devil's Island and you, dear Zola, returned from exile, Grieg has agreed to make with me a recital tonight of piano and violin compositions by him, Fauré, Saint-Saens, Chopin, Brahms, Liszt, Beethoven, Schubert, Schumann and Mendelssohn.

Jacque Corot (aside) – Better and better, now I'm convinced that tonight will be the most memorable cultural event of any Parisian salon ever. What a fine taste has this excellent Ernesta Stern, unless all this evening has never happened, because it is improbable to gather together so many celebrities under one roof, and it happens only in my old mind. But who cares, I enjoy it, the theater audience likes it, at least those who stayed for so many hours, the actors like it, it epitomizes the cultural environment of the Parisian Belle Epoque, that is what matters. I'd say therefore, *se non è vero, è ben trovato*, even if it is not true, it is a good story.

(Joseph Joachim & Edvard Grieg make a recital of piano and violin compositions by Chopin, Saint-Saens, Grieg, Fauré, Brahms, Liszt, Beethoven, Schubert, Schumann & Mendelssohn)

Ernesta Stern - Back to Paris. When we say Paris and Comedy, we can only mean Georges Feydeau. We laughed at the premiere of *L'Hotel du libre echange*, 5 years ago, but it was nothing in comparison to the hilarious receipt of *La Dame de chez Maxim's* a few months ago. The plays of Feydeau are marked by characters with whom the audiences can identify, plunged into fast-moving comic plots of mistaken identity attempted adultery, split-second timing and a precariously happy ending, *car tout est bien qui finit bien*, except in real life...

[Georges Feydeau](#) - Dear friends, I want you to love me, so I'll just say to the women here that when a woman speaks, it is to say nothing, so when she does not say anything, she is talking. And to the men who are laughing let me say that if my jokes come in your ear and come out immediately by the other, it's because, between the two, there is nothing to hold them. I see here among you many friends whose name I don't know, but I've known you for too long to

ask you. Some of us in your salon dear Ernesta are happily married because marriage is the art for two people to live together as happy as they would have lived on their own. But for the others who have lovers, let me ask: is it not more moral, the free union of two lovers who love each other, than the legitimate union of two beings without love? In praise of older women, let me say that if we could see how women would look twenty years later, we would not marry them twenty years before. And to those who want to succeed in a career let me say that if you are lazy and stubborn, you will certainly achieve something. I bought recently a painting by Alfred Sisley *La neige a Louveciennes* and I like it, but paintings are not bought because people like them, on the contrary, people like paintings because they've bought them.

Mais, treve de plaisanteries, I consider myself very lucky not only because of my lovely wife and children, but because I grew up in a literary and artistic environment, as my father was a friend of Gustave Flaubert, Theophile Gautier and Alexandre Dumas fils, and my mother was a very close friend of the Emperor Napoleon III and the Duc de Morny. When I was taken to the theater at the age of six I was so enthusiastic that I started to write a play of my own and since then I have not stopped. When Meilhac read one of my early plays he told me that it was stupid but I'll be a man of the theater, and since my first performed play *Tailleur pour dames* was premiered in 1886 the critics find my plays insubstantial, not even a comedy, but the audiences liked my imbrolios, good humor, gaiety, fun, madness, and that it what matters. Even the management of Theatre du Palais-Royal turned down Champignol malgre lui, as too unbelievable for the audiences to accept, but when the vaudeville opened ultimately in 1892 it achieved an extraordinary success, and never has one heard such laughter at a Paris theatre. And it ran for 434 performances, which is indeed unbelievable, as the success of its production in London, Berlin and New York. I hope that *La Dame de chez Maxim* will outrun the previous successes, because I need money to buy new paintings, even from Monet here.

Jacque Corot (aside) – I personally believe that there is no high culture or low culture. Victor Hugo is good culture, but so is Feydeau. Theater is divine, but film is also cultural. Opera is exhilarating and chansons are excellent too. Emile Zola is one of the best authors, but he is not better than Jules Verne. What matters is the quality of culture, comedy should be good, opera should not be boring, tragedy should not be ridiculous, philosophy should not be trivial.

Georges Feydeau – I cannot show you unfortunately scenes from my comedies because they are funny only in the context of the whole play. But I had an illumination, before films will be talking and one would see my plays, to show you silent films, funny and not funny, made by a personal friend, the film director [Georges Méliès](#), present here, who made for us a potpourri of the films that he has directed this year – it starts with the funeral of Felix Faure, the funeral not how he died, the robbing of Cleopatra's tomb, Cinderella, The bridegroom's dilemma, An up-to-date conjurer, The devil in a convent, The pillar of fire, The clown and motor-car, A mysterious portrait, Summoning the Spirits, The human pyramid, The mysterious knight, The snow man, and finally the plat de resistance that this audience will enjoy tremendously – [The Dreyfus Affair](#): Arrest of Dreyfus, Degradation of Dreyfus, Devil's Island, Suicide of Colonel Henri, Landing of Dreyfus at Quiberon, Dreyfus meets his wife, The court martial, etc. As you know I am a fervent Dreyfusard and it has been for me a pleasure to direct this film. Because the films are silent of course, I have asked the young Polish [Bronislaw Huberman](#), who will take part in a concert later this evening, to play on his violin whatever he likes from the classic and popular repertoire, from Rossini to Bizet, Jewish and Christian sacred music, Egyptian themes for Cleopatra, for Cinderella Cendrillon by Jules Massenet, and so on. You'll see – he is brilliant, only 17, a former pupil of Joachim, a good friend of Rubinstein. He is extremely expressive and flexible, in 1896 he performed the violin concerto of Johannes Brahms in the presence of the composer, who was stunned by his playing quality.

(We watch a potpourri of 1899 Georges Melies films prepared by him for the party, including Cinderella, Cleopatra, comedies and mysteries, finally the first film on the Dreyfus Affair. Accompanied by Bronislaw Huberman on the violin in a classical, sacred and popular recital)

Ernesta Stern – We have with us tonight the pillars of culture, French and international, we heard famous novelists, playwrights, poets, painters, engineers, scientists, composers, musicians, singers, actors, inventors, directors, managers, futurists, journalists, and prophets. But we still have not heard the best living sculptor Auguste Rodin, known for his masterpieces – The Thinker, The Kiss, The Burghers of Calais, Monument to Balzac, The Gates of Hell. His works departed from traditional themes of mythology and allegory, while modeling the human body with naturalism, his sculptures celebrate individual character and physicality. At the beginning he was criticized but today he has become consensus, his works favored by the government and the artistic community. He is invited to the best Parisian salons, yet he preferred to be with us tonight, displaying his loquaciousness and temperament for which he is better known. Oscar Wilde here is his follower, as well as Rilke and Mirbeau.

[Auguste Rodin](#) – Dear friends, I would like to clarify some misconceptions that were associated with my work over the years. I was called innovator, inventor, pioneer, but I invent nothing – I rediscover. At my age I have learned that patience is also a form of action, nothing is a waste of time if you use the experience wisely. Ultimately, art is contemplation, it is the pleasure of the mind, which searches into nature and which there divines the spirit of which nature herself is animated. The artist must create a spark before he can make a fire, and before art is born, the artist must be ready to be consumed by the fire of his own creation. True artists are almost the only men who do their work for pleasure. To the artist there is never anything ugly in nature, which has no ideal bodies. But you have to be simple, the more simple we are, the more complete we become. I grant you that the artist does not see Nature as she appears to the vulgar, because his emotion reveals to him the hidden truths beneath appearances. I do not correct nature, I incorporate myself into it, it directs me. And if this concept is in contradiction to the spirit of the age, I know very well that one must fight for his principles.

I really cannot understand those who maintain that art can be immoral. In art, immorality cannot exist, art is always sacred. There is no morality in nature. The human body is first and foremost a mirror to the soul and its greatest beauty comes from that. The nude alone is well dressed. Man's naked form belongs to no particular moment in history, it is eternal, and can be looked upon with joy by the people of all ages. I have unbounded admiration for the nude, I worship it like a god. In front of the model I work with the same will to reproduce truth as if I were making a portrait. I can only work with a model, the sight of human forms nourishes and comforts me. The dazzling splendor revealed to the artist by the model that divests herself of her clothes has the effect of the sun piercing the clouds. Venus, Eve, these are feeble terms to express the beauty of women. I see here also very young people, let me tell you that genius only comes to those who know how to use their eyes and their intelligence. Some people maintain that photography can also be an art, but it is the artist who is truthful, while the photographer is mendacious for in reality time never stops cold. He who is discouraged after a failure is not a real artist. The main thing is to be moved, to love, to tremble, to live, be a man before being an artist! And this applies to all forms of arts – visual arts, music and literature.

Jacque Corot (aside) – What a giant! Not only his sculptures are gigantic, he is himself a giant, like Michelangelo, but I prefer him to the Italian sculptor, as I think that Rodin is more humane, more natural, more modern. And since Rodin no sculptor has ever surpassed him.

Ernesta Stern – I would like to welcome a dear guest from Russia, the chemist Dmitri Mendeleev. I believe that culture is holistic, encompassing literature, arts, music, science and

innovations, theater, philosophy, geography, history, political and economic sciences, possibly also films, sports, fashion. One should not be at the expense of the other, and there should be equilibrium between all of them – less Latin and Greek with more chemistry and physics, if we want to have a brave, new world. Not only holistic, cosmopolite as well, encompassing all nations. Russia's culture is wrongly perceived as literature only, in the last decades also music, maybe in the next century it will be sciences and the Russians will be the first ones to send a rocket to space. In the meanwhile, our friend Mendeleev has reinvented the laws that govern chemistry, and made a vital, pioneering contribution to world's science. But maybe dear Dmitri you can explain to ordinary people as we are what is it all about.

Dmitri Mendeleev – I had a dream and in this dream I have envisioned the complete arrangements of the elements, they fell into place as required, and this gives you another facet to the interpretation of dreams, dear Freud. Following this dream I formulated the Periodic Law and created a farsighted version of the periodic table of elements. This corrected not only the accepted properties of known elements, such as the atomic weight of uranium, but also to predict the properties of new elements that are yet to be discovered, as Marie Curie has explained to you. I was a teacher and wanted only to prepare a textbook for my course, with a classification of the elements according to their chemical properties. I saw the forest, while many other scientists see only the trees. But I didn't confine myself only to chemistry, I explored also physics, chemical industry, hydrodynamics, meteorology, geology, explosives, petroleum, fuels, fertilizers, even economy, protectionist trade and agriculture, demography...

I see that I bore you as you don't expect to hear a scientific lecture on a reveillon evening. I prefer to give you some of the insights that I have found, which are far more valuable than my scientific discoveries, as there is nothing in this world that I fear to say and I have achieved an inner freedom, obtained by a lot of work, peaceful and calm work. Pleasures flit by - they are only for yourself; work leaves a mark of long-lasting joy, work is for others. It is the function of science to discover the existence of a general reign of order in nature and to find the causes governing this order. And this refers in equal measure to the relations of man - social and political - and to the entire universe as a whole. The establishment of a law, moreover, does not take place when the first thought of it takes form, or even when its significance is recognized, but only when it has been confirmed by the results of the experiment. There exists everywhere a medium in things, determined by equilibrium, and we should try to reach it.

We could live at the present day without a Plato, but a double number of Newtons is required to discover the secrets of nature, and to bring life into harmony with the laws of nature. In that pure enjoyment experienced on approaching to the ideal, in that eagerness to draw aside the veil from the hidden truth, we ought to see surest pledges of further scientific success. Science thus advances, discovering new truths, and at the same time obtaining practical results. Elaborating on your line of thought, dear Ernesta, I would say that knowing how contented, free and joyful is life in the realms of science, one fervently wishes that many would enter their portals. The edifice of science not only requires material, but also a plan. Without the material, the plan alone is but a castle in the air, a mere possibility, whilst the material without a plan is but useless matter. And, you asked us to make forecasts for the new century, let me say this: Why do the Americans quarrel, why do they hate Negroes, Indians, even Germans, why do they not have science and poetry commensurate with themselves, why are there so many frauds and so much nonsense? I cannot soon give a solution to these questions... It was clear that in the United States there was a development not of the best, but of the middle and worst sides of European civilization, the notorious general voting, the tendency to politics... all the same as in Europe. A new dawn is not to be seen on this side of the ocean.

Jacque Corot (aside) – It is quite funny to discover how in retrospective great men as Mendeleev who have revolutionized the basics of chemistry were totally wrong when they forecasted the future. To say that the twentieth century will not be the American century, was maybe reasonable to say in 1899, but without any vision of the future. In many aspects the United States has developed for the best many sides of European civilization – in literature, in sciences, definitely in films and inventions, some would say also in arts and music, in theater and political thought. But Mendeleev was also correct in some of his US forecasts – the obsessive tendency to politics, the discontents on their democratic system, too many frauds – the worst scams in world economy, so much nonsense – the excessive aspects of advertising, consumerism, reality programs, culture to the lowest standards in society, hate to black people, native Americans, xenophobia... But also civil rights, New Deal, ethical thought...

Ernesta Stern – Our last speaker for tonight, don't hide your smiles and sighs of relief, will be one of us, a Frenchman, a true revolutionary, who invented a new social science – Sociology – Emile Durkheim. Why have I kept him for the end? Because culture is to no avail if it will remain in the exclusive domain of the elites, of our salons, of the privileged 1% of the population. I don't want to comment on the revolutionary vision of communism of Marx and Engels, there is a limit to my liberal thought, I and many other rich people in France do not want to lose all our properties to the proletariat and live in a dictatorship. But I am in favor, and I hope that many of you will agree, that social justice should be achieved in our lifetime, liberte, egalite, fraternite, but not to the extreme – not anarchy, not communism, not loving others as oneself. Find the middle way – liberty but with law and order, equality based on meritocracy, fraternity without doing to others what you wouldn't want to be done to you. So, culture should be in the public domain, accessible to everybody, with tickets to the Comedie Francaise and the Opera Garnier costing as much as a cinema ticket, with libraries open to the general public, free education from kindergarten to university at the best schools and universities. This new order will be based on science and inventions that will make food, transportation, housing accessible to all, maybe not a hotel particulier but a decent flat in the suburbs for everybody, it will be based on huge government budgets for welfare, education, health, culture. We have to reinvent our social sciences – political, economical, and sociology.

[Emile Durkheim](#) – Well... I can go home now, as you have said much better than I can ever say what has to be done in the next century in social sciences. You all know that I am a Dreyfusard, because of my convictions but possibly also because my wife Louise Dreyfus comes from this illustrious family, although there is no direct connection to Alfred. I am not the only one to have founded sociology, although many call me the principal architect of modern social sciences, let posterity decide about that. You referred, dear Ernesta, to Liberty. Liberty is the daughter of authority properly understood. For to be free is not to do what one pleases; it is to be the master of oneself, it is to know how to act within reason and to do one's duty. Groups, when interacting, create their own culture and attach powerful emotions to it. I differ from Kant by maintaining that moral duties originate in society and are not be found in some universal moral concept such as the categorical imperative. The individual believes that by adhering to morality, they are serving the common Good, and for this reason, the individual submits voluntarily to the moral commandment. However, in order to accomplish its aims, morality must be legitimate in the eyes of those to whom it speaks. In general, men aspire to education only to the extent that they are freed from the yoke of tradition; for as long as she is mistress of intelligences, she is sufficient for everything and does not easily tolerate rival power. I am concerned with how societies could maintain their integrity and coherence in modernity, in an era in which traditional social and religious ties are no longer assumed. The tools that could be surveyed in sociology are polls, surveys, statistics. All these are observations that I made in my books published in the last few years – The Division of

Labour in Society and The Rules of Sociological method. Last year I established the journal *L'Annee Sociologique*. My main goal is the acceptance of sociology as a legitimate science.

I advocate beliefs that might be unacceptable to many nationalistic, traditional and religious groups. I am secular, republican, with a sympathy towards socialism, and of course Dreyfusard. Frankly, when mores are sufficient, laws are unnecessary; when mores are insufficient, laws are unenforceable. It is society which, fashioning us in its image, fills us with religious, political and moral beliefs that control our actions. Each new generation is reared by its predecessor; the latter must therefore improve in order to improve its successor. The movement is circular. Socialism is not a science, a sociology in miniature: it is a cry of pain. Our whole social environment seems to us to be filled with forces which really exist only in our own minds. When man discovered the mirror, he began to lose his soul. From top to bottom of the ladder, greed is aroused without knowing where to find ultimate foothold. Nothing can calm it, since its goal is far beyond all it can attain. Reality seems valueless by comparison with the dreams of fevered imaginations; reality is therefore abandoned.

Man is only a moral being because he lives in society, since morality consists in solidarity with the group, and varies according to that solidarity. If you cause all social life to vanish, and moral life would vanish at the same time, having no object to cling to. Science cannot describe individuals, but only types. If human societies cannot be classified, they must remain inaccessible to scientific description. The roles of art, morality, religion, political faith, science itself are not to repair organic exhaustion nor to provide sound functioning of the organs. All this supraphysical life is built and expanded not because of the demands of the cosmic environment but because of the demands of the social environment. Being secular, I am a strong believer in science, it is science, and not religion, which has taught men that things are complex and difficult to understand. Solidarity can grow only in inverse ratio to personality. Every society is a moral society. In certain respects, this character is even more pronounced in organized societies. As the individual is not sufficient unto himself, it is from society that he receives everything necessary to him, as it is for society that he works. Society is not a mere sum of individuals. Rather, the system formed by their association represents a specific reality which has its own characteristics... The group thinks, feels, and acts quite differently from the way in which its members would were they isolated. If, then, we begin with the individual, we shall be able to understand nothing of what takes place in the group.

Jacque Corot (aside) – Wow! Chers amis, I promised you giants and I am a man of my word. Emile Durkheim was indeed one of the gigantic figures of his era, comparable only to other giants as Tolstoy, Zola, Ibsen, Monet, Rodin. So, in case that you were not too bored by his dissertation, let's recreate with a musical interlude, but I interfere with the role of our hostess.

Ernesta Stern – Since our great Victor Hugo died in 1885, we have lost many of the cultural paragons of Europe. I'll just mention their names in order for us to remember them and their contributions to our society, to our culture, to our souls, among them many regulars of our salon: Victor Hugo, Louis Pasteur, Vincent Van Gogh, Rosa Bonheur, Alfred Sisley, John Everett Milais, Berthe Morisot, Lewis Carroll, Stephane Mallarme, Theodor Fontane, Henri Meilhac, Alphonse Daudet, Paul Verlaine, Harriet Beecher Stowe, Carlo Collodi, Edmond de Goncourt, Alfred Nobel, Friedrich Engels, Alexandre Dumas fils, Robert Louis Stevenson, Jose Zorilla, Guy de Maupassant, Walt Whitman, Pedro Antonio de Alarcon, Herman Melville, Arthur Rimbaud, Emile Augier, Emily Dickinson, Jules Valles, Friedrich Engels, Georges-Pierre Seurat, Johan Strauss II, Amilcare Ponchielli, Alexander Borodin, Leo Delibes, Anton Rubinstein, Edouard Lalo, Emmanuel Chabrier, Ernest Chausson, Anton Bruckner, Johannes Brahms, Pyotr Ilyich Tchaikovsky, Charles Gounod and Franz Liszt.

I thought which text by one of them has any forecasts on the twentieth century and suddenly I had a revelation – Victor Hugo has written *La Legende des Siecles*, and one of its chapters was called *Le Vingtieme Siecle*. I am grateful that Hugo's granddaughter Jeanne Hugo has accepted to read from this poem, which fits exactly into the spirit of our evening. Hugo was a prophet, the most important cultural person of the century, he fought for freedom and was exiled like you my dear Zola. [Jeanne Hugo](#), who is well-known in Parisian society, has come with her husband the scientist and explorer [Jean-Baptiste Charcot](#). Then, we'll hear the Cuban/French poet Jose-Maria de Heredia reciting poetry by the late Spanish writer Pedro Antonio de Alarcon. We'll hear also the Russian actress Olga Knipper playing Tatiana writing a letter to Eugene Onegin by Alexander Pushkin, adapted to Tchaikovsky's famous opera.

Following that, we'll hear a concert of works by the late composers who have died recently and that we have not heard works by them tonight – Johan Strauss II, Anton Bruckner, Charles Gounod, Amilcare Ponchielli, Alexander Borodin, Leo Delibes, Anton Rubinstein, Edouard Lalo, Emmanuel Chabrier, Ernest Chausson and Pyotr Ilyich Tchaikovsky. And of course operas that the late Henri Meilhac who died a couple of years ago wrote for them the libretto: by Offenbach – *Le bresilien*, *La belle Helene*, *Barbe-bleue*, *La vie Parisienne*, *La Grande-Duchesse de Gerolstein*, *La Perichole*, and by Bizet – the most famous *Carmen*.

The concert will be performed by an ensemble of Orchestre Lamoureux conducted by [Camille Chevillard](#), with soloists [Pablo Casals](#) – cello, [Bronislaw Huberman](#) – violin, [Lionel Tertis](#) – viola, [Maurice Ravel](#) – piano. They'll perform chamber music, sonatas and orchestral music, as well as opera, vocal and ballet music with an ensemble of opera singers and dancers from the Garnier Opera, and the soloists [Adelina Patti](#) – soprano, [Antonio Paoli](#) – tenor, [Karl Mantzius](#) – baritone, [Luisa Tetrazzini](#) – soprano, [Leon Rothier](#) – bass, [Edyth Walker](#) – mezzo-soprano, [Francesco Tamagno](#) – tenor, [Clara Butt](#) – contralto. So, be ready to hear music from operas, ballets and instrumental music, such as - *Faust*, *Mireille*, *Romeo et Juliette*, *Ave Maria*, songs, waltzes, *La Gioconda*, *Prince Igor*, *In the steps of Central Asia*, *Lakme*, *Sylvia*, *Coppelia*, lieder, sonatas, extracts from trios and quartets, concerti and symphonies as *Symphonie Espagnole* and Bruckner and Tchaikovsky's symphonies, rhapsodies as *Espana*, *Die Maccabaer*, *Poeme de l'amour et de la mer*, *Die Fledermaus*, *Der Zigeunerbaron*, *Wiener Blut*, polkas, quadrilles and waltzes as *Emperor Waltz*, *Voices of Spring*, *Viennese Blood*, *Wine Women and Song*, *The Blue Danube*, and from operas written by Meilhac arias of – Offenbach's *Le Bresilien*, *La belle Helene*, *Barbe-bleue*, *La vie Parisienne*, *La Grande-Duchesse de Gerolstein*, *La Perichole*, Bizet's *Carmen*, and of course by Tchaikovsky the ballets *Le lac des cygnes*, *The Sleeping Beauty*, *The Nutcracker*, and *The Queen of Spades*, Eugene Onegin, *Capriccio Italien*, *Romeo and Juliet*, *The Tempest*, and *Francesca da Rimini*.

(Jeanne Hugo recites a poem from *La Legende des Siecles* by Victor Hugo, her grandfather)

(Jose-Maria de Heredia recites poems by the Spanish poet Pedro Antonio de Alarcon)

(Olga Knipper plays Tatiana writing to Eugene Onegin by Pushkin and Tchaikovsky's opera)

(Then, a concert in memoriam of the late composers, with an ensemble of Orchestre Lamoureux conducted by [Camille Chevillard](#), with soloists [Pablo Casals](#) – cello, [Bronislaw Huberman](#) – violin, [Lionel Tertis](#) – viola, [Maurice Ravel](#) – piano. They'll perform chamber music, sonatas and orchestral music, as well as opera, vocal & ballet music with an ensemble of opera singers & dancers from the Garnier Opera, soloists [Adelina Patti](#) – soprano, [Antonio Paoli](#) – tenor, [Karl Mantzius](#) – baritone, [Luisa Tetrazzini](#) – soprano, [Leon Rothier](#) – bass, [Edyth Walker](#) – mezzo-soprano, [Francesco Tamagno](#) – tenor, [Clara Butt](#) – contralto.)

Jeanne Hugo -

Victor Hugo – La Legende des Siecles – Vingtieme Siecle – Pleine Mer

L'ancien monde, l'ensemble étrange et surprenant
 De faits sociaux, morts et pourris maintenant,
 D'où sortit ce navire aujourd'hui sous l'écume,
 L'ancien monde aussi, lui, plongé dans l'amertume,
 Avait tous les fléaux pour vents et pour typhons.
 Construction d'airain aux étages profonds,
 Sur qui le mal, flot vil, crachait sa bave infâme,
 Plein de fumée, et mû par une hydre de flamme,
 La Haine, il ressemblait à ce sombre vaisseau.
 Le mal l'avait marqué de son funèbre sceau.
 Ce monde, enveloppé d'une brume éternelle,
 Était fatal: l'Espoir avait plié son aile;
 Pas d'unité, divorce et joug; diversité
 De langue, de raison, de code, de cité;
 Nul lien; nul faisceau; le progrès solitaire,
 Comme un serpent coupé, se tordait sur la terre,
 Sans pouvoir réunir les tronçons de l'effort;
 L'esclavage, parquant les peuples pour la mort,
 Les enfermait au fond d'un cirque de frontières
 Où les gardaient la Guerre et la Nuit, bestiaires;
 L'Adam slave luttait contre l'Adam germain;
 Un genre humain en France; un autre genre humain
 En Amérique, un autre à Londres, un autre à Rome;
 L'homme au delà d'un pont ne connaissait plus l'homme;
 Les vivants, d'ignorance et de vices chargés,
 Se traînaient; en travers de tout, les préjugés,
 Les superstitions étaient d'âpres enceintes
 Terribles d'autant plus qu'elles étaient plus saintes;
 Quel créneau soupçonneux et noir qu'un alcoran!
 Un texte avait le glaive au poing comme un tyran;
 La loi d'un peuple était chez l'autre peuple un crime;
 Lire était un fossé, croire était un abîme;
 Les rois étaient des tours; les dieux étaient des murs;
 Nul moyen de franchir tant d'obstacles obscurs;
 Sitôt qu'on voulait croître, on rencontrait la barre
 D'une mode sauvage ou d'un dogme barbare;
 Et, quant à l'avenir, défense d'aller là.
 Le vent de l'infini sur ce monde souffla.
 Il a sombré. Du fond des cieux inaccessibles,
 Les vivants de l'éther, les êtres invisibles
 Confusément épars sous l'obscur firmament
 A cette heure, pensifs, regardent fixement
 Sa disparition dans la nuit redoutable.
 Qu'est-ce que le simoun a fait du grain de sable?
 Cela fut. C'est passé. Cela n'est plus ici.
 Ce monde est mort. Mais quoi! l'homme est-il mort aussi?

Cette forme de lui disparaissant, l'a-t-elle
 Lui-même remporté dans l'énigme éternelle?
 L'océan est désert. Pas une voile au loin.
 Ce n'est plus que du flot que le flot est témoin.
 Pas un esquif vivant sur l'onde où la mouette
 Voit du Léviathan rôder la silhouette.
 Est-ce que l'homme, ainsi qu'un feuillage jauni,
 S'en est allé dans l'ombre? Est-ce que c'est fini?
 Seul, le flux et reflux va, vient, passe et repasse.
 Et l'oeil, pour retrouver l'homme absent de l'espace,
 Regarde en vain là-bas. Rien.
 Regardez là-haut.

Jose-Maria de Heredia – poetry in Spanish by Pedro Antonio de Alarcón

Fuego y nieve

Fire and Snow

Duro es tu corazón como el granito;
 mi corazón como la cera tierno:
 verano ardiente soy; tú helado invierno;
 tú nieve eterna; fuego yo infinito.

Your heart is hard like granite ;
 my heart is tender like wax:
 I am hot summer; you are frozen winter;
 you are eternal snow ; I am endless fire.

Yo me acerco a tu nieve, y no tiritó;
 antes crece la furia de este infierno;
 y hiélate a ti más mi fuego eterno,
 y ni me apagas ¡ay! ni te derrito.

I approach your snow, & I do not shiver ;
 the fury of this hell grows before;
 and you cool more my eternal fire,
 and you don't even turn me off! Oh! Nor do I melt you.

¿Cómo encuentro calor donde no hay llama?
 ¿Cómo no da calor la llama mía?
 ¿Cómo mi incendio tu esquivas no inflama?

How do I find heat where there is no flame?
 How doesn't my flame give heat?
 How doesn't my fire ignite your elusiveness?

¿Cómo tu hielo mi pasión no enfría?
 ¡Oh! ¿por qué no nos hizo el hado aleva,
 o de fuego a los dos, o a ambos de nieve?

How doesn't your ice cool my passion?
 Oh! Why didn't fate make us
 Or both fire, or both snow?

SEGUIDILLA MANCHEGA PARA GUITARRA

Ayer te he visto en cuerpo:
 ¡qué cuerpo tienes!
 Ayer te vi en el baile...
 ¡cómo te mueves!-
 ¡Es una burla
 que haya en cuerpo tan pícaro
 alma tan pura!

Yesterday I have seen you in body :
 What body do you have!
 I saw you at the dance yesterday...
 How do you move ! -
 It is a jest
 That in such a mischievous body
 There is such a pure soul!

Ernesta Stern – I want to welcome guests who have just arrived: the Swiss poet [Carl Spitteler](#), the Serbian writer [Janko Veselinovic](#), the Indian polymath [Rabindranath Tagore](#), the Chinese writer [Lie Kim Hok](#), the Japanese author [Koda Rohan](#), the Croatian poet [Antun Gustav Matos](#), and the Belgian playwright [Maurice Maeterlinck](#), the author of *Pelleas & Melisande*.

Olga Knipper - (acting tenderly, lovingly, passionately, childishly, womanly, determined, with despair, hope, in agony)

Tatyana's Letter (from Eugene Onegin by Alexander Pushkin & Tchaikovsky's opera)

Tatyana's letter to Onegin.

Письмо Татьяны к Онегину

Я к вам пишу - чего же боле?
Что я могу еще сказать?
Теперь, я знаю, в вашей воле
Меня презреньем наказать.
Но вы, к моей несчастной доле
Хоть каплю жалости храня,
Вы не оставите меня.
Сначала я молчать хотела;
Поверьте: моего стыда
Вы не узнали б никогда,
Когда б надежду я имела
Хоть редко, хоть в неделю раз
В деревне нашей видеть вас,
Чтоб только слышать ваши
речи,
Вам слово молвить, и потом
Все думать, думать об одном
И день и ночь до новой встречи.

Но говорят, вы нелюдим;
В глуши, в деревне всё вам
скучно,
А мы... ничем мы не блесим,
Хоть вам и рады простодушно.

Зачем вы посетили нас?
В глуши забытого селенья
Я никогда не знала б вас,
Не знала б горького мученья.
Души неопытной волненья
Смирив со временем (как
знать?),
По сердцу я нашла бы друга,
Была бы верная супруга
И добродетельная мать.

I write this to you - what more can be
said?
What more can I add to that one fact?
For now I know it is in your power
To punish me contemptuously for this
act.
But you, keeping for my unhappy lot
Even one drop of sympathy
Will not entirely abandon me.
At first I wished to remain silent;
Believe me, my shame, my agony,
You never ever would have heard.
As long as hope remained preserved

That rarely, even once a week,
I'd see you in our country house,
To hear your voice, to hear you speak,
To say a few words, and then, and then
To think, and think, and think again
All day, all night, until the next
meeting.

But it is said you are unsociable,
And in this backwater all is tedious to
you,
While we... well here we shine at
nothing,
Although we're glad to welcome you.

Why did you come to visit us?
In this forgotten rural home
Your face I never would have known
Nor known this bitter suffering.
The fever of inexperience
In time (who can tell?) would have
died down,
And I'd have found another lover,
Dear to my heart, to whom I'd be true,
And a loving wife, and virtuous
mother.

Другой!.. Нет, никому на свете
 Не отдала бы сердца я!
 То в вышнем суждено совете...
 То воля неба: я твоя;
 Вся жизнь моя была залогом
 Свиданья верного с тобой;
 Я знаю, ты мне послан богом,
 До гроба ты хранитель мой...
 Ты в сновиденьях мне являлся,
 Незримый, ты мне был уж мил,
 Твой чудный взгляд меня
 томил,
 В душе твой голос раздавался
 Давно... нет, это был не сон!
 Ты чуть вошел, я вмиг узнала,
 Вся обомлела, запылала
 И в мыслях молвила: вот он!
 Не правда ль? я тебя слыхала:
 Ты говорил со мной в тиши,
 Когда я бедным помогала
 Или молитвой улаждала
 Тоску волнуемой души?
 И в это самое мгновенье
 Не ты ли, милое виденье,
 В прозрачной темноте
 мелькнул,
 Приникнул тихо к изголовью?
 Не ты ль, с отрадой и любовью,
 Слова надежды мне шепнул?

Кто ты, мой ангел ли
 хранитель,
 Или коварный искушитель:
 Мои сомненья разреши.
 Быть может, это всё пустое,
 Обман неопытной души!
 И суждено совсем иное...
 Но так и быть! Судьбу мою
 Отныне я тебе вручаю,
 Перед тобою слезы лью,
 Твоей защиты умоляю...
 Вообрази: я здесь одна,
 Никто меня не понимает,
 Рассудок мой изнемогает,

Another!... No, no one on this earth
 Is there to whom I'd give my heart!
 That is ordained by highest fate...
 That is heaven's will - that I am yours;
 My life till now was but a pledge,
 Of meeting with you, a forward image;
 You were sent by heaven of that I'm
 sure,
 To the grave itself you are my
 saviour...
 In dreams you have appeared to me,
 Though yet unseen, I held you dear,
 Your glance and strangeness tortured
 me,
 To my soul your voice was loud and
 clear
 From long ago... It was not a dream!
 You came, and I knew that very
 instant,
 I was struck dumb, my heart flared up,
 And in my thoughts said "He is the
 one!"
 Is it not true? I heard you often:
 In the silence did you not speak to me,
 Both when I helped the poor, and
 when
 With prayer I sought to ease and soften
 The pain inside my anguished head?
 And at this very moment, is it not you,
 Oh sweetest, lovely vision who
 In the night's transparency flits by
 And quietly nestles by the bed's head?
 And you, who with love and
 rapturously
 Whispered a word of hope to me?
 Who are you, my guardian angel?
 Or a wily devil, a tempter fatal?
 Disperse these doubts, this agony.
 Perhaps all this is nothingness,
 A foolish mind's self-aberration,
 And something other is fate's decree...
 So be it! Whatever my destiny,
 To you I give it from this day,
 Before you the tears roll down my
 cheek,
 And your protection I beseech...
 For consider: here I am alone,
 No one understands what I say,
 My reason tortures me every day,

И молча гибнуть я должна.
Я жду тебя: единым взором
Надежды сердца оживи,
Иль сон тяжелый перерви,
Увы, заслуженным укором!

And silently I am doomed to perish.
You I await: With a single glance
Revive the hope that's in my heart,
Cut short this heavy dream I cherish,
Deserving, I know, reproach and
scorn.

Кончаю! Страшно перечесть...
Стыдом и страхом замираю...
Но мне порукой ваша честь,
И смело ей себя вверяю...

I finish - I tremble to read it through,
With shame and terror my heart sinks
low,
But your honour is my guarantee
And to that I entrust my destiny.

Ernesta Stern (with great emotion, tears in her eyes) - As you all know my dear husband Louis, who is by my side, is very ill and we pray hard for his convalescence. When I decided to organize this evening in his honor all the participants - guests and artists - enthusiastically accepted to honor him with their presence. But I hope that this evening is not a farewell party but the dawn of a new century and that, cher Louis, you will recover from your illness. Louis, personally chose the program for this evening, the artists, the guests, and he warmly thanks you for coming. You all know of Louis' banking activities, being associated with the Stern Bank since 1865, but he has also a very refined taste in art. Our art collection was collected mainly by his choices and he is an assiduous member of the Cercle du Palais Royal. We thank members from all our family, first of all our dear son, [Jean Stern](#), one of the best fencers.

In case that you are confused about our connections with the Rothschild family, who are here our dear guests, it is very simple. Betty von Rothschild was the granddaughter of Mayer Amschel, founder of the Rothschild Dynasty, and the daughter of Salomon Mayer von Rothschild and Caroline Stern. Salomon Mayer was the brother of James Mayer de Rothschild, who was the founder of the Rothschild Bank in France and the father of Edmond Benjamin de Rothschild. Caroline Stern was the aunt of Antoine Jacob Stern, who founded the Stern Bank in Paris in 1832 and was the father of my husband Louis. If this is not complicated enough our dear Betty also married her uncle James Mayer. So, all of us are cousins, as we are also cousins to the other bankers' families. We welcome tonight [Edmond de Rothschild](#) and his son [Maurice](#). Edmond is not only active in banking but he pursues artistic and philanthropic interests. Furthermore, he is a leading proponent of the Zionist movement and financed the first site at Rishon LeZion, as part of his goal to establish a Jewish homeland, industrialization, agriculture and economic development. You see, dear Herzl, great minds think alike, and I am sure that you'll find the way to cooperate closely. We have here also the painter [Zoe de Rothschild](#), niece of Edmond, and wife of the Belgian banker [Leon Lambert](#), with their lovely daughter Claude. Dear Zoe, I think that as two typical Jewish mothers we should arrange a wedding between my son Jean and your daughter Claude. Don't blush Claude nothing will be achieved without your consent. We have with us tonight also Henriette Stern, sister of my husband Louis, with her husband Georges Halphen and their son the composer [Fernand Halphen](#). Finally, we have here the other brother of my husband Louis – Jacques Stern, founder of the Banque de Paris et des Pays-Bas, and husband of [Sophie Croizette](#), the former actress from the Comedie Francaise, who played with Sarah Bernhardt in the play Le mariage de Figaro by Beaumarchais. Sophie had a hotel particulier at 7, rond-point des Champs-Elysees, not far from here, before she married, where she was holding a very fine salon, and Edmond has a hotel particulier at 41, rue du Faubourg Saint-

Honore, just opposite our residence, and that is how he could come to us, as he has also a reveillon at his sumptuous house. So, we are not only cousins, we are also neighbors!

My husband Louis asked our Spanish friends, who are almost Parisians, to give a concert of their compositions, so I am delighted to invite the Spanish composer and pianist [Isaac Albeniz](#) accompanied by the young [Manuel de Falla](#), the Spanish composer and guitarist [Francisco Tarrega](#) accompanied by [Alfred Cottin](#), and the Spanish composer & violinist [Pablo de Sarasate](#) accompanied by [Berthe Marx](#), who'll play their own compositions, and by other's.

(Isaac Albeniz, Francisco Tarrega an Pablo de Sarasate give a recital of their compositions)

Jacque Corot (aside) – My heart is broken when I see how you, dear Ernesta, are trying to appease your overflowing emotions, your grief and despair filling your soul, in order to gratify your husband and guests, knowing that his end is near. Louis is about to die within a few weeks from a pneumonia that he contracted days before his death, but he was extremely sick even before. You are bigger than life, women in your times succeeded only in the fields that society intended for them – in running salons, like very intellectual women, in acting, like Sarah Bernhardt who was extremely talented, in painting, like Berthe Morisot who was the granddaughter of Fragonard, in literature, like Colette who was also married to a famous writer, in science, like Marie Curie whose career received a boost after marrying her colleague Pierre Curie, in journalism, like Marguerite Durand, who was married to a member of the Assemblée Nationale and had a child from one of the directors of Figaro, where she worked. It was very difficult for women to succeed, unless they were extremely talented, very rich or married the right men. They were also ridiculed for attempting to succeed like men. I feel endless empathy for you, dear Ernesta, because you are what is best in the human race, because of your moderate way, your good temper, your love for all, your activity for culture and implementing the values of humanism. De Profundis, you have grown to be one of the greatest women of the Belle Epoque, with the best cultural salon and your success as a writer.

Ernesta Stern - I take this opportunity to welcome, on top of our guests from all the nationalities who spoke to us until now, the regulars of my salon, the famous painter [Leon Bonnat](#), who was the teacher of John Singer Sargent, Gustave Caillebotte and the Norwegian Edvard Munch who is almost a Parisian and whose painting The Scream makes me scream, the painter [Carolus-Duran](#), who married the painter [Pauline Croizette](#), the sister of Sophie my sister-in-law, the novelist [Paul Adam](#), who published a few months ago an excellent historical novel La Force, the astronomer and author [Camille Flammarion](#), who wrote the scaring La fin du monde, the poet, translator from Spanish [Jose-Maria de Heredia](#), born in Cuba but he is the most Parisian poet, the writer and politician [Joseph Reinach](#) who is the champion of Alfred Dreyfus from the beginning, he poet, novelist and playwright [Jean Richepin](#), once a lover who exchanged stormy love letters with Sarah Bernhardt, but both have remained very good friends over the years, the poet [Henri de Regnier](#), married to Heredia's daughter the author [Marie de Regnier](#), they are good friends with the poet and writer [Pierre Louys](#) who is married to another daughter of Heredia – [Louise](#), all four of them are here with us tonight and they are inseparable. Louys is friend with Oscar Wilde, and dedicatee of Wilde's Salome in French.

I would like to welcome also my dear friend the French painter [Camille Pissarro](#), who is not only one of the founders of Impressionism but also a strong believer in anarchism in arts, the poet [Gustave Kahn](#), who also plays a role in debates on anarchism, feminism, socialism and Zionism, the young author of Ubu Roi [Alfred Jarry](#), we were among the few who were not shocked by his play, and the couple a la mode, the author [Willy](#) and his charming wife [Colette](#), who it is rumored are working on a novel Claudine a l'école, based on Colette's experiences, [Anna de Noailles](#), who was born in Paris as a Romanian Princess and has

married a son of the Duke de Noailles, the French feminist and a dear friend [Marguerite Durand](#), who founded recently a feminist daily newspaper La Fronde, run exclusively by women, advocating women's rights, admission to the Bar Association and the Ecole des Beaux-Arts, and what an horror, to be even allowed to be named to the Legion of Honor. The Austrian composer [Gustav Mahler](#), is taking his Vienna Philharmonic to play concerts at the Exposition Universelle, so bienvenue a Paris dear Gustav. The Russian composer [Alexander Glazunov](#) was recently appointed as professor at the Saint-Petersburg Conservatory but came to us for the Christmas vacations, the Czech composer [Antonin Dvorak](#), received a few months ago a gold medal for Litteris et Artibus from the Emperor Franz Joseph himself. My good friend, the Czech philosopher, humanist and ethicist [Tomas Masaryk](#), contested recently the Jewish blood libel in the Hilsner Trial, imagine in 1899 a blood libel in the center of Europe, and we complain that the poor French Army is accusing Dreyfus, at least he was not accused of any blood rites. Thank you, dear Tomas, for being a friend to the Jewish community and such a humanist. And I want to mention here that my husband Louis Stern has no connection to another anti-Semitic scandal l'affaire Stern in Bad Kissingen in 1895.

We have tonight with us the Dutch naturalist author [Marcellus Emants](#), who has two mentors Emile Zola and Hippolyte Taine and wrote Een nagelaten bekentenis, the Romanian writer [Ion Luca Caragiale](#), is mostly critical of literary experiments and Modernism, but here in liberal Paris we welcome all opinions including your conservatism. The Turkish writer [Tevfik Fikret](#) told me that he is an advocate for free speech and constitutional government and is openly critical of Abdul Hamid II. The Egyptian poet [Ahmed Shawqi](#), studied here at Paris University, and the young writer [Khalil Mutran](#), is a true cosmopolitan Arabic – he was born in Ottoman Syria in Baalbek from a well-known Palestinian family, studied in Beirut, wanted to live in Chile but came to Paris instead, and now he lives in Egypt. We have here tonight also the Ukrainian Yiddish author and playwright [Sholem Aleikhem](#) who wrote Tevye der milkhiker (Dairyman), another Ukrainian the young Hebrew poet [Hayim Nahman Bialik](#), who wrote the long poem Hamatmid (Studious), the young author in Ladino Judeo-Spanish [Elia Carmona](#), is encountering problems with the Ottoman censorship imposing restrictions on the publication of some of his books, dealing with topics of love, romance and crime. Those of you who want to read Dumas' Count of Monte Cristo in Judeo-Arabic are invited to read the translation by the Tunisian author and journalist [Jacob Chemla](#), welcome. Another guest is the Greek poet [Kostis Palamas](#), who wrote the words to the Olympic Hymn. And we are happy to have with us tonight also the Father of the modern Olympic Games [Pierre de Coubertin](#).

We all know that after the first Olympics in Athens in 1896, we'll hold the next Olympics here in Paris, in the summer as part of the Exposition Universelle, so we'll have in our Exposition not only technology and culture but also sports. In the spirit of innovation, I have invited the young Belgian race car driver [Camille Jenatzy](#), who broke recently the speed record of 100 km/h, with his electric car La jamais contente, dear Camille we are content with your record and take care of yourself. You may wonder how we have among our guests a former German general, ca pourrait mettre la puce a l'oreille a nos amis anti-Dreyfusards, it could be construed as a proof of the treason of the Dreyfusards. But, actually the mother of Graf [Ferdinand Adolf Heinrich August von Zeppelin](#) was French, he was an observer in the American Civil War and made his first balloon ascent in 1863. Since 1891, after resigning from the army, he devoted his full attention to airships. Last year he formed a stock company to finance the construction of the first rigid airship the Zeppelin LZ1, which is about to be completed within a few weeks. If everything goes as scheduled the airship will be flown soon.

We have with us here tonight also the Polish famous author of Quo Vadis and Rodzina Polanieckich [Henryk Sienkiewicz](#), the young Swedish author [Selma Lagerlof](#), the author of

Gosta Berlings saga, I hope dear Ragnar Sohlman that in your new Nobel Prizes you'll take into consideration female talents, and who knows two of the women who are with us tonight Selma and Marie Curie will be among the first to be awarded the prestigious prizes within a decade. Dear Ibsen, you were probably thrilled a few months ago to read the monograph that the Danish [Georg Brandes](#) wrote about you. Brandes is with us, as well as the Finnish writer, artist and architect [Johan Jacob Ahrenberg](#), so we have quite a strong Scandinavian presence. Last but not least we have tonight friends from many more pillars of culture in Europe, Africa, Asia & America. Finally, I am most grateful that you came, dear [Giuseppe Verdi](#), and allowed me to tell that at the age of 86 you still create and publish, to our great admiration.

(All the guests rise spontaneously for a standing ovation to greet Giuseppe Verdi, while singing a cappella the chorus *Va Pensiero* from *Nabucco*, led by the tenor Enrico Caruso)

Va, pensiero, sull'ali dorate;
va, ti posa sui clivi, sui colli,
ove olezzano tepide e molli
l'aure dolci del suolo natal!

Fly, my thoughts, on wings of gold;
go settle upon the slopes and the hills,
where, soft and mild, the sweet airs
of my native land smell fragrant!

Del Giordano le rive saluta,
di Sionne le torri atterrate.
O, mia patria, sì bella e perduta!
O, membra, sì cara e fatal!

Greet the banks of the Jordan
and Zion's toppled towers.
Oh, my homeland, so lovely and so lost!
Oh memory, so dear and so dead!

Arpa d'or dei fatidici vati,
perché muta dal salice pendi?
Le memorie nel petto raccendi,
ci favella del tempo che fu!

Golden harp of the prophets of old,
why do you now hang silent upon the willow?
Rekindle the memories in our hearts,
and speak of times gone by!

O simile di Sòlima ai fati
traggi un suono di crudo lamento,
o t'ispiri il Signore un concerto
che ne infonda al patire virtù!

Mindful of the fate of Solomon's temple,
Let me cry out with sad lamentation,
or else may the Lord strengthen me
to bear these sufferings!

(The opera singers sing arias from Verdi's operas, ending with *Triumphal March* from *Aida*)

Jacque Corot (aside) – Verdi has remained unequalled. Upon his death, a year later, along his funeral's cortege in Milan, bystanders started singing "Va, pensiero". When he was reinterred at the Casa di Riposo, [Arturo Toscanini](#) conducted a choir of 800 in the famous hymn. I have so much more to tell about the guests of Ernesta, Mahler will marry Alma Schindler, who'll become one of the most interesting persons of the century, Colette who'll publish some of the best novels of French literature, Masarik who will become the first president of the state of Czechoslovakia for 17 years before resigning and dying just before the shameful Munich agreement, about Jean Stern who will eventually marry Claude Lambert in 1904, and Maurice de Rothschild who'll marry Noemie Halphen, granddaughter of Emile Pereire, in 1909 and was mother of the philanthropist Edmond de Rothschild; but I'm just a chorus, not a prophet.

Ernesta Stern – Chers amis, it is almost midnight. In a few moments a new century will be born. We listened to your forecasts for the new century and we hope that it will be the best century in the history of mankind. Every indication favors that, the last 50 to 80 years were the best ever in culture, literature, arts, music, inventions, sciences, architecture, theater, civil rights, literacy, health, welfare. From now on, the situation can only improve, democracy will prevail, nations will be liberated, no more racism, no more pandemics, no more wars, equal

rights to all citizens, to women, to all races, culture will spread over the world, free secular education to all from kindergarten to university, people will live until 120. So, let us count the last seconds of this century – ten, neuf, ocho, sette, sechs, pyat, fire, drie, dois, ahat, Happy New Year, Prosperous New Century, Peace, Health, Liberty, and a Long Life to All!

Dear Friends, while we hear and see the fireworks all over Paris, after having heard and seen the cultural fireworks of the Cultural and Creative Paragons of Europe, let us sing the Ode to Joy from Beethoven's Ninth Symphony. It expresses our hope for Liberte, Egalite, Fraternite, for joy and peace, and who knows maybe during the new century that we have just started a European Union will be founded, with no boundaries between nations, and this hymn will become the anthem of the unified Europe, from Ireland to Romania, from Sweden to Greece, from Portugal to Lithuania, a Union that will be founded by the former enemies and new friends – France and Germany. So, actors, musicians, guests, let us play and sing the Ode!

(The actors, musicians and guests sing and play the Ode to Joy from Beethoven's Ninth Symphony, while the Parisian New Century fireworks outside the windows are seen & heard. The protagonists, actors, musicians... enter with flags of the nations of Ernesta Stern's guests, France, UK, USA, Italy, Spain, Austria-Hungary, Germany, Russia, Ottomans, Zionists, Portugal, etc., and finally we see only Jacque Corot holding the flag of the European Union)

An die Freude

Freude, schöner Götterfunken,
Tochter aus Elysium,
Wir betreten feuertrunken,
Himmlische, dein Heiligtum!
Deine Zauber binden wieder
Was die Mode streng geteilt;
Alle Menschen werden Brüder
Wo dein sanfter Flügel weilt.

Wem der große Wurf gelungen
Eines Freundes Freund zu sein;
Wer ein holdes Weib errungen
Mische seinen Jubel ein!
Ja, wer auch nur eine Seele
Sein nennt auf dem Erdenrund!
Und wer's nie gekonnt, der stehle
Weinend sich aus diesem Bund!

Freude trinken alle Wesen
An den Brüsten der Natur;
Alle Guten, alle Bösen
Folgen ihrer Rosenspur.
Küsse gab sie uns und Reben,
Einen Freund, geprüft im Tod;
Wollust ward dem Wurm gegeben
und der Cherub steht vor Gott.

Froh, wie seine Sonnen fliegen

Ode to Joy

Joy, beautiful spark of Divinity [or: of gods],
Daughter of [Elysium](#),
We enter, drunk with fire,
Heavenly one, thy sanctuary!
Thy magic binds again
What custom strictly divided;
All people become brothers,
Where thy gentle wing abides.

Whoever has succeeded in the great attempt,
To be a friend's friend,
Whoever has won a lovely woman,
Add his to the jubilation!
Yes, and also whoever has just one soul
To call his own in this world!
And he who never managed it should slink
Weeping from this union!

All creatures drink of joy
At nature's breasts.
All the Just, all the Evil
Follow her trail of roses.
Kisses she gave us and grapevines,
A friend, proven in death.
Salaciousness was given to the worm
And the cherub stands before God.

Gladly, as His suns fly

Durch des Himmels prächt'gen Plan
 Laufet, Brüder, eure Bahn,
 Freudig, wie ein Held zum Siegen.

through the heavens' grand plan
 Go on, brothers, your way,
 Joyful, like a hero to victory.

Seid umschlungen, Millionen!
 Diesen Kuß der ganzen Welt!
 Brüder, über'm Sternenzelt
 Muß ein lieber Vater wohnen.
 Ihr stürzt nieder, Millionen?
 Ahnest du den Schöpfer, Welt?
 Such' ihn über'm Sternenzelt!
 Über Sternen muß er wohnen.

Be embraced, Millions!
 This kiss to all the world!
 Brothers, above the starry canopy
 There must dwell a loving Father.
 Are you collapsing, millions?
 Do you sense the creator, world?
 Seek him above the starry canopy!
 Above stars must He dwell.

Jacque Corot (to the guests and the theater audience) – I wonder who wrote the immortal lines: “All the world's a stage, and all the men and women merely players; they have their exits and their entrances; and one man in his time plays many parts, his acts being seven ages.” Anyhow, it is not probably in our century, as most of the guests of Ernesta Stern's Salon were convinced that they have reached the end of history, the age of justice, in fair round belly with good capon lined, with eyes severe and beard of formal cut, full of wise saws and modern instances. But they soon found out, that tens of millions would die in World War I and the Spanish Flu, and after the worst cataclysm of human history – World War II and the Holocaust. that they remained sans teeth, sans eyes, sans taste, sans everything, And after the terrible war, they started all over again the seven ages, the mewling infant, the whining schoolboy, the sighing lover, the quick in quarrel soldier, and then the justice again in fair round belly. And they thought towards the end of the twentieth century once again that the end of history has arrived, tout va pour le mieux dans le meilleur des mondes, all is for the best as in Voltaire's *Candide*, quite the opposite from Jaques' monologue in Shakespeare's *As You Like It*. By the way, another Jacque as me, and as in this play, we are more of an observer than an actor, placing himself outside the group of happy characters who populate both plays. Because I am not only 80 as in Ernesta's reveillon, nor am I living 120 years until 1939, being eternal or virtual, living beyond 2020. I have lost my optimism while traveling the world, and I constantly remind the protagonists and the audience that in the real world time is not suspended, and grief, sorrow and death provide a counterpoint to all human joys.

I have seen it all, after the end of history, so-called, came the stock exchange collapse, 9/11, the Great Recession, Covid-19 pandemics, wars, terrorism, materialism, lack of ethics and a superficial culture, as foreseen by Jules Verne. We witnessed the most spectacular cultural fireworks in the years 1820 to 1939, which have not been surpassed since then. But even if all the world is just a stage and we are merely players, even if we are dancing in a round dance as in Arthur Schnitzler's *Reigen*, *La Ronde*, *Ring a Ring o'Roses*, even if history never ends but goes in circles, life is worth living, experiencing the seven ages once and again, as luckily, men and women live only one cycle, unlike Jacque Corot or Shakespeare's Jaque, or Man and Woman in *Reigen*, or even Six Characters in Search of an Author, as in Pirandello's play, and in our play 36 characters. Why don't we learn from history? Why don't we read Zola's books, learn from Schopenhauer, watch Shaw's plays, in order not to make again and again the same mistakes? I don't know! But I have tried in my humble play to bring together all the protagonists, the best creative paragons ever, to give you the proper insights for your life!

(While watching on the screen the new buildings and monuments of the 1900 Paris World Exposition – Grand Palais, Petit Palais, Pont Alexandre III, Gare d'Orsay, etc., John Philip Sousa enters with his March Band performing American, English & French military marches)

TWELFTY MASTERPIECES' QUOTES ON BUSINESS ETHICS

I don't excel too much in my fields of occupation and interests. I was a quite successful businessman but I never became a CEO of a large company, just VP Sales and Finance of the largest and most successful high tech company in the Startup Nation, and I never made a multimillion exit and became a multimillionaire. I had a short academic career of ten years, but I started at the age of 60, taught successfully at the best Israeli universities and at INSEAD and was elected the Best Lecturer of my university, but was never appointment as a professor, just received my PhD in Business Ethic with distinction. I wrote more than twenty books in English, French and Hebrew – academic books published by the best publishing houses – Kluwer, Springer, Magnès; a novel, plays, an autobiography of 1566 pages; eBooks available at no cost on websites of leading universities: on culture, geography, heritage; anthologies of essays, articles, correspondence; children books, a book on my wife Ruthy, etc. But my books were sold in total in a few thousand copies, I never received any royalties & the new ones are free.

So, what is my originality? My contribution to business, research, literature, humanity? Probably in the combination of all those disciplines which is quite unique, taking into consideration that I also learned more than 50 languages, invented a new methodology of teaching business ethics combining analysis of ethical dilemmas of protagonists in plays, novels and films, case studies based on my personal experience as a business man giving credibility, finding for the first time in history the rules that govern wrongdoing to minority shareholders, forecasting major economic crises and proposing practical solutions to prevent them, devising a pioneering vision, book & articles on the Second Republic of Israel, finding for the first time ever a strong correlation between the level of ethics in countries and their level of quantitative & qualitative prosperity, mostly in the 10 best states: Denmark, Norway, Sweden, Finland, Netherlands, Switzerland, New Zealand, Singapore, Australia and Canada. I bring in this chapter quotes that I used in my academic books on business ethics, sometimes with quite a chutzpah, as quoting Discepolo's Tango Cambalache in Kluwer and Springer books, revolutionary poems by Victor Hugo, subversive quotes from Brecht in neoliberal countries, even quotes from Mao. As my book is focused in the twelfty of 1820-1939, I have chosen only quotes from masterpieces of this twelfty in 6 languages from many countries.

But when I used those quotes in my books "Activist Business Ethics" published by Kluwer or "Business Ethics: The Ethical Revolution of Minority Shareholders" published by Springer for example, they are an integral part of my dissertation on psychological or legal aspects of business ethics, in chapters about philosophy, society, personification, predominance of values, they illustrate my findings, they are the base of the development of my ideas, they assist me in making up my points, in strengthening my arguments, as they condense the thoughts of giants who knew much more about life, ethics, even business as Zola for example. What Brecht or Discepolo, Zola, Hugo or Balzac, Scott Fitzgerald or Ibsen, write about the ethical conduct of society is wiser than most of the academic articles that I have read about business ethics. And of course philosophers as Schopenhauer or Marx, psychologists as Freud, even Piave's ethical insights on Monterone in Rigoletto, reinforce my thesis about crucial issues in business ethics. Let alone, religious precepts from Judaism, Christianity or Islam, which are however beyond the scope of our twelfty, but very present then nevertheless.

1-3. "Morten: And what are we going to do, when you have made liberal-minded and high-minded men of us?"

Dr. Stockman: Then you shall drive all the wolves out of the country, my boys!"

"Dr. Stockman: And just look here, Katherine – they have torn a great rent in my black trousers too!

Mrs. Stockman: Oh, dear! – and they are the best pair you have got!

Dr. Stockman: You should never wear your best trousers when you go out to fight for freedom and truth."

"Den sterkeste mann i verden, det er han som står mest alene." "The strongest man in the world is he who stands alone most of the time."
(Henrik Ibsen, *An Enemy of the People*, *En Folkefiende*, in Norwegian, Act V, 1882)

4. "Dr. Stockman: Well, but is it not the duty of a citizen to let the public share in any new ideas he may have?"

Peter Stockman: Oh, the public doesn't require any new ideas. The public is best served by the good, old-established ideas it already has."

(Henrik Ibsen, *An Enemy of the People*, Act II, 1882)

5-6. Der Wahrheit ist allerzeit nur ein kurzes Siegesfest beschieden, zwischen den beiden langen Zeiträumen, wo sie als Paradox verdammt und als Trivial gering geschätzt wird.

(Arthur Schopenhauer, German philosopher, 1788-1860, in German)

The truth has always only a brief victory celebration, between the two long periods of time, where it is condemned as a paradox and underestimated as trivial.

"The truth can wait, for it lives a long life"

(Arthur Schopenhauer, German philosopher, 1788-1860)

7. "Je fis souffler un vent révolutionnaire.

Je mis un bonnet rouge au vieux dictionnaire.

Plus de mot sénateur! plus de mot roturier!

Je fis une tempête au fond de l'encrier,
 Et je mêlai, parmi les ombres débordées,
 Au peuple noir des mots l'essaim blanc des idées;
 Et je dis: Pas de mot ou l'idée au vol pur
 Ne puisse se poser, toute humide d'azur!...
 Je bondis hors du cercle et brisai le compas.
 Je nommai le cochon par son nom; pourquoi pas?"

(Victor Hugo, Reponse a un acte d'accusation, Reply to a bill of indictment, in French, 1834)

"I have swept a revolutionary wind.
 I have put a red hat on the old dictionary.
 No more noble! no more common people!
 I have made a tempest at the bottom of the inkstand,
 And I have blended, between the overloaded shadows,
 The white swarm of ideas with the black multitude of words;
 And I said: No words where the pure flight of ideas
 Cannot land on, all humid from the azure sky!...
 I have leaped out of the ring and broken the compass.
 I have pointed the finger at the pig; why not?

8. "Que el mundo fue y sera una porqueria, ya lo
 (En el quiniento seis y en el dos mil tambien.)
 Que siempre ha habido chorros, maquiavelos y estafaos,
 Contentos y amargaos, valores y doble...
 Pero que el siglo veinte es un despliegue
 De maldad insolente, ya no hay quien lo niegue.
 Vivimos revolcaos en un merengue
 Y en un mismos lodo todos manoseaos...

Hoy resulta que es lo mismo ser derecho que traidor...!
 Ignorante, sabio o chorro, generoso o estafador!...
 Todo es igual. Nada es mejor.
 Lo mismo un burro que un gran profesor.
 No hay aplazaos ni escalafon,
 Los inmorales nos han igualao.

**Si uno vive en la impostura y otro roba en su ambicion,
Da lo mismo que si es cura,
Colchonero, rey de bastos, caradura o polizon..."**

(Enrique Santos Discepolo, Tango, Cambalache/The Junk Shop, in Spanish, 1934)

**"The world was and will be a filthy place, I know it...
(It was in 506 as it will be in the year 2000.)
As there have always been diabolical villains and crooks,
The contented and the disgruntled, honorable men and swindlers...
Because the twentieth century is a display
Of insolent wickedness, nobody can deny it.
We live wallowed in debauchery
All floundering in the same mud..."**

**Nowadays there is no difference in being honest or a traitor...!
Ignorant, wise, tramp, generous or crook.
All is the same. No-one is better.
No difference, dolts as great professors.
No putting it off, no getting on with it either;
We are on the same footing with the corrupt.
Some men may be living out a lie, others are ripping off everyone;
We are all in the same boat; the priest,
The mattress-maker, the card-shark, the cheeky, the good-for-nothing..."**

9. "Les lois sont des toiles d'araignées à travers lesquelles passent les grosses mouches et où restent les petites" La maison Nucingen, Honoré de Balzac, 1837.

"The laws are spider's webs that the fat flies succeed to go through, while the small flies get stuck to them." La maison Nucingen, Honore de Balzac, in French, 1837.

10. Moritatensanger:

**“Und der Haifisch, der hat Zahne
Und die tragt er im Gesicht
Und Machheath, der hat ein Messer
Doch das Messer sieht man nicht.
Ach, es sind des Haifisch Flossen
Rot, wenn dieser Blut vergiesst.
Mackie Messer tragt ‘nen Handschuh
Drauf man keine Untat liest.
An ‘nem schonen blauen Sonntag**

Liegt ein toter Mann am Strand
 Und ein Mensch geht um die Ecke
 Den man Mackie Messer nennt.
 Und Schmul Meier bleibt verschwunden
 Und so mancher reiche Mann
 Und sein Geld hat Mackie Messer
 Dem man nichts beweisen kann.”

(Bertolt Brecht, Die Dreigroschenoper, The Threepenny Opera, in German,
 Die Moritat von Mackie Messer, The Ballad of Mack the Knife, Act I, scene I, 1928)

“Streetsinger:

And the shark has teeth
 And he wears them in his face
 And Macheath, he has a knife,
 But the knife one does not see.
 Oh, the shark’s fins appear
 Red, when he spills blood.
 Mack the Knife, he wears his gloves
 On which his crimes leave not a trace.
 On a nice, clear-skied Sunday
 A dead man lies on the beach
 And a man sneaks round the corner
 Whom they all call Mack the Knife.
 And Schmul Meier disappeared for good
 And many a rich man.
 And Mack the Knife has all his money,
 Though you cannot prove a thing.”

11. Moritatensinger:

“Denn die einen sind im Dunkeln

Und die andern sind im Licht.

Und man siehet die im Lichte

Die im Dunkeln sieht man nicht.”

(Bertolt Brecht, Die Dreigroschenoper, Die Schluss-Strophen der Moritat, The Final Verses of the Moritat, in German, Act III, last scene, 1928)

“For the ones they are in darkness

And the others are in light.

And you see the ones in brightness

Those in darkness drop from sight.”

12. “Saccard avait achevé de mettre la main sur tous les membres du conseil, en les achetant simplement, pour la plupart. Grâce à lui, le marquis de Bohain, compromis dans une histoire de pot-de-vin frisant l’escroquerie, pris la main au fond du sac, avait pu étouffer le scandale, en désintéressant la compagnie volée; et il était devenu ainsi son humble creature, sans cesser de porter haut la tête, fleur de noblesse, le plus bel ornement du conseil. Huret, de même, depuis que Rougon l’avait chassé, après le vol de la dépêche annonçant la cession de la Venetie, s’était donné tout entier à la fortune de l’Universelle, la représentant au Corps législatif, penchant pour elle dans les eaux fangeuses de la politique, gardant la plus grosse part de ses effrontes maquignonnages, qui pouvaient, un beau matin, le jeter à Mazas.

Et le vicomte de Robin-Chagot, le vice-président, touchait cent mille francs de prime secrète pour donner sans examen les signatures, pendant les longues absences d’Hamelin; et le banquier Kolb se faisait également payer sa complaisance passive, en utilisant à l’étranger la puissance de la maison, qu’il allait jusqu’à compromettre, dans ses arbitrages; et Sedille lui-même, le marchand de soie, ébranlé à la suite d’une liquidation terrible, s’était fait prêter une grosse somme, qu’il n’avait pu rendre. Seul, Daigremont gardait son indépendance absolue vis-à-vis de Saccard; ce qui inquiétait ce dernier, parfois, bien que l’aimable homme restât charmant, l’invitant à ses fêtes, signant tout lui aussi sans observation, avec sa bonne grâce de Parisien sceptique qui trouve que tout va bien, tant qu’il gagne.” (Emile Zola, L’Argent, in French, p. 310-1, 1891)

“Saccard had succeeded in getting hold of all the members of the board of directors, in buying them out literally, in most of the cases. It is due to him, that the marquis de Bohain, compromised in a story of bribing equivalent to a swindle, discovered with his hand in the bag, could escape from a scandal, by compensating the robbed company; and he became subsequently his humble servant, while remaining with his head high, an aristocrat, the best ornament of the board. Huret, as well, since Rougon has dismissed him, after the theft of the wire that announced the transfer of Venetia, has committed himself fully to the success of the Universelle, representing it at the Parliament, fishing for it in the dirty waters of politics, keeping the largest part of the shameless scams, that could throw him one day to prison.

And the vicomte de Robin-Chagot, the vice-president, received a hundred thousand francs as a secret fee for signing without examination during the long absences of Hamelin; and the banker Kolb was paid also for his passive readiness to oblige, while utilizing abroad the strength of the company, which put it even in jeopardy in his arbitrations; and Sedille himself, the silk merchant, undermined by the consequences of a terrible liquidation, was lent a huge sum, that he was unable to reimburse. Only, Daigremont kept his full independence toward Saccard; which bothered the latter, sometimes, although the nice person remained charming, inviting him to his feasts, signing everything without inquiring, with his amiability of a skeptical Parisian that finds that all is well, as long as he is gaining money.”

13. “Mais les morts inconnus, les victimes sans nom, sans histoire, emplissaient surtout d’une pitié infinie le cœur de Mme. Caroline. Ceux-la étaient legion, jonchaient les buissons écartés, les fosses pleins d’herbe, et il y avait ainsi des cadavres perdus, des blessés râlant d’angoisse, derrière chaque tronc d’arbre. Que d’effroyables drames muets, la cohue des petits rentiers pauvres, des petits actionnaires ayant mis toutes leurs économies dans une même valeur, les concierges retirées, les pâles demoiselles vivant avec un chat, les retraitées de province à l’existence réglée de maniaques, les prêtres de campagne dénudés par l’aumône, tous ces êtres infimes dont le budget est de quelques sous, tant pour le lait, tant pour le pain, un budget si exact et si réduit, que deux sous de moins amènent des cataclysmes! Et, brusquement, plus rien, la vie coupée, emportée, de vieilles mains tremblantes, éperdues, tatonnantes dans les ténèbres, incapables de travail, toutes ces existences humbles et tranquilles jetées d’un coup à l’épouvante du besoin!” (Emile Zola, *L’Argent*, in French, p. 440, 1891)

“But the unknown dead, the nameless victims, with no history, filled especially with infinite pity the heart of Mme. Caroline. Those were legions, were strewn all over the remote bushes, the ditches full of grass, lost corpses, wounded people moaning from anxiety, behind every trunk of a tree. How many dreadful silent dramas, the crowd of the small poor retired people, the small shareholders who have invested all their savings in the same stock, the retired concierges, the pale old maids living with a cat, the old people living in the country in a well-ordered obsessive existence, the priests in the villages resorting to begging, all those tiny little people with tight budgets, so much for milk, so much for bread, such a small and exact budget, that any reduction can cause a cataclysm! And, all of a sudden, a void, life is cut off, taken away, old shaky hands, desperate, groping in the dark, unable to work, all those humble and quiet lives thrown all of a sudden to the terror of poverty!”

14. “Regarde ces billets de banque, ils peuvent tenir dans ma poche mais ils prendront la forme et la couleur de mon désir. Confort, beauté, santé, amour, honneurs, puissance, je tiens tout cela dans ma main... Tu t’effares, mon pauvre Tamise, mais je vais te dire un secret: malgré les rêveurs, malgré les poètes et peut-être malgré mon cœur, j’ai appris la grande leçon: Tamise, les hommes ne sont pas bons. C’est la force qui gouverne le monde, et ces petits rectangles de papier bruissant, voilà la forme moderne de la force. (Marcel Pagnol, *Oeuvres Complètes I*, *Topaze*, in French, p. 453, 1928) “Look at those banknotes, they can fit in my pocket but they will soon take form and color of my desire. Comfort, beauty, health, love, honors, power, I hold all this in my hand... You are bewildered, my poor Tamise, but I will tell you a secret: in spite of the dreamers, in spite

of the poets and maybe in spite of my heart, I have learned the big lesson: Tamise, men are not good. It is power which governs the world, and this small rectangles of noisy paper, this is the modern structure of power.”

15. “Poiche fosti invano da me maledetto, ne un fulmino o un ferro colpiva il tuo petto, felice pur anco, o Duca, vivrai.” (libretto by Francesco Maria Piave, based on the 1832 play *Le roi s’amuse* by Victor Hugo, *Rigoletto*, music by Giuseppe Verdi, Act III, in Italian, p.14, 1851) “And since my curse has left you unharmed, and no lightning or iron has cracked your skull, you will even though live happily.”

16. “I couldn’t forgive him or like him, but I saw that what he had done was, to him, entirely justified. It was all very careless and confused. They were careless people, Tom and Daisy – they smashed up things and creatures and then retreated into their money or their vast carelessness, or whatever it was that kept them together, and let other people clean up the mess they had made... I shook hands with him; it seemed silly not to for I felt suddenly as though I were talking to a child. Then he went into the jewelry store to buy a pearl necklace – or perhaps only a pair of cuff buttons – rid of my provincial squeamishness forever... Gatsby believed in the green light, the orgiastic future that year by year recedes before us. It eluded us then, but that’s no matter – tomorrow we will run faster, stretch out our arms farther... And one fine morning - So we beat on, boats against the current, borne back ceaselessly into the past.” (Francis Scott Fitzgerald, *The Great Gatsby*, in English, p.107, 1925)

17. Rabbi Israel Salanter, 1809-1883, the father of the Musar (morals) movement in Orthodox Judaism and a famed Rosh Yeshiva and Talmudist, “has stated that the transfer of funds from one person to the other without his consent is a theft according to the Torah, no different from the theft of a burglar. He put therefore the ethical theft, even if it is legal, at the same level as the brutal theft. (Jacques Cory, “Activist Business Ethic”, page 50)

18. Karl Marx, 1818-1883, a German philosopher, economist, historian, sociologist, political theorist, journalist and socialist revolutionary: “Karl Marx did not believe that the proletariat existed as a class conscious of its rights when he wrote ‘Das Kapital’. The minority shareholders, nowadays like the proletariat in the 19th century, are not associated and conscious of their power. Marx has noticed the excessive abuse of power of the capitalists of his time who managed the economy not with the invisible hand of Adam Smith but with an iron fist, which oppressed the masses. It is Dickens, Zola, Hugo and others who have described the sufferance of the masses, but unfortunately modern literature does not pay attention to the wrongdoing to minority shareholders. Marx and Zola have condemned the indifference and injustice of the mighty toward the poor, the weak, those who were not organized.” (Jacques Cory, “Activist Business Ethic”, page 157, as well as the following quote from Robert C. Solomon)

“Taking the labor theory of value to its logical conclusion, Marx argued that those who did the work produced the value and, consequently, deserved the products of their

labors for themselves. In other words, his emphasis on the actual activity of production instead of the commercial value of the end products led him to a conclusion that would have not been tolerable to Adam Smith – that the work itself was everything and the operations of the market were only a systematized form of theft. Marx, in other words, is very much in the line of ancient and religious thinkers who rejected the activity of business as parasitic on the honest labor of the working man... That concept is exploitation, and it is the sense of being exploited that did, in fact, create the class consciousness Marx urged (for example in the American labor union movement) and that continues to appeal so powerfully to so many people in Third World countries, especially former colonies of the great industrial empires.” (Solomon, *Above the Bottom Line*, p. 267)

19. Sigmund Freud (1856-1939), was an Austrian neurologist, the founder of psychoanalysis: “After having analyzed ethics from many different angles, we should try to analyze the influence of psychoanalysis on the conduct of businessmen, and we could start with Freud, who is often treated as the modern enemy of morality. “In the writings of most ethicists, Freud, if he is mentioned at all, is treated as the chief modern enemy of morality, whose work is best ignored or flatly condemned in the process of getting on with the task of doing traditional moral philosophy, unimpeded by the sorts of depth-psychological considerations that have transformed everyday morality outside the academy.” (Wallwork, *Psychoanalysis and Ethics*, p. 2) If human nature is selfish and a man tries only to satisfy his interests and pleasures, there is no possible moral unless moral is the facade of selfishness and we are moral only to satisfy our ego. In other words, we can sacrifice ourselves, give up our material interests and our pleasure if we satisfy the intellectual interests that enlarge our ego, but we act always in order to satisfy our interests. We can delay the satisfaction of our pleasures, suffer pains and even martyrdom, if we hope to obtain other pleasures in a near or remote future or even in paradise.

“Freud points out that no departure from the rule of the pleasure principle is entailed. ‘Even religion is obliged to support its demand that earthly pleasure shall be set aside by promising that it will provide instead an incomparably greater amount of superior pleasure in another world’ (SE 14 [1915] :311). With this example, Freud seems to recognize that in its pleasure seeking, the ego looks at what will give it satisfaction in life as a whole, taking a broad range of considerations into account. This would seem to allow the individual, whether religious or not, to embrace a non-egoistic act if it is part of a life plan adopted as the self’s way to ultimate happiness. For example, someone might discipline his baser tendencies and sacrifice his more immediate interests in order to obey the rules of moral and professional conduct laid down by his chosen profession, all because he thinks that life as a doctor, lawyer, teacher, accountant, or scientist will make him happy, even taking into account the burdens of arduous training and the occasional need for ‘selflessness’ and ‘dedication’ required to care adequately for patient or client or to achieve sought-after results. (same, p. 121)

The intellectual dilemma of whether a man is moral by altruism or by selfishness is completely superfluous if all we want to achieve is that everybody will act ethically. In the extreme case, we could try to transform ethical conduct into a reflex, exactly like hunger or thirst. Or we could reconcile the theories of the greatest philosopher of ethics, Aristotle, with the allegedly worst enemy of morality, Freud, by substituting the term

‘happiness’ for ‘pleasure’. “Significantly, Freud signals his shift to qualitative hedonism linguistically by substituting ‘happiness’ (das Gluck) for ‘pleasure’ (die Lust). The term das Gluck in its colloquial German sense resonates with eudaimonia in Greek and felicitas and beatitudo in Latin. Like them, it carries rich connotations of the goal of life being fulfillment, excellence, well-being, and self-realization. Choice of the term implicitly conveys the message that it takes more for a person to be pleased with life as a whole or with the self (conscious and unconscious, past, present, and anticipated) than a string of separate agreeable sensations of the same monotonous sort, differing from one another only in their intensity and duration.” (same, p. 130) Freud maintains that only a person who achieves maturity and builds a strong character by way of qualitative transformation of his personality is capable of defeating the predominance of the quantitative factors. “To pursue happiness as an inclusive goal through such activities as artistic creativity, intellectual work, sensuality, love, and aesthetic appreciation is to enjoy each of these activities as contributing something qualitatively unique to a life plan.” (same, p. 133)

In a word, Freud imagines the possibility of obtaining individual happiness through the sublimation of subconscious desires, by obtaining intellectual pleasures, even by the satisfaction of others’ desires, or by moral conscience. The final form of the narcissism of Freud is in the positive attitude toward oneself, the respect of oneself, self-esteem, Selbstgefuhl. (Jacques Cory, “Activist Business Ethic”, pages 81-82)

20. Finally, to emphasize my point of using quotes as an integral part of my academic book I bring here the last paragraph of my book “Activist Business Ethics” (p. 173), which starts from the above mentioned quotes of Schopenhauer in a different version, but elaborates them to the final conclusion of the book: “Schopenhauer said: "The truth can wait, for it lives a long life. All truth passes through three stages. First, it is ridiculed. Second, it is violently opposed. Third, it's accepted as being self-evident." Do we have the long life needed to wait for the truth? We are in the first stage of the truth as activist business ethicists are only ridiculed. They are not violently opposed, which shows that they are not feared enough. If we do not write books, theses, articles, novels and plays on these subjects, if we do not lecture in companies, universities, activist associations on those topics, and most of all - if we do not decide to take our fate in our own hands and fight for our privileges, we shall continue to be ridiculed in the years to come. But if the books by this author and similar books, which will be written in the future, will shake the complacency of the unethical businessmen we might reach the next stage and be violently opposed. We are waiting eagerly for this stage to come, as it will announce that the last stage is near and the truth of equality to all business groups will prevail. We are not philosophers and we do not have the time and the long life to wait for this truth to arrive. This is why we do our utmost to shorten the time. Do you, stakeholders and minority shareholders, have the long life to wait for the end of the multitude of cases in which your rights are despoiled, or are you willing to act vehemently at last in your lifetime?”

ADDITIONAL QUOTES

If I used hundreds of quotes in my business ethics books, not all of them are of course from our twelfth's masterpieces, published in 1820-1939. Some of them are from much earlier eras, from the Bible, the New Testament, the Quran, the Talmud/Mishna, from Greek and Latin classics, Shakespeare, French classics, Don Quixote, Dante, etc. I'll bring here only a few of them, all of them here and in the previous part are used in a proper context in my books, and are the basis for a dissertation deriving from those quotes. The quotes are from 10 ancient cultures in Greek, Latin, Hebrew, Aramaic, Arabic, Persian, Chinese, Japanese, Hindi, Swahili, but also from the Russian culture of the twelfth, the sixth leading culture after the 5 mentioned previously – French, English, German, Spanish and Italian. However, I surveyed briefly in my book the literature of 20+ more European cultures, from which I mentioned here sayings in Portuguese, Dutch, Yiddish & Ladino. Altogether, 60 quotes in 21 languages, including Norwegian, which I mentioned before, because of the greatest playwright Ibsen, whom I quoted most and taught his plays' ethical dilemmas in my courses with role personification, as from *An Enemy of the People*. But also to commemorate the Nobel Prize awarded in Norway and Sweden, and surveyed at length in my book. The Nobel Prize organization allowed me also to publish an article about Marie Curie, who received two Nobel Prizes.

21. "The accomplice of a thief is his own enemy;

He is put under oath and dare not testify."

(The Bible, Proverbs, 29:24)

22. "Obsequium amicos veritas odium parit"

Readiness to oblige creates friends, frankness engenders hatred

(Terence, *Andrienne*, I,1,68, in Latin)

23. "Les vertus se perdent dans l'intérêt comme les fleuves se perdent dans la mer."

Virtues get lost by personal interests like rivers that disappear into the sea.

(La Rochefoucauld, *Maximes*, in French)

24. "God loves from whole to parts; but human soul

Must rise from individual to the whole.

Self-love but serves the virtuous mind to wake,

As the small pebble stirs the peaceful lake;

The centre moved, a circle strait succeeds,
 Another still, and still another spreads;
 Friend, parent, neighbour, first will it embrace;
 His country next; and next all human race."

(Alexander Pope, 1688-1744, *An Essay on Man*, in English)

25. "This is the land of the great big dogs, you don't love a man here, you eat him! That's the principle; the only one we live by."

(Arthur Miller, *All My Sons*, Act Three)

26. "It is often easier to fight for principles than to live up to them."

(Adlai E. Stevenson in a lecture in New York City in 1952)

27. "No servant can serve two masters. Either he will hate the one and love the other, or he will be devoted to the one and despise the other. You cannot serve both God and Money." (The Bible, The New Testament, Luke, 16:13)

28. "Do not exploit the poor because they are poor

And do not crush the needy in court,

For the Lord will take up their case

And will plunder those who plunder them."

(The Bible, Proverbs, 22:22-23)

29-30 "על דאטפת – אטפוד, וסוף מטיפיד – יטופון"

Al deateft atafouh - vesof metifaih yetoufoun (Aramaic).

"Because you have drowned others - you were drowned, and those who have drowned you - will be drowned." When Hillel the wise, as told in the Jewish Mishna, saw the head of a robber whom he knew, floating in the river, Hillel said: "Because you have robbed and murdered your victims and thrown their bodies into the river, your murderers who are also criminals have murdered you, and their crime will be punished by other criminals who will also kill them and throw their bodies into the river."

The Mishna says in Sanhedrin (קע"א): *Bemida sheadam moded – modedin lo* – Hebrew:

"במידה שאדם מודד – מודדין לו"

"A criminal is punished by the same measure of his crime." Haman wanted to hang Mordachai and he himself was hanged. The Egyptians drowned the Hebrew babies and were themselves drowned while chasing the Hebrews who fled from Egypt.

31. "And We showed them the two highways. But they have not embarked upon the steep road. And what will convey to you what the steep road is? Emancipating a slave, or feeding on a day of hunger an orphaned relative or a pauper in misery. The one will be of those who believe, and enjoin patience on one another, and exhort each other to kindness: they are the company on the Right Hand. But those who repudiate our signs, they are the company on the Left Hand: over them will be a vault of fire." (Koran, The City, 10-20)

32. "- Signor Hakham, el asno se cayo al poso!

- No se puede hazer nada, car c'est Hilul Shabat, il est défendu de travailler le jour du Sabbath.

- Ma es su asno, signor Hakham!

- Ah Dio santo! Se deve salvarlo! Mon Dieu, dans ce cas la, Pikuah nefesh dokhe Shabat, pour

sauver une âme on peut faire outre du Sabbath."

(Kuento, Judeo-Spanish folk story, told in Ladino, French and Hebrew, by Pauline & Albert Cory)

"- Mister Rabbi, the donkey has fallen into the well!

- We cannot do anything, as it would be the sacrilege of Sabbath if we work on the holy day.

- But it is your donkey, Mister Rabbi!

- Good Lord! We have to save him! It is permitted in the Law to work on Sabbath in order to save a soul."

33. "Conscience is but a word that cowards use,

Devis'd at first to keep the strong in awe:

Our strong arms be our conscience, swords our law.

March on, join bravely, let us to't pell-mell;

If not to heaven, then hand in hand to hell."

(Shakespeare, Richard III, Act V, Scene III)

34. Nihil agis, nihil moliris, nihil cogitas, quod non ego non modo audiam, sed etiam videam planeque sentiam.

Nothing you do, nothing you undertake, nothing you plan that I would not only hear but would indeed plainly see and observe.

(Cicero in the Senate, the first oration against Catiline, in Latin)

35. "דעליך סני להברך לא תעביד" (שבת לא א – הלל) ARAMAIC –
The Golden Rule - One should not treat others in ways that one would not like to be treated. (Talmud, Shabat, 31:1). In Judaism, Christianity, Islam, Confucianism, Buddhism, Hinduism, etc.

36. "Hippolyte – Quelques crimes toujours precedent les grands crimes.
Quiconque a pu franchir les bornes legitimes
Peut violer enfin les droits les plus sacres;
Ainsi que la vertu, le crime a ses degres;
Et jamais on n'a vu la timide innocence
Passer subitement a l'extreme licence."
(Racine, in French, Phedre, Acte IV, Scene II, 1094-1098)

"Hippolyte – Some crimes always precede major crimes.
Whoever has crossed the legitimate borders
Can ultimately violate the most sacred rights;
As with virtue, crime has its degrees;
And never have we seen timid innocence
Cross over suddenly to extreme license."

37. In Wikiquote my definition of whistle-blower has become a „classic“. It is based on the following paragraph quoting Dante & the dilemma of the positive/negative squealer.

"We are educated since our childhood that it is prohibited to tell on your friends. The pejorative names for the telltales or tattletales are countless – whistle-blowers, stool pigeons, squealers, etc. Dante writes in the last verses of the Inferno, how the traitors and informers are punished in the lowest place of hell. Dante and Virgil enter Judecca, the lowest zone of Cocytus, where the souls of the traitors who betrayed their legitimate superiors and benefactors are totally immersed in the frozen waste. At the central and lowest point lies Satan, who devours Judas, Brutus and Cassius in his three mouths:

"That soul there, which has the worst punishment,
Is Judas Iscariot, my master said,
With his head inside, and kicking his legs.
Of the two others, who hang upside-down,
The one who hangs from the black face is Brutus;

See how he twists and says not a word;

And the other is Cassius, whose body looks so heavy.”

(Dante, *The Divine Comedy, Inferno XXXIV*, 61-67, p.192-3)

It is incredible that out of all the criminals - those who have committed atrocious murders, genocides, rapes - the ones who receive the worst punishment are the traitors. It is not Pontius Pilate, who gave the order to crucify Jesus, it is not Julius Caesar who was an unscrupulous tyrant, it would not be Hitler if Dante would have lived in our times, but it would rather be Rommel, who ‘betrayed’ his fuhrer in order to save Germany.”

38. "There are seven things that will destroy us: Wealth without Work, Pleasure without Conscience, Knowledge without Character, Religion without Sacrifice, Politics without Principle, Science without Humanity, Business without Ethics." (Mahatma Gandhi, 1869-1948, Indian)

39. "Qui tacet, consentire videtur, ubi loqui debuit ac potuit" (Latin proverb, in Latin)

"He who is silent, when he ought to have spoken and was able to, is taken to agree."

40. "Chi va con lo zoppo impara a zoppicare".

"He who goes with the crook learns to be a crook". (Italian proverb, in Italian)

41. شَرَارَةٌ بِشَحْرَقٍ حَارَةٍ

A tiny flame can kindle a neighborhood (Arabic)

42. μέτρον ἄριστον. *Métron áriston*. "Moderation is best" (Aristotle, in Greek)

43. "MAÎTRE JACQUES: je vous l'avais bien dit que je vous fâcherais de vous dire la vérité." – Master Jacques : I have told you that you will get angry if I tell you the truth. (Moliere, *L'avare*, 3 act, scene 1, in French)

44. "Chi crede a sogni è matto; e chi non crede che cos' è?" – Lorenzo da Ponte, in Italian. He who believes in dreams is insane; but he who doesn't believe – what is he? Da Ponte lived also in the book's twelfty until 1838. He was an Italian, later American, born Jewish who became a Roman Catholic priest, wrote the libretti for 28 operas by 11 composers, including Mozart's *The Marriage of Figaro*, *Don Giovanni* & *Così fan tutte*.

45. La ora la mas eskura es para amanecer (in Ladino) – the darkest hour is before dawn.

46. Баре дерўтся - у холóпов чубы́ трещáт -*Bare derutsya - u kholopov chuby treschat*
When the masters are fighting, their servants suffer (in Russian).

47. "Все счастливые семьи похожи друг на друга, каждая несчастливáя семья несчастлива по-своему." (in Russian) *vse-schastlivie-semi-pahozhi-drug-na-druga-kazhdaya-neschastlivaya-semya-neschastliva-pa-svoemu*.

"Happy families are all alike; every unhappy family is unhappy in its own way" (the first sentence of Anna Karenina, 1878, by Lev Tolstoy)

48. λάθε βιώσας – Lathe biosas (in Greek). This phrase summarizes the core of Epicurean philosophy of life and it means to live unobtrusively, preserving tranquility.

49. One silver coin hides a hundred stains of ugliness (in Chinese).

chǒu bǎizhǎiqián

丑 百 遮 钱

50. "The problem with being in the rat race is, even if you win, you're still a rat."

(Lily Tomlin)

51. "En lo que toca – prosiguió Sancho – a la valentia, cortesía, hazanias y asunto de vuestra merced, hay diferentes opiniones: unos dicen: 'Loco, pero gracioso'; otros, 'Valiente, pero desgraciado'; otros, 'Cortes, pero impertinente'; y por aquí van discurrendo en tantas cosas, que ni a vuestras merced ni a mi nos dejan hueso sano.

Mira, Sancho – dijo don Quijote – donde quiera que esta la virtud en eminente grado, es perseguida. Pocos o ninguno de los famosos varones que pasaron dejó de ser calumniado de la malicia." (Cervantes, Don Quijote de la Mancha II, p. 43, in Spanish)

"In what pertains, continued Sancho, to courage, courtesy, exploits, and business of your grace, there are diverging opinions: the ones say: 'Crazy, but gracious'; the others, 'Courageous, but unhappy', others, 'Courteous, but impertinent' and from there they discuss so many things, that neither to your grace neither to me they leave a whole bone.

- Look there, Sancho – said don Quijote – in the place where virtue exists at a large degree, it is persecuted. A few or none of the respectable and famous men who have existed have escaped from the calumny of malice."

52. کوه به کوه نمیرسد, آدم به آدم میرسد.

A mountain doesn't meet a mountain but a man meets a man, in Persian.

53. जल में रहकर मगर से बैर ठीक नहीं

You cannot be the enemy of the crocodile if you live in the water (in Hindi).

54.

必要に応じてリッチでパワフルなチートをしますが、それらを呪わないでください

Hitsuyōniōjite ritchi de pawafuruna chīto o shimasuga, sorera o norowanaide kudasai
Cheat the rich and powerful if you want but don't curse them (in Japanese).

55. Cada um por si e Deus por todos - Everyone is for himself and God is for all, in Portuguese

56. Zolang er leven is, is er hoop – as long as there is life, there is hope, in Dutch.

57. Fedha fedheha – money brings shame, in Swahili.

58. Я не я, и лошадь не моя – I am not me and the horse is not mine, in Russian.

59. מער עוישער מער האזער

Richer – Swiner, Mehr oysher mehr hazer, the richer he is more swine he is, in Yiddish.

60. Isaiah 33/15-16 - 15 He that walketh righteously, and speaketh uprightly; he that despiseth the gain of oppressions, that shaketh his hands from holding of bribes, that stoppeth his ears from hearing of blood, and shutteth his eyes from looking upon evil; 16 He shall dwell on high; his place of defence shall be the munitions of rocks; his bread shall be given, his waters shall be sure. In Hebrew:

ישעיהו ל"ג: טו הלך צדקת, ודבר מישרים; מאס בבצע מעשקות, נער כפיו מתמוך בשחד, אטם אזנו משמע דמים, ועצם שיניו מראות ברע. טז הוא מרומים ישכון, מצדות סלעים משגבו; לחמו נתן, מימיו נאמנים.

FRENCH CHANSONS IN 1900-1939

French chansons existed always and will exist forever. Yet, if we divide their peak twelfty or 120 years in 1900-2019, as we have done with our “twelfty” of 1820-1939 for the Romanticism, Realism and Modernism into most/more/significant eras, we may find that the most significant era was the era of 1940-1979 with the 36 excellent singers, most of them are auteurs-compositeurs-interpretes – [singer/songwriter](#) of music/melodies and lyrics, they are [musicians](#) who [write](#), [compose](#) & perform their own musical material, including the 10 best: [YVES MONTAND](#), [MARCEL MOULOU DJI](#), [ÉDITH PIAF](#), [GEORGES BRASSENS](#), [JACQUES BREL](#), [CHARLES AZNAVOUR](#), [DALIDA](#), [JOHNNY HALLYDAY](#), [SERGE GAINSBOURG](#), [GILBERT BECAUD](#), but also: BARBARA, LES COMPAGNONS DE LA CHANSON, LUIS MARIANO, GEORGES GUETARY, LES FRERES JACQUES, ANDRE CLAVEAU, GEORGES MOUSTAKI, JULIETTE GRECO, JACQUELINE FRANCOIS, DARIO MORENO, HENRI SALVADOR, SALVATORE ADAMO, GUY BEART, ENRICO MACIAS, LINE RENAUD, RICHARD ANTHONY, SHEILA, FRANCE GAL, LEO FERRE, EDDY MITCHELL, CLAUDE NOUGARO, SLYVIE VARTAND, CLAUDE FRANCOIS, BOURVIL, FERNANDEL, JOE DASSIN. Altogether 36 excellent singers.

The more significant era is the era of 1900-1939, which coincides with the Modernism era in our book, with the 10 best: MAURICE CHEVALIER, TINO ROSSI, MISTINGUETT, JOSEPHINE BAKER, JEAN SABLON, ARLETTY, CHARLES TRENET, RINA KETTY, LUCIENNE DELYLE, DAMIA. But also: GEORGES MILTON, MIREILLE, LUCIENNE BOYER, RAY VENTURA, FREHEL, YVONNE PRINTEMPS, PAUL MISRAKI, LEO MARJANE, [Eugénie Buffet](#), [Berthe Sylva](#), [Marie Dubas](#), [Théodore Botrel](#), [Félix Mayol](#), [Andrée Turcy](#), [Yvette Guilbert](#), [Yvonne George](#), [Marianne Oswald](#), [Aristide Bruant](#). And excellent impresarios, lyricists and composers, as Loulou Gaste, Jacques Canetti, Casimir Oberfeld, Emile Carrara, Albert Willemetz, Leon Agel, Vincent Scotto, Django Reinhardt. In total 36 excellent musicians. And the significant era encompasses the [years 1980-2019](#), with less known singers. The best singers of this era, some of them are auteur/compositeur/interprete, are: [Jean-Jacques Goldman](#), [Daniel Balavoine](#), [Mylène Farmer](#), [Indochine](#), [Alain Bashung](#), [Étienne Daho](#), [Michael Jones](#), [Carole Fredericks](#), [Téléphone](#), [Chagrin d'amour](#), [Les Nègresses Vertes](#), [Plastic Bertrand](#), [Cheb Khaled](#), [Sapho](#), [Patricia Kaas](#), [MC Solaar](#), [Kool Shen](#), [Joeystarr](#), [Dominique A](#), [Mano Solo](#), [Miossec](#), [Juliette, Amina](#), [Benjamin Biolay](#), [Thomas Fersen](#), [Philippe Katerine](#), [Émilie Simon](#), [Coralie Clément](#), [Sébastien Tellier](#), [Mickey 3D](#), [Calogero](#), [Zaz](#). To them we can add the lyricist of the 1998 musical [Notre-Dame de Paris](#) - [Luc Plamondon](#), and its composer - [Richard Cocciante](#). Another 2000 musical is [Les Dix Commandements](#), with the lyricist - [Lionel Florence](#), and its composer - [Pascal Obispo](#). Altogether, 36 excellent musicians, less known.

As our book deals only with the years 1820-1939, we'll analyze only the more significant era in French chansons. But before doing so, we'll just mention other great singers with excellent chansons in Italy – [Beniamino Gigli](#), with his song [Non ti scordar di me](#) in the 1935 film with the same name; in Argentina – [Carlos Gardel](#), singing the best tangos ever, but probably not [Cambalache](#), with music and lyrics from 1934 by [Enrique Santos Discépolo](#), which gives such an accurate forecast of the remaining decades of the 20th century; in the US – [Woody Guthrie](#), who began to compose songs about the Dust Bowl in 1935, [Al Jolson](#), who sings in the first talkie [The Jazz Singer](#), [Bing Crosby](#), singing in a 1939 record [I got rhythm](#) by [George Gershwin](#), [Bessie Smith](#), singing [Irving Berlin's Alexander's rag time band](#) in 1927, [Fred Astaire](#) singing [Irving Berlin's Cheek to Cheek](#) in 1935 film [Top Hat](#), [Mary Martin](#) singing

the 1938 [My heart belongs to daddy](#) by [Cole Porter](#); in Germany [Marlene Dietrich](#), singing the 1930 song [Falling in love again](#) from the film [Blue Angel](#), and the 1937 song [Lili Marleen](#); in Spain [Miguel de Molina](#), singing the 1937 song [Ojos Verdes](#); in England [Vera Lynn](#), with the 1939 British song [We'll meet again](#); and in Russia [Katyusha](#) composed in 1938 by [Matvey Blanter](#), and the singers [Leonid Utyosov](#), singing [Serdtsse](#) in the 1934 Soviet musical film "[Jolly Fellows](#)", and [Mark Bernes](#), singing "Beloved city" in the 30s. All those from the book's six main cultures – French, English, German, Spanish, Russian and Italian.

Some of the most important songs composed in the 1900-1939 era are already mentioned in this book, as [Mon amant de Saint-Jean](#), composed in 1937 by [Emile Carrara](#), [Paris sera toujours Paris](#) composed in 1939 by [Casimir Oberfeld](#), lyrics by [Albert Willemetz](#), [J'ai deux amours mon pays et Paris](#), composed by the one and only [Vincent Scotto](#). But I would want to write in this chapter about the most significant song of this era, personifying the message of this book, and of our era, a century later, the 1935 song, still popular today: [Tout va bien tres bien madame la marquise](#), everything is going very well Madame la Marquise, sung by [Ray Ventura](#) and his orchestra, with lyrics and music by [Paul Misraki](#). This title has become since then an expression widely used to cover the disastrous reality by the fake news that all is well.

The idea is not new, it appears in Russian Popular Stories by Alexandre Afanassiev, 1871, and is called there - *Khorochko, da khoudo* (« Ça va bien, mais ça va mal »), all is well but all goes wrong. Paul Misraki composed the song during a whole night for Ray Ventura et ses Collegiens at Nimes. It had a tremendous success from the first night, because it fitted the mood of the French people who knew that the situation is deteriorating, while their governments told them that all is well. It relates a phone conversation between James the valet of the marquise and his mistress, starting with the news that her mare died and gradually disclosing the sequence of events – the marquis committed suicide after learning that they were ruined and while doing so he set fire on the castle which ultimately killed the mare. Winds of War existed since 1935, culminating in the Munich agreements, the Anschluss and the break of war in September 1939. The song was translated all over the world and is still popular and actual, since Paris, France and Europe refuse to confront the dangers of Islamic fundamentalism, Covid-19 and other viruses, Capitalism crises, neo-liberal economy, populist regimes, excessive immigration with many groups who do not abide to the European ethos.

To catch the spirit of those years and songs I'll bring here the words of some best songs, and a few words on some of the most famous singers. We'll start with Maurice Chevalier (1888-1972), who was a French actor, [cabaret singer](#) and entertainer. He is perhaps best known for his signature songs, including "[Livin' In The Sunlight](#)", "[Valentine](#)", "[Louise](#)", "[Mimi](#)", and "[Thank Heaven for Little Girls](#)" and for his films, including [The Love Parade](#), [The Big Pond](#), [The Smiling Lieutenant](#), [One Hour with You](#) and [Love Me Tonight](#). His trademark attire was a [boater](#) hat and tuxedo. Chevalier was born in [Paris](#). He made his name as a star of [musical comedy](#), appearing in public as a singer and dancer at an early age before working in menial jobs as a teenager. In 1909, he became the partner of the biggest female star in France at the time, [Fréhel](#). Although their relationship was brief, she secured him his first major engagement, as a mimic and a singer in *l'Alcazar* in [Marseille](#), for which he received critical acclaim by French theatre critics. In 1917, he discovered [jazz](#) and [ragtime](#) and went to [London](#), where he found new success at the [Palace Theatre](#). After this, he toured the [United States](#), where he met the American composers [George Gershwin](#) and [Irving Berlin](#) and brought the [operetta](#) [Dédé](#) to [Broadway](#) in 1922. He developed an interest in acting and had success in [Dédé](#). When [talkies](#) arrived, he went to [Hollywood](#) in 1928, where he played his first American role in [Innocents of Paris](#). In 1930, he was nominated for the [Academy Award](#)

[for Best Actor](#) for his roles in *The Love Parade* (1929) and *The Big Pond* (1930), which secured his first big American hits, such as "[You Brought a New Kind of Love to Me](#)".

One of his best known songs was the 1921 song “Dans la vie faut pas s’en faire”, from the musical *Dédé*, lyrics by Abert Willemetz, music by Henri Christiné. It shows the nonchalance of the era, nothing matters, tout va tres bien Mme. la marquise, all is for the best in this world:

En sortant du trente et quarante,
Je ne possédais plus un radis
De l'héritage de ma tante.
Tout autre que moi se serait dit:
Je vais me faire sauter la cervelle,
Mesuicider d'un coup d'couteau,
M'empoisonner, me fiche à l'eau,
Enfin des morts bien naturelles.
Mais voulant finir en beauté,
Je me suis tué à répéter:

Dans la vie, faut pas s'en faire,
Moi je ne m'en fais pas:
Toutes ces p'tites misères
Seront passagères,
Tout ça s'arrang'ra.
Je n'ai pas un caractère
à m'faire du tracas,
Croyez-moi, sur terre
Faut jamais s'en faire,
Moi je ne m'en fais pas

You don't have to make much of your life

Coming out of the thirties and forties
I didn't possess anything more than a radish
Which I inherited from my aunt
Everyone around me would say
I was going to blow my brains out
Commit suicide with a stab of a knife
Poison myself, drown myself
That is to say, very natural deaths
But wanting to die beautifully
I killed myself repeating:

In life it's not necessary to make anything of it

I'm not making anything of myself

All these little miseries

Will be brief

Everything will settle

I'm not the kind of person

To cause myself trouble

Believe me, on earth

It's never necessary to do much

I'm not making anything of myself

Mistinguett (born **Jeanne Florentine Bourgeois**; 3 April 1875 – 5 January 1956) was a French actress and singer. She was at one time the highest-paid female entertainer in the world. At an early age Bourgeois aspired to be an entertainer. She began as a [flower seller](#) in a restaurant in her hometown, singing popular ballads as she sold blossoms. After taking classes in theatre and singing, she began her career as an entertainer in 1885. One day on the train to Paris for a violin lesson, she met Saint-Marcel, who directed the revue at the [Casino de Paris](#). He engaged her first as a stage-hand, and here she began to pursue her goal to become an entertainer, experimenting with various stage-names, being successively Miss Helyett, Miss Tinguette, Mistinguette and, finally, Mistinguett. In the 1880s Mistinguett visited her neighbor [Anna Thibaud](#) to ask for advice. Thibaud told her, "To succeed in the theatre ... you must be pretty. You must excite men." Mistinguett asked if she meant that she had to excite the crowds. Thibaud repeated, "No, the men!"

Bourgeois made her debut as Mistinguett at the Casino de Paris in 1895 and went on to appear in venues such as the [Folies Bergère](#), [Moulin Rouge](#) and Eldorado. Her risqué routines captivated Paris, and she went on to become the most popular French entertainer of her time and the highest-paid female entertainer in the world, known for her flamboyance and a zest for the theatrical. In 1919 her legs were insured for 500,000 [francs](#). Though Mistinguett never married, she had a son, Léopoldo João de Lima e Silva. She also had a long relationship with [Maurice Chevalier](#), 13 years her junior. It is claimed that she and Chevalier informed the police in 1940 that singer-songwriter [Charles Trenet](#) was gay and consorting with youths.

She first recorded her signature song, "[Mon Homme](#)", in 1916. It was popularised under its English title "My Man" by [Fanny Brice](#) and has become a standard in the [repertoire](#) of numerous pop and [jazz](#) singers. During a tour of the United States, Mistinguett was asked by [Time](#) magazine to explain her popularity. Her answer was, "It is a kind of magnetism. I say 'Come closer' and draw them to me." Mistinguett died in [Bougival](#), France, at the age of 80, attended by her son. Upon her death, writer [Jean Cocteau](#) observed in an obituary, "Her voice, slightly off-key, was that of the Parisian street hawkers - the husky, trailing voice of the Paris people. She was of the animal race that owes nothing to intellectualism. She incarnated herself. She flattered a French patriotism that was not shameful. It is normal now that she should crumble, like the other [caryatids](#) of that great & marvelous epoch that was ours".

The song that is most associated with her and is also typical to this epoch is – Mon homme. The song was originally composed by [Maurice Yvain](#) with French lyrics by Jacques-Charles (Jacques Mardochée Charles) and [Albert Willemetz](#), in 1920 and was introduced to Parisian audiences in the revue "*Paris qui Jazz*" at the [Casino de Paris](#). The song was performed by revue star [Mistinguett](#) and her stage partner American dancer [Harry Pilcer](#). One word of advice – it is not exactly politically correct, nor feminist, but the audiences – men and women – relished the song, it was translated into English, and was popularized in the English speaking world in the 1920s with the 1921 recording by [Ziegfeld Follies](#) singer [Fanny Brice](#).

Mon homme

Sur cette terre,

Ma seule joie, mon seul bonheur

C'est mon homme.

J'ai donné tout c'que j'ai,

Mon amour et tout mon cœur

À mon homme.

Et même, la nuit,

Quand je rêve, c'est de lui

De mon homme.

Ce n'est pas qu'il est beau,

Qu'il est riche ni costaud

Mais je l'aime, c'est idiot

I' m'fout des coups.

I' m'prend mes sous.

Je suis à bout

Mais malgré tout,

Que voulez-vous.

Je l'ai tellement dans la peau

Qu'j'en suis marteau.

Dès qu'il me touche, c'est fini,

Je suis à lui.

Quand ses yeux sur moi se posent,

Ça m'rend toute chose.
Je l'ai tellement dans la peau
Qu'au moindre mot,
I' m'f'rait faire n'importe quoi.
J'tuerais, ma foi.
J'sens qu'il me f'rait dev'nir infâme,
Mais je n'suis qu'une femme,
Et j'l'ai tellement dans la peau.

Pour le quitter,
C'est fou, ce que m'ont offert
D'autres hommes.
Entre nous, voyez-vous,
Ils ne valent pas très cher,
Tous les hommes.
La femme, à vrai dire,
N'est faite que pour souffrir
Par les hommes.
Dans les bals, j'ai couru.
Afin d'l'oublier, j'ai bu.
Rien à faire, j'ai pas pu.

Quand i' m'dit : « Viens ! »
J'suis comme un chien.
Y a pas moyen,
C'est comme un lien
Qui me retient.

Je l'ai tellement dans la peau
Qu'j'en suis dingo.
Que celle qui n'a pas connu

Aussi ceci
 Ose venir la première
 Me j'ter la pierre.
 En avoir un dans la peau,
 C'est l'pire des maux
 Mais c'est connaître l'amour
 Sous son vrai jour.
 Et j'dis qu'i faut qu'on pardonne
 Quand une femme se donne
 À l'homme qu'elle a dans la peau.

English translation

My Man

On this earth
 My only joy, my only happiness
 Is my man
 I've given everything that I have,
 My love and all my heart
 To my man.

And yet, at night,
 When I dream, it's of him
 Of my man.
 It's not that he's beautiful
 That he's rich or tough
 But I love him, it's stupid
 He hits me.
 He takes my money.
 I'm exhausted
 But despite everything,

What do you want.

I have him under my skin so much

That I'm crazy.

As soon as he touches me, it's over,

I am his.

When his eyes rest on mine,

It makes me weak at the knees.

I have him under my skin so much

That the slightest word,

Would make me do anything.

I would kill, my faith.

I feel that he would make me become notorious

But I'm just a woman,

And I have him under my skin.

To leave him,

It's crazy, that they've offered me

Other men.

Between us, you see,

They aren't worth very much,

All the men.

The woman, truth be told,

Is only made for suffering

For the men.

I rushed to the dance.

I drank to forget him.

I couldn't do anything.

When he told me: "Come!"

I was like a dog.

There's no way

It's like a bond

Holding me.

I have him under my skin so much

That I'm nuts.

Those who haven't

Also known this

Dare to throw the first

Stone at me.

To have someone under your skin,

It's the worst pain

But it's to know love

In its real light.

And I say that we need to forgive

When a woman gives herself

To a man that she has under her skin.

Mistinguett's song *En douce* was very popular in France, as it depicts the contrast between rich and poor, those who were born in bourgeois families, have expensive education, high society weddings, when all know that they are going to lose their virginity, while she was born without any fuss and when she did it with her man there were no church bells, she did not bother the priest and all the guests, it was on the grass behind the fortifications that she felt the famous thrill, she said nothing and didn't sigh, just hid her head and cried on the sly...

Y a des enfants

Qui, dès en naissant,

Font les intéressants

Pour ces seigneurs

Il faut un docteur

Une nurse, un précepteur

Quand on les prend

C'est avec des gants

Si on leur colle une bise

Avant faut qu'on se stérilise

Moi, quand j'ai mis l' nez ici-bas

Je n'ai pas causé tout c' branle-bas !

J'ai fait ça en douce

Je suis v'nue je n' sais pas comment
 Vas-y comme j' te pousse
 Et j'ai même pas connu d' maman
 J'ai grandi, malgré les gnons,
 Comme un champignon
 J'ai pas été en pension
 Faire mon instruction

J'ai fait ça en douce
 Et j'ai eu qu'un seul professeur
 Tout c' qu' y a d' maousse
 C'est un ancien cambrioleur
 Je sais comme on chipe un pain
 Quand, d'puis trois jours, on a faim
 Et comment, pris par la Rousse,
 On se manie l' train en douce

Y a des poules qui
 Font des tas d' chichis
 Quand elles se marient
 Elles s' collent en blanc
 Elles publient des bans,
 Elles invitent l'arrière-ban
 Il y a un lunch,
 On bouffe et on guinche
 Enfin, toute la France
 Sait qu'elles vont perdre leur innocence
 Quand j' me suis donnée à mon homme
 Y avait pas d' cloches, ni d'harmonium

J'ai fait ça en douce
 Sans toutes ces complications
 En pleine cambrousse
 Derrière les fortifications,
 Pour perdre ma fleur d'oranger
 J'ai pas dérangé
 Le maire, le suisse, le bedeau
 Et des tas d' badauds !

J'ai fait ça en douce
 Et j'ai connu sur le gazon
 La grande secousse
 Et le fameux petit frisson
 Et lorsque j'ai chaviré
 J'ai rien dit, rien soupiré
 Mais j'ai caché ma frimousse
 Afin de pleurer en douce

Y a des piqués
 Qui, une fois claqués,

Font encore du chiqué
 Quand ils s'en vont,
 Aux quatre coins, ils ont
 Des plumeaux, des cordons !
 Plus y a d' gens
 Plus ils sont contents
 Ils sont fiers quand ils meurent
 D'arrêter les tramways, deux heures
 Moi, pour pas qu' mon inhumation
 Entrave la circulation

Je f'rai ça en douce
 Et sans envoyer de faire-part
 Pourquoi faire d' la mousse
 Et des tas d' chichis quand on part ?
 J' n'ai pas besoin de bagnoles
 De monsieur Borniol,
 Ni de toute sa ferblanterie
 J' veux pas qu'on m' charrie !

Je f'rai ça en douce
 Je n' veux pas, pour porter mon deuil,
 Que l'on mette des housses
 Aux pauv' chevaux ni aux fauteuils
 Pas besoin d' bouquets ruineux,
 Dans mon p'tit coin, j'aime mieux
 Voir sortir, quand l'printemps pousse,
 Une fleur ou deux en douce

Translation of I did it on the sly

There are children
 Who, from birth,
 Are taken very seriously.
 For these lords
 You need a doctor
 A nurse, a tutor.
 When we hold them
 It is with gloves
 If we give them a kiss
 Before we have to sterilize.
 Me, when I put my nose down on earth
 I did not cause such a fuss!

I did it on the sly
 I came I don't know how
 Go ahead as I push you
 And I haven't even known a mom
 I grew up, despite the blows,
 Like a mushroom

I have not been to boarding school
Do my instruction

I did it on the sly
And I only had one teacher
All that there is despicable
He is a former burglar
I know how we steal bread
When, for three days, we've been hungry...

Louis Charles Augustin Georges Trenet (18 May 1913 – 19 February 2001) was a French singer-songwriter, who composed both the music and the lyrics to nearly a thousand songs. These include "[La Mer](#)", "[Boum!](#)" and "Y'a d'la joie", and supported a career that lasted well over sixty years. His act was characterised by a jaunty air touched with eccentricity. Trenet's best-known songs include "[Boum!](#)", "[La Mer](#)", "Y'a d'la joie", "[Que reste-t-il de nos amours?](#)", "Ménilmontant" and "Douce France". His catalogue of songs is enormous, numbering close to a thousand. While many of his songs mined relatively conventional topics such as love, Paris, and nostalgia for his younger days, what set Trenet's songs apart were their personal, poetic, sometimes quite eccentric qualities, often infused with a warm wit.

Some of his songs had unconventional subject matter, with whimsical imagery bordering on the surreal. "Y'a d'la joie" evokes joy through a series of disconnected images, including that of a subway car shooting out of its tunnel into the air, the Eiffel Tower crossing the street and a baker making excellent bread. The lovers engaged in a [minuet](#) in "Polka du Roi" reveal themselves at length to be "no longer human": they are made of wax and trapped in the [Musée Grévin](#). Many of his hits from the 1930s and 1940s effectively combine the melodic and verbal nuances of French song with American swing rhythms.

"**Boum !**" ([onomatopoeia](#) similar to "boom" in English) is a popular 1938 song by the French singer/songwriter [Charles Trenet](#) which won him the [Grand Prix du Disque](#). Its light, irreverent lyrics express a [joie de vivre](#) typical in French popular music produced during the late 1930s. According to historian Charles Rearick, Trenet's songs of the period represented [escapism](#) at a time dominated by political unrest and economic uncertainty. It includes depictions of the sounds made by various animals and also various [onomatopoeia](#). The lyric to the refrain is:

<i>Boum !</i>		Boom!
<i>Quand</i>	<i>notre</i>	When our heart
<i>coeur</i>	<i>fait</i>	goes "Boom!"
<i>Boum !</i>		
<i>Tout avec lui dit</i>		Everything goes
<i>Boum !</i>		"Boom!" with it,
<i>Et c'est l'amour</i>		And it is love
<i>Qui s'éveille.</i>		Which awakes.

PARIS SERA TOUJOURS PARIS WILL ALWAYS BE PARIS

This chapter could be also an epilogue of this book. When I am writing this chapter, Paris is once again in a precarious situation, with the pandemic, no tourism, huge demonstrations, a Jewish teacher decapitated by a Muslim fundamentalist, and the city victimized more and more by Islamic terrorism, no more glamorous as I have always known it, Paris in distress, as it was in 1939, after the break of the war and before the German invasion. Albert Willemetz, the lyricist, wanted to encourage the population of Paris, as can be seen from the words of the song. Casimir Oberfeld, composed the song in a lively tune, full of hope and joy. He composed very popular songs in the 1920s and the 1930s, but following the invasion he faced increasing persecution as he was a Jew. He was arrested and sent to Auschwitz where he died in January 1945. The song was sung by the one and only Maurice Chevalier, and became very popular then, and still is today. In the following lyrics one can see the dichotomy between the euphoric reputation of the city and the harsh reality of its inhabitants, yesterday as today.

Paris sera toujours Paris

Par précaution on a beau mettre

Des croisillons à nos fenêtres

Passer au bleu nos devantures

Et jusqu'aux pneus de nos voitures

Désentoiler tous nos musées

Chambouler les [Champs-Élysées](#)

Emmailloter de terre battue

Toutes les beautés de nos statues

Voiler le soir les réverbères

Plonger dans le noir la ville lumière...

Le refrain:

Paris sera toujours Paris!

La plus belle ville du monde.

Malgré l'obscurité profonde

Paris Will Always Be Paris

Despite putting bars on our windows

As a precaution

Going over our shops fronts in blue

As far as our car tyres

Removing the canvases from all our museums

Bringing chaos to the [Champs-Élysées](#)

Enveloping all the beauty

Of our statues with clay

Veiling the street lamps in the evening

Plunging the city of light into darkness...

Chorus:

Paris will always be Paris!

The most beautiful city in the world.

Despite the profound darkness

Son éclat ne peut être assombri

Paris sera toujours Paris!

Plus on réduit son éclairage

Plus on voit briller son courage

Sa bonne humeur et son esprit.

Paris sera toujours Paris!

Pour qu'à ce bruit chacun s'entraîne

On peut la nuit jouer d'la sirène

Nous contraindre à faire le zouave

En pyjama dans notre cave.

On aura beau par des ukases

Nous couper l'veau et même le jazz

Nous imposer le masque à gaz

Des mots croisés à quatre cases

Nous obliger dans nos demeures

À nous coucher tous à onze heures...

Le refrain

Bien que ma foi, depuis octobre

Les robes soient beaucoup plus sobres

Qu'il y ait moins d'fleurs et moins
d'aigrettes

Que les couleurs soient plus discrètes.

Bien qu'aux galas on élimine

Les chinchillas et les hermines

Que les bijoux pleins de décence

Her radiance is unable to be dimmed

Paris will always be Paris!

The more her lighting is reduced

The more we see her courage

Good mood and spirit shine.

Paris will always be Paris!

So that everyone gets trained to this
noise

They are able to sound the siren at night

Compelling us to act the fool

In pajamas in our cellar.

No matter how with edicts

They ration our veal and even jazz

Impose gas masks on us

Crosswords with four squares

Oblige us in our homes

To go to bed at eleven o'clock sharp...

Chorus

Despite my faith, since October

The dresses are much more sobre

There are fewer flowers and fewer
plumes

The colours are more modest.

Although they are getting rid of

Chinchillas and ermine at galas

The jewels, full of decorum

Brillant surtout par leur absence.	Shine above everything through their absence.
Que la beauté soit moins voyante	Beauty may be less ostentatious
Moins effrontée, moins froufroulante...	Less brazen, less rusty...
Paris sera toujours Paris!	Paris will always be Paris!
La plus belle fille du monde.	The most beautiful girl in the world.
Même quand au loin le canon gronde	Even when the cannon thunders in the distance
Sa tenue est encore plus jolie	Her garb is still prettier
Paris sera toujours Paris!	Paris will always be Paris!
On peut limiter ses dépenses.	They can limit her expenses.
Sa distinction, son élégance	Her distinction, her elegance
N'en ont alors que plus de prix.	Are then only worth more.
Paris sera toujours Paris!	Paris will always be Paris!

But for me Paris was always hospitable, bounteous, welcoming. Although French is my mother tongue, I was born in the “diaspora”, and came to Paris for the first time ever in 1967, when I was 23 years old. Its impact was overwhelming, the most beautiful city I have ever seen, I felt immediately at home there, visited the museums, saw plays and operas by the best actors in the best theaters at the Comedie française, Odeon, Opera Garnier. I studied for a whole year in the nearby Fontainebleau at INSEAD, and took every opportunity to visit Paris.

Furthermore, I experienced one of the most exhilarating adventures of my life – the Students’ Revolution in May 1968. The eternal struggle between revolution and conservatism, intellectuals and bourgeois, with endless discussion on what is better Maoism or Trotskyism. When the best actors Jean-Louis Barrault and Madeleine Renaud begged the students and workers gathered at the Odeon Theater to understand that French theater is not elitist but social. In my business career and in my cultural trips I visited Paris dozens of times, negotiating new ventures with conglomerates and small companies, overseeing a Parisian subsidiary, conducting successfully a turnaround of a French company, I even visited Paris once a month during several years in the 1990s. In every trip I went to the theater, concerts, operas, shows, every night during the 1-2 weeks of the visit, and 4 times during the weekends, visited each time the Impressionist museums, and several times the other museums, took tours for connoisseurs to hidden places of Paris, and in between strolled on the Grands Boulevards, visited friends, went to French films, but never went to fancy restaurants, only once went to Régine’s discotheque, and if I went occasionally to the Moulin Rouge or the Lido it was only for the shows. Still, I am a complete dilettante of Paris and I know nothing about the city.

I also wrote a PhD dissertation in Business Ethics first for the Universite de Paris and then to CNAM and visited my directeurs de these every month for several years, I gave lectures several times at INSEAD and other organizations, took my wife and children to frequent visits to Paris, and finally received my PhD in 2004 after defending my dissertation at an amphitheater of CNAM with an audience from all over Paris. So, Paris was always good for me, I was never mugged in Paris (it happened in Rome), I was never sick there (it happened in New Zealand), I took always safely the Metro (but never in New York), I had never problems with my visas (it happened in Canada and Peru), and the Shabab didn't try to burn me alive as all the Europeans (it happened in my "hometown" Cairo when I was 7). I always felt at ease with the fantastic French cultural heritage which I was exposed to since I was 5 at the Lycee. I didn't mind either that I was taught history about "my ancestors from Gaulle", in a class full of Jews, Arabs, Italians, Armenians, Copts and only a few French kids. I wrote my PhD dissertation in French, translated a play into French, and understood almost perfectly the difficult texts in rhymes of Racine and Corneille, but much less the slang in the streets.

I felt in Paris all the time *liberté, égalité, fraternité*. Liberty, as you always feel free in Paris, as foreign painters, authors and composers, as all the refugees all over the centuries felt, the Jews (see in this book's chapters), the Poles (Marie Curie, Chopin), the Russians (Henry Troyat, Chagall), the Italians (Modigliani, Montand), the Spaniards (Picasso, the refugees from the Civil War), the Americans (Gertrude Stein, Scott Fitzgerald), the Armenians (Aznavour), the Africans (a long list of singers), the Arabs (Isabelle Adjani, Mouloudji), immigrants from Egypt (Georges Moustaki, Dalida, Guy Beart, Georges Guetary, Bob Azzam), Israel (Rika Zarai), Turkey (Dario Moreno), but not many Muslim fundamentalists, as their Imams try to convey hatred towards the "infidels" (although they are only immigrants), and the irresolute French government, because of election constraints, doesn't take adequate measures to eradicate terror and anti-Semitism, unlike the American, Israeli and Greek governments.

Equality, as I almost never encountered anti-Semitism (although many friends told me that I don't look like a Jew...), I studied at no cost for my PhD at the University of Paris and CNAM, the French people never patronized me. When I lost my hearing, the Comedie Francaise gave to my wife and me a loge at a much reduced price with special hearing aids and captions that could be seen above the loge in front. However, the Dreyfus Affair happened in "our" twelfty. Indeed, in those times at least half of the French people were anti-Semites, as they were inculcated since early childhood that the Jews murdered Christ. But since free education became *laïque/secular* (I studied at such a school at the Lycee) and the ties between Church and State were severed in the first decade of the 20th century, and since the reform in the Catholic Church in the sixties of the 20th century, the situation has improved substantially, although the French regime of Petain assisted the Germans to exterminate the Jews in the early forties, and in some provincial towns you can still encounter anti-Semitism, especially among people who were born in the 40s and 50s. Yet, overall, Jews and foreigners in general enjoyed freedom, equality and even fraternity in France, much more than in most other European countries, provided of course that they adopted the French ethos.

Fraternity, my best foreign friends are French, I was invited to their homes, they assisted me when needed, I invited them to Israel, I even managed to change the attitude of many prejudiced French people against the Jews and wrote a case study about that, as some of "my best friends" were anti-Semites... I share with the French people their language, their culture, their heritage, not at the expense of my Israeli or Sephardic heritage, but on top of it. As another North African wrote "toi Paris tu m'as pris dans tes bras" – Paris, you took me in

your arms, well but this is a song of Enrico Massias from 1964, much after “our” twelfty, yet it described how the Algerians “Pied Noirs” Christians, Arabs, Jews felt in France and Paris.

But, in “our times”, there is a no less appropriate song stating the same message of Parisian hospitality, Josephine Baker, another immigrant, sings “J’ai deux amours mon pays et Paris” – I have two loves my country and Paris. My heart is ravished by Paris, as in the song, the stay is enchanted there as in the song, what puts a spell on me is Paris as in the song. Indeed, it is sheer love, physical and spiritual love, to the Parisian atmosphere, its cultural audiences, where I feel at home at the theaters and in Champs Elysees, in the Cafes and in the book shops, at the university, when I was invited to watch in the Sorbonne courtyard a play and I couldn’t leave, as I was under the actors’ spell, in spite of the heavy rain which soaked me.

Yet, Paris and France are not free from defaults. I was exposed to the French corruption by Colette Neuville founder of ADAM, and I wrote about it extensively in my dissertation. I couldn’t attend two decisive meetings on my PhD because of a Metro strike, one had a disastrous impact with my directeur de these at the University of Paris, the other almost prevented my initial meeting with my new directeur de these at CNAM. Fortunately, in the second case, I found a taxi after an hour, and my counterpart was kind enough to wait for me, to what developed as a very fruitful cooperation, establishing immediately trustful relations.

But those were the exceptions. I am quite “blasé”, after visiting more than sixty countries and hundreds of cities. I am not thrilled anymore, as I used to be by the Grand Canyon, Niagara Falls, or the Amazon. I am bored by New York, indifferent to London, and I wouldn’t want to revisit Rome, Berlin or Istanbul in the near future. But I am willing to spend a week every month in Paris, live in Paris for a few years, or at least be thrilled as in the first time by Paris once a year. When I look at my wife I see the same beautiful woman that I met more than half a century ago, I don’t discern any wrinkles, as for me love has no age. Love for my wife, my children, my grandchildren - it is unconditioned and ageless. The same applies to my country Israel, but in the whole wide world there is only one place that I love as my own country – France, its people, its culture, and most of all its center – Paris. I admire Scandinavian ethics and prosperity, German seriousness, Italian joie de vivre, Spanish openness, American business, English correctness, Greek folklore, Russian temperament, but a visit to those countries is “more of the same”, and when I visit smaller countries as Belgium, Netherlands, Austria, Switzerland, Czechia, Slovakia, they look to me all alike, the same towns, a similar mentality to the other countries that I have visited, nothing exhilarating, intoxicating, unique.

But Paris is unique, it cannot be compared to any other city, even if you visit it 100 times you can still discover new places, be thrilled, gladdened, delighted, with raised spirits, stimulating pleasure, invigorating stamina, happy, with a soared and energized state of mind. Because “Paris will always be Paris” as Maurice Chevalier sang in 1939, “We’ll always have Paris” like Rick told Ilsa in Casablanca in 1942, “I love Paris in the springtime, in the summer, in the fall, in winter” like Cole Porter wrote in 1953. I love Paris since the first time I saw it in 1967, but I have loved it since 1946 when I was 2 years old and sang in Cairo “Mon amour de Saint Jean” my Parisian lover, composed in 1937 by Emile Carrara, I loved Paris in books by Victor Hugo – *Les Misérables*, *Notre Dame de Paris*; in books by Emile Zola - *L’argent*, *La curee*, *Le ventre de Paris*, *Paris*, *Au bonheur des dames*, *Nana*, *L’assomoir*, *Son excellence Eugene Rougon*; in books by Jean-Paul Sartre, Andre Gide, Balzac, Dumas; as I have known Paris from the books, the paintings and by the music & chansons since my early childhood, long before I visited it for the first time 20 years later, and as I have met it with the readers of this book, in its literature, art, music, history, salonnières, famous people, its quality of life...

PREMIERES – CALENDAR OF EVENTS

ATTENDING THE BEST PREMIERES OF PLAYS, FILMS, OPERAS, CLASSICAL MUSIC, BALLETS, EVENTS IN PARIS AND THE WORLD FROM 1820 TO 1939

Freud would say that the reason that I am writing this book in the midst of the Corona Virus crisis is because I cannot go to the theater and concerts, all the theaters around the world are closed, & of course no premieres. That's why I sail on the wings of imagination to the twelfth where most of the best plays were written, most of the best operas, symphonies, ballets and concerti were composed, most of the best paintings were painted, at least in my opinion.

I am aware that the Greek and Latin playwrights lived thousands of years ago, Shakespeare, Moliere, Racine, Corneille, Lope de Vega and Goldoni lived centuries ago, Mozart was the ultimate composer, and the Renaissance paintings and sculptures are perceived by many as the pinnacle of art. I love all of them, but I love most Ibsen, Chekhov, Shaw, Wilde, Rostand, Hugo, Zola, Feydeau, Pirandello – all of them wrote in this twelfth, impressionists Renoir, Manet, Monet, & Van Gogh, Modigliani, Cezanne, Gauguin, & composers Beethoven, Verdi, Mendelssohn, Mahler, Offenbach, Brahms, Chopin, Puccini, Tchaikovski, Rahmaninov...

Not that I attended many premieres. I have seen thousands of plays all over the world, but mainly in Paris, London, New York and Israel. For many years I saw the first performances of the best Israeli theaters, but seldom were they premieres of Israeli playwrights, and it goes without saying that even if I saw many times Ibsen's *An Enemy of the People* or Rostand's *Cyrano de Bergerac*, *Uncle Vania* or *Lady Windermere's Fan*, none of them was a premiere... Still, I can remember some memorable performances – when I was a small child in Cairo – Rostand's 6 act-play *L'Aiglon*, the best Chekhov's *Three Sisters* seen at a small theater in Paris with my son who didn't understand French but was so moved that he wept. I initiated my children to the theater since an early age, on the Bar Mitzva trip of this son in London we saw Ibsen's *Peer Gynt*. Later on, when he lived in Seattle in 2006 he took me to an outstanding Shaw's *Arms and the Man*. I had similar experiences with my two other children and with my wife Ruthy, who saw with me in Paris Offenbach's operettas and Orangerie's paintings.

That is why in Jacques Corot's virtual life he would attend thousands of premieres in Paris and all over the world, of plays, operas, concerts, ballets, recitals of singers and soloists, even films, participate in book launches, openings of exhibitions of paintings, new museums, new buildings, and so on. If he attends a premiere outside Paris (such as *Aida*), I mention the city & country. The famous and outstanding premieres are underlined, such as *Hernani*, *Cyrano*, *Aida*, *Le sacre du printemps*, Strauss' *Le Beau Danube Bleu*, and of course important events...

In real life, however, I saw most of the plays mentioned in this essay (the same applies to operas, ballets and concerts), or at least read them or about them, I saw some of them several times in many languages, some of them I even taught at the university, such as Ibsen's *An Enemy of the People*. Some of the plays I even saw at Israeli's premieres - [2011-2013](#)

[CULTURAL ACTIVITIES](#) , or in DVDs, or on the Internet, TV and films. I saw concerts, operas, ballets, mostly on the Internet and not in live performances all over the world, as I would have wanted for lack of time & opportunity. And I even experienced some events.

Most of the premieres take place in this virtual life in Paris, as Paris is where the "cultural action" is in France, and in this twelfth (1820-1939) in the cultural world as well. Paris is the cultural center of France, as London in the UK, Madrid in Spain, Athens in Greece, Stockholm in Sweden, Brussels in Belgium, Lisbon in Portugal, Buenos Aires in Argentina, Stockholm in Sweden, Copenhagen in Denmark, Oslo in Norway, and New York in the US. However, in Russia there are 2 cultural centers in Moscow & Saint Petersburg, in Germany Berlin is predominant but Hamburg, Frankfurt & Dresden are important as well, and so in Italy where cultural life is focused in Rome, but also in Venice, Milan and Florence.

This novel could include meetings and conversations, premieres and launchings, with my virtual hero's favorite French and foreigners living or visiting Paris - novelists, playwrights, poets, actors, composers, painters, sculptors, violinists, pianists, conductors, directors, cultural figures... I referred to some of them previously. I would like to elaborate on French authors:

[Stendhal](#) (Henri Beyle) (1783–1842), [Alphonse de Lamartine](#) (1790–1869), [Alfred de Vigny](#) (1797–1863), [Eugène Delacroix](#) (1798–1863) as an author, [Sophie Rostopchine](#), [Comtesse de Ségur](#) (1799–1874), [Honoré de Balzac](#) (1799–1850), [Victor Hugo](#) (1802–1885), [Alexandre Dumas, père](#) (1802–1870), [Prosper Mérimée](#) (1803–1870), [Eugène Sue](#) (1804–1857), [George Sand](#) (Amandine-Lucie-Aurore Dupin, baronne Dudevant) (1804–1876), [Pierre-Joseph Proudhon](#) (1809–1865), [Alfred de Musset](#) (1810–1857), [Théophile Gautier](#) (1811–1872), [Louis Blanc](#) (1811–1882), [Eugène Labiche](#) (1815–1888), [Paul Féval, père](#) (1817–1887), [Charles-Marie Leconte de Lisle](#) (1818–1894), [Charles Baudelaire](#) (1821–1867), [Gustave Flaubert](#) (1821–1880), [Edmond de Goncourt](#) (1822–1896), [Théodore de Banville](#) (1823–1891), [Ernest Renan](#) (1823–1892), [Alexandre Dumas, fils](#) (1824–1895), [Edmond About](#) (1828–1885), [Hyppolyte Taine](#) (1828–1893), [Jules Verne](#) (1828–1905), [Jules de Goncourt](#) (1830–1870), [Hector Malot](#) (1830–1907), [Henri Meilhac](#) (1831–1897), [Victorien Sardou](#) (1831–1908), [Émile Gaboriau](#) (1832–1873), [Jules Vallès](#) (1832–1885), [Ludovic Halévy](#) (1834–1908), [Sully Prudhomme](#) (1839–1907), [Alphonse Daudet](#) (1840–1897), [Émile Zola](#) (1840–1902), [Catulle Mendès](#) (1841–1909), [Stéphane Mallarmé](#) (1842–1898), [José María de Heredia](#) (1842–1905), [Albert Sorel](#) (1842–1906), [Paul Verlaine](#) (1844–1896), [Anatole France](#) (Anatole François Thibault) (1844–1924), [Joris-Karl Huysmans](#) (1848–1907), [Octave Mirbeau](#) (1848–1917), [Guy de Maupassant](#) (1850–1893), [Pierre Loti](#) (Julien Viaud) (1850–1923), [Arthur Rimbaud](#) (1854–1891), [Émile Verhaeren](#) (1855–1916), [Jean Moréas](#) (Jean Papadiamantopoulos) (1856–1910), [Jules Lemaitre](#) (1858–1915), [Georges Courteline](#) (Georges Moineaux) (1858–1929), [Gustave Kahn](#) (1859–1936), [Henri Bergson](#) (1859–1941), [Jules Laforgue](#) (1860–1887), [Michel Zévaco](#) (1860–1918), [Paul Adam](#) (1862–1920), [Georges Feydeau](#) (1862–1921), [Maurice Barrès](#) (1862–1923), [Maurice Maeterlinck](#) (1862–1949), [Jules Renard](#) (1864–1910), [Henri de Régnier](#) (1864–1936), [Maurice Leblanc](#) (1864–1941), [Romain Rolland](#) (1866–1944), [Tristan Bernard](#) (1866–1947), [Marcel Schwob](#) (1867–1905), [Edmond Rostand](#) (1868–1918), [Gaston Leroux](#) (1868–1927), [Paul Claudel](#) (1868–1955), [André Gide](#) (1869–1951), [Marcel Proust](#) (1871–1922), [Paul Valéry](#) (1871–1945), [Henry Bataille](#) (1872–1922), [Alfred Jarry](#) (1873–1907), [Charles Péguy](#) (1873–1914), [Henri Barbusse](#) (1873–1935), [Colette](#) (Sidonie Gabrielle Colette) (1873–1954), [Anna de Noailles](#) (Anne de Brancovan, comtesse de Noailles) (1876–1933), [Max Jacob](#) (1876–1944), [Francis Picabia](#) (1879–1953) as an author, [Guillaume Apollinaire](#) (Wilhelm Apollinaris de Kostrowitzky) (1880–1918), [Roger Martin du Gard](#) (1881–1958), [André Salmon](#) (1881–1969), [Jean Giraudoux](#) (1882–1944), [Georges](#)

[Duhamel](#) (1884–1966), [Sacha Guitry](#) (1885–1957), [André Maurois](#) (Emile Herzog) (1885–1967), [Jules Romains](#) (Jules-Louis de Farigoule) (1885–1972), [Alain-Fournier](#) (Henri Fournier) (1886–1914), [Francis Carco](#) (François Carcopino-Tusoli) (1886–1958), [Pierre Benoit](#) (1886–1962), [Blaise Cendrars](#) (1887–1961), [François Mauriac](#) (1887–1970), [Georges Bernanos](#) (1888–1948), [Paul Morand](#) (1888–1976), [Jean Cocteau](#) (1889–1963), [Max Ernst](#) (1891–1976), [Paul Éluard](#) (Eugène Grindel) (1895–1952), [Marcel Pagnol](#) (1895–1974), [Albert Cohen](#) (1895–1981), [André Breton](#) (1896–1966), [Henry de Montherlant](#) (1896–1972), [Tristan Tzara](#) (1896–1963), [Elsa Triolet](#) (1896–1970), [Louis Aragon](#) (1897–1982), [Joseph Kessel](#) (1898–1979), [Marcel Achard](#) (1899–1974), [Marcelle Auclair](#) (1899–1983), [Armand Salacrou](#) (1899–1989), [Antoine de Saint-Exupéry](#) (1900–1944), [André Malraux](#) (1901–1976), [Marcel Aymé](#) (1902–1967), [Jean-Paul Sartre](#) (1905–1980), [Simone de Beauvoir](#) (1908–1986), [Jean Anouilh](#) (1910–1987), [Albert Camus](#) (1913–1960), [Samuel Beckett](#) (1906–1989), etc.

I have of course not mentioned the dates of the launching of all the thousand books of those authors and of the French translations of the foreign authors mentioned in previous pages, but as I give links to their websites we can gather in what years they took place. There were also as many evenings where poems of the best contemporary poets were read. I mention in the next pages some of the dates of the premieres of the plays of the French playwrights and the premieres of the foreign playwrights in Paris in French or elsewhere, the other dates can be gathered from the links to the playwrights above. Other cultural events were the premieres of operas, ballets, classical music, as given partially in the next pages, mainly in Paris.

Very interesting dates are the opening date of the Salon des refuses on 15/5/1863 at the Palais des Champs Elysees in annex to the Palais de l'Industrie, where the impressionists and others could show their paintings, such as Camille Pissarro, Edouard Manet, Henri Fantin-Latour, Whistler, Jongkind, etc., and subsequently at the Salons des independants, the first one of annual salons was held on 10/12/1884 at the Salon d'Hiver aux Champs Elysees, with paintings of: [Paul Cézanne](#), [Odilon Redon](#), [Georges Seurat](#), [Henri-Edmond Cross](#), [Vincent van Gogh](#), [Henri de Toulouse-Lautrec](#), [Armand Guillaumin](#), [Maximilien Luce](#), [Maurice Bastide du Lude](#), [Charles Angrand](#), [Pierre Bonnard](#), [Pierre Dumont](#), [Gaston Prunier](#), [Germain Raingo-Pelouse](#), [Edouard Vuillard](#), [Ker-Xavier Roussel](#), [Louis Valtat](#), [Paul Sérusier](#), [Maurice Denis](#), [Jeanne Rij-Rousseau](#), [Félix Vallotton](#), [Pierre Laprade](#), [Georges Rouault](#), [Lucie Cousturier](#), [Albert Marquet](#), [André Dunoyer de Segonzac](#), [Roger de La Fresnaye](#), [Victor Dupont](#), [Edvard Munch](#), [André Lhote](#). One could visit of course also official annual salons.

Culture is also the French chansons with the famous singers of those times, having their opening nights, such as Mistinguett at the Moulin Rouge on 29/7/1907 with "La Revue de la femme", and the same Mistinguett this time with Maurice Chevalier at the premiere of the musical review "Pa-ri-ki-danse" at the Casino de Paris on 29/11/1919. Other famous singers of the Belle Epoque starting at the end of 19th century up to the first World War and the roaring twenties, some of them also composed the songs and/or the lyrics were: Jeanne Aubert, Adolphe Berard, Lucien Boyer, Aristide Bruant, Charlus, Paulette Darty, Henri Dickson, Paul Debuet, Dranem, Henry Fragson, Pervenche Frehel, Eugene Gabin, Yvette Guilbert, Anna Judic, Esther Lekain, Felix Mayol, Emile Mercadier, Jean Note, Polaire, Polin, Vorelli, Vilbert, etc. One of the most famous was Josephine Baker who immigrated to Paris in 1925. On 2/10/1925 was the premiere of her Revue Negre at Theatre des Champs-Elysees.

Paris was also the magnet that attracted many famous composers such as Frederic Chopin (1831-1849), Jacques Offenbach (1834-1880), who lived in Paris for most of their productive lives, Franz Liszt who lived in Paris from 1827 to 1834. After visiting Paris in 1913 for the scandalous opening of Le Sacre du Printemps, Igor Stravinski lived in Biarritz from 1921 to

1924, from 1924 he lived in Nice. Niccolò Paganini lived in Paris from 1836 to 1838 & from 1838 to 1840 in Nice where he died. Gioachino Rossini lived in Paris from 1825 until his death in 1868 except for 1 year in Italy, and he retired, ceasing to compose operas since 1830. Pablo Picasso lived in Paris since 1901. Marc Chagall lived in Paris in 1910 - 1914 and since 1923. Amadeo Modigliani lived in Paris from 1906 until his death in 1920. Chaim Soutine immigrated to Paris in 1913. Vincent Van Gogh lived in Paris & Provence from 1886 until his death in 1890. Constantin Brancusi lived in Paris from 1903. Jacques Lipchitz moved to Paris in 1909. In 1910 Moise Kisling moved to Paris. Camille Pissarro moved to Paris from 1855.

Karl Marx lived in Paris from 1843 to 1845 and for short periods in 1848-1849. Heinrich Heine lived in Paris since 1831 until his death in 1856. F. Scott Fitzgerald lived in Paris and the Cote d'azur except for a short period in Hollywood. Ernest Hemingway lived in Paris from 1922 to 1928. In 1903 [Gertrude Stein](#) relocated to Paris. While numerous artists visited the Stein salon, many of these artists were not represented among the paintings on the walls at 27 Rue de Fleurus. Where [Renoir](#), Cézanne, Matisse, and Picasso's works dominated Leo and Gertrude's collection. The gatherings in the Stein home "brought together confluences of talent and thinking that would help define modernism in literature and art". Dedicated attendees included [Pablo Picasso](#), [Ernest Hemingway](#), [F. Scott Fitzgerald](#), [Sinclair Lewis](#), [Ezra Pound](#), [Gavin Williamson](#), [Thornton Wilder](#), [Sherwood Anderson](#), [Francis Cyril Rose](#), [Bob Brown](#), [René Crevel](#), [Élisabeth de Gramont](#), [Francis Picabia](#), [Claribel Cone](#), [Mildred Aldrich](#), [Jane Peterson](#), [Carl Van Vechten](#) and [Henri Matisse](#).

Saturday evenings had been set as the fixed day and time for formal congregation so Stein could work at her writing uninterrupted by impromptu visitors. It was Stein's partner Alice who became the de facto hostess for the wives and girlfriends of the artists in attendance, who met in a separate room. Gertrude attributed the beginnings of the Saturday evening salons to Matisse, as people began visiting to see his paintings and those of Cézanne: "Matisse brought people, everybody brought somebody, and they came at any time and it began to be a nuisance, and it was in this way that Saturday evenings began." Among Picasso's acquaintances who frequented the Saturday evenings were: [Fernande Olivier](#) (Picasso's mistress), [Georges Braque](#) (artist), [André Derain](#) (artist), [Max Jacob](#) (poet), [Guillaume Apollinaire](#) (poet), [Marie Laurencin](#) (artist, Apollinaire's mistress), [Henri Rousseau](#) (painter), and [Joseph Stella](#). Hemingway frequented Stein's salon, but the two had an uneven relationship. They began as close friends, with Hemingway admiring Stein as a mentor, but they later grew apart. A special chapter is devoted to famous salonnières as Gertrude Stein.

All the thousands premieres mentioned in this essay are only a suggestion for a culture loving to attend. I imagine that if I would have lived in that twelfty, I would not have the time to go to all of them, especially that many of them were scattered all over Europe and some of them in the US, and we know how difficult it was in those times to travel, without flights and speedy transportation, not to mention the inconvenience to travel so far for just attending a premiere. Most of the plays and concerts that I have seen throughout the world were during my very frequent business trips when I was free at nights (I never went to discotheques, bars and very seldom to dinners). But I have friends who travel on purpose to a premiere in New York or Paris, thousands of kilometers from Tel Aviv. I love culture but not so much as to travel a few days just to see Barenboim, and when I saw him conducting it was when I was in Berlin for a reunion. But, anyhow, our virtual hero Jacques Corot, would not have to travel physically to all those premieres as his poor alter ego Jacques Cory does, or would have done. Yet, those are not the most important and comprehensive events and premieres, as the list is completely subjective, they are the most significant in my opinion to understand those times.

With technology of the mid 21st century he would attend all those premieres as a hologram and just enjoy the evenings, without the cumbersome voyages, especially with the “primitive” technology of the 19th and first half of the 20th century, and he would avoid the smell of the rich but not so clean bourgeoisie, who were very intellectual but I cannot vouch on their hygiene. And on top of that there was no air conditioning, as the first air conditioner, designed and built in [Buffalo, New York](#) by Carrier, began working only on 17 July 1902, and the first private home to have air conditioning was built in Minneapolis in 1914, owned by [Charles Gates](#), not Bill - Charles. But also there were no computers, flights, Internet, YouTube, Zoom.

The book’s segment ‘Premieres – Calendar of Events’ includes the following 12 chapters:

French Plays

Foreign Plays

Literature – Novels, Poetry, Philosophy, Journalism

Operas and Musicals – Vocal Music

Ballets & Dance

Classical Music – Instrumental Music

Films – Cinematography, Silent and Sound Films

Arts – Painting, Sculpture, Architecture

Science – Formal, Natural, Social

Technology – Photography, Transport, Telecommunication, Inventions, Energy

Events – Historical, Sport, Religion, Inaugurations, Miscellaneous

Timeline of the History of the City of Paris

Note – most of the events and premieres in plays, etc. are described in English. However, as many sources were in French – some of those events are described in French, but one can understand from the name of the play, opera, etc., the author and the site, where the events took place. And if not – one can translate it in “Google translate” from French into English.

FRENCH PLAYS

23/12/1820: inauguration du [Théâtre du Gymnase](#) afin de servir d'abord de lieu d'entraînement pour les élèves du [conservatoire](#).

12/7/1821: – *Le Mont Sauvage*, mélodrame en 3 actes de [Pixérécourt](#), au [théâtre de la Gaîté](#)

2/7/1823: *L'Auberge des adrets*, mélodrame de [Benjamin Antier](#) par [Frédéric Lemaître](#), au [Théâtre de l'Ambigu-Comique](#)

27/12/1824 : *Sylla*, d'[Étienne de Jouy](#), à la [Comédie-Française](#), au bénéfice de [Saint-Fal](#)

23/1/1827 : Inauguration du [Théâtre des Bouffes-Parisiens](#), à Paris

1/3/1827 : Inauguration du premier [Théâtre des Nouveautés](#), à [Paris](#).

13-14/7/1827 : Incendie du [Théâtre de l'Ambigu-Comique](#), à Paris

[13/2/1828](#) : [Victor Hugo](#), *Amy Robsart*, drame en cinq actes et en prose

20/6/1829: *Mérimos Béliéro, ou l'Autre école des vieillards*, parodie en 5 actes et en vers d'[Auguste Romieu](#) et [Balisson de Rougemont](#), au [Théâtre des Variétés](#).

25/2/1830 – Victor Hugo – Hernani - Comedie Francaise. It is more remembered for the demonstrations which accompanied the first performance, called "La bataille d'Hernani". It was a battle between the classical and romantic theater lovers wearing red vests.

3/5/1831: première représentation au [théâtre de la Porte-Saint-Martin](#) du drame d'Alexandre Dumas [Antony](#) qui remporte un succès spectaculaire.

11/8/1831: *Marion Delorme* de [Victor Hugo](#), au [théâtre de la Porte-Saint-Martin](#).

29/5/1832: *La Tour de Nesle* d'Alexandre Dumas, au [Théâtre de la Porte-Saint-Martin](#)

2/7/1832: *Chabert*, d'[Honoré de Balzac](#), histoire contemporaine en 2 actes, mêlée de chant, avec [Jacques Arago](#), Paris, [Théâtre du Vaudeville](#), [Paris](#).

22/11/1832: *Le Roi s'amuse* de [Victor Hugo](#), à la [Comédie-Française](#). Les representations sont suspendues le lendemain. Interdit depuis le 10/12/1832.

2/2/1833: *Lucrèce Borgia* de [Victor Hugo](#), au [Théâtre de la Porte-Saint-Martin](#)

30/5/1833: *Quitte pour la peur* d'[Alfred de Musset](#), comédie créée à l'[Opéra de Paris](#)

6/11/1833: *Marie Tudor* de [Victor Hugo](#), au [Théâtre de la Porte-Saint-Martin](#).

12/2/1835 – Alfred de Vigny – Chatterton – Comedie Francaise, with Marie Dorval, Vigny's mistress. One of the most important Romantic Plays, elaborates the myth of the Poete maudit.

6/3/1835: *Les gants jaunes* de [Jean-François Bayard](#), vaudeville en un acte créé par [Étienne Arnal](#) au [Théâtre du Vaudeville](#).

6/4/1835: *Le Père Goriot* d'après le roman d'[Honoré de Balzac](#) est représenté simultanément au [Théâtre du Vaudeville](#) et au [Théâtre des Variétés](#).

28/4/1835: Angelo, tyran de Padoue de Victor Hugo, à la Comédie-Française

18/5/1835: le Théâtre du Vaudeville joue une parodie (d'*Angelo* de Hugo) de Dupeuty et Duvert : *Cornaro, tyran pas doux*.

23/12/1835: *La Fiole de Cagliostro*, vaudeville en un seul acte d'Édouard Brisebarre, au Théâtre du Palais-Royal

28/8/1838: L'Avocat Loubet, drame d'Eugène Labiche, au Théâtre du Panthéon

25/9/1838: *La Reine de Blanchisseuses*, œuvre de Rougemont, Hennery et Granger, au Théâtre des Variétés.

8/11/1838: Ruy Blas de Victor Hugo, au Théâtre de la Renaissance, pour l'ouverture officielle

6/2/1839: Les Trois Bals vaudeville en trois actes de Jean-François-Alfred Bayard, au Théâtre des Variétés, à Paris.

20/8/1839: L'Article 960 ou la Donation d'Eugène Labiche, au Théâtre du Vaudeville, à Paris.

15/2/1840: création de *Le chevalier de Saint Georges*, comédie en trois actes de Mélesville et Roger de Beauvoir au théâtre des Variétés, avec Pierre-Chéri Lafont.

14/3/1840: création de Vautrin d'Honoré de Balzac au Théâtre de la Porte-Saint-Martin. Le lendemain la pièce sera jugée dangereuse et interdite

17/8/1840: Bocquet père et fils ou le Chemin le plus long d'Eugène Labiche, au Théâtre du Gymnase

24/12/1896: *Le Colonel Roquebrune* de Georges Ohnet, Théâtre de la Porte-Saint-Martin

10/12/1896 – Alfred Jarry – *Ubu Roi* – Theatre de l'Oeuvre, Paris. It caused a riotous response in the audience as it opened and closed on the same day. It is considered a wild, bizarre and comic play, significant for the way it overturns cultural rules, norms, and conventions. To

some of those who were in the audience on opening night, including W. B. Yeats and the poet and essayist Catulle Mendès, it seemed an event of revolutionary importance, but many, as Courteline, were mystified and outraged by the seeming childishness, obscenity, and disrespect of the piece. It is now seen by some to have opened the door for what became known as modernism in the twentieth century. It is a precursor to Dada, Surrealism and the Theatre of the Absurd. Jarry satirized power, greed, and their evil practices—in particular the propensity of the complacent bourgeoisie to abuse the authority engendered by success.

13/1/1897: *Allez, messieurs !* pièce en 1 acte de [Tristan Bernard](#), Paris, [Théâtre de l'Odéon](#),

16/2/1897: [première](#) de *Le Chemineau*, pièce en 5 actes de [Jean Richepin](#), au [Théâtre de l'Odéon](#)

19/11/1919: *Le Disciple du Diable* de George Bernard Shaw, mise en scène de Georges Pitoëff, Théâtre Pitoëff (Genève)

3/2/1920 – Eugene O'Neill – Beyond the Horizon – Morosco Theater, New York, USA (Pulitzer Prize for Drama, 1920)

2/11/1920 – Eugene O'Neill – The Emperor Jones – Provincetown Playhouse, New York, US

9/12/1920 – S. Anski – The Dybbuk – Originally written in Russian, Anski translate it into Yiddish, and it was performed by the Vilna Troupe in Yiddish at the Eliseum Theater in Warsaw, Poland. However, Anski died a month before. 31/1/1922 - In Hebrew (translation by Hayim Nahman Bialik) – Habima Theater with Hanna Rovina, directed by Eugene Vakhtangov, Stanislavsky's gifted pupil with music by Joel Engel, in Moscow, Russia. 1/9/1921 in Yiddish – Yiddish Art Theater, New York, USA, 15/12/1925 first performance in English – Neighborhood Playhouse, New York, USA. 28/2/1925 – In German – Vienna's Rolanbuhnen, Vienna, Austria. 31/1/1928 – In French – Studio des Champs Elysees, Paris.

23/12/1920 – Reigen, La Ronde – Arthur Schnitzler, Kleines Schauspielhaus, Berlin, Germany and 1 February 1921 in Vienna. The play elicited violent critical and popular reactions. Schnitzler suffered moralistic and personal attacks that became virulently [anti-Semitic](#); he was attacked as a [Jewish](#) pornographer and the outcry came to be known as the "Reigen scandal." Despite a 1921 Berlin court verdict that dismissed the charges of immorality, Schnitzler withdrew *La Ronde* himself from public production in German-speaking countries. The play remained popular in Russia, Czechoslovakia and especially in France, where it was twice adapted for the cinema, in 1950 and 1964. In 1982, forty years after Arthur Schnitzler's death, his son [Heinrich Schnitzler](#) released the play for German-language performances. In 1922, the [psychoanalysis](#)-founding [Sigmund Freud](#) wrote to Schnitzler: "You have learned through intuition – though actually as a result of sensitive introspection – *everything* that I have had to unearth by laborious work on other persons."

25/1/1921: [R. U. R.](#) (*Rossumovi univerzální roboti*) de [Karel Čapek](#), créée à [Prague](#) au [Théâtre national](#).

21/3/1921: [La Mouette](#) d'[Anton Tchekhov](#), créée à [Genève](#).

15/4/1921: [Uncle Vania](#) de [Tchekhov](#) est jouée à Paris.

9/5/1921- Luigi Pirandello – Sei personaggi in cerca d'autore, Six personnages en quete d'auteur – Teatro Valle, Rome, Italy. In French – 10/4/1923 – Comedie des Champs-Elysees

2/11/1921 – Eugene O'Neill – Anna Christie – Vanderbilt Theater, New York, USA (Pulitzer Prize for Drama 1922)

24/2/1922 – Luigi Pirandello – Enrico IV, Henri IV – Teatro Manzoni, Milan, Italy

27/2/1922 – George Bernard Shaw – Back to Methuselah, Garrick Theater, New York, USA

12/4/1923 – Sean O'Casey – The Shadow of a Gunman, Abbey Theatre, Dublin, Ireland

28/12/1923 – George Bernard Shaw – Saint Joan – Garrick Theater, New York, USA

22/5/1924 – Luigi Pirandello – Ciascuno a suo modo, Each in His Own Way – Teatro dei Filodrammatica, Milan, Italy

11/11/1924 – Eugene O'Neill – Desire Under the Elms – Provincetown Playhouse, New York, USA

9/11/1926: *La Comédie du bonheur*, pièce en trois actes et quatre tableaux de [Nicolas Evreïnoff](#), traduite du russe par [Fernand Nozière](#), représentée pour la première fois au [Théâtre Montmartre](#), avec [Charles Dullin](#).

23/10/1927 – Sabetay Y. Djaen – Los Pogromes de Kichinev in Ladino with Mois Angel – Pantheon Theatre, Salonica, Greece (this is the date of the review on the performance held in Sukot 1927). Other Ladino performances worth mentioning were "Yosef vendido por sus hermanos" in Seattle, USA staged by Leon Behar in July 1922, La Expulsion de los judios de Espania 10/9/1920, La Reina Ester in 21/10/1920. In 23/2/1909 premiered Doctor Kohn by Max Nordau in Ladino in Salonica, Greece, at the Eden Theatre, performed by the Leguoro-Faina Company, El Muevo Guetto by Theodor Herzl in Salonica, Greece on 15/2/1915, Moliere's L'Avare adapted to Ladino as Han Binyamin in Salonica, Greece, Yosef Avraham Papo's adaptation of Racine's Athalie, performed in Salonica, Greece, and Istanbul, Turkey. In New York – Ahashverosh i Ester in Spring 1911 by la Societa Hesed veEmet de Kastoralis, Shakespeare's Romeo i Julieta translated into Ladino (the first book that I have ever read in Ladino in Rashi letters in 1962 at the Hebrew University of Jerusalem, Israel), Amor i Dezespero, la Arleziana in 1922. In 1909 many plays on the Dreyfus Affair in Salonica, Greece. All the dates are the dates of the reviews on hundreds of plays all over the world.

30/1/1928 – Eugene O'Neill – Strange Interlude – John Golden Theater, New York, USA (Pulitzer Prize for Drama 1928)

31/8/1928 – Threepenny Opera by Bertolt Brecht, music by Kurt Weill, at Berlin's Theater am Schiffbauerdamm. *Die Dreigroschenoper* is a "play with music" by Bertolt Brecht, adapted from a translation by Elisabeth Hauptmann of John Gay's 18th-century English ballad opera, *The Beggar's Opera*, and four ballads by François Villon, with music by Kurt Weill. Although there is debate as to how much, if any, Hauptmann might have contributed to the text, Brecht is usually listed as sole author. The work offers a socialist critique of the capitalist world. It opened at Berlin's Theater am Schiffbauerdamm. Songs from *The Threepenny Opera* have been widely covered and become standards, most notably "Die Moritat von Mackie Messer" ("The Ballad of Mack the Knife") and "Seeräuberjenny" ("Pirate Jenny").

14/10/1930: *L'Opéra de quat'sous* (Die Dreigroschenoper) de Bertolt Brecht et Kurt Weill, créé en version française au théâtre Montparnasse.

8/3/1933 – Bodas de sangre (blood wedding) – Federico Garcia Lorca – Teatro Beatriz, Madrid, Spain.

29/12/1934 – Yerma – Federico Garcia Lorca – Teatro Español, Madrid, Spain. With Margarita Xirgú, Enrique Diosdado, Ricardo Merino, Pilar Muñoz, Carmen Collado, Pedro López Lagar y Eloísa Vigo.

21/4/1936: *Les Innocentes* adaptation de la pièce *The Children's Hour* de Lillian Hellman, Théâtre des Arts, avec Marcelle Géniat, Yolande Laffon et Jean Davy

13/5/1936: *Tu ne m'échapperas jamais*, pièce en trois actes de [Margaret Kennedy](#) adaptée par Pierre Sabatier, [Théâtre des Mathurins](#), avec [Ludmilla](#) et [Georges Pitoëff](#)

15/3/1937: *Chacun sa vérité* de [Luigi Pirandello](#), [Comédie-Française](#)

5/12/1938: *Gas Light* de [Patrick Hamilton](#), première au théâtre Richmond, [Londres](#).

LITERATURE – NOVELS, POETRY, PHILOSOPHY, JOURNALISM

16/1/1820 – *Poems Descriptive of Rural Life and Scenery* by "[Northamptonshire](#) peasant poet" [John Clare](#) is published in England by [John Taylor](#).

15/2/1824 – [Lord Byron](#) falls ill at [Missolonghi](#) while taking part in the [Greek War of Independence](#). He dies of fever on [April 19](#).

4/1824 – *The United States Literary Gazette*, a semi-monthly, begins publication. It publishes poetry by [Henry Wadsworth Longfellow](#) and [William Cullen Bryant](#), among many others.

5/1824 — "Sketches of the Five American Presidents, and of the Five Presidential Candidates, From the Memoranda of a Traveler," by [John Neal](#), the first work by an American author published in a British literary journal.

7/5/1824 – The première of [Beethoven's Symphony No. 9](#) (the "Choral") is played at the [Theater am Kärntnertor](#) in [Vienna](#). It incorporates a setting of [Schiller's "Ode to Joy"](#) (*Ode an die Freude*, 1785).

17/5/1824 – The publisher [John Murray](#) and with five of [Lord Byron's](#) friends and executors, decide to destroy the manuscript of [Byron's memoirs](#) (which he has been given to publish), because of scandalous details that would damage Byron's reputation. Opposed only by [Thomas Moore](#), the two volumes of memoirs are dismembered and burnt in the fireplace at the [John Murray \(publisher\)'s](#) office, 50 [Albemarle Street](#) in London.

21/6/1824 – The [Vagrancy Act](#) in [England](#) provides for the prosecution of "every Person wilfully exposing to view, in any Street... or public Place, any obscene Print, Picture, or other indecent Exhibition".

19/2/1825 – [Franz Grillparzer's](#) *König Ottokars Glück und Ende* (The Fortune and Fall of King Ottokar, published 1823) is first performed, at the [Burgtheater](#) in Vienna, after [Caroline Augusta, Empress of Austria](#), urges her husband [Francis I of Austria](#) to lift the censorship restrictions on it.

6/5/1825 and 15/6/1825 – The two youngest [Brontë sisters](#), [Maria](#) and [Elizabeth](#), die at home at [Haworth Parsonage](#) aged 11 and 9, of [consumption](#) they have contracted at [Cowan Bridge School](#).

6/5/1825 – French bibliophile, translator, lawyer and politician [Henri Boulard](#) (born 1754) dies, leaving a library of over half a million books, one of the greatest private book collections in history.

17/12/1825 – [John Neal](#) moves in with and becomes personal secretary of [Jeremy Bentham](#), who recruits Neal to his [utilitarian](#) philosophy.

15/1/1826 – The French newspaper *Le Figaro* begins publication in Paris. In this first edition, it is a satirical weekly, reflecting the preoccupation of its two founders, [Maurice Alhoy](#) and [Étienne Arago](#).

17/1/1826 – The [Ballantyne](#) printing business in [Edinburgh](#) crashes, ruining Sir [Walter Scott](#) as a principal investor. He undertakes to repay his creditors from his writings, although his publisher [Archibald Constable](#) also fails. Distress caused by the events contributes to the illness afflicting Scott's wife, Lady Charlotte; she dies in May.^[6]

4/2/1826 – In the [Mexican Republic](#), lithographer [Claudio Linati](#) inaugurates *El Iris*, a "pocket sized" bi-weekly. It is in print until [August 2](#), when its popularization of [liberal ideas](#) prompts the intervention of state censors; Linati leaves Mexico later in 1826, probably for political reasons.

6/2/1826 - First print of [James Fenimore Cooper's](#) *The Last of the Mohicans*. This is Cooper's first book under contract with [Philadelphia](#) publishers [Mathew Carey](#) and [Isaac Lea](#), following [Charles Wiley's](#) near-bankruptcy and death. It endures as "the most popular novel of the 1820s."

6/2/1826 - Charles L. Force brings printing to the [Colony of Liberia](#) and, ten days later, founds the bi-weekly *Liberia Herald*. Force dies later that year, but his publication is revived in [1830](#) by [John Brown Russwurm](#).^[10]

16/2/1826 (O. S.: February 4) – [Hungarian Serbs](#) gather at [Pest](#) to set up *Matica srpska*, a cultural society dedicated to promoting the works of Serb writers. It sponsors [Georgije Magarašević's](#) *Serbski Letopis*, which remained "one of Europe's oldest, regularly published journals."

3/1826 – Aged eight, the future orator and memoirist [Frederick Douglass](#) is lent by his master to the Aulds of [Fell's Point, Baltimore](#). He will remain their house servant, and later their regular slave, until [1838](#), when he escapes via the [Underground Railroad](#).

4/1826 – [Andrés Bello](#) launches his London magazine *Repertorio Americano*, in which he publishes the final installment of his *Las Silvas Americanas*, known as *Silva a la agricultura de la zona tórrida* (*Silva* for Agriculture in the Torrid Zone).^[13] It is sometimes described as a final masterpiece of [Neoclassicism](#) in [Latin American literature](#).^[14]

16/4/1826 – [Thomas Pringle](#), a founding figure of [South African literature](#), embarks on his return trip to England. His stay in the [Cape Colony](#) leads him to join and publicize for the [Anti-Slavery Society](#).

18/5/1826 – At [Buda, Habsburg Hungary](#), [Wallachian](#) intellectual [Dinicu Golescu](#) receives *imprimatur* for his *Însemnare a călătoriei mele* (Accounts of My Travels).^[16] This pioneering travelog covers extensive trips in Central and Western Europe, which Golescu had begun in [1824](#). The author documents his own "amazed 'discovery' of the West [and] acceptance of his country's admitted inferiority." As a "manifesto for the new culture" *Însemnare* promotes Wallachia's passage into the [Age of Enlightenment](#). For the same purpose Golescu sponsors a school on [his estate](#).

6/1826 – Despite having maintained links with the Decembrists, poet [Alexander Griboyedov](#) receives a "certificate of loyalism" from the Russian government.

25/7/1826 (O.S.: July 13) – Five Decembrist leaders, including poet [Konraty Ryleyev](#), are hanged in [Senate Square, Saint Petersburg](#). Pushkin's papers of the time include a drawing of five silhouettes on a scaffold, with the words: "Me too, I could be...".

19/8/1826 – [Louis Christophe François Hachette](#) purchases Brédif bookshop on rue Pierre-Sarrazin, Paris. This becomes the first asset owned by [Hachette publishing company](#).

9/1826 – The first issue of [Lydia Maria Child's](#) *The Juvenile Miscellany*, a magazine for children, is published in [Boston](#). Becoming "so popular that children used to sit on their doorsteps waiting for the mail carrier to deliver it," it lasts until [1834](#).

10/1826 – [Tyrone Power](#) gets his break as a principal Irish [character actor](#) at the [Theatre Royal, Covent Garden](#) in London.

17/10/1826 – [Thomas Carlyle](#) and [Jane Welsh](#) marry in [Templand](#).

November 1826 - Hungarian philologist [Sándor Kőrösi Csoma](#) ends his stay at Teta, on the outskirts of [Phugtal Monastery](#) in [Ladakh](#).

November 1826 - The [London Missionary Society](#) sets up the first printing press in [Madagascar \(Merina Kingdom\)](#). It survives to [1836](#), being ultimately shut down for political reasons.

12/1826 – At [Sault Ste. Marie, Michigan](#), [Henry Schoolcraft](#) sets up a review called *Literary Voyager, or Muzzeniegan*. It includes poems and stories by his part-[Ojibwe](#) wife, [Jane Johnston Schoolcraft](#), who thus becomes one of the first Native American literary professionals.

5/12/1826 (O. S.: November 23) – From his boarding school in [Nezhin, Chernigov Governorate](#), [Nikolai Gogol](#) writes home to his mother, describing a "radical new change" in his poetic style. Only two pieces he wrote during this period have survived for posterity.

c. [December 25/1826](#) – [Edgar Allan Poe](#) is forced to renounce his studies at the [University of Virginia](#) when his foster parent John Allan refuses to pay for his tuition.

1/1827 – [Amhlaoibh Ó Súilleabháin](#) begins his Irish-language diary, later published as [Cín Lae Amhlaoibh](#).

2/1827 – [Thomas De Quincey's](#) essay [On Murder Considered as one of the Fine Arts](#) is published in [Blackwood's Magazine](#).

23/2/1827 – Sir [Walter Scott's](#) authorship of the [Waverley Novels](#) is first publicly acknowledged at an Edinburgh Theatrical Fund dinner.

24/2/1827 – [Samuel Griswold Goodrich](#) copyrights the first of the "Peter Parley" juvenile books in the United States, which will continue until 1860.

16/4/1827 – Nathaniel Willis Senior begins publishing a new magazine for children, [The Youth's Companion](#), in [Boston](#), Massachusetts, weekly from [June 6](#). One of the most enduring of its type, the magazine continues until 1929.

6/1827 – [John Neal](#) returns to the US after two and a half years in England.¹

4/9/1827 – The [Great Fire of Turku](#) (the largest city in [Finland](#) at that time) destroys Finnish archives, including practically all material from Finland's Middle Ages. The library of the [Royal Academy of Turku](#) was also destroyed.

14/10/1827 – [Ludwig Tieck](#)'s [Potsdam](#) production of [A Midsummer Night's Dream](#) is the first to feature the incidental music composed by [Felix Mendelssohn](#).

1/1828 - [Thomas Dale](#) becomes the first university professor of English language and literature, at the new [London University](#). [John Neal](#) launches *The Yankee* literary journal.^[2]

6/1/1828 – [William Lamb](#), the future Lord Melbourne, writes to his estranged wife, [Lady Caroline Lamb](#), from Ireland, regretting that official duties make it impossible to visit her immediately. Later in the month, he makes the sea crossing arriving at her bedside shortly before her death.

21/2/1828 – The [Cherokee Phoenix](#), the earliest newspaper published by [Native Americans in the United States](#) and in one of their indigenous languages, ([Cherokee](#)), is first issued in [New Echota](#).

1/4/1828 – [The Athenæum](#), "London Literary and Critical Journal", is launched by [James Silk Buckingham](#).

12/1828 – [Nikolai Gogol](#) leaves school and goes to [Saint Petersburg](#).

26/1/1829 – The first performance of [Douglas Jerrold's](#) comic nautical [melodrama](#) [Black-Eyed Susan; or, All in the Downs](#) is held at the [Surrey Theatre](#) in [Lambeth](#), London. It will run for a new record of well over 150 performances.

29/1/1829 – The first complete performance of [Goethe's](#) [Faust: The First Part of the Tragedy](#) (1808), adapted by [August Klingemann](#), in [Braunschweig](#).

9/1829 – [George Eliot's](#) novel [Middlemarch](#) opens (1871–1872).

29/10/1829 – The English actress [Fanny Kemble](#) makes her stage debut as [Juliet](#) in [Shakespeare's](#) [Romeo and Juliet](#), at her father's [Theatre Royal, Covent Garden](#) in London.

12/1829 — [John Neal](#) published the final issue of *The Yankee* literary journal.

2/1830 – [Barthold Georg Niebuhr's](#) house burns down, but most of his books are saved.

25/2/1830 – The première of [Victor Hugo's](#) play [Hernani](#) in Paris elicits protests from an audience seeing it as an attack on [Classicism](#).

26/3/1830 – The [Book of Mormon](#) is published by [Joseph Smith](#) in [Palmyra, New York](#).

24/5/1830 – [Sarah Josepha Hale's](#) [Poems for Our Children](#), including "Mary's Lamb", with the verse "[Mary Had a Little Lamb](#)", is published by Marsh, Capen & Lyon in Boston, Massachusetts.

1/7/1830 – [Edgar Allan Poe](#) matriculates as a cadet at the [United States Military Academy](#), West Point.

8/1830 – François-René de Chateaubriand sacrifices his political career by refusing to swear an oath of allegiance to Louis-Philippe, and retires to write his memoirs.

25/8/August 25 – Belgian Revolution breaks out; Flemish novelist Hendrik Conscience takes the side of the revolutionaries.

12/1830 – Elizabeth Vestris becomes the first female actor-manager in the history of London theatre by leasing the Olympic Theatre in Drury Lane where she presents extravaganzas and burlesques.

1/1/1831 – William Lloyd Garrison begins publication of the *Liberator*, an abolitionist periodical in the United States.

18/2/1831 (old style) – Alexander Pushkin marries Natalya Goncharova at the Great Ascension Church on Bolshaya Nikitskaya Street in Moscow.

16/3/1831 – Victor Hugo's historical romantic Gothic novel *Notre-Dame de Paris*, known in English as *The Hunchback of Notre-Dame* (completed on January 15), is published by Gosselin in Paris.

19/3/1831 – The play *La Cocarde Tricolore* by the Cogniard brothers introduces the term "*chauvinism*".^[1]

18/4/1831 – *The Sydney Morning Herald* is first published.

4/2/1832 – *Chambers's Edinburgh Journal* is established by William Chambers.

31/3/1832 – *Tait's Edinburgh Magazine* is established by William Tait.

21/5/1832 – Washington Irving returns to the United States after living in Europe for seventeen years.

21/9/1832 – Scottish historical novelist and poet Sir Walter Scott dies aged 61 at his home, *Abbotsford House*, leaving his novel *The Siege of Malta* unfinished; he is buried in the grounds of *Dryburgh Abbey* with Presbyterian and Episcopalian ministers in attendance. His novels *Count Robert of Paris* and *Castle Dangerous* are published this year. On the same day, English poet and novelist Anna Maria Porter dies of typhus in Bristol aged 53.

1/1833 - *The Knickerbocker* is established by Charles Fenno Hoffman as *The Knickerbacker: or, New-York monthly magazine*.

1/1833 - Alphonse de Lamartine is elected a *député* of France.^[1]

c. January 1833 – Richard Bentley (publisher) issues the first collected edition of Jane Austen's novels.

16/2/1833 – Victor Hugo and Juliette Drouet begin a fifty-year affair. This is recorded in his novel *Les Misérables* (1862) as the date of Marius and Cosette's wedding night (Part V, Book 6, Chapter 1).

16/3/1833 – [Parley's Magazine](#), an American periodical for young readers, publishes its first issue in Boston.

25/3/1833 – [Edmund Kean](#), playing [Othello](#) to the [Iago](#) of his son, [Charles Kean](#), collapses on the stage of the [Theatre Royal, Covent Garden](#), London, and dies two months later.

10/6/1833 – The Dramatic Authors Act passed in the [United Kingdom](#) grants playwrights [copyright](#) in their work.

Summer 1833 – [George Sand](#) and [Alfred de Musset](#) begin a two-year affair, recorded in their respective novels *Elle et lui* (1859) and *La Confession d'un Enfant du Siècle* (1836).

15/9/1833 – The English poet [Arthur Henry Hallam](#), a close friend of [Tennyson](#) and engaged to be married to his sister [Emily](#), dies suddenly of a brain haemorrhage in [Vienna](#) aged 22. This year Tennyson writes "[Ulysses](#)" in his memory (completed October 20; published in *Poems* of 1842), "Tithon" (an early version of "[Tithonus](#)") and "[The Two Voices](#)" (originally entitled "Thoughts of a Suicide"). He begins "Morte d'Arthur" (published 1842) and "Tiresias" (published 1885). In 1850 he will publish *In Memoriam A.H.H.*

3/10/1833 – The Anglo-Irish actress [Harriet Smithson](#) marries the French composer [Hector Berlioz](#) in a civil ceremony at the British Embassy in Paris.

1/12/1833 – [Charles Dickens](#)' first published work of fiction, "A Dinner at Poplar Walk", is the first item in what will become *Sketches by Boz*. It appears unsigned in the *Monthly Magazine* (London).

4/1834 – [W. Harrison Ainsworth](#)'s first novel, the historical romance *Rookwood*, is published anonymously in London by [Richard Bentley](#), with illustrations by [George Cruikshank](#). Romanticising the [highwayman Dick Turpin](#), it succeeds enough for the author to take up full-time writing. Bentley also publishes [Edward Bulwer-Lytton](#)'s anonymous popular novel *The Last Days of Pompeii* in the same year.

10/6/1834 – The Scottish philosopher and writer [Thomas Carlyle](#) moves to [Cheyne Row](#) ([Carlyle's House](#)) in London.

8/1834 – [Charles Dickens](#) first uses the [pen name](#) Boz, in the second installment of "The Boarding-House", one of the *Sketches by Boz*, originally published in the *Monthly Magazine* (London).

24/11/1834 – [George Sand](#) begins her journal addressed to [Alfred de Musset](#).

21/1/1835 – Abolitionist [Susan Paul](#) officiates at a meeting of the [New England Anti-Slavery Society](#) (NEASS) in Boston. Later in the year, her *Memoir of James Jackson* becomes the earliest-known published narrative by an [African-American](#) woman and the first account documenting the life of a free black child in the United States.

17/2/1835 – [William Colenso](#) prints the first book in New Zealand, a translation into the [Māori language](#) of the [Epistle to the Philippians](#) and [Epistle to the Ephesians](#).

c. early March 1835 – [John Stuart Mill](#)'s maid accidentally burns the unpublished first volume manuscript of [Thomas Carlyle](#)'s *[The French Revolution: A History](#)*.

8/5/1835 – The first of [Hans Christian Andersen](#)'s 168 fantastic stories are published as *[Fairy Tales Told for Children. First Collection](#)* (*Eventyr, fortalte for Børn*) by C. A. Reitzel in Copenhagen, including "[The Tinderbox](#)" ("[Fyrtøiet](#)") and "[The Princess and the Pea](#)" ("[Prinsessen paa Ærten](#)"). On [December 16](#) a second collection including "[Thumbelina](#)" ("[Tommelise](#)") is published.

7/1835 – [Bertelsmann](#) is founded by [Carl Bertelsmann](#) as a religious printer and publisher in [Prussia](#).

November/December 1835 – The [German Federal Convention](#) prohibits circulation of work by members of the "[Young Germany](#)" group of writers ([Karl Gutzkow](#), [Heinrich Heine](#), [Heinrich Laube](#), [Theodor Mundt](#) and [Ludolf Wienbarg](#)) and the exiled poet [Heinrich Heine](#).

31/3/1836 (dated April) – The first monthly part of *[The Pickwick Papers](#)* by [Charles Dickens](#) is issued in London. On April 20, the original illustrator, [Robert Seymour](#), shoots himself and Dickens has more freedom to develop the story in his own way.

2/4/1836 – Dickens marries [Catherine Hogarth](#) at [St Luke's Church, Chelsea](#) (London). They honeymoon at [Chalk, Kent](#).

19/4/1836 – [Nikolai Gogol](#)'s satire *[The Government Inspector](#)* («[Ревизор](#)») is premièred at the [Alexandra Theatre](#) in [Saint Petersburg](#) before the Emperor [Nicholas I of Russia](#) and first published there.

6/1836 – [Georg Büchner](#) begins work on his play *[Woyzeck](#)*; it remains unfinished when he dies the following year in [Zurich](#).

20/8/1836 – The [legal deposit](#) privilege in the U.K. is removed from the libraries of [Sion College](#) in London, the four [universities in Scotland](#) and [King's Inns](#) in Dublin and replaced by a government grant for the purchase of books.

9/1836 – The *[Flinders Island Chronicle](#)* is founded in Australia, the first newspaper produced by [indigenous Australians](#).¹

23/10/1836 – [Honoré de Balzac](#)'s novel *[La Vieille Fille](#)* (The Old Maid) begins a 12-day serialization in the newly-established Paris newspaper *[La Presse](#)*, as the first novel serialized in the French press.

6/11/1836 – The funeral of [Czech romantic](#) poet [Karel Hynek Mácha](#) takes place on what should have been the day of his wedding to [Eleonora Šomková](#), about a month after the birth of their child. Mácha had overexerted himself in helping put out a fire and died just before his 26th birthday of [pneumonia](#) in [Litoměřice](#).

12/1836 – [Charles Dickens](#) first meets, in London, a lifelong friend, the biographer and critic [John Forster](#).

16/6/1837 – [Charles Dickens](#) is introduced to the actor [William Macready](#) by [John Forster](#) backstage at a rehearsal of [Othello](#).

7/1837 – The English "peasant poet" [John Clare](#) first enters an asylum for the insane, at [High Beach](#) in Essex.

9/1837 – In [Burton's Gentleman's Magazine](#) (Philadelphia), [William Evans Burton](#) publishes an early example of the [detective story](#), "The Secret Cell", featuring a London police officer and his wife.

10/1837 – [The United States Magazine and Democratic Review](#) is first published.

4/10/1837 – [Andreas Munch](#)'s first play, *Kong Sverres Ungdom*, opens the [Christiania Theatre](#)'s new building in Norway.

25/1/1838 – [William Macready](#) opens a performance of [King Lear](#) at the [Theatre Royal, Covent Garden](#), London, restoring most of [Shakespeare](#)'s original text, including the character of the Fool.

28/1/1838 – The second night of [Henrik Wergeland](#)'s satirical musical play *Campbellerne* (The Campbells) in [Christiania](#) (Norway) provokes a riot.

3/1838 – *The Monthly Chronicle*, "a national journal of politics, literature, science, and art", begins publication by [Longman](#) in London.

7/6/1838 – English poet and novelist [Letitia Elizabeth Landon](#) marries George Maclean, travelling with him in early August to Cape Coast Castle, Gold Coast, where she dies on October 15 of a spasm arising from a heart defect.

19/10/1838 – Poet [Alfred de Musset](#) is appointed librarian of the Ministry of the Interior in France.

3/11/1838 – [The Times of India](#) is founded as [The Bombay Times and Journal of Commerce](#) by Raobahadur Narayan Dinanath Velkar in [Bombay](#).

8/11/1838 – French novelist [George Sand](#) begins an uncomfortable winter living with her lover, the ailing Polish-born composer and pianist [Frédéric Chopin](#), on the [Mediterranean](#) island of [Majorca](#) in the abandoned [Carthusian](#) monastery of [Valldemossa](#).

21/1/1839 – [Åbo Svenska Teater](#) in Åbo ([Turku](#)), Finland, opens with a performance of the Swedish-language play *Gubben i Bergsbygden*.

3/1839 – [W. Harrison Ainsworth](#) takes over editorship of [Bentley's Miscellany](#) from [Charles Dickens](#) at the end of the year. Until April serializations of their respective novels [Jack Sheppard](#) and [Oliver Twist](#) have been running simultaneously in the magazine.

4/1839 – [Washington Irving](#) begins contributing regularly to [The Knickerbocker](#), and will publish thirty new pieces in the magazine through March 1841 — including "The Creole Village," where he coins the phrase "the almighty dollar".

31/5/1839 – An important [British constitutional](#) case of [Stockdale v Hansard](#) begins when publisher [John Joseph Stockdale](#) sues for libel after [John Roberton](#)'s pseudo-medical work *On Diseases of the Generative System* (1811) is declared in a parliamentary report to be [indecent](#).

9/1839 – The first known London production of [Love's Labour's Lost](#) after Shakespeare's era opens at the [Theatre Royal, Covent Garden](#), with [Madame Vestris](#) as Rosaline.

6/1840 – An amnesty to mark the accession of King [Frederick William IV of Prussia](#) frees the novelist [Fritz Reuter](#) from the [Dömitz Fortress](#) after two years' imprisonment on a charge of high treason.

6/7/1840 – Novelists [Charles Dickens](#) and [William Makepeace Thackeray](#) independently attend the hanging outside [Newgate Prison](#) in London of the murderer [François Benjamin Courvoisier](#), who blames the influence of W. Harrison Ainsworth's [Newgate novel Jack Sheppard](#) (which concluded serialization in [Bentley's Miscellany](#) in February) for his crime.^[2]

10/8/1840 – [Fortsas hoax](#): Bibliophiles gather in [Binche, Belgium](#) for an auction of 52 unique, meticulously catalogued books from the collection of the late Comte de Fortsas. The Count, the books and the auction all prove fictitious.^[3]

4/3/1841 – [Dion Boucicault](#)'s first London première, the comedy [London Assurance](#) (originally *Out of Town*), opens at the [Theatre Royal, Covent Garden](#). It is presented by the husband-and-wife team [Charles Matthews](#) and [Elizabeth Vestris](#).

10/4/1841 – [Horace Greeley](#) begins publication of the [New-York Tribune](#).

20/4/1841 – [Edgar Allan Poe](#)'s short story "The Murders in the Rue Morgue" appears in [Graham's Magazine](#) (Philadelphia), where he has become editor in February. It will be recognized as the first significant work of [detective fiction](#).

5/1841 – The [London Library](#) is founded in [Pall Mall, London](#) on the initiative of [Thomas Carlyle](#).

23/6/1841 – London publisher [Edward Moxon](#) is tried and convicted of [blasphemous libel](#) for an edition of [Shelley](#)'s poem [Queen Mab](#) (1813) with its atheistic passages restored.

17/6/1841 – [Punch](#) magazine, founded in London by [Henry Mayhew](#) and engraver [Ebenezer Landells](#), is edited by Mayhew and [Mark Lemon](#).

20/7/1841 – The English "peasant poet" [John Clare](#) absconds from an asylum for the insane at [High Beach](#) in Essex and walks 90 miles (140 km) to his home at [Northborough](#) in the East Midlands. In late December he is admitted to [Northampton General Lunatic Asylum](#) where he will spend the remaining 23 years of his life.

28/7/1841 – [Mary Rogers](#), the "Beautiful Cigar Girl", is found murdered in New York City. This will inspire [Edgar Allan Poe](#)'s story "[The Mystery of Marie Rogêt](#)" of the following year, as a sequel to "The Murders in the Rue Morgue".

[July 17, 1841](#) – First edition of the humorous magazine [Punch](#) published in [London](#)

3/1/1842 – [Charles Dickens](#) sets sail for the United States.

14/2/1842 – [Washington Irving](#) is one of the hosts at a public dinner for [Charles Dickens](#) in New York.

3/1842 – The [Book of Abraham](#) by [Joseph Smith](#) is presented as being "a translation of some ancient records... purporting to be the writings of [Abraham](#), while he was in Egypt, called the Book of Abraham, written by his own hand, upon [papyrus](#)." It is published in two installments in the Mormon periodical [Times and Seasons](#).

c. [March 7, 1842](#) – [Charles Dickens](#) meets [Edgar Allan Poe](#) in [Philadelphia](#).

28/3/1842 – The [Teatr Skarbowski](#) in [Lviv](#) opens with the performance of a play by [Franz Grillparzer](#).

7/6/1842 – [Charles Dickens](#) leaves New York to return to Britain.

19/6/1842 – [Eugène Sue](#)'s fictional [The Mysteries of Paris](#) (*Les Mystères de Paris*) begins to be serialized in the newspaper [Journal des débats](#).

1/7/1842 – [The Copyright Act](#) in the United Kingdom provides for authors' copyrights in books to endure for the remainder of the author's life and a further seven years; if this period is less than 42 years from the date of first publication, then the copyright will persist for a full 42 years.

1/1843 - Serial publication begins of [Charles Dickens](#)' picaresque novel [The Life and Adventures of Martin Chuzzlewit](#) by [Chapman & Hall](#) in London. In the July chapters, he lands his hero in the United States.

1/1843 - [Edgar Allan Poe](#)'s [Gothic](#) short story "[The Tell-Tale Heart](#)" appears in [The Pioneer](#) in Boston and his poem "[The Conqueror Worm](#)" in [Graham's Magazine](#) in [Philadelphia](#).

2/1843 – [Macmillan Publishers](#) is founded in London by the [Scottish](#) brothers [Daniel](#) and [Alexander Macmillan](#).

4/4/1843 – [William Wordsworth](#) accepts the office of [Poet Laureate of the United Kingdom](#), after the death of [Robert Southey](#) on March 21. He is reassured that it is seen as a purely honorific position.

21/6/1843 – [Edgar Allan Poe](#)'s short story "[The Gold-Bug](#)" begins to be serialized in the [Philadelphia Dollar Newspaper](#) as the winning entry in a competition, earning Poe a \$100 prize. It will be widely reprinted and adapted for theater. It popularizes [cryptography](#).

7/1843 – [Margaret Fuller](#)'s "The Great Lawsuit. Man versus Men. Woman versus Women" appears in [The Dial](#) magazine in the United States. It will later be expanded into a book, [Woman in the Nineteenth Century](#) (1845).

19/8/1843 – [Edgar Allan Poe](#)'s Gothic short story "[The Black Cat](#)" is first published in [The Saturday Evening Post](#).

22/8/1843 – The [Theatres Act](#) in the [United Kingdom](#) ends a virtual monopoly of theatrical performances held by the [patent theatres](#) and encourages development of popular entertainment.

25/6/1857 – [Charles Baudelaire's](#) collection of poems *Les Fleurs du mal* is published in Paris. He will be convicted and some of the most decadent poems suppressed on charges of offending morals and religion.

[August 21](#) – [24](#), 1857 – Performances of [Wilkie Collins'](#) drama *The Frozen Deep* at the [Free Trade Hall](#), [Manchester](#), for the benefit of the widow of writer [Douglas William Jerrold](#) (died June 8), during which [Charles Dickens](#), who is directing and performing, becomes infatuated with the professional actress [Ellen Ternan](#).^[1]

9/1857 – [Obscene Publications Act 1857](#) is passed in the United Kingdom, making the sale of obscene material a statutory offence (although it gives no definition of [obscenity](#)). [William Dugdale](#), a prime target of the act, is one of the first to be charged under it. The Act is replaced with a less stringent one in [1959](#).

25/9/1857 – [Eugène Sue's](#) extended fiction *Les Mystères du peuple* is condemned on charges of offending morals and religion, the author having died on August 3.

10/1857 – The Sacramento Library Association, predecessor of [Sacramento Public Library](#), is established as a public subscription library in [Sacramento, California](#), by members of the "[Big Four](#)" and other prominent citizens.

1/11/1857 – [The Atlantic Monthly](#) is first published, in [Boston](#), Massachusetts, by Phillips, Sampson and Company.

3/1/1858 – The English critic [John Ruskin](#) first meets at her London home 10-year-old [Rose La Touche](#), who becomes his muse.

29/4/1858 – [Charles Dickens](#) embarks on his first professional tour giving readings from his works. This will involve 129 appearances in 49 towns throughout the British Isles.

15/5/1858 – The third [Royal Opera House](#) in [Covent Garden](#), London, designed by [Edward Middleton Barry](#), opens, having been rebuilt after its second destruction by fire in 1856.

18/6/1858 – [Henrik Ibsen](#) marries [Suzannah Thoresen](#), in the same year that he becomes creative director of [Oslo's National Theater](#).

9/1858 – [Charles Baudelaire's](#) study on [Théophile Gautier](#) is published in *Revue contemporaine*.

15/10/1858 – The farce [Our American Cousin](#) by the English playwright [Tom Taylor](#) is first performed at [Laura Keane's Theatre](#) in New York City, with the American [Joe Jefferson](#) in the title rôle and the English actor [Edward Askew Sothorn](#) as [Lord Dundreary](#).

c. January, 1859 – [Tidskrift för hemmet](#) (Home Review), the first women's magazine in the Nordic countries, is founded by [Sophie Leijonhufvud](#) and [Rosalie Olivecrona](#) in [Stockholm](#) (Sweden).

1/2/1859 – [George Eliot's](#) [Adam Bede](#), her first full-length novel, is published by [John Blackwood](#) in the United Kingdom. Contemporary reviews are largely positive, describing it as "of the highest class". and "first-rate"; However, it is also accused of being "vile outpourings of a lewd woman's mind" and circulating libraries refuse to stock it or will supply it only under the counter.

4/2/1859 – German scholar [Constantin von Tischendorf](#) identifies portions of the mid-4th century [Codex Sinaiticus](#) (an uncial manuscript of the Greek Bible) at [Saint Catherine's Monastery](#) on Mount Sinai in the [Khedivate of Egypt](#) and arranges for its presentation to his patron, Tsar [Alexander II of Russia](#) at [Saint Petersburg](#).

30/4/1859 – [Charles Dickens's](#) weekly magazine [All the Year Round](#) is published for the first time in London, succeeding [Household Words](#) and containing the first serial installment of his historical novel [A Tale of Two Cities](#).

6-7/1859 – [Frances Harper's](#) "The Two Offers", the first English-language short story by an African American author, is published in the first volume of [The Anglo-African Magazine](#) (New York).

9/1859 – Twenty three-year-old [Isabella Beeton's *Mrs Beeton's Book of Household Management*](#) begins publication as a [partwork](#) supplement to [The Englishwoman's Domestic Magazine](#), published by her husband [Samuel Orchart Beeton](#) in London.

26/11/1859 – [Wilkie Collins's *The Woman in White*](#), an early example of [mystery fiction](#), begins serialisation in [All the Year Round](#).

1/1860 - The first issue of the [Cornhill Magazine](#) appears in London. It serializes [Anthony Trollope's *Framley Parsonage*](#) throughout the year.

1/1860 - [Mrs. Henry Wood's "sensation novel" *East Lynne*](#) begins serialization in [The New Monthly Magazine](#). Her first full-length novel, [Danesbury House](#), also appears this year.

~ 1/1860 - The Catholic newspaper [L'Univers](#) is suppressed by the French government.

28/1/1860 – The first of [Charles Dickens'](#) literary sketches generally titled [The Uncommercial Traveller](#) appears in his magazine [All the Year Round](#).

2/1860 – [Mary Elizabeth Braddon](#) gives up her acting career to write. In the same year she meets her future husband [John Maxwell](#).

27/3/1860 – The Irish [melodrama *The Colleen Bawn*](#), or *The Brides of Garryowen*, written by and starring [Dion Boucicault](#), is first performed at Miss [Laura Keene's](#) theatre, [New York](#).

4/4/1860 – [George Eliot's](#) novel [The Mill on the Floss](#) is published by [John Blackwood](#) in three volumes.

9/6/1860 – [Ann S. Stephens' *Malaeska: The Indian Wife of the White Hunter*](#), a tale of the [American frontier](#), becomes the first [Beadle's dime novel](#), published in cheap [paperback](#) book format by [Irwin P. Beadle & Co.](#) in [New York City](#).

30/6/1860 – In the 1860 Oxford evolution debate, [Samuel Wilberforce](#) and [Thomas Huxley](#) debate the theories of [Charles Darwin](#) at the [Oxford University Museum of Natural History](#). [Lewis Carroll](#) is among the audience.

25/8/1860 – [Wilkie Collins's](#) sensation novel [The Woman in White](#), an early example of [mystery fiction](#), completes its serialization in [All the Year Round](#). It appears in book form in London around August 15.

c. September 3, 1860 – [Charles Dickens](#) burns most of his private papers at his home in [Kent, Gads Hill Place](#), having taken up regular residence there this year.

1/12/1860 – [Charles Dickens's *Bildungsroman Great Expectations*](#) begins serialization in [All the Year Round](#).

5/1/1861 – The first issue of the [Weekly Budget](#) magazine is published by [James Henderson](#).

11/1/1861 – Thirty-one-year-old [John Edward Taylor](#) the younger becomes sole editor and proprietor of the [Manchester Guardian](#).

3/1861 – [Fyodor Dostoyevsky's](#) monthly *Vremya* (Вре́мя, Time) begins publication in [Saint Petersburg](#) under the nominal editorship of his brother [Mikhail](#). Fyodor's novel *The House of the Dead* (Записки из Мёртвого дома, *Zapiski iz Myortvogo doma*) is first published in it this year.

23/4/1861 – [Herbert Coleridge](#), first editor of what will become the *Oxford English Dictionary*, dies aged 30 of [tuberculosis](#) in London. [Frederick James Furnivall](#) is appointed to succeed him.

May/July, 1861 – *The Bombay Times and Journal of Commerce* becomes *The Times of India*.

29/6/1861 – [Elizabeth Barrett Browning](#) dies aged 55 in the arms of her husband and fellow poet [Robert Browning](#) in Florence; on July 1 she is buried in the Protestant cemetery there. Robert leaves the city soon afterwards.

7/1861 – [Sheridan Le Fanu](#) becomes editor and proprietor of the *Dublin University Magazine*. From October he begins in it the serialization of his novel *The House by the Churchyard*.

July 19–24, 1861 – Rev. James Long is tried in [Calcutta](#) for defamation in distributing a translation of [Dinabandhu Mitra's](#) play *Nil Darpan*.

3/8/1861 – Serialization of [Charles Dickens's](#) *Bildungsroman Great Expectations* in his magazine *All the Year Round* is concluded; in October it is published complete in three volumes by [Chapman & Hall](#) in London.

14/9/1861 – [Gottfried Keller](#) becomes municipal secretary of his home town of [Zurich](#).

19/9/1861 – [Mrs. Henry Wood's](#) 'sensation novel' *East Lynne* is published in London in three volumes, as its serialisation is concluded in *The New Monthly Magazine*. This year also sees its first theatrical adaptation, as *Edith, or The Earl's Daughter*, staged in [New York City](#).

20/10/1861 – Poet and dramatist [Apollo Korzeniowski](#) is arrested for his political activities and placed in the infamous Tenth Pavilion of [Warsaw](#) Citadel.

2/1862 – [Ivan Turgenev's](#) novel *Fathers and Sons* (Отцы и дети – old spelling Отцы и дѣти, *Ottsy i dety*, literally "Fathers and Children") is published by *Russkiy Vestnik* in [Moscow](#).

30 or 31/3/1862 – The first two volumes of [Victor Hugo's](#) epic historical novel *Les Misérables* appear in Brussels, followed on April 3 by Paris publication, with the remaining volumes on May 15. The first English-language translations, by [Charles Edwin Wilbour](#), are published in New York on June 7, and by [Frederic Charles Lascelles Wraxall](#), in London in October. 3 April 1862 – Release in Paris of the first 2 volumes of *Les Misérables* by Victor Hugo - The appearance of the novel was a highly anticipated event as Victor Hugo was considered one of France's foremost poets in the middle of the nineteenth century. The *New York Times* announced its forthcoming publication as early as April 1860. Hugo forbade his publishers from summarizing his story and refused to authorize the publication of excerpts in advance of publication. He instructed them to build on his earlier success and suggested this

approach: "What Victor H. did for the Gothic world in *Notre-Dame of Paris* [*The Hunchback of Notre Dame*], he accomplishes for the modern world in *Les Misérables*". A massive advertising campaign preceded the release of the first two volumes of *Les Misérables* in Brussels on 30 or 31 March and in Paris on 3 April 1862. The remaining volumes appeared on 15 May 1862.

6/4/1862 – Two months after joining the staff of General [William Babcock Hazen](#), [Ambrose Bierce](#) joins in the [Battle of Shiloh](#), later the subject of a memoir. Among those on the opposite side is the future journalist and explorer [Henry Morton Stanley](#), who will also record his experiences.

28/4/1862 – [Thomas Hardy](#) becomes an assistant to architect [Arthur Blomfield](#).

6/1862 – [Nikolai Chernyshevsky](#) is imprisoned in [Saint Petersburg](#) and begins his novel *What Is To Be Done?*

4/6/1862 – Henry Morton Stanley, now a "[Galvanized Yankee](#)", joins the [Union Army](#); he is discharged 18 days later because of illness.

7/1862 – [George Eliot](#)'s historical novel [Romola](#) begins serialization in [Cornhill Magazine](#), the first time she has published a full-length book in this format. [George Murray Smith](#) of the publishers [Smith, Elder & Co.](#) has agreed a £7,000 advance for it.

1/7/1862 – [Moscow](#)'s first free [public library](#) opens as The Library of the Moscow Public Museum and Rumiantsev Museum, predecessor of the [Russian State Library](#).

4/7/1862 – Charles Dodgson (better known as by his later pseudonym [Lewis Carroll](#)) extemporises a story for 10-year-old [Alice Liddell](#) and her sisters on a rowing trip on [The Isis](#) from [Oxford](#) to [Godstow](#). The story becomes a manuscript titled [Alice's Adventures Under Ground](#) and is published in 1865 as [Alice's Adventures in Wonderland](#).

23/9/1862 – [Leo Tolstoy](#) marries [Sophia \(Sonya\) Andreevna Behrs](#), 16 years his junior, in [Moscow](#), having given her a diary detailing his previous sexual relations.

26/11/1862 – Charles Dodgson sends the handwritten manuscript of [Alice's Adventures Underground](#) to [Alice Liddell](#).

29/11/1862 – Serialization of [The Notting Hill Mystery](#) by "Charles Felix" (probably [Charles Warren Adams](#)) commences in [Once A Week](#) (London), with illustrations by [George du Maurier](#); it is seen as the first full-length [detective novel](#) in English.

12/1862 – [Louisa May Alcott](#) becomes a nurse at the Union hospital in [Georgetown, D.C.](#)

24/12/1862 – [William Dean Howells](#) marries Elinor Mead at the American Embassy in Paris.

1/1/1863 – The essayist and poet [Ralph Waldo Emerson](#) commemorates today's [Emancipation Proclamation](#) in the United States by composing "[Boston Hymn](#)" and surprising a crowd of 3,000 with a debut reading of it at [Boston Music Hall](#).

31/1/1863 – Jules Verne's novel *Five Weeks in a Balloon, or, Journeys and Discoveries in Africa by Three Englishmen* (Cinq semaines en ballon) is published by Pierre-Jules Hetzel in Paris. It will be the first of Verne's *Voyages Extraordinaires*.

3/2/1863 – Samuel Langhorne Clemens, in signing a humorous letter to the *Territorial Enterprise* newspaper in *Virginia City, Nevada*, first uses the pen name *Mark Twain*.

28/2/1863 – *Flaubert* and *Turgenev* meet for the first time, in Paris.

12/6/1863 – The Arts Club is founded by *Charles Dickens*, *Anthony Trollope*, *Frederic Leighton* and others in London's *Mayfair*, as a social meeting place for those involved or interested in the creative arts.

13/6/1863 – *Samuel Butler*'s dystopian article "*Darwin among the Machines*" is published (as by "Cellarius") in *The Press* newspaper in *Christchurch*, New Zealand; it will be incorporated into his novel *Erewhon* (1872).

11/1863 – *Mendele Mocher Sforim*'s his first Yiddish language story, "Dos Kleine Menshele" (The Little Man), is published in the *Odessa* weekly *Kol Mevasser*.

29/12/1863 – An estimated 7000 people attend the funeral of *William Makepeace Thackeray* at *Kensington Gardens* and nearly 2000 his burial in London's *Kensal Green Cemetery*.

1/1864 – *Anthony Trollope*'s *Can You Forgive Her?*, the first of his *Palliser novels*, begins to appear in monthly parts in London. Trollope completes it on April 28 and the first volume is published as a book in September by *Chapman & Hall*. In April, *The Small House at Allington* concludes publication in the *Cornhill Magazine* and is published in book form by *George Smith*.

January 2–April 16, 1864 – *James Payn* publishes his most popular story, *Lost Sir Massingberd*, in *Chambers's Journal*. He follows it in the magazine (August 6 – December 24) by *Married Beneath Him*.

20/2/1864 – Painter *George Frederic Watts* marries his 16-year-old model, the actress *Ellen Terry*, 30 years his junior, in London. She elopes less than a year later.

3/1864 (dated January–February) – The first issue of the Russian literary magazine *Epoch* («Эпо́ха»), edited by *Fyodor Dostoyevsky* and his brother *Mikhail* (died July 22), is published in *Saint Petersburg*. This and the March and April issues contain the first publication of Fyodor's existential novella *Notes from Underground* («Записки из подполья», *Zapiski iz podpol'ya*).

10/4/1864 – Publisher *William Ticknor* dies of pneumonia in *Philadelphia* while on a trip with *Nathaniel Hawthorne* for the sake of the latter's health.

23/4/1864 – The *Deutsche Shakespeare-Gesellschaft* (German Shakespeare Society) is founded as the first scientific and cultural association of its type in *Weimar*, and one of the world's oldest continuing literary societies.

4/1864 – [Charles Baudelaire](#) leaves Paris for Belgium in the hope of resolving his financial difficulties.

26/5/1864 – [Alexandre Dumas, fils](#) marries Nadejda Naryschkine. His father, [Alexandre Dumas, père](#), returns to Paris from Italy.

5/1864 – The first [Lithuanian press ban](#) is imposed in the [Russian Empire](#).

19/6/1864 – [Henrik Ibsen](#) arrives in Rome in a self-imposed exile from Norway that will last for 27 years.

27/6/1864 – [Ambrose Bierce](#) is wounded at the [Battle of Kennesaw Mountain](#).

2/7/1864 – *The Female Detective* is published under the pseudonym "Andrew Forrester, Junior" in London, presenting the first female professional detective in fiction. Around December, she is followed by Mrs Paschal in *Revelations of a Lady Detective*, published anonymously by William Stephens Hayward.

9/1864 – A debate at the [Royal Geographical Society](#) between [Richard Francis Burton](#) and [John Hanning Speke](#) is prevented by Speke's suicide (or accidental shooting).

25/11/1864 – The brothers [Edwin Booth](#) (playing Brutus), [John Wilkes Booth](#) (who carries out the [assassination of Abraham Lincoln](#) the following year, playing Mark Antony) and [Junius Brutus Booth, Jr.](#) (playing Cassius) make their only appearance onstage together, in a performance of Shakespeare's *Julius Caesar* (in the year of the playwright's birth tricentennial) at the Winter Garden Theater in New York City, staged to raise funds for a [memorial to William Shakespeare](#) in the city's [Central Park](#).

12/1864 – [Sheridan Le Fanu](#)'s [Gothic locked room mystery-thriller](#) *Uncle Silas* completes its serialisation in his [Dublin University Magazine](#) as "Maud Ruthyn and Uncle Silas" and is published as a [three-volume novel](#) by [Richard Bentley](#) in London.^[4]

1/1865 – The first issue appears of *Our Young Folks*, an American monthly for children produced by [Ticknor and Fields](#) in [Boston](#).

2/1865 – Publication of [Leo Tolstoy](#)'s 1805, an early version of *War and Peace*, begins in the magazine [Russkiy Vestnik](#).

14/4/1865 – The [President of the United States, Abraham Lincoln](#), is shot while attending a performance of the farce *Our American Cousin* at [Ford's Theatre](#) in [Washington, D.C.](#), by actor and [Confederate](#) sympathizer [John Wilkes Booth](#). Lincoln dies the following day.

9/6/1865 – [Charles Dickens](#) is caught in the [Staplehurst rail crash](#) in Kent, England, together with the actress [Ellen Ternan](#) and her mother. Dickens is deeply affected by the event for the rest of his life.

14/6/1865 – [Karl May](#) begins a four-year prison sentence for thefts and frauds at [Osterstein Castle \(Zwickau\)](#).

7/1865 – The American magazine for children *The Little Corporal* first appears.

4/7/1865 – Lewis Carroll's children's book *Alice's Adventures in Wonderland* is published by Macmillan in London for Charles Lutwidge Dodgson (Carroll), three years after it was first narrated to Alice Liddell and her sisters. He and his illustrator, John Tenniel, withdraw this edition (printed in Oxford), and the first trade editions are published on November 26 and released in December (dated 1866), that published by Appleton in New York using the rejected sheets from the earlier printing.

11/11/1865– London West End opening of the comedy drama *Society* written and directed by Thomas William Robertson at the Prince of Wales's Theatre, considered a milestone in English Victorian drama because of its realism in dialogue and performance.

18/11/1865 – Mark Twain's story "The Celebrated Jumping Frog of Calaveras County" is published in the New York weekly *The Saturday Press* in its original version as "Jim Smiley and His Jumping Frog".

1/1866 – Fyodor Dostoyevsky's novel *Crime and Punishment* (Преступление и наказание, *Prestupleniye i nakazaniye*) is serialized through the year in the monthly literary magazine *Russkiy Vestnik* (Русскій Вѣстникъ, "The Russian Messenger"). His novella *The Gambler* (Игрок, *Igrok*) is dictated to his future wife to meet a publisher deadline of November 1.

7/1866 – Anthony Trollope's novel *Nina Balatka: The Story of a Maiden of Prague* is initially published anonymously (serialisation in *Blackwood's Magazine* July 1866 – January 1867). Trollope is interested in discovering whether his books sell on their own merits or as a consequence of the author's name and reputation.

8/9/1866 – London publisher Samuel Orchart Beeton is obliged by the financial panic of 1866 to settle all his debts by selling his property. He sells his titles and name to Ward Lock & Co.

11/1866 – The American magazine for children *Children's Hour* publishes its first issue. By February 1867 – The first blue plaque is erected in London by the Society of Arts on the birthplace (1788) of poet Lord Byron (later demolished).

3/10/1867 – Anthony Trollope resigns from a senior administrative position in the British General Post Office, to write full-time.

11/1867 – The Leipzig publisher Reclam launches its *Universal-Bibliothek* series of cheap reprints with an edition of Goethe's *Faust* following the lifting of copyright restrictions in the new North German Confederation for authors dead for more than 30 years.

2/12/1867 – Charles Dickens begins a U.S. reading tour in New York City.

12/1867 - December – After publication of Leo Tolstoy's *1805*, an early version of *War and Peace*, concludes in *The Russian Messenger*, an advertisement appears for the revised complete novel.

1/1868 – Émile Zola defends his first major novel, *Thérèse Raquin* (1867), against charges of pornography and corruption of morals.

January 4–August 8, 1868 – Wilkie Collins' epistolary novel *The Moonstone*: a Romance is serialised in *All the Year Round* (U.K.), being published in book format in July by Tinsley Brothers of London. It is seen as a precursor of full-length mystery fiction (with its introduction of the police detective Sergeant Cuff) and the psychological thriller.

9/1/1868 – John William De Forest, writing for *The Nation*, calls for a more specifically American literature; the essay's title, "The Great American Novel", is the first known use of the term.

29/4/1868 – The Court of King's Bench (England) decides on appeal the legal case *Regina v. Hicklin* on interpretation of the word "obscene" in the Obscene Publications Act 1857, applying the "Hicklin test": that any part of a publication with a "tendency... to deprave and corrupt those whose minds are open to such immoral influences, and into whose hands a publication of this sort may fall" makes the whole publication obscene, regardless of the author's intentions.

9/1868 – The first volume of Louisa May Alcott's novel for girls *Little Women* is published by Roberts Brothers of Boston, Massachusetts.

11/1868 - Robert Browning's narrative poem *The Ring and the Book* begins four-part publication by Smith, Elder & Co. in London. It is a major commercial and critical success.

11/1868 - Norman MacLeod, editor of *Good Words* (U.K.), begins publishing its companion juvenile version, *Good Words for the Young*. The first issue begins the serial publication of George MacDonald's *At the Back of the North Wind*.

12/1868 – The Globe Theatre (Newcastle Street) in London opens with the première of the recently bankrupted Henry James Byron's semi-autobiographical comedy *Cyril's Success*.

3/2/1869 – Booth's Theatre opens on Manhattan with the owner, Edwin Booth, playing the male lead in Shakespeare's *Romeo and Juliet*.

22/5/1869 – Serial publication of Anthony Trollope's novel *He Knew He Was Right* concludes and it appears in London as the first book to include a fictional private investigator, ex-policeman Samuel Bozzle. It concerns a case of marital breakdown.

8/1869 - Ambrose Bierce, writing a satirical column for the San Francisco News Letter, begins to produce the cynical definitions which will eventually become *The Devil's Dictionary*.

8/1869 - Macmillan Publishing opens its first American office in New York City, headed by George Edward Brett.

5/10/1869 – Model, poet and artist Elizabeth Siddal (d. 1862) is exhumed at Highgate Cemetery in London in order to recover the manuscript of Dante Gabriel Rossetti's *Poems* buried with her.

12/1869 – Publication of Leo Tolstoy's novel *War and Peace* («Война и миръ», *Voyna i mir*) complete in book form concludes. It is printed in Moscow and sold by the author on subscription.

19/1/1870 – [Ivan Turgenev](#) attends and writes about the public execution by [guillotine](#) of the [spree killer Jean-Baptiste Troppmann](#) outside the gates of [La Roquette Prisons](#) in Paris.

28/3/1870 – Serialisation of Kenward Philp's *The Bowery Detective* in *The Fireside Companion* (New York) begins, the first known story to include the word [detective](#) in the title.

4-9/1870 – The serialisation of [Charles Dickens](#)' last novel, *The Mystery of Edwin Drood*, is left unfinished on his death on June 9 at [Gads Hill Place](#) in [Kent](#), from a stroke, aged 58.

5/1870 – [Karl May](#) begins a second four-year prison sentence for thefts and frauds, at [Waldheim, Saxony](#).

Spring 1870 – Serial publication begins of [Aleksis Kivi](#)'s only novel *Seitsemän veljestä* ("Seven Brothers"), the first notable novel in the [Finnish language](#).

August 24/25, 1870 – Libraries of the [University of Strasbourg](#) and the City of [Strasbourg](#) at [Temple Neuf](#) are destroyed by fire during the [Siege of Strasbourg](#) in the [Franco-Prussian War](#), resulting in the loss of 3,446 medieval manuscripts, including the original 12th-century *Hortus deliciarum* compiled by [Herrad of Landsberg](#), the [Apologist codex](#) containing the only text of the early *Epistle to Diognetus*, and rare Renaissance books.

17/9/1870 – The first performance of [Alexander Pushkin](#)'s play *Boris Godunov* (1825) is given at the [Mariinsky Theatre](#) in [Saint Petersburg](#) by members of the [Alexandrinsky Theatre](#).

c. [September 20](#), 1870 – [Friedrich Engels](#) moves permanently to London from [Manchester](#).

18/12/1870 – The Russian literary weekly *Niva* («Нива», "Cornfield") is first published by [Adolf Marks](#) in Saint Petersburg.

1/1/1871 – The children's literary magazine *Young Folks* begins publication in the United Kingdom as *Our Young Folks' Weekly Budget*.^[1]

1/1871 – [John Ruskin](#) begins publishing *Fors Clavigera*, his originally monthly "letters to the workmen and labourers of Great Britain".

18/3/1871 – 28/5/1871 – The [Paris Commune](#) is influential on the literary figures in the city at the time and far beyond: [Jules Vallès](#) publishes his newspaper *Le Cri du Peuple* February 22–May 23 (with interruptions). At the beginning of April, [Victor Hugo](#) moves to Brussels to take care of the family of his son, who has just died, but closely follows events in Paris, on April 21 publishing the poem "Pas de représailles" (No reprisals) and on June 11 writing the poem "Sur une barricade" (On the barricade). [Émile Zola](#), as a journalist for *Le Sémaphore de Marseille*, reports the fall of the Commune, and is one of the first reporters to enter the city during *Semaine sanglante* (Bloody Week, beginning May 21).

10/1871 – "Thomas Maitland", i. e. [Robert Williams Buchanan](#), attacks [Dante Gabriel Rossetti](#) and other members of what Buchanan calls the "[Fleshly School](#)" of English poetry in *The Contemporary Review*. On December 16 Rossetti replies in "The Stealthy School of Criticism" in the *Athenaeum*.

25/11/1871 – First performance of [The Bells](#) starring [Henry Irving](#) at the [Lyceum Theatre, London](#), the actor's first great success. On the same night, he breaks up permanently with his wife when she criticises his choice of profession.

12/1871 – Publication of [George Eliot's](#) novel [Middlemarch](#) in eight parts commences.

3/1872 - The Federation of [Madrid](#) expels [Paul Lafargue](#) and all other signatories to an ostensibly subversive article in [La Emancipación](#).

3/1872 - Serialisation of [Sheridan Le Fanu's](#) [Gothic vampire novella Carmilla](#) ends in the monthly [The Dark Blue](#). Later this year it appears in his collection [In a Glass Darkly](#). Set in the [Duchy of Styria](#), it helps to introduce the [lesbian vampire](#) genre.^[2]

19/6/1872 – The [Bibliothèque nationale et universitaire](#) is founded in [Strasbourg](#) as the *Kaiserliche Universitäts- und Landesbibliothek zu Straßburg*, a public regional and academic library for the new German territory of [Alsace-Lorraine](#) (*Reichsland Elsass-Lothringen*) after destruction of its predecessors in the [Siege of Strasbourg](#) in the [Franco-Prussian War](#).

7/1872 – [Rose la Touche](#) rejects a proposal from [John Ruskin](#) for the last time.

7/7/1872 – [Paul Verlaine](#) abandons his family for [London](#) with [Arthur Rimbaud](#).

[September 13](#) (O. S.: September 1), 1872 – Romanian poet [Mihai Eminescu](#) first attends the literary club [Junimea](#) of [Iași](#) and reads out his fantasy story [Poor Dionis](#) (*Sărmanul Dionis*). It is poorly received by the [Junimists](#).

30/9/1872 – [George MacDonald](#) arrives in [Boston](#) for a lecture tour of the United States.

11/1872 (approximate date) – [Lafcadio Hearn](#) becomes a reporter on the [Cincinnati Daily Enquirer](#).

3/12/1872 – [George Smith](#) presents the first translation of the [Epic of Gilgamesh](#) to a meeting of the [Society of Biblical Archaeology](#) in London.

22/12/1872 – [Jules Verne's](#) novel [Around the World in Eighty Days](#) (*Le Tour du monde en quatre-vingts jours*) finishes serialisation (since November 2) in the daily [Le Temps](#), the day after the concluding date of the narrative. January 30, 1873 - The closing date of the novel "Around the World in 80 Days" by Jules Verne, 21 December 1872, was the same date as the serial publication in France. As it was being published serially for the first time, some readers believed that the journey was actually taking place – bets were placed, and some railway companies and ship liner companies lobbied Verne to appear in the book. It is unknown if Verne submitted to their requests, but the descriptions of some rail and shipping lines leave some suspicion he was influenced.

1/1/1873 – [Chicago Public Library](#) opens in an old water tank in the aftermath of the [Great Chicago Fire](#) of 1871.

3/3/1873 - The [United States Congress](#) enacts the [Comstock Law](#), making it illegal to send any "obscene, lewd, or lascivious" books through the mail.

3/3/1873 - The first performance of [W. S. Gilbert](#) and [Gilbert Arthur à Beckett's](#) play *The Happy Land* at the [Royal Court Theatre, London](#), parodies [William Ewart Gladstone](#), [Robert Lowe](#), and [Acton Smee Ayrton](#), respectively the [Prime Minister](#), [Chancellor of the Exchequer](#), and [First Commissioner of Works](#).

12/10/1912 – [Arthur Schnitzler's](#) play *La Ronde* (*Reigen*, 1900) is first performed (without the author's consent), in [Budapest](#). It is also first translated into French this year.

25/10/1912 – The first issue of *Simbolul* is put out in [Bucharest](#) by [Marcel Janco](#), [Tristan Tzara](#) and [Ion Vinea](#).^[8]

December? 1912 (or at latest January 1913) – *A Slap in the Face of Public Taste* (Пощёчина общественному вкусу), the seminal text of [Russian Futurism](#), is published as a manifesto and a poetry almanac.^[9] Edited and written by [David Burliuk](#), [Viktor Khlebnikov](#), [Aleksei Kruchenykh](#) and [Vladimir Mayakovsky](#), it attacks the tradition of [Russian Symbolism](#), notably works by [Leonid Andreyev](#), [Konstantin Balmont](#), [Alexander Blok](#) and [Ivan Bunin](#), and ridicules independents such as [Maxim Gorky](#).^[10]

1/1913 – [Acmeist poetry](#), with roots back to [1909](#), is officially born as a reaction to [Russian Futurism](#). Manifestos are printed in the journal *Apollon* by [Nikolay Gumilyov](#) and [Sergey Gorodetsky](#), with illustrative works by both, and by [Anna Akhmatova](#), [Vladimir Narbut](#), and [Osip Mandelstam](#) — the last with "Hagia Sophia".^[1]

1/1/1913 – The [German National Library](#) is founded in [Leipzig](#).

8/1/1913 – [Harold Monro](#) founds the [Poetry Bookshop](#) in London, which becomes a noted literary meeting-place.^[2]

24/1/1913 – [Franz Kafka](#) stopped working on his novel *Amerika*, which he never finished

5/4/1913 – Serialization of the adventures of [Gaston Leroux's](#) character [Chéri-Bibi](#) begins in [Le Matin](#) (France).

4/1913 – [Bernhard Kellermann's](#) novel [Der Tunnel](#) sells 100,000 copies in its first six months.

c. April, 1913 – [Humphrey S. Milford](#) becomes publisher to the [University of Oxford](#) and head of the London operations of [Oxford University Press](#), after the retirement of Henry Frowde.^{[3][4]}

9/1913 – [F. Scott Fitzgerald](#) enters [Princeton University](#), where he meets [Edmund Wilson](#) and [John Peale Bishop](#).

8/11/1913 – [Georg Büchner's](#) play [Woyzeck](#), unfinished on his death in [1837](#), receives its first performance at the Residenztheater, [Munich](#).

13/11/1913 – [Marcel Proust's](#) [Swann's Way](#) (*Du côté de chez Swann*), volume 1 of *In Search of Lost Time* (*À la recherche du temps perdu*), is published by [Éditions Grasset](#) in Paris at the author's expense.

21/12/1913 – [Arthur Wynne's](#) "word-cross", the first [crossword puzzle](#), appears in the [New York World](#).^[5]

26/12/1913 – [Ambrose Bierce](#), an observer with [Pancho Villa's](#) army in the [Mexican Revolution](#), sends his last known correspondence. He is never seen again.^[6]

18/1/1914 – A party held in honour of English poet [Wilfrid Scawen Blunt](#) at his [stud farm](#) in [West Sussex](#) brings together [W. B. Yeats](#), [Ezra Pound](#), [Thomas Sturge Moore](#), [Victor Plarr](#), [Richard Aldington](#), [F. S. Flint](#) and [Frederic Manning](#). Peacock is on the menu.^[1]

2-12/1914 – Publication of *New Numbers*, a quarterly collection of work by the [Dymock poets](#) in England edited by [Lascelles Abercrombie](#).

2/2/1914 – [James Joyce's](#) semi-autobiographical novel [A Portrait of the Artist as a Young Man](#) commences serialization in [The Egoist](#), a new [London](#) literary magazine founded by [Dora Marsden](#).

4/2/1914 – A staging of [George A. Birmingham's](#) comedy [General John Regan](#) at [Westport](#) Town Hall in Ireland provokes a riot.^[2]

10/2/1914 – [Thomas Hardy](#) marries his second wife, the children's author [Florence Dugdale](#), at St Andrew's, [Enfield](#).^[3]

3/1914 - [The Times Literary Supplement](#) is published separately for the first time (in London).

3/1914 - [The Little Review](#) is founded by [Margaret Caroline Anderson](#) as part of [Chicago's](#) literary renaissance.

4/3/1914 – Irish-born novelist [George Moore](#) publishes *Vale*, the final of his 3-volume autobiographical *Hail and Farewell* (first in [1911](#)).

11/4/1914 – The first English-language performance of [George Bernard Shaw's](#) comedy *Pygmalion* at [His Majesty's Theatre](#) is given in [London](#)^[4] starring [Mrs. Patrick Campbell](#) and [Herbert Beerbohm Tree](#), and famously including the Act III line "Not bloody likely!".

6/1914 – James Joyce's [Dubliners](#), a collection of fifteen short stories depicting the Irish middle classes in and around Dublin during the early 20th century, is published in London.

20/6/1914 – The first issue (of two) appears of the [Vorticist literary magazine](#) [BLAST](#) edited by [Wyndham Lewis](#).^[5] It includes [Ford Madox Hueffer's](#) "The Saddest Story", a preliminary version of [The Good Soldier](#).

24/6/1914 – [Edward Thomas](#) makes the English railway journey which inspires his poem "[Adlestrop](#)" while traveling to meet [Robert Frost](#); Thomas begins writing poetry for the first time after this summer.^[6]

7/1914 - [E. M. Forster](#) completes his novel [Maurice](#), with its theme of [male homosexual](#) love; it is not published until [1971](#).

7/1914 - [Heinrich Mann](#) completes his novel [Der Untertan](#), with its critique of German nationalism; it is not published until [1918](#).

23/7/1914 – [Austro-Hungarian ultimatum](#) includes demands that [Serbia](#) should suppress all publications which "incite hatred and contempt of the Austro-Hungarian monarchy", particularly schoolbooks.^[7]

8/1914 - The [literature of World War I](#) makes its first appearance. [John Masefield](#) writes the poem "August, 1914" (published in the September 1 issue of [The English Review](#)), the last he will produce before the peace.

8/1914 - [Stanley Unwin](#) purchases a controlling interest in the London publisher George Allen.

8/1914 - At about this date [Loughborough](#) (England) publishers Wills & Hepworth publish their first illustrated children's books in the [Ladybird](#) series, [Hans Andersen's Fairy Tales](#) by E[thel] Talbot and *Tiny Tots Travels* by M. Burridge.^[8]

3/8/1914 – [Siegfried Sassoon](#) volunteers for military service, initially as a Trooper in the [Sussex Yeomanry](#).^[9]

25/8/1914 – The library of the [Catholic University of Leuven](#) is set on fire by German troops during the [Rape of Belgium](#).^[10]

9/1914 – [J. R. R. Tolkien](#) writes a poem about [Eärendil](#), the first appearance of his [mythopoeic Middle-earth legendarium](#). Eärendil will much later appear in [The Silmarillion](#). At this time Tolkien is an Oxford undergraduate staying at Phoenix Farm, [Gedling](#), near Nottingham.^{[11][12]}

2/9/1914 – [Charles Masterman](#) invites 25 "eminent literary men" to [Wellington House](#) in London to form a secret British War Propaganda Bureau. Those who attend include [William Archer](#), [Arnold Bennett](#), [Hall Caine](#), [G. K. Chesterton](#), [Arthur Conan Doyle](#), [Ford Madox Hueffer](#), [John Galsworthy](#), [Thomas Hardy](#), [Rudyard Kipling](#), [John Masefield](#), [Henry Newbolt](#), [Gilbert Parker](#), [G. M. Trevelyan](#) and [H. G. Wells](#). Kipling soon afterwards writes the poem "For all we have and are". [W. B. Yeats](#), however, refuses to sign a letter of support for the War signed by most of the participants and published in [The Times](#) on September 18.

9/9/1914 – [Hilaire Belloc](#) is contracted to write regular articles on the War in the new British weekly [Land and Water](#).^[13]

21/9/1914 – [Laurence Binyon](#)'s poem "For the Fallen", containing his "[Ode of Remembrance](#)", is published in [The Times](#) (London).

22/9/1914 - French novelist [Alain-Fournier](#) (Lieutenant Henri-Alban Fournier), aged 27, is killed in action near [Vaux-lès-Palameix](#) ([Meuse](#)) a month after enlisting, leaving his second novel, *Colombe Blanchet*, unfinished; his body will not be identified until 1991.^[14]

22/9/1914 - [T. S. Eliot](#) (at this time in England to study) meets fellow American poet [Ezra Pound](#) for the first time, in London.

29/9/1914 – [Arthur Machen](#)'s short story "The Bowmen", origin of the legend of the [Angels of Mons](#), is published in [The Evening News](#) (London).

2/10/1914 – The date predicted by [Charles Taze Russell](#), founder of the Watchtower Society (Jehovah's Witnesses), as the date for the "[full end](#)" of [Babylon](#), or [nominal Christianity](#), with statements such as: "True, it is expecting great things to claim, as we do, that within the coming twenty-six years all present governments will be overthrown and dissolved.... In view of this strong Bible evidence concerning the Times of the Gentiles, we consider it an established truth that the final end of the kingdoms of this world, and the full establishment of the Kingdom of God, will be accomplished at the end of A. D. 1914...."^[15]

7/11/1914 – The first issue of [The New Republic](#) magazine is published in the United States.

16/11/1914 – [M. P. Shiel](#) is convicted and imprisoned for "indecently assaulting and carnally knowing" his 12-year-old *de facto* stepdaughter on October 26 in London.^[16]

12/1914 – Wilhelm Apollinaris de Kostrowitzky, who writes under the [pen name](#) "[Guillaume Apollinaire](#)", enlists in the French Army to fight in [World War I](#) and becomes a French citizen^[17] after an August attempt at enlistment is rejected.

31/12/1914 – [T. S. Eliot](#) writes to [Conrad Aiken](#) from Oxford (where he has a scholarship at [Merton College](#)), saying: "I hate university towns and university people, who are the same everywhere, with pregnant wives, sprawling children, many books and hideous pictures on the walls.... Oxford is very pretty, but I don't like to be dead."^[18]

1/1915 – The [Geração de Orpheu](#) launch the short-lived magazine *Orpheu*, introducing [literary modernism](#) to Portugal.^[1]

13/1/1915 – "Reminiscences of Sergeant Michael Cassidy", the first known story by Captain [H. C. McNeile](#), [Royal Engineers](#), writing as "Sapper", begins in the [Daily Mail](#) (London).^[2]

28/2/1915 – [Rupert Brooke](#) sails with the British [Mediterranean Expeditionary Force](#), but develops [sepsis](#) from an infected mosquito bite. This ends with his death in a hospital ship off [Skyros](#).^[3] His collection *1914 & Other Poems*, including the [sonnet](#) "[The Soldier](#)", appears posthumously in May.

3/1915 – [Ford Madox Ford](#)'s novel *The Good Soldier: A tale of passion* is published by [John Lane](#) – [The Bodley Head](#) in London under this title, and under the author's original name, Ford Madox Hueffer, although he had intended it to be called *The Saddest Story*.

26/3/1915 – [Virginia Woolf](#)'s first novel, *The Voyage Out*, is published in London by the firm of her half-brother, [Gerald Duckworth](#).

6/4/1915 – The American [Ezra Pound](#)'s poetry collection *Cathay*, "translations... for the most part of the Chinese of [Rihaku](#), from the notes of the late [Ernest Fenollosa](#), and the decipherings of the Professors Mori and Ariga", by [Elkin Mathews](#), is published in London.^[4]

24/4/1915 – [Deportation begins of Armenian notables from Istanbul](#). Among the literary deportees killed in the [Armenian genocide](#) are [Dikran Chökürlian](#), [Armen Dorian](#), [Melkon Giurdjian](#), [Ardashes Harutiunian](#), [Jacques Sayabalian](#), [Ruben Sevak](#), [Siamanto](#), [Rupen Zartarian](#) and actor [Yenovk Shahan](#). Survivors include [Yervant Odian](#) and [Alexander Panossian](#).

3/5/1915 – The [rondeau](#) "[In Flanders Fields](#)" by the Canadian poet [John McCrae](#) is written; it is first published on [December 8](#) in the London magazine *Punch*.^[5]

7/5/1915 – The [Sinking of the RMS Lusitania](#) claims 1,198 victims. The [Americans](#) among them in this torpedo attack on a civilian passenger liner include the writer and playwright [Justus Miles Forman](#) (born 1875), the theatrical producer [Charles Frohman](#) (born 1856), the writer and philosopher [Elbert Hubbard](#) (born 1856) and his second wife [Alice Moore Hubbard](#) (born 1861), and the playwright [Charles Klein](#) (born 1867). The survivors include the British-born writer and educator [Ian Holbourn](#) and the bookseller [Charles E. Lauriat, Jr.](#)

13/5/1915 – As [Julian Grenfell](#) stands talking with other officers, a shell lands some yards away and a splinter hits him in the head. He is taken to a hospital in Boulogne, where he dies 13 days later. His poem "Into Battle" is published in *The Times* the following day.^[6] His younger brother [Gerald William \(Billy\) Grenfell](#) is killed in action two months later.

c. May, 1915 – Publication of the first modern book illustrated with [wood engravings](#), [Frances Cornford's](#) *Spring Morning*, from the [Poetry Bookshop](#), London, has engravings by her cousin [Gwen Raverat](#).^[7]

24/6/1915 – The [Widener Library](#) at [Harvard University](#) is dedicated.

26/6/1915 – 14/8/1915 – [P. G. Wodehouse's](#) novel *Something Fresh* is serialized in *The Saturday Evening Post* (U.S.), introducing the character of [Lord Emsworth](#) of [Blandings Castle](#). It first appears in book form on September 3 in New York, from [D. Appleton & Company](#), and on September 16 in London, from [Methuen](#).^[8]

8-9/1915 – [John Buchan's](#) thriller *The Thirty-Nine Steps*, set just before the outbreak of war and introducing as hero [Richard Hannay](#), is serialised in *Blackwood's Magazine*. Book publication follows in October by [William Blackwood and Sons](#) in [Edinburgh](#).

8-12/1915 – [Ezra Pound](#) completes the early sections of his poem *The Cantos*.^[9]

15/9/1915 – [P. G. Wodehouse's](#) story "Extricating Young Gussie" is published in *The Saturday Evening Post* (U.S.). It introduces as characters [Jeeves](#) and [Bertie](#).

30/9/1915 – [D. H. Lawrence's](#) novel *The Rainbow* is prosecuted on its appearance in London under the [Obscene Publications Act 1857](#), and suppressed by his publisher, Methuen. The U.S. edition appears in November without any legal challenge.

10/1915 – [Franz Kafka's](#) seminal novella *The Metamorphosis* (*Die Verwandlung*) is first published in *Die Weißen Blätter* ([Leipzig](#)).^[10] Kafka finishes writing *The Trial* (*Der Process*) this year, but it will not be published until 1925, the year after his death.

15/10/1915 – *Detective Story Magazine* is first published by [Street & Smith](#) of New York, a successor to *Nick Carter Stories*.

11/1915 – The German author [Heinrich Mann's](#) essay on [Émile Zola](#) in *Die Weißen Blätter* marks Zola's political commitment and attacks the economic causes of the war. This temporarily disrupts Mann's relations with his younger brother, the novelist [Thomas Mann](#).^[11]

1/1916 - *The Journal of Negro History* is founded by [Carter G. Woodson](#), father of "Black History" and "Negro History Week" in the [United States](#).^[1]

1/1916 - [Ryūnosuke Akutagawa's](#) short story, *The Nose*, is published in a student magazine.^[2]

1/3/1916 – The [National Library of Wales](#) completes its transfer to purpose-built premises in [Aberystwyth](#).^[3]

22/3/1916 – [J. R. R. Tolkien](#) and [Edith Bratt](#) marry at [St Mary Immaculate Roman Catholic Church, Warwick](#), England. They will serve as inspiration for the fictional characters [Beren](#) and [Lúthien](#). Tolkien leaves for military service in France at the beginning of June.

30/3/1916 – [Don Marquis](#) introduces the characters [Archy and Mehitabel](#) in "The Sun Dial" column in [The Evening Sun \(New York City\)](#). Archy is a poetry-writing [cockroach](#) unable to operate the typewriter [shift key](#); Mehitabel is a cat.

4-6/1916 – [Katherine Mansfield](#) and [John Middleton Murry](#) live as neighbours to [D. H.](#) and [Frieda Lawrence](#) at Higher Tregerthen, near [Zennor](#) in Cornwall (England).^[4]

24-30/4/1916 – In the [Easter Rising in Ireland](#), members of the [Irish Republican Brotherhood](#) proclaim an [Irish Republic](#) and the [Irish Volunteers](#) and [Irish Citizen Army](#) occupy the [General Post Office](#) and other buildings in [Dublin](#), before surrendering to the [British Army](#). Of the seven subsequently executed leaders of the Rising, [Thomas MacDonagh](#), [Patrick Pearse](#) and [Joseph Plunkett](#) are poets and [James Connolly](#) a balladeer and playwright. The events are the theme of [W. B. Yeats'](#) poem "[Easter, 1916](#)", first published this September.

16/5/1916 – [Natsume Sōseki](#)'s novel [Light and Darkness](#) ([明暗](#), *Mei An*) begins to be serialized in the [Tokyo](#) and [Osaka](#) editions of the newspaper [Asahi Shimbun](#), but will remain unfinished at the author's death on [December 9](#), aged 49.

1/7/1916 - The poets [W. N. Hodgson](#), [Will Streets](#), [Gilbert Waterhouse](#), Henry Field, Alfred Ratcliffe, Alexander Robertson and Bernard White are among 19,000 British soldiers killed on the [First day on the Somme](#) alone.^[5] The same day is chosen for the death of fictitious poet Cecil Valance in [Alan Hollinghurst's](#) 2011 novel [The Stranger's Child](#). The [Battle of the Somme](#) continues until [October 18](#), during which time American poet [Alan Seeger](#) (serving with the French), Irish writer [Tom Kettle](#), English poet [Edward Wyndham Tennant](#), English short story writer [Saki](#) and English bowler [Percy Jeeves](#) (whose name P. G. Wodehouse borrowed for his character) are all killed. The English writer [Robert Graves](#), novelist [Stuart Cloete](#), playwright/actor [Arnold Ridley](#) and artist/poet [David Jones](#) are seriously injured – Graves is for a time believed killed. [Ford Madox Hueffer](#) suffers concussion and shell shock. [A. A. Milne](#) and J. R. R. Tolkien are invalided out. The English poet [Siegfried Sassoon](#) wins the [Military Cross](#). The [Cameron Highlander Dòmhnall Ruadh Chorùna](#) composes the [Scottish Gaelic love song](#) [An Eala Bhàn](#) (The White Swan) in the [oral literature](#) tradition. The future U.K. Prime Minister [Harold Macmillan](#) is wounded in September's [Battle of Flers–Courcelette](#); sheltering in a [slit trench](#), he reads [Aeschylus](#) in the original Greek.

1/7/1916 - [W. B. Yeats](#) makes his fifth and final proposal of marriage to the newly widowed [Maud Gonne](#) in France.

1-12/7/1916 – The [Jersey Shore shark attacks of 1916](#) take place; these would be the partial inspiration for [Peter Benchley's](#) novel [Jaws](#) (1974).^[citation needed]

Summer 1916 – In the United States, 15-year-old [Margaret Mitchell](#) writes a [novella](#) called [Lost Laymen](#) in two notebooks. She will later give the manuscript to a boyfriend and the book remains lost until the mid-1990s. It is published in 1996. Meanwhile, Mitchell will go on to write [Gone with the Wind](#).

9/1916 – [Joseph Conrad's](#) novella [The Shadow Line](#) begins to be serialized in [The English Review](#) (London) and the [Metropolitan Magazine \(New York\)](#).

6/10/1916 – The poet [Perpessicius](#) loses his right arm fighting for the Romanians in a skirmish at [Muratan](#).^[6]

19/10/1916 – New premises for the [German National Library](#) open in [Leipzig](#).

12/1916 – The first of many editions of [Robert Baden-Powell](#)'s [The Wolf Cub's Handbook](#) is published.^[7]

29/12/1916 – [James Joyce](#)'s semi-autobiographical novel [A Portrait of the Artist as a Young Man](#) is first published complete in book form, in [New York](#) by [B. W. Huebsch](#).

1/1917 - [Francis Picabia](#) produces the first issue of the [Dada](#) periodical [391](#) in [Barcelona](#).

1/1917 - Philosopher [Hu Shih](#), the main advocate of replacing scholarly language with the vernacular in Chinese literature, publishes an article in the magazine [New Youth \(Xin Qingnian\)](#), "A Preliminary Discussion of Literature Reform", offering eight guidelines for writers.

1/1917 - [J. R. R. Tolkien](#), on medical leave from the [British Army](#) at [Great Haywood](#), begins [The Book of Lost Tales](#) (the first version of [The Silmarillion](#)), starting with the "Fall of [Gondolin](#)". This first chronicles Tolkien's mythopoeic Middle-earth [legendarium](#) in prose.^{[1][2]}

[February 4](#) or [5](#), 1917 – The English writer [Hugh Kingsmill](#) is captured in action in France.^[3]

16/2/1917 – The publisher [Boni & Liveright](#) is founded in [New York City](#) by [Horace Liveright](#) with [Albert Boni](#), and initiates the "Modern Library" imprint.

4/1917 – [Leonard](#) and [Virginia Woolf](#) take delivery of a hand printing press needed to establish the [Hogarth Press](#) at their home in [Richmond upon Thames](#).^[4] Their first publication is [Two Stories](#).

5/1917 – [W. B. Yeats](#) acquires [Thoor Ballylee](#) in Ireland.

4/6/1917 – The first [Pulitzer Prizes](#) are awarded: [Laura E. Richards](#), [Maude H. Elliott](#), and [Florence Hall](#) receive the first for biography (for [Julia Ward Howe](#)), [Jean Jules Jusserand](#) the first for history with [With Americans of Past and Present Days](#), and [Herbert B. Swope](#) the first for journalism for his work for the [New York World](#).

18/6/1917 – [Luigi Pirandello](#)'s drama [Right You Are \(if you think so\)](#) (*Così è (se vi pare)*) is first performed, in [Milan](#).

7/1917 – [Siegfried Sassoon](#) issues a "Soldier's Declaration" against prolonging [World War I](#). He is sent by the military (with assistance from [Robert Graves](#)) to [Edinburgh](#)'s [Craiglockhart War Hospital](#), where [Wilfred Owen](#) introduces himself on August 18.^[5] At Sassoon's urging, Owen writes his two great war poems, "[Anthem for Doomed Youth](#)" and "[Dulce et Decorum est](#)", although like almost all his poetry they remain unpublished until after his death in action next year. Their meeting would later inspire [Stephen MacDonald](#)'s drama [Not About Heroes](#) (1982) and [Pat Barker](#)'s novel [Regeneration](#) (1991).^[6]

Summer 1917 – The [Siuru expressionist](#) and [neo-romantic](#) literary movement in [Estonia](#) is formed by young poets and writers.^{[7][8]}

6/9/1917 – At the [National Eisteddfod of Wales](#) in [Birkenhead](#), the [Chairing of the Bard](#) ceremony ends with the chair draped in black, the winner, [Hedd Wyn](#), having died a month earlier in battle.^[9]

10/1917 - [Ernest Hemingway](#) takes his first job, as a reporter on [The Kansas City Star](#).

10/1917 - [D. H. Lawrence](#) is forced to leave [Cornwall](#) at three days' notice under terms of the [Defence of the Realm Act](#) in the United Kingdom.^[10]

20/10/1917 – The 51-year-old poet [W. B. Yeats](#) marries 25-year-old [Georgie Hyde-Lees](#) at [Harrow Road register office](#) in London, with [Ezra Pound](#) as best man, a couple of months after his proposal of marriage to his ex-mistress's daughter, [Iseult Gonne](#), is rejected.

25/12/1917 – [Jesse Lynch Williams'](#) [Why Marry?](#), the first drama to win a [Pulitzer Prize](#), opens at the [Astor Theatre \(New York\)](#).

1/1/1918 – The English novelist and wartime propagandist [Hall Caine](#) is made a Knight of the [KBE](#).

2/1/1918 – The English novelist [Marie Corelli](#) is convicted under wartime legislation against hoarding food.^[1]

18/1/1918 – The first edition of [Aussie: The Australian Soldiers' Magazine](#) appears.

23/1/1918 – The English poet [Robert Graves](#) marries the painter [Nancy Nicholson](#) in London. The wedding guests include [Wilfred Owen](#), whose first nationally published poem appears three days later ("Miners" in *The Nation*). He will be killed by the end of the year.

3/1918 - The [Telemachus](#) episode in [James Joyce's](#) [Ulysses](#) is published in serialized form in the U.S. journal [The Little Review](#).

3/1918 - The English novelist [Alec Waugh](#) is taken [prisoner of war](#). He will be incarcerated in [Mainz Citadel](#) with the [monologist](#) [J. Milton Hayes](#), also taken prisoner this year, and [Hugh Kingsmill](#).

4/1918 - [Hu Shih](#), chief advocate of the use of the vernacular in [Chinese literature](#) at the time, publishes an essay, "Constructive Literary Revolution – A Literature of National Speech" in the magazine [New Youth \(Xin Qingnian\)](#) proposing a [four-point reform](#) program.

4/1918 - The English writer [May Sinclair](#) introduces the term "[Stream of consciousness](#)" to describe a [narrative mode](#), in a discussion of [Dorothy Richardson's](#) novel sequence [Pilgrimage](#) in *The Egoist*.

3/5/1918 – The New Zealand writer and poet [Katherine Mansfield](#) marries her long-time partner [John Middleton Murry](#) at [Kensington register office](#) in London.

6/1918 - The 2nd annual [Pulitzer Prizes](#) are awarded in the United States, including the first award for a novel.^[2]

6/1918 - The English poet [Basil Bunting](#) is imprisoned as a [conscientious objector](#).

17/8/1918 – The poets [Wilfred Owen](#) and [Siegfried Sassoon](#) meet for the last time, in London, and spend what Sassoon will recall as "the whole of a hot cloudless afternoon together."^[3]

3/10/1918 – [Siegfried Sassoon](#) visits his mentor [Robbie Ross](#) for the last time. Sassoon will write later that Ross's goodbye gave him a "presentiment of final farewell."^[3]

4/11/1918 – [Wilfred Owen](#) is killed in action aged 25, at the [Sambre–Oise Canal](#), with only five of his poems published. News of his death reaches his parents in [Shrewsbury](#) a week later on [Armistice Day](#). He is awarded a posthumous [Military Cross](#) a year later.

12/1918 – The *Poems* of [Gerard Manley Hopkins](#) (died 1889, including [The Wreck of the Deutschland](#), 1875/1876) are published through [Robert Bridges](#). Few were published in Hopkins' lifetime, so that this introduces his innovative [sprung rhythm](#) and [imagery](#) to many readers.

28/12/1918 – Emperor [Khải Định](#) of [Vietnam](#) declares the traditional [Chữ nôm](#) script for the [Vietnamese language](#) to be replaced by the [Latin script Vietnamese alphabet](#).

2/1919 – [Richmal Crompton](#)'s anarchic English schoolboy William Brown is introduced in the first published [Just William](#) story, "Rice-Mould", in *Home* magazine.

1/3 – 15/10/1919 – Publication runs of the American [pulp magazine](#) [The Thrill Book](#) are oriented towards the [fantasy genre](#) or [science fiction](#). It includes the serialization of [The Heads of Cerberus](#), written by [Gertrude Barrows Bennett](#) as Francis Stevens, with its early thematic use of an alternate time-track, or parallel worlds.

3/1919 – The diaries up to the end of 1917 from the English naturalist [W. N. P. Barbellion](#) (Bruce Frederick Cummings) are published as [The Journal of a Disappointed Man](#) in London by [Chatto & Windus](#). This treats his resignation to the disease [multiple sclerosis](#), of which he will die on [October 22](#), aged 30, at [Gerrards Cross](#).^[1]

28/3/1919 – Two paintings by [E. E. Cummings](#) appear in an exhibition of the New York Society of Independent Artists.

2/4/1919 – [Vladimir Nabokov](#) leaves Russia with his family.

7/4/1919 – The anarchist writers [Gustav Landauer](#) and [Erich Mühsam](#) play leading roles in creating the [Bavarian Soviet Republic](#). They are later joined by the essayist and [debt relief](#) advocate [Silvio Gesell](#). Taken over by the [Communist Party of Germany](#), the republic is eventually crushed by the [Freikorps](#); Landauer is killed in prison ([May 2](#)).^[2] Combatants on the *Freikorps* side include [Ernst Kantorowicz](#), later famous as a historian.^[3]

April and October, 1919 – The English writers [Vera Brittain](#) and [Winifred Holtby](#) return after war service to complete their degree courses at [Somerville College, Oxford](#).^[4]

6/1919 – The [Algonquin Round Table](#) of writers, critics, actors and wits led by [Alexander Woollcott](#) first meets at the [Algonquin Hotel](#) in New York City.

29/7/1919 – [Alfred Harcourt](#) and [Donald Brace](#) set up the publishing company [Harcourt, Brace & Howe](#) in New York City.^[5]

28/10/1919 – [Arthur Ransome](#) leaves Russia with his future wife Evgenia Petrovna Shelepina, previously [Trotsky](#)'s secretary, carrying a diplomatic message for Estonia.

11/1919 – The literary monthly [The London Mercury](#) is launched with [J. C. Squire](#) as editor.

17/11/1919 – An American expatriate, [Sylvia Beach](#), opens the [Shakespeare and Company](#) bookstore in [Paris](#).

29/11/1919 – The [Großes Schauspielhaus](#) opens as a theater in [Berlin](#), with an interior designed by [Hans Poelzig](#). It begins with the director [Max Reinhardt](#)'s production of the [Oresteia](#).^[6]

12/1919 – [T. E. Lawrence](#) loses most of the manuscript of [Seven Pillars of Wisdom](#) while changing trains at [Reading](#) in England en route from the [Paris Peace Conference](#) to Oxford.^[7]

2/2/1920 – [Beyond the Horizon](#), [Eugene O'Neill](#)'s second full-length play, opens with a [Morosco Theatre](#) matinée in New York City, partly as a producer's experiment and partly to quiet the actor [Richard Bennett](#), who sought to play the lead. Reviewers hail the play and O'Neill gains fame.

27/2/1920 – An inaugural meeting of the [Bloomsbury Group](#)'s Memoir Club is arranged by [Mary MacCarthy](#) in London.^[1]

Spring 1920 – The poet [Anton Podbevšek](#) and others organize the [Novo Mesto](#) Spring (*Novomeška pomlad*) event, the beginning of [Slovenian Modernism](#).

15/3/1920 – [The Blue Flame](#), a four-act play by [George V. Hobart](#) and [John Willard](#) after Leta Vance Nicholson, opens at the [Shubert Theatre \(New York City\)](#) on [Broadway](#) before a year's U.S. tour. Though described by a critic as "one of the worst plays ever written,"^[2] it is a commercial success, largely due to [Theda Bara](#) as the central character of a [vamp](#).

22/3/1920 – [Federico García Lorca](#)'s first play, [The Butterfly's Evil Spell](#) (*El maleficio de la mariposa*) is poorly received at its première in Madrid.

26/3/1920 – [This Side of Paradise](#) by [F. Scott Fitzgerald](#) sets him up as a writer and celebrity. An initial 3,000 copies sell out in three days. The book's reputation dims in later years, but [Dorothy Parker](#) will recall that it was seen as innovative when it first appeared.

4/1920 – [Hart Crane](#) publishes his poem "My Grandmother's Love Letters" in [The Dial](#), his first major move toward recognition as a poet.

4/1920 – The pulp magazine [Black Mask](#) is launched in New York City as "An Illustrated Magazine of Detective Mystery, Adventure, Romance, and Spiritualism" by journalist [H. L. Mencken](#) and drama critic [George Jean Nathan](#).

3/4/1920 – F. Scott Fitzgerald marries Zelda Sayre in the rectory of St. Patrick's Cathedral (Manhattan).

1/5/1920 – F. Scott Fitzgerald's short story "Bernice Bobs Her Hair" appears in the Saturday Evening Post and on the magazine's cover, illustrated by artist Norman Rockwell.

7/1920 – Krishna Lal Adhikari's *Makaiko Kheti* (The Cultivation of Maize) is published in Nepal; following claims that it contains "mischievous expressions to treason", the author is sentenced to nine years in prison (where he will die in 1923) and all known copies of the book are destroyed.^[3]

22/8/1920 – The Salzburg Festival in Austria is inaugurated with a performance of Hugo von Hofmannsthal's play *Jedermann* (Everyman, 1911) in front of Salzburg Cathedral, directed by Max Reinhardt.

10/1920 – Agatha Christie's first novel, *The Mysterious Affair at Styles*, appears in the U.S., introducing her long-running Belgian detective Hercule Poirot in the setting of an English country house. The book is published in the U.K. on January 21, 1921.

1/11/1920 – Eugene O'Neill's *The Emperor Jones* plays at the Playwright's Theater in New York City with Charles Sidney Gilpin in the title role.^[4]

9/11/1920 – D. H. Lawrence's novel *Women in Love* appears in a limited U.S. subscribers' edition.

12/1920 – The first edition of the *Poems* of the English war poet Wilfred Owen, killed in action in 1918, appears in London, introduced by his friend Siegfried Sassoon. Only five of Owen's verses were published in his lifetime. This introduces his work to many readers. It includes the 1917 poems "*Anthem for Doomed Youth*" and "*Dulce et Decorum est*", horrifying imagery in the latter's 28 lines poem's making it one of the best-known condemnations of war.

23/12/1920 – Arthur Schnitzler's play *Reigen* (*La Ronde*, 1900) receives a first authorized performance, in Berlin, where it is criticized on moral and anti-Semitic grounds.

Christmas 1920 – Monteiro Lobato's children's story "A Menina do Narizinho Arrebitado" (Girl with the Uprturned Nose), the origin of the *Sítio do Picapau Amarelo* novel series, is published in Brazil.

1/1/1921 – The publishing firm Jonathan Cape is founded in Bloomsbury, London, by Herbert Jonathan Cape and Wren Howard.^[1]

2/1921 – Margaret Caroline Anderson and Jane Heap, publishers of *The Little Review*, are convicted of obscenity in a New York court for publishing the "Nausicaa" episode of James Joyce's *Ulysses*.^[2]

3/1921 – Jorge Luis Borges returns to his native Buenos Aires in Argentina after a period living with his family in Europe.

20/4/1921 – The Hungarian [Ferenc Molnár](#)'s play [Liliom](#) is first produced on [Broadway](#) in English.

9/5/1921 – The première of [Luigi Pirandello](#)'s [Six Characters in Search of an Author](#) (*Sei personaggi in cerca d'autore*) at the [Teatro Valle](#) in Rome divides the audience.

5/1921 – A production of [Pericles, Prince of Tyre](#) directed by Robert Atkins at [The Old Vic](#), London, restores the unexpurgated text for the first time since Shakespeare's day.

6/6/1921 – The première of [Tristan Tzara](#)'s parodic [The Gas Heart](#) (*Le Cœur à gaz*) takes place at a [Dada](#) Salon at the [Galerie Montaigne](#) in Paris. It provokes audience derision.

10/6/1921 – [D. H. Lawrence](#)'s novel [Women in Love](#) is first published commercially by [Martin Secker](#) in London.

5/9/1921 – The [Cervantes Theatre](#) ([Buenos Aires](#)) opens with a production of [Lope de Vega](#)'s [La dama boba](#) (*The Foolish Lady*, 1613).^[3]

26/9/1921 – The [Maddermarket Theatre](#) in [Norwich](#), England, an old chapel, is turned into an [English Renaissance theatre](#) for period drama by an amateur [repertory company](#) directed by [Walter Nugent Monck](#).^[4] It opens with [As You Like It](#).

9/12/1921 – [John William Gott](#) becomes the last person in England imprisoned for [blasphemous libel](#).

31/12/1921 – [Mexican](#) poet [Manuel Maples Arce](#) distributes the first [Stridentist](#) manifesto, *Comprimido estridentista*, in the broadsheet *Actual* No. 1 in Mexico City.

1/1922 – [Ryūnosuke Akutagawa](#)'s modernist [short story](#) "[In a Grove](#)" ([藪の中](#), *Yabu no naka*) is published in the Japanese magazine [Shinchō](#).

24/1/1922 – [Façade – An Entertainment](#), poems by [Edith Sitwell](#) recited over an instrumental accompaniment by [William Walton](#), are first performed, privately in London.^[2]

27/1/1922 – [Franz Kafka](#) begins intensive work on his novel [The Castle](#) (*Das Schloss*) at the mountain resort of [Spindlermühle](#), ceasing around early September in mid-sentence.^[3]

2/2/1922 - In a "savage creative storm" of less than three weeks beginning today at [Château de Muzot](#) in Switzerland, [Rainer Maria Rilke](#) writes his [Sonnets to Orpheus](#) (*Die Sonette an Orpheus*) and completes his [Duino Elegies](#) (*Duineser Elegien*).

2/2/1922 - The [modernist](#) novel [Ulysses](#) by [James Joyce](#) is published complete in book form by [Sylvia Beach](#)'s [Shakespeare and Company](#) in Paris (on 2/2/22, Joyce's 40th birthday), with a further edition in Paris for the [Egoist Press](#), London, on October 12, much of it seized by the [United States Customs Service](#)). The U.K. customs will also seize copies entering the country.^[4]

2-9/1922 – [D. H.](#) and [Frieda Lawrence](#) migrate from Europe to the United States, visiting Australia on the way, where he completes writing his novel [Kangaroo](#).

3/1922 – [F. Scott Fitzgerald's](#) novel *The Beautiful and Damned* is published in book form by [Charles Scribner's Sons](#) in New York; on December 10 a [silent film version](#) is released.

c. March 8, 1922 – The Czech playwrights [Karel](#) and [Josef Čapek's](#) play *Pictures from the Insects' Life* (*Ze života hmyzu*, also known as *The Insect Play*, published 1921) is first performed at the [National Theatre Brno](#). It is also first performed this year in English translation, in the United States.

4/1922 – [Marcel Proust's](#) *Sodome et Gomorrhe II* (part of the [novel sequence](#) *À la Recherche du temps perdu*) is published in Paris.

18/5/1922 – [Marcel Proust](#), [James Joyce](#), [Sergei Diaghilev](#), [Igor Stravinsky](#), [Pablo Picasso](#), [Erik Satie](#) and [Clive Bell](#), hosted by English art patron and novelist [Sydney Schiff](#), dine in [Paris](#) at the [Hotel Majestic](#): their one joint meeting. This is an evening to remember!

27/5/1922 – [F. Scott Fitzgerald's](#) short story "[The Curious Case of Benjamin Button](#)" is published in [The Smart Set](#) magazine.

6/1922 - [F. Scott Fitzgerald's](#) short story "[The Diamond as Big as the Ritz](#)" appears in [Collier's](#) magazine.

6/1922 - Over one night at his home in [Shaftsbury, Vermont](#), [Robert Frost](#) completes the poem "New Hampshire" and at sunrise writes "[Stopping by Woods on a Snowy Evening](#)".^[6]

7/1922 – Having issued a 2nd edition of [António Botto's](#) poetry collection *Canções* through his [Lisbon](#) publishing house [Olisipo](#), [Fernando Pessoa](#) publishes a magazine article praising Botto's courage and sincerity in shamelessly singing [homosexual](#) love as a true [aesthete](#),^[7] sparking controversy over *literatura de Sodoma*.

8/1922 – [T. E. Lawrence](#) is recruited into the British [Royal Air Force](#) as Ordinary [Aircraftman](#) 352087 John Hume Ross by Flying Officer [W. E. Johns](#) in London. Lawrence later writes [The Mint](#) about his experiences.

Summer 1922 – [F. Scott Fitzgerald's](#) novel *The Great Gatsby* (1925) is set on [Long Island](#) at this time, partly inspired by Scott and [Zelda Fitzgerald's](#) life from October 9 at [Great Neck, New York](#), with the novelist [Ring Lardner](#) and the newspaper editor [Herbert Bayard Swope](#) as friends and neighbors.

9/1922 - [Marcel Proust's](#) sequence *À la Recherche du temps perdu* begins to appear in English in a translation by [C. K. Scott Moncrieff](#) of *Swann's Way*, as the first volume of *Remembrance of Things Past*. This occurs two months before the author's death.

9/1922 - [T. S. Eliot](#) and [E. M. Forster](#) stay in the country with [Virginia Woolf](#) and discuss Joyce's *Ulysses*.^[8]

14/9/1922 – [Sinclair Lewis's](#) satirical novel *Babbitt* is published by [Harcourt, Brace & Company](#).

22/9/1922 - [Bengali](#) writer [Kazi Nazrul Islam](#) publishes the poem "Anandamoyeer Agamane" (The Advent of the Delightful Mother) in support of the [Indian independence movement](#), in

the *Puja* issue of his new biweekly [Dhumketu](#). For this he is arrested in the [Bengal Presidency](#) and imprisoned on a charge of [sedition](#) for much of the following year. He goes on a hunger strike and composes many poems while in prison. His poem "[Bidrohi](#)" (বিদ্রোহী , The Rebel, December 1921) appears in his first anthology, *Agnibeena*.

22/9/1922 - F. Scott Fitzgerald's short story collection [Tales of the Jazz Age](#) is published by Charles Scribner's Sons in New York.

29/9/1922 – [Drums in the Night](#) (*Trommeln in der Nacht*), at the [Munich Kammerspiele](#), becomes the first play by [Bertolt Brecht](#) to be staged.

15/10/1922 – [T. S. Eliot](#) founds [The Criterion](#) magazine (October 15), with the first appearance of his poem [The Waste Land](#).^[2] This will be first fully published in book form by [Boni & Liveright](#) in New York in December.

26/10/1922 – [Jacob's Room](#) by [Virginia Woolf](#) is published by the [Hogarth Press](#) of [Richmond upon Thames](#) with a jacket design by the author's sister [Vanessa Bell](#). Also this summer, Woolf writes the short story "Mrs Dalloway in Bond Street" (published July 1923), the groundwork of the novel [Mrs Dalloway](#) (1925).

11/1922 – [Uri Zvi Greenberg](#) flees to Berlin after the second issue of the [Yiddish](#) literary journal [Albatros](#), which he edits, is seized. The [Warsaw](#) authorities accuse him of blasphemy for iconoclastic depictions of Jesus, notably his prose poem "Royte epl fun veybeymer" (Red Apples from the Trees of Pain).

12/1922 – A valise containing all [Ernest Hemingway](#)'s manuscripts of the past year's writing is stolen at [Paris-Gare de Lyon](#).

6/12/1922 – [W. B. Yeats](#) becomes a nominated [member of the Seanad Éireann](#) in the [Irish Free State](#).

10/12/1922 – The [National Library of Albania](#) is inaugurated in [Tirana](#).^[9]

20/12/1922 – [Jean Cocteau](#)'s [Antigone](#) appears at the reopened [Théâtre de l'Atelier](#) in the [Montmartre](#) district of Paris, with sets by [Pablo Picasso](#), music by [Arthur Honegger](#) and costumes by [Gabrielle Chanel](#). [Génica Athanasiou](#) plays the title rôle, with [Charles Dullin](#) as [Créon](#) and [Antonin Artaud](#) as [Tiresias](#). There are [Dadaist](#) protests.^[10]

1/1923 - A copy of [James Joyce](#)'s 1922 novel [Ulysses](#) posted to a London bookseller by the proprietor of [Davy Byrne's pub](#) in Dublin, which features in the book, is detained as obscene by the U.K. authorities.^[2]

1/1923 - [T. E. Lawrence](#) is forced to leave the British [Royal Air Force](#), his alias as 352087 Aircraftman John Hume Ross having been exposed. He joins the [Royal Tank Corps](#) as 7875698 Private T. E. Shaw.^[3]

5/2/1923 – Poet and super-tramp [W. H. Davies](#) marries Helen Payne, an ex-prostitute thirty years his junior, at [East Grinstead](#).^[4]

3/1923 – The first issue of the [pulp magazine](#) *Weird Tales* appears in the U.S. It becomes noted for its [horror fiction](#) and [fantasy](#).

11/4/1923 – [Seán O'Casey's](#) drama *The Shadow of a Gunman*, the first of his "Dublin Trilogy", set during the recent [Irish War of Independence](#), opens at the [Abbey Theatre, Dublin](#).

21/4/1923 – The first of a series of innovative modern-dress productions of Shakespeare plays, *Cymbeline*, directed by [H. K. Aylliff](#), opens at [Barry Jackson's Birmingham Repertory Theatre](#) in England.^[5]

9/5/1923 – The première of [Bertolt Brecht's](#) play *In the Jungle of Cities* (*Im Dickicht der Städte*) at the [Residenz Theatre](#) in [Munich](#) is disrupted by [Nazi](#) demonstrators.

11/5/1923 – [Dorothy L. Sayers'](#) fictional English detective and bibliophile, [Lord Peter Wimsey](#), makes his first appearance in the novel *Whose Body?*, published by [Boni & Liveright](#) in the United States. The first U.K. edition follows in October from [T. Fisher Unwin](#).^[6]

6/7/1923 – A riot breaks out at the re-staging of [Tristan Tzara's](#) Dadaist play *The Gas Heart* at the [Théâtre Michel](#), Paris, between those aligned with [André Breton](#) and those aligned with Tzara. The conflict leads to a permanent split in the Dada movement and the founding of [Surrealism](#) as an alternative.^[7]

Summer 1923 – The teenage English brothers [Julian](#) and [Quentin Bell](#) begin issuing a family newspaper, the *Charleston Bulletin*, at their Sussex home, [Charleston Farmhouse](#), with occasional contributions by their maternal aunt [Virginia Woolf](#).

9/1923 – [T. S. Eliot's](#) poem *The Waste Land* (1922) is first published in the [United Kingdom](#) in book form, complete with notes, in a [limited edition](#) by the [Hogarth Press](#) of [Richmond upon Thames](#). The firm is run by Eliot's [Bloomsbury Group](#) friends [Leonard](#) and [Virginia Woolf](#), and the type handset by Virginia (completed in July).^{[8][9]}

8/10/1923 – A production of Shakespeare's *Titus Andronicus* at [The Old Vic](#), directed by [Robert Atkins](#), is the first in London since 1857. It is also the first to restore the full original text since the playwright's time.

12/1923 – [Persian](#) poet [Nima Yooshij](#) publishes the poem *Afsaneh*, the manifesto of the [She'r-e Nimaai](#) school of [modernist poetry](#).

28/12/1923 – [George Bernard Shaw's](#) drama *Saint Joan* is premièred at the [Garrick Theatre](#) ([New York City](#)) on [Broadway](#) by the [Theatre Guild](#), with [Winifred Lenihan](#) in the title role.^[10]

1/1924 - Writer [Miguel de Unamuno](#) is dismissed for the first time from his university posts by the Spanish dictator General [Miguel Primo de Rivera](#) and goes into exile on [Fuerteventura](#) in the [Canary Islands](#).

1/1924 - [Richard L. Simon](#) and [M. Lincoln \("Max"\) Schuster](#) establish the [New York City publisher Simon & Schuster](#), which initially specializes in [crossword puzzle](#) books.^[1]

15/1/1924 – The world's first [radio play](#), *Danger* by [Richard Hughes](#), is broadcast by the [B.B.C.](#) from its London studios.^[2]

2/2/1924 – A largely rewritten version of [Roi Cooper Megrue](#) and [Walter C. Hackett](#)'s 1914 farce *It Pays to Advertise* opens in a production by actor-manager [Tom Walls](#), at the [Aldwych Theatre](#) in London. It runs until 10 July 1925, a total of 598 performances, as the first in a sequence of twelve [Aldwych farces](#).^{[3][4][5]}

3/3/1924 – [Seán O'Casey](#)'s drama *Juno and the Paycock* opens at the [Abbey Theatre, Dublin](#).^[6]

3/1924 - [Leonard](#) and [Virginia Woolf](#) move themselves and the [Hogarth Press](#) back to a house in [Bloomsbury](#) at 52 [Tavistock Square](#), London.

3/1924 - [Weird Tales](#) magazine publishes [H. P. Lovecraft](#)'s story "[The Rats in the Walls](#)" in the United States.

4/1924 – [Ford Madox Ford](#) publishes the first of four volumes set around [World War I](#), titled *Parade's End*. It is completed in 1928.

12/4/1924 – The Indian poet [Rabindranath Tagore](#) arrives in China, where his views prove controversial.^[7] While there, he becomes associated with the innovative poets [Xu Zhimo](#) and [Lin Huiyin](#).

3/5/1924 – [F. Scott](#) and [Zelda Fitzgerald](#) leave New York for France.

6/1924 – Ret Marut, perhaps previously Otto Feige and presumed later to be the writer [B. Traven](#), leaves Europe for [Mexico](#).^[8]

4/6/1924 – [E. M. Forster](#)'s novel *A Passage to India* is published in the U.K. He will write no further fiction in the remaining 46 years of his life.

9/1924 – *Buddenbrooks*, the first of [Thomas Mann](#)'s works to appear in English, is published in a translation by the American [Helen T. Lowe-Porter](#). The original German appeared in 1901.

21/2/1925 – The first issue of *The New Yorker* magazine is published by [Harold Ross](#).^[1]

28/2/1925 – The first story under the name [B. Traven](#) (identified variously as actor Ret Marut or Otto Feige) is published, in *Vorwärts* ([Berlin](#)).

4/1925 – [F. Scott Fitzgerald](#) and [Ernest Hemingway](#) meet in the Dingo Bar, rue Delambre, in the [Montparnasse](#) quarter of [Paris](#), after the April 10 publication of Fitzgerald's *The Great Gatsby* and before Hemingway departs on a trip to Spain that he will fictionalize in *The Sun Also Rises*.

14/5/1925 – [Virginia Woolf](#)'s novel *Mrs Dalloway* is published by the [Hogarth Press](#) in [Bloomsbury](#), London.^[2] Woolf is beginning work on *To the Lighthouse*.

20/5/1925 – [C. S. Lewis](#) is elected a fellow of [Magdalen College, Oxford](#), where he tutors in English language and literature until 1954.^[3]

Summer 1925 – [Samuel Beckett](#) plays in the first of two [first-class cricket](#) matches, for [Dublin University](#) against [Northamptonshire](#).

22/7/1925 – The first of [Ben Travers](#)' "Aldwych farces", *A Cuckoo in the Nest*, opens at London's [Aldwych Theatre](#) in a production by actor-manager [Tom Walls](#) featuring the brothers [Ralph Lynn](#), [Gordon James](#) and [Hastings Lynn](#).^[4]

1/10/1925 – [J. R. R. Tolkien](#) becomes [Rawlinson and Bosworth Professor of Anglo-Saxon](#) at the [University of Oxford](#).

24/12/1925 – [A. A. Milne](#)'s [Winnie-the-Pooh](#) story "The Wrong Sort of Bees" appears in the [London Evening News](#).

28/12/1925 – The [Russian poet Sergei Yesenin](#) (born 1895) writes a farewell poem, "Goodbye, my friend, goodbye" (До свиданья, друг мой, до свиданья) in his own blood before hanging himself at the [Angleterre Hotel, Leningrad](#).

12/1925 – [W. H. Auden](#) and [Christopher Isherwood](#) meet for the first time as adults in London.^[5]

8/2/1926 – [Seán O'Casey](#)'s play *The Plough and the Stars* opens at the [Abbey Theatre, Dublin](#). At the February 11 performance there is a near-riot: one audience member strikes an actress.^[1]

12/2/1926 – The [Irish Free State](#) Minister for Justice, [Kevin O'Higgins](#), appoints a [Committee on Evil Literature](#).

26/2/1926 – The future English novelist [Graham Greene](#) is received into the [Catholic Church](#).

1/4/1926 – [Hugo Gernsback](#) launches his pioneering [science fiction](#) magazine *Amazing Stories* in the United States.

11/5/1926 – [C. S. Lewis](#) and [J. R. R. Tolkien](#) first meet in Oxford.^[2]

10/10/1926 – [Mikhail Bulgakov](#)'s novel *The White Guard* (Белая гвардия), partly serialized in *Rossiya* before the magazine's suppression earlier in the year, opens as a dramatic adaptation, *The Days of the Turbins*, at the [Moscow Art Theatre](#). It is enjoyed by [Stalin](#).

14/10/1926 – The children's book *Winnie-the-Pooh* by [A. A. Milne](#) first appears, published by [Methuen](#) in London.

3/12/1926 – The English detective story writer [Agatha Christie](#) disappears from her home in [Surrey](#). On [December 14](#) she is found at a [Harrogate](#) hotel by the journalist [Ritchie Calder](#), staying under her husband's mistress's surname.

12/1926 – [Thomas Mann](#) begins writing *Die Geschichten Jaakobs* in [Munich](#), first of the tetralogy *Joseph and His Brothers* (*Joseph und seine Brüder*), on which he will work until January 1943.

1/1927 – The [Books Kinokuniya](#) (紀伊國屋書店) bookstore business is established in [Tokyo](#).

4/2/1927 – [Gertrude Stein](#) is honored by the *Académie des femmes*,^[1] an informal gathering for woman writers, founded by the expatriate American [Natalie Clifford Barney](#) starts at her Paris *salon*. Others honored include [Colette](#), [Anna Wickham](#), [Rachilde](#), [Lucie Delarue-Mardrus](#), [Mina Loy](#), [Djuna Barnes](#), and posthumously, [Renée Vivien](#).^[2]

5/5/1927 – [Virginia Woolf](#)'s stream of consciousness novel *To the Lighthouse* is published by [Hogarth Press](#) in London. A second impression follows in June. It is seen as a landmark of high modernism.^[3]

29/6/1927 – [T. S. Eliot](#), hitherto [Unitarian](#), is baptised into the [Church of England](#) at [Finstock](#). In November he takes [British citizenship](#).

7/7/1927 – [James Joyce](#)'s collection *Pomes Penyeach* is published by [Shakespeare and Company](#) in Paris.

9/7/1927 – [P. G. Wodehouse](#)'s short story "Pig-hoo-o-o-o-ey", published in the U.S. magazine *Liberty*, introduces [Lord Emsworth](#)'s prize pig, the [Empress of Blandings](#). The first UK appearance follows in the August issue of *The Strand Magazine*.

8/1927 – [T. S. Eliot](#)'s poem *Journey of the Magi* appears in [Faber and Gwyer](#)'s *Ariel poems* series in London, illustrated by [E. McKnight Kauffer](#).

9/1927 – [Eric Blair](#) ([George Orwell](#)) decides while on leave from the Imperial Police in [Burma](#) to remain in the U.K. He moves to London to become a writer.

10/1927 – [Victor Gollancz](#) founds the London publishing house [Victor Gollancz Ltd](#).

12/1927 – [Agatha Christie](#)'s fictional amateur detective [Miss Marple](#) makes a first appearance in "The Tuesday Night Club", published in *The Royal Magazine*.^[4]

1/1928 - The Soviet magazine *Oktyabr* begins publishing [Mikhail Sholokhov](#)'s novel *And Quiet Flows the Don* («Тихий Дон», *Tikhiy Don*) in instalments.

1/1928 - [Ford Madox Ford](#) publishes *Last Post* in the U.K., as the last in his [World War I](#) tetralogy *Parade's End*, which has been appearing since 1924.

16/1/1928 – The English novelist and poet [Thomas Hardy](#)'s ashes are interred in the [Poets' Corner](#) of [Westminster Abbey](#), London. [Pallbearers](#) include [Stanley Baldwin](#), [J. M. Barrie](#), [John Galsworthy](#), [Edmund Gosse](#), [A. E. Housman](#), [Rudyard Kipling](#), [Ramsay MacDonald](#) and [George Bernard Shaw](#).^[1] Meanwhile Hardy's heart is interred where he wished to be buried, in the grave of his first wife, [Emma](#), in the churchyard of his parish of birth, [Stinsford](#) ("Mellstock") in [Dorset](#).^[2] Later in the year, his widow [Florence](#) publishes the

first part of a biography, *The Early Life of Thomas Hardy, 1840–1891* ([Macmillan](#)), in fact largely dictated by Hardy.^[3]

2/1928 – [Weird Tales](#) magazine publishes [H. P. Lovecraft](#)'s story "[The Call of Cthulhu](#)" in the United States.

31/3/1928 – [Stockholm Public Library](#), designed by [Gunnar Asplund](#), opens.

19/4/1928 – Publication of the [Oxford English Dictionary](#) is completed.

Spring 1928 – [George Orwell](#) moves from London to Paris; his first articles as a professional writer appear later in the year.^[4]

6/1928 – The [literary magazine](#) *Contemporáneos* is first published in Mexico by [Jaime Torres Bodet](#), giving a name to the group [Los Contemporáneos](#).

27/6/1928 – The English writer [Evelyn Waugh](#) marries Evelyn Gardner, daughter of Lady Winifred Burghclere, in St Paul's Church, [Portman Square](#), London, with only [Harold Acton](#), [Alec Waugh](#) (the author's brother) and [Pansy Pakenham](#) present.^[5] They move into a flat in Canonbury Square, [Islington](#). In September the author's first completed novel, *[Decline and Fall](#)*, is published by [Chapman & Hall](#), of which his father, [Arthur Waugh](#), is managing director. It is illustrated by the author. It reaches a third impression by the end of the year. The marriage lasts until the following September.

7/1928 – [D. H. Lawrence](#)'s *[Lady Chatterley's Lover](#)* is published in [Florence](#). It will not be published unexpurgated in Britain until 1960.

27/8/1928 – [Taibhdhearc na Gaillimhe](#) in [Galway](#) is founded as the national [Irish-language](#) theater, opening with [Micheál Mac Liammóir](#)'s version of *[Dhiarmada agus Ghráinne](#)*.

31/8/1928 – *[The Threepenny Opera](#)* (*Die Dreigroschenoper*), adapted by [Bertolt Brecht](#), [Elisabeth Hauptmann](#) and composer [Kurt Weill](#) (with set designer [Caspar Neher](#)) from *[The Beggar's Opera](#)*, is launched at the [Theater am Schiffbauerdamm](#) in [Berlin](#), with [Harald Paulsen](#) and [Lotte Lenya](#) in the principal rôles.

9/1928 - [S. S. Van Dine](#) publishes "Twenty Rules for Writing Detective Stories" in [The American Magazine](#).

9/1928 - [Leslie Charteris](#) publishes *[Meet the Tiger](#)* in the U.K., the first adventure of [Simon Templar](#) ("the Saint"). Charteris will write dozens of novels and stories with the character in 1928–1963; successor writers will continue until 1983.

21/9/1928 – The [Gorseth Kernow](#) is set up at [Boscawen-Un](#) in [Cornwall](#) by [Henry Jenner](#) (Gwas Myghal) and others.

10/1928 - [W. H. Auden](#) goes to Berlin and is soon joined by [Christopher Isherwood](#).^[6]

10/1928 - *[Luk Phu Chai](#)* (A Real Man), perhaps the first major original [Thai](#) novel, is published by Siburapha ([Kulap Saipradit](#)).^[7]

14/10/1928 – The [Gate Theatre](#) in Dublin is founded by English actors and lovers [Micheál Mac Liammóir](#) and [Hilton Edwards](#), initially using the [Abbey Theatre](#)'s Peacock studio to stage works by European and American dramatists.

11-12/1928 – [Erich Maria Remarque](#)'s antiwar novel *All Quiet on the Western Front* (*Im Westen nichts Neues*) appears in the German newspaper *Vossische Zeitung*. [Hans Herbert Grimm](#)'s *Schlump* is also published (anonymously) by [Kurt Wolff](#) in Berlin this year.

1/11/1928 – [Mustafa Kemal Atatürk](#), [President of Turkey](#), introduces the Roman-based 29-letter [Turkish alphabet](#) to replace the Ottoman script as official [writing system](#) for the [Turkish language](#).

6/11/1928 – [Xu Zhimo](#) writes his poem 再別康橋 (*Zài Bié Kāngqiáo*, "On Leaving Cambridge Once More").

9-16/11/1928 – [Radclyffe Hall](#)'s novel *The Well of Loneliness*, published on July 27 by [Jonathan Cape](#) in London with an appreciation by [Havelock Ellis](#), is tried and convicted at [Bow Street Magistrates' Court](#) on the grounds of [obscenity](#) under the [Hicklin test](#), for its theme of [lesbian](#) love, after a campaign against it by [James Douglas](#) in the *Sunday Express*. The presiding magistrate, Sir [Chartres Biron](#), holds that the book contains "not one word which suggested that anyone with the horrible tendencies described was in the least degree blameworthy. All the characters in the book were presented as attractive people and put forward with admiration."^[8] Other [lesbian literature](#) published in England this year evades prosecution: [Elizabeth Bowen](#)'s novel *The Hotel*, [Virginia Woolf](#)'s fictional *Orlando: A Biography*, and [Compton MacKenzie](#)'s satirical *Extraordinary Women*. [Djuna Barnes' novel *Ladies Almanack*, published in Paris, also alludes to the controversy.^{\[9\]\[10\]}](#)

9/12/1928 – [R. C. Sherriff](#)'s drama *Journey's End*, set on the [Western Front \(World War I\)](#), is premièred by the [Incorporated Stage Society](#) at the [Apollo Theatre](#) in London, with [Laurence Olivier](#) in a principal rôle.^[11]

19/12/1928 – [Italo Svevo](#) ([Aron Schmitz](#)), returning from an Alpine resort to [Trieste](#), suffers a car accident. He dies next day leaving his novel *Il Vegliardo* (The Old Man) unfinished in mid-word.

10/1/1929 – *The Adventures of Tintin* begin with the first appearance of [Hergé](#)'s [Belgian comic book](#) hero in *Tintin in the Land of the Soviets* (*Les Aventures de Tintin, reporter..., au pays des Soviets*), serialized in the children's newspaper supplement *Le Petit Vingtième*.

2-8/1929 – [Voltaire](#)'s *Candide* (1759) is held to be obscene by the [United States Customs Service](#) in [Boston](#).

2/1929 – The first of [Margery Allingham](#)'s [crime novels](#) to feature [Albert Campion](#), *The Crime at Black Dudley* (U.S. title: *The Black Dudley Murder*), appears in England.

3/1929 – [Norah C. James](#)'s first novel, *Sleeveless Errand*, is held to be obscene on publication in London, for its portrayal of the city's bohemian life.^[1] An edition appears later in Paris from [Jack Kahane](#)'s [Obelisk Press](#).^[2]

1/4/1929 – The [Faber and Faber](#) publishing company is founded in London by [Geoffrey Faber](#), with [T. S. Eliot](#) as its literary editor.

5/1929 – [Hugo Gernsback](#) first uses the term "[science fiction](#)" in its modern sense, for his pulp magazine [Amazing Stories](#).^[3]

c. June 1929 – The first of [Gladys Mitchell](#)'s crime novels appears in the UK. Entitled *Speedy Death*, it introduces a psychologist detective character, [Mrs Bradley](#).

7/1929 – British publisher [William Collins, Sons](#) launches its Detective Story Club imprint with [Edgar Wallace](#)'s novelization of *The Terror*.

5/7/1929 – [Scotland Yard](#) seizes 13 paintings of male and female nudes by [D. H. Lawrence](#) from a [Mayfair](#), London, gallery on grounds of indecency, citing the [Vagrancy Act 1838](#).^[4]

8/1929 – The Censorship of Publications Act sets up the [Censorship of Publications Board](#) in the [Irish Free State](#).

15/8/1929 – The first [Ellery Queen](#) mystery novel, *The Roman Hat Mystery*, is published in [New York City](#).

Mid year 1929 – Serialization begins of one of the first [Thai](#) novels – the first by a woman, M. L. Bubpha Kunjara Nimmanhemmin writing as Dokmai Sot – entitled *Sattru Khong Chaolon* (Her Enemy). Soon after comes the semi-autobiographical *Lakhon Haeng Chiwit* (The Circus of Life) of Prince Arkartdam-keung Rapheephath, writing as M. C. Akat. Several Thai writers join [Kulap Saipradit](#) in the Suphapburut literary group.^[5]

10/1929 – [Jean-Paul Sartre](#) and [Simone de Beauvoir](#) become a couple, having met while he studied at the [École Normale Supérieure](#) in Paris. Twenty-one-year-old De Beauvoir becomes the youngest person ever to obtain an [agrégation](#) in philosophy, and comes second in the final examination, beaten only by Sartre.

11/10/1929 – [Seán O'Casey](#)'s play *The Silver Tassie*, set in [World War I](#), receives its première at the [Apollo Theatre](#), London, directed by [Raymond Massey](#). It stars [Charles Laughton](#) and [Barry Fitzgerald](#), and has a set design by [Augustus John](#).^[6] Rejected the year before by [W. B. Yeats](#) for the [Abbey Theatre](#) in [Dublin](#), it will not open in Ireland until 1935.

5/10/1929 – The [New York Society for the Suppression of Vice](#) confiscates copies of [Samuel Roth](#)'s pirated edition of [James Joyce](#)'s 1922 novel *Ulysses* – the first complete edition printed in the U.S.^[7] He serves two prison terms for publishing an obscene work.^[8]

29/10/1929 – Released in the U.S. is the first [sound film](#) adaptation of a Shakespeare play: *The Taming of the Shrew*, starring [Mary Pickford](#) and her husband [Douglas Fairbanks](#).

12/1929 – [George Orwell](#) returns to England after a period living in Paris.

6/1/1930 – An early literary character-licensing agreement is signed by [A. A. Milne](#), giving [Stephen Slesinger](#) U.S. and Canadian merchandising rights to the [Winnie-the-Pooh](#) works.

2/1930 – The [Censorship of Publications Board](#) begins to function in the [Irish Free State](#). Among the first 13 books banned (announced in May) are [Point Counter Point](#) by [Aldous Huxley](#), [The Well of Loneliness](#) by [Radclyffe Hall](#) and several on sex and marriage by [Margaret Sanger](#) and [Marie Stopes](#).^[1]

23/2/1930 – [Erich Maria Remarque's](#) anti-war novel [All Quiet on the Western Front](#) is banned in [Thuringian](#) schools by Education Minister [Wilhelm Frick](#).^[2]

19/3/1930 – [Paul Robeson](#) plays the title role of [Othello](#) at the [Savoy Theatre](#), London, with [Peggy Ashcroft](#) as [Desdemona](#).^[3]

6/5/1930 – The [Collins Crime Club](#) is launched as a [crime fiction](#) imprint by the U.K. firm [William Collins](#).

10/5/1930 – [John Masefield](#) becomes [Poet Laureate of the United Kingdom](#).^[4]

14/7/1930 – [Luigi Pirandello's](#) [The Man with the Flower in His Mouth](#) becomes the first broadcast television drama, by the [BBC](#) in England, directed by [Val Gielgud](#).^[5]

19/7/1930 – [Georges Simenon's](#) Detective Inspector [Jules Maigret](#) makes a first appearance in print, under Simenon's own name after he abandons pseudonyms, in the novel [Pietr-le-Letton](#) ([The Strange Case of Peter the Lett](#)), which begins serialization in the French weekly magazine [Ric et Rac](#) published by [Fayard](#).^[6] It will appear in book form in 1931 as the fifth of 75 novels (and 28 short stories) in which Simenon features the pipe-smoking Paris detective.

11/9/1930 – [Agatha Christie](#) marries archaeologist [Max Mallowan](#) in Edinburgh.

24/9/1930 – The first production of [Noël Coward's](#) comedy [Private Lives](#) opens at the [Phoenix Theatre \(London\)](#), featuring Coward, [Gertrude Lawrence](#) and [Laurence Olivier](#) in the cast.^[5]

29/9/1930 – The English satirical novelist [Evelyn Waugh](#) joins the [Catholic Church](#).

13/10/1930 – [Agatha Christie's](#) [The Murder at the Vicarage](#), the first full-length novel to feature her amateur detective [Miss Marple](#), appears in the U.K. in the [Collins Crime Club](#) series, after serialization in the United States.

5/11/1930 – The American novelist [Sinclair Lewis](#) is awarded the [Nobel Prize in Literature](#).

10/12/1930 – The first performance of [Bertolt Brecht's](#) [Lehrstück The Decision](#) ([Die Maßnahme](#)), written in collaboration with [Slatan Dudow](#) and the composer [Hanns Eisler](#), occurs at the [Großes Schauspielhaus](#) in Berlin, with [Ernst Busch](#) as lead.

10/1/1931 – A rare copy of [Edgar Allan Poe's](#) [Al Aaraaf, Tamerlane, and Other Poems](#) and first editions of [The Scarlet Letter](#) and [Moby-Dick](#) are stolen from [New York Public Library](#) by Samuel Dupree, on behalf of a crooked New York antiquarian book dealer, Harry Gold.^[1]

26/1/1931 – The play [Green Grow the Lilacs](#), by a [Cherokee](#) playwright, [Lynn Riggs](#), opens on [Broadway](#). It is later adapted as [Oklahoma!](#) by [Rodgers and Hammerstein](#).^[2]

27/3/1931 – The English writer [Arnold Bennett](#) dies of [typhoid](#) in London, shortly after a visit to Paris, where he drank local water in an attempt to prove it was safe.^[3]

11/4/1931 – [Gerald Brenan](#) and [Gamel Woolsey](#) make a form of marriage in Rome.^[4]

1/6/1931 – The [Near v. Minnesota](#) case in the [Supreme Court of the United States](#) affirms the principle that [prior restraint](#) is unconstitutional.

4/7/1931 – [James Joyce](#) marries his long-time partner [Nora Barnacle](#) at [Kensington register office](#) in London.

4/10/1931 – The [Dick Tracy comic strip](#) first appears, created by cartoonist [Chester Gould](#).^[5]

5/10/1931 – The first U.K. performance of [Oscar Wilde's](#) tragedy [Salome](#) (1891) is given at the [Savoy Theatre](#), London, with [Nancy Price](#) as producer and as Herodias, and her daughter [Joan Maude](#) in the title role.^[6]

11/1931 – [Federico García Lorca](#) is appointed by the leftist [Second Spanish Republic](#) as director of a touring theatre company, [Teatro Universitario La Barraca](#) (The Shack), charged with taking a portable stage into rural areas to introduce audiences to classical Spanish theatre without charge.^[7]

3/1932 – Captain [W. E. Johns'](#) English character [Biggles](#) (James Bigglesworth) is introduced as a [World War I](#) pilot in the short story "The White Fokker", in the first, April issue of [Popular Flying](#) magazine, edited by Johns. The first Biggles collection, [The Camels Are Coming](#), ensues in April.

23/4/1932 – To mark Shakespeare's birthday: The [Royal Shakespeare Company's new theatre](#) opens at [Stratford-upon-Avon](#).^[1] The [Folger Shakespeare Library](#) opens in Washington, D.C.^[2]

26/4/1932 – The 32-year-old American poet [Hart Crane](#), in a state of alcoholic depression, throws himself overboard from the [Orizaba](#) between Mexico and New York; his body is never recovered.^[3]

5/1932 – The first issue appears of the English journal of literary criticism [Scrutiny: a quarterly review](#), edited by [F. R. Leavis](#).

28/6/1932 – [Alice Hargreaves](#), the inspiration for [Alice's Adventures in Wonderland](#), meets the publisher [Peter Llewelyn Davies](#), the inspiration for [Peter Pan](#), at a [Lewis Carroll](#) centenary exhibition in a London bookshop.^[4]

7/1932 – [W. B. Yeats](#) leases [Riversdale](#) house in the [Dublin](#) suburb of [Rathfarnham](#) and publishes *Words for Music Perhaps, and Other Poems*.^[5]

Summer 1932 - The [Open Air Theatre, Regent's Park](#), is established as a regular venue in London by [Sydney Carroll](#) and [Robert Atkins](#). The first performances at the [Minack Theatre](#), an open-air venue on the coast of [Cornwall](#) (England), include [The Tempest](#).

3/10/1932 – [The Times](#) newspaper of London introduces the [Times New Roman](#) typeface devised by [Stanley Morison](#).^[6]

16/11/1932 – [Compton Mackenzie](#) is prosecuted under the [Official Secrets Act](#) in the U.K. for material in his *Greek Memories*.^[7]

10/1932 – Nineteen Irish writers led by Yeats and [George Bernard Shaw](#) form an Academy of Irish Letters that opposes the [Censorship of Publications Board](#).^[8]

12/1932 - [E. V. Knox](#) replaces Sir [Owen Seaman](#) as editor of *Punch* magazine. Shortly after publication, the first copies of [Graham Greene](#)'s novel *Stamboul Train*, published by [Heinemann](#) in London, are withdrawn and the text altered after a threat of [libel](#) action by [J. B. Priestley](#).^[9]

2/1933 – Having joined the [Japanese Communist Party](#), the Chinese novelist [Hu Feng](#) is arrested and "badly beaten" in [Tokyo](#) for his protests against imperialism. Returning to the [Republic of China](#) as a popular hero, he is nevertheless prevented from joining the [Communist Party of China](#) by the rejection of him by a rival, [Zhou Yang](#).^[1]

17/2/1933 – The magazine *News-Week* is published for the first time in [New York](#).

8/3/1933 – Première of [Federico García Lorca](#)'s play *Blood Wedding* (*Bodas de Sangre*) is held at the Teatro Beatriz in [Madrid](#).

23/4/1933 – [Millosh Gjergj Nikolla](#) is appointed schoolteacher among the [Serbs](#) of [Vraka, Kingdom of Albania](#). The next two years bring his creative period as a short story writer, describing his sense of despair at being isolated in a backward region.^[2]

5/1933 – [Nazi book burnings](#) take place in [Germany](#) by the [German Student Union](#), principally of works by Jewish intellectuals, leading to an [Exilliteratur](#). Although his novels are spared (unlike those of his brother [Heinrich Mann](#)), [Thomas Mann](#) settles in Switzerland. [Lion Feuchtwanger](#), on a lecture tour of the United States in January, has decided not to return to Germany; [Bertolt Brecht](#) has moved to [Prague](#) in February; and [Alfred Döblin](#) to Switzerland in March.

16-17/5/1933 – In the [Soviet Union](#), [Joseph Stalin](#) orders the [NKVD](#) to "preserve but isolate" [Osip Mandelstam](#), after having been informed of the "[Stalin Epigram](#)"; Mandelstam is then arrested. A protest by literary figures, including [Anna Akhmatova](#) and [Boris Pasternak](#), prompts Stalin to declare that he might "review the case" (he never will). His admiration for Pasternak as a poetic genius is strengthened when the latter asks for a private meeting to discuss "life and death" — although he never grants it, he instructs the NKVD to "leave that cloud-dweller [Pasternak] alone".^[3]

6/1933 - [W. H. Auden](#) has his "Vision of Agape".^[4] [Robert Walser](#), under treatment for schizophrenia since 1929, is placed in a [sanatorium](#) in [Herisau](#), Switzerland. This ends his work as a writer, though he will live until 1956.^[5]

7/1933 – *Poedjangga Baroe*, the Indonesian avant-garde literary magazine, is first published, by [Armijn Pane](#), [Amir Hamzah](#) and [Sutan Takdir Alisjahbana](#).

October (approximate) 1933 – The name [Inklings](#), previously used by a disbanded undergraduate group, is taken by an informal literary discussion group of [University of Oxford](#) academics, including [C. S. Lewis](#) and [J. R. R. Tolkien](#).^[6]

8/10/1933 – The General Union of Roma in Romania is set up by writer [Gheorghe A. Lăzăreanu-Lăzurică](#), with [Grigoraș Dinicu](#) as honorary president; by 1934, it publishes the [Romani-language](#) newspaper *O Ròm*, and books of [Romani mythology](#), edited by [Constantin S. Nicolăescu-Plopșor](#).^[7]

12/1933 - [Codex Sinaiticus](#) sold by the Soviet Union to the [British Museum Library](#) through the agency of [Maggs Bros Ltd](#) at a price of £100,000, the highest ever paid for a book at this time.

12/1933 - [Raymond Chandler](#)'s first short story, the [detective fiction](#) "[Blackmailers Don't Shoot](#)", is published in the magazine [Black Mask](#) in the United States.

6/12/1933 – In [United States v. One Book Called Ulysses](#), U.S. District Judge [John M. Woolsey](#) rules that [James Joyce](#)'s novel [Ulysses](#) is not as a whole [pornographic](#) and therefore cannot not be [obscene](#).^[8]

7/1/1934 – The first [Flash Gordon comic strip](#) is created and illustrated by [Alex Raymond](#) and published in the United States.^[1]

25/1/1934 – [James Joyce](#)'s novel [Ulysses](#), after a December acquittal (upheld on appeal in February) in [United States v. One Book Called Ulysses](#), is first published in an authorized edition in the Anglophone world by [Random House](#) of New York City. It has 12,000 advance sales.^[2]

1/1934 – [B. Traven](#)'s novel [The Death Ship](#) (1926) first appears in English.

2/1934 – [Stefan Zweig](#) flees Austria and settles in London.

6/2/1934 – The [February 6 riots](#) in France, partly provoked by a performance of Shakespeare's [Coriolanus](#) by the [Comédie-Française](#), will become the focus of a cult in the works of far-right authors, notably [Death on Credit](#) by [Louis-Ferdinand Céline](#) (1936) and [Gilles](#) by [Pierre Drieu La Rochelle](#) (1939). Also in 1934, Drieu announces his conversion to fascism, with the essay [Socialisme fasciste](#).^[3]

[March 16](#) and [October 5](#), 1934 – [P. G. Wodehouse](#)'s [Thank You, Jeeves](#) and [Right Ho, Jeeves](#), the first full-length novels to feature [Jeeves](#), are published.

4/1934 – [F. Scott Fitzgerald](#)'s fourth and final completed novel, [Tender Is the Night](#), appears in book form in New York, after serialization since January in the monthly [Scribner's Magazine](#).

3/4/1934 – The English [literary biographer](#) Thomas Wright (of [Olney](#)) first publishes, in the [Daily Express](#), some facts about [Charles Dickens](#)' relations with the actress [Ellen Ternan](#).^[4]

6/4/1934 – [Rudyard Kipling](#) and [W. B. Yeats](#) are awarded the Gothenburg Prize for Poetry.

1/5/1934 – The first officially designated Thingplatz for the performance of [Thingspiele](#) is dedicated in the [Brandberge](#) in [Halle \(Nazi Germany\)](#).^[5]

6/1934 - A medieval manuscript of *Le Morte d'Arthur* used by [Caxton](#) is identified in the Fellows' Library of [Winchester College](#) (England) by the bibliophile [Walter Fraser Oakeshott](#).^[6]

6/1934 - The English poet [Laurie Lee](#) [walks out one midsummer morning](#) from his [Gloucestershire](#) home, bound for Spain.

6/1934 - Two notable [gentleman detectives](#) of the [Golden Age of Detective Fiction](#), set in England, appear for the first time in print, later to have whole series written about them. The first to feature Inspector [Roderick Alleyn](#) of [Scotland Yard](#) is *A Man Lay Dead* by [Ngaio Marsh](#), at this time resident in her native New Zealand, published in London. The first [Sir Henry Merrivale locked room mystery](#), *The Plague Court Murders*, appears from [John Dickson Carr](#), at this time resident in the UK and writing as "Carter Dickson", in New York around early June. It is followed in December by *The White Priory Murders*.^[7]

17/7/1934 – The circular [Manchester Central Library](#), England, opens.

8/1934 – [Boris Pasternak](#) and [Korney Chukovsky](#) are among those at the first Congress of the [Union of Soviet Writers](#).^[8]

9/1934 – [Henry Miller's](#) novel *Tropic of Cancer* is published in [Paris](#) by the [Obelisk Press](#). The [United States Customs Service](#) prohibits imports of it.^[9]

22/10/1934 – A new [Cambridge University Library](#), designed by [Giles Gilbert Scott](#), opens in England.

24/10/1934 – The first of [Rex Stout's](#) [Nero Wolfe detective novels](#), *Fer-de-Lance*, is published in New York, and abridged in the November [The American Magazine](#) as "Point of Death."

20/11/1934 – [Lillian Hellman's](#) first successful play, *The Children's Hour*, dealing with a theme of accusations of [lesbianism](#), opens at the [Maxine Elliott Theatre](#) on [Broadway](#) in New York, where it will run for two years.

25/12/1934 – The Romanian novelist [Panait Istrati](#), a former communist, begins his collaboration with the quasi-fascist *Cruciada Românilor* with a polemic against antisemitism.^[10] The weekly newspaper, edited by [Mihai Stelescu](#) and [Alexandru Talex](#), later hosts pieces by [Constantin Virgil Gheorghiu](#).^[11]

20/3/1935 – The London publisher [Boriswood](#) pleads guilty and is fined in [Manchester's](#) Assize Court for publishing an "obscene" book, a 1934 cheap edition of [James Hanley's](#) 1931 novel *Boy*.^[11]

13/5/1935 – [T. E. Lawrence](#), having left the British [Royal Air Force](#) in March, has an accident with his [Brough Superior](#) motorcycle while returning to his cottage at [Clouds Hill](#), England, after posting books to a friend, A. E. "Jock" Chambers, and sending a telegram inviting the

novelist [Henry Williamson](#) to lunch.^{[2][3]} He dies six days later. On July 29 his [Seven Pillars of Wisdom](#) is first published in an edition for general circulation.

15/6/1935 - [W. H. Auden](#) concludes a marriage of convenience with [Erika Mann](#).^[4]

15/6/1935 - [T. S. Eliot's](#) verse drama [Murder in the Cathedral](#) is premièred,^[5] at [Canterbury Cathedral](#), the setting for the action of the play.

30/7/1935 – [Allen Lane](#) founds [Penguin Books](#), as the first mass-market paperbacks in Britain.^{[6][7]}

8/1935 – Open-air reading room established by [New York Public Library](#) in [Bryant Park](#).

27/8/1935 – The [Federal Theatre Project](#) is established in the United States.

5/9/1935 – [Michael Joseph](#) is founded as a publisher in London.^[8]

2/11/1935 – The Scottish-born thriller writer [John Buchan, 1st Baron Tweedsmuir](#), is sworn in as [Governor General of Canada](#).

7/11/1935 – The [British and Foreign Blind Association](#) introduces a library of [talking books](#) for the visually impaired.

26/11/1935 – [Scrooge](#), the first feature-length talking film version of [Dickens' A Christmas Carol \(1843\)](#) is released in Britain. Sir [Seymour Hicks](#) reprises the title rôle, which he has performed for decades on stage.

8/1/1936 – Jewish booksellers throughout Nazi Germany are deprived of their Reich Publications Chamber membership cards, without which no one can sell books.^[2]

5/1936 – The Greek poet and Communist activist [Yiannis Ritsos](#) is inspired to write his poem [Epitaphios](#) by a photograph of a dead protester at a massive tobacco workers' demonstration in Thessaloniki. It is published soon after. In August, the [right-wing dictatorship](#) of [Ioannis Metaxas](#) comes to power in Greece and copies are burned publicly at the foot of the Acropolis in Athens.^[3]

16-17/5/1936 – About 30 left-wing writers of the [Second Polish Republic](#) gather at the [Lviv Anti-Fascist Congress of Cultural Workers](#).

3/8/1936 – [George Heywood Hill](#) establishes the [Heywood Hill](#) bookshop in London's [Mayfair](#).

18/8/1936 – The 38-year-old Spanish dramatist, [Federico García Lorca](#), is arrested by [Francoist](#) militia during the [White Terror](#) and never seen alive again. His brother-in-law, [Manuel Fernández-Montesinos](#), the leftist mayor of Granada, is shot on the same day.^{[4][5]} Lorca's play [The House of Bernarda Alba](#) (*La casa de Bernarda Alba*), completed on June 19, will not be performed until 1945.

6/11/1936 – After United States publication in 1934, the U.K. authorities decide they will not prosecute or seize copies of [James Joyce's](#) 1922 novel [Ulysses](#).^[6]

23/11/1936 – [Life](#) magazine begins to appear as a weekly news magazine in the United States, under the management of [Henry Luce](#).

9/1/1937 – The first issue of [Look](#) magazine goes on sale in the United States.

19/1/1937 – [BBC Television](#) broadcasts *The Underground Murder Mystery* by J. Bissell Thomas from London, the first play to be written for television.^[1]

6/2/1937 – [John Steinbeck](#)'s novella of the [Great Depression](#), *Of Mice and Men*, appears in the United States.

4/1937 – The Irish writers [Elizabeth Bowen](#) and [Seán Ó Faoláin](#) first meet, in London.

14/5/1937 – BBC Television broadcasts a 30-minute excerpt of *Twelfth Night*, the first known television broadcast of a Shakespeare piece. The cast includes [Peggy Ashcroft](#) and [Greer Garson](#).

21/5/1937 – [Penguin Books](#) in the U.K. launches [Pelican Books](#), a [sixpenny](#) paperback [non-fiction](#) imprint, with a two-volume edition of [George Bernard Shaw](#)'s *The Intelligent Woman's Guide to Socialism and Capitalism*.^[2]

6/1937 - The British [science fiction magazine](#) *Tales of Wonder* first appears.

6/1937 - [John Cowper Powys](#) visits [Sycharth](#), birthplace of [Owain Glyndŵr](#), which inspires his 1940 novel *Owen Glendower*.^[3]

30/6/1937 – *The New England Quarterly* prints poems by a [colonial American](#) pastor, [Edward Taylor](#) (died 1729), discovered by Thomas H. Johnson.^[4]

Summer 1937 – American-born writer [Thomas Quinn Curtiss](#) meets German-born novelist [Klaus Mann](#) in Europe and they start a relationship.

7/1937 - [Buchenwald concentration camp](#) in [Nazi Germany](#) is established around the [Goethe Oak](#).

7/1937 - [Rex Ingamells](#) and other poets initiate the [Jindyworobak Movement](#) in [Australian literature](#), in the magazine *Venture*.^[5]

7/1937 - The American academic librarian [Randolph Greenfield Adams](#) writes a controversial *Library Quarterly* essay, "Librarians as Enemies of Books", complaining of librarians downgrading books and scholarship in favor of other tasks.^{[6][7]}

4/7/1937 – *The Lost Colony* a historical drama by [Paul Green](#), is first performed at an outdoor theater in the place where it is set: [Roanoke Island](#), [North Carolina](#).

31/7/1937 – [Stephen Vincent Benét](#)'s [post-apocalyptic](#) short story "[By the Waters of Babylon](#)", inspired by April's [Bombing of Guernica](#), is published in the U.S. *The Saturday Evening Post* as "The Place of the Gods".

10/9/1937 – The Soviet playwright [Sergei Tretyakov](#) commits suicide while under sentence of death at [Butyrka prison](#) in Moscow as part of the [Great Purge](#).^[8]

21/9/1937 – J. R. R. Tolkien's [juvenile fantasy](#) novel *[The Hobbit, or There and Back Again](#)* is published in England by George Allen & Unwin on the recommendation of young [Rayner Unwin](#).

29/9/1937 – The French playwright [Antonin Artaud](#) is expelled from Ireland.

6/10/1937 – The fictional [Mrs. Miniver](#) appears in a column on domestic life by [Jan Struther](#) for *[The Times](#)*, London.^[9]

November 11 ([Armistice Day](#)) 1937 – BBC Television broadcasts *[Journey's End](#)* by [R. C. Sherriff](#), 1928, set on the [Western Front \(World War I\)](#) in 1918, as the first full-length television adaptation of a stage play. [Reginald Tate](#) plays the lead, having long performed it in the theater.^{[10][11]}

1/1938 - The [John Dos Passos](#) trilogy *[U.S.A.](#)* is published, containing his novels *[The 42nd Parallel](#)* (1930), *[1919](#)* (1932), and *[The Big Money](#)* (1936).

1/1938 - [Samuel Beckett](#) is stabbed in the chest in Paris and nearly killed.

21/2/1938 – The gay American writer and composer [Paul Bowles](#) marries the lesbian American writer [Jane Auer](#) at a [Reformed Church](#) in [Manhattan](#).

7/3/1938 – Samuel Beckett's first completed novel *[Murphy](#)* is published in London.

11/7/1938 – The first live drama adaptation in [Orson Welles'](#) *[The Mercury Theatre on the Air](#)* series on [CBS Radio](#) in the United States is broadcast: [Bram Stoker's](#) *[Dracula](#)*.

9/1938 – [Muslims](#) protest in London against passages they see as disrespectful to their religion in [H. G. Wells'](#) *[A Short History of the World](#)* (1922).^[1]

13/9/1938 – The first production in Britain of a play by [Bertolt Brecht](#), *[Mrs Carrar's Rifles](#)*, opens at the [Unity Theatre](#), London.

30/10/1938 – [Orson Welles'](#) radio adaptation of *[The War of the Worlds](#)* (with script by [Howard Koch](#)) is broadcast in *[The Mercury Theatre on the Air](#)* series.

24/12/1938 – [Jorge Luis Borges](#) is injured in an accident and develops blood poisoning. While recovering the following year he will write the first short story in his later characteristic style.

Early 1939 – The [Pocket Books](#) mass-market [paperback](#) imprint is launched in the United States. The first of the nationally distributed titles is [James Hilton's](#) *[Lost Horizon](#)*.

1/1939 - American [literary magazine](#) *[The Kenyon Review](#)* is founded and edited by [John Crowe Ransom](#).^[1]

1/1939 - The American [pulp science fiction magazine](#) *Startling Stories* appears, edited by [Mort Weisinger](#). It includes *The Black Flame* by [Stanley G. Weinbaum](#) as lead novel.

1/1939 - [Eando Binder's](#) story "[I, Robot](#)" appears in the U.S. science fiction magazine *Amazing Stories*.

1/1939 - *The Criterion*, a British literary quarterly, is founded and edited by [T. S. Eliot](#).^[2]

1/1939 - [W. H. Auden](#) and [Christopher Isherwood](#) set sail from England for the United States.

1-2/1939 – *Poetry London: a Bi-Monthly of Modern Verse and Criticism*, founded and edited by [Tambimuttu](#) (with [Dylan Thomas](#) and others), is first published.

6/2/1939 – [Raymond Chandler's](#) California [private detective](#) [Philip Marlowe](#) is introduced in his first full-length work of [crime fiction](#), *The Big Sleep*, which reworks elements from earlier short stories. It is published by [Alfred A. Knopf](#) in the United States.^[3]

3/1939 – [Isaac Asimov's](#) first published [short story](#), "[Marooned off Vesta](#)", appears in *Astounding Science-Fiction* magazine.

4/3/1939 – [BBC Television](#) broadcasts one of the first specially written [television plays](#), *Condemned To Be Shot* by R. E. J. Brooke (perhaps the actor Reginald Brooke), live from its London studios at [Alexandra Palace](#). The production notably uses a camera as the first-person view by the play's unseen central character.

31/3/1939 – The [20th Century Fox](#) releases a film version of *The Hound of the Baskervilles*, first of a [Sherlock Holmes film series](#) starring [Basil Rathbone](#) as [Sherlock Holmes](#) and [Nigel Bruce](#) as [Dr Watson](#).

13/4/1939 – The [United Artists](#) film version of *Wuthering Heights*, starring [Merle Oberon](#) and [Laurence Olivier](#), is released.

5/1939 – [Jorge Luis Borges'](#) first short story in his later characteristic style, "[Pierre Menard, autor del Quijote](#)", is published in the [Buenos Aires](#) literary magazine *Sur*.

4/5/1939 – [James Joyce's](#) last work, *Finnegans Wake*, is published in full by [Faber and Faber](#) in London.

15/5/1939 – Russian writer [Isaac Babel](#) is arrested by the [NKVD](#) at his [dacha](#) as part of the [Great Purge](#) in the [Soviet Union](#), and incarcerated in the [Lubyanka Building](#) in Moscow.

c. August 1939 – [Ernest Vincent Wright](#) publishes his [lipogrammatic](#) novel *Gadsby*, "a story of over 50,000 words without using the letter 'E'", in [Los Angeles](#) a few months before his death on October 7.

8/1939 - [Mikhail Bulgakov](#), while secretly working on *The Master and Margarita*, prepares the propaganda play *Batumi*, to romanticize events in [Joseph Stalin's](#) youth. The project is shelved by Stalin himself, once Bulgakov announces he will interview witnesses personally.^[4]

8/1939 - [Robert A. Heinlein](#)'s first published short story, "[Life-Line](#)", appears in *Astounding Science-Fiction*.

Before September 1939 – After a pledge drive led by Renaud de Jouvenel and [Lucien Lévy-Bruhl](#), the Romanian poet [Benjamin Fondane](#) is [naturalized French](#) and in September conscripted into the [French Army](#), to serve in the [Phony War](#).^[5]

2/9/1939 – [Jean-Paul Sartre](#) is conscripted into the French Army, where he will serve as a [meteorologist](#).

3/9/1939 – Yorkshire-born novelist and playwright [J. B. Priestley](#) reads the first installment of his novel [Let the People Sing](#), a celebration of local democracy specially written for radio, on [BBC Home Service](#) radio in the UK, the day war is declared.^[6]

18/9/1939 – The Polish painter, playwright and novelist [Stanisław Ignacy Witkiewicz](#) (born [1885](#)) commits suicide after the [Soviet invasion of Poland](#).

9-10/1939 – [Famous Fantastic Mysteries](#), a [pulp magazine](#) reprinting American [science fiction](#) and [fantasy](#), begins publication in New York.

Fall 1939 – [Frank Herbert](#) lies about his age to get his first job as a local newspaper reporter.

11/1939 – The teenage [Brendan Behan](#) is arrested in [Liverpool](#) for possessing explosives.

8/11/1939 – [Lindsay and Crouse](#)'s stage adaptation of [Clarence Day](#)'s [Life with Father](#) opens at the [Empire Theatre \(42nd Street\)](#) in New York. Running until 12 July 1947, it becomes the all-time longest-running non-musical play in [Broadway theatre](#).^[7]

11-12/1939 – [Captain Marvel](#) makes his first appearance, in [Whiz Comics](#) #2 (cover date February 1940).

OPERAS & MUSICALS – VOCAL MUSIC

4/11/1820: inauguration du [Grand Théâtre de Liège](#) avec une *Zémire et Azor* d'[André Grétry](#), natif de la ville.

14/11/1820: création à [La Scala](#) de Milan de *Margherita d'Anjou*, opéra de [Giacomo Meyerbeer](#).

26/12/1820: *Fedra* de [Simon Mayr](#), à *la Scala* de Milan

24/2/1821: *Matilde di Shabran*, opéra de [Gioachino Rossini](#), créé au [Teatro Apollo](#) de [Rome](#).

7/3/1821: Première audition publique du lied *Der Erlkönig* de [Franz Schubert](#) chanté par le baryton [Johann Michael Vogl](#).

15/5/1821: création de *La sciocca per astuzia* de [Giuseppe Mosca](#), à *la Scala* de Milan

18/6/1821: *Der Freischütz*, opéra de [Carl Maria von Weber](#), créé à [Berlin](#), Schauspielhaus.

2/10/1821: *Donna Aurora* dans *Donna Aurora o sia Il romanzo all'improvviso* de [Francesco Morlacchi](#), à *la Scala* de Milan

30/10/1821: création de *Elisa e Claudio* de [Saverio Mercadante](#), à *la Scala* de Milan

6/1/1822: création de *Antigona e Lauso* de [Stefano Pavesi](#), à [La Scala](#) de Milan¹.

28/1/1822 : *Zoraida di Granata*, opéra en 2 actes, musique de [Donizetti](#), livret de [Bartolomeo Merelli](#), créé au [Teatro Argentina](#) de [Rome](#).

16/2/1822: *Zelmira*, opéra en 2 actes, musique de [Rossini](#), livret d'[Andrea Leone Tottola](#), créé au [Teatro San Carlo](#) de [Naples](#).

12/3/1822: *L'esule di Granata*, melodramma en 2 actes, musique de [Meyerbeer](#), livret de [Felice Romani](#), créé au [Teatro alla Scala](#) de [Milan](#).

12/5/1822: *La zingara*, opéra en 2 actes, musique de [Donizetti](#), livret d'[Andrea Leone Tottola](#), créé à [Naples](#).

29/6/1822: *La lettera anonima*, opéra en un acte, musique de [Donizetti](#), livret de [Giulio Genoino](#), créé à [Naples](#).

26/10/1822: *Chiara e Serafina*, opera semiseria en deux actes, musique de [Donizetti](#), livret de [Felice Romani](#), créé au [Teatro alla Scala](#) de [Milan](#).

26/12/1822: Amleto de Saverio Mercadante, à la Scala de Milan

3/2/1823 – Gioachino Rossini – Semiramide – La Fenice, Venice, Italy. Libretto by Gaetano Rossi is based on Voltaire's tragedy Semiramis, which in turn was based on the legend of Semiramis of Assyria.

6/2/1823: *La vestale* de Giovanni Pacini, à la Scala de Milan

12/4/1823 – Oberon by Weber, at Covent Garden, London, UK

30/5/1823: *Aristeo*, cantate de Gaetano Donizetti, livret de Giovanni Schmidt, donnée à Naples, Teatro San Carlo.

2/7/1823: Alfredo il grande, premier opéra seria napolitain de Gaetano Donizetti, livret d'Andrea Leone Tottola, est créé au Teatro San Carlo. C'est un échec.

3/9/1823: Il fortunato inganno (*L'heureuse tromperie*), opéra-bouffe (*opera buffa*) en 2 actes, musique de Gaetano Donizetti, livret d'Andrea Leone Tottola, créé au Teatro Nuovo de Naples. Nouvel échec pour le compositeur.

25/10/1823: Euryanthe, opéra de Carl Maria von Weber, créé à Vienne au Theater am Kärntnertor.

4/2/1824: L'ajo nell'imbarazzo, opéra de Gaetano Donizetti, créé à Rome.

7/2/1824: création de *Gli amici di Siracusa* de Mercadante, au Teatro Argentina de Rome

7/4/1824: Il crociato in Egitto, opéra de Giacomo Meyerbeer, créé à La Fenice de Venise.

7/4/1824: la Missa Solemnis de Beethoven, créée à Saint-Pétersbourg.

7/5/1824 – Ludwig van Beethoven – Symphony no. 9, with Friedrich Schiller's Ode to Joy, at Theater am Kaerntnertor, in Vienna, Austria. Conductors Michael Umlauf and Beethoven, with Kaerntnertor House Orchestra, Gesellschaft der Musikfreunde with Soloists: Henriette Sontag (soprano), Caroline Unger (alto), Anton Haizinger (tenor), and Joseph Seipelt (bass).

Although most of his major works had been premiered in Vienna, Beethoven was keen to have his latest composition performed in Berlin as soon as possible after finishing it, as he thought that musical taste in Vienna had become dominated by Italian composers such as Rossini. When his friends and financiers heard this, they urged him to premiere the symphony in Vienna in the form of a petition signed by a number of prominent Viennese music patrons and performers. Beethoven was flattered by the adoration of Vienna, so the Ninth Symphony was premiered on 7 May 1824 in the Theater am Kärntnertor in Vienna along with the overture The Consecration of the House (*Die Weihe des Hauses*) and three parts of the Missa solemnis (the Kyrie, Credo, and Agnus Dei). This was the composer's first onstage appearance in 12 years; the hall was packed with an eager audience and a number of musicians. The premiere of Symphony No. 9 involved the largest orchestra ever assembled by Beethoven and required the combined efforts of the Kärntnertor house orchestra, the Vienna Music Society (Gesellschaft der Musikfreunde), and a select group of capable amateurs.

While no complete list of premiere performers exists, many of Vienna's most elite performers are known to have participated. The [soprano](#) and [alto](#) parts were sung by two famous young singers: [Henriette Sontag](#) and [Caroline Unger](#). German soprano Henriette Sontag was 18 years old when Beethoven personally recruited her to perform in the premiere of the Ninth. Also personally recruited by Beethoven, 20-year-old [contralto](#) Caroline Unger, a native of Vienna, had gained critical praise in 1821 appearing in Rossini's *Tancredi*. After performing in Beethoven's 1824 premiere, Unger then found fame in Italy and Paris. and [Joseph Seipelt](#) sang the [tenor](#) and [bass/baritone](#) parts, respectively.

Although the performance was officially directed by [Michael Umlauf](#), the theatre's [Kapellmeister](#), Beethoven shared the stage with him. However, two years earlier, Umlauf had watched as the composer's attempt to conduct a [dress rehearsal](#) of his opera *Fidelio* ended in disaster. So this time, he instructed the singers and musicians to ignore the almost completely deaf Beethoven. At the beginning of every part, Beethoven, who sat by the stage, gave the tempos. He was turning the pages of his score and beating time for an orchestra he could not hear. There are a number of anecdotes about the premiere of the Ninth. Based on the testimony of the participants, there are suggestions that it was under-rehearsed (there were only two full rehearsals) and rather scrappy in execution. On the other hand, the premiere was a great success. In any case, Beethoven was not to blame, as violinist [Joseph Böhm](#) recalled:

Beethoven himself conducted, that is, he stood in front of a conductor's stand and threw himself back and forth like a madman. At one moment he stretched to his full height, at the next he crouched down to the floor, he flailed about with his hands and feet as though he wanted to play all the instruments and sing all the chorus parts. —The actual direction was in [Louis] Duport's hands; we musicians followed his baton only.

When the audience applauded—testimonies differ over whether at the end of the [scherzo](#) or symphony—Beethoven was several bars off and still conducting. Because of that, the [contralto](#) Caroline Unger walked over and turned Beethoven around to accept the audience's cheers and applause. According to the critic for the *Theater-Zeitung*, "the public received the musical hero with the utmost respect and sympathy, listened to his wonderful, gigantic creations with the most absorbed attention and broke out in jubilant applause, often during sections, and repeatedly at the end of them." The audience acclaimed him through [standing ovations](#) five times; there were handkerchiefs in the air, hats, and raised hands, so that Beethoven, who could not hear the applause, could at least see the ovations.

[28/7/1824](#) : *Emilia di Liverpool*, opéra de [Gaetano Donizetti](#), créé à [Naples](#).

[2/3/1825](#): *La Belle au bois dormant*, opéra de [Michele Carafa](#), créé au [Théâtre de l'Académie Royale de Musique](#) à [Paris](#).

[19/6/1825](#): *Il viaggio a Reims*, opéra de [Gioachino Rossini](#), créé au [Théâtre-Italien](#) à [Paris](#).

[25/7/1825](#): la *Messe Solennelle* de [Berlioz](#), créée dans l'église de Saint-Roch à Paris.

[10/12/1825](#): *La Dame blanche*, féerie lyrique de [Boieldieu](#) dont le livret est tiré d'un roman de [Walter Scott](#), créé à l'[Opéra-comique](#).

[7/1/1826](#): *Alahor in Granata*, opera seria en 2 actes de [Gaetano Donizetti](#), créé au [Teatro Carolino](#) de [Palerme](#).

6/3/1830: création de *Il diluvio universale* de [Donizetti](#), au *San Carlo* de [Naples](#).

11/3/1830: *I Capuleti ed i Montecchi*, opéra de [Vincenzo Bellini](#), créé à *la Fenice* de [Venise](#).

28/5/1830: *Attendre et courir*, *opéra-comique* d'[Halévy](#), créé à l'[Opéra-Comique](#).

31/7/1830: création de *Il ritorno desiderato* de [Donizetti](#), au *Teatro San Carlo* de [Naples](#).

30/10/1830: *Sardanapale*, cantate de [Berlioz](#), créée à [Paris](#).

20/12/1830: *Anne Boleyn*, opéra de [Gaetano Donizetti](#), créé à [Milan](#), *Teatro Carcano*

4/3/1831: *Pier li Houyeu*, opéra d'[Eugène Ysaye](#), créé au [Grand Théâtre de Liège](#).

6/3/1831: *La sonnambula*, opéra de [Bellini](#), créé à *la Scala* de [Milan](#).

3/5/1831: *Zampa* ou *La Fiancée de marbre*, opéra de [Ferdinand Herold](#), créé à l'[Opéra-Comique](#) de [Paris](#).

8/5/1831: création de *Edoardo in Iscozia* de [Coccia](#), au [Teatro San Carlo](#) de [Naples](#).

30/5/1831: création de *Francesca di Foix* de [Donizetti](#), au *San Carlo* de [Naples](#).

18/6/1831: création de *La romanziera e l'uomo nero* de Donizetti, à Naples.

31/8/1831: création de *Zaira* de Mercadante, à Naples

11/10/1831: création de *Chiara di Rosembergh* de Luigi Ricci, à *La Scala* de Milan.

12/11/1831: création de *Enrico di Monfort* de Carlo Coccia, à *la Scala* de Milan.

21/11/1831: *Robert le Diable*, opéra de Giacomo Meyerbeer, créé à la salle Le Peletier.

26/12/1831: *Norma*, opéra de Bellini, créé à la Scala de Milan.

12/1/1832: création de *Fausta* de Donizetti, à Naples

19/3/1832: *Ivanhoe* de Giovanni Pacini, à *la Fenice* de Venise

12/5/1832: *L'elisir d'amore*, opéra de Gaetano Donizetti, créé au Teatro della Canobbiana de Milan.

4/11/1832: création de *Sancia di Castiglia* de Donizetti, à Naples

15/12/1832: *Le Pré aux clercs*, opéra-comique de Ferdinand Hérold, créé à l'Opéra-Comique.

12/1/1833: création de *Gli Elvezi ossia Corrado di Tochenburgo* de Pacini, à Naples.

12/3/1833: *Parisina*, opéra de Gaetano Donizetti, créé au Teatro della Pergola de Florence.

16/3/1833: *Béatrice de Tende*, opéra de Vincenzo Bellini, créé au théâtre de La Fenice de Venise.

22/7/1833 – *Ali Baba ou les quarante voleurs* by Luigi Cherubini, libretto by Eugene Scribe and Melesville, at the Paris Opera, Paris

26/12/1833: *Lucrezia Borgia*, opéra de Gaetano Donizetti, créé à la Scala de Milan.

25/9/1834: l'opéra-comique *Le Chalet* d'Adolphe Adam créé à l'Opéra-Comique de Paris. Cette œuvre sera considérée comme marquant le point de départ de l'Opérette, et influencera notamment Offenbach.

18/10/1834: création de *Buondelmonte* de Donizetti, à Naples

24/12/1834: création de *Gemma di Vergy* de Donizetti, à Milan.

25/1/1835: *I puritani*, opéra de Vincenzo Bellini, créé au Théâtre-Italien de Paris.

23/2/1835: *La Juive*, opéra de Jacques Fromental Halevy, créé à l'Académie royale de musique de Paris

12/3/1835: *Marino Faliero*, opéra de Gaetano Donizetti, créé au Théâtre-Italien de Paris.

21/3/1835: *Carlo di Borgogna* de [Giovanni Pacini](#), à [La Fenice](#) de Venise

23/3/1835: [Le Cheval de bronze](#), opéra de [Daniel François Esprit Auber](#), créé à l'[Opéra-Comique](#).

13/7/1835: création de [Marsa](#) de [Coccia](#), à Naples

26/9/1835: [Lucia di Lammermoor](#), opéra de [Gaetano Donizetti](#), créé au [teatro San Carlo](#) de Naples.

26/12/1835: *Gli Illinesi* de [Pietro Antonio Coppola](#), au [teatro Regio](#) de Turin

30/12/1835 – Maria Stuarda by Donizetti, at La Scala, Milan

23/1/1836: [Actéon](#), opéra-comique de [Daniel-François-Esprit Auber](#), créé à l'[Opéra-Comique](#).

4/2/1836: [Belisario](#), [opera seria](#) de [Gaetano Donizetti](#), créé au [Teatro La Fenice](#) de [Venise](#).

29/2/1836: [Les Huguenots](#), opéra de [Giacomo Meyerbeer](#), créé à la [salle Le Peletier](#).

29/3/1836: [La Défense d'aimer](#) opéra de [Richard Wagner](#), créé à [Magdebourg](#).

22/5/1836: [Paulus](#), oratorio de [Felix Mendelssohn](#), créé à [Düsseldorf](#).

13/10/1836: Le [Postillon de Lonjumeau](#), opéra-comique d'[Adolphe Adam](#), créé à la Salle de la Bourse, où la troupe de l'[Opéra-comique](#) était provisoirement établie.

14/11/1836: à l'Opéra de Paris, première de [La Esmeralda](#), paroles de [Victor Hugo](#), musique de [Louise Bertin](#). Le 16 décembre, réduite à trois actes et présentée en lever de rideau, la sixième représentation échoue lamentablement.

18/11/1836: création de *Fausto* de [Luigi Gordigiani](#), au [Teatro della Pergola](#) de Florence.

9/12/1836: [Une vie pour le tsar](#), opéra de [Mikhaïl Glinka](#), d'après la légende d'[Ivan Soussanine](#), héros national russe, créé au [Théâtre Mariinsky](#) à [Saint-Pétersbourg](#), en présence du [tsar Nicolas I^{er}](#).

29/10/1837: création de [Roberto Devereux](#) de Donizetti, à Naples, Teatro San Carlo

5/12/1837: [Grande Messe des Morts](#) d'[Hector Berlioz](#), donné aux [Invalides](#) pour les obsèques du [général Damrémont](#).

22/12/1837: [Zar und Zimmermann](#), opéra d'[Albert Lortzing](#), créé à [Leipzig](#).

15/1/1838: La première [Salle Favart](#) à [Paris](#) est détruite par un incendie.

30/1/1838: [Maria de Rudenz](#), opéra de [Gaetano Donizetti](#), est créé à La Fenice à [Venise](#).

10/9/1838 – Hector Berlioz – Benvenuto Cellini – Opera Le Pelletier sous la direction de François-Antoine Habeneck

1/1/1839: création de Elena da Feltre de Saverio Mercadante, à Naples

8/1/1839: *La Romilda*, opéra de Ferdinand Hiller, créé à la Scala de Milan.

6/8/1839: Lucia di Lammermoor, opéra de Gaetano Donizetti, créé à Paris dans la version française.

17/11/1839: Oberto, premier opéra de Verdi est créé à Milan.

February 11, 1840 – Gaetano Donizetti's opera *La fille du régiment* premieres in Paris, Salle de la Bourse

29/2/1840: *Lo zingaro*, opéra en 2 actes, musique d'Uranio Fontana, livret de Thomas Sauvage, créé au Théâtre de la Renaissance de Paris.

10/4/1840: les Martyrs, premier grand opéra de Gaetano Donizetti, créé à l'Opéra de Paris.

5/9/1840: Un giorno di regno, opéra de Giuseppe Verdi, créé à la Scala de Milan.

2/12/1840 – La favorite by Donizetti, at Academie Royale de Musique, Paris

13/4/1841: ouverture de l'Opéra de Dresde (Semperoper) construit par l'architecte Gottfried Semper.

7/1/1842: Stabat Mater de Gioachino Rossini exécuté à Paris, salle Ventadour.

9/3/1842 – Giuseppe Verdi – Nabucco – La Scala, Milan, Italy. Verdi became the musical figurehead of the Risorgimento, because of his famous "Va, pensiero" chorus sung by the Hebrew slaves. The audience responded with nationalistic fervor to the slaves' powerful hymn of longing for their homeland/freedom. At Verdi's funeral the crowds broke into Va, pensiero.

19/5/1842: Linda di Chamounix, opéra de Gaetano Donizetti, créé à Vienne au Kärntnertortheater.

20/10/1842: Rienzi, der letzte der Tribunen, opéra de Wagner, créé à Dresde, sous la direction de Reissiger.

17/11/1842: présentation de Linda di Chamounix au Théâtre-Italien à Paris, avec de légères modifications.

27/11/1842 – Ruslan and Lyudmila, by Glinka, at the Bolshoi, Saint Petersburg

9/12/1842: *Rouslan et Ludmila*, opéra de Mikhaïl Glinka, d'après le poème narratif de Pouchkine du même nom, créé au Théâtre Mariinsky à Saint-Pétersbourg.

31/12/1842: *Der Wildschütz*, opéra d'[Albert Lortzing](#), créé à [Leipzig](#).

2/1/1843: [Le Vaisseau fantôme](#) by [Richard Wagner](#) at [Semperoper in Dresden](#).

2/1/1843: *Le Vaisseau fantôme*, opéra de [Wagner](#), créé à [Dresde](#), [Koniglisches Hofftheater](#)

3/1/1843: *Don Pasquale*, opéra bouffe de [Gaetano Donizetti](#), créé au [Théâtre italien de Paris](#).

February 11, 1843 – Giuseppe Verdi's opera *I Lombardi alla prima crociata* premieres at [La Scala in Milan](#).

February 6, 1843 – The [Virginia Minstrels](#) perform the first [minstrel show](#), at the [Bowery Amphitheatre](#) in [New York City](#).

25/2/1843: [Luigi V, re di Francia](#), opéra d'[Alberto Mazzucato](#), créé au [Teatro Re](#) à Milan

5/6/1843: [Maria di Rohan](#), opéra de [Donizetti](#), créé au [Theater am Kärntnertor](#) à [Vienne](#).

27/11/1843 – The Bohemian Girl, opera by Michael William Balfe, libretto by Alfred Bunn, based on La Gitanilla by Miguel de Cervantes, at the Drury Lane Theatre, London.

18/1/1844: Première représentation au [Teatro San Carlo](#) de [Naples](#) de [Caterina Cornaro](#) de [Gaetano Donizetti](#).

9/3/1844: A la Fenice de [Venise](#), première de l'opéra de [Giuseppe Verdi](#), [Ernani](#).

November 3, 1844 – Giuseppe Verdi's *I due Foscari* debuts at [Teatro Argentina](#), Rome.

7/12/1844: création au [Hofoper de Berlin](#) de [Ein Feldlager in Schlesien](#), opéra de [Giacomo Meyerbeer](#).

15/2/1845: Première de [Giovanna d'Arco](#), opéra de [Giuseppe Verdi](#) à la [Scala de Milan](#).

12/8/1845: Première d'[Alzira](#), opéra de [Giuseppe Verdi](#) au [Teatro San Carlo](#) de [Naples](#).

19/10/1845: Première de [Tannhäuser](#), opéra de [Richard Wagner](#) à [Dresde](#), [Koeniglisches Hofftheater](#)

17/3/1846 – Attila by Verdi, at Teatro La Fenice in Venice, Italy

24/8/1846 – Dichter und Bauer by Franz von Suppe, libretto based on Karl Elmar's 1846 comedy, at the Theater and der Wien, Vienna, Austria

6/12/1846 – Hector Berlioz – La Damnation de Faust (work for solo voices, choruses and orchestra) – Opera Comique

4/2/1847 : *Il birraio di Preston*, opéra de Luigi Ricci, créé au Teatro della Pergola à Florence.
March 14, 1847 – Verdi's opera *Macbeth* premieres at Teatro della Pergola in Florence, Italy.

4/4/1847: Inauguration du Gran Teatre del Liceu à Barcelone.

22/7/1847: *I masnadieri* (*Les Brigands*), opéra de Giuseppe Verdi, créé au Her Majesty's Theatre de Londres.

15/11/1847: *Les Premiers pas*, opéra-comique de Jacques-Frumental Halévy, créé au Théâtre national de l'Opéra-Comique à Paris.

25/11/1847: *Martha, oder Der Markt zu Richmond*, opéra de Friedrich von Flotow, créé au Kärntnertortheater à Vienne.

26/11/1847: *Jérusalem*, premier opéra de Giuseppe Verdi pour l'Opéra de Paris, créé à Paris.

25/10/1848: *Il corsaro*, melodramma tragico de Giuseppe Verdi, créé au Teatro Grande de Trieste.

30/11/1848: *Poliuto* de Gaetano Donizetti, créé au Teatro San Carlo de Naples, dix ans après son interdiction par la censure napolitaine et quelques mois après la mort du compositeur.

3/1/1849: *Le Caïd*, opéra-bouffe d'Ambroise Thomas, créé à l'Opéra-Comique.

17/1/1849: *La battaglia di Legnano*, opéra de Giuseppe Verdi, créé à Rome.

9/3/1849: *Les Joyeuses Commères de Windsor*, opéra-comique d'Otto Nicolai, créé à Berlin, Königliches Opernhaus

16/4/1849: *Prophète*, opéra de Giacomo Meyerbeer, créé à la salle Le Peletier.

15/9/1849: création du *Requiem* d'Anton Bruckner à L'abbaye de Saint-Florian en Autriche.

8/12/1849: *Luisa Miller*, opéra de Giuseppe Verdi, créé au Teatro San Carlo de Naples.

28/2/1850: *Crispino e la comare*, opéra-comique de Luigi Ricci et Federico Ricci, créé à Venise au Teatro San Benedetto.

20/7/1850: Création de *Giralda ou la Nouvelle Psyché*, opéra d'Adolphe Adam à l'Opéra-Comique à Paris

24/8/1850: *Prométhée*, poème symphonique de Franz Liszt.

28/8/1850: Création de *Lohengrin*, opéra de Richard Wagner au Großherzogliches Hoftheater à Weimar sous la direction de Franz Liszt.

3/9/1850: Publication dans le *Neue Zeitschrift für Musik* de l'essai antisemite *Das Judenthum in der Musik* de Wagner sous le pseudonyme de K. Freigedank.

16/11/1850: Stiffelio de Giuseppe Verdi, créé à Trieste.

19/11/1850: Inauguration du Teatro Real à Madrid avec la représentation de La Favorite de Donizetti.

11/3/1851 - Giuseppe Verdi – Rigoletto – Teatro La Fenice, Venice, Italy. 19/1/1857 – Theatre Italien, Paris. The Italian libretto was written by Francesco Maria Piave, based on the 1932 play Le roi s'amuse by Victor Hugo. My favorite opera, I have heard it on records, discs, DVDs, films, and live performances, but unfortunately not with the best singers. If I would have to see only one or two premieres I would choose those two premieres. The Italian premiere was a complete triumph – Felice Varesi, baritone, Rigoletto, the Duke's Jester; Teresa Brambilla, soprano, Gilda his daughter; Raffaele Mirate, tenor, Duke of Mantua, and his cynical aria "La donna e mobile", became extremely popular and was sung in the streets.

24/3/1852: Première représentation de la seconde version de l'opéra Luigi V, re di Francia d'Alberto Mazzucato (livret de Felice Romani), au Teatro Regio de Parme.

4/9/1852: Si j'étais roi, opéra-comique d'Adolphe Adam, créé au Théâtre lyrique.

19/1/1853 - Giuseppe Verdi – Il Trovatore – Teatro Apollo, Rome, Italy. 23/12/1854 –Theatre Italien, Paris. The Italian libretto was largely written by Salvatore Cammarano, based on the play El Trovador (1836) by Antonio Garcia Gutierrez. The opera was very successful and is a staple of the standard operatic repertoire. It was Gutiérrez's most successful play, one which Verdi scholar Julian Budden describes as "a high flown, sprawling melodrama flamboyantly defiant of the Aristotelian unities, packed with all manner of fantastic and bizarre incident."

4/2/1853: Les Noces de Jeannette, opéra-comique de Victor Massé, créé dans la Salle Favart, sous la direction de Théophile Tilmant.

6/3/1853 - Giuseppe Verdi – La Traviata – La Fenice in Venice, Italy. Set to an Italian libretto by Francesco Maria Piave, it is based on La Dame aux camélias (1852), a play adapted from the 1848 novel by Alexandre Dumas fils. La traviata has become immensely popular and is among the most frequently performed of all operas. 6/12/1856 –Theatre Italien, Paris.

24/4/1843 – Der Irrfahrt um's Gluck, by Franz von Suppe, at the Theater an der Wien, Vienna

28/4/1853: Le Colin-maillard, opéra-comique d'Aristide Hignard, créé au Théâtre Lyrique.

16/2/1854: L'Étoile du Nord, opéra de Giacomo Meyerbeer, créé à l'Opéra-Comique sous la direction de Théophile Tilmant.

16/4/1854: Mazeppa, poème symphonique de Franz Liszt, créé au théâtre de la Cour de Weimar.

18/10/1854: La Nonne sanglante, opéra de Charles Gounod, créé à la salle Le Peletier.

10/12/1854: L'Enfance du Christ, d'Hector Berlioz, créé à Paris.

23/12/1854 – Giuseppe Verdi – Il Trovatore – Theatre Italien

30/4/1855: le *Te Deum* d'Hector Berlioz, créé à Paris.

16/5/1855: *Roussalka*, opéra de Alexandre Dargomyjski, créé à Saint-Pétersbourg.

13/6/1855: *Les Vêpres siciliennes*, opéra de Giuseppe Verdi, créé à l'Opéra de Paris. French libretto by Eugene Scribe and Charles Duveyrier from their work *Le duc d'Albe* (1838).

29/11/1855: la *Messe solennelle en l'honneur de sainte Cécile*, de Charles Gounod, créée à Saint-Eustache à Paris.

19/9/1856: *Les Dragons de Villars*, opéra-comique de Aimé Maillart, créé au Théâtre-Lyrique à Paris.

6/12/1856: au théâtre des Italiens, première représentation de l'opéra *La Traviata* de Giuseppe Verdi, inspirée du roman *La Dame aux camélias* d'Alexandre Dumas.

19/1/1857 – Giuseppe Verdi – Rigoletto – Theatre Italien

12/3/1857: *Simon Boccanegra*, opéra de Giuseppe Verdi créé au théâtre de la Fenice à Venise.

9/4/1857: *Docteur Miracle*, opérette de Georges Bizet, créée aux Bouffes-Parisiens.

5/5/1857: *L'Opéra aux fenêtres*, opérette de Léon Gastinel, créée aux Bouffes-Parisiens.

27/7/1857 – *Une demoiselle en loterie* by Jacques Offenbach, libretto by Adolphe Jaime and Hector Cremieux, at the Bouffes Parisiens, Paris

16/8/1857: *Aroldo*, opéra de Giuseppe Verdi, créé au Teatro Nuovo de Rimini.

10/10/1857: *Le Mariage aux lanternes* opérette de Jacques Offenbach, créée à Paris.

14/1/1858: *Scherz, List und Rache*, opéra-comique de Max Bruch, créé à Cologne.

15/1/1858: *Le Médecin malgré lui*, opéra-comique de Charles Gounod, créé au Théâtre-Lyrique.

17/2/1858: première de *Monsieur de Chimpanzé*, opérette en un acte de J. Verne et A. Hignard aux Bouffes-Parisiens.

3/3/1858: *Mesdames de la Halle*, opérette de Jacques Offenbach, créée aux théâtre des Bouffes-Parisiens.

21/10/1858 – Jacques Offenbach – Orphee aux Enfers in 2 Acts – Theatre des Bouffes-Parisiens. A 2nd version in 4 Acts was created on 7/2/1874 at the Theatre de la Gaite (cancan)

15/12/1858: *Der Barbier von Bagdad*, opéra de [Peter Cornelius](#), créé au [Théâtre national allemand](#) à [Weimar](#).

24/12/1858: l'[Oratorio de Noël](#) de [Camille Saint-Saëns](#) est créé à Paris.

17/2/1859 - Giuseppe Verdi – Un Ballo in maschera – Teatro Apollo, Rome. 13/1/1861 — Theatre Italien, Paris.

19/3/1859 – Charles Gounod – Faust – Theatre Lyrique. The original version of [Faust](#) employed spoken dialogue, and it was in this form that the work was first performed. The manager of the Théâtre Lyrique, [Léon Carvalho](#) cast his wife [Marie Miolan-Carvalho](#) as Marguerite and there were various changes during production, including the removal and contraction of several numbers. The tenor Hector Gruyer was originally cast as Faust but was found to be inadequate during rehearsals, being eventually replaced by a principal of the Opéra-Comique, Joseph-Théodore-Désiré Barbot, shortly before the opening night. After a successful initial run at the Théâtre Lyrique the publisher Antoine Choudens, who purchased the copyright for 10,000 francs, took the work (now with [recitatives](#) replacing the spoken dialogue) on tour through Germany, Belgium, Italy and England, with Marie Miolan-Carvalho repeating her role.

Performances in Germany followed, with [Dresden Semperoper](#) in 1861 being the first to bill the work as *Margarethe* rather than *Faust*. For many years this custom – or alternatively, staging the opera as *Gretchen* – continued in Germany. Some sources claim this was out of respect for part 1 of Goethe's poetic drama, which the opera follows closely.^[1] Others claim the opposite: that the retitling was done to emphasise Gounod's opera's reliance on Goethe's characters, and to differentiate it from [Louis Spohr's *Faust*](#), which had held the stage for many years in Germany and had recently appeared (1851) in a three-act revision. It is also possible that the 1861 Dresden title change was out of respect for Spohr's close and long association with the city.

The opera was given for the first time in Italy at [La Scala](#) in 1862 and in England at [Her Majesty's Theatre](#), London (in Italian) in 1863. In 1864, when the opera was given at the same venue in English, Gounod took a theme from the prelude to the opera and wrote a new aria for the star baritone [Charles Santley](#) in the role of Valentin, 'Even bravest heart may swell' (with words by [Henry Chorley](#)). This number was then translated into French for subsequent productions as "Avant de quitter ces lieux" and has become one of the most familiar pieces from the opera.

In 1869 a [ballet](#) had to be inserted (into the first scene of the final act) before the work could be played at the [Opéra](#): it became the most frequently performed opera at that house. With the change from spoken dialogue to sung recitatives, plus the musical and balletic additions, the opera was thus finally transformed into a work following the conventions of [grand opera](#). It was *Faust* with which the [Metropolitan Opera](#) in New York City opened for the first time on 22 October 1883.

4/4/1859: *Pardon de Ploërmel (Dinorah)*, opéra de [Giacomo Meyerbeer](#), créé à l'[Opéra-Comique](#).

8/6 /1859: *L'Omelette à la Follembuche* de [Léo Delibes](#) au [Théâtre des Bouffes-Parisiens](#)

19/11/1859 – Genevieve de Brabant by Jacques Offenbach, libretto by Louis-Adolphe Jaime and Etienne Trefen, at the Theatre des Bouffes Parisiens, Paris. Revival in a three-act version revised by Hector-Jonathan Cremieux at the Theatre des Menus-Plaisirs on 26/12/1867. Expanded to a five-act version at the Theatre de la Gaite on the 25/2/1875. All the versions were conducted by Jacques Offenbach.

18/2/1860: *Non credo*, article d'[Hector Berlioz](#) dans le *Journal des débats*, à la suite de trois concerts donnés à [Paris](#) par [Richard Wagner](#).

18/2/1860: *Philémon et Baucis*, opéra-comique de [Charles Gounod](#), créé au [Théâtre-Lyrique](#), [Paris](#).

27/3/1860: *Daphnis et Chloé*, opérette de [Jacques Offenbach](#), créée à Paris.

11/5/1860: *Titus et Bérénice*, opérette-bouffe de [Léon Gastinel](#), créée aux [Bouffes-Parisiens](#).

3/8/1860: *La Colombe*, opéra-comique (version en 1 acte) de [Charles Gounod](#), créé au Théâtre de [Baden-Baden](#) (voir [1866](#)).

24/11/1860: *Das Pensionat*, opérette de [Franz von Suppé](#) représentée à [Vienne](#) au [Theater an der Wien](#).

24/12/1860: première de *Barkouf*, de [Jacques Offenbach](#), sur un livret d'[Eugène Scribe](#) et [Henry Boisseaux](#), à l'[Opéra-Comique](#), chef d'orchestre : Jacques Offenbach.

13/1/1861 – Giuseppe Verdi – Un Ballo in maschera – Theatre Italien

23/3/1861 – Le pont des soupirs by Jacques Offenbach, libretto by Hector Cremieux and Ludovic Halevy, at the Theatre des Bouffes Parisiens. A four-act version at the Theatre des Varietes on 8/5/1868, conducted by Jacques Offenbach.

6/4/1861: *La Statue*, opéra d'[Ernest Reyer](#), sur un livret de [Michel Carré](#) et [Jules Barbier](#), est créé au [Théâtre Lyrique](#) à [Paris](#).

15/5/1861: *Le Buisson Vert*, opéra-comique de [Léon Gastinel](#), créé au [Théâtre-Lyrique](#).

31/5/1861 – M. Choufleur restera chez lui le..., by Jacques Offenbach and the Duc de Morny. Libretto by Duc de Morny, Ludovic Halevy, Hector Jonathan Cremieux and Erneste Lepine. At the Présidence du Corps Legislatif, Palais Bourbon, Paris, in the presence of Napoleon III, half brother of Morny. First public performance on 14/9/1861 at the Theatre des Bouffes Parisiens, Paris.

29/2/1862: *La Reine de Saba*, opéra de [Charles Gounod](#), créé à [Paris](#).

26/4/1862: *Die Kartenschlägerin*, opérette de [Franz von Suppé](#), créée à Kai-Theater, [Vienne](#).

9/8/1862: *Béatrice et Bénédict*, opéra-comique d'[Hector Berlioz](#), créé à [Baden-Baden](#).

24/10/1862 – Chilperc, music and libretto by Herve at the Theatre des Folies Dramatiques, Paris. During a successful revival of the operetta at the Theatre des Varietes in 1895, Henri Toulouse-Lautrec painted Marcelle Lender performing a bolero from the operetta.

25/10/1862 – Zen Madchen und kein Mann by Franz von Suppe, at the Kai-Theater, Vienna

10/11/1862 – Giuseppe Verdi – La Forza del destino – Theatre Imperial, Saint-Petersbourg, Russie

18/4/1863 – Flotte Burschen by Franz von Suppe, at the Kai-Theater, Vienna

21/7/1863: création de Lischen et Fritzchen, opérette en un acte de Jacques Offenbach.

30/9/1863 – Georges Bizet – Les Pecheurs de perles – Theatre Lyrique

4/11/1863: création des Troyens, opéra d'Hector Berlioz. At the Theatre Lyrique, now Theatre de la Ville, Place du Chatelet, Paris. Libretto written by Berlioz himself from Virgil's epic poem The Aeneid.

14/3/1864: La *Petite messe solennelle* de Gioachino Rossini, créée à Paris.

19/3/1864 – Charles Gounod – Mireille – Theatre Lyrique

17/5/1864: *Ja, vi elsker dette landet*, hymne national norvégien composé par Rikard Nordraak, joué pour la fête nationale.

24/6/1864 – Pique Dame by Franz von Suppe, libretto by S. Strasser, probably Suppe's second wife Sofie Strasser. Loosely based on Pushkin's 1834 story « The Queen of Spades », at the Thalia Theater, Graz, Austria

17/12/1864 – Jacques Offenbach – La Belle Helene – Theatre des Varietes

19/4/1865 – Giuseppe Verdi – Macbeth – Theatre Lyrique

28/4/1865: *L'Africaine*, dernier opéra de Giacomo Meyerbeer, créé (création posthume) à la salle Le Peletier sous la direction de François Hainl.

10/6/1865: *Tristan und Isolde*, opéra de Richard Wagner, créé au Théâtre royal de la Cour de Bavière à Munich sous la direction de Hans von Bülow

19/12/1874: *El Barberillo de Lavapiés*, zarzuela de Francisco Asenjo Barbieri, créée au Teatro de la Zarzuela à Madrid.

3/3/1875 – Georges Bizet, based on the book by Prosper Mérimée – *Carmen*, Opéra Comique.

Carmen is an [opera](#) in four acts by French composer [Georges Bizet](#). The [libretto](#) was written by [Henri Meilhac](#) and [Ludovic Halévy](#), based on the [novella of the same title](#) by [Prosper Mérimée](#). The opera was first performed by the [Opéra-Comique](#) in Paris on 3 March 1875, where its breaking of conventions shocked and scandalized its first audiences. Bizet died suddenly after the 33rd performance, unaware that the work would achieve international acclaim within the following ten years. *Carmen* has since become one of the most popular and frequently performed operas in the classical [canon](#); the "[Habanera](#)" from act 1 and the "[Toreador Song](#)" from act 2 are among the best known of all operatic arias.

The opera is written in the genre of [opéra comique](#) with musical numbers separated by dialogue. It is set in southern Spain and tells the story of the downfall of Don José, a naïve soldier who is seduced by the wiles of the fiery [gypsy](#) Carmen. José abandons his childhood sweetheart and deserts from his military duties, yet loses Carmen's love to the glamorous [torero](#) Escamillo, after which José kills her in a jealous rage. The depictions of proletarian life, immorality, and lawlessness, and the tragic death of the main character on stage, broke new ground in French opera and were highly controversial.

After the premiere, most reviews were critical, and the French public was generally indifferent. *Carmen* initially gained its reputation through a series of productions outside France, and was not revived in Paris until 1883. Thereafter, it rapidly acquired popularity at home and abroad. Later commentators have asserted that *Carmen* forms the bridge between the tradition of [opéra comique](#) and the realism or [verismo](#) that characterised late 19th-century Italian opera.

The music of *Carmen* has since been widely acclaimed for brilliance of melody, harmony, atmosphere, and orchestration, and for the skill with which Bizet musically represented the emotions and suffering of his characters. After the composer's death, the score was subject to significant amendment, including the introduction of [recitative](#) in place of the original dialogue; there is no standard edition of the opera, and different views exist as to what versions best express Bizet's intentions. The opera has been recorded many times since the first [acoustical](#) recording in 1908, and the story has been the subject of many screen and stage adaptations.

10/3/1875: [La Reine de Saba](#), opéra de [Károly Goldmark](#), créée au [Hofoper](#) de [Vienne](#).

25/3/1875 – Trial by Jury by Arthur Sullivan, libretto by W. S. Gilbert, at the Royalty Theatre in London

5/6/1875 – The Zoo by Arthur Sullivan, libretto by B. C. Stephenson, at the St. Jame's Theatre in London.

26/10/1875: [Le Voyage dans la Lune](#), opéra-féerie de [Jacques Offenbach](#). Based on Jules Verne's novel, at the Theatre de la Gaite, Paris

3/11/1875 – La Creole by Jacques Offenbach who also conducted, libretto by Albert Milhaud and Henri Meilhac, at the Theatre des Bouffes Parisiens, Paris. Costumes designed by Alfred Grevin.

21/12/1875 – La petite mariee, by Chales Lecocq, at the Theatre de la Renaissance, Paris

7/7/1907 – Ziegfeld Follies, at the Roof Theater, Jardin de Paris, New York, USA. The *Ziegfeld Follies* was a series of elaborate [theatrical revue](#) productions on [Broadway](#) in New York City from 1907 to 1931, with renewals in 1934 and 1936. They became a [radio program](#) in 1932 and 1936 as *The Ziegfeld Follies of the Air*. Inspired by the [Folies Bergère](#) of Paris, the Ziegfeld Follies were conceived and mounted by [Florenz Ziegfeld Jr.](#), reportedly at the suggestion of his then-wife, the stage actress and singer [Anna Held](#). The shows' producers were [turn-of-the-twentieth-century](#) producing titans [Klaw and Erlanger](#). The Follies were a series of lavish revues, something between later Broadway shows and the more elaborate high class [vaudeville](#) and [variety show](#).

During the Follies era, many of the top entertainers, including [W. C. Fields](#), [Eddie Cantor](#), [Josephine Baker](#), [Fanny Brice](#), [Ann Pennington](#), [Bert Williams](#), [Eva Tanguay](#), [Bob](#)

[Hope](#), [Will Rogers](#), [Ruth Etting](#), [Ray Bolger](#), [Helen Morgan](#), [Louise Brooks](#), [Marilyn Miller](#), [Ed Wynn](#), [Gilda Gray](#), [Nora Bayes](#) and [Sophie Tucker](#) appeared in the shows. The Ziegfeld Follies were also famous for their display of many beautiful chorus girls, commonly known as [Ziegfeld Girls](#), who "paraded up and down flights of stairs as anything from birds to battleships." They usually wore elaborate costumes by designers such as [Erté](#), [Lady Duff Gordon](#) and [Ben Ali Haggin](#). The "[tableaux vivants](#)" were designed by Ben Ali Haggin from 1917 to 1925. Joseph Urban was the scenic designer for the Follies shows starting in 1915.

27/7/1907 – The Merry Farmer, Der Fidele Bauer, by Leo Fall, libretto by Viktor Leon, at the Mannheim Hof Theater, Mannheim, Germany. It was Fall's first major success.

22/8/1920: Ouverture du premier [Festival de Salzbourg](#) par une représentation du *Jedermann* d'[Hugo von Hofmannsthal](#).

Music festivals had been held in Salzburg at irregular intervals since 1877 held by the [International Mozarteum Foundation](#) but were discontinued in 1910. Although a festival was planned for 1914, it was cancelled at the outbreak of [World War I](#). In 1917, Friedrich Gehmacher and Heinrich Damisch formed an organization known as the *Salzburger Festspielhaus-Gemeinde* to establish an annual festival of drama and music, emphasizing especially the works of Mozart.^[1] At the close of the war in 1918, the festival's revival was championed by five men now regarded as its founders:^[2] the poet and dramatist [Hugo von Hofmannsthal](#), the composer [Richard Strauss](#), the scenic designer [Alfred Roller](#), the conductor [Franz Schalk](#), and the director [Max Reinhardt](#), then intendant of the [Deutsches Theater](#) in [Berlin](#), who had produced the first performance of Hofmannsthal's play *Jedermann* at the Berlin [Zirkus Schumann](#) arena in 1911.

According to Hofmannsthal's political writings, the Salzburg Festival, as a counterpart to the Prussian-North German uncompromising worldview, should emphasize the centuries-old Habsburg principles of "live and let live" with regard to ethnic groups, peoples, minorities, religions, cultures and languages.^{[3][4][5]} The Salzburg Festival was officially inaugurated on 22 August 1920 with Reinhardt's performance of Hofmannsthal's *Jedermann* on the steps of [Salzburg Cathedral](#), starring [Alexander Moissi](#). The practice has become a tradition, and the play is now always performed at Cathedral Square; since 1921 it has been accompanied by several performances of [chamber music](#) and [orchestral](#) works. The first operatic production came in 1922, with [Mozart's](#) *Don Giovanni* conducted by Richard Strauss. The singers were mainly drawn from the [Wiener Staatsoper](#), including [Richard Tauber](#) in the part of Don Ottavio.

4/12/1920: *Die tote Stadt*, opéra de [Korngold](#), créé à [Hambourg](#). At the State Opera, with Erich Wolfgang Korngold present and Egon Pollack conducting, and simultaneously at the Cologne Opera with Otto Klemperer conducting.

2/10/1925 – “Revue Negre” with Josephine Baker at the Theatre des Champs-Elysees, Paris.

30/10/1925: *Paganini*, opérette de Franz Lehár avec Carl Clewing dans le rôle-titre, créée au théâtre Johann Strauss de Vienne.

11/11/1925: *Šárka*, opéra de Janáček (composé en 1887), créé à Brno sous la direction de Vaclav Neumann.

14/12/1925: *Wozzeck*, opéra d'Alban Berg, créé à Berlin, State Opera. Based on the play Woyzeck by Georg Buchner. Music and Libretto by Alban Berg.

26/3/1926 – The Circus Princess by Emmerich Kalman with a German libretto by Julius Brammer and Alfred Grunwald premiered at the Theater an der Wien in Vienna and went on to 344 performances there. 24/9/1926 – at the Kiraly Szinhaz, Budapest. 6/10/1926 – Stockholm Vasa Teatern, Stockholm, Sweden. 17/10/1926 – Hamburg Operetten, Hamburg, Germany. 23/11/1926 – Moscow, Russia. 4/4/1927 – Apollo Theatre, Atlantic City, USA. 25/4/1927 – Winter Garden Theatre, New York, USA.

25/4/1926 – Giacomo Puccini – Turandot – Teatro alla Scala, Milan, Italy. The opera was posthumously completed by Franco Alfano in 1926, and set to a libretto in Italian by Giuseppe Adami and Renato Simoni. Its most well-known aria is "Nessun dorma" (vincero..). Though Puccini's first interest in the subject was based on his reading of Friedrich Schiller's 1801 adaptation of the play, his work is most nearly based on the earlier play *Turandot* (1762) by Count Carlo Gozzi. The original story is based on one of the seven stories in the epic *Haft Peykar*; a work of 12th-century Persian poet Nizami. The first performance was conducted by Arturo Toscanini. This performance included only Puccini's music and not Alfano's additions. The first performance of the opera as completed by Alfano was the following night, 26 April. In the middle of act 3, two measures after the words "*Liù, poesia!*", the orchestra rested. Toscanini stopped and laid down his baton. He turned to the audience and announced: "*Qui finisce l'opera, perché a questo punto il maestro è morto*" ("Here the opera ends, because at this point the maestro died"). The curtain was lowered slowly.

8/5/1926 : les Chansons madécasses de Maurice Ravel, créées à Rome avec Alfredo Casella au piano.

19/6/1926 – King Roger by Karal Szymanowsky, at the Grand Theatre, Warsaw, Poland

10/8/1926 and 22/8/1926 – Don Giovanni by Mozart, with Richard Tauber, at the Salzburg Festival, conductor Franz Schalk

13/8/1926 and 29/8/1926 – Die Fledermaus by Johan Strauss II, director Bruno Walter, at the Salzburg Festival

18/8/1926 and 25/8/1926 – Adriane auf Naxos by Hugo von Hofmanstahl and Richard Strauss, director Clemens Krauss

6/9/1926 – Castles in the Air, musical comedy. Book and Lyrics by Raymond Wilson Peck, music by Percy Wenrich, at the Salwyn Theatre on Broadway, New York. 29/6/1927 – at the Shaftesbury Theater, London.

12/10/1926 – Crisscross – Globe Theatre on Broadway, New York, USA. Book and lyrics by Otto Harbach and Anne Caldwell, music by Jerome Kern.

16/10/1926: *Háry János*, opéra de Zoltán Kodály, créé à Budapest, Royal Hungarian Opera House.

9/11/1926: *Cardillac*, opéra de Paul Hindemith, créé à Dresde, Staatsoper, sous la direction de Fritz Busch. Based on Das Fraulein von Seuden by E.T.A. Hoffmann.

30/11/1926 – The Desert Song by Sigmund Romberg, book and lyrics by Otto Harbach, Oskar Hammerstein II and Frank Mandel, at the Casino Theater, New York.

18/12/1926: *L'Affaire Makropoulos*, opéra de Leoš Janáček , créé à Brno.

8/1/1927: *Penthesilea*, opéra de Othmar Schoeck, créé à Dresde.

10/2/1927: *Jonny spielt auf*, opéra d'Ernst Křenek, créé à Leipzig.

21/2/1927: *Sophie Arnould*, comédie lyrique de Gabriel Pierné, créée à l'Opéra-Comique.

5/4/1927: *Madonna Imperia* de Franco Alfano, d'après La Belle Impéria d'Honoré de Balzac, livret d'Arturo Rossato d'après un conte drolatique, opéra en 1 acte.

30/5/1927 – Oedipus Rex by Igor Stravinsky, libretto by Jean Cocteau, based on Sophocles' Oedipus Rex, at the Theatre Sarah Bernhardt, Paris

7/10/1927: *Le Miracle d'Héliane* (Das Wunder der Heliane), opéra en 3 actes d'Erich Wolfgang Korngold, créé à Hambourg.

12/11/1927: *La campana sommersa*, opéra d'Ottorino Respighi, créé au Stadttheater de Hambourg.

22/11/1927 – Funny Face – Alvin Theatre, New York, USA. Musical composed by George Gershwin, with lyrics by Ira Gershwin, and book by Fred Thompson and Paul Gerard Smith. it starred Fred Astaire and his sister Adele Astaire. It was in this show that Fred Astaire first danced in evening clothes and a top hat.

5/12/1927: la *Messe glagolitique* de Leoš Janáček, créée à Prague sous la direction de Jaroslav Kvapil.

16/12/1927: *Le Pauvre Matelot*, opéra de Darius Milhaud sur un livret de Jean Cocteau, créé à l'Opéra-Comique.

27/12/1927 – Showboat – Ziegfeld Theatre, New York, USA. With music by Jerome Kern and book and lyrics by Oscar Hammerstein II, based on Edna Ferber's best-selling 1926 novel of the same name. The musical follows the lives of the performers, stagehands and dock workers on the Cotton Blossom, a Mississippi River show boat, over 40 years from 1887 to 1927. Its themes include racial prejudice and tragic, enduring love. The musical contributed such classic songs as "Ol' Man River", "Make Believe", and "Can't Help Lovin' Dat Man". The musical was first produced in 1927 by Florenz Ziegfeld. The premiere of Show Boat on Broadway was an important event in the history of American musical theatre. It "was a radical departure in musical storytelling, marrying spectacle with seriousness", compared with the trivial and unrealistic operettas, light musical comedies and "Follies"-type musical revues that defined Broadway in the 1890s and early 20th century.

28/12/1927: *Antigone*, tragédie musicale d'Arthur Honegger, créée au théâtre de la Monnaie à Bruxelles.

4/1/1928 – Blackbirds of 1928, music by Jimmy McHugh, lyrics by Dorothy Fields, with black stars and Jazz music – the Harlem Renaissance: Adelaide Hall, Bill Bojangles Robinson and Aida Ward. At Les Ambassadeurs Nightclub in New York, and from 9/5/1928 at the Liberty Theater, New York.

20/4/1928: *L'Abandon d'Ariane*, opéra de Darius Milhaud, créé à Wiesbaden.

6/5/1928: *Der Diktator*, opéra de Ernst Křenek, créé au Hessisches Staatstheater de Wiesbaden.

6/6/1928: *Hélène d'Égypte*, opéra de [Richard Strauss](#), créé à [Dresde](#).

21/7/1928: *Die Tageszeiten*, cycle de lieder pour chœur d'hommes et orchestre op.76 de [Richard Strauss](#) à [Vienne \(Autriche\)](#) à l'occasion du centenaire de la mort de [Schubert](#).

31/8/1928 – The Threepenny Opera, Die Dreigroschenoper by Bertolt Brecht Lyrics, Music by Kurt Weill, based on The Beggar's Opera, by John Gay, at the Theater am Schiffbauerdamm, Berlin. Since 1954 it has been home to the Berliner Ensemble Theater Company, founded in 1949 by Helene Weigel and Bertolt Brecht. Weigel was the second wif of Bertolt Brecht from 1930 to 1956, date when he died.

19/9/1928 – The New Moon by Sigmund Romberg, book and lyrics by [Oscar Hammerstein II](#), [Frank Mandel](#), and [Laurence Schwab](#), at the Imperial Theatre, New York, USA

25/9/1928 – Chee Chee, musical, music by Richard Rodgers, lyrics by Lorenz Hart, book – The son of the Grand Ennuch by Charles Pettit, at the Mansfield Theater, New York.

23/10/1928 – Animal Crackers, musical. Music and lyrics by Bert Kalmar and Harry Ruby. Book by George S. Kaufman, Morrie Ryskind. Actors – the Marx Brothers. At the 44th Street Theater, New York, USA

28/10/1928: *El giravolt de maig*, opéra de [Eduard Toldrà](#), créé au [Palais de la musique catalane](#) de [Barcelone](#).

11/1/1929: le *Stabat Mater* de [Karol Szymanowski](#), créé à [Varsovie](#) sous la direction de [Grzegorz Fitelberg](#).

24/4/1929: *La Peau de chagrin*, drame lyrique de [Charles-Gaston Levadé](#), livret tiré du roman *La Peau de chagrin* de [Balzac](#) est créé à l'[Opéra-Comique](#) de Paris.

29/4/1929: *Le Joueur*, opéra de [Prokofiev](#) est créé à [Bruxelles](#) sous la direction de [Maurice Corneil de Thoran](#).

2/7/1929 – Bitter Sweet, music and lyrics by Noel Coward, at the Palace Theatre, Manchester, UK, directed by Coward. 18/7/1929 – His Majesty's Theatre, London.

2/7/1929 – Show Girl – Ziegfeld Theatre, New York, USA. The music was written by [George Gershwin](#), with lyrics by [Ira Gershwin](#) and [Gus Kahn](#). The Broadway production was produced by [Florenz Ziegfeld](#), directed by [McGuire](#), and choreographed by Bobby Connolly, with [ballet](#) sequences—including one set to *An American in Paris*—by [Albertina Rasch](#). [Duke Ellington](#) conducted the orchestra. The cast included [Ruby Keeler](#) as Dixie, [Jimmy Durante](#), [Eddie Foy, Jr.](#), [Frank McHugh](#), and [Nick Lucas](#).

10/10/1929: *Le Pays du sourire*, opérette de [Franz Lehár](#) (2^e version), créée au *Berliner Metropol-Theater* (pour la première version, voir 1923).

19/1/1930: *Leben des Orest*, opéra d'[Ernst Křenek](#), créé à [Leipzig](#).

1/2/1930: *Von heute auf morgen*, d'Arnold Schoenberg, créé à Francfort sous la direction de William Steinberg.

9/3/1930: *Grandeur et décadence de la ville de Mahagonny*, opéra de Kurt Weil sur un livret de Bertolt Brecht créé à Leipzig.

11/4/1930: *De la maison des morts*, opéra de Leoš Janáček créé à Brno.

5/5/1930: *Christophe Colomb*, opéra de Darius Milhaud sur un livret de Paul Claudel créé au Staatsoper de Berlin.

18/6/1930: *Le Nez*, opéra de Chostakovitch, créé au Théâtre Maly de Léningrad.

14/10/1930 – Girl Crazy – Alvin Theatre, New York, USA. With music by George Gershwin, lyrics by Ira Gershwin and book by Guy Bolton and John McGowan. Ethel Merman made her stage debut in this musical production and it also turned Ginger Rogers into an overnight star. It was directed by Alexander Leftwich, with choreography by George Hale and sets by Donald Oenslager. This musical made a star of Ginger Rogers, who, with Allen Kearns, sang "Could You Use Me?" and "Embraceable You" and, with Willie Howard, "But Not for Me". Ethel Merman, in her Broadway debut sang "I Got Rhythm", "Sam and Delilah", and "Boy! What Love Has Done To Me!" and "became an overnight sensation...that launched her fifty year career." Also of note is the opening night pit orchestra, which was composed of many well-known jazz musicians, including Benny Goodman, Gene Krupa, Glenn Miller and Jimmy Dorsey.

8/11/1930: *L'Auberge du Cheval-Blanc* (*Im weißen Rößl*), opérette de Ralph Benatzky, créée à Berlin.

12/12/1930: *Les Aventures du roi Pausole*, opérette d'Arthur Honegger, créée au Théâtre des Bouffes-Parisiens

23/6/1931: *Amphion*, drame lyrique d'Arthur Honegger, créé à l'Opéra de Paris.

5/1/1932: *Maximilien*, opéra de Darius Milhaud est créé à l'Opéra de Paris, sous la direction de François Ruhlmann.

16/3/1932: *Maria Egiziaca*, opéra d'Ottorino Respighi, créé au Carnegie Hall de New York, en version de concert.

20/4/1932: *Le Bal masqué*, cantate profane de Francis Poulenc, texte de Max Jacob, est créé au théâtre d'Hyères, sous la direction de Roger Désormière.

13/3/1933: *Hymne* d'Olivier Messiaen, créé par l'Orchestre des concerts Straram.

1/7/1933: *Arabella*, opéra de Richard Strauss, créé à Dresde.

12/8/1933: *Les Maîtres chanteurs*, opéra de Richard Wagner joué à Bayreuth, est retransmis en direct par radio dans le monde entier.

22/1/1934: *Lady Macbeth du district de Mtsensk*, opéra de Dmitri Chostakovitch, créé simultanément au Théâtre Maly de Leningrad et au Théâtre d'Art de Stanislavski et Nemirovitch-Dantchenko de Moscou.

23/1/1934: *La fiamma*, opéra d'Ottorino Respighi, créé au Teatro dell'Opera à Rome, sous la direction du compositeur.

30/4/1934: *Perséphone*, mélodrame d'Igor Stravinsky, créé à l'Opéra de Paris.

24/6/1935: *La femme silencieuse*, opéra de Richard Strauss, créé sous la direction de Karl Böhm à Dresde.

30/9/1935: *Porgy and Bess*, opéra de George Gershwin, créé à Boston.

Porgy and Bess is an English-language opera by American composer George Gershwin, with a libretto written by author DuBose Heyward and lyricist Ira Gershwin. It was adapted from Dorothy Heyward and DuBose Heyward's play *Porgy*, itself an adaptation of DuBose Heyward's 1925 novel of the same name.

Porgy and Bess was first performed in Boston on September 30, 1935, before it moved to Broadway in New York City. It featured a cast of classically trained African-American singers—a daring artistic choice at the time. After an initially unpopular public reception, a 1976 Houston Grand Opera production gained it new popularity, and it is now one of the best-known and most frequently performed operas.

The libretto of *Porgy and Bess* tells the story of Porgy, a disabled black street beggar living in the slums of Charleston. It deals with his attempts to rescue Bess from the clutches of Crown, her violent and possessive lover, and Sportin' Life, her drug dealer. The opera plot generally follows the stage play.

In the years following Gershwin's death, *Porgy and Bess* was adapted for smaller scale performances. It was adapted as a film *Porgy and Bess* in 1959. Some of the songs in the opera, such as "Summertime", became popular and are frequently recorded.

14/11/1935: *Der Schwanendreher*, concerto pour alto de Paul Hindemith, créé par le compositeur à Amsterdam.

11/2/1936: *Il campiello*, opéra de Ermanno Wolf-Ferrari, créé à la Scala de Milan.

2/5/1936: *Pierre et le Loup*, de Sergueï Prokofiev, créé à Moscou.

13/5/1936: *Œdipe*, de Georges Enesco, créé à l'Opéra de Paris.

14/11/1936: *Le Testament de la tante Caroline*, opéra bouffe d'Albert Roussel, créé à l'opéra d'Olomouc.

24/2/1937: *Lucrezia*, opéra d'Ottorino Respighi, créé à la Scala de Milan sous la direction de Gino Marinuzzi.

2/3/1937: *Massimilla Doni*, opéra d'Othmar Schoeck, texte d'Armin Rüeger selon la nouvelle du même nom d'Honoré de Balzac, créé au Staatsoper de Dresde.

2/6/1937: *Lulu* d'Alban Berg à l'Opéra de Zurich.

8/6/1937: *Carmina Burana* de Carl Orff, créé au Vieil opéra de Francfort.

3/2/1938: *Esther de Carpentras*, opéra-bouffe de Darius Milhaud, créé à l'Opéra-Comique à Paris sous la direction de Roger Désormière.

28/5/1938: *Mathis le peintre*, opéra de Paul Hindemith, créé à Zurich au Stadttheater sous la direction de Robert Denzler.

22/6/1938: *Karl V*, opéra d'Ernst Křenek, créé à Prague.

24/7/1938: *Jour de paix*, opéra de Richard Strauss créé à Munich sous la direction de Clemens Krauss.

15/10/1938: *Daphné*, opéra de Richard Strauss, créé à Dresde sous la direction de Karl Böhm.

19/3/1939: Le *Requiem*, de Joseph-Guy Ropartz, créé à Angers.

20/3/1939: *La Chartreuse de Parme*, opéra d'Henri Sauguet, créé à l'Opéra de Paris sous la direction de Philippe Gaubert.

BALLETS & DANCE

16/3/1825 – Jocko ou le singe du Bresil by Alexandre Piccinni, choreography by Frederic-Auguste Blache, at the Theatre de la Porte Saint-Martin

19/9/1827 – La Sonnambula by Ferdinand Harold, choreography by Jean-Pierre Aumer, at the Academie Royale de Musique, Paris, ancestor of l'Opera de Paris.

3/5/1830 – Manon Lescaut by Jacques-Fromental Halevy, livret Eugen Scribe d'apres le roman de l'Abbe Prevost, choreographie – Jean-Pierre Aumer, Opera de Paris, Paris.

12/3/1832: *La Sylphide*, ballet, dans la version de Jean Schneitzhoeffter et la chorégraphie de Filippo Taglioni, créé à l'Opéra de Paris – Academie Royale de Musique, Paris. Dancer – Marie Taglioni.

21/9/1836 – La fille du Danube by Adolphe Adam. Choreography by Filippo Taglioni. Dancer – Marie Taglioni. Ballet of the Academie Royale de Musique, Paris.

23/9/1840: *Le Diable amoureux*, ballet de François Benoist et Napoléon Henri Reber, créé à l'Opéra de Paris.

28/6/1841 – Giselle – Adolphe Adam – Salle le Peletier, Paris. *Giselle*, originally titled *Giselle, ou les Wilis*, 'Giselle, or The Wilis', is a [romantic ballet](#) ("ballet-pantomime") in two acts, and is considered a masterwork in the [classical ballet](#) performance canon. It was first performed by the [Ballet du Théâtre de l'Académie Royale de Musique](#) at the [Salle Le Peletier](#) in [Paris](#), France on 28 June 1841, with Italian ballerina [Carlotta Grisi](#) as Giselle. The ballet was an unqualified triumph. *Giselle* became hugely popular and was staged at once across Europe, Russia, and the United States. Librettists [Jules-Henri Vernoy de Saint-Georges](#) and [Théophile Gautier](#) took their inspiration for the plot from a [prose](#) passage about the Wilis in *De l'Allemagne*, by [Heinrich Heine](#), and from a poem called "Fantômes" in *Les Orientales* by [Victor Hugo](#). The prolific opera and ballet composer [Adolphe Adam](#) composed the music. [Jean Coralli](#) and [Jules Perrot](#) created the original [choreography](#). The role of Giselle was intended for Carlotta Grisi as her debut piece for the Paris public, and she was the only [ballerina](#) to dance it at the [Paris Opera](#) for many years. The traditional choreography that has been passed down derives primarily from the revivals staged by [Marius Petipa](#) during the late 19th and early 20th centuries for the [Imperial Ballet](#) in [St. Petersburg](#). One of the world's most-often performed classical ballets, it is also one of its most challenging to dance.

22/6/1843 – Ondine by Cesare Pugni, choreography by Jules Perrot, at Her Majesty's Theatre, London.

17/7/1843 — *La Péri*, ballet en deux actes et trois tableaux de [Théophile Gautier](#), chorégraphie de [Jean Coralli](#), musique de [Friedrich Burgmüller](#), représenté à l'[Opéra Le Peletier](#), Paris, avec [Carlotta Grisi](#) (*La Péri*) et [Lucien Petipa](#) (*Achmet*).

13/12/1895: première exécution complète de la *Symphonie n° 2* (1888-1894), dite « *Résurrection* », en ut mineur, pour Orchestre, contralto, soprano et chœur de Gustav Mahler à Berlin par l'Orchestre philharmonique de Berlin dirigé par le compositeur. Les trois premiers mouvements ont été créés le 4 mars.

29/1/1896 – Concert at the GroßeMusikvereinssaal in Vienna, where the young 14 yearsa old Bronislaw Huberman was to play the Brahms concerto. The audience

that night contained such celebrities as Gustav Mahler, Anton Bruckner, Hans Richter, Count Hohenlowe, Karl Goldmark, Ferdinand Löwe, Johann Strauss, and the composer Johannes Brahms. Brahms was expecting to hear a student like performance of the work. In the words of his biographer, Max Kalbeck: "As soon as Brahms heard the sound of the violin, he pricked up his ears, during the Andante he wiped his eyes, and after the Finale he went into the green room, embraced the young fellow, and stroked his cheeks. When Huberman complained that the public applauded after the cadenza, breaking into the lovely Cantilena, Brahms replied, 'You should not have played the cadenza so beautifully.' Brahms brought him a photo of his, with the inscription "To Bronislaw Huberman so that he may kindly remember Vienna, February 1896, and his grateful listener J. Brahms." The musical quotation is the opening of the slow movement of the concerto.

16/2/1896: la *Symphonie n° 2* d'Albéric Magnard créée à Nancy sous la direction de Guy Ropartz.

19/3/1896: le *Concerto pour violoncelle en si mineur* d'Antonín Dvořák créé à Londres par Leo Stern au violoncelle accompagné par l'orchestre de la société philharmonique sous la direction du compositeur.

2/6/1896 – Camille Saint-Saens – Concerto pour piano no. 5, solist Saint-Saens – Salle Pleyel

9/10/1896: le *Quatuor à cordes n° 13 en sol majeur* d'Antonín Dvořák créé lors d'un concert de l'Association de Musique de chambre Tchèque.

7/11/1896: *La Jeune Fille dans la tour*, opéra de Sibelius, créé en version de concert à Helsinki sous la direction du compositeur.

10/11/1896: le *Quatuor à cordes n° 14 en la bémol majeur* d'Antonín Dvořák créé à Vienne par le Quatuor Rosé (le 20 décembre à New York par le Quatuor de Bohême).

27/11/1896: *Ainsi parlait Zarathoustra*, poème symphonique de Richard Strauss, créé à Francfort sous la direction du compositeur.

10/12/1896: *Thème et Variations* de Gabriel Fauré, créé à Londres par Léon Delafosse.

27/12/1896: *Poème* d'Ernest Chausson, créé à Nancy par Eugène Ysaÿe.

2/6/1896 - Camille Saint-Saens – Concerto pour piano no. 5, solist Saint-Saens with Orchestre de la Societe des Concerts du Conservatoire sous la direction de Paul Taffanel – Salle Pleyel

10/1/1897: *Istar, variations symphoniques*, poème symphonique de Vincent d'Indy, créé aux concerts Ysaÿe.

14/2/1897: la *Symphonie n° 1 en fa mineur* op. 7 d'Hugo Alfvén, créée à Stockholm, par le Kungliga Hovkapellet dirigé par Conrad Nordqvist (nl).

15/3/1897: la *Symphonie n° 1 en ré mineur*, de [Rachmaninov](#), créée à [Saint-Pétersbourg](#) sous la direction de [Glazounov](#) dans le cadre des [Concerts symphoniques russes](#). Elle reçoit un très mauvais accueil.

18/5/1897: *L'Apprenti sorcier* de [Paul Dukas](#), créé par la [Société nationale de musique](#), sous la direction du compositeur.

6/2/1898: le *Poème roumain* de [Georges Enesco](#), créé au [Théâtre du Châtelet](#).

5/3/1898: le *Quatuor à cordes n° 2 en mi majeur* de [Vincent d'Indy](#), créé à la [Société nationale de musique](#).

2/4/1898: la *Symphonie n° 4 en ut mineur* de [Sergueï Taneïev](#), créée à [Saint-Pétersbourg](#).

18/4/1898: le *Menuet antique* de [Maurice Ravel](#), créé [salle Érard](#) par [Ricardo Viñes](#).

21/6/1898: *Pelléas et Mélisande* opus 80, musique de scène de [Gabriel Fauré](#), créée à [Londres](#) (voir 1901).

28/1/1899: La *Chanson perpétuelle* d'[Ernest Chausson](#), créée par [Jeanne Raunay](#).

26/4/1899: La *Symphonie n° 1* (première version disparue) de [Jean Sibelius](#), créée par l'[orchestre philharmonique d'Helsinki](#) sous la direction du compositeur (voir 1900).

3/3/1899: *Une vie de héros*, op. 40, poème symphonique de [Richard Strauss](#), créée à [Francfort-sur-le-Main](#).

2/5/1899: La *Symphonie n° 2 en ré majeur* op. 11 d'[Hugo Alfvén](#), créée à [Stockholm](#) sous la direction de [Wilhelm Stenhammar](#).

14/5/1899: La *Symphonie n° 3* d'[Albéric Magnard](#), créée à [Paris](#) sous la direction du compositeur.

4/11/1899: *Finlandia*, poème symphonique de [Jean Sibelius](#), créé par l'[orchestre philharmonique d'Helsinki](#) sous la direction du compositeur (voir 1940).

27/1/1900: Le *quatuor à cordes op. 35* d'[Ernest Chausson](#), décédé l'année précédente, créé à [Paris](#).

1/7/1900: La *Symphonie n° 1* (version révisée) de [Jean Sibelius](#), créée par l'[orchestre philharmonique d'Helsinki](#) sous la direction de [Robert Kajanus](#) (voir 1899).

27/8/1900: *Prométhée*, ([Gabriel Fauré](#)), aux arènes de [Béziers](#).

9/12/1900: 2 des *Nocturnes* (Nuages et Fêtes) de [Claude Debussy](#), créés aux [Concerts Lamoureux](#) (voir 1901).

3/2/1901: *Pelléas et Mélisande*, suite tirée de la musique de scène de [Gabriel Fauré](#), créée par l'[Orchestre Lamoureux](#) (voir 1898).

20/3/1901: *Symphonie n° 1*, d'[Alexandre Scriabine](#), créée à [Moscou](#) sous la direction de [Vassili Safonov](#).

19/10/1901: Première des cinq marches *Pomp and Circumstance* de Sir [Edward Elgar](#), créée à [Liverpool](#).

27/10/1901: *Nocturnes* de [Debussy](#), créés à [Paris](#) (voir 1900).

27/10/1901 (11/9/1901 – Julian calendar) – Sergei Rachmaninov – Concerto pour piano no. 2, composer – solist, Moscow, Russia

4/11/1901: *Le Voile du Bonheur*, de [Gabriel Fauré](#), créé à [Paris](#).

25/11/1901: *Symphonie n° 4* de [Gustav Mahler](#), créée à [Munich](#).

14/12/1901: *Paris: The Song of a Great City* de [Frederick Delius](#), créé à [Elberfeld](#) par [Hans Haym](#).

12/1/1902: la *Symphonie n° 2* de [Scriabine](#), créée à [Saint-Petersbourg](#) sous la direction de [Anatoli Liadov](#).

8/3/1902: *La Nuit transfigurée* pour [secteur à cordes](#) d'[Arnold Schönberg](#), créée à [Vienne](#).

8/3/1902 : la *Symphonie n° 2* de [Jean Sibelius](#), créée à [Helsinki](#) par l'[Orchestre philharmonique d'Helsinki](#) dirigé par le compositeur.

21/3/1902: la *Sinfonia Domestica* de [Richard Strauss](#), créée à [New York](#).

5/4/1902: *Jeux d'eau* et *Pavane pour une infante défunte* de [Maurice Ravel](#), créés à [Paris](#) par [Gabriel Grovlez](#).

9/6/1902: la *Symphonie n° 3* (terminée en 1896) de [Mahler](#), créée à [Krefeld](#) par l'[Orchestre du Gürzenich de Cologne](#), sous la direction du compositeur.

2/11/1902: *En Saga* opus 9, poème symphonique (version révisée) de [Jean Sibelius](#), créé à [Helsinki](#) sous la direction de [Robert Kajanus](#) (voir 1893).

1/12/1902: la *Symphonie n° 2* de [Carl Nielsen](#), créée sous la direction du compositeur.

11/2/1903: la *Symphonie n° 9* d'[Anton Bruckner](#), créée à [Vienne](#).

18/4/1903: les *Pièces brèves* de [Gabriel Fauré](#), créées par [Ricardo Viñes](#) à la Société nationale.

13/1/1904: *Kossuth*, poème symphonique de [Béla Bartók](#), créé à [Budapest](#) sous la direction d'[István Kerner](#).

28/2/1904: la *Symphonie n° 2 en si bémol majeur* de [Vincent d'Indy](#) créée aux [Concerts Lamoureux](#) à [Paris](#).

5/3/1904: le *Quatuor à cordes* de [Maurice Ravel](#), composé en [1902-1903](#), créé par le [Quatuor Heyman](#). This quatuor is the central theme of one of the best films that I've ever seen [Un cœur en hiver](#) (1992) directed by Claude Sautet, with Emmanuelle Beart, Daniel Auteil & Andre Dussolier. I've seen the film several times, and I had the luck to see performances of the 3 actors at the Paris theaters.

18/3/1904: *Baba-Yaga*, tableau symphonique d'[Anatoli Liadov](#), créé à [Saint-Pétersbourg](#).

21/3/1904: la *Sinfonia Domestica* de [Richard Strauss](#), créée au [Carnegie Hall](#) de [New York](#).

17/5/1904 : *Schéhérazade* de [Maurice Ravel](#), créé aux Bouffes-Parisiens.

17/5/1904 : *Résurrection* d'[Albert Roussel](#), créé à Paris sous la direction d'[Alfred Cortot](#).

15/10/1904: début des cours d'[Arnold Schönberg](#) à la [seconde école de Vienne](#).

18/10/1904: la *Symphonie n° 5* de [Mahler](#), créée à [Cologne](#) sous la direction du compositeur.

10/11/1904 : le *Concerto de Piano* de [Ferruccio Busoni](#), créé à [Berlin](#).

11/12/1904: la *Symphonie n° 2 en fa majeur* de [Giuseppe Martucci](#) est créée sous la direction du compositeur.

10/1/1905: la *Symphonie n° 3* de [Franz Berwald](#) est créée quarante ans après la mort du compositeur.

2525 janvier : *Pelléas et Mélisande* d'[Arnold Schönberg](#), créé à [Vienne](#).

3/2/1905: la *Sonate pour violon et piano* de [Vincent d'Indy](#), créée par [Armand Parent](#) et le compositeur au piano.

5/2/1905: le *Concerto pour violoncelle n° 2* de [Camille Saint-Saëns](#), créé à [Paris](#).

15/2/1905: le *Concerto pour violon* en la mineur de [Glazounov](#), créé par la [Société musicale russe](#) de [Saint-Pétersbourg](#) et [Leopold Auer](#), avec [Glazounov](#) à la direction.

29/5/1905: la *Symphonie n° 3* d'[Alexandre Scriabine](#), créée à [Paris](#) sous la direction d'[Arthur Nikisch](#).

12/9/1905: *Quatuor à cordes*, dit 1905 d'[Anton Webern](#).

8/10/1905: la *Sinfonietta* de [Max Reger](#), créée à [Essen](#) sous la direction de [Felix Mottl](#).

15/10/1905: *La Mer* de [Claude Debussy](#), créée par l'[Orchestre Lamoureux](#) sous la direction de [Camille Chevillard](#).

19/10/1905 – Jean Sibelius – Concerto pour violon – Orchestre philharmonique de Berlin, Berlin. This is the second version, one of the best violin concerti (but worthwhile to make the trip to Berlin, as 4 days before I was at the premiere of Debussy's La Mer in Paris...)

6/1/1906: Miroirs de Maurice Ravel, créé par Ricardo Viñes à Paris.

27/1/1906: la Sonate « 1er octobre 1905 » pour piano de Janáček est créée à Brno par la pianiste Ludmila Tučková.

4/2/1906: la Suite slovaque de Vítězslav Novák est créée.

18/2/1906: Jour d'été sur la montagne, poème symphonique de Vincent d'Indy, créé aux Concerts Colonne.

27/5/1906: La Symphonie n° 6 « Tragique » de Gustav Mahler, créée à Essen.

11/11/1906: Symphonie n° 3 de Guy Ropartz, créée à Paris.

3/12/1906: La Symphonie n° 3 en mi majeur op. 23 d'Hugo Alfvén, créée à Göteborg sous la direction du compositeur.

3/2/1907: la Symphonie « Asraël », de Josef Suk, créée à Prague.

5/2/1907: audition à Vienne du Premier quatuor à cordes d'Arnold Schönberg ; scandale.

8/2/1907: la Symphonie de chambre n° 1, d'Arnold Schönberg, créée à Vienne.

22/2/1907: Introduction et allegro de Ravel, créés à Paris.

25/9/1907: la Symphonie n° 3 de Jean Sibelius, créée à Helsinki par l'Orchestre philharmonique d'Helsinki dirigé par le compositeur.

26/1/1908 – Sergei Rachmaninov – Symphonie no. 2, conducted by the composer – Saint Petersburg, Russia

5/3/1908: la Rapsodie espagnole, de Maurice Ravel, créée au Théâtre du Châtelet par l'orchestre des Concerts Colonne sous la direction d'Édouard Colonne.

22/3/1908: la Symphonie n° 1, d'Albert Roussel, créée à Bruxelles sous la direction de Sylvain Dupuis.

6/4/1908: Saga-Drøm, poème symphonique de Carl Nielsen, créé à Copenhague.

8/5/1908: Syanevit, musique de scène de Jean Sibelius, créée à Helsinki sous la direction du compositeur.

19/9/1908: la *Symphonie n° 7* de [Gustav Mahler](#), créée à [Prague](#).

4/11/1908: la *Passacaille* d'[Anton Webern](#), créée à [Vienne](#) sous la direction du compositeur.

3/12/1908: la *Symphonie n° 1* d'[Edward Elgar](#), créée à [Manchester](#) sous la direction de [Hans Richter](#).

10/12/1908: le *Poème de l'extase* d'[Alexandre Scriabine](#), créé à [New York](#) sous la direction de Modest Altschuler.

16/12/1908: *Le Marchand de sable qui passe*, musique de scène d'[Albert Roussel](#), est créé.

17/12/1908 - Camille Saint-Saens – Music for the silent film L'Assassinat du Duc de Guise, 18 minutes, the first music for film composed by a famous composer

18/12/1908: *Children's Corner* de [Claude Debussy](#), créé par [Harold Bauer](#) à [Paris](#).

9/1/1909: *Gaspard de la nuit* de [Maurice Ravel](#), créé par [Ricardo Viñes](#) (piano).

3/4/1909: la *Symphonie n° 2* dite *Ouessant*, de [Charles Tournemire](#), créée à [Paris](#).

10/4/1909: la *Symphonie n° 2*, de [Mili Balakirev](#), créée à [Saint-Pétersbourg](#).

1/5/1909: *L'Île des morts*, poème symphonique de [Serge Rachmaninoff](#), créé à [Moscou](#).

28/11/1909 – Sergei Rachmaninov – Concerto pour piano no. 3, composer is solist, with the Orchestre Symphonique de New York – Century Theatre, New York, USA

17/3/1910: la *Sonate pour violoncelle et piano* de [Zoltán Kodály](#), créée par [Jenö Kerperly](#) (violoncelle) et [Bela Bartók](#) (piano).

19/3/1910: *Quatuor à cordes n° 1* de [Béla Bartók](#), créé à [Budapest](#).

20/4/1910: *Ma mère l'Oye*, suite pour piano à quatre mains de [Maurice Ravel](#), créée par deux enfants (voir [1912](#)).

12/9/1910: la *Symphonie n° 8* de [Gustav Mahler](#) est créée à [Munich](#), dirigée par le compositeur.

12/10/1910: la *Symphonie n° 1* de [Ralph Vaughan Williams](#), créée à [Leeds](#).

10/11/1910: le *Concerto pour violon* d'[Edward Elgar](#), créé à [Londres](#) sous la direction du compositeur, avec en soliste [Fritz Kreisler](#).

5/12/1910: *Songes*, de [Sergueï Prokofiev](#).

28/1/1911: la *Suite en fa dièse* pour piano d'[Albert Roussel](#), créée par [Blanche Selva](#).

11/3/1911: Goyescas d'Enrique Granados, créées à Barcelone par le compositeur.

15/3/1911: Prométhée ou le Poème du feu d'Alexandre Scriabine, créé à Moscou sous la direction de Serge Koussevitzky.

3/4/1911: la Symphonie n° 4 de Jean Sibelius, créée à Helsinki.

7/4/1911: la Symphonie n° 2 de Karol Szymanowski est créée.

24/4/1911: les Quatre pièces pour violon et piano d'Anton Webern, créées à Vienne par Fritz Brunner et Atta Jonas-Werndorff.

8/5/1911: Valses nobles et sentimentales pour piano de Maurice Ravel, créées par Louis Aubert.

22/5/1911: Le Martyre de saint Sébastien, de Debussy.

24/5/1911: la Symphonie n° 2, d'Elgar, créée à Londres.

28/2/1912: Nielsen dirige la création Copenhague de son Concerto pour violon, avec en soliste Emil Telmányi. Nielsen dirige également la création de sa Symphonie n° 3.

23/3/1912: la Symphonie n° 3 « Ilya Mouromets » de Reinhold Glière, créée à Moscou sous la direction d'Emil Cooper.

26/6/1912: la Symphonie n° 9 de Mahler, créée au festival de Vienne par l'Orchestre philharmonique de Vienne dirigé par Bruno Walter.

7/8/1912: le Concerto pour piano n° 1, de Prokofiev, créé par le compositeur à Saint-Petersbourg.

3/9/1912: la Sonatine d'Albert Roussel, créée à la Société nationale de musique.

The Israel Philharmonic Orchestra was founded as the **Palestine Symphony Orchestra** by violinist [Bronisław Huberman](#) in 1936, at a time of the dismissal of many [Jewish](#) musicians from European orchestras, due to the German anti-Semitic policy that took place under the Nazi regime since 1933. The concert was conducted by [Arturo Toscanini](#) and its first principal conductor was [William Steinberg](#). The concert took place at the Yerid Hamizrah Hall of Tel Aviv, Eretz Israel, so-called Palestine, now Israel, and included performances of Carl Maria von Weber's *Oberon* Overture, Rossini's Overture to *La Scala di Seta*, Brahms' Second Symphony, Schubert's Unfinished Symphony, and the Nocturne and Scherzo from Mendelssohn's *Midsummer Night's Dream*. The concert was broadcast live across the world on the radio. The orchestra performed with Toscanini in Tel Aviv, Jerusalem and Haifa in December-January 1936-37.

21/1/1937 *Musique pour cordes, percussion et célesta* de [Béla Bartók](#), créée à [Bâle](#) par [Paul Sacher](#).

25/1/1937: la *Symphonie n° 2* de [Gian Francesco Malipiero](#), créée à [Seattle](#).

12/7/1937: le *Concerto pour piano* de [Khatchatourian](#), créé à [Moscou](#) par [Lev Oborine](#), avec l'[Orchestre philharmonique de Moscou](#) sous la direction de [Lev Steinberg](#).

15/8/1937: l'organiste [Jehan Alain](#) termine la composition de ses *Litanies*.

26/10/1937: les *Variations pour piano* d'[Anton Webern](#), créées par [Peter Stadlen](#).

21/11/1937: la *Symphonie n° 5* de [Chostakovitch](#), créée à [Léningrad](#) sous la direction d'[Evgeni Mravinski](#).

16/1/1938: la *Sonate pour deux pianos et percussion* de [Béla Bartók](#), créée à [Bâle](#) par le compositeur lui-même, sa femme, la pianiste [Ditta Pásztory](#), et les percussionnistes [Fritz Schiesser](#) et [Philipp Rühlig](#).

17/2/1938: *Litanies* de [Jehan Alain](#).

26/3/1938: la *Symphonie n° 3* (2^e version) de [Howard Hanson](#), créée par l'[Orchestre symphonique de la NBC](#).

8/4/1938: la *Symphonie n° 1* de [Walter Piston](#), créée par l'[Orchestre symphonique de Boston](#) dirigé par le compositeur.

12/5/1938: *Jeanne d'Arc au bûcher* (version pour orchestre) d'[Arthur Honegger](#), créé à [Bâle](#) (version scénique créée en 1942).

22/9/1938: le *Quatuor à cordes op. 28* d'[Anton Webern](#), créé à [Pittsfield \(Massachusetts\)](#) par le Quatuor Kolish.

5/11/1938: *Adagio pour cordes* et *First Essay for Orchestra* de [Samuel Barber](#), créés à [New York](#) par [Arturo Toscanini](#) avec l'[orchestre symphonique de la NBC](#).

15/12/1938: le *Concerto pour violon* d'[Ernest Bloch](#), créé à [Cleveland](#) par [Joseph Szigeti](#), l'[orchestre de Cleveland](#) sous la direction de [Dmitri Mitropoulos](#).

2/2/1939: *La Fantaisie pastorale*, de [Darius Milhaud](#).

23/3/1939: Le *Concerto pour violon n° 2*, de [Bela Bartók](#), créé à [Amsterdam](#) par [Zoltan Székely](#), avec l'[Orchestre royal du Concertgebouw](#) sous la direction de [Willem Mengelberg](#).

24/5/1939: *Thrène et Péan*, symphonie n° 3 de [Matthijs Vermeulen](#), créée à [Amsterdam](#) par l'[orchestre royal du Concertgebouw](#) dirigé par [Eduard van Beinum](#).

26/5/1939: La *Symphonie n° 1*, d'[Alan Hovhaness](#), créée à [Londres](#) par l'[Orchestre symphonique de la BBC](#) sous la direction de [Leslie Heward](#).

17/6/1939: Les *Variations symphoniques*, de [Witold Lutosławski](#), créées par l'[orchestre radio symphonique polonais](#) sous la direction de [Grzegorz Fitelberg](#).

21/6/1939: Le *Concerto pour orgue, cordes et timbales* de Francis Poulenc, créé à la Salle Gaveau par Maurice Duruflé et l'Orchestre symphonique de Paris dirigés par Roger Désormière.

5/11/1939: La *Symphonie n° 6 en si mineur*, de Dmitri Chostakovitch, créée par l'orchestre philharmonique de Leningrad sous la direction de Evgeni Mravinski.

9/11/1939: Le *Concerto de Aranjuez*, de Joaquín Rodrigo, créé à Barcelone.

FILMS – CINEMATOGRAPHY, SILENT, SOUND

SEE ALSO CHAPTER “FILMS IN THE PERIOD 1888-1939”

18/8/1887 - *Man Walking Around a Corner*, directed by [Louis Le Prince](#). The oldest known film. The film was taken on the corner of Rue Bochard-de-Saron and Avenue Trudaine in the [9th arrondissement of Paris](#). Pictures from the film were sent in a letter dated 18 August 1887 to his wife.

27/2/1888 - [Thomas Edison](#) meets with [Eadweard Muybridge](#) who proposes a scheme for [sound film](#) (February 27, [West Orange, New Jersey](#)).

March 1891 – [William K. L. Dickson](#) successfully develops a working prototype of the [Kinetoscope](#) which moves horizontally.

20/5/1891– First public display of [Thomas Edison's](#) prototype horizontal [kinetoscope](#): *Dickson Greeting* is shown at Edison's Laboratory for a convention of the National Federation of Women's Clubs in [West Orange, New Jersey](#).

24/8/1891 – [Thomas Edison](#) files for a patent for the [motion picture camera](#) (which he receives in [1897](#)).

18/10/1892– *Théâtre Optique* event opens, showing projected motion pictures to the public at the [Musée Grévin](#) in [Paris](#).

May 9, 1893 – The premiere of the completed Kinetoscope was held at the Brooklyn Institute of Arts and Sciences, in New York, USA. The [Kinetoscope](#), an early [motion picture](#) exhibition device invented by [Thomas Edison](#) and developed by [William Kennedy Dickson](#), is introduced to the public. (It was in development since 1889 and a number of films had already been created for it). The first film publicly shown on the system was *[Blacksmith Scene](#)* (aka *Blacksmiths*); directed by Dickson and [shot](#) by Heise, it was produced at the new Edison moviemaking studio, known as the [Black Maria](#). Despite extensive promotion, a major display of the Kinetoscope, involving as many as twenty-five machines, never took place at the Chicago exposition. Kinetoscope production had been delayed in part because of Dickson's absence of more than eleven weeks early in the year with a nervous breakdown. On April 14, 1894, a public Kinetoscope parlor was opened by the Holland Bros. in New York City at 1155 Broadway, on the corner of 27th Street—the first commercial motion picture house. The venue had ten machines, set up in parallel rows of five, each showing a different movie. For 25 cents a viewer could see all the films in either row; half a dollar gave access to the entire bill. The machines were purchased from the new Kinetoscope Company, which had contracted with Edison for their production; the firm, headed by Norman C. Raff and Frank R. Gammon, included among its investors Andrew M. Holland, one of the entrepreneurial siblings, and Edison's former business chief, Alfred O. Tate. The ten films that comprise the

first commercial movie program, all shot at the Black Maria, were descriptively titled: *Barber Shop*, *Bertoldi (mouth support)* (Ena Bertoldi, a British vaudeville contortionist), *Bertoldi (table contortion)*, *Blacksmiths*, *Roosters* (some manner of cock fight), *Highland Dance*, *Horse Shoeing*, *Sandow* (Eugen Sandow, a German strongman), *Trapeze*, and *Wrestling*. As historian Charles Musser describes, a "profound transformation of American life and performance culture" had begun.

7/1/1894 - William Kennedy Dickson receives a patent for motion picture film.

7/1/1894 - Thomas Edison films his assistant, Fred Ott sneezing with the Kinetoscope at the Black Maria.^[1]

14/4/1894 – The first commercial presentation of the Kinetoscope took place in the Holland Brothers' Kinetoscope Parlor at 1155 Broadway, New York City.^[2]

6/6/1894 - Charles Francis Jenkins projects a filmed motion picture before an audience in Richmond, Indiana. Earliest documented projection of a motion picture.^[3]

2-3/1895 – Robert W. Paul and Birt Acres build and run the first working 35 mm movie camera in Britain, the Kineopticon. Their first films include Incident at Clovelly Cottage, The Oxford and Cambridge University Boat Race and Rough Sea at Dover.^[1]

2-3/1895 - In France, the brothers Auguste and Louis Lumière, design and built a lightweight, hand-held motion picture camera called the Cinématographe. They discover that their machine can also be used to project images onto a large screen. The Lumière brothers create several short films at this time that are considered to be pivotal in the history of motion pictures.^[1]

13/2/1895 – Auguste and Louis Lumière patent the Cinematographe, a combination movie camera and projector. The first film was projected privately at La societe d'encouragement pour l'industrialisation in Paris

22/3/1895 – First display of motion pictures by Auguste and Louis Lumière (private screening).

27/5/1895 – Birt Acres patents the Kineopticon under his own name.

Late September 1895 – C. Francis Jenkins and Thomas Armat demonstrate their Phantoscope, a motion picture projector, in Atlanta, Georgia at the Cotton States and International Exposition.

11/1895 – In Germany, Emil and Max Skladanowsky develop their own film projector.

1 November 1895 – the first cinema ever – the Berlin Wintergarten Theatre, presented a short film by the Skladanowsky brothers.

December 28, 1895 – at Salon Indien du Grand Café in Paris the first public screening of films at which admission was charged. Auguste and Louis Lumière of Besançon, Franche-Comté, France introduce cinematograph, a combination film camera, film projector and

developer, to the public. This history-making presentation featured ten short films, including their first film, *Sortie des Usines Lumière à Lyon* (*Workers Leaving the Lumière Factory*). The [Lumière brothers](#) have their first paying audience at the Grand Café Boulevard des Capucines in Paris — this date is sometimes considered the debut of the motion picture as an entertainment medium. The 10 short films were filmed, directed and produced by the Brothers Lumiere: 1. La sortie de l'usine Lumiere a Lyon, 2. La voltage, 3. La peche aux poisons rouges, 4. Le débarquement du congres de photographie a Lyon, 5. Le forgerons, 6. L'arroseur arrose, 7. Le repas de bebe, 8. Le saut a la couverture, 9. La place des Cordeliers a Lyon, 10. La mer (Baignade en mer). 33 people pay 1 franc each to watch the films, with an average length of 40 seconds. But the police has to intervene, as 2000 people want to get into the Grand Café.

30/12/1895 – The [American Mutoscope and Biograph Company](#) motion pictures is founded in New Jersey by the KMCD Syndicate of [William Kennedy Dickson](#), Henry Marvin, [Herman Casler](#) and [Elias Koopman](#).^[2]

1/1896 January – In the [United States](#), the [Vitascope film projector](#) is designed by [Charles Francis Jenkins](#) and [Thomas Armat](#). Armat begins working with [Thomas Edison](#) to manufacture it.

14/1/1896 – [Birt Acres](#) demonstrates his film projector, the *Kineopticon*, the first in Britain, to the [Royal Photographic Society](#) at the [Queen's Hall](#) in London. This is the first film show to an audience in the U.K.^[1]

20/2/1896 – In London:^[2] - [Robert W. Paul](#) demonstrates his film projector, the *Theatrograph* (later known as the *Animatograph*), at the [Alhambra Theatre](#).

20/2/1896 - The [Lumière Brothers](#) first project their films in Britain, at the [Empire Theatre of Varieties, Leicester Square](#).

4/1896 – Edison and Armat's [Vitascope](#) is used to project motion pictures in public screenings in New York City.

14/5/1896 – Tsar [Nicholas II of Russia](#) is crowned in Moscow, the first [coronation](#) ever recorded in film.

11/7/1896 – First films screened in [Venezuela](#) by [Luis Manuel Méndez](#) and [Manuel Trujillo Durán](#) at the [Baralt Theatre](#) in [Maracaibo](#).^[3]

26/7/1896 – "Vitascope Hall" opens on [Canal Street, New Orleans](#), the first business devoted exclusively to showing motion pictures at a fixed location [1]

28/9/1896 – The [Pathé Frères](#) film company is founded.

19/10/1896 – "Edison Hall" in [Buffalo, New York](#), the first building constructed specifically for showing motion pictures. [2]

3/11/1896 - [Marius Sestier](#) films the [Melbourne Cup](#), a major sporting event in Australia.

28/1/1897 – The first [Venezuelan](#)-made films are screened at the [Baralt Theatre](#) in [Maracaibo](#), two locally-made actuality shorts, [Un célebre especialista sacando muelas en el gran Hotel Europa](#) and [Muchachos bañándose en la laguna de Maracaibo](#).^[1]

4/5/1897 – During a film screening at the Charity Bazaar in [Paris](#), a curtain catches on fire from the [ether](#) used to fuel the [projector](#) lamp. The fire spreads and becomes catastrophic, ultimately resulting in 126 deaths.^[2]

20/6/1897 – [Queen Victoria's Diamond Jubilee](#) procession filmed.^[3]

19/5/1898 – Vitagraph is founded in New York.^[citation needed]

27/8/1898 – [Alfred John West](#) gives a Royal Command Performance to [Queen Victoria](#) of film from the cruise of HMS *Crescent* at Osborne House.

9/1899 - [King John](#), a [silent](#) compilation of three short scenes from a forthcoming stage production by [Herbert Beerbohm Tree](#) with film direction by [William Kennedy Dickson](#) and [Walter Pfeffer Dando](#), is filmed in London, the first known film based on a [Shakespeare](#) play.

9/1899 - [Mitchell and Kenyon](#) of [Blackburn](#) in the north of England release three fiction films under the 'Norden' brand which attract national attention – *The Tramp's Surprise*, *The Tramps and the Artist* and *Kidnapping by Indians*, the latter being the first [Western](#).

11/1899 – The oldest surviving [Japanese](#) film, *Momijigari*, is shot by [Tsunekichi Shibata](#) in [Tokyo](#) as a record of [kabuki](#) actors [Onoe Kikugorō V](#) and [Ichikawa Danjūrō IX](#) performing a scene from the play *Momijigari*.

10/3/1902 – A Circuit Court decision in the United States ends [Thomas Edison's](#) monopoly on [35 mm movie film](#) technology.^[1]

2/4/1902 – [Thomas Lincoln Tally](#) opens the Electric Theater, the first permanent movie theater, in Los Angeles.^[2] Tally co-founds the [First National Exhibitors Circuit](#) in 1917.^{[3][4]}

9/8/1902 – [Georges Méliès'](#) film *The Coronation of Edward VII* (a staged simulation with inserted actuality footage) is first shown in London on the evening of the [Coronation](#) itself.

1/9/1902 – Actor/producer Méliès premières the first [science fiction](#) film, the [silent](#) *A Trip to the Moon* (*Le Voyage dans La Lune*), at the Théâtre Robert-Houdin in Paris, France; it proves an immediate success.^[5] One scene features the animated human face of the moon being struck in the eye by a rocket.

23/6/1904: [Marcus Loew](#) founds the theatre chain, the People's Vaudeville Company, which later was renamed [Loews Theatres](#) which was the oldest theatre chain operating in North America when it was merged with [AMC Theatres](#) in 2006

19/6/1905 – [John P. Harris](#) and his brother Harry in [Pittsburgh](#) open the first [theater](#) in the [U.S.](#) devoted exclusively to the exhibition of motion pictures.

16/12/1905 – [Variety](#), an entertainment trade newspaper that would later cover the film industry, is published for the first time in New York City.

26/12/1906 - The world's first feature film, [The Story of the Kelly Gang](#) is released in [Melbourne](#), Australia.

19/1/1907 – [Variety](#) publishes its first film review.

7/5/1907 – Seattle film maker William Harbeck sets up a camera at the front of a B.C. Electric streetcar and films the downtown streets of [Vancouver](#), [British Columbia](#). Pieces of the film, the earliest surviving footage of the city,^[1] have disappeared, only about 7 minutes remain.^[2]

29/5/1907 – [Salaviinanpolttajat](#), also known as *The Moonshiners*, the first fictional film made in Finland, is released.

20/6/1907 – [L'Enfant prodigue](#), the first feature-length motion picture produced in Europe, opens in Paris.

[Peerless Film Manufacturing Company](#) was founded in Chicago by [George K. Spoor](#) and [Gilbert M. Anderson](#). On August 10, 1907, the studio name was changed to [Essanay Studios](#) ("S and A").^{[3][4]}

28/11/1907 - In [Haverhill, Massachusetts](#), scrap-metal dealer [Louis B. Mayer](#) opens his first movie theater (in a few years he had the largest theater chain in [New England](#) and in 1917 he founded his own production company, which eventually became part of [Metro-Goldwyn-Mayer](#)).

3/7/1908 - Malhabour Theater, the first film house in [Iloilo City](#) was opened to the public.^[1]

14/7/1908 – [D. W. Griffith](#) becomes a director at the [American Mutoscope and Biograph Company](#) in New York City. Between 1908 and 1913, Griffith will direct nearly 500 films starting with the release of [The Adventures of Dollie](#).

28/10/1908 – The Russian Film Industry begins with the release of Russia's first fictional narrative film [Stenka Razin](#).

18/11/1908 – Release in France of [The Assassination of the Duke of Guise](#) (*La Mort du duc de Guise*), the first film with a screenplay by an eminent man of letters, the playwright [Henri Lavedan](#);^[2] it is also directed by two men of the theatre, [Charles Le Bargy](#) and [André Calmettes](#), features actors of the [Comédie-Française](#), and is accompanied by a score from [Saint-Saëns](#).

12/1908 - [Thomas Edison](#) forms the [Motion Picture Patents Company](#), with goals of controlling production and distribution, raising theater admission prices, cooperating with censorship bodies, and preventing film stock from getting into the hands of nonmember producers.

4/2/1909 February 4 – The [Paris Film Congress](#) begins, an attempt by leading European producers to form a cartel similar to that of the [Motion Picture Patents Company](#) in the United States.

12/5/1909 – [Mr. Flip](#) is released and is the first film to feature someone being [hit in the face with a pie](#).

23/5/1909 – The first [news cinema](#), The Daily Bioscope, opens in London.

17/6/1909 – [In the Sultan's Power](#) is the first film ever completely made in [Los Angeles, California](#). It is filmed by director [Francis Boggs](#).

25/10/1909 – [IMP](#) release their first film, [Hiawatha](#), based on the 1855 poem [The Song of Hiawatha](#) by [Henry Wadsworth Longfellow](#).^[2]

5/11/1909 - A Nature Movie by Arthur C. Pillsbury using film to explore the wonders of Yosemite. This first showing was for John Muir, a friend, and associate of Pillsbury's. Included was footage of the Hetch Hetchy. This film was then shown for the 1910 season at the Pillsbury Studio in Yosemite, advertised using postcards.^[3]

2/12/1909 – [Matsunosuke Onoe](#), who will become the first superstar of [Japanese cinema](#), appears in his first film, [Goban Tadanobu](#).

20/12/1909 – [James Joyce](#) opens the [Volta Cinematograph](#), the first cinema in Dublin.^[4]

18/10/1910 – The first cinematic version of [Mary Shelley's Frankenstein](#) (1818) is released in the United States by [Edison Studios](#). One of the first [horror films](#), it features (unbilled) actor [Charles Ogle](#) as [the monster](#).

6/5/1910 – The newsreel footage of the [funeral of Edward VII](#) is shot in [Kinemacolor](#), making it the first color [newsreel](#).

7/1910 – [The Johnson-Jeffries Fight](#) footage causes race riots and is banned in the South of the US.

2/1911 February: [The Motion Picture Story Magazine](#), the first American film [fan magazine](#), is published. It is followed later in the year by [Photoplay](#).

8/4/1911: [Winsor McCay](#) releases his first film [Little Nemo](#), one of the earliest animated films.

23/10/1911 (October 10 [OS](#)): [Svetozar Botorić's The Life and Deeds of the Immortal Leader Karađorđe](#) (*Život i dela besmrtnog vožda Karađorđa*, Живот и дела бесмртног војда Карађорђа) premieres in [Belgrade](#) and becomes the first [feature film](#) made in [Serbia](#) and the [Balkans](#).

26/10/1911: [Defence of Sevastopol](#) («Оборона Севастополя») premieres at the Crimean palace of Tsar Nicholas II and becomes the first feature-length film made in the Russian Empire and one of the first in the world.

27/10/1911: [David Horsley's Nestor Motion Picture Company](#) opens the first motion picture studio in [Hollywood](#).

11/1911: The [Kalem Company](#) of [New York](#) pays the estate of author [Lew Wallace](#) \$25,000 in legal settlement for having adapted [Ben Hur \(1907 film\)](#) from [his novel](#) without securing prior rights.

10/11/1911 – [Notre-Dame de Paris](#), directed by [Albert Capellain](#)

10/11/1911 – [Madame Sans-Gene](#), directed by [Henri Desfontaines](#) and [Andre Calmettes](#)

2/1912 – [Babelsberg Studio](#) outside [Berlin](#) begins operation with shooting of [The Dance of the Dead \(Der Totentanz\)](#) by Danish director [Urban Gad](#) starring [Asta Nielsen](#) (released September 7).

30/4/1912 – [Universal Film Manufacturing Company](#) is founded in New York, the oldest surviving film studio in the United States.

8/5/1912 – [Famous Players Film Company](#), the forerunner of [Paramount Pictures](#), is founded by [Adolph Zukor](#).

18/5/1912 – [Shree Pundalik](#) by [Dadasaheb Torne](#), the first [Indian film](#), is released.

8/6/1912 – [New York Motion Picture Company](#) is merged with Universal, giving Universal a studio in [Edendale, Los Angeles](#).

4/7/1912 – [Mack Sennett](#), who has previously worked as an actor and comedy director with [D. W. Griffith](#), forms a new company with New York City entrepreneur Adam Kessel, [Keystone Studios](#). It will play an important role in developing [slapstick](#) comedy as the home to the [Keystone Cops](#), English actor [Charlie Chaplin](#), and others.

12/7/1912 – [Queen Elizabeth](#) is the first film released by Famous Players. Directed by [Henri Desfontaines](#) and [Louis Mercanton](#). Actress [Sarah Bernhardt](#).

26/7/1912 – [Edison Studios](#) releases [What Happened to Mary](#), the first ever motion picture [serial](#).

15/10/1912 – [Richard III](#), directed by [Andre Calmettes](#) and [James Keane](#)

1/1/1913 – The [British Board of Film Censors](#) is established.

4/1/1913 – [Les Miserables](#), directed by [Albert Capellain](#), length – 6 hours

21/4/1913 – The first full-length Indian (and Marathi) feature film [Raja Harishchandra](#) (silent)^{[1][2]} has its première (public release May 3).

5/1913 – [Mary Pickford](#) signs a contract with [Adolph Zukor's Famous Players Film Company](#) for \$500 per week, becoming the company's first superstar.^[3]

8/5/1913 – [Fantomax](#), a l'hombre de la guillotine, directed by [Louis Feuillade](#)

12/9/1913 – Juve contre Fantomas, directed by Louis Feuillade

17/9/1913 – L'enfant de Paris, directed by Leonce Perret

3/10/1913 – Germinal, directed by Albert Capellain

21/11/1913 – Fantomas, le mort qui tue, directed by Louis Feuillade

24/11/1913 - [*Traffic in Souls*](#) is an early example of the narrative style of Hollywood film.

29/12/1913 – [Charlie Chaplin](#) signs a contract with [Mack Sennett](#) to begin making films at [Keystone Studios](#).

29/12/1913 – release of [*The Adventures of Kathlyn*](#), the second American [serial film](#) and the first to feature [cliffhanger](#) endings that became popular with later serials.

29/12/1913 – production starts on Jesse L. Lasky Feature Play Company's [*The Squaw Man*](#), the first full-length [Hollywood](#) feature film.

28/1/1914 – Le roman d'un mousse, directed by Leonce Perret

2/2/1914 – [Charlie Chaplin](#)'s first film, [*Making a Living*](#) is released.

7/2/1914 – Release of Charlie Chaplin's second film, the [Keystone](#) comedy [*Kid Auto Races at Venice*](#), in which his character of [The Tramp](#) is introduced to audiences (although first filmed in [*Mabel's Strange Predicament*](#), released two days later).^{[2][3][4]}

8/2/1914 – [Winsor McCay](#)'s [*Gertie the Dinosaur*](#) greatly advances filmed animation movement techniques.

10/2/1914 – Release of the film [*Hearts Adrift*](#); the name of [Mary Pickford](#), the star, is displayed above the title on movie marquees.

2/1914 – [Lewis J. Selznick](#) and [Arthur Spiegel](#) organize the [World Film Corporation](#),^{[5][6]} a distributor of independently produced films^[7] located in [Fort Lee, New Jersey](#),^{[8][9][10]}

27/2/1914 – Le chevalier de Maison-Rouge, directed by Albert Capellain

8/3/1914 – [D. W. Griffith](#)'s first feature film, [*Judith of Bethulia*](#), is released. It is his last production for the [Biograph Company](#).

13/3/1914 – Fantomas contre Fantomas, directed by Louis Feuillade

20/3/1914 – [*Tess of the Storm Country*](#) makes [Mary Pickford](#) an icon in the US and a celebrity around the world.

31/3/1914 – The serial [*The Perils of Pauline*](#) is an early example of the [damsel in distress](#) in film.

12/4/1914 – The 3,300-seat [Mark Strand Theatre](#) opens in New York City.

18/4/1914 – [Cabiria](#), directed by [Giovanni Pastrone](#), is released in Italy, the first [epic film](#),^[1] featuring the first extensive use of a moving [camera dolly](#) in a feature film, and introducing the long-running character [Maciste](#).

8/5/1914 – [Paramount Pictures](#) is formed as a film distributor by [William Wadsworth Hodgkinson](#).

8/5/1914 – [Fantomas, le faux magistrat](#), directed by [Louis Feuillade](#)

19/11/1914 – [William Fox's Box Office Attractions Company](#) releases its first production, [Life's Shop Window](#).

3/12/1914 – [William S. Hart](#) appears in his first feature film, [The Bargain](#), which makes him a star.

21/12/1914 – Release of the first American made feature-length comedy film, [Tillie's Punctured Romance](#), which also contains [Marie Dressler](#) and [Charlie Chaplin](#)'s feature film debuts.

12/1914 – Chaplin joins [Essanay Studios](#) for \$1,250 per week.

1/2/1915 : [Fox Film Corporation](#) founded

8/2/1915: [D.W Griffith's The Birth of a Nation](#) premieres at Clune's Auditorium Los Angeles and breaks both box office and film length records (running at a total length of over three hours).

2/1915: [Metro Pictures](#), a forerunner of [Metro-Goldwyn-Mayer](#), is founded^[1]

22/2/1915: The [Allan Dwan](#) directed film [David Harum](#) is released. The film is the first in long line of a successful romantic onscreen pairings of actors [May Allison](#) and [Harold Lockwood](#).

15/3/1915: [Universal Studios Hollywood](#) opens (1964).

18/6/1915: The [Motion Picture Directors Association](#) (MPDA) is formed by twenty-six [film directors](#) in [Los Angeles, California](#).

7/1915: [Triangle Film Corporation](#) is founded in [Culver City, California](#) and attracts filmmakers [D. W. Griffith](#), [Thomas H. Ince](#) and [Mack Sennett](#)

23/9/1927 – Sunrise: A song of two humans, in the US, directed by [F. W. Murnau](#), produced by [Fox](#).

6/10/1927 – [The Jazz Singer](#), starring [Al Jolson](#), premieres at the Warner Theater in New York City. Although not the first 'talkie', [The Jazz Singer](#) becomes the first box-office hit and popularizes sound motion pictures. It is the highest-grossing movie up to this time.^[citation needed] In keeping with the film's theme of a conflict within a Jewish family, the film premiered after sunset on the eve of the [Yom Kippur](#) holiday. The buildup to the premiere was tense. Besides Warner Bros.' precarious financial position, the physical presentation of the film itself was remarkably complex: Each of Jolson's musical numbers was mounted on a separate reel with a separate accompanying sound disc. Even though the film was only eighty-nine minutes

long...there were fifteen reels and fifteen discs to manage, and the projectionist had to be able to thread the film and cue up the Vitaphone records very quickly. The least stumble, hesitation, or human error would result in public and financial humiliation for the company.

None of the four Warner brothers were able to attend: [Sam Warner](#)—among them, the strongest advocate for Vitaphone—had died the previous day of pneumonia, and the surviving brothers had returned to California for his funeral. According to Doris Warner, who was in attendance, about halfway through the film she began to feel that something exceptional was taking place. Suddenly, Jolson's face appeared in big close-up, and said "Wait a minute, wait a minute, you ain't heard nothing yet!" Jolson's "Wait a minute" line prompted a loud, positive response from the audience, who were dumbfounded by seeing and hearing someone speak on a film for the first time, so much so that the double-entendre was missed at first. Applause followed each of his songs. Excitement built, and when Jolson and Eugenie Besserer began their dialogue scene, "the audience became hysterical." After the show, the audience turned into a "milling, battling, mob", in one journalist's description, chanting "Jolson, Jolson, Jolson!" Among those who reviewed the film, the critic who foresaw most clearly what it presaged for the future of cinema was *Life* magazine's [Robert E. Sherwood](#). He described the spoken dialogue scene between Jolson and Besserer as "fraught with tremendous significance.... I for one suddenly realized that the end of the silent drama is in sight".

9/11/1927 – Catherine ou une vie sans joie, directed by Jean Renoir and Albert Dieudonne

17/11/1927 – The Kid Brother, directed by Ted Wilde, with Harold Lloyd, production – The Corporation. New York – 23/11/1927.

6/7/1928 – *Lights of New York* (starring [Helene Costello](#)) is released by [Warner Bros](#). It is the first "100% Talkie" feature film, in that dialog is spoken throughout the film. Previous releases *Don Juan* and *The Jazz Singer* had used a synchronized soundtrack with sound effects and music, with *The Jazz Singer* having a few incidental lines spoken by [Al Jolson](#).^[6]

18/7/1928, La chute de la maison Usher, Jean Epstein

18/7/1928, Tire au flanc, Jean Renoir

15/9/1928 – The Docks of New York, directed by Josef von Sternberg, released in New York by Paramount.

19/9/1928 – *The Singing Fool*, Warner Bros' follow-up to *The Jazz Singer*, is released. While still only a partial-talkie (sequences still featured [intertitles](#)), 66 minutes of the film's 105 minute running time feature dialogue or songs, making it the longest talking motion picture yet. (*Lights of New York* runs a total of 57 minutes.) It is the highest-grossing film of the year, becomes Warner Bros' highest-grossing film for the next 13 years, and is the most financially successful film of Al Jolson's career.^{[7][8]}

23/10/1928 – [RKO Productions Inc.](#) created

10/11/1928 – At the beginning of *White Shadows in the South Seas*, [Metro-Goldwyn-Mayer's](#) mascot [Leo the Lion](#) roars for the very first time, giving voice to one of the most popular American film logos.^{[9][10][11]}

18/11/1928 – [Disney's](#) *Steamboat Willie* premieres, marking the official introduction of [Mickey Mouse](#). This animated short is the first film to include a soundtrack, completely created in post production, including sound effects, music, and dialogue.

23/11/1928 – The Wind, directed by Victor Sjöström, with Lilian Gish, distributed by MGM.

25/12/1928 – *In Old Arizona*, released by [Fox Films](#), is the first sound-on-film feature-length talkie, utilizing the [Movietone](#) process. Previously, feature-length talkies used the less-reliable [Vitaphone](#) sound-on-disc process. It is also the first Western talkie, and the first sound film primarily shot outdoors.

25/12/1928, L'argent, Marcel L'Herbier

7/1/1929 - The first [science fiction comic strip](#), [Buck Rogers](#), begins January 7, 1929.

7/1/1929 - The first [Tarzan](#) comic strip begins on this date.

1/2/1929 – [The Broadway Melody](#) is released by [MGM](#), Grauman's Chinese Theater, Los Angeles, becomes the first major musical film of the sound era, sparking a host of imitators as well as a series of *Broadway Melody* films that will run until [1940](#).

15/2/1929, *Le capitaine Fracasse*, Alberto Cavalcanti

18/2/1929, *Le tournoi dans la cite*, Jean Renoir

18/2/1929 – The first [Academy Awards](#), or Oscars, are announced for the year ended August 1, 1928.

1/3/1929, *Les deux timides*, Rene Clair

3/3/1929 – [William Fox](#) announces that he has taken control of [Loews Inc.](#), including its subsidiary [Metro-Goldwyn-Mayer](#), buying shares from [Marcus Loew](#)'s widow and sons and [Nicholas Schenck](#) for \$50 million. The acquisition eventually falls through.

5/4/1929, *Les nouveaux messieurs*, Jacques Feyder

13/4/1929 – *Close Harmony*, musical talkie, produced by Paramount, directed by John Cromwell and A. Edward Sutherland

11/5/1929, *Le bled*, Jean Renoir

16/5/1929 – The first Academy Awards are distributed at [The Hollywood Roosevelt Hotel](#) in Los Angeles. The **1st Academy Awards** ceremony, presented by the [Academy of Motion Picture Arts and Sciences](#) (AMPAS), honored the best films of 1927 and 1928 and took place on May 16, 1929, at a private dinner held at [the Hollywood Roosevelt Hotel](#) in Los Angeles, California. AMPAS president [Douglas Fairbanks](#) hosted the show. Tickets cost \$5 (which would be \$74 in 2019, considering inflation), 270 people attended the event and the presentation ceremony lasted 15 minutes. Awards were created by [Louis B. Mayer](#), founder of [Louis B. Mayer Pictures Corporation](#) (at present merged into [Metro-Goldwyn-Mayer](#)). It is the only Academy Awards ceremony not to be broadcast either on radio or television. The radio broadcast was introduced during the [2nd Academy Awards](#).^[2] During the ceremony, AMPAS presented [Academy Awards](#) – now colloquially known as the Oscars – in 12 categories. Winners were announced three months before the live event. Some nominations were announced without reference to a specific film, such as for [Ralph Hammeras](#) and [Nugent Slaughter](#), who received nominations in the now-defunct category of Engineering Effects.^[3] Unlike later ceremonies, an actor could be awarded for multiple works within a calendar year for the same category. [Emil Jannings](#), for example, was given the [Best Actor](#) award for his work in both *[The Way of All Flesh](#)* and *[The Last Command](#)*. Also, [Charlie Chaplin](#) and [Warner Brothers](#) each received an Honorary Award.^{[4][5]} Major winners at the ceremony included *[7th Heaven](#)* and *[Sunrise](#)*, which each received three awards, and *[Wings](#)*, receiving two awards. Among its honors, *Sunrise* won the award for Unique and Artistic Picture, and *Wings* won the award for [Outstanding Picture](#) (now known as Best Picture). These two categories at the time were regarded equally as the top award of the night, intended to honor different and important aspects of superior filmmaking. The next year, the Academy

dropped the Unique and Artistic Picture award and decided retroactively that the award won by *Wings* was the highest honor that could be awarded.^{[3][6]}

26/5/1929 – *Fox Grandeur News* is shown in *Fox Film*'s new widescreen 70 mm *Grandeur film* format

26/6/1929, *Finis Terrae*, Jean Epstein

13/7/1929 – The first all color talkie (in *Technicolor*), *On with the Show*, is released by *Warner Bros.* who lead the way in a new color revolution just as they had ushered in that of the talkies.

17/7/1929 – *William Fox* is badly injured in a car accident which kills his chauffeur.

27/9/1929 – *Die Buchse der Pandora*, German film premiered in Vienna, Austria. Directed by G. W. Pabst, acting *Louise Brooks*, produced by *Nero Film*, distributed by *Sud Film*.

28/7/1929 – *Blackmail*, in the UK, London, directed by *Alfred Hitchcock*, produced by *BIP*.

3/8/1929 – *The Cock-Eyed World* beats every known gross for any box office attraction throughout the world with a reported first week gross of \$173,391 at the *Roxy Theatre (New York City)*.^[5]

20/8/1929 – *Hallelujah!* is the first Hollywood film to contain an entire black cast.

22/8/1929 – First in the *Walt Disney Productions*' animated short *Silly Symphony* series, *The Skeleton Dance*, is released.

9/1929 – *Paramount Pictures* acquires 49% of *CBS*.

27/9/1929 Vienna, 15/10/1929 Germany – *Tagebuch einer Verlorenen*, *Diary of a lost girl*, directed by G. W. Pabst, produced by *Pabst Film*.

24/10/1929 – *Jean Harlow* signs a five-year, \$100 per week contract with *Howard Hughes*.

25/10/1929, *Monte Cristo*, *Henri Frescourt*

30/10/1929 – Entertainment newspaper *Variety* report that *Wall Street Lays An Egg* leading to many prominent showman and film stars losing money on their investments.

31/10/1929 – *Les trios masques*, directed by *Andre Hugon*, the first French Talkie, producer *Pathe* owned by *Bernard Natan* since 2/1929

11/1929 – *Warner Bros.* gain complete control of *First National Pictures* buying *Fox Film*'s 36% stake for \$10 million^[6]

6/11/1929, Un chien andalou, Luis Bunuel

10/11/1929 – Première of [John Grierson's documentary film *Drifters*](#) about [North Sea herring fishermen](#), made for the [Empire Marketing Board](#), effectively inaugurating the British [Documentary Film Movement](#). (It debuts at the private Film Society in London on a double-bill with the U.K. première of [Eisenstein's *The Battleship Potemkin*](#).)^[7]

15/11/1929 – U.K. release of [Atlantic](#), a film about the [sinking of the RMS Titanic](#) which is one of the first British [sound-on-film](#) movies and, in its simultaneously-shot German-language version, the first to be released in Germany; also the first *Titanic* movie with sound.

12/1929 – [Anti-trust](#) suits are filed against [William Fox](#) and [Warner Bros.](#) by the [US Department of Justice](#) for Fox's acquisition of Loews and Warners' acquisition of the Stanley Corporation of America and First National.

23/2/1930: Silent screen legend [Mabel Normand](#) dies at the age of 37 in [Monrovia, California](#) after a lengthy battle with tuberculosis.

10/3/1930: Release of [Goodbye Argentina](#) (*Adiós Argentina*), the first Argentine film with a (musical) soundtrack. [Ada Cornaro](#) has her first starring role and [Libertad Lamarque](#) makes her film debut.

3/4/1930 - The 2nd Academy Awards honored the best films released between August 1, 1928, and July 31, 1929. They took place on April 3, 1930, at an awards banquet in the Cocoanut Grove of the [Ambassador Hotel](#) in Los Angeles. Most nominations: [In Old Arizona](#) (Fox Film Corporation) – 5 - Best Picture: [The Broadway Melody](#) (MGM) - Best Director: [Frank Lloyd](#) – [The Divine Lady](#) - Best Actor: [Warner Baxter](#) – [In Old Arizona](#) - Best Actress: [Mary Pickford](#) – [Coquette](#)/ Most awards – no film won more than 1 award/ Note: Prior to 1933, awards were not based on calendar years. Best Picture, Actress and Director went to 1930 films.

6/4/1930: [William Fox](#) sells his interest in [Fox Film](#) for \$18 million and [Harley L. Clarke](#) becomes president.^{[7][8]}

27/5/1930: [Howard Hughes'](#) epic film [Hell's Angels](#) premieres at [Grauman's Chinese Theatre](#) in [Hollywood](#) and features [Jean Harlow](#) in her first major role as well as some impressive aerial sequences. Although not a financial success upon its release due to its bloated budget, the film is acclaimed by critics and launches Harlow as one of the 1930s' biggest stars.

3/9/1930: [The Hollywood Reporter](#) is first published.

19/9/1930: [The Love Parade](#) receives a record six [Academy Award](#) nominations.

1/11/1930: [The Big Trail](#) featuring a young [John Wayne](#) in his first starring role is released in both [35mm](#) and a very early form of [70mm](#) film. It is the first large scale big-budget film of the sound era, costing over \$2 million. The film is praised for its aesthetic quality and realism that will not become commonplace until many decades later. However, due to the new film

format and the film's release during the [Great Depression](#), the film will go on to become a financial failure at the box office.

5/11/1930 at the Ambassador Hotel, Los Angeles, California, hosted by Conrad Nagel - the **3rd Academy Awards** were awarded to films completed and screened released between August 1, 1929, and July 31, 1930, by the [Academy of Motion Picture Arts and Sciences](#).

[All Quiet on the Western Front](#) was the first film to win both Best Picture and Best Director, a feat that would become common in later years. Lewis Milestone became the first person to win two Oscars, having won Best Director – Comedy at the [1st Academy Awards](#).

[The Love Parade](#) received six nominations, the greatest number of any film to that point. However, it did not win in any category.

[Best Sound Recording](#) was introduced this year, making it the first new category since the inception of the Oscars. It was awarded to [Douglas Shearer](#), brother of Best Actress winner [Norma Shearer](#), making them the [first sibling winners](#) in Oscar history.

This was also the first Academy Awards ceremony to be filmed.^[1] It is unknown where it was filmed at, but what was filmed was [Universal Pictures](#) co-founder and president [Carl Laemmle](#) winning a special Academy Award for [All Quiet on the Western Front](#) which was given to him by [Louis B. Mayer](#), who was vice president of [Metro-Goldwyn-Mayer](#) at the time, Norma Shearer winning her Best Actress award, and screenwriter [Frances Marion](#) winning the [Academy Award for Best Writing Achievement](#) for [The Big House](#).

5/1/1931: [RKO](#) acquires the producing and distribution arm of [Pathé](#) for \$4.6 million.^[6]

20/6/1931: [Monogram Pictures](#) releases its first film, [Ships of Hate](#).^[7]

7/7/1931: Anti-competitive practices disclosed about certain distributors and producers in Canada.^[8]

10/11/1931 at the Biltmore Hotel, Los Angeles, California - The **4th Academy Awards** were awarded to films completed and screened released between August 1, 1930, and July 31, 1931, by the [Academy of Motion Picture Arts and Sciences](#). At the ceremony, nine-year-old [Jackie Cooper](#), nominated for Best Actor in [Skippy](#), fell asleep on the shoulder of Best Actress nominee Marie Dressler. When Dressler was announced as the winner, Cooper had to be eased onto his mother's lap. [Cimarron](#) was the first Western to win Best Picture, and would remain the only one to do so for 59 years (until [Dances with Wolves](#) won in 1991). It received a then-record seven nominations, and was the first film to win more than two awards. [Jackie Cooper](#) was the first child star to receive a nomination, and he was the youngest nominee for nearly 50 years. He is the second-youngest Oscar nominee ever and [the only Best Actor nominee under age 18](#). Best Actor winner [Lionel Barrymore](#) became the first person to have received nominations in multiple categories, with a Best Director nod for [Madame X](#) at the [2nd Academy Awards](#). He was also the only ever best leading actor winner to be born in the 1870s In addition, [Cimarron](#) and [A Free Soul](#) became the first movies to receive multiple acting nominations.

17/11/1931: E. R. Tinker elected president of [Fox Films](#) replacing Harley L. Clarke.^[8]

14/12/1931:RKO refinancing plan approved.^[8]

18/11/1932 - The 5th Academy Awards were conducted by the [Academy of Motion Picture Arts and Sciences](#) on November 18, 1932,^[7] at a ceremony held at [The Ambassador](#)

Hotel^[7] in Los Angeles, California. The ceremony was hosted by Conrad Nagel.^[7] Films screened in Los Angeles between August 1, 1931, and July 31, 1932, were eligible to receive awards.^[7] Major awards: Best Picture: *Grand Hotel* – Metro-Goldwyn-Mayer - Best Director: **Frank Borzage** – *Bad Girl* - Best Actor: **Fredric March** – *Dr. Jekyll and Mr. Hyde* & **Wallace Beery** – *The Champ* - Best Actress: **Helen Hayes** – *The Sin of Madelon Claudet*/ Note: Prior to 1933 awards were not based on calendar years, which is how there are no Best Actor, Best Actress or Best Director awards for 1932 films. The 1931–32 awards went to 1931 films.

11/1/1933 – Radio City Music Hall in New York City starts showing films.^[7]

2/3/1933 – *King Kong* premieres at Radio City Music Hall.^[8]

9/3/1933 - Punyal na Ginto (The Golden Dagger), the first Filipino-language film made in the Philippines, was released.^[9]

11/3/1933 – *42nd Street* sparks a comeback for musical film.^[7]

6/6/1933 – The drive-in theater is patented in Camden, New Jersey.^[10]

6/9/1933 – *Daily Variety*, a trade newspaper, is published for the first time in Hollywood.^[11]

10/10/1933 – John Wayne appears as Singin' Sandy Saunders in *Riders of Destiny*.

29/12/1933 – Fred Astaire and Ginger Rogers appear on screen together for the first time in *Flying Down to Rio*.

26/1/1934 – Samuel Goldwyn (formerly of Metro-Goldwyn-Mayer) purchases the film rights to *The Wonderful Wizard of Oz* from the L. Frank Baum estate for \$40,000.

19/2/1934 – Bob Hope marries Dolores Reade.

16/3/1934 - The 6th Academy Awards were held on March 16, 1934, at The Ambassador Hotel in Los Angeles. They were hosted by Will Rogers and Rogers also presented all of the awards. This was the last time that the Oscars' eligibility period was spread over two different calendar years, creating the longest time frame for which films could be nominated: the seventeen months from August 1, 1932, to December 31, 1933. Most nominations: *Cavalcade* (Fox Film); *A Farewell to Arms* (Paramount Pictures) and *Lady for a Day* (Columbia Pictures) – 4. Major awards: Best Picture: *Cavalcade* – Fox Film - Best Director: **Frank Lloyd** – *Cavalcade* - Best Actor: **Charles Laughton** – *The Private Life of Henry VIII* - Best Actress: **Katharine Hepburn** – *Morning Glory*/ Most Awards: *Cavalcade* – 3 (Outstanding Production; Best Director; Best Art Direction)

19/4/1934 – Fox Studios releases *Stand Up and Cheer!*, with five-year-old Shirley Temple in a relatively minor role. Shirley steals the film and Fox, which had been near bankruptcy, finds itself owning a goldmine.

18/5/1934 – Paramount releases *Little Miss Marker*, with Shirley Temple, on loan from Fox, in the title role.

13/6/1934 – An amendment to the [Production Code](#) establishes the [Production Code Administration](#), and requires all films to obtain a certificate of approval before being released.

28/7/1934 – Canadian-born actress [Marie Dressler](#), best known for starring in films such as [Min and Bill](#) and [Emma](#), dies from cancer in [Santa Barbara, California](#) at the age of 65. For her performance in *Min and Bill*, Dressler received the [Academy Award for Best Actress](#).

12/10/1934 – [Fred Astaire](#) and [Ginger Rogers](#) wham audiences again in their first joint starring roles with [The Gay Divorcee](#) grossing \$1.8 million^[4] to add to the \$1.5 million^[4] earned by [Flying Down to Rio](#) released at the end of 1933

12/11/1934 – The musical [Babes in Toyland](#) debuts, starring [Stan Laurel](#) and [Oliver Hardy](#) as comic relief.

11/12/1934 – Fox releases the [Sol M. Wurtzel](#) production of [Bright Eyes](#), starring their hot new property, Shirley Temple. Shirley sings "[On the Good Ship Lollipop](#)", and wins the first [Academy Award](#) ever given to a child, for her endearing portrayal of Shirley Blake.

22/2/1935 – [The Little Colonel](#) premieres starring [Shirley Temple](#), [Lionel Barrymore](#) and [Bill Robinson](#), featuring famous stair dance with Hollywood's first interracial dance couple

23/2/1935 – [Gene Autry](#) stars as himself as the Singing Cowboy in the serial [The Phantom Empire](#). He would later be voted the number one [Western](#) star from 1937 to 1942.

27/2/1935 – Seven-year-old [Shirley Temple](#) wins the first special [Academy Juvenile Award](#).

27/2/1935 - the 7th Academy Awards was held on February 27, 1935, at the [Biltmore Hotel](#) in [Los Angeles](#). They were hosted by [Irvin S. Cobb](#). For the first time, the [Academy](#) standardized the practice – still in effect – that the award eligibility period for a film would be the preceding calendar year. Most nominations: [One Night of Love](#) ([Columbia Pictures](#)) – 6. Major Awards - Best Picture: [It Happened One Night](#) – [Columbia Pictures](#) - Best Director: [Frank Capra](#) – [It Happened One Night](#) - Best Actor: [Clark Gable](#) – [It Happened One Night](#) - Best Actress: [Claudette Colbert](#) – [It Happened One Night](#) Most Awards: [It Happened One Night](#) – 5 - [It Happened One Night](#) became the first film to perform a "clean sweep" of the top five award categories: Best Picture, Best Director, Best Actor, Best Actress, and Best Screenplay. This feat would later be duplicated by [One Flew Over the Cuckoo's Nest](#) in 1976 and [The Silence of the Lambs](#) in 1992. It also was the first romantic comedy to be named Best Picture.

3/1935 – The [Bantu Educational Kinema Experiment](#) is started in order to educate the [Bantu peoples](#).^[5]

5/1935 - Formation of [Republic Pictures](#) following merger of smaller companies including [Monogram Pictures](#), [Mascot Pictures](#), [Liberty Pictures](#) and [Majestic Pictures](#).

31/5/1935 – [Fox Film](#) and [Twentieth Century Pictures](#) merge to form [20th Century Fox](#).

15/8/1935 – [Will Rogers](#) who the previous year was voted the [Top Money Making Star](#) dies in a plane crash.

25/8/1935 – William Boyd appears in his first of 66 films as Hopalong Cassidy in *Hop-Along Cassidy*.

9/1935 – Judy Garland signs a contract with Metro-Goldwyn-Mayer (MGM).

5/9/1935 – Gene Autry appears in his first film for the newly formed Republic Pictures – *Tumbling Tumbleweeds*, named after his second million-selling record.

30/11/1935 – The British-made film *Scrooge*, the first all-talking film version of Charles Dickens' novel *A Christmas Carol*, opens in the U.S. after its U.K. release on November 26. Seymour Hicks plays Ebenezer Scrooge, a role he has played onstage hundreds of times. The film is criticized by some for not showing all of the ghosts physically, and quickly fades into obscurity. Widespread interest does not surface until the film is shown on television in the 1980s, in very shabby-looking prints. It is eventually restored on DVD.

9/1/1936 January 9 – Silent screen icon John Gilbert, perhaps best known for his appearances in films such as *The Merry Widow* and *The Big Parade*, dies suddenly of a heart attack at his Bel Air home, aged 38.

15/2/1936 – first Republic serial, *Darkest Africa*, is released.

5/3/1936 - The 8th Academy Awards were held on March 5, 1936, at the Biltmore Hotel in Los Angeles, California. They were hosted by Frank Capra. This was the first year in which the gold statuettes were called "Oscars". Most nominations: *Mutiny on the Bounty* (MGM) – 8. Major Awards. Best Picture: *Mutiny on the Bounty* – Metro-Goldwyn-Mayer - Best Director: John Ford – *The Informer* - Best Actor: Victor McLaglen – *The Informer* - Best Actress: Bette Davis – *Dangerous*. Most Awards: *The Informer* (RKO) – 4 (Actor, Director, Adaptation, Scoring)

29/5/1936 – Fritz Lang's first Hollywood film, *Fury*, starring Spencer Tracy and Bruce Cabot, is released.

14/9/1936 – Film producer Irving Thalberg, often referred by many as the "Boy Wonder of Hollywood", dies from pneumonia at his home in Santa Monica, aged 37.

4/3/1937 at the Biltmore Hotel, Los Angeles, California - The 9th Academy Awards were held on March 4, 1937, at the Biltmore Hotel in Los Angeles, California.^[1] They were hosted by George Jessel; music was provided by the Victor Young Orchestra, which at the time featured Spike Jones on drums. This ceremony marked the introduction of the Best Supporting Actor and Best Supporting Actress categories, and was the first year that the awards for directing and acting were fixed at five nominees per category.

My Man Godfrey became the first film to receive nominations in all four acting categories, but did not win in any category. It is the only such film to not receive a nomination for Best Picture, and was the only one to lose all of its nominations until *Sunset Boulevard* at the 23rd Academy Awards. It was also the first of four films to receive four acting nominations without one for Best Picture, followed by *I Remember Mama* (1948), *Othello* (1965), and *Doubt* (2008).

16/4/1937 – *Way Out West* premieres in the US.

7/5/1937 – *Shall We Dance* premieres in the US.

11/5/1937 – [Captains Courageous](#) premieres in the US.

7/6/1937 – [Jean Harlow](#), one of the biggest Hollywood stars of the decade, dies aged 26 at [Good Samaritan Hospital](#) in Los Angeles. The official cause of death is listed as [cerebral edema](#), a complication of kidney failure.

9/7/1937 – The silent film archives of [Fox Film Corporation](#) are destroyed by the [1937 Fox vault fire](#).

23/7/1937 – Six weeks after Jean Harlow's death, her final film, [Saratoga](#), is released. It is an instant box office success and becomes the most financially successful film of Harlow's career.

21/12/1937 – [Snow White and the Seven Dwarfs](#) premieres at the [Carthay Circle Theatre](#) in [Los Angeles](#). The film is a massive box office success and briefly holds the record as the highest-grossing sound film of all time.

1/1938 January – [MGM](#) announces that [Judy Garland](#) will be cast in the role of [Dorothy Gale](#) in the upcoming [The Wizard of Oz](#) film. [Ray Bolger](#) is cast as the [Tin Woodman](#) and [Buddy Ebsen](#) as the [Scarecrow](#). At Bolger's insistence, the roles are switched between the two actors. On July 25, MGM announces [Bert Lahr](#) has been cast as the [Cowardly Lion](#).

24/2/1938 – The entertainment trade newspaper Variety reported that the film studio Metro-Goldwyn-Mayer (MGM) had bought the rights to adapt [L. Frank Baum](#)'s beloved children's novel [The Wonderful Wizard of Oz](#) for the screen.

3/3/1938 - The **10th Academy Awards** were originally scheduled for March 3, 1938, but due to the [Los Angeles flood of 1938](#)^{[1][2]} were held on March 10, 1938, at the [Biltmore Hotel](#) in [Los Angeles, California](#). It was hosted by [Bob Burns](#).^[3] Two categories were discontinued following this presentation: [Best Dance Direction](#), which was the only nomination ever received by a [Marx Brothers](#) film (Dave Gould for the dance number "All God's Children Got Rhythm" in [A Day at the Races](#)), and [Best Assistant Director](#). [The Life of Emile Zola](#) was the first film to receive ten nominations and the second biographical film to win [Best Picture](#), following the previous years [The Great Ziegfeld](#). [Luise Rainer](#) received the [Academy Award for Best Actress](#) for [The Good Earth](#), earning her the distinctions of being the first actor to win two Academy Awards and the first to win consecutive acting awards, following her performance in [The Great Ziegfeld](#). [A Star Is Born](#) was the first color film to receive a [Best Picture](#) nomination. [Walt Disney's Snow White and the Seven Dwarfs](#), the world's first full-length [Technicolor](#) animated feature film with sound and widely seen as [one of the greatest motion pictures of all time](#), received only one nomination ([Best Score](#)). In the following year, the Academy presented Disney an [Honorary Academy Award](#), "for creating [Snow White and the Seven Dwarfs](#) [1937], recognized as a significant screen innovation which has charmed millions and pioneered a great new entertainment field for the motion picture cartoon". (One statuette and seven miniature statuettes on a stepped base.) This is a rare case of a film being recognized in two succeeding ceremonies. The presentation of the [Irving G. Thalberg Memorial Award](#) began, presented to [Darryl F. Zanuck](#), who also as of 2014 holds the record for most presentations at three. This was the first year in which every film nominated for Best Picture received multiple nominations.

5/4/1938 – [Noel Langley](#) completes the first script for *The Wizard of Oz*.

20/4/1938 – Leonard Slye appears in his first starring role as [Roy Rogers](#) in *Under Western Stars*. He became one of the most popular [Western](#) stars being ranked number one from 1943 to 1952 and would become known as "King of the Cowboys".

7/5/1938 – Lyricist [Edgar Yipsel Harburg](#) and composer, [Harold Arlen](#), begin work on the musical score for *The Wizard of Oz*.

13/10/1938 – Filming starts on *The Wizard of Oz* on the [Metro-Goldwyn-Mayer studio lot](#) in [Culver City, California](#), initially with [Richard Thorpe](#) as director.

21/10/1938 – [Buddy Ebsen](#) suffers from a near fatal allergic reaction to the aluminum dust used in his Tin Woodman make-up on the set of *The Wizard of Oz*. Ebsen is replaced by [Jack Haley](#).

23/12/1938 – [Margaret Hamilton](#) is severely burned during a mishap on the set of *The Wizard of Oz*. Hamilton, who was cast in the role of the [Wicked Witch of the West](#), leaves the film for six weeks.

1939 Film historians often rate 1939 as "the greatest year in the history of Hollywood".^{[8][9]} Hollywood films produced in [Southern California](#) were at the height of their [Golden Age](#) (in spite of many cheaply made or undistinguished films' also being produced, something to be expected with any year in commercial cinema), and during 1939 there are the [premieres](#) of an outstandingly large number of exceptional motion pictures, many of which become honored as all-time classic films.

23/2/1939 - The **11th Academy Awards** were held on February 23, 1939, at the [Biltmore Hotel](#) in [Los Angeles, California](#).^[1] It was the first Academy Awards show without any official host. This was also the first ceremony in which a foreign language film ([Jean Renoir's Grand Illusion](#)) was nominated for [Best Picture](#). [Frank Capra](#) became the first person to win three Best Director awards, to be followed by [John Ford](#) (who would go on to win four) and [William Wyler](#). This was the first of only two times in Oscar history that three of the four acting awards were won by repeat winners; only [Fay Bainter](#) was a first time award winner. The only other time that this happened was at the [67th Academy Awards](#) in 1994. Fay Bainter also was the first actress in the history of the Oscars to receive [two acting nominations in the same year](#). In addition, [Spencer Tracy](#) became the first of only two lead actors to win two years in a row; the other one, [Tom Hanks](#), also did so in 1994. [George Bernard Shaw's](#) screenplay win would make him the only person to win both a [Nobel Prize](#) and an Academy Award until [Bob Dylan](#) received the [Academy Award for Best Original Song](#) in 2001 and the [Nobel Prize in Literature](#) in 2016. Radio coverage was banned at the 1939 ceremony. A reporter from [KNX](#), Los Angeles, which had been reporting from the Academy Awards since 1930, locked himself into a booth and was able to broadcast for a few minutes before security guards broke down the door. Partial radio coverage was permitted again at the 1942 ceremony.^[2]

31/3/1939 – Release of the [20th Century Fox](#) film version of *The Hound of the Baskervilles*, first of a [Sherlock Holmes film series](#) starring [Basil Rathbone](#) as [Sherlock Holmes](#) and [Nigel Bruce](#) as [Dr. Watson](#).

10/6/1939 – MGM's first successful animated character, [Barney Bear](#), made his debut in [The Bear That Couldn't Sleep](#).

15/8/1939 – [The Wizard of Oz](#) premiered at [Grauman's Chinese Theatre](#) in Los Angeles.

17/10/1939 – [Mr. Smith Goes to Washington](#) premiered in [Washington, D.C.](#)

15/12/1939 – [Gone with the Wind](#) premiered in [Atlanta](#), Georgia, with a three-day-long festival.

[Gone with the Wind](#) is a 1939 American [epic historical romance film](#) adapted from the 1936 [novel](#) by [Margaret Mitchell](#). The film was produced by [David O. Selznick](#) of [Selznick International Pictures](#) and directed by [Victor Fleming](#). Set in the [American South](#) against the backdrop of the [American Civil War](#) and the [Reconstruction era](#), the film tells the story of [Scarlett O'Hara](#), the strong-willed daughter of a Georgia plantation owner. It follows her romantic pursuit of [Ashley Wilkes](#), who is married to his cousin, [Melanie Hamilton](#), and her subsequent marriage to [Rhett Butler](#). The leading roles are played by [Vivien Leigh](#) (Scarlett), [Clark Gable](#) (Rhett), [Leslie Howard](#) (Ashley), and [Olivia de Havilland](#) (Melanie).

Production was difficult from the start. Filming was delayed for two years because of Selznick's determination to secure Gable for the role of Rhett Butler, and the "search for Scarlett" led to 1,400 women being interviewed for the part. The original screenplay was written by [Sidney Howard](#) and underwent many revisions by several writers in an attempt to reduce it to a suitable length. The original director, [George Cukor](#), was fired shortly after filming began and was replaced by Fleming, who in turn was briefly replaced by [Sam Wood](#) while Fleming took some time off due to [exhaustion](#).

The film received positive reviews upon its release in December 1939, although some reviewers found it to be too long. The casting was widely praised, and many reviewers found Leigh especially suited to her role as Scarlett. At the [12th Academy Awards](#), it received ten [Academy Awards](#) (eight competitive, two honorary) from thirteen nominations, including wins for [Best Picture](#), [Best Director](#) (Fleming), [Best Adapted Screenplay](#) (posthumously awarded to Sidney Howard), [Best Actress](#) (Leigh), and [Best Supporting Actress](#) ([Hattie McDaniel](#), becoming the first African American to win an Academy Award). It set records for the total number of wins and nominations at the time.

[Gone with the Wind](#) was immensely popular when first released. It became the [highest-earning film made up to that point](#), and held the record for over a quarter of a century. When [adjusted for monetary inflation](#), it is still [the highest-grossing film in history](#). It was re-released periodically throughout the 20th century and became ingrained in popular culture. Although the film has been criticized as [historical negationism](#) glorifying slavery, it has been credited with triggering changes in the way in which African Americans are depicted cinematically. The film is regarded as one of [the greatest films of all time](#); it has placed in the top ten of the [American Film Institute's](#) list of the [top 100 American films](#) since the list's [inception in 1998](#). In 1989, the United States [Library of Congress](#) selected it for preservation in the [National Film Registry](#).

ARTS – PAINTING, SCULPTURE, ARCHITECTURE

8/4/1820 - the Venus de Milo was discovered by a peasant named Yorgos Kentrotas, inside a buried niche within the ancient city ruins of Milos. Milos is the current village of [Trypiti](#), on the island of [Milos](#) (also called Melos, or Milo) in the [Aegean](#), which was then a part of the [Ottoman Empire](#).

[2/4/1824](#) – The British government buys [John Julius Angerstein](#)'s art collection for £60,000 for the purpose of establishing a [National Gallery](#) in [London](#) which opens to the public in his former townhouse on May 10.

25/12/1826 – Opening of the [Military Gallery of the Winter Palace](#), containing 332 [portraits](#) of [generals](#) who took part in the [Patriotic War of 1812](#), painted by [George Dawe](#) and his Russian assistants [Alexander Polyakov](#) and [Wilhelm August Golicke](#).

3/12/1828 – The [Musée Fabre](#) opens in the refurbished Hôtel de Massillan in [Montpellier](#), France.

21/6/1831 – The [North Carolina State House](#) is razed in a blaze and therein the roof collapses on [Antonio Canova](#)'s 1820 [statue of George Washington](#), smashing it to pieces.^[1]

29-31/10/1831 – The [1831 Bristol riots](#) in England are observed by local artist [William James Müller](#) who paints a series of sketches of the city in flames.

20/1/1837 – Death of the [neo-classical architect](#) Sir [John Soane](#) gives effect to the creation of his [London](#) house as [Sir John Soane's Museum](#).

1/6/1837 – The Government-funded Normal School of Design, predecessor of the [Royal College of Art](#), begins classes at [Somerset House](#) in London

10/6/1837 – [Galerie des Batailles](#) at the [Palace of Versailles](#) in France, designed by [Pierre-François-Léonard Fontaine](#) with Frédéric Nepveu for the display of sculptures and historical paintings, is opened.

[8/4/1838](#) – The British [National Gallery](#) first opens to the public in the building purpose-designed for it by [William Wilkins](#) in [Trafalgar Square, London](#).

31/8/1838 – [Scottish](#)-born scene painter [David Roberts](#) sets sail for [Egypt](#), with the encouragement of [J. M. W. Turner](#), to produce a series of drawings of the region for use as the basis for paintings and [chromolithographs](#).

[9/1/1839](#) – The [French Academy of Sciences](#) announces the [Daguerreotype photography](#) process.

25/1/1839 – [H. Fox Talbot](#) shows his "photogenic drawings" at the [Royal Institution](#) in London.

4/3/1840 – Alexander S. Wolcott and John Johnson open their "Daguerreian Parlor" on Broadway (Manhattan), the world's first commercial photography portrait studio.

1/5/1840 – Issue in the United Kingdom of the Penny Black, the world's first postage stamp, depicting the head of Queen Victoria engraved by Charles Heath and his son Frederick based on a sketch provided by Henry Corbould itself based on a cameo portrait by William Wyon, together with Mulready stationery. The stamp becomes valid for postage from May 6.

30/9/1840 – Foundation of Nelson's Column laid in London, Trafalgar Square being laid out and paved around it during the year.

31/7/1844 – Opening of the Wadsworth Atheneum, which is today the oldest art museum in the United States.

7/2/1845 – At the British Museum in London, a drunken visitor smashes the Portland Vase which takes months to repair. It has since been reconstructed three times.

10/12/1848 – The Leipzig Art Association opens the Städtische Museum.

1/5/1851 – The Great Exhibition opens at Crystal Palace, London. Works of art on display include the Tara Brooch, handicrafts and ornaments by the Sindhis, an electrotype of John Evan Thomas' sculpture *Death of Tewdric Mawr, King of Gwent*, and a demonstration by makers of Bristol blue glass.

5/2/1852 – Hermitage Museum first opens to the public in Saint Petersburg.

1/6/1852 – The Hôtel Drouot is inaugurated in Paris as a fine art auction gallery.

27/11/1854 – André-Adolphe-Eugène Disdéri patents a method of producing *carte de visite* photographs in France.

15/5/1855-15/11/1855 – Exposition Universelle in Paris, including a salon for art. Gustave Courbet, having had several of his paintings rejected, including the monumental *The Painter's Studio (L'Atelier du peintre, "a real allegory summing up seven years of my artistic and moral life")*, exhibits in a temporary *Pavillon du Réalisme* adjacent to the official show, creating both public outrage and artistic admiration.

1/5/1856 – Charles Lutwidge Dodgson ('Lewis Carroll') takes up photography as a hobby

25/8/1856 – Dante Gabriel Rossetti first encounters Fanny Cornforth (Sarah Cox) in a London pleasure garden; the following day he sketches her head in his studio for the figure of a prostitute in his unfinished painting *Found*

2/12/1856 – The National Portrait Gallery, London, is established

8/12/1856 – Édouard Manet opens his own studio

20/6/1857 – Opening of the Victoria and Albert Museum, London, UK, by Queen Victoria.

3/1/1858 – English writer and art critic [John Ruskin](#) meets 10-year-old [Rose La Touche](#), a drawing pupil who becomes his muse, for the first time, at her family's London home.^[1]

13/5/1858 – [John Ruskin](#) begins a tour of [Europe](#) which he considers a significant turning point in his life.^[2]

22/3/1859 – [Scottish National Gallery](#) opens to the public in [Edinburgh](#) in neoclassical premises designed by [W. H. Playfair](#).

26/4/1859 – [William Morris](#) marries his model, [Jane Burden](#). [Edward Burne-Jones](#) presents them with a self-painted wardrobe.

30/12/1860 – *Towarzystwo Zachęty do Sztuk Pięknych* ("Society for the Encouragement of Fine Arts") holds its first meeting in [Warsaw](#).

1/5/1862-1/11/1862 – [1862 International Exhibition](#) held at [South Kensington](#) in London. Notable artistic displays include a large picture gallery; work shown by [William Morris](#)'s decorative arts firm of Morris, Marshall, Faulkner & Company; and an exhibit from [Japan](#) influential in the development of [Anglo-Japanese style](#).^[1] Morris designs his first wallpaper, *Trellis*.

15/5/1863 – First exhibition of the Salons des Refusés. In 1863 the Salon jury refused two thirds of the paintings presented, including the works of Gustave Courbet, [Édouard Manet](#), [Camille Pissarro](#) and [Johan Jongkind](#). The rejected artists and their friends protested, and the protests reached Emperor [Napoleon III](#). The Emperor's tastes in art were traditional; he commissioned and bought works by artists such as [Alexandre Cabanel](#) and [Franz Xaver Winterhalter](#), but he was also sensitive to public opinion. His office issued a statement: "Numerous complaints have come to the Emperor on the subject of the works of art which were refused by the jury of the Exposition. His Majesty, wishing to let the public judge the legitimacy of these complaints, has decided that the works of art which were refused should be displayed in another part of the Palace of Industry." More than a thousand visitors a day visited the Salon des Refusés. The journalist [Émile Zola](#) reported that visitors pushed to get into the crowded galleries where the refused paintings were hung, and the rooms were full of the laughter of the spectators. Critics and the public ridiculed the *refusés*, which included such now-famous paintings as [Édouard Manet's *Déjeuner sur l'herbe*](#) and [James McNeill Whistler's *Symphony in White, No. 1: The White Girl*](#). But the critical attention also legitimized the emerging avant-garde in painting. The [Impressionists](#) successfully exhibited their works outside the traditional Salon beginning in 1874. Subsequent Salons des Refusés were mounted in Paris in 1874, 1875, and 1886, by which time the popularity of the Paris Salon had declined for those who were more interested in Impressionism.

12/6/1863 – [The Arts Club](#) is founded by [Charles Dickens](#), [Anthony Trollope](#), [Frederic Leighton](#) and others in London's [Mayfair](#) as a social meeting place for those involved or interested in the creative arts.

30/1/1864 – [National Gallery of Ireland](#) opens to the public in [Dublin](#) in a building designed by [Francis Fowke](#) based on early plans by [Charles Lanyon](#).

31/1/1869 – The [Société Libre des Beaux-Arts](#) publishes its manifesto.

30/7/1869 – Vincent van Gogh starts his apprenticeship with the art dealers Goupil & Cie in The Hague (in which his uncle is a partner).

4/12/1869 – The weekly illustrated newspaper *The Graphic* is first published by engraver William Luson Thomas in London.

5/4/1871 – Federation of Artists, organized by Gustave Courbet, holds its first meeting in Paris. Membership includes Jules Dalou, Honoré Daumier, André Gill and Eugène Pottier; Jean-Baptiste-Camille Corot and Eduard Manet are also members but do not actively participate.

16/5/1871 – Napoleonic column in the Place Vendôme is pulled down according to a suggestion by Courbet, one of the events photographed by Bruno Braquehais.

20/2/1872 – The Metropolitan Museum of Art opens in New York City.

13/11/1872 (07:35) (probable date) – Claude Monet begins painting *Impression, Sunrise* (*Impression, soleil levant*) as viewed from his hotel room at Le Havre.

December 27, 1873 – At the workshop of the photographer Nadar, on 35, boulevard des Capucines, Monet, Renoir, Pissarro, and Sisley organized the *Société Anonyme Coopérative des Artistes Peintres, Sculpteurs, Graveurs* ("Cooperative and Anonymous Association of Painters, Sculptors, and Engravers") for the purpose of exhibiting their artworks independently. Members of the association, which soon included Cézanne, Berthe Morisot, and Edgar Degas, were expected to forswear participation in the Salon. The organizers invited a number of other progressive artists to join them in their inaugural exhibition, including the slightly older Eugène Boudin, whose example had first persuaded Monet to take up *plein air* painting years before. Another painter who greatly influenced Monet and his friends, Johan Jongkind, declined to participate, as did Manet. In total, thirty artists participated in their first exhibition, held in April 1874 at the studio of the photographer Nadar. The group soon became known as the *Impressionists*.

15/4/1874 – First exhibiton of Impressionist painters, organized by the Painters Society from April 15 to May 15 1874, at 35 boulevard des Capucines in Paris on the studios of the famous photographer Nadar. The painters who participated were: Zacharie Astruc, Antoine Ferdinand Attendu, Édouard Béliard, Eugène Boudin, Félix Bracquemond, Édouard Brandon, Pierre Isidore Bureau, Adolphe-Félix Cals, Paul Cézanne, Gustave-Henri Colin, Louis Debras, Edgar Degas, Giuseppe De Nittis, Armand Guillaumin, Louis Latouche, Ludovic-Napoléon Lepic, Stanislas Lépine, Léopold Levert, Alfred Meyer, Claude Monet, Auguste de Molins, Berthe Morisot, Émilien Mulot Durivage, Auguste Ottin, Léon-Auguste Ottin, Camille Pissarro, Pierre Auguste Renoir, Léon-Paul-Joseph Robert, Henri Rouart, Alfred Sisley. An art critic Louis Leroy called the group the pejorative name of *impressionnisme*, which was not received favorably by the painters. Those exhibitions continued until the eighth one in 1886.

16/5/1876 – German American "Napoleon of crime" Adam Worth steals Gainsborough's *Portrait of Georgiana, Duchess of Devonshire* from Agnew's gallery in Old Bond Street, London three weeks after its sale at Christie's for 10,000 guineas, the highest price ever paid for a painting at auction at this time. It is not recovered until 1901.

6/9/1877 – The [Walker Art Gallery](#) in [Liverpool](#), England, is opened.

25-26/11/1878 – [James McNeill Whistler](#)'s [libel](#) case against English art critic [John Ruskin](#) over a scathing [1877](#) review of Whistler's painting *Nocturne in Black and Gold – The Falling Rocket* is heard in the [High Court of Justice](#) in London. Whistler wins a [farthing](#) in nominal damages and only half of the costs, leading to his bankruptcy, and alienates patrons.

10/4/1879-11/5/1879 – Fourth [Impressionist](#) exhibition in Paris, arranged by [Gustave Caillebotte](#) at 28 avenue de l'Opéra.

1/3/1882 – Seventh [Impressionist](#) exhibition in Paris opens at 251 [rue Saint-Honoré](#).

20/4/1883 – [Claude Monet](#) moves to the house in [Giverny](#) which will be his main residence for the rest of his life.

28/10/1883 – [Les XX](#) established in [Brussels](#) by [Octave Maus](#).

2/2/1884 – First annual exhibition of [Les XX](#) opens at the [Palais des Beaux-Arts](#) in Brussels. Artists invited to show in addition to members of the group include [Auguste Rodin](#), [James McNeill Whistler](#) and [Max Liebermann](#).

29/7/1884 – [Société des Artistes Indépendants](#) established in Paris under the leadership of [Albert Dubois-Pillet](#).

10/12/1884 – Salon des independants – Salons of independent artists held almost every year since 1884, the first one is held at the pavillon de la ville de Paris aux Champs-Élysées and was called Salon d'hiver. Among the works exhibited at the first Salon were *Une baignade à Asnières* ([Georges Seurat](#)), *le Pont d'Austerlitz* ([Paul Signac](#)), and *Au jardin du Luxembourg* ([Henri-Edmond Cross](#)). In the first decades of the Salon some famous painters exhibited there their works : [Paul Cézanne](#), [Odilon Redon](#), [Georges Seurat](#), [Henri-Edmond Cross](#), [Vincent van Gogh](#), [Henri de Toulouse-Lautrec](#), [Armand Guillaumin](#), [Maximilien Luce](#), [Maurice Bastide du Lude](#), [Charles Angrand](#), [Pierre Bonnard](#), [Pierre Dumont](#), [Gaston Prunier](#), [Germain Raingo-Pelouse](#), [Edouard Vuillard](#), [Ker-Xavier Roussel](#), [Louis Valtat](#), [Paul Sérusier](#), [Maurice Denis](#), [Jeanne Rij-Rousseau](#), [Félix Vallotton](#), [Pierre Laprade](#), [Georges Rouault](#), [Lucie Cousturier](#), [Albert Marquet](#), [André Dunoyer de Segonzac](#), [Roger de La Fresnaye](#), [Victor Dupont](#), [Edvard Munch](#), [André Lhote](#).

24/3/1885 [O.S.] – [Peter Carl Fabergé](#) presents the first imperial Fabergé egg to [Maria Feodorovna](#), wife of [Alexander III of Russia](#), beginning an Easter tradition that continues until 1917.

20/5/1885 – A letter, "A Woman's Plea", published in [The Times](#) of London protests against the use of nude [models](#) in art. Signed "British Matron" it is in fact written by painter and senior Royal Academician [John Callcott Horsley](#).

13/7/1885 – New building for the [Rijksmuseum](#) in [Amsterdam](#), designed by [Pierre Cuypers](#), opens.

30/6/1886 – [Royal Holloway College](#) for women, established by patent medicine manufacturer [Thomas Holloway](#) (died 1883), opened by [Queen Victoria](#) at [Egham](#) in [Surrey](#), England, incorporating a picture gallery for which the founder has acquired a collection of predominantly modern British works; this is the first art gallery in Britain intended primarily for viewing by women.

21/8/1886-21/9/1886 – Second exhibition by the [Société des Artistes Indépendants](#) in Paris. [Henri Rousseau](#) exhibits for the first time and Seurat's *A Sunday Afternoon on the Island of La Grande Jatte* causes the critic [Félix Fénéon](#) to describe the technique of [pointillism](#) and [chromoluminarist](#) style being developed by Seurat and [Paul Signac](#) as [neo-impressionism](#).

28/10/1886 – Dedication of [Frédéric Auguste Bartholdi's Statue of Liberty](#) in [New York Harbor](#).

26/3/1887-8/6/1887 – Third exhibition by the [Société des Artistes Indépendants](#) in Paris.

14/11/1887 – [Paul Gauguin](#) and [Charles Laval](#) return to Paris from [Martinique](#) where they have been living since leaving Panama in June.

26/1/1888 – [Paul Gauguin](#) leaves Paris to rejoin the [Pont-Aven School](#) of artists in Brittany, where he will remain until October and meet with [Émile Bernard](#)

21/2/1888 – [Vincent van Gogh](#) moves to [Arles](#) where he will be very productive as a painter

22/3/1888 – Fourth exhibition by the [Société des Artistes Indépendants](#) opens in Paris; it includes three paintings by van Gogh

14/7/1888 - The Monument à Léon Gambetta, by [Jean-Paul Aubé](#), is inaugurated at the [Louvre](#)

3/10/1888 – [Leeds City Art Gallery](#) in England opens

23/10/1888 – [Paul Gauguin](#) joins van Gogh in Arles, bringing [Émile Bernard's](#) painting *Le Pardon de Pont-Aven*

23/12/1888 – Having quarrelled with Gauguin, van Gogh cuts off the lower part of his own left ear, taking it to a brothel, and is removed to the local [hospital](#)

2/2/1889 – Sixth annual exhibition of [Les XX](#) opens in [Brussels](#), including the first important [display of Paul Gauguin's work](#).

6/5/1889-31/10/1889 – [Exposition Universelle](#) in Paris, with the [Eiffel Tower](#) as its entrance arch.

8/5/1889 – Van Gogh moves from [Arles](#) to the [Saint-Paul asylum](#) in [Saint-Rémy-de-Provence](#).

15/7/1889 – The [Scottish National Portrait Gallery](#) opens in [Edinburgh](#) in premises designed by [Rowand Anderson](#), the first in the world to be purpose-built as a [portrait](#) gallery.

17/8/1889 – The [9 by 5 Impression Exhibition](#) opens in [Melbourne, Australia](#).

18/1/1890-23/2/1890 – Seventh annual exhibition of [Les XX](#) in [Brussels](#) includes a [display of work by Vincent van Gogh](#). [Henry de Groux](#) criticises his paintings but [Albert Aurier](#) praises them. From the exhibition, [van Gogh](#) sells [The Red Vineyard](#) to [Anna Boch](#), said to be the only sale of his work during his lifetime.^[1]

20/3/1890-27/4/1890 – The [Société des Artistes Indépendants](#) show in [Paris](#) includes a major display of van Gogh paintings.

20/5/1890 – Van Gogh moves to [Auvers-sur-Oise](#) on the edge of Paris in the care of Dr [Paul Gachet](#) where he will produce around seventy paintings in as many days. More than a dozen are [size 30 canvases](#) (92 x 65 cm).

27/7/1890 – [Death of Vincent van Gogh](#): van Gogh perhaps paints [Tree Roots](#), then apparently shoots himself, dying two days later.

20/9/1890 – [Theo van Gogh](#), assisted by [Émile Bernard](#), mounts an improvised retrospective exhibition of his brother Vincent's works in Theo's former Paris apartment.

4/4/1892 – [Munich Secession](#)

1/5/1893 – The [1893 World's Fair](#), also known as the World's Columbian Exposition, opens to the public in [Chicago, USA](#), with a Romanesque statue of [Columbia](#) overlooking the man-made lake. The first United States commemorative [postage stamps](#) are issued for the Exposition. Among other art exhibits are two bronze calves by [Anne Marie Carl-Nielsen](#).

14/6/1893 – Opening of [Shelley Memorial](#) at [University College, Oxford](#), designed by [Basil Champneys](#) with a reclining nude marble statue of [Percy Bysshe Shelley](#) by [Edward Onslow Ford](#).

29/6/1893 – Unveiling of the [Shaftesbury Memorial Fountain](#) at [Piccadilly Circus](#) in London, with a [gilded aluminium](#) statue of [Anteros](#), designed by [Alfred Gilbert](#) and cast by [Morris Singer](#).

1/1/1895 – [Alphonse Mucha](#)'s [lithographed](#) poster for the play [Gismonda](#) starring [Sarah Bernhardt](#) is posted in [Paris](#). Bernhardt is so satisfied with its success that she gives Mucha a six-year contract.

13/4/1895 – The [Russian Museum](#) is established in [Saint Petersburg](#) by [Nicholas II](#).

30/4/1895 – First [Venice Biennale](#) opens.

3/7/1895 – [Paul Gauguin](#) leaves France to settle permanently in [Polynesia](#).

18/2/1897 – Conclusion of the [Benin Expedition of 1897](#), leading to the [Benin Bronzes](#) being carried off to London.

3/4/1897 – Vienna Secession founded by artists including Gustav Klimt, Koloman Moser, Josef Hoffmann, Joseph Maria Olbrich, Max Kurzweil. Secession hall designed by Olbrich.

1/5/1897 – Ny Carlsberg Glyptotek art museum opened in Copenhagen.

27/5/1897 – A Separate Exhibition of Painting and Sculpture (Wystawa osobna obrazów i rzeźb) is staged at Sukiennice Museum in Main Square, Kraków.

4/8/1897 – The "Lady of Elche" Iberian sculpture (4th century BCE) is found at L'Alcúdia near Elche in Spain.

27/10/1897 – First meeting of the Society of Polish Artists "Sztuka" in Kraków.^[3]

15/12/1899 – Glasgow School of Art opens its new building, the most notable work of Charles Rennie Mackintosh.

14/4/1900-12/11/1900 – Exposition Universelle in Paris helps popularize Art Nouveau style. Alphonse Mucha decorates the Bosnia and Herzegovina Pavilion and collaborates on the Austria-Hungary one.

12/3/1901 – Whitechapel Gallery, designed by Charles Harrison Townsend, opens in London as one of the first publicly funded galleries for temporary exhibitions in the city.

11/5/1901 – The Kraków Society of Friends of Fine Arts inaugurates its Palace of Art.

1-27/10/1907 – Salon d'Automne, Paris. Georges Braque exhibits *Viaduc à l'Estaque*, a proto-Cubist work which later enters the Minneapolis Institute of Arts. Simultaneously, there is a retrospective exhibition of 56 works by Paul Cézanne as a tribute to the artist who died in 1906.

20/3/1908-2/5/1908 – Salon des Indépendants in Paris gives rise to the term "Cubism" (*cubisme*).

May 1908 – Sergey Prokudin-Gorsky produces a color photographic portrait of Leo Tolstoy.

29/7/1908 July 29 – The Whitworth Art Gallery building in Manchester (England) is formally opened.^[1]

20/2/1909 – Filippo Tommaso Marinetti's Futurist Manifesto is first published, in the French newspaper *Le Figaro*.

May–June 1909 – Claude Monet's *Water Lilies* series of paintings are first exhibited, at Paul Durand-Ruel's gallery in Paris.

27/4/1910 – Futurist poet Filippo Tommaso Marinetti issues the manifesto *Contro Venezia passatista* ("Against Past-loving Venice") in the *Piazza San Marco*.

2/2/1911 – First issue of Franz Pfemfert's *Die Aktion*.

10/6/1911 – Rembrandt House Museum opened in Amsterdam.

21/8/1911 – Leonardo da Vinci's *Mona Lisa* is stolen from the Louvre museum in Paris by Vincenzo Peruggia; the theft is discovered the following day when painter Louis Béroud arrives to sketch it but the painting is not located until December 1913. Poet and art critic Guillaume Apollinaire and his friend Pablo Picasso are questioned over the theft.

18/12/1911 – First exhibition of Der Blaue Reiter Group opens in Munich.

5/1/1912 (Old Style December 23, 1911) – Moscow Art Theatre production of *Hamlet*, designed by Edward Gordon Craig, opens.

May 1912 – *The Blue Rider Almanac* published in Munich, containing reproductions of more than 140 multi-ethnic artworks, articles on the visual arts and music and Vasily Kandinsky's experimental theater composition *The Yellow Sound*.

26/6/1912 – Austrian writer Frida Strindberg opens *The Cave of the Golden Calf*, a London nightclub decorated by Spencer Gore, Wyndham Lewis, Charles Ginner and Jacob Epstein with its motif by Eric Gill; it becomes a haunt of Futurists.

July 1912 – At the 1912 Summer Olympics in Stockholm, American marksman, horse breeder and artist Walter W. Winans wins a silver medal for shooting and a gold in the sculpture category of the art competitions for his bronze statuette *An American Trotter*.

16/1/1913 (OS) – Ilya Repin's painting *Ivan the Terrible and His Son Ivan* in the Tretyakov Gallery, Moscow, is slashed.

19/1/1913 – Lovis Corinth's retrospective opens at the Munich Secession galleries.^[1] This year the "New Munich Secession" splits from the Munich Secession.

End of January 1913 – Franz Marc's *Collection II* opens at the Moderne Galerie Heinrich Thannhauser in Munich.^[1] This is followed at the gallery in February by the first major retrospective of Picasso's work.

17/2/1913 – The Armory Show opens in New York City. It displays works of artists who are to become some of the most influential painters of the early 20th century.

10/3/1913 – French sculptor Camille Claudel is committed by her family to a psychiatric hospital where she will remain until her death in 1943.

April 1913 – Marcel Duchamp withdraws from painting and begins working as a library assistant in the Sainte-Geneviève Library in Paris to be able to earn a living wage while concentrating on scholarship and working on his *The Bride Stripped Bare by Her Bachelors, Even*.

May 1913 – The Paul Émile Chabas painting *September Morn* provokes a charge of indecency when displayed in the window of a Chicago art gallery.

27/5/1913 – Die Brücke dissolved.

29/5/1913 – The ballet *The Rite of Spring*, with music by [Igor Stravinsky](#) conducted by [Pierre Monteux](#), choreography by [Vaslav Nijinsky](#) and design by [Nicholas Roerich](#), is premièred by [Sergei Diaghilev's Ballets Russes](#) at the [Théâtre des Champs-Élysées](#) in Paris, its modernism provoking one of the most famous classical music riots in history. The audience includes [Gabriele D'Annunzio](#), [Coco Chanel](#), [Marcel Duchamp](#), [Harry Graf Kessler](#) and [Maurice Ravel](#).

August–September 1913 – [Ernst Ludwig Kirchner](#) spends the summer painting on the island of [Fehmarn](#); returning to Berlin he begins his series of [street scenes](#) from around the [Potsdamer Platz](#).

19/9/1913 – First German Autumn Salon opens in Berlin, featuring 366 paintings by 90 artists from 12 countries, notably [Franz Marc](#); [Guillaume Apollinaire](#) and [Filippo Tommaso Marinetti](#) deliver accompanying lectures.

Autumn 1913 – The *Neue Galerie* in Berlin reopens with displays of the work of [Picasso](#) and others associated with French [Modernism](#).

18/10/1913 – [Monument to the Battle of the Nations](#) at [Leipzig](#), designed by [Bruno Schmitz](#) incorporating sculptures by [Christian Behrens](#) and [Franz Metzner](#), is inaugurated.

12/12/1913 – [Leonardo da Vinci's Mona Lisa](#), stolen from the [Louvre](#) in 1911, is located in [Florence](#) when [Vincenzo Peruggia](#) attempts to sell it. It is returned to Paris on December 30.

4/5/1914 – Suffragette Mary Wood attacks [John Singer Sargent's](#) portrait of [Henry James](#) at the [Royal Academy Summer Exhibition](#) in London with a meat cleaver. At the same exhibition on May 12, Gertrude Mary Ansell attacks the recently-deceased [Hubert von Herkomer's](#) portrait of the Duke of Wellington, and on May 26 'Mary Spencer' (Maude Kate Smith) attacks [George Clausen's](#) painting *Primavera*.

10/6/1915 – The only contemporary [Vorticist](#) exhibition staged opens at the Doré Gallery in London.

24/10/1915 – [Giovanni Battista Tiepolo's](#) [frescos](#), *Translation of the House of Loreto*, in the Church of the [Scalzi \(Venice\)](#) are destroyed by an [Austrian](#) bombardment.

19/12/1915 – [Kasimir Malevich](#) stages the [0.10 Exhibition](#) and originates [Suprematism](#).^[4]

5/2/1916 – [Cabaret Voltaire](#) is opened by German poet [Hugo Ball](#) and his future wife [Emmy Hennings](#) in the back room of Ephraim Jan's *Holländische Meierei* in [Zürich](#); although surviving only until the summer it is pivotal in the creation of [Dada](#). Those who gather here include [Marcel Janco](#), [Richard Huelsenbeck](#), [Tristan Tzara](#), [Sophie Taeuber-Arp](#) and [Jean Arp](#).

9/2/1916 : 6.00 p.m. – [Tristan Tzara](#) "founds" [Dada](#) (according to [Hans Arp](#)).

1/3/1916 – [Liljevalchs konsthall](#) inaugurated in [Stockholm](#).

20/5/1916 – *Boy with Baby Carriage* is [Norman Rockwell](#)'s first cover for [The Saturday Evening Post](#).

16/6/1916 – [Cleveland Museum of Art](#) opens.

14/7/1916 – Hugo Ball recites the [Dada manifesto](#) in Zürich.

31/8/1916 – [Kestnergesellschaft](#) founded in [Hanover](#), Germany.

19/9/1916 – [Edvard Munch](#)'s paintings for the *Aula* (festival hall) of [Det Kongelige Frederiks Universitet, Christiania](#), are inaugurated.

26/9/1916 – [C. R. W. Nevinson](#)'s first major single-artist exhibition opens in [London](#).

16/2/1918 – [Joan Miró](#)'s first solo exhibition opens at the [Galeries Dalmau](#); his work is ridiculed and defaced.

May 1918 – [Stanley Spencer](#), a serving British Army soldier, is appointed as an official [war artist](#). A similar appointment is made this year for [Australian](#) soldier [Frank R. Crozier](#).

3/5/1918 – [William Orpen](#)'s exhibition *War* opens in London; the paintings are donated to the British government. He is [knighted](#) in June.

11/5/1918 – [Paul Nash](#)'s exhibition *The Void of War* opens at the Leicester Galleries in London.

18/6/1918 – [Pablo Picasso](#) marries [Olga Khoklova](#).

June 1918 – [Alfred Stieglitz](#) begins nude photography of [Georgia O'Keeffe](#).

15/10/1918 – [Kunsthalle Bern](#) opened.

3/11/1918 – The [Robespierre Monument \(Moscow\)](#), designed by Beatrice Yuryevna Sandomierz, is unveiled; it collapses four days later.

3/12/1918 – The [November Group](#) (*Novembergruppe*) of expressionist artists is formed in Germany, and shortly afterwards merges with the [Arbeitsrat für Kunst](#).

25/4/1919 – The [Bauhaus](#) architectural and design movement is founded in [Weimar](#), Germany, by [Walter Gropius](#).

December 1919 – *The National War Paintings and Other Records* exhibition staged at the [Royal Academy of Arts](#) in London.

1/2/1920 – [National Art Gallery](#) opens in [Tbilisi](#).

30/6/1920 – The first Dada International Fair. The **First International Dada Fair** took place in [Berlin](#), Germany in 1920, from Jun 30, 1920 to Aug 25, 1920. It was Grosz, Heartfield and Hausmann. It was to become the most famous of all Berlin Dada's exploits. It featured almost

200 works by artists including [Hans Arp](#), [Max Ernst](#), [Hannah Höch](#), [Francis Picabia](#), and [Rudolf Schlichter](#), as well as key works by Grosz, Höch and Hausmann. The work *Tatlin At Home*, 1920, can be clearly seen in one of the publicity photos taken by a professional photographer; the exhibition, whilst financially unsuccessful, gained prominent exposure in Amsterdam, Milan, Rome and Boston. The exhibition also proved to be one of the main influences on the content and layout of *Entartete Kunst*, the show of [degenerate art](#) put on by the Nazis in 1937, with key slogans such as "*Nehmen Sie DADA Ernst*", "*Take Dada Seriously!*", appearing in both exhibitions.

7/11/1920 – The "mass action" *The Storming of the Winter Palace*, directed by [Nikolai Evreinov](#), is staged outside the [Winter Palace](#) in [Petrograd](#).

1/2/1922 – [Akron Art Institute](#) opens in [Ohio](#).

11-18/2/1922 – [Modern Art Week](#) (*Semana de Arte Moderna*) at the [Theatro Municipal, São Paulo](#), marks the start of [Modernism](#) in [Brazil](#).

16/12/1922 - [December 16 - Gabriel Narutowicz](#), sworn on [December 11](#) as first president of the [Second Polish Republic](#), is assassinated by right-wing modernist painter and art critic [Eligiusz Niewiadomski](#) at the [Zachęta](#) art gallery in Warsaw.

20/12/1922 – *Antigone* by [Jean Cocteau](#) appears on the stage of the [Théâtre de l'Atelier](#) in the [Montmartre](#) district of Paris, with settings by [Pablo Picasso](#), music by [Arthur Honegger](#) and costumes by [Gabrielle Chanel](#). There are some protests by [Dadaists](#).

20/3/1923 – The [Arts Club of Chicago](#) hosts the opening of [Pablo Picasso's](#) first [United States](#) show, *Original Drawings by Pablo Picasso*.

8/5/1923 – [Göteborgs Konsthall](#) opens as the art gallery for the [Gothenburg Exhibition](#).

March 1924 – Exhibition *Alfred Stieglitz Presents Fifty-One Recent Pictures: Oils, Water-colors, Pastels, Drawings*, by [Georgia O'Keeffe](#) (together with a display of his photographs) opens at the [Anderson Galleries](#) in [New York City](#).

15/5/1924 – [Juan Gris](#) delivers his lecture *Des possibilités de la peinture* at the [University of Paris](#).

August 1924 – English artist and designer [Eric Gill](#) moves with some of his artistic community from [Ditchling](#) in East Sussex to the disused Llanthony Abbey at [Capel-y-ffin](#) in Wales.

24/9/1924 – Première of the [Dadaist](#) post-Cubist Futurist experimental art film *Ballet Mécanique* conceived, written and co-directed by the painter [Fernand Léger](#) in collaboration with [Dudley Murphy](#) and [Man Ray](#) at the Internationale Ausstellung neuer Theatertechnik (International Exposition for New Theater Technique) in [Vienna](#) presented by [Frederick Kiesler](#).^{[3][4]} It features [Alice Prin](#) ("[Kiki de Montparnasse](#)") and has a musical score by [American](#) composer [George Antheil](#) but is presented in a silent version on this occasion.

December 1924 – The [Bucharest](#) International Modern Art Exhibit, an [avant-garde](#) event hosted by [Contimporanul](#), displaying works by [Constantin Brâncuși](#), [Hans Arp](#), [Paul](#)

[Klee, János](#) [Mattis-Teutsch, Kurt](#) [Schwitters, Michel](#) [Seuphor, Milița](#) [Pătrașcu, Marcel Janco](#), [Victor Brauner](#) and [M. H. Maxy](#).

31/3/1925 – The [Bauhaus](#) closes in [Weimar](#) and moves to [Dessau](#).

April–October 1925 – In Paris, the Ministry of Commerce and Industry sponsors the [International Exposition of Modern Industrial and Decorative Arts](#); the event gives a name to the [Art Deco](#) style. [Le Corbusier's Pavillon d'Esprit Nouveau](#) is so disliked by the organizers that they erect a six-meter-high fence around it.

17/9/1925 – [Frida Kahlo](#) is seriously and permanently injured when a bus in which she is riding collides with a trolley car in Mexico City; she takes up painting while immobilized following the accident.

1925 [November 13/14](#) (midnight) – First [Surrealist](#) exhibition opens at the [Galerie Pierre](#), Paris.

16/5/1927 – A pair of oval rooms built at the [Musée de l'Orangerie](#) in Paris as a permanent home for eight of [Monet's water lily](#) paintings is opened by the [Government of France](#).

28/6/1927 – Unveiling of "The Building of Britain" series of historical paintings by various artists in St Stephen's Hall of the [Palace of Westminster](#) in London. [Charles Sims' King John confronted by his Barons assembled in force at Runnymede gives unwilling consent to Magna Carta, the foundation of justice and individual freedom in England, 1215](#) attracts criticism from the press, Members of Parliament and other artists for its idiosyncrasy.^[3]

24/7/1927 – Unveiling of [Menin Gate](#) Memorial to the Missing at [Ypres, Belgium](#), designed by Sir [Reginald Blomfield](#).

29/9/1927 – Unveiling of [107th Infantry Memorial](#) in [Central Park, New York City](#), designed by Karl Illava, a former sergeant in the regiment.

7/1/1928 – The [Tate Gallery, London](#), is flooded by the [River Thames](#).

26/3/1928 – The [China Academy of Art](#) is founded in Hangzhou (originally named the National Academy of Art).

6/1/1929 – On the death of New York collector [Louisine Havemeyer](#), her collection of paintings, rich in works of [Impressionism](#), is bequeathed to the [Metropolitan Museum of Art](#).

10/1/1929 – First appearance of [Hergé's Belgian comic book hero Tintin](#) as [Tintin in the Land of the Soviets](#) (*Les Aventures de Tintin, reporter..., au pays des Soviets*), begins serialization in children's newspaper supplement [Le Petit Vingtième](#).

17/1/1929 – First appearance of [E. C. Segar's American sailor comic book hero Popeye](#) in [Thimble Theatre](#).

6/6/1929 – Première of the [Surrealist film Un Chien Andalou](#) by [Luis Buñuel](#) and [Salvador Dalí](#), in Paris.

5/7/1929 – In London, [Scotland Yard](#) seizes 13 paintings of male and female nudes by [D. H. Lawrence](#) from a [Mayfair](#) gallery on grounds of indecency under the [Vagrancy Act 1838](#).

221/8/1929 – Mexican painters [Diego Rivera](#) and [Frieda Kahlo](#) marry for the first time, in a civil ceremony in the town hall at [Coyoacán](#).

October 1929 - La galerie Goemans opens in Paris with a Surrealist exhibition featuring [Jean Arp](#), Salvador Dalí, [Yves Tanguy](#) and [René Magritte](#). American artist [Lynd Ward](#) publishes his first wordless "novel in woodcuts", *[Gods' Man](#)*, in New York City.

November 1929 – The [East London Group](#) (for the first time under this name) exhibit with [Walter Sickert](#) at the [Lefevre Gallery](#) in the [West End of London](#).

7/11/1929 – The [Museum of Modern Art](#) opens in [New York City](#). An exhibit, "Cézanne, Gauguin, Seurat and van Gogh", at the new museum attracts 47,000 visitors.

1/12/1929 – [Underground Electric Railways Company of London](#) officially opens its new headquarters building at [55 Broadway](#) designed by [Charles Holden](#), incorporating sculptures by [Jacob Epstein](#), [Eric Gill](#) and [Henry Moore](#).

29/11/1930 – Première of the Surrealist film *[L'Age d'Or](#)* by [Luis Buñuel](#) (co-written with [Salvador Dalí](#)) at Studio 28 in [Paris](#).

15/2/1931 – [Abstraction-Création](#) group formed in [Paris](#) by [Theo van Doesburg](#) to promote non-figurative, non-surrealist art. Other founder members include [Auguste Herbin](#), [Jean Hélion](#) and [Georges Vantongerloo](#).

4/10/1931 – Debut appearance of the [Dick Tracy comic strip](#), created by cartoonist [Chester Gould](#).

6-19/4/1932 – German art dealer [Otto Wacker](#) is tried and convicted in Berlin for selling forged paintings he attributed to [Vincent van Gogh](#) and sentenced to 19 months in prison.

16/6/1932 – [Pablo Picasso's](#) retrospective exhibition opens at the [Galleries Georges Petit](#) in Paris, displaying 225 paintings.

25/6/1932 – An article in *[The Saturday Evening Post](#)* (US) claims that the 1911 theft of [Leonardo da Vinci's](#) *[Mona Lisa](#)* was partly masterminded by a forger named [Yves Chaudron](#).

2/8/1932 – The [Saint Petersburg Union of Artists](#) is established (as the "Leningrad Union of Soviet Artists").

October 1932 – [Courtauld Institute of Art](#) opens in [London](#).

15/11/1932 – First exhibition of [Group f/64](#) photographers opens at the [de Young Museum](#) in San Francisco.

12/1/1933 – [George Grosz](#) emigrates from [Nazi Germany](#) to the [United States](#).

February/March 1933 – [Käthe Kollwitz](#) is forced by the [Nazi Party](#) in Germany to resign from the faculty of the [Academy of Arts, Berlin](#).

[April 1933](#) – Closure of the [Bauhaus](#).

[May 1933](#) – The mural *Man at the Crossroads* by [Diego Rivera](#) at the [Rockefeller Center](#) in [New York](#) is covered up because it contains a portrait of [Lenin](#). While Rivera has been working on it, he has been joined in the United States by [Frieda Kahlo](#) who begins her painting *My Dress Hangs There*.

[July 1933](#) – New [Midland Hotel, Morecambe](#), on the Lancashire coast of England, designed by [Oliver Hill](#), is opened incorporating sculpture by [Eric Gill](#) and murals by [Eric Ravilious](#) and [Edward Bawden](#).

[September/October 1933](#) – "[Henri Cartier-Bresson](#) and an Exhibition of Anti-Graphic Photography" staged at [Julien Levy's](#) gallery in [New York City](#).

[September 1933](#) – [Artists Union](#) formed in the United States as the Emergency Work Bureau Artists Group.

[12/12/1933](#) – Scholars of the [Warburg Institute](#) in [Hamburg](#) resolve to relocate from [Nazi Germany](#) to London.

[10/4/1934](#) – *The Just Judges*, a panel of the [Ghent Altarpiece](#) painted by [Jan van Eyck](#) or his brother [Hubert](#) between 1430–32, is stolen from [St Bavo's Cathedral, Ghent](#), Belgium. In November, on his deathbed, Arsène Goedertier admits to the theft but most of the panel is never recovered.

[31/8/1934](#) – John Smiukse destroys the mural *Nightmare of 1934* in [Tarrytown, New York](#).

[15/2/1935](#) – [2/3/1935](#) – The [National Association for the Advancement of Colored People](#) stages an exhibition *Art Commentary on Lynching* in [New York City](#).

[December 1935](#) – [Elfriede Lohse-Wächtler](#) undergoes forced sterilization in accordance with [Nazi eugenics](#) policies and never paints again.

[15/2/1936](#) – Exhibition *Abstract and Concrete*, curated by [Nicolette Gray](#), opens at 41 [St Giles', Oxford](#), prior to touring [England](#). It is the first showing of [abstract art](#), and of the work of [Mondrian](#), in the country.^[1]

[27/3/1936](#) – [RMS Queen Mary](#) begins her maiden Atlantic crossing. Interior design, under the direction of E. C. Leach, is by [Arthur Joseph Davis](#) and J. C. Whipp of Mewès & Davis (UK) and [Benjamin Wistar Morris](#) (USA) with much craftsmanship undertaken by the [Bromsgrove Guild of Applied Arts](#). Graphic artists commissioned to supply work include [Edward Wadsworth](#) and [Anna and Doris Zinkeisen](#).

[11/6/1936](#) – [4/7/1936](#) – [London International Surrealist Exhibition](#), opened by [André Breton](#).

[November 1936](#) – Exhibition *Cubism and Abstract Art*, curated by [Alfred H. Barr, Jr.](#), opens at the [Museum of Modern Art, New York](#).

Summer 1936 – Spanish Civil War breaks out. Photographers Endre Friedmann and Gerda Taro, who have jointly devised the name Robert Capa, journey from Paris to cover it. The Second Spanish Republic appoints Pablo Picasso as "director of the Prado, albeit in absentia" and he arranges for evacuation of its principal paintings.

23/11/1936 – Margaret Bourke-White's photographs of the construction of the Fort Peck Dam are featured in the first issue of *Life* magazine.

1/12/1936 – Members of the Artists Union occupy the New York City offices of the Federal Art Project; police arrest 219 of them, the largest-ever arrest in the city at this date.

9/1/1937 – Leon Trotsky begins exile in Mexico with his wife Natalia Sedova; they share The Blue House in Coyoacán with painters Frida Kahlo and Diego Rivera and Trotsky has an affair with Frida.

1/5/1937 – 4/6/1937 – Pablo Picasso paints *Guernica*, a large cubistic monochrome oil painting created in reaction to the German bombing of the Spanish Basque town of the same name on 26 April. It is first exhibited in July at the Spanish Republican government pavilion (designed by Josep Lluís Sert) in the *Exposition Internationale des Arts et Techniques dans la Vie Moderne* in Paris before commencing a world tour. René Iché created a sculpture *Guernica* the day after the bombing took place, but will not exhibit it in his lifetime. The Spanish Government pavilion at the International Exhibition also includes Horacio Ferrer's *Madrid 1937 (Black Aeroplanes)*, Joan Miró's *The Reaper* and a mercury fountain by Alexander Calder. Vera Mukhina's sculpture *Worker and Kolkhoz Woman* is also created for the Exhibition.

May 1937 – Stanley Spencer and his wife Hilda are divorced; within a week he marries Patricia Preece who departs on honeymoon to St Ives with her partner Dorothy Hepworth while he resumes relations with Hilda at Cookham.

18/7/1937 – *Große Deutsche Kunstausstellung* ("Great German Art Exhibition") opened by Adolf Hitler in the *Haus der deutschen Kunst* ("House of German Art") in Munich, newly completed to the designs of Paul Troost (d. 1934) to display art of the Third Reich. Hitler has rejected the choices of the original selection jury and placed his personal photographer Heinrich Hoffmann in charge of curating the display, but even so has rejected some of the more experimental paintings.

19/7/1937 – *Entartete Kunst* ("Degenerate art") exhibition, mounted by the Nazis, opens in Munich. By 1937, the concept of degeneracy was firmly entrenched in Nazi policy. On June 30 of that year Goebbels put Adolf Ziegler, the head of *Reichskammer der Bildenden Künste* (Reich Chamber of Visual Art), in charge of a six-man commission authorized to confiscate from museums and art collections throughout the Reich, any remaining art deemed modern, degenerate, or subversive. These works were then to be presented to the public in an exhibit intended to incite further revulsion against the "perverse Jewish spirit" penetrating German culture.

Over 5000 works were seized, including 1052 by Nolde, 759 by Heckel, 639 by Ernst Ludwig Kirchner and 508 by Max Beckmann, as well as smaller numbers of works by such artists as Alexander Archipenko, Marc Chagall, James Ensor, Albert Gleizes, Henri Matisse, Jean Metzinger, Pablo Picasso, and Vincent van Gogh. The *Entartete Kunst* exhibit, featuring over 650 paintings, sculptures, prints, and books from the collections of 32 German museums,

premiered in [Munich](#) on July 19, 1937, and remained on view until November 30, before traveling to 11 other cities in Germany and Austria.

The exhibit was held on the second floor of a building formerly occupied by the Institute of [Archaeology](#). Viewers had to reach the exhibit by means of a narrow staircase. The first sculpture was an oversized, theatrical portrait of [Jesus](#), which purposely intimidated viewers as they literally bumped into it in order to enter. The rooms were made of temporary partitions and deliberately chaotic and overfilled. Pictures were crowded together, sometimes unframed, usually hung by cord.

The first three rooms were grouped thematically. The first room contained works considered demeaning of religion; the second featured works by Jewish artists in particular; the third contained works deemed insulting to the women, soldiers and farmers of Germany. The rest of the exhibit had no particular theme.

There were slogans painted on the walls. For example:

- Insolent mockery of the Divine under Centrist rule
- Revelation of the Jewish racial soul
- An insult to German womanhood
- The ideal—cretin and whore
- Deliberate sabotage of national defense
- German farmers—a Yiddish view
- The Jewish longing for the wilderness reveals itself—in Germany the [Negro](#) becomes the racial ideal of a degenerate art
- Madness becomes method
- Nature as seen by sick minds
- Even museum bigwigs called this the "art of the German people"^[33]

Speeches of Nazi party leaders contrasted with artist [manifestos](#) from various art movements, such as [Dada](#) and [Surrealism](#). Next to many paintings were labels indicating how much money a museum spent to acquire the artwork. In the case of paintings acquired during the post-war [Weimar hyperinflation](#) of the early 1920s, when the cost of a kilogram loaf of bread reached 233 [billion German marks](#), the prices of the paintings were of course greatly exaggerated. The exhibit was designed to promote the idea that modernism was a [conspiracy](#) by people who hated German decency, frequently identified as Jewish-Bolshevik, although only 6 of the 112 artists included in the exhibition were in fact Jewish.^[35]

The exhibition program contained photographs of modern artworks accompanied by defamatory text. The cover featured the exhibition title—with the word "*Kunst*", meaning art, in [scare quotes](#)—superimposed on an image of [Otto Freundlich](#)'s sculpture [Der Neue Mensch](#).

A few weeks after the opening of the exhibition, Goebbels ordered a second and more thorough scouring of German art collections; inventory lists indicate that the artworks seized in this second round, combined with those gathered prior to the exhibition, amounted to 16,558 works.

Coinciding with the *Entartete Kunst* exhibition, the *Grosse deutsche Kunstausstellung* (Great German art exhibition) made its premiere amid much pageantry. This exhibition, held at the palatial [Haus der deutschen Kunst](#) (House of German Art), displayed the work of officially approved artists such as [Arno Breker](#) and [Adolf Wissel](#). At the end of four months *Entartete Kunst* had attracted over two million visitors, nearly three and a half times the number that visited the nearby *Grosse deutsche Kunstausstellung*.

Avant-garde German artists were now branded both enemies of the state and a threat to German culture. Many went into exile. Max Beckmann fled to Amsterdam on the opening day of the *Entartete Kunst* exhibit. Max Ernst emigrated to America with the assistance of Peggy Guggenheim. Ernst Ludwig Kirchner committed suicide in Switzerland in 1938. Paul Klee spent his years in exile in Switzerland, yet was unable to obtain Swiss citizenship because of his status as a degenerate artist. A leading German dealer, Alfred Flechtheim, died penniless in exile in London in 1937.

Other artists remained in internal exile. Otto Dix retreated to the countryside to paint unpeopled landscapes in a meticulous style that would not provoke the authorities. The Reichskulturkammer forbade artists such as Edgar Ende and Emil Nolde from purchasing painting materials. Those who remained in Germany were forbidden to work at universities and were subject to surprise raids by the Gestapo in order to ensure that they were not violating the ban on producing artwork; Nolde secretly carried on painting, but using only watercolors (so as not to be betrayed by the telltale odor of oil paint). Although officially no artists were put to death because of their work, those of Jewish descent who did not escape from Germany in time were sent to concentration camps. Others were murdered in the Action T4 (see, for example, Elfriede Lohse-Wächtler).

After the exhibit, paintings were sorted out for sale and sold in Switzerland at auction; some pieces were acquired by museums, others by private collectors. Nazi officials took many for their private use: for example, Hermann Göring took 14 valuable pieces, including a Van Gogh and a Cézanne. In March 1939, the Berlin Fire Brigade burned about 4000 paintings, drawings and prints that had apparently little value on the international market. This was an act of unprecedented vandalism, although the Nazis were well used to book burnings on a large scale.

A large amount of "degenerate art" by Picasso, Dalí, Ernst, Klee, Léger and Miró was destroyed in a bonfire on the night of July 27, 1942, in the gardens of the Galerie nationale du Jeu de Paume in Paris. Whereas it was forbidden to export "degenerate art" to Germany, it was still possible to buy and sell artworks of "degenerate artists" in occupied France. The Nazis considered indeed that they should not be concerned by Frenchmen's mental health. As a consequence, many works made by these artists were sold at the main French auction house during the occupation.

The couple Sophie and Emanuel Fohn, who exchanged the works for harmless works of art from their own possession and kept them in safe custody throughout the National Socialist era, saved about 250 works by ostracized artists. The collection survived in South Tyrol from 1943 and was handed over to the Bavarian State Painting Collections in 1964.

After the collapse of Nazi Germany and the invasion of Berlin by the Red Army, some artwork from the exhibit was found buried underground. It is unclear how many of these then reappeared in the Hermitage Museum in Saint Petersburg, where they still remain.

30/7/1937 – Guernica and Picasso exhibitions. Arguably Picasso's most famous work is his depiction of the German bombing of Guernica during the Spanish Civil War – *Guernica*. This large canvas embodies for many the inhumanity, brutality and hopelessness of war. Asked to explain its symbolism, Picasso said, "It isn't up to the painter to define the symbols. Otherwise it would be better if he wrote them out in so many words! The public who look at the picture must interpret the symbols as they understand them." *Guernica* was exhibited in July 1937 at the Spanish Pavilion at the Paris International Exposition, and then became the centerpiece of an exhibition of 118 works by Picasso, Matisse, Braque and Henri Laurens that toured

Scandinavia and England. After the victory of Francisco Franco in Spain, the painting was sent to the United States to raise funds and support for Spanish refugees. In 1939, the [Museum of Modern Art](#) in New York City, under its director [Alfred Barr](#), a Picasso enthusiast, held a major retrospective of Picasso's principal works until that time. This exhibition lionized Picasso, brought into full public view in America the scope of his artistry, and resulted in a reinterpretation of his work by contemporary art historians and scholars. According to Jonathan Weinberg, "Given the extraordinary quality of the show and Picasso's enormous prestige, generally heightened by the political impact of *Guernica* ... the critics were surprisingly ambivalent".^[54] Picasso's "multiplicity of styles" was disturbing to one journalist; another described him as "wayward and even malicious"; [Alfred Frankenstein's](#) review in [ARTnews](#) concluded that Picasso was both charlatan and genius.

October 1937 – Formation in [London](#) of the [Euston Road School](#), a private School of Drawing and Painting originally established in [Fitzroy Street](#) by [William Coldstream](#), [Claude Rogers](#) and [Victor Pasmore](#), and giving name to the group of [naturalist artists](#) associated with it.^[1]

21/12/1937 – Premiere of [Walt Disney's *Snow White and the Seven Dwarfs*](#) in the [United States](#), the first full-length animated feature film (concept artist: Albert Hurter).

17/1/1938 – The surrealist exhibition at the Galerie Beaux-Arts in Paris. The **Exposition Internationale du Surréalisme** was an exhibition by [surrealist](#) artists that took place from January 17 to February 24, 1938, in the generously equipped Galérie Beaux-Arts, run by [Georges Wildenstein](#), at 140, Rue du Faubourg Saint-Honoré in [Paris](#). It was organised by the French writer [André Breton](#), the surrealists' brain and theorist, and [Paul Éluard](#), the best known poet of the movement. The catalogue listed, along with the above, [Marcel Duchamp](#) as generator and arbitrator (to appease the partly fierce conflicts mainly between Breton and Éluard), [Salvador Dalí](#) and [Max Ernst](#) as technical advisers, [Man Ray](#) as head lighting technician and [Wolfgang Paalen](#) as responsible for the design the entrance and main hall with "water and foliage". The exhibition was staged in three sections, showing paintings and objects as well as unusually decorated rooms and [mannequins](#) which had been redesigned in various ways. With this holistic presentation of surrealist art work the movement wrote exhibition history.

Before their first group exhibition in November 1925, which took place in Pierre Loeb's gallery "Pierre" in Paris, the surrealist artists had previously shown their works at solo exhibitions. The group exhibition showed works of [Giorgio de Chirico](#), [Hans Arp](#), Max Ernst, [Paul Klee](#), [Man Ray](#), [André Masson](#), [Joan Miró](#), [Pablo Picasso](#) and [Pierre Roy](#). Another joint exhibition followed in 1928 in the Parisian gallery "Au Sacre du Printemps" with the title "Le Surréalisme, existe-t-il?" (Does [Surrealism](#) really exist?) Among the participants were Max Ernst, André Masson, Joan Miró, [Francis Picabia](#) und [Yves Tanguy](#). Further group exhibitions followed. In 1931 the first surrealist exhibition in the US took place in the [Wadsworth Atheneum](#) in [Hartford, Connecticut](#), and in May 1936 the "Exposition surréaliste d'objets" was held in the Parisian gallery Charles Ratton, which particularly valued object art and also referred to [Primitivism](#), [sexual fetishes](#) and mathematical models.^{[1][4]}

In June of the same year the [International Surrealist Exhibition](#) was launched in the [New Burlington Galleries](#) in London. These exhibitions still made use of the usual form of representation, i.e. the White Room, which was designed at the "Sonderbund" exhibition in [Cologne](#) in 1912. In 1938 however, André Breton wanted to establish a framework for the

surrealist art in the [Beaux Arts Gallery](#), in which the presentation itself was surrealist art. As a creative act it was to be a surreal experience, in which paintings and objects served as elements in a completely surrealist environment.

At the end of 1937, André Breton and [Nusch Éluard](#) asked Duchamp to contribute ideas to the surrealist exhibition they were planning. Duchamp had already presented his works at previous exhibitions, but he never became a member because of his principle never to be part of any group. Nevertheless, Duchamp accepted the invitation to help design the exhibition.

24/1/1938 – [Peggy Guggenheim](#) opens her Guggenheim Jeune gallery at 30 [Cork Street](#) in London with a display of work by [Jean Cocteau](#), followed in February by the first showing of [Wassily Kandinsky](#)'s work in Britain.

8/7/1938 – Exhibition of twentieth century German art opens in London at the [New Burlington Galleries](#), challenging the Nazi view of "degenerate art" in its home country.

10/7/1938 – Second *Große Deutsche Kunstausstellung* ("Great German Art Exhibition") opened by [Adolf Hitler](#) in the *Haus der deutschen Kunst* ("House of German Art") in [Munich](#); Hitler attacks the contemporary London exhibition.

13/7/1938 – [Kröller-Müller Museum](#), designed by [Henry van de Velde](#), opens in [Otterlo](#), Netherlands.

5-17/12/1938 – [Albert Namatjira](#) exhibition in [Melbourne](#) includes over 2,000 works, the first solo display of [indigenous Australian art](#).

20/3/1939 – The [Berlin](#) Fire Brigade is ordered to burn around 5000 works of graphic art considered by the ruling [Nazi Party](#) in [Germany](#) to be "[degenerate art](#)" and which have little market value.^{[1][2]}

May 1939 – Release of *Detective Comics* #27, the debut of [Batman](#).

May 1939 - The expulsion of [Salvador Dali](#) from the [Surrealist movement](#) is announced.

June 1939 – [Peggy Guggenheim](#) closes her Guggenheim Jeune gallery at 30 [Cork Street](#) in London, abandons her plan for a modern art gallery in the city, and in August moves to Paris.

23/8/1939 – 2/9/1939 – Most paintings from the [National Gallery](#) in London are evacuated to [Wales](#).

September 1939 – Artworks from the [Louvre](#) and other French museums are evacuated to the [Château de Chambord](#).

6/12/1939 – Mexican painters' [Frida Kahlo](#) and [Diego Rivera](#)'s brief divorce is finalized.

7/11/1939 – The [War Artists' Advisory Committee](#) of the [Ministry of Information \(United Kingdom\)](#) is appointed, following a scheme put forward by Sir [Kenneth Clark](#) on August 29, first meeting on November 23 to decide which [war artists](#) it will employ.

SCIENCE – FORMAL, NATURAL, SOCIAL

	Science		
	Formal science	Empirical sciences	
		Natural science	Social science
Foundation	Logic; Mathematics; Statistics	Physics; Chemistry; Biology; Earth science; Space science	Economics; Political science; Sociology; Psychology

SEE CHAPTER “SCIENCE IN THE TWELFTY 1820-1939”

HIGHLIGHTS

December 27, 1831 – Charles Darwin embarks on his historic voyage aboard HMS Beagle.

July 2, 1832 – Andre-Michel Guerry presents his *Essay on moral statistics of France*, to the French Academy of Sciences, a significant step in the founding of empirical social science.

September 7, 1835 – Charles Darwin arrives at the Galapagos Islands aboard HMS Beagle.

October 2, 1836 – Charles Darwin returns to England aboard HMS Beagle with biological data he will use to develop his theory of evolution, having left South America on August 17.

November 13, 1841 – Scottish surgeon James Braid first sees a demonstration of *animal magnetism* by Charles Lafontaine in Manchester, which leads to his study of the phenomenon that he (Braid) eventually calls *hypnotism*.

August 28, 1844 – Friedrich Engels and Karl Marx meet in Paris, France.

August 28, 1845 – The journal *Scientific American* begins publication

December 27, 1845 – Anesthesia is used for childbirth for the first time (Dr. Crawford Long in Jefferson, Georgia).

September 23, 1846 – Discovery of Neptune: The planet is observed for the first time by German astronomers Johann Gottfried Galle and Heinrich Louis d'Arrest as predicted by the British astronomer John Couch Adams and the French astronomer Urbain Le Verrier.

June 1, 1847 – The first congress of the Communist League is held in London.

February 21, 1848 – Karl Marx and Friedrich Engels publish *The Communist Manifesto* (*Manifest der Kommunistischen Partei*) in London.

8 February and 8 March 1865 - The principles of Mendelian inheritance were named for and first derived by Gregor Johann Mendel, a nineteenth-century Moravian monk who formulated his ideas after conducting simple hybridisation experiments with pea plants (*Pisum sativum*) he had planted in the garden of his monastery. Between 1856 and 1863, Mendel cultivated and tested some 5,000 pea plants. From these experiments, he induced two generalizations which later became known as *Mendel's Principles of Heredity* or *Mendelian inheritance*. He described his experiments in a two-part paper, *Versuche über Pflanzen-Hybriden* (*Experiments on Plant Hybridization*), that he presented to the Natural History Society of Brno on 8 February and 8 March 1865, and which was published in 1866.

August 18, 1868 - Helium was first detected during the total solar eclipse in parts of India. It was the first eclipse expedition in which a spectroscope was used.

March 1 [O.S. February 17] 1869 - Russian chemistry professor Dmitri Mendeleev and German chemist Julius Lothar Meyer independently published their periodic tables in 1869 and 1870, respectively. Mendeleev's table, dated March 1 [O.S. February 17] 1869, was his first published version. That of Meyer was an expanded version of his (Meyer's) table of 1864. They both constructed their tables by listing the elements in rows or columns in order of atomic weight and starting a new row or column when the characteristics of the elements began to repeat.

On 26 December 1898, Pierre and Marie Curie announced the existence of a second element, which they named "radium", from the Latin word for "ray". In the course of their research, they also coined the word "radioactivity".

March 17, 1905 – Annus Mirabilis papers – Albert Einstein publishes his paper "On a heuristic viewpoint concerning the production and transformation of light", in which he explains the photoelectric effect, using the notion of light quanta. For this paper Einstein received the Nobel Prize for Physics in 1921.

May 11, 1905 – Annus Mirabilis papers – Albert Einstein submits his doctoral dissertation "On the Motion of Small Particles...", in which he explains Brownian motion.

June 30, 1905 – Annus Mirabilis papers – Albert Einstein publishes the article "On the Electrodynamics of Moving Bodies", where he reveals his theory of special relativity.

September 27, 1905 – Annus Mirabilis papers – Albert Einstein submits his paper "Does the Inertia of a Body Depend Upon Its Energy Content?", in which he develops an argument for the famous equation $E = mc^2$.

BY YEARS

1820

- [Astronomical Society of London](#) is founded.^[1]
- [Royal Observatory, Cape of Good Hope](#), is founded.^[2]

- [Christian Friedrich Nasse](#) formulates Nasse's law: [hemophilia](#) occurs only in males and is transmitted by [asymptomatic](#) females.
- Ground is set aside for establishment of the [United States Botanic Garden](#) in [Washington, D.C.](#)
- May – [John Herapath](#) draws up a partial account of the [kinetic theory of gases](#).^[3]
- [Joseph Bienaimé Caventou](#) and [Pierre Joseph Pelletier](#) isolate the [alkaloids cinchonine](#) and [quinine](#) from [Cinchona](#) bark.
- [Friedrich Accum](#)'s *A Treatise on Adulterations of Food and Culinary Poisons* is published in London.
- [Charles Xavier Thomas de Colmar](#) makes his "Arithmometer", the first mass-produced calculator.
- January 27 (NS) – The [Antarctic ice sheet](#) is sighted for the first time by [Imperial Russian Navy](#) captain [Fabian Gottlieb von Bellingshausen](#).^[4]
- January 30 – Antarctica is sighted for the second time by [Irish Royal Navy](#) captain [Edward Bransfield](#).^[4]
- July – Botanist [Edwin James](#) becomes the first recorded person to reach the summit of [Pikes Peak](#) in [Colorado](#).
- November 17 – Antarctica is sighted for the third time by [United States seal hunter Nathaniel Palmer](#).^[5]
- May – [The Geological Society](#) publishes a *Geological Map of England & Wales* by [G. B. Greenough](#) (dated 1819) as an alternative to [William Smith](#)'s famous [geological map](#) of 1815. Greenough's map is produced from a collaborative effort that is skilfully edited and generally acknowledged to be more accurate than Smith's.^[6]
- [Hans Christian Ørsted](#) discovers the relationship between [electricity](#) and [magnetism](#).
- Laws of [electrodynamics](#) are established by [André-Marie Ampère](#).
- [Jean-Baptiste Biot](#) and [Félix Savart](#) demonstrate the [Biot–Savart law](#) in [electromagnetism](#).
- July 26 – Opening of [Union Chain Bridge](#) across the [River Tweed](#) between [England](#) and [Scotland](#), designed by [Captain Samuel Brown](#). Its span of 449 ft (137 metres) is the longest in the [Western world](#) at this time, and it is the first [wrought iron](#) vehicular [suspension bridge](#) of its type in [Britain](#).^[7]
- [English](#) inventor [Thomas Hancock](#) [patents](#) the production of fastenings using rubberized fabrics and invents the "pickling machine" (masticator) for recycling [rubber](#) scraps.
- [French](#) engineer [Jean-Victor Poncelet](#) develops an inward-flow [water turbine](#).

1821

- [Johann Franz Encke](#) calculates that [Comet Encke](#) has a periodic [orbit](#), the second [comet](#) after [Comet Halley](#) for which this has been discovered.
- [Alexis Bouvard](#) detects irregularities in the orbit of [Uranus](#).
- Swedish [mycologist Elias Magnus Fries](#) begins publication of *Systema Mycologicum*, a key work in the modern [taxonomy](#) of [mushrooms](#).

- [William Jackson Hooker](#) publishes *Flora Scotica; or, A description of Scottish plants*.
- [Prideaux John Selby](#) begins publication of *Illustrations of British Ornithology*, the first set of life-sized illustrations of British birds.
- [John Kidd](#) describes the properties of the substance which he calls [naphthaline](#).^[1]
- [Pierre Jean Robiquet](#), [Joseph Bienaimé Caventou](#) and [Pierre Joseph Pelletier](#) isolate [caffeine](#).
- January 28 – Russian explorer [Fabian Gottlieb von Bellingshausen](#) discovers [Alexander I Land](#) in Antarctica, later determined to be the world's second-largest uninhabited island.
- December 6 – The [South Orkney Islands](#) are discovered by [George Powell](#) and [Nathaniel Palmer](#).^{[2][3]}
- December 15 – The world's first geographical society, the [Société de géographie](#), is established in Paris.
- [William Parry](#) starts his second voyage to find the [Northwest Passage](#).
- [Ignaz Venetz](#) proposes his [ice age](#) theory.
- [Pierre Berthier](#) discovers [bauxite](#).
- [Mary Anning](#) finds the first ever [plesiosaur](#) fossil at [Lyme Regis](#).
- [Augustin-Louis Cauchy](#) gives the first complete presentation of [calculus](#) using limits.
- [Charles Bell](#) presents a paper to the [Royal Society](#), "On the Nerves, Giving an Account of some Experiments on their Structure and Functions, which led to a New Arrangement of the System", identifying [Bell's palsy](#); and also publishes his book *Illustrations of the Great Operations of Surgery: Trepan, Hernia, Amputation, Aneurism, and Lithotomy* (illustrated by himself).
- [Jean Marc Gaspard Itard](#) publishes *Traité des maladies d'oreille et de l'audition* in Paris, a major work on [otology](#).
- [William Buckland](#) finds the remains of a [hyena](#)'s den in [Yorkshire](#), containing the bones of [lions](#), [elephants](#) and [rhinoceros](#).
- [Michael Faraday](#) discovers electromagnetic rotation.
- [Thomas Johann Seebeck](#) discovers the [thermoelectric effect](#).
- [Augustin Fresnel](#) shows that light is made up of a traverse wave motion.
- [John Herapath](#) publishes a [kinetic theory of gases](#).
- [Antide Janvier](#) publishes his textbook on the theory and practice of watchmaking, *Manuel Chronometrique, ou, precis de ce qui concerne le temps, ses divisions, ses mesures, leurs usages, etc.* in Paris.
- [Copley Medal](#): [Edward Sabine](#); [John Herschel](#)^[4]

1822

- "[Rostocker Pfeilstorch](#)", a [white stork](#), is found in northern Germany with an arrow from central Africa through its neck, demonstrating the fact of [bird migration](#).

- [Georges Cuvier](#) establishes new standards and methods in [stratigraphy](#) and [paleontology](#).
- [Gideon Mantell](#) discovers the first [fossil](#) of the [iguanodon](#).
- [John Phillips](#) and [William Conybeare](#) identify the [Carboniferous](#) Period.
- [Jean Baptiste Julien d'Omalius d'Halloy](#) identifies the [Cretaceous](#) Period. He also proposes the [Jurassic](#) System.
- July 3 – [Charles Babbage](#) publishes a proposal for a "[difference engine](#)", a mechanical forerunner of the modern computer for calculating [logarithms](#) and [trigonometric](#) functions. Construction of an operational version will proceed under British Government sponsorship 1823–32 but it will never be completed.^[1]
- [Karl Feuerbach](#) describes the [nine-point circle](#) of a [triangle](#).^[2]
- [William Farish](#) of the [University of Cambridge](#) publishes a systematization of the rules for [isometric drawing](#).^{[3][4][5]}
- [United States Army surgeon William Beaumont](#) pioneers human [gastric endoscopy](#) on [Alexis St. Martin](#).^[6]
- Scottish surgeon [John Henry Wishart](#) gives the first description in England of [neurofibromatosis type II](#).^{[7][8]}
- [Navier–Stokes equations](#) in [fluid dynamics](#) first formulated.
- May 23 – HMS *Comet* launched at [Deptford Dockyard](#) in the [United Kingdom](#), the first [steamboat](#) commissioned by the [Royal Navy](#).
- June 10 – The [Aaron Manby](#) crosses the [English Channel](#), making her the first seagoing iron steamboat.
- [French](#) civil engineer [Louis Vicat](#) completes construction of a concrete viaduct across the [Dordogne](#) at [Souillac, Lot](#).^[9]
- September 11 – [Galileo's](#) *[Dialogue Concerning the Two Chief World Systems](#)* (1632) is permitted by the [Roman Catholic Church](#) to be published.
- June 12 – [Edward Banks](#) [knighted](#), the first such honour for work in [civil engineering](#).^[10]
- [Copley Medal](#): [William Buckland](#)^[11]

1823

- [Olbers' paradox](#) is described by the [German astronomer Heinrich Wilhelm Matthäus Olbers](#).
- [Cambridge Observatory](#) established in [England](#).^[1]
- December 29 – [Great Comet of 1823](#) first observed.
- June 17 – [Charles Macintosh](#) [patents](#) a method of rubberizing fabric to waterproof it.^[2]
- February 20 – [James Weddell's](#) expedition to [Antarctica](#) reaches [latitude](#) 74°15' S and [longitude](#) 34°16'45" W, the most southerly position that will be attained for more than 80 years.

- [János Bolyai](#) completes a treatise on [parallel lines](#) that he calls [absolute geometry](#), although it will not be published until 1832.
- After August – [Philipp Franz von Siebold](#) begins to introduce Western medicine to Japan.
- October 5 – [The Lancet](#) founded by [Thomas Wakley](#).
- [Theodric Romeyn Beck](#) publishes the first significant American book on [forensic medicine](#), *Elements of Medical Jurisprudence* in [Albany, New York](#).
- January 23 – In a cave on the [Gower Peninsula](#) of [Wales](#), [William Buckland](#) inspects the "[Red Lady of Paviland](#)", the first identification of a prehistoric (male) human burial. The bones, discovered on December 21 last, are with those of the woolly [mammoth](#), proving that the two had coexisted.^[3]
- December 10 – On the [Jurassic Coast](#) of southern England, [Mary Anning](#) finds the first complete [Plesiosaurus](#) skeleton.^[4]
- [William Sturgeon](#) invents the [electromagnet](#).
- December 6 – English inventor [Samuel Brown](#) obtains his first [patent](#) for a hydrogen fuelled compressionless atmospheric gas vacuum engine,^[5] the first [internal combustion engine](#) to be applied industrially.^[6]
- First use of a [Fresnel lens](#) in a [lighthouse](#) optic, at the [Cordouan lighthouse](#) on the [Gironde estuary](#).^[7]
- First permanent [wire cable suspension bridge](#), Pont Saint Antoine in [Geneva](#), by [Guillaume Henri Dufour](#), of two 40 m spans.^[8]
- First [cast iron](#) framed [greenhouse](#) erected at [Wollaton Park](#) in England as a [Camellia](#) house.
- French officer [Henri-Joseph Paixhans](#) develops the [Paixhans gun](#), the first [naval artillery](#) to fire explosive [shells](#).
- [Annals of the New York Academy of Sciences](#) first published.
- [Copley Medal](#): [John Pond](#)^[9]

1824

- [Franz von Gruithuisen](#) explains the formation of craters on the [Moon](#) as a result of [meteorite](#) impacts.^[1]
- [William Pearson](#) publishes *An Introduction to Practical Astronomy*.
- [John Curtis](#) begins publication of [British Entomology](#) in London.
- [Thomas Say](#) begins publication of *American Entomology, or Descriptions of the Insects of North America* in [Philadelphia](#), including the first description of the [Colorado potato beetle](#).
- [Joseph Fourier](#) calculates that the Earth would be far colder if it lacked an atmosphere.^[2]
- [Niels Henrik Abel](#) partially proves that the general quintic or higher equations cannot be solved by a general formula involving only arithmetical operations and roots.^[3]

- [Augustin-Louis Cauchy](#) proves convergence of the [Euler method](#), using the implicit Euler method.
- The Rev. Professor [William Buckland](#) becomes the first person to describe a [dinosaur](#) in a [scientific journal](#).^[4]
- October 21 – [Patent](#) issued to [Joseph Aspdin](#) for [Portland cement](#).^[5]
- [Sadi Carnot](#) scientifically analyzes the [efficiency](#) of [steam engines](#) and [heat engines](#) in general in his book *Reflections on the Motive Power of Fire and on Machines Fitted to Develop that Power* ("Réflexions sur la puissance motrice du feu et sur les machines propres à développer cette puissance").
- [Louis Braille](#), at age 15, develops the six-dot code, later known as [Braille](#), which allows the [visually impaired](#) to read and write faster than previous [raised-letter systems](#).
- The [Panoramagram](#) is invented as the first stereoscopic viewer.
- January 8 – After much controversy, [Michael Faraday](#) is finally elected as a member of the [Royal Society](#) with only one vote against him.
- February 5 – The [Franklin Institute](#) of the State of Pennsylvania for the Promotion of the Mechanic Arts is founded in [Philadelphia](#) by [Samuel Vaughan Merrick](#) and [William H. Keating](#).
- November 5 – [Rensselaer Polytechnic Institute](#), the first [technological university](#) in the English-speaking world, is founded in [Troy, New York](#).
- [Copley Medal](#): [John Brinkley](#)^[6]

1825

- [Pierre-Simon Laplace](#) completes his study of [gravitation](#), the stability of the solar system, tides, the precession of the equinoxes, the [libration](#) of the Moon, and [Saturn's](#) rings in publishing the fifth and final volume of *Mécanique Céleste* (Celestial Mechanics).^[1]
- [Richard Harlan](#) publishes *Fauna Americana*.^[2]
- [Charles Waterton](#) publishes *Wanderings in South America, the North-west of the United States, and the Antilles, in the years 1812, 1816, 1820, and 1824; with original instructions for the perfect preservation of birds, &c. for cabinets of natural history*.
- [Cox's](#) [Orange](#) [Pippin apple cultivar](#) first grown, at [Colnbrook](#) in [Buckinghamshire, England](#), by [horticulturist](#) and retired [brewer](#) [Richard Cox](#).
- [Michael Faraday](#) isolates [benzene](#) as *Bicarburet of Hydrogen*.^{[3][4]}
- [Hans Christian Ørsted](#) reduces [aluminium chloride](#) to produce metallic [aluminium](#) in an impure form.
- [Friedrich Wöhler](#) and [Justus von Liebig](#) perform the first confirmed discovery and explanation of [isomers](#), earlier named by Berzelius. Working with cyanic acid and fulminic acid, they correctly deduce that isomerism is caused by differing arrangements of atoms within a molecular structure.^{[5][6]}
- July – [Volcanic eruption](#) of [Mount Guntur](#) in [West Java](#).

- [G. Poulett Scrope](#) publishes *Considerations on Volcanoes*, the first systematic work on [volcanology](#).^[7]
- [Augustin-Louis Cauchy](#) presents the [Cauchy integral theorem](#) for general integration paths—he assumes the function being integrated has a continuous derivative.
- Augustin-Louis Cauchy introduces the theory of residues in [complex analysis](#).
- [Peter Gustav Lejeune Dirichlet](#) and [Adrien-Marie Legendre](#) prove [Fermat's last theorem](#) for $n = 5$.
- [André-Marie Ampère](#) discovers [Stokes' theorem](#).
- [Benjamin Gompertz](#) formulates the [Gompertz function](#).
- [Jean-Baptiste Sarlandière](#)'s *Mémoires sur L'Électro-Puncture* introduces Western medicine to [electroacupuncture](#).^[8]
- [Georges Cuvier](#) proposes his [catastrophe theory](#) as the cause of [extinctions](#) of large groups of animals.
- [Étienne Geoffroy Saint-Hilaire](#) identifies Cuvier's fossil 'crocodile' as a [teleosaurus](#).
- August – The [wire-cable suspension bridge](#) between [Tournon-sur-Rhône](#) and [Tain-l'Hermitage](#), designed by [Marc Seguin](#), opens.^[9]
- September 27 – The world's longest railway to be worked by [steam locomotives](#) at this date, the [Stockton and Darlington Railway](#), opens in [northern England](#).
- October 26 – The [Erie Canal](#) officially opens over 363 miles (584 km) from [Albany, New York](#), to [Lake Erie](#).^[10]
- [English](#) inventor [William Sturgeon](#) describes the first [electromagnet](#).^[11]
- [Copley Medal](#): [François Arago](#); [Peter Barlow](#)^[12]

1826

- [Mary Somerville](#) presents a paper on "The Magnetic Properties of the Violet Rays of the Solar Spectrum" to the [Royal Society](#) in London.
- [Antoine Jerome Balard](#) isolates [bromine](#).
- [Pierre Jean Robiquet](#) isolates the dye [alizarin](#).^[1]
- [Michael Faraday](#) determines the chemical formula of [naphthalene](#).
- May 22 – [HMS Beagle](#) departs on her first voyage from [Plymouth](#) for a [hydrographic](#) survey of the [Patagonia](#) and [Tierra del Fuego](#) regions of South America.
- [Hyacinthe de Bougainville](#) completes a three-year global [circumnavigation](#).
- *Journal für die reine und angewandte Mathematik* is founded by [August Leopold Crelle](#) in [Berlin](#).
- February – [Nikolai Lobachevsky](#) first presents his system of [non-Euclidean hyperbolic geometry](#).
- [Johannes Peter Müller](#) publishes his first important works, *Zur vergleichenden Physiologie des Gesichtsinns* ("On the comparative physiology of sight", [Leipzig](#))

and *Über die phantastischen Gesichterscheinungen* ("On visual hallucination", [Coblenz](#)), making a first statement of the [law of specific nerve energies](#).

- January 30 – The [Menai Suspension Bridge](#), built by engineer [Thomas Telford](#), is opened between the island of [Anglesey](#) and the mainland of [Wales](#).^[2]
- April 1 – [American](#) inventor [Samuel Morey](#) patents a compressionless [internal combustion engine](#) in the United States.^{[3][4][5]}
- June – [Nicéphore Niépce](#) produces the first photograph, [View from the Window at Le Gras](#).^[6]
- [Benoit Fourneyron](#) develops an efficient outward-flow [water turbine](#).
- [Karl Ernst von Baer](#) discovers the mammalian [ovum](#).^{[7][8][9]}
- The [Austrian](#) zoologist Johann Nepomuk Meyer first describes the [Asiatic lion](#) under the [name](#) *Felis leo persicus*.^[10]
- The [Zoological Society of London](#) is founded by Sir [Thomas Stamford Raffles](#).
- [Copley Medal](#): [James South](#)^[11]

1827

- [Aluminium](#) isolated by [Friedrich Wöhler](#).^[1]
- [William Prout](#) classifies the components of food into the three main divisions of [carbohydrates](#), [fats](#) and [proteins](#).^[2]
- [Zeise's salt](#) is the first [platinum/olefin](#) complex, an early example of [organometallic chemistry](#).
- [John Walker](#) first offers friction [matches](#) for sale.
- [William Edward Parry](#) reaches 82°45'N, which will remain for 49 years the highest [latitude](#) attained.^{[3][4]}
- [G. Poulett Scrope](#) publishes his *Memoir on the Geology of Central France, including the volcanic formations...*, extending by detailed observation his work on [volcanology](#).^[5]
- [John Farey](#) publishes *A Treatise on the Steam Engine, historical, practical and descriptive* in [London](#).
- [Robert Adams](#) first describes the cardiac condition which will become known as [Adams-Stokes syndrome](#).^{[6][7]}
- [Richard Bright](#) first describes the renal condition which will become known as [Bright's disease](#).^[8]
- [Robert Brown](#) observes the phenomenon of [Brownian motion](#).^[9]
- [Joseph Fourier](#) first proposes existence of the [greenhouse effect](#).^[10]
- April 26–May 24 – The [Royal Netherlands Navy's](#) British-built [paddle steamer Curaçao](#) makes the first [Transatlantic Crossing](#) by steam, from [Hellevoetsluis](#) to [Paramaribo](#).^[11]
- c. July – [Robert Wilson](#) of [Dunbar](#) in Scotland demonstrates a [screw propeller](#).

- Completion of [Ozimek Suspension Bridge](#) in Poland, designed by Karl Schottelius, possibly the oldest surviving [wrought iron suspension bridge](#) in [continental Europe](#).
- [Jacob Perkins](#) introduces the [uniflow steam engine](#) to the United Kingdom.^[12]
- [John James Audubon](#) begins publication of *The Birds of America* in the [United Kingdom](#).
- Three [giraffes](#), the first to be seen in [Europe](#) for over three centuries, are presented by the [Ottoman](#) Viceroy of [Egypt](#), [Mehmet Ali Pasha](#). [Zarafa](#) is presented to King [Charles X of France](#) in [Paris](#) on 9 July having walked from [Marseilles](#) (landed 31 October 1826). The others are presented to King [George IV of the United Kingdom](#) in [London](#) and [Francis II, Holy Roman Emperor](#), in [Vienna](#).^[13]
- [Royal Institute of Technology](#) (originally named 'Technological Institute') founded in [Stockholm, Sweden](#).
- [Copley Medal](#): [William Prout](#); [Henry Foster](#)^[14]

1828

- [Aluminium](#) isolated by [Friedrich Wöhler](#).^[1]
- [William Prout](#) classifies the components of food into the three main divisions of [carbohydrates](#), [fats](#) and [proteins](#).^[2]
- [Zeise's salt](#) is the first [platinum/olefin](#) complex, an early example of [organometallic chemistry](#).
- [John Walker](#) first offers friction [matches](#) for sale.
- [William Edward Parry](#) reaches 82°45'N, which will remain for 49 years the highest [latitude](#) attained.^{[3][4]}
- [G. Poulett Scrope](#) publishes his *Memoir on the Geology of Central France, including the volcanic formations...*, extending by detailed observation his work on [volcanology](#).^[5]
- [John Farey](#) publishes *A Treatise on the Steam Engine, historical, practical and descriptive* in [London](#).
- [Robert Adams](#) first describes the cardiac condition which will become known as [Adams-Stokes syndrome](#).^{[6][7]}
- [Richard Bright](#) first describes the renal condition which will become known as [Bright's disease](#).^[8]
- [Robert Brown](#) observes the phenomenon of [Brownian motion](#).^[9]
- [Joseph Fourier](#) first proposes existence of the [greenhouse effect](#).^[10]
- April 26–May 24 – The [Royal Netherlands Navy's](#) British-built [paddle steamer Curaçao](#) makes the first [Transatlantic Crossing](#) by steam, from [Hellevoetsluis](#) to [Paramaribo](#).^[11]
- c. July – [Robert Wilson](#) of [Dunbar](#) in Scotland demonstrates a [screw propeller](#).
- Completion of [Ozimek Suspension Bridge](#) in Poland, designed by Karl Schottelius, possibly the oldest surviving [wrought iron suspension bridge](#) in [continental Europe](#).

- [Jacob Perkins](#) introduces the [uniflow steam engine](#) to the United Kingdom.^[12]
- [John James Audubon](#) begins publication of *The Birds of America* in the [United Kingdom](#).
- Three [giraffes](#), the first to be seen in [Europe](#) for over three centuries, are presented by the [Ottoman](#) Viceroy of [Egypt](#), [Mehmet Ali Pasha](#). [Zarafa](#) is presented to King [Charles X of France](#) in [Paris](#) on 9 July having walked from [Marseilles](#) (landed 31 October 1826). The others are presented to King [George IV of the United Kingdom](#) in [London](#) and [Francis II, Holy Roman Emperor](#), in [Vienna](#).^[13]
- [Royal Institute of Technology](#) (originally named 'Technological Institute') founded in [Stockholm](#), [Sweden](#).
- [Copley Medal](#): [William Prout](#); [Henry Foster](#)^[14]

1829

- [Isaac Holden](#) produces a form of friction [match](#).
- [Peter Gustav Lejeune Dirichlet](#) publishes a memoir giving the [Dirichlet conditions](#), showing for which functions the convergence of the [Fourier series](#) holds; introducing [Dirichlet's test](#) for the convergence of series; the [Dirichlet function](#) as an example that not any function is integrable; and, in the proof of the theorem for the Fourier series, the [Dirichlet kernel](#) and [Dirichlet integral](#).^[1] He also introduces a general modern concept for a [function](#).^[2]
- [Nikolai Ivanovich Lobachevsky](#) publishes his work on hyperbolic [non-Euclidean geometry](#).^[3]
- [S. D. Poisson](#) publishes *Sur l'attraction des sphéroides*.
- Dr [Benjamin Guy Babington](#) makes the first known use of a [laryngoscope](#).^[4]
- [Jules Desnoyers](#) names the [Quaternary](#) period.
- [Engis 2](#), part of the skull of a young child and other bones, recognised in 1936 as the first known [Neanderthal](#) fossil, is found in the [Awirs](#) cave near [Engis](#) in the [United Kingdom of the Netherlands](#) (modern-day Belgium) by [Philippe-Charles Schmerling](#).^[5]
- May – [Cyrill Demian patents](#) a version of the [accordion](#) in [Vienna](#).
- June 30 – [Henry Robinson Palmer](#) files a British patent application for [corrugated iron](#) for use in buildings.^[6]
- July 23 – In the [United States](#), [William Burt](#) obtains the first patent for a form of [typewriter](#), the [typographer](#).^[7]
- October 6–14 – The [Rainhill Trials](#), a [steam locomotive](#) competition, are run in [England](#) and won by [Stephenson's Rocket](#).
- December 19 – [Charles Wheatstone patents](#) the [concertina](#) in Britain.
- [Louis Braille](#) publishes the first description of his method of [embossed](#) printing that allows the [visually impaired](#) to read.^[8]
- [Chalmers University of Technology](#) founded in [Gothenburg](#), [Sweden](#).

- [Technical University of Denmark](#) (originally named 'College of Advanced Technology') founded in [Copenhagen, Denmark](#).
- [University of Stuttgart](#) founded in [Stuttgart, Germany](#).
- [Ecole Centrale Paris](#) (originally named 'École Centrale des Arts et Manufactures') founded in [Paris, France](#).
- [Copley Medal](#): not awarded^[9]

1830

- March 16 – Great Comet of 1830 (C/1830 F1, 1830 I) first observed in [Mauritius](#).
- [Johann Heinrich Mädler](#) and [Wilhelm Beer](#) produce the first map of the surface of Mars.
- [Charles Bell](#) publishes his *Nervous System of the Human Body*.
- [William Jackson Hooker](#) commences publication of *The British Flora*.
- October 14 – [HMS Beagle](#) returns to England from her first voyage, a [hydrographic](#) survey of the [Patagonia](#) and [Tierra del Fuego](#) regions of South America.
- [Charles Lyell](#) publishes the first volume of his *Principles of Geology, being an attempt to explain the former changes of the Earth's surface, by reference to causes now in operation*.
- [Thomas Southwood Smith](#) publishes the standard textbook *A Treatise on Fever* in [London](#).
- Approximate date – The chain [osteotome](#), a form of [chainsaw](#), is invented by German orthopaedist [Bernhard Heine](#).^{[1][2][3][4]}
- July 13 – [John Ruggles](#) is granted [United States patent No. 1](#), for applying [rack railway](#) equipment to the "Locomotive steam-engine for rail and other roads".
- August 31 – [Edwin Budding](#) is granted a [United Kingdom](#) patent for the [lawnmower](#).
- [Aeneas Coffey](#) is granted a United Kingdom patent for an improved [column still](#).
- [Eaton Hodgkinson](#) publishes his pioneering paper on the optimum [cross section](#) for [cast iron structural beams](#).^[5]
- Stephen H. Long designs the [Long truss](#) wooden bridge.
- [Charles Babbage](#) publishes *Reflections on the Decline of Science in England, and on Some of Its Causes*.
- [Copley Medal](#): not awarded^[6]

1831

- January 7 – Great Comet of 1831 (C/1831 A1, 1830 II) first observed by [John Herapath](#).^[1]
- March 7 – [Royal Astronomical Society](#) receives its [Royal Charter](#).^[2]
- [Heinrich Schwabe](#) makes the first detailed drawing of the [Great Red Spot](#) on [Jupiter](#).

- [Mary Somerville](#) translates [Laplace](#)'s *Mécanique céleste* as *The Mechanism of the Heavens*.
- September 1 – [Zoological Gardens, Dublin](#), open in [Ireland](#).^[3]
- [A. A. Bussy](#) publishes his *Mémoire sur le Radical métallique de la Magnésie* describing his method of isolating [magnesium](#).
- The [Kaliapparat](#) is a laboratory device invented in 1831 by [Justus von Liebig](#).
- June 1 – British [Royal Navy](#) officer [James Clark Ross](#) locates the position of the [North Magnetic Pole](#) on the [Boothia Peninsula](#).
- December 27 – [Charles Darwin](#) starts his voyage on [HMS Beagle](#) from [Plymouth](#).
- May 16 – [Middlesex County Asylum](#) for pauper lunatics opens at [Hanwell](#) near London under the humane superintendence of [William Charles Ellis](#).
- Dr [C. Turner Thackrah](#) publishes *The Effects of the Principal Arts, Trades, and Professions, and of Civic States and Habits of Living, on Health and Longevity, with a particular reference to the trades and manufactures of Leeds, and suggestions for the removal of many of the agents which produce disease and shorten the duration of life*, a pioneering study of [occupational](#) and [public health](#) in a newly industrialised English city.^[4]
- [Henry Witham](#) publishes *Observations on fossil vegetables, accompanied by representations of their internal structure, as seen through the microscope* in [Edinburgh](#).
- April 12 – [Broughton Suspension Bridge](#) over the [River Irwell](#) in [England](#) collapses under marching troops.^[5]
- August 29 – [Michael Faraday](#) demonstrates [electromagnetic induction](#) at the [Royal Society](#).^[6] [Joseph Henry](#) recognises it at about the same time. Faraday also develops the [Faraday Wheel](#), a [homopolar generator](#).
- [Joseph Henry](#) invents the [electric bell](#).^[7]
- [James Meadows Rendel](#) erects the first [basculer bridge](#) with a [hydraulic](#) mechanism, on the [Kingsbridge Estuary](#) in England.^[8]
- [William Wallace](#) invents the [eidograph](#).^[9]
- September 27 – [British Association for the Advancement of Science](#) first meets, in [York](#).^[10]
- [Copley Medal](#): [George Biddell Airy](#)^[11]
- [Wollaston Medal](#): [William Smith](#)

1832

- Dr. [Thomas Bell](#) begins publication of *A Monograph of the Testudinata*, the first comprehensive study of the world's [turtles](#).
- [Isidore Geoffroy Saint-Hilaire](#) begins publication of *Histoire générale et particulière des anomalies de l'organisation chez l'homme et les animaux*, a key text on [teratology](#).^[1]

- [Pierre Jean Robiquet](#) isolates the [analgesic codeine](#).
- Friedrich Wöhler and Justus von Liebig discover and explain [functional groups](#) and [radicals](#) in relation to organic chemistry.^{[2][3]}
- [Pittacal](#) was discovered by German chemist [Carl Ludwig Reichenbach](#).
- April 21 – [Cyrille Pierre Théodore Laplace](#) completes a four-year global [circumnavigation](#).
- [Évariste Galois](#) presents a general condition for the solvability of [algebraic equations](#), thereby essentially founding [group theory](#) and [Galois theory](#).^[4] On May 29, the eve of a duel from which he will die, he writes his "mathematical testament", a letter to [Auguste Chevalier](#).
- [Peter Gustav Lejeune Dirichlet](#) proves [Fermat's last theorem](#) for $n = 14$.
- [János Bolyai](#)'s system of [non-Euclidean geometry](#) is first published.^[5]
- February 12 – In [England](#), a [second cholera pandemic](#) begins to spread, starting from the [East End of London](#). It is declared officially over in early May but deaths continue. It will claim at least 3000 victims. In [Liverpool](#), [Kitty Wilkinson](#) becomes the "Saint of the Slums"^[6] by promoting hygiene.^[7]
- July 19 – [Anatomy Act](#) in the [United Kingdom](#) provides for licensing and inspection of [anatomists](#), and for unclaimed bodies from public institutions to be available for their dissection.
- [Dr James Kay](#) publishes *[The moral and physical condition of the working-class employed in the cotton manufacture in Manchester](#)*.
- [Thomas Hodgkin](#) first describes abnormalities in the [lymph system](#) later known as [Hodgkin's lymphoma](#).^{[8][9]}
- [James Rennell](#)'s *An Investigation of the Currents of the Atlantic Ocean, and of those which prevail between the Indian Ocean and the Atlantic* is published posthumously by his daughter. It will not be significantly superseded for more than a century.^[10]
- [Michael Faraday](#) states his laws of electrolysis.
- c. December – Following a paper by Faraday, Belgian physicist [Joseph Plateau](#) and Austrian professor of practical geometry [Simon Stampfer](#) simultaneously and independently devise the [phenakistiscope](#), an [animation](#) device creating an optical illusion of motion.
- [Swiss crystallographer Louis Albert Necker](#) first publishes the [optical illusion](#) which becomes known as the [Necker Cube](#).^[11]
- The first commutator DC [electric motor](#), capable of turning machinery, is demonstrated by [William Sturgeon](#) in London.
- [Copley Medal](#): [Michael Faraday](#); [Siméon Poisson](#)^[12]

1833

- November 12–13 – A spectacular occurrence of the [Leonid meteor shower](#) is observed over [Alabama](#).

- May 3 – The [Entomological Society of London](#) is inaugurated.
- [Katherine Sophia Kane](#)'s *The Irish Flora* is published anonymously.
- [Thomas Graham](#) proposes [Graham's Law](#).
- June 5 – [Ada Lovelace](#) is introduced to [Charles Babbage](#) by [Mary Somerville](#).^[1]
- November 25 – A major 8.7 [earthquake](#) strikes [Sumatra](#).
- *probable date* – Paul Gerwien proves the [Bolyai–Gerwien theorem](#) formulated by [Farkas Bolyai](#): that any two simple [polygons](#) of equal [area](#) are equidecomposable.
- [Henry Witham](#) publishes *The Internal Structure of Fossil Vegetables found in the Carboniferous and Oolitic deposits of Great Britain* in [Edinburgh](#).
- [Carl Friedrich Gauss](#) and [Wilhelm Eduard Weber](#) develop an electromagnetic telegraph at [Göttingen](#).
- [William Beaumont](#) publishes *Experiments and Observations on the Gastric Juice and the Physiology of Digestion*.
- [Charles Bell](#) publishes *The Hand: its Mechanism and Vital Endowments as Evincing Design*, the fourth [Bridgewater Treatise](#).
- [Marshall Hall](#) coins the term "reflex" for a muscular reaction.
- [Jean Lobstein](#) proposes use of the term [arteriosclerosis](#).^[2]
- [Johannes Peter Müller](#) begins publication of his major [physiology](#) textbook *Handbuch der Physiologie des Menschen*.
- [Anselme Payen](#) discovers [diastase](#) (the first [enzyme](#) identified).
- August 18 – The [Canadian](#) ship [SS Royal William](#) sets out from [Pictou, Nova Scotia](#) on a 25-day passage of the [Atlantic Ocean](#) largely under steam to [Gravesend, Kent, England](#).
- [Obed Hussey](#) patents a [reaper](#) in the [United States](#).^{[3][4]}
- [Cornish](#) engineer [Adrian Stephens](#) invents the [steam whistle](#) as a warning device at [Dowlais Ironworks](#) in [Wales](#).^{[5][6]}
- Publication by [Charles Knight](#) of *The Penny Cyclopædia of the Society for the Diffusion of Useful Knowledge* begins in [London](#).
- [Copley Medal](#): Not awarded^[7]

1834

- March – [William Whewell](#) (anonymously) first publishes the term [scientist](#) in the [Quarterly Review](#), but notes it as "not generally palatable".^[1]
- March 14 – [John Herschel](#) discovers the open cluster of stars now known as [NGC 3603](#).^[2]
- [Hermann Helmholtz](#) proposes [gravitational contraction](#) as the [energy](#) source for the [Sun](#).
- [Johann Heinrich von Mädler](#) and [Wilhelm Beer](#) publish *Mappa Selenographica*, the most complete map of the [moon](#) up to this time.
- [Thomas Henderson](#) is appointed first [Astronomer Royal for Scotland](#).

- [James Paget](#) discovers in human muscle the parasitic worm that causes [trichinosis](#).
- [Félix Dujardin](#) proposes that single-cell animals should be classified in a group by themselves.
- [Phenol](#) was discovered by [Friedlieb Ferdinand Runge](#), who extracted it (in impure form) from coal tar.
- The [Triassic](#) is named by [Friedrich August von Alberti](#) for the three distinct layers of [redbeds](#), capped by [chalk](#), followed by black [shales](#) that are found throughout [Germany](#) and Northwest [Europe](#), called the 'Trias'.
- The large prehistoric whale [Basilosaurus](#) is discovered in [Eocene](#) rock deposits. It is presumed to be a large reptile.^{[3][4][5]}
- [Charles Babbage](#) begins the conceptual design of an "[analytical engine](#)", a mechanical forerunner of the modern [computer](#). It will not be built in his lifetime.^{[6][7][8]}
- [Carl Gustav Jakob Jacobi](#) discovers his [uniformly rotating self-gravitating ellipsoids](#).
- [Scottish naval architect John Scott Russell](#) first observes a nondecaying solitary [wave](#) (a [soliton](#), which he calls "the Wave of Translation") while watching a boat hauled through the water of the [Union Canal](#) near [Edinburgh](#), subsequently using a tank to study the dependence of solitary wave velocities on amplitude and liquid depth.^[9]
- [Joseph-François Malgaigne](#) publishes *Manuel de medecine operatoire*.
- [St. Vincent's Hospital](#) is set up in [Dublin](#) by [Mary Aikenhead](#), staffed by the [Religious Sisters of Charity](#),^[10] the first [hospital](#) staffed by [nuns](#) in the [English](#)-speaking world.
- [Émile Clapeyron](#) presents a formulation of the second law of thermodynamics.
- [Michael Faraday](#) publishes "On Electrical Decomposition" in the [Philosophical Transactions of the Royal Society](#), in which he coins the words [electrode](#), [anode](#), [cathode](#), [anion](#), [cation](#), [electrolyte](#) and [electrolyze](#).^[11]
- [Heinrich Lenz](#) discovers [Lenz's law](#).
- [Jean-Charles-Athanase Peltier](#) discovers the [Peltier effect](#).
- June 21 – [Cyrus McCormick](#) receives his first [patent](#) for a mechanical [reaper](#), in the [United States](#).^[12]
- December 23 – English architect [Joseph Hansom](#) patents the [Hansom cab](#).^{[8][13]}
- [Joseph Chaley](#)'s Grand Pont Suspendu in [Fribourg](#) is the first [suspension bridge](#) with cables assembled in mid-air.^[14]
- [Jacob Perkins](#) creates a cooling machine that uses ice, an early [refrigerator](#).^[15]
- [Copley Medal](#): [Giovanni Plana](#)^[16]

1835

- August 5 – First sighting of the return of [Comet Halley](#) by Father [Dominique Dumouchel](#), director of the [Collegio Romano](#) at the [Vatican](#). It is next seen on August 21 by [Friedrich Georg Wilhelm Struve](#) at the [Dorpat Observatory](#). [John Herschel](#) had been expected to

find the comet first, as he was at the time in [South Africa](#) with his 20 ft focal length reflector – at this time the largest telescope in the world. He finally observes it in October and watches until it reaches [perihelion](#) November 16. It reappears in January 1836, and Herschel will be the last person to observe it in May.

- August 25 – The first of six articles on discoveries of living creatures on the moon supposedly made by Herschel and a fictitious companion named Dr. Andrew Grant is published in the [New York Sun](#). This incident is now known as the [Great Moon Hoax](#).
- [Berlin Observatory](#) opened.
- [Caroline Herschel](#) and [Mary Somerville](#) become the first women members of the [Royal Astronomical Society](#).
- January – [J. C. Loudon](#) begins publication of *Arboretum et Fruticetum Britannicum*.
- [Cell division](#) is first observed under the [microscope](#) by German botanist [Hugo von Mohl](#) as he works over [green algae](#) *Cladophora glomerata*.^[1]
- [Vinyl chloride](#) first produced by [Justus von Liebig](#) and his student [Henri Victor Regnault](#).
- [Ordnance Geological Survey](#) founded in [Britain](#), under [Henry De la Beche](#), the world's first national [geological survey](#).
- [Roderick Murchison](#) names the [Silurian](#) period,^[2] and [Adam Sedgwick](#) the [Cambrian](#).^[3]
- [Adolphe Quetelet](#) publishes *Sur l'homme et le développement de ses facultés, ou Essai de physique sociale* (translated as *Treatise on Man*), outlining his theory of "social physics" and describing his concept of the "average man" (*l'homme moyen*) who is characterized by the [mean values](#) of measured variables that follow a [normal distribution](#).^[4]
- [George Biddell Airy](#) provides the first full explanation of the [Airy disk](#) phenomenon.^[5]
- [Gaspard-Gustave Coriolis](#) examines motion on a spinning surface and deduces the [Coriolis effect](#).
- [William Rowan Hamilton](#) states [Hamilton's equations of motion](#).
- [Irish physician Robert James Graves](#) first describes symptoms of [Graves' disease](#).^{[6][7]}
- [French physician Pierre Charles Alexandre Louis](#) publishes his book *Recherches sur les effets de la saignée dans quelques maladies inflammatoires et sur l'action de l'émétique et des vésicatoires dans la pneumonie* in [Paris](#), in which he analyzes case studies to demonstrate that [bloodletting](#) is largely ineffective as a treatment.^[8]
- [Belgian](#) statistician [Adolphe Quetelet](#) publishes his books *Sur l'homme et le développement de ses facultés, ou Essai de physique sociale*, in which he presents his theory of human [variance](#) around the [average](#), with human traits being distributed according to a [normal curve](#).^[9]
- August – [H. Fox Talbot](#) exposes the world's first known [photographic negatives](#) at [Lacock Abbey](#) in [Wiltshire, England](#).^[10]
- September 12 – A [Prussian patent](#) is granted to [Wilhelm Friedrich Wieprecht](#) and Carl Moritz^[11] for a valved bass [tuba](#).
- [Samuel Colt](#) invents the [revolver](#).
- [Joseph Henry](#) invents the electric [relay](#).^[12]
- [Samuel Morse](#) develops the [Morse code](#).

- [Copley Medal](#): [William Snow Harris](#)^[13]
- [Wollaston Medal](#): [Gideon Mantell](#)

1836

- May 15 – [Francis Baily](#), during an [eclipse](#) of the [sun](#), observes the phenomenon named after him as [Baily's beads](#).
- October 2 – Naturalist [Charles Darwin](#) returns to [Falmouth, England](#), aboard [HMS Beagle](#) after a 5-year journey collecting biological data he will later use to develop his [theory of evolution](#).
- Writer [Georg Büchner](#)'s dissertation on the common [barbel \(fish\)](#), *[Barbus barbus](#)*, "Mémoire sur le Système Nerveux du Barbeaux (*Cyprinus barbus L.*)" is published in [Paris](#) and [Strasbourg](#). In October, after receiving his doctorate, he is appointed by the [University of Zurich](#) as a lecturer in anatomy.
- [Theodor Schwann](#) discovers [pepsin](#) in extracts from the [stomach](#) lining, the first isolation of an animal [enzyme](#).
- [French chemist Auguste Laurent](#) discovers [o-phthalic acid](#) (1,2-benzenecarboxylic acid) by oxidizing [naphthalene](#) tetrachloride.
- The [chemical compound acetylene](#), also called ethyne, is discovered by [Edmund Davy](#).
- [James Marsh](#) publishes the [Marsh test](#) for the presence of [arsenic](#).^[11]
- [Hungarian chemistry student János Irinyi](#) invents a noiseless [match](#).^[2]
- October 24 – The earliest [United States patent](#) for a [phosphorus friction match](#) is granted to Alonzo Dwight Phillips of [Springfield, Massachusetts](#).
- October 13 – [Theodor Fliedner](#), a [Lutheran](#) minister, and Friederike, his wife, open the [Deaconess Home and Hospital](#) at [Kaiserswerth, Germany](#), as an institute to train women in [nursing](#).
- [Nicholas Callan](#) invents the first [induction coil](#).^{[3][4][5]}
- [Andrew Crosse](#)'s electrical experiment seems to produce strange insects, *acarus calvanicus*.
- February 25 – [Samuel Colt](#) receives a United States patent for the [Colt revolver](#), the first revolving barrel multishot firearm.
- December – [Victoria Bridge, Bath](#), England, opened, the first to use James Dredge's [patent 'taper principle'](#) of stays.^[6]
- [James Nasmyth](#) invents the [shaper](#).^[7]
- [Copley Medal](#): [Jöns Jakob Berzelius](#); [Francis Kiernan](#)^[8]
- [Wollaston Medal](#): [Louis Agassiz](#)

1837

- March–July – [Charles Darwin](#) begins privately to develop his theory of [transmutation of species](#).

- November 6 – Establishment of the [Public Garden](#) in [Boston](#) (Massachusetts), as a [botanical garden](#),^[1] the first in the [United States](#) to be open to the general public.
- [Peter Gustav Lejeune Dirichlet](#) publishes [Dirichlet's theorem on arithmetic progressions](#), using [mathematical analysis](#) concepts to tackle an algebraic problem and thus creating the branch of [analytic number theory](#). In proving the theorem, he introduces the [Dirichlet characters](#) and [L-functions](#).^{[2][3]} He also notes the difference between the [absolute](#) and [conditional convergence](#) of [series](#) and its impact in what will later be called the [Riemann series theorem](#).
- [Bernard Bolzano](#) publishes *Wissenschaftslehre*.
- [William Rowan Hamilton](#) treats [complex numbers](#) as [ordered pairs](#) of [real numbers](#).^[4]
- [Siméon Denis Poisson](#)'s lectures on probability (introducing [Poisson distribution](#)) and decision theory are published.^[5]
- [Pierre Wantzel](#) proves that several ancient [geometric](#) problems (including [doubling the cube](#) and [trisecting the angle](#)) are impossible to solve using only [compass and straightedge](#).^{[4][6]}
- [Michael Faraday](#) introduces the concept of [lines of force](#).
- February 25 – [Thomas Davenport](#) obtains the first United States [patent](#) on an [electric motor](#).^[7]
- May – [Samuel Morse](#) patents his telegraph and exhibits it to the [United States Congress](#).
- June 12 – [Cooke](#) and [Wheatstone](#) file their patent for the [electrical telegraph](#) in the [United Kingdom](#).^[8]
- July 19 – [Isambard Kingdom Brunel](#)'s paddle steamer *[SS Great Western](#)* is launched in [Bristol](#).^[9]
- July – [Godefroy Engelmann](#) of [Mulhouse](#) patents [chromolithography](#).^[10]
- November 18 – [William Crompton](#) patents the cotton [power loom](#) in the United States.^[11]
- [Louis Daguerre](#)'s [daguerrotype](#) *[L'Atelier de l'artiste](#)* is said to be the earliest known photographic image successfully to undergo the full process of [exposure](#), [development](#) and fixation.^{[12][13]}
- [Camille Polonceau](#) patents the Polonceau [truss](#).
- [Bernard Bolzano](#) publishes his *Wissenschaftslehre* ("Theory of Science").
- [Andrew Ure](#) publishes his encyclopedia *A Dictionary of Arts, Manufactures and Mines* in the [United Kingdom](#).
- [Copley Medal](#): [Antoine-César Becquerel](#); [John Frederic Daniell](#)^[14]
- [Wollaston Medal](#): Proby Thomas Cautley; Hugh Falconer

1838

- [Friedrich Wilhelm Bessel](#) makes the first accurate measurement of distance to a star, [61 Cygni](#), using [parallax](#). [Thomas Henderson](#) ([Alpha Centauri](#)) and [Friedrich Georg Wilhelm Struve](#) ([Vega](#)) announce their measurements using parallax shortly afterwards.
- [Claude Servais Mathias Pouillet](#) makes the first quantitative measurements of the [heat](#) emitted by the [Sun](#).

- [Peter Andreas Hansen](#) publishes a revision of the [lunar theory](#), *Fundamenta nova investigationis orbitae verae quam luna perlustrat*.
- January 10 – [John Gould](#) reports to the [Zoological Society of London](#) that [bird specimens](#) brought by [Charles Darwin](#) from the [Galápagos Islands](#) which Darwin had thought were blackbirds, "gross-bills" and [finches](#) are in fact "a series of ground Finches which are so peculiar" as to form "an entirely new group, containing 12 species", an important step in the [inception of Darwin's theory](#).^{[11][2]}
- May 9 – [Royal Agricultural Society of England](#) established.
- [Proteins](#) discovered by [Gerardus Johannes Mulder](#)^[3] and named by [Jöns Jakob Berzelius](#).^[4]
- [Matthias Schleiden](#) discovers that all living plant tissue is composed of cells.
- [Andrew Smith](#) begins publication of *Illustrations of the Zoology of South Africa*.
- [Bulat steel alloy](#) developed by [Pavel Petrovich Anosov](#).
- [Electrotyping](#) is invented by [Moritz von Jacobi](#) in Russia.^[5]
- August 18 – The [United States Exploring Expedition](#) under [U.S. Navy Lieutenant Charles Wilkes](#) sets sail for a four-year [circumnavigation](#) westabout.
- In [Australia](#), [Charles Sturt](#) proves that the Hume and [Murray](#) are the same river.
- [Augustus De Morgan](#) introduces the term '[mathematical induction](#)'.^[6]
- [S. D. Poisson](#) publishes *Recherches sur la probabilité des jugements en matière criminelle et en matière civile*, containing his work on [probability theory](#) and introducing [Poisson distribution](#).
- [Jean Esquirol](#) publishes *Des maladies mentales considérées sous le rapport médicale, hygiénique et médico-legal* in [Paris](#). This includes the first description of what will later become known as [Down syndrome](#).^[7]
- [John Gorrie](#) experiments with cooling the hospital wards of [malarial](#) patients in [Apalachicola, Florida](#).^[8]
- January 6 – [Samuel Morse](#) first publicly demonstrates the [electrical telegraph](#).
- April 4–22 – The [paddle steamer SS Sirius \(1837\)](#) makes the [Transatlantic Crossing](#) to [New York](#) from [Cork, Ireland](#), in eighteen days, though not using steam continuously.^[9]
- April 8–23 – [Isambard Kingdom Brunel](#)'s paddle steamer [SS Great Western](#) (1838) makes the Transatlantic Crossing to New York from [Avonmouth, England](#), in fifteen days, inaugurating a regular steamship service.^[10]
- [Liverpool](#)-built [barque Ironsides](#) becomes the first large ocean-going iron ship.^[11]
- [William Barnett](#) obtains a United Kingdom [patent](#) for an [internal combustion engine](#), the first with compression of the gas/air mixture in the cylinder.^{[12][13]}
- [David Bruce, Jr.](#), invents the Pivotal Typecaster, which replaces hand typesetting in printing.
- The first [screw-pile lighthouse](#) is built by [Alexander Mitchell](#) on [Maplin Sands](#) in the [Thames Estuary](#).
- [David Brewster](#) originates the [stereoscope](#).

- A statue of English chemist and physicist [John Dalton](#) (in marble by [Sir Francis Chantrey](#)) is erected in [Manchester](#) during the scientist's lifetime.
- [Copley Medal](#): [Carl Friedrich Gauss](#); [Michael Faraday](#)^[14]
- [Wollaston Medal](#): [Richard Owen](#)

1839

- January – The first [parallax](#) measurement of the distance to [Alpha Centauri](#) is published by [Thomas Henderson](#).^[1]
- January 2 – The first photograph of the [Moon](#) is taken by [Louis Daguerre](#).^[2]
- January 29 – English naturalist [Charles Darwin](#) marries his cousin [Emma Wedgwood](#).
- [Theodor Schwann](#) proposes that all living matter is made up of [cells](#).
- The [beetle](#) subfamily [Oxyporinae](#) is discovered by [Wilhelm Ferdinand Erichson](#).
- [Carl Mosander](#) discovers [lanthanum](#).
- May 1 – Start of [Eyre's expeditions](#) to the interior of [South Australia](#).
- September 19 – [James Clark Ross](#) sets off on the first scientific expedition to survey [Antarctica](#).
- Publication of [Charles Darwin's](#) *[Journal of Researches into the Geology and Natural History of the Various Countries Visited by H.M.S. Beagle under the Command of Captain FitzRoy, R.N., from 1832 to 1839](#)*.
- [Roderick Murchison](#) publishes *The Silurian System*.
- December 24 – An enormous [landslide](#) occurs at [Axmouth](#), [Devon](#), [England](#). A report by geologists [William Daniel Conybeare](#) and [William Buckland](#) is one of the earliest scientific descriptions of such an event.^[3]
- June–September – Dr [John Conolly](#) abolishes the physical restraint of the insane at [Middlesex County Asylum](#) (at [Hanwell](#) near London).
- January 9 – The [French Academy of Sciences](#) announces the [Daguerreotype photography](#) process.
- January 25 – [H. Fox Talbot](#) shows his "photogenic drawings" at the [Royal Institution](#).
- February 24 – [William Otis](#) receives a [patent](#) for the [steam shovel](#).
- April 9 – The world's first commercial electric [telegraph](#) line comes into operation alongside the [Great Western Railway](#) in [England](#).
- May 29 – [Mungo Ponton](#) presents his discovery of the light-sensitive quality of [sodium dichromate](#) as a method of permanent [photography](#).^[4]
- [Michael Faraday](#) publishes *Experimental Researches in Electricity*^[5] clarifying the true nature of [electricity](#).
- Invention of the [Grove](#) fuel cell by [William Grove](#).^[6]
- Development of vulcanized rubber by [Charles Goodyear](#).
- Development of [Babbitt metal](#) by [Isaac Babbitt](#).
- Invention of the Polonceau [truss](#) for roof construction by [Camille Polonceau](#).^[7]

- Claimed invention of the rear-wheel driven bicycle by [Kirkpatrick Macmillan](#) in [Scotland](#).^[8]
- [Copley Medal](#): [Robert Brown](#)^[9]
- [Wollaston Medal](#): [Christian Gottfried Ehrenberg](#)

1840

- [William Whewell](#) publishes *The Philosophy of the Inductive Sciences*, introducing the terms [scientist](#) (for the second time) and [physicist](#).^{[1][2][3]}
- [Justus von Liebig](#) publishes *Die Organische Chemie in ihre Anwendung auf Agricultur und Physiologie* in [Braunschweig](#), emphasising the importance of agricultural chemistry in crop production; it will go through at least eight editions.^[4]
- The first known photograph of [Niagara Falls](#), a [daguerreotype](#), is taken by English chemist [Hugh Lee Pattinson](#).
- [John William Draper](#) invents [astronomical photography](#) and photographs the [Moon](#).
- [John Gould](#) begins publication of *The Birds of Australia*.
- [Germain Hess](#) proposes [Hess's law](#), an early statement of the [law of conservation of energy](#), which establishes that energy changes in a chemical process depend only on the states of the starting and product materials and not on the specific pathway taken between the two states.^[5]
- [George Richards Elkington](#) patents the [electroplating](#) process invented by surgeon [John Wright](#) of [Birmingham](#) in England.
- [Louis Agassiz](#) publishes his *Etudes sur les glaciers*, the first major scientific work to propose that the Earth has seen an [ice age](#).
- January 19 – Captain [Charles Wilkes'](#) [United States Exploring Expedition](#) sights [Wilkes Land](#), providing evidence that [Antarctica](#) is a complete continent.^[6]
- January 21 – [Adélie Land](#) first visited by [Jules Dumont d'Urville](#) in the [French ship Astrolabe](#).^[7]
- The [Nemesis \(1839\)](#) becomes the first iron ship to sail around the [Cape of Good Hope](#), aided by techniques to adjust the compass for the effect of an iron hull developed the year before by [George Biddell Airy](#), the [Astronomer Royal](#).^[8]
- Publication begins in [Paris](#) of the *Œuvres complètes d'Ambroise Paré* edited by [Joseph-François Malgaigne](#).
- April 15 – [King's College Hospital](#) opens in [London](#).
- July 23 – [Vaccination Act](#) in the United Kingdom provides for free [vaccination](#) for the poor and prohibits [variolation](#).
- [Joseph Whitworth](#) introduces his precision "end measurements" technique.

- [Carl Friedrich Gauss](#) publishes his *Dioptrische Untersuchungen*,^[9] in which he gives the first systematic analysis of the formation of images under a [paraxial approximation](#) ([Gaussian optics](#)).^[10]
- [Robert Bunsen](#) invents the [Bunsen cell](#).
- [British](#) inventor [Warren De la Rue](#) creates the first [light bulb](#) using a vacuum tube, although its use of a [platinum](#) coil makes it commercially unviable.
- [Copley Medal](#): [Justus Liebig](#); [Charles-François Sturm](#)^[11]
- [Wollaston Medal](#): [Andre Hubert Dumont](#)

1841

- Rev. [Miles Joseph Berkeley](#) demonstrates that *[Phytophthora infestans](#)* (potato blight) is a fungal infection.
- [Royal Botanic Gardens, Kew](#), first open to the public^[1] and [William Hooker](#) appointed director.
- [John Gould](#) begins publication of *A Monograph of the Macropodidae, or Family of Kangaroos*.
- [Theobromine](#) is first discovered in [cacao](#) beans by Russian chemist Alexander Woskresensky.^{[2][3]}
- [Uranium](#) is first isolated, by [Eugène-Melchior Péligot](#).
- [Chemical Society of London](#) founded by [Thomas Graham](#).
- [Reinsch test](#) for [heavy metals](#) discovered by Hugo Reinsch.^[4]
- January 27 – The active [volcano Mount Erebus](#) in [Antarctica](#) is discovered and named by [James Clark Ross](#).^[5]
- January 28 – Ross discovers the "Victoria Barrier", later known as the [Ross Ice Shelf](#).
- Ross additionally discovers the [Ross Sea](#), [Victoria Land](#) and [Mount Terror](#).
- [Hugh Miller](#) publishes *The Old Red Sandstone*.
- The first comprehensive [geological map](#) of France is published by [Dufrénoy](#) and [Élie de Beaumont](#), the result of thirteen years of investigations.
- November 13 – Scottish surgeon [James Braid](#) attends his first demonstration of *[animal magnetism](#)* (given by [Charles Lafontaine](#) in [Manchester](#), England) which leads to Braid's study of the subject he eventually calls *[hypnotism](#)*.
- [Prussian](#) mathematician [Karl Weierstrass](#) discovers but does not publish the [Laurent expansion theorem](#).
- [English](#) mathematician [William Rutherford](#) calculates an [approximation of \$\pi\$](#) to 208 decimal places of which the first 152 are correct.
- [Platelets](#) are first described from microscopic observation by [George Gulliver](#).
- February – [H. Fox Talbot](#) obtains a patent in the [United Kingdom](#) for the [calotype](#) process in photography.^[6]

- April 16 – [Loring Coes](#) patents the screw type [wrench](#) commonly known as the [monkey wrench](#) in the [United States](#).
- April 24 – [Squire Whipple](#) patents the iron [bowstring arch](#) through [truss bridge](#) in the United States.^[7]
- Draughtsman William Howe and pattern-maker William Williams of [Robert Stephenson and Company](#) in [Newcastle upon Tyne](#) originate [Stephenson valve gear](#) for the [steam locomotive](#).
- [Joseph Whitworth](#) introduces the [British Standard Whitworth](#) system of [screw threads](#) in his paper *On a Uniform System of Screw Threads*.
- [American](#) artist John G. Rand invents the collapsible [zinc oil paint tube](#), marketed by [Winsor & Newton](#) of [London](#).^[8]
- [Copley Medal](#): [Georg Ohm](#)^[9]
- [Wollaston Medal](#): [Adolphe Theodore Brongniart](#)

1842

- [Nathaniel Bagshaw Ward](#) publishes *On the Growth of Plants in Closely Glazed Cases* in London, promoting his concept of the [Wardian case](#).^[1]
- [Antarctic](#) explorer [James Clark Ross](#) charts the eastern side of [James Ross Island](#) and on January 23 reaches a [Farthest South](#) of 78°09'30"S.^[2]
- January – [American](#) medical student William E. Clarke of [Berkshire Medical College](#) becomes the first person to administer an inhaled [anesthetic](#) to facilitate a surgical procedure ([dental extraction](#)).^[3]
- March 30 – American physician and pharmacist [Crawford Long](#) administers an inhaled anesthetic ([diethyl ether](#)) to facilitate a surgical procedure (removal of a neck tumor).^{[4][5]}
- [English](#) surgeon [William Bowman](#) publishes *On the Structure and Use of the Malpighian Bodies of the Kidney*,^[6] identifying [Bowman's capsule](#), a key component of the [nephron](#).
- [Edwin Chadwick](#)'s critical *Report on an inquiry into the Sanitary Condition of the Labouring Population of Great Britain* is published by the [Poor Law Commission](#).^[7]
- [Palaeontologist](#) [Richard Owen](#) coins the name *Dinosauria*, hence the [Anglicized](#) [dinosaur](#).^[8]
- [Christian Doppler](#) proposes the [Doppler effect](#).^[9]
- [Julius Robert von Mayer](#) proposes that [work](#) and [heat](#) are equivalent.^[10] This is independently discovered in 1843 by [James Prescott Joule](#), who names it "[mechanical equivalent of heat](#)".
- January 8 – [Delft University of Technology](#) established by [William II of the Netherlands](#) as a 'Royal Academy for the education of civilian engineers'.^[11]
- February 21 – [John Greenough](#) is granted the first [U.S. patent](#) for the [sewing machine](#).^[12]
- June – [James Nasmyth](#) patents his design of [steam hammer](#) in England and introduces an improved [planing machine](#).^[13]

- September 14–17 – English naturalist [Charles Darwin](#) and his family settle at [Down House](#) in [Kent](#).
- [Copley Medal](#): [James MacCullagh](#)^[14]
- [Wollaston Medal](#): [Leopold von Buch](#)

1843

- March 11–14 – [Eta Carinae](#) flares to become the [second brightest star](#).
- February 5–April 19 – "[Great March Comet](#)" observed.
- [Heinrich Schwabe](#) reports a periodic change in the number of [sunspots](#): they wax and wane in number according to a ten-year cycle.
- [Jean-Baptiste Dumas](#) names [lactose](#).^[11]
- [Carl Mosander](#) discovers the [chemical elements Terbium](#) and [Erbium](#).^[12]
- [John J. Waterston](#) produces an account of the [kinetic theory of gases](#).^[3]
- September – [Ada Lovelace](#) translates and expands [Menabrea](#)'s notes on [Charles Babbage's analytical engine](#), including an [algorithm](#) for calculating a sequence of [Bernoulli numbers](#), regarded as the world's first [computer program](#).^{[4][5][6]}
- October 16 – [William Rowan Hamilton](#) discovers the calculus of [quaternions](#) and deduces that they are non-commutative.^[17]
- [Arthur Cayley](#) and [James Joseph Sylvester](#) found the algebraic [invariant theory](#).
- [John T. Graves](#) discovers the [octonions](#).
- [Pierre-Alphonse Laurent](#) discovers and presents the Laurent expansion theorem.
- [James Prescott Joule](#) experimentally finds the [mechanical equivalent of heat](#).^[8]
- [Ohm's acoustic law](#) was proposed by German physicist [Georg Ohm](#).
- British surgeon [James Braid](#) publishes *Neurypnology: or the Rationale of Nervous Sleep*, a key text in the history of [hypnotism](#).
- [Oliver Wendell Holmes, Sr.](#), argues that [puerperal fever](#) is spread by lack of hygiene in physicians.^[9]
- March 25 – Completion of the [Thames Tunnel](#), the first bored underwater tunnel in the world (engineer: [Marc Isambard Brunel](#)).^[10]
- July 19 – Launch of [SS Great Britain](#), the first iron-hulled, propeller-driven ship to cross the [Atlantic Ocean](#) (designer: [Isambard Kingdom Brunel](#)).^[11]
- November 21 – [Thomas Hancock patents](#) the [vulcanisation](#) of [rubber](#) using [sulphur](#) in the [United Kingdom](#)
- The steam powered [rotary printing press](#) is invented by [Richard March Hoe](#) in the [United States](#).^[12]
- [Robert Stirling](#) and his brother James convert a steam engine at a [Dundee](#) factory to operate as a [Stirling engine](#).
- The first public [telegraph](#) line in the [United Kingdom](#) is laid between [Paddington](#) and [Slough](#).
- Approximate date – [Euphonium](#) invented.

- October – [Anna Atkins](#) begins publication of *Photographs of British Algae: Cyanotype Impressions*, a collection of [contact printed cyanotype photograms](#) of [algae](#) which forms the first book illustrated with [photographic](#) images.^{[13][14][15][16]}
- [Copley Medal](#): [Jean-Baptiste Dumas](#)^[17]
- [Wollaston Medal](#) for Geology: [Jean-Baptiste Elie de Beaumont](#); [Pierre Armand Dufrenoy](#)

1844

- [Friedrich Bessel](#) explains the wobbling motions of [Sirius](#) and [Procyon](#) by suggesting that these stars have dark companions.
- July 3 – The last definitely recorded pair of [great auks](#) (*Pinguinus impennis*) are killed on the [Icelandic](#) island of [Eldey](#).
- August 1 – Opening of [Berlin Zoological Garden](#).^[1]
- [Gabriel Gustav Valentin](#) notes the digestive activity of [pancreatic juice](#).
- [George Robert Gray](#) begins publication in [London](#) of *The Genera of Birds*.
- [Joseph Dalton Hooker](#) begins publication of *The Botany of the Antarctic Voyage of H.M. Discovery Ships Erebus and Terror ... 1839–1843* in [London](#).^[2]
- [Karl Klaus](#) discovers [ruthenium](#).
- Professor [Gustaf Erik Pasch](#) of [Stockholm](#) is granted the privilege of manufacturing a [safety match](#).
- French chemist [Adolphe Wurtz](#) reports the first synthesis of [copper hydride](#), a well-known reducing agent and catalyst in organic chemistry.
- [Robert Chambers](#) publishes *Vestiges of the Natural History of Creation* (anonymously).
- [Joseph Liouville](#) finds the first [transcendental number](#)
- [Hermann Grassmann](#) studies vectors with more than three dimensions.
- [Irish physician](#) Francis Rynd utilises a hollow [hypodermic needle](#) to make the first recorded [subcutaneous injections](#), specifically of a [sedative](#) to treat [neuralgia](#).
- [Joseph Whitworth](#) introduces the [thou](#).^[3]
- [William Robert Grove](#) publishes *The Correlation of Physical Forces*, the first comprehensive account of the [conservation of energy](#).
- January 30 – [Charles Goodyear patents](#) the [vulcanisation](#) of [rubber](#) in the [United States](#).
- May 11 – [Samuel Morse](#) sends the first message using [Morse code](#).
- June – [Henry Fox Talbot](#) commences publication of the first book illustrated with photographs from a camera, *The Pencil of Nature*.
- [Uriah A. Boyden](#) develops an improved outward-flow [water turbine](#).
- [Robert Bunsen](#) invents the grease-spot [photometer](#).
- Thomas and Caleb Pratt design the Pratt [truss bridge](#).
- [Dublin](#) iron-founder [Richard Turner](#) begins assembling components for the [Palm house](#) at [Kew Gardens](#) in [London](#), the first large-scale structural use of [wrought iron](#).

- [Egide Walschaerts](#) of the [Belgian State Railways](#) originates [Walschaerts valve gear](#) for the [steam locomotive](#).
- July 27 – Death of English chemist and physicist [John Dalton](#) in [Manchester](#) where his body lies in honour in the [Town Hall](#) and more than 40,000 people file past his coffin.
- [Copley Medal](#): [Carlo Matteucci](#)^[4]
- [Wollaston Medal](#) for Geology: [William Conybeare](#)

1845

- April – [Lord Rosse](#) discovers that the nebula [M51](#) has a spiral structure.
- September–October – [Cornish](#) mathematician [John Couch Adams](#) communicates to [James Challis](#) and [George Biddell Airy](#) his calculations demonstrating that a body ([Neptune](#)) is perturbing the orbit of [Uranus](#).^[1]
- November 10 – [Urbain Le Verrier](#) presents to the [Académie des sciences](#) in Paris a memoir showing that existing theories fail to account for the motion of Uranus.^[2]
- Construction begins in [Ireland](#) of the "[Leviathan of Parsonstown](#)", a [telescope](#) built by Lord Rosse.
- August–September – Previously unknown [Potato blight](#) strikes the [potato](#) crop in Ireland: start of the [Great Famine](#).^{[3][4]}
- March 17 – [Stephen Perry](#) patents the [rubber band](#) in [England](#).^[5]
- [Edmond Frémy](#) discovers the [oxidizing agent](#) [Frémy's salt](#).
- August – [John Franklin's expedition](#) with [HMS Erebus](#) and [HMS Terror](#) to find the [Northwest Passage](#) is last seen entering [Baffin Bay](#) prior to its mysterious disappearance.^[6]
- December 27 – [Anesthesia](#) is used in [childbirth](#) for the first time, by Dr [Crawford Long](#) in [Jefferson, Georgia](#).
- September 13 – [Michael Faraday](#) discovers that an intense [magnetic field](#) can rotate the plane of polarized light, the [Faraday effect](#).
- [C. H. D. Buys Ballot](#) confirms the [Doppler effect](#) for [sound waves](#).^[7]
- [Kirchhoff's circuit laws](#) are first described by German physicist [Gustav Kirchhoff](#).
- July 26–August 10 – [Isambard Kingdom Brunel](#)'s iron [steamship](#) [Great Britain](#) makes the [Transatlantic Crossing](#) from [Liverpool](#) to [New York](#), the first [screw propelled](#) vessel to make the passage.^{[8][9]}
- The [saxhorn](#) family of valved [brass instruments](#) is [patented](#) by [Adolphe Sax](#) in France.
- January 14 – [Physikalische Gesellschaft zu Berlin](#) established and begins publishing [Fortschritte der Physik](#) and [Verhandlungen](#).
- August 28 – The journal [Scientific American](#) begins publication.
- [Alexander von Humboldt's](#) *Kosmos: Entwurf einer physischen Weltbeschreibung* begins publication.

- [Copley Medal](#): [Theodor Schwann](#)^[10]
- [Wollaston Medal](#) for Geology: [John Phillips](#)

1846

- February 20 – [Francesco de Vico](#) discovers [comet 122P/de Vico](#).
- June 1 – [Urbain Le Verrier](#) predicts the existence and location of [Neptune](#) from irregularities in the orbit of [Uranus](#).
- August 8 – Neptune observed but not recognised by [James Challis](#).
- August 31 – Urbain Le Verrier publishes full details of the predicted orbit and the mass of the new planet.
- September 23 – [Johann Galle](#) discovers [Neptune](#).
- October 10 – [William Lassell](#) discovers [Triton](#), Neptune's largest [moon](#).^[11]
- [Royal Botanic Gardens, Melbourne](#), established in [Australia](#).
- [Abraham Pineo Gesner](#) develops a process to refine a liquid fuel, which he calls [kerosene](#), from [coal](#), [bitumen](#) or [oil shale](#).
- [Augustin-Louis Cauchy](#) publishes [Green's theorem](#).^[12]
- October – Dentist [William T. G. Morton](#) becomes the first person *publicly* to demonstrate the use of [diethyl ether](#) as a general [anesthetic](#) in what becomes known as the [Ether Dome](#) of [Massachusetts General Hospital](#).^[3]
- December 21 – [British](#) surgeon [Robert Liston](#) carries out the first operation under anesthesia in Europe.^[4]
- [Édouard Séguin](#) publishes *Traitement moral, hygiène et éducation des idiots et des autres enfants arriérés* in [Paris](#), the earliest systematic textbook dealing with the [special needs](#) of children with [developmental disabilities](#),^[5] his views will be influential on both sides of the Atlantic.
- Dr [J. Collis Browne](#) formulates his [laudanum](#)-based pain-relieving [Chlorodyne](#) compound while serving in the [British Indian Army](#).
- January 13 – Opening of the [Milan–Venice railway](#)'s 3.2 km (2.0 mi) bridge over the [Venetian Lagoon](#) between [Mestre](#) and [Venice](#) in [Italy](#),^{[6][7]} the world's longest since 1151.
- June 28 – [Adolphe Sax](#) patents the [saxophone](#).^[8]
- September 10 – [Elias Howe](#) is awarded the first [United States](#) patent for a [sewing machine](#) using a [lockstitch](#) design.^[9]
- Scottish-born engineer [Robert William Thomson](#) is granted his first patent for a [pneumatic tyre](#), in France.
- [William Armstrong](#)'s first [hydraulic crane](#) is erected at [Newcastle upon Tyne](#) in England.
- [Squire Whipple](#) introduces the trapezoidal [Whipple truss](#) for bridges in the United States.
- [Copley Medal](#): [Urbain Le Verrier](#)^[10]
- [Wollaston Medal](#): [William Lonsdale](#)

1847

- July 1 – German amateur astronomer [Karl Ludwig Hencke](#) discovers [asteroid 6 Hebe](#) from [Driesen](#).
- August 13 – English astronomer [John Russell Hind](#) discovers asteroid [7 Iris](#) from London.
- October 18 – J. R. Hind discovers asteroid [8 Flora](#) from London.
- October 1 – American astronomer [Maria Mitchell](#) discovers [comet C/1847 T1](#); it is independently discovered two days later by [Francesco de Vico](#) from Rome.
- A new edition of the [astrometric star catalogue *Histoire Céleste Française*](#) is published, from which the [Lalande](#) star reference numbers which continue in use are derived.^[1]
- [Nitroglycerin](#), at first called *pyroglycerine*, first synthesized by [Ascanio Sobrero](#).
- [Hermann Kolbe](#) obtains [acetic acid](#) from completely inorganic sources, further disproving vitalism.^[2]
- [J. S. Fry & Sons](#) of [Bristol](#) (England) produce a moulded [chocolate bar](#).^[3]
- October – Last [volcanic eruption](#) of [Mount Guntur](#) in [West Java](#).
- [George Boole](#) formalizes [symbolic logic](#) in the pamphlet *The Mathematical Analysis of Logic* (published in [Cambridge](#)), defining what is now called [Boolean algebra](#).
- [Johann Benedict Listing](#) publishes *Vorstudien zur Topologie* in [Göttingen](#), first introducing the term [Topology](#) in print.^{[4][5]}
- January 1 – Britain's first [Medical Officer of Health](#) is appointed, Dr. [William Henry Duncan](#) in [Liverpool](#).^[6]
- November 4–8 – [James Young Simpson](#) discovers the [anesthetic](#) properties of [chloroform](#) and first uses it, successfully, on a patient, in an [obstetric](#) case in [Edinburgh](#).^{[7][8]}
- [Émile Küss](#) and [Charles-Emmanuel Sédillot](#) perform the first recorded [biopsies](#) on [neoplasms](#).
- [Ignaz Semmelweis](#) studies and prevents the transmission of [puerperal fever](#).
- The journal *Archiv für pathologische Anatomie und Physiologie und für klinische Medizin* is founded by [Rudolf Virchow](#) and [Benno Reinhardt](#).
- [Joseph-François Malgaigne](#) publishes *Traité des fractures et des luxations* in [Paris](#).
- [Hermann von Helmholtz](#) formally states the law of [conservation of energy](#).
- January 27 – [Institution of Mechanical Engineers](#) founded in the Queen's Hotel next to [Curzon Street railway station](#) in [Birmingham, England](#), by [George Stephenson](#) and others.^[9]
- May 24 – The [Dee bridge disaster](#): a [cast iron](#) girder bridge across the [river Dee](#) at [Chester, England](#), designed by [Robert Stephenson](#) for the [Chester and Holyhead Railway](#), collapses under a [Shrewsbury and Chester Railway](#) train with five fatalities.^[10]
- July 24 – [Richard March Hoe](#) patents a [rotary printing press](#) in the [United States](#).^[11]
- [Squire Whipple](#) publishes *A Work on Bridge Building* in the United States.
- August 18 – American missionary [Thomas S. Savage](#) and anatomist [Jeffries Wyman](#) first describe the great ape species *Troglodytes gorilla*, known in modern times as the [western gorilla](#), to the [Boston Society of Natural History](#).^{[12][13][14]}

- [Copley Medal](#): [John Herschel](#).^[15]
- [Wollaston Medal](#) for Geology: [Ami Boué](#).

1848

- September 20 – The [American Association for the Advancement of Science](#) is set up in [Pennsylvania](#) by re-formation of the [Association of American Geologists and Naturalists](#), with [William Charles Redfield](#) as its first president.
- September 16 – [William Cranch Bond](#) and [William Lassell](#) discover [Hyperion](#), [Saturn's moon](#).
- [Lord Rosse](#) studies [M1](#) and names it the [Crab Nebula](#).
- [Édouard Roche](#) calculates the [Roche limit](#).^[1]
- [Rudolf Wolf](#) (in [Zurich](#)) devises a way of quantifying [sunspot](#) activity, the [Wolf number](#).^[2]
- April 16 – [Joseph Dalton Hooker](#) arrives at [Darjeeling](#) to begin the first [European plant collecting](#) expedition in the [Himalayas](#).
- [Edward Frankland](#), working in [Germany](#), discovers the [organometallic compound diethylzinc](#).
- [Admiral Nevelskoi](#) demonstrates that the [Strait of Tartary](#) is a [strait](#).
- September 13 – [Vermont](#) railroad worker [Phineas Gage](#) survives a 3-foot-plus (1 m) iron rod being driven through his head, providing a demonstration of the effects of damage to the brain's [frontal lobe](#).
- November 1 – The first [medical school](#) for women, The Boston Female Medical School, opens in [Boston](#), [Massachusetts](#).
- [Alfred Baring Garrod](#) recognises that excess [uric acid](#) in the blood is the cause of [gout](#).^[3]
- [Rudolf Virchow](#) produces a [Report on the Typhus Epidemic in Upper Silesia](#) advocating broad social as well as public health measures to counter such outbreaks.^[4]
- [Lord Kelvin](#) establishes concept of [absolute zero](#), the temperature at which all molecular motion ceases.^[5]
- [Nicholas Callan](#) of [Maynooth College](#) invents an improved form of [battery](#).^[6]
- [Hippolyte Fizeau](#) and [John Scott Russell](#) present studies of the [Doppler effect](#) in [electromagnetic](#) and [sound waves](#) respectively.^[7]
- August 15 – [James Warren](#) submits a U.K. [patent](#) application for the [Warren truss](#).
- [James Bogardus](#) erects the first free-standing [cast-iron architectural](#) façade, the Milhau Pharmacy Building in [New York City](#).
- Completion of [palm houses](#) at [Kew Gardens](#), [London](#), and the [National Botanic Gardens](#), [Glasnevin](#), by [Richard Turner](#) of [Dublin](#).
- [Joseph-Louis Lambot](#) constructs the first [ferrocement](#) boat, in France.
- [Linus Yale Sr.](#), invents the modern [pin tumbler lock](#).^[8]
- [John Stringfellow](#) flies a steam-powered monoplane model for a short distance in a powered glide in England.^[9]

- [Copley Medal](#): [John Couch Adams](#)^[10]
- [Wollaston Medal](#) for Geology: [William Buckland](#)

1849

- [Édouard Roche](#) finds the limiting radius of tidal destruction and tidal creation for a body held together only by its self gravity, called the [Roche limit](#), and uses it to explain why [Saturn](#)'s rings do not condense into a satellite.
- [Arnold Adolph Berthold](#) pioneers [endocrinology](#) with his observations on the operation of the [testicles](#) in [roosters](#).^[11]
- Nikolai Annenkov begins publication of *Flora Mosquensis Exsiccata*, the first [Russian Flora](#).^[12]
- [Richard Owen](#) publishes *On the Nature of Limbs* and begins publication of *A History of British Fossil Reptiles*.
- [William Thompson](#) begins publication (in London) of [The Natural History of Ireland](#) with the first volume on birds.
- [Charles-Adolphe Wurtz](#) obtains [methylamine](#).
- [Louis Pasteur](#) discovers that the [racemic](#) form of [tartaric acid](#) is a mixture of the levorotatory and dextrorotatory forms, thus clarifying the nature of [optical rotation](#) and advancing the field of [stereochemistry](#).^[13]
- [George Gabriel Stokes](#) shows that [solitary waves](#) can arise from a combination of periodic waves.
- [January 23](#) – English-born [Elizabeth Blackwell](#) is awarded her M.D. by the Medical Institute of [Geneva, New York](#), becoming the first woman to qualify as a doctor in the [United States](#).
- British [physician](#) Dr. [Thomas Addison](#) first describes [Addison's disease](#) in his *On the Constitutional and Local Effects of Disease of the Suprarenal Capsules*.
- London physician Dr. [John Snow](#) first publishes his theory that [cholera](#) is a [contagious disease](#) of the [human gastrointestinal tract](#) in his pamphlet *On the Mode of Communication of Cholera*.^[14]
- [Hippolyte Fizeau](#) and [Léon Foucault](#) measure the speed of light to be about 298,000 km/s.
- [March 10](#) – [George Henry Corliss](#) is granted a [United States patent](#) for the [rotary valve Corliss steam engine](#).
- [April 10](#) – [Walter Hunt](#) is granted a United States patent for the modern [safety pin](#).^{[15][6]}
- [May 22](#) – [Abraham Lincoln's patent](#): [Abraham Lincoln](#) is granted a United States patent for a buoyancy mechanism to lift boats over river shoals, the only patent ever granted to a [President of the United States](#).^[17]
- [June 20](#) – First [tube](#) of [Robert Stephenson](#)'s [Britannia Bridge](#) is floated into position on the [Menai Strait](#) for the [Chester and Holyhead Railway](#)'s [North Wales Coast Line](#) with many leading British railway civil engineers present.^[18]

- Completion of [Wheeling Suspension Bridge](#) over the [Ohio River](#) at [Wheeling, West Virginia](#), designed by [Charles Ellet](#), with a world record main span (at this date) of 1,010 ft (310 m) tower to tower.
- Completion of [Roebling's Delaware Aqueduct](#), a wire suspension bridge carrying the [Delaware and Hudson Canal](#) over the [Delaware River](#) between [Minisink Ford, New York](#), and [Lackawaxen, Pennsylvania](#), designed by Russell F. Lord and [John A. Roebling](#) with a span of 535 ft (175 m).
- Eugene Bourdon patents the Bourdon gauge for [pressure measurement](#) in France.^[9]
- [David Brewster](#) perfects the [stereoscope](#).
- [James B. Francis](#) develops the radial flow [Francis turbine](#).
- [Copley Medal](#): [Roderick Murchison](#)^[10]
- [Wollaston Medal](#) for Geology: [Joseph Prestwich](#)

1850

- May 25 – The young [Hippopotamous Obaysch](#) arrives at [London Zoo](#) from [Egypt](#), the first seen in Europe since Roman times.
- [Rewilding](#) of [Ascension Island](#) begins.
- October 17 – [James Young](#) [patents](#) a method of distilling [kerosene](#) from coal.
- Rev. [Levi Hill](#) invents a [color photography](#) process, "heliromy", capable of basic rendering of reds and blues.
- July 2 – [William Thomson](#) communicates [Stoke's theorem](#) to [George Stokes](#).^[1] Stokes presents a paper on the numerical calculation of a class of definite [integrals](#) and [infinite series](#).^[2]
- [Thomas Kirkman](#) proposes [Kirkman's schoolgirl problem](#).^{[3][4]}
- [Victor Puiseux](#) distinguishes between poles and branch points and introduces the concept of [essential singular points](#).
- [J. J. Sylvester](#) originates the term [matrix](#) in mathematics.^{[5][6]}
- March – Dr [Benjamin Guy Babington](#) founds the London Epidemiological Society.^[7]
- [Central Criminal Lunatic Asylum for Ireland](#) opened in [Dundrum, Dublin](#), the first secure hospital in Europe.^[8]
- April 3 – [British Meteorological Society](#) founded.
- May – [John Tyndall](#) and [Hermann Knoblauch](#) publish a report on "The magneto-optic properties of crystals, and the relation of magnetism and diamagnetism to molecular arrangement".
- [Rudolf Clausius](#) publishes his paper on the mechanical theory of heat, which first states the basic ideas of the [second law of thermodynamics](#).^[9]
- [Hippolyte Fizeau](#) and E. Gounelle measure the speed of [electricity](#).
- [Léon Foucault](#) demonstrates the greater [speed of light](#) in air than in water, and establishes that the speed of light in different media is inverse to the [refractive indices](#) of the media, using the [Fizeau-Foucault apparatus](#).

- [George Stokes](#) publishes a paper on the effects of the internal friction of fluids on the motion of [pendulums](#).
- July 14 – [John Gorrie](#) makes the first public demonstration of his [ice-making machine](#), in [Apalachicola, Florida](#).^[10]
- Completion of the [Bibliothèque Sainte-Geneviève](#) in [Paris](#) to the design of [Henri Labrouste](#), the first major public building with an exposed [cast-iron frame](#).^[11]
- Astronomer [Maria Mitchell](#) becomes the first woman member of the [American Association for the Advancement of Science](#).
- The [University of Oxford](#) in England establishes an Honour School (i.e. an undergraduate course) in [Natural Science](#).
- [Copley Medal](#): [Peter Andreas Hansen](#)^[12]
- [Wollaston Medal](#): [William Hopkins](#)^[13]

1851

- February – First public exhibition of a [Foucault pendulum](#), at the Meridian of the [Paris Observatory](#), demonstrating the [Earth's rotation](#). A few weeks later [Foucault](#) installs one at the [Panthéon](#).^[1]
- July 28 – [Solar eclipse of July 28, 1851](#): Total [solar eclipse](#). The first correctly exposed photograph, a [daguerrotype](#), of the [solar corona](#) is made during the total phase of the eclipse by Berkowski at [Koenigsberg Observatory](#) in [Prussia](#).^[2] Astronomers [Robert Grant](#) and [William Swan](#) (of the [United Kingdom](#)) and [Karl Ludwig von Littrow](#) (of [Austria](#)) observe this eclipse and determine that [solar prominences](#) are part of the Sun because the Moon is seen to cover and uncover them as it moves in front.^[3]
- October 24 – [Ariel](#) and [Umbriel](#), [moons](#) of [Uranus](#), were discovered by [William Lassell](#).^[4]
- The [William Brydson Jack Observatory](#) is completed at [Fredericton](#), [New Brunswick](#).
- March – [English](#) sculptor [Frederick Scott Archer](#) makes public the [wet plate collodion](#) photographic process.^[5]
- [Julius Pintsch](#) produces Pintsch gas.
- [Charles-Adolphe Wurtz](#) produces compound [ureas](#).
- [George Wilson](#) publishes *The Life of the Hon. Henry Cavendish*.
- [Eugène Prouhet](#) first applies the [Thue–Morse sequence](#) to [number theory](#).
- [Bernhard Riemann](#) provides a proof of [Green's theorem](#) in his inaugural dissertation.^[6]
- [The Royal Marsden](#) is established as the Free Cancer Hospital by surgeon [William Marsden](#) in London, the world's first specialist [cancer](#) hospital.
- The [Keratometer](#) is invented by the [German physiologist Hermann von Helmholtz](#).
- [Hippolyte Fizeau](#) carries out the [Fizeau experiment](#) to measure the relative speeds of light in moving water.^[7]

- November 13 – First protected [submarine telegraph cable](#) laid, across the [English Channel](#).
- [William Armstrong](#) introduces the weight-loaded [hydraulic accumulator](#).^[8]
- [Copley Medal](#): [Richard Owen](#)^[9]
- [Wollaston Medal](#) for geology: [Adam Sedgwick](#)

1852

- September 24 – [French](#) engineer [Henri Giffard](#) makes the first [airship](#) trip, from Paris to [Trappes](#).
- September 19 – [Annibale de Gasparis](#) discovers the asteroid [20 Massalia](#) from the north dome of the [Astronomical Observatory of Capodimonte](#) in [Naples](#).
- October 5 – American apiarist [L. L. Langstroth](#) patents the [Langstroth hive](#) for the cultivation of honey bees.
- Last recognised sighting of a [great auk](#), on the [Grand Banks of Newfoundland](#).^[1]
- [August Beer](#) proposes [Beer's law](#), which explains the relationship between the composition of a mixture and the amount of light it will absorb. Based partly on earlier work by [Pierre Bouguer](#) and [Johann Heinrich Lambert](#), it establishes the [analytical](#) technique known as [spectrophotometry](#).^[2]
- October 23 – [Francis Guthrie](#) poses the [four colour problem](#) to [Augustus De Morgan](#).^{[3][4]}
- January 15 – Nine representatives of [Hebrew charitable organizations](#) come together to form what will become the [Mount Sinai Hospital, New York](#).
- February 15 – The [Great Ormond Street Hospital for Sick Children](#), London, admits its first patient.^[5]
- March 2 – The first American experimental steam [fire engine](#), designed by [Alexander Bonner Latta](#), is tested.^[6]
- The mechanical [semaphore line](#) in France is superseded by the [electric telegraph](#).
- Captain [E. M. Boxer](#) of the [Royal Arsenal](#) devises an improvement to the [shrapnel shell](#) by insertion of an iron diaphragm, preventing premature ignition.^[7]
- [Copley Medal](#): [Alexander von Humboldt](#)^[8]
- [Wollaston Medal](#) for Geology: [William Henry Fitton](#)

1853

- March 17 – [Claude Bernard](#) presents his [doctoral thesis](#) describing the [glycogenetic](#) function of the [liver](#).^[1]
- [Anton de Bary](#) publishes the first study demonstrating that [rust](#) and [smut fungi](#) cause [plant disease](#).
- November 25 – First definite sighting of [Heard Island](#) in the Antarctic.

- [Alfred Russel Wallace](#) publishes *A Narrative of Travels on the Amazon and Rio Negro, with an account of the native tribes, and observations on the climate, geology, and natural history of the Amazon Valley*.
- [Jakob Steiner](#) investigates the [Steiner system](#).^[2]
- August 1 – Under terms of the [Vaccination Act](#) in the United Kingdom, all children born after this date are to receive compulsory [vaccination](#) against [smallpox](#) during their first 3 months of life.^[3]
- [William Little](#) publishes a paper "On the Deformities of the Human Frame" in which he gives the first description of pseudo-[hypertrophic muscular dystrophy](#).^[4]
- [Charles Pravaz](#) and [Alexander Wood](#) independently invent a practical hypodermic [syringe](#).
- Antoine Desormeaux produces and names an [endoscope](#) illuminated by a [kerosene lamp](#), using it to examine the [urinary tract](#).^[5]
- [John Francis Campbell](#) invents the original form of [Campbell–Stokes recorder](#) (for sunshine).
- [Eugenio Barsanti](#) and [Felice Matteucci](#) first develop the [Barsanti-Matteucci engine](#), an [internal combustion engine](#) using the free-piston principle.^{[6][7]}
- [Copley Medal](#): [Heinrich Wilhelm Dove](#)^[8]
- [Wollaston Medal](#) for Geology: [Adolphe d'Archiac](#); [Édouard de Verneuil](#)

1854

- July 22 – Discovery of the asteroid [30 Urania](#) by [John Russell Hind](#).
- [George Airy](#) calculates the mean density of the [Earth](#) by measuring the gravity in a coal mine in [South Shields](#).
- [Benjamin Silliman](#) of [Yale University](#) is the first person to [fractionate petroleum](#) into its individual components by [distillation](#).
- January 4 – First definite sighting of [McDonald Islands](#) in the Antarctic.
- March 26 – [Playfair cipher](#) first demonstrated, by [Charles Wheatstone](#).
- [George Boole](#)'s work on [algebraic logic](#), *An Investigation of the Laws of Thought on Which are Founded the Mathematical Theories of Logic and Probabilities*, published in [London](#).^[1]
- [Arthur Cayley](#) states the original version of [Cayley's theorem](#) and produces the first [Cayley table](#).^{[2][3]}
- [Bernhard Riemann](#), a [German](#) mathematician, submits his [habilitation](#) thesis *Ueber die Darstellbarkeit einer Function durch eine trigonometrische Reihe* ("About the representability of a function by a trigonometric series"), in which he describes the [Riemann integral](#). It is published by [Richard Dedekind](#) in 1867.^[4]

- April–May – [Dr John Snow](#) traces the source of one outbreak of [cholera](#) in [London](#) (which kills 500) to a single [water pump](#), validating his theory that [cholera](#) is water-borne, and forming the starting point for [epidemiology](#).
- November – [Florence Nightingale](#) and her team of trained volunteer [nurses](#) arrive at [Selimiye Barracks](#) in [Scutari](#) in the [Ottoman Empire](#) to care for [British Army](#) troops invalidated from the [Crimean War](#).^[5]
- [Spanish](#)-born [vocal pedagogist Manuel García](#) observes his own functioning [glottis](#) using a form of [laryngoscope](#) incorporating mirrors.^{[6][7]}
- [Claude Bernard](#) introduces the term [Milieu intérieur](#) in [physiology](#).
- [Filippo Pacini](#), an Italian anatomist, discovers [Vibrio cholerae](#), the [bacterium](#) that causes cholera.^[8]
- [Louis Pasteur](#) begins studying [fermentation](#) at the request of [brewers](#).
- May 9 – [Albert Fink](#) patents the [Fink truss](#) in the [United States](#).^[9]
- May 17 – Deck of [Wheeling Suspension Bridge](#) in the United States destroyed through torsional movement and vertical undulations in a severe windstorm.
- July – First voyage by a seagoing [steamship](#) fitted with a [compound steam engine](#), the [screw](#) steamer *Brandon*, built on the [River Clyde](#) in [Scotland](#) by [John Elder](#).^[10]
- September 19 – [Thaddeus Hyatt](#) patents a practical [pavement light](#).^[11]
- November 27 – [André-Adolphe-Eugène Disdéri](#) patents a method of producing [carte de visite](#) photographs in France.
- December 20 – In the case of *Talbot v. Laroche*, pioneer of [photography](#) [Henry Fox Talbot](#) fails in asserting that the [collodion](#) process infringes his [calotype patent](#).^[12]
- [James Ambrose Cutting](#) takes out three [United States patents](#) for improvements to the [wet plate collodion process](#) ([Ambrotype](#) photography).
- [Elisha Otis](#) completes work on the safety [elevator](#).
- 10 June – [The Crystal Palace](#) reopens in [Sydenham](#), [South London](#)^[13] with life-size [dinosaur](#) models in the grounds.
- [Copley Medal](#): [Johannes Peter Müller](#)^[14]
- [Wollaston Medal](#) for Geology: [Richard John Griffith](#)

1855

- September – [Alfred Russel Wallace](#) publishes "On the Law which has Regulated the Introduction of New Species", which he has written while working in [Sarawak](#) on the island of [Borneo](#) in February;^[1] in December, [Edward Blyth](#) brings it to the attention of [Charles Darwin](#).
- [Robert Remak](#) publishes *Untersuchungen über die Entwicklung der Wirbelthiere* in [Berlin](#), providing evidence for [cell division](#), which is supported (but not acknowledged) by [Rudolf Virchow](#).^{[2][3]}
- September – Rev. [James Patterson](#) presents the [Gall orthographic projection](#) for [celestial](#) and terrestrial [equal-area](#) cartography.^[4]
- May 10 – The [Bunsen burner](#) is invented by [Robert Wilhelm Bunsen](#).

- [Friedrich Gaedcke](#) first isolates the [cocaine alkaloid](#), which he names "erythroxyline".^[5]
- [William Odling](#) proposes that [carbon](#) is [tetravalent](#).
- [Charles-Adolphe Wurtz](#) publishes the [Wurtz reaction](#).^[6]
- [Benjamin Silliman, Jr.](#) pioneers methods of [petroleum cracking](#), which makes the entire modern [petrochemical](#) industry possible.^[7]
- November 17 – Dr [David Livingstone](#) becomes the first European to see the [Victoria Falls](#).
- March – [Mary Seacole](#) opens the British Hotel at [Balaklava](#), a nursing and [convalescent](#) establishment for [Crimean War](#) officers.^[8]
- October – The [Renkioi temporary hospital](#), [prefabricated](#) in wood to a design by [I. K. Brunel](#), is erected in [Turkey](#) to serve Crimean War invalids.^[9]
- [Thomas Addison](#) describes [Addison's disease](#) in *On the Constitutional and Local Effects of Disease of the Suprarenal Capsules*.
- The first [archaeopteryx](#) fossil is found in [Bavaria](#), but will not be identified until 1970.^[10]
- [James Clerk Maxwell](#) unifies [electricity](#) and [magnetism](#) into a single theory, [classical electromagnetism](#), thereby showing that [light](#) is an electromagnetic [wave](#).
- [Heinrich Geißler](#) designs a mercury pump capable of producing a significant [vacuum](#).
- October 17 – [Henry Bessemer](#) files his [patent](#) for the [Bessemer process](#) of [steelmaking](#).^[11]
- [William Armstrong](#) produces the [rifled breech-loading Armstrong Gun](#).
- c. February – Establishment of the Industrial Museum of Scotland in [Edinburgh](#), a predecessor of the [National Museum of Scotland](#), with chemist [George Wilson](#) as its director. In August he is also appointed [Regius Professor](#) of Technology in the [University of Edinburgh](#), the first such post in Britain.^[12] This year also he publishes *Researches on Colour-Blindness*.
- Opening of [Eidgenössische Polytechnische Schule](#) in [Zurich](#), [Switzerland](#).
- [Matthew Fontaine Maury](#) publishes *The Physical Geography of the Sea*.
- [Copley Medal](#): [Léon Foucault](#)^[13]
- [Wollaston Medal](#) for Geology: [Henry De la Beche](#)

1856

- First remains of [Neanderthal](#) Man found in the [Neandertal](#) Valley of [Germany](#).^[1]
- [N. R. Pogson](#) proposes that the ratio used in [Hipparchus'](#) stellar [apparent magnitude](#) system should be adopted as a standard.
- [NGC 6539](#) is discovered by [Theodor Brorsen](#).
- [Paul Du Chaillu](#) becomes the first European to observe [gorillas](#) in the wild.^[2]
- [Gregor Mendel](#) starts his research on [genetics](#).

- [Lev Tsenkovsky](#) introduces the concept that the lower [algae](#) and other [infusoria](#) are [unicellular organisms](#).^[3]
- March – [William Perkin](#) first discovers an [aniline dye](#), [mauveine](#).^[4]
- [Alexander Parkes](#) patents the first [thermoplastic](#), [Parkesine](#).^[5]
- [Louis Pasteur](#) crystallizes [galactose](#).^[6]
- [Charles-Adolphe Wurtz](#) discovers the [glycols](#).
- May 20 – Dr [David Livingstone](#) arrives at [Quelimane](#) on the [Indian Ocean](#) having completed a 2-year transcontinental journey across [Africa](#) from [Luanda](#).^[7]
- [Thomas Montgomerie](#) of the [Great Trigonometric Survey](#) of [India](#) makes the first survey of the [Karakoram Range](#), from [Mount Haramukh](#), 210 km (130 miles) to the south, and designates the two most prominent peaks as [K1](#) and [K2](#).^[8]
- August 23 – [Eunice Newton Foote](#)'s paper on "Circumstances affecting the heat of the sun's rays" read at the [American Association for the Advancement of Science](#) presents the causes of the [greenhouse effect](#).
- October 4 – American meteorologist [William Ferrel](#) demonstrates the tendency of rising and rotating warm air to pull in air from more southerly, warmer regions and transport it poleward.^[9]
- American paleontologist [Joseph Leidy](#) describes the new [tyrannosaurid dinosaur](#) genus and species [Deinodon horridus](#).^[10]
- [Henry Darcy](#) formulates [Darcy's law](#) on fluid flow.^[11]
- September 22 – British metallurgist [Robert Mushet](#) patents improvements to the [Bessemer process](#) for the production of [steel](#).^[12]
- English agricultural engineer [John Fowler](#) first demonstrates his steam-driven agricultural [ploughing](#) system.^[13]
- English engineer [John Ramsbottom](#) invents a tamper-proof spring [safety valve](#) for [steam locomotives](#).^[14]
- French chemist [Alphonse Louis Poitevin](#) invents the [collotype](#) photographic process.
- [Tinsmith](#) Ralph Collier of [Baltimore](#), [Maryland](#), patents the first egg beater with rotating parts.^[15]
- [Sarrusophone](#) patented.
- Approximate date – [Bandoneon](#) invented.
- [Copley Medal](#): [Henri Milne-Edwards](#)^[16]
- [Wollaston Medal](#) for Geology: [William Edmond Logan](#)

1857

- [Peter Andreas Hansen](#)'s *Tables of the Moon* are published in London.^[1]
- [Rev. M. J. Berkeley](#) publishes *Introduction to Cryptogamic Botany*.
- [Galen Clark](#) discovers the [Mariposa Grove](#) of [giant sequoias](#) in [California](#).

- [Robert Bunsen](#) invents apparatus for measuring [effusion](#).
- [August Kekulé](#) proposes that [carbon](#) is tetravalent, or forms exactly four [chemical bonds](#).^{[2][3]}
- [Carl Wilhelm Siemens](#) patented the [Siemens cycle](#).
- January 9 – The 7.9 M_w [Fort Tejon earthquake](#) shakes [Central](#) and [Southern California](#) with a maximum [Mercalli intensity](#) of IX (*Violent*). The event, which involved slip on the southern segment of the [San Andreas Fault](#), left two people dead.
- [Friedrich Albert Fallou](#) publishes *Anfangsgründe der Bodenkunde* [First Principles of Soil Science], laying the foundations for the modern study of [soil science](#).
- May 16 – The [British North American Exploring Expedition](#), led by Irish geographer Capt. [John Palliser](#), sets off for a three-year exploration of [Western Canada](#).
- The [Stockton and Darlington Railway's](#) [Locomotion No. 1](#) of 1825 is set aside for preservation in England.
- [William Rowan Hamilton](#) invents the [Icosian game](#).^[4]
- March 12 – [Elizabeth Blackwell](#) opens the [New York Infirmary for Indigent Women and Children](#).
- French surgeon Jean-Louis-Paul Denucé gives the first description of a [neonatal incubator](#).
- French psychiatrist [Bénédict Morel](#) publishes *Traité des dégénérescences physiques, intellectuelles et morales de l'espèce humaine et des causes qui produisent ces variétés malades*.
- March 23 – [Elisha Otis](#)' first [elevator](#) is installed (at 488 [Broadway \(Manhattan\)](#)).
- The first [rails](#) made from [steel](#) are made by [Robert Forester Mushet](#) early in the year and laid experimentally at [Derby railway station](#) on the [Midland Railway](#) in [England](#). They prove far more durable than the iron rails they replace and remain in use until 1873.^[5]
- Naturalist [P. H. Gosse](#)'s [creationist](#) text [Omphalos: An Attempt to Untie the Geological Knot](#) is published in England.
- [Copley Medal](#): [Michel Eugène Chevreul](#)^[6]
- [Wollaston Medal](#) for geology: [Joachim Barrande](#)

1858

- In [Luxor, Egypt](#), the [Rhind papyrus](#) is found (named for [Alexander Henry Rhind](#), the discoverer); it is sometimes called the Ahmes papyrus for the scribe who wrote it around 1650 BC.
- [Donati's Comet](#), the first comet to be photographed, is discovered by [Giovanni Battista Donati](#) on 2 June and remains visible for several months afterwards.

- [William Herschel](#) initiates [fingerprinting](#) as a means of identification, in [Bengal](#).^[1]
- [Rudolf Virchow](#) publishes *Die Cellularpathologie in ihrer Begründung auf physiologische und pathologische Gewebelehre: 20 Vorlesungen, gehalten während der Monate Februar, März und April 1858 im Pathologischen Institut zu Berlin*.
- [George Bentham](#)'s *Handbook of the British flora* is published. This will be in use (in editions edited by [Joseph Dalton Hooker](#)) for a century.
- [Publication of Darwin's theory](#):
 - June 18 – [Charles Darwin](#) receives papers from [Alfred Russel Wallace](#) setting out the latter's theory of [natural selection](#) which he forwards to [Charles Lyell](#).
 - July 1 – Darwin and Wallace's papers on their theories of [evolution](#), *On the Tendency of Species to form Varieties; and on the Perpetuation of Varieties and Species by Natural Means of Selection* (submitted with the support of Lyell and [Joseph Dalton Hooker](#)) are read by [John Joseph Bennett](#) to a meeting of the [Linnean Society of London](#). They are first published on August 20.
- February 13 – [Richard Francis Burton](#) and [John Hanning Speke](#) become the first Europeans to discover [Lake Tanganyika](#).^[2]
- May 14 – Dr [David Livingstone](#)'s 6-year [Second Zambesi Expedition](#), under the patronage of the [Royal Geographical Society](#), arrives at the [African](#) coast with the prefabricated iron [paddle steamer](#) *Ma Robert*.^[3]
- August 3 – John Hanning Speke discovers [Lake Victoria](#), source of the [River Nile](#).^[2]
- The [Möbius strip](#) is discovered independently by [German mathematicians](#) [August Ferdinand Möbius](#) and [Johann Benedict Listing](#).^{[4][5][6]}
- [Arthur Cayley](#) publishes "A memoir on the theory of matrices", introducing the modern concept of the [matrix](#) in mathematics.^{[7][8][9]}
- August 2 – [Medical Act 1858](#) passed "to Regulate the Qualifications of Practitioners in Medicine and Surgery" in the United Kingdom.
- First publication of [Gray's Anatomy](#).
- Publication in [London](#) of [Thomas B. Peacock's](#) *On Malformations, &c., of the Human Heart, with original cases* which becomes a standard [cardiology](#) textbook.^[10]
- [French pediatrician](#) [Eugène Bouchut](#) develops a new technique for non-surgical [oro-tracheal intubation](#) to bypass laryngeal obstruction resulting from a diphtheria-related pseudomembrane.^[11]
- First treatise on postpartum psychiatric disturbances, by [Louis-Victor Marcé](#), MD.^[12]
- January 31 – [I. K. Brunel](#)'s *SS Great Eastern*, the largest ship built to date, is launched on the [River Thames](#) using [Tangye hydraulic rams](#).^[13]
- August – The first [aerial photography](#) is carried out by [Nadar](#) from a [moored balloon](#) in France using the [collodion process](#).^[14]
- [Hoffmann kiln patented](#) in [Germany](#) by Friedrich Hoffmann for continuous production [brickmaking](#).
- [Copley Medal](#): [Charles Lyell](#)^[15]
- [Wollaston Medal for geology](#): [James Hall](#)

1859

- May 26 & June 2 – Geologist [Joseph Prestwich](#) and amateur archaeologist [John Evans](#) report (to the [Royal Society](#) and [Society of Antiquaries of London](#), respectively) the results of their investigations of gravel-pits in the [Somme valley](#) and elsewhere, extending [human history](#) back to what will become known as the [Paleolithic](#) Era.^{[1][2]}
- August 28–September 2 – The [solar storm of 1859](#), the largest geomagnetic solar storm on record, causes the [Northern lights aurora](#) to be visible as far south as Cuba and knocks out [telegraph](#) communication. This is also called the Carrington event, [Richard Carrington](#) being the first known person to observe [solar flares](#), due to this storm. It is also the first major solar radiation storm to be recorded.^[3]
- [Marian Albertovich Kowalski](#) publishes the first usable method to deduce the [rotation](#) of the [Milky Way](#).^[4]
- English clergyman [Thomas William Webb](#) publishes the first edition of his popular amateur guide *Celestial Objects for Common Telescopes*.
- Attempting to explain [Mercury's](#) solar orbit, [French](#) mathematician [Urbain Le Verrier](#) proposes the existence of a [hypothetical planet, Vulcan](#), inside its orbit and amateur astronomer [Edmond Modeste Lescarbault](#) claims to have observed it on March 26.^[5]
- March 21 – The [Commonwealth of Pennsylvania](#) issues the charter establishing the [Zoological Society of Philadelphia](#), the first organization of its kind in the [United States](#) and founder of the nation's first [zoo](#).
- November 3 – [Alfred Russel Wallace](#)'s paper "On the Zoological geography of the Malay Archipelago", introducing the [Wallace Line](#), is read by [Charles Darwin](#) to the [Linnean Society of London](#).^[6]
- November 24 – [Charles Darwin](#) publishes *On the Origin of Species*.
- December – [Joseph Dalton Hooker](#)'s *Introductory Essay to the Flora Tasmaniae* supports Darwin's theories.
- [Pollen](#) is identified as the cause of [allergic rhinitis](#) by [Charles Harrison Blackley](#).^[7]
- [Isidore Geoffroy Saint-Hilaire](#), in the second volume of *Histoire naturelle générale des Règnes organiques*, introduces the term [ethology](#).^[8]
- [Wilhelm Peters](#) first describes the [guppy](#) (fish *Poecilia reticulata*) from Venezuela.
- [Rudolf Virchow](#) publishes *Vorlesungen über Cellularpathologie in ihrer Begründung auf physiologischer und pathologischer Gewebelehre*, a major textbook on [cellular pathology](#).^[9]
- [Benjamin Collins Brodie](#) reports the highly [lamellar](#) structure of thermally reduced [graphite oxide](#).^{[10][11]}
- [Aleksandr Butlerov](#) discovers [hexamine](#).
- [August von Hofmann](#) isolates [sorbic acid](#).
- [Gustav Robert Kirchhoff](#) and [Robert Bunsen](#) invent an improved [spectroscope](#).^{[12][13]}
- [Pinacol](#) was discovered through [Pinacol coupling reaction](#) by [Wilhelm Rudolph Fittig](#).
- [John Tyndall](#) discovers that some gases block [infrared radiation](#). He suggests that changes in the concentration of these gases could bring [climate change](#).^[14]
- The [Royal Geographical Society](#) of [London](#) is granted a [Royal Charter](#) by [Queen Victoria](#).

- French mathematician [Nicolas Auguste Tissot](#) first proposes [Tissot's indicatrix](#) in [cartography](#).
- [Emanoil Bacaloglu](#) develops the "Bacaloglu [pseudosphere](#)".^[15]
- [Arthur Cayley](#) produces the first [Cayley–Klein metric](#).^[16]
- [Bernhard Riemann](#) publishes his paper on [number theory](#), *Ueber die Anzahl der Primzahlen unter einer gegebenen Grösse* ("[On the Number of Primes Less Than a Given Magnitude](#)")^[17] including the [Riemann zeta function](#) and [Riemann hypothesis](#).
- [Florence Nightingale](#) publishes [Notes on Nursing: What it is and What it is Not](#) in London.^[18]
- [District nursing](#) begins in [Liverpool, England](#), when philanthropist [William Rathbone](#) employs Mary Robinson to nurse the sick poor in their own homes.
- May 2 – [Isambard Kingdom Brunel's Royal Albert Bridge](#) for the [Cornwall Railway](#) at [Saltash](#) in [England](#) is officially opened.^[19]
- November 24 – [French ironclad Gloire](#) launched, the first ocean-going [ironclad battleship](#).
- [Thomas Aveling](#) of [Rochester, Kent](#), England, produces the first [traction engine](#), by modification of an existing machine.^[20]
- [Étienne Lenoir](#), working in [Paris](#), produces the first single-cylinder [two-stroke Lenoir cycle gas engine](#) with an electric [ignition system](#).^[21]
- [Gustav Kirchhoff](#) stated [Kirchhoff's law of thermal radiation](#) first in several papers in 1859
- February 23 – [William Armstrong](#) created a [Knight Bachelor](#)
- [Copley Medal](#): [Wilhelm Weber](#)^[22]
- [Wollaston Medal for geology](#): [Charles Darwin](#)

1860

- July 18 – Total [solar eclipse](#). [Warren De La Rue](#)'s photographs of this event, taken in [Spain](#), together with those of [Angelo Secchi](#), demonstrate the solar character of the prominences or red flames seen around the limb of the moon during such an eclipse.^[1]
- June 30 – [Debate about evolution](#) at the new [Oxford University Museum of Natural History](#).
- [John Curtis](#) publishes *Farm Insects, being the natural history and economy of the insects injurious to the field crops of Great Britain and Ireland... with suggestions for their destruction* [Archived 2012-03-21 at the Wayback Machine](#) in Glasgow.
- [Joseph Dalton Hooker](#) concludes publication of *The Botany of the Antarctic Voyage of H.M. Discovery Ships Erebus and Terror ... 1839–1843* with issue of the final part of *Flora Tasmaniae* in [London](#).^[2]
- September 3–5 – [Karlsruhe Congress](#), the first international meeting of chemists.
- [Marcellin Berthelot](#) rediscovers and names [acetylene](#).

- [Robert Bunsen](#) and [Gustav Kirchhoff](#), using their newly improved [spectroscope](#), discover and name [caesium](#) in [mineral water](#) from [Bad Dürkheim](#), Germany.^[3]
- [Stanislao Cannizzaro](#), resurrecting Avogadro's ideas regarding diatomic molecules, compiles a table of [atomic weights](#) and presents it at the 1860 [Karlsruhe Congress](#), ending decades of conflicting atomic weights and molecular formulas, and leading to Mendeleev's discovery of the periodic law.^[4]
- [Albert Niemann](#) makes a detailed analysis of the [coca](#) leaf, isolating and purifying the [crystalline alkaloid](#) which he calls [cocaine](#).^[5]
- The [Erlenmeyer flask](#) was created by German chemist [Emil Erlenmeyer](#).
- [Carl Wilhelm Borchardt](#) first discovers and proves [Cayley's formula](#) in [graph theory](#).
- July 9 – The [Nightingale Training School and Home for Nurses](#), the first [nursing school](#) based on the ideas of [Florence Nightingale](#), is opened at [St Thomas' Hospital](#) in [London](#).
- [Gustav Fechner](#) publishes *Elemente der Psychophysik*, establishing the discipline of [psychophysics](#) and introducing the [Weber–Fechner law](#) on the intensity of stimuli.^{[6][7]}
- April 9 – Earliest known decipherable [sound recording](#) of the human voice, a [phonautogram](#), produced by [Édouard-Léon Scott de Martinville](#). Playback is impossible at this time.^[8]
- December 29 – Launch of [HMS Warrior](#) by the [Thames Ironworks and Shipbuilding Company](#), the first all-iron [warship](#), for the first time combining steam engines delivering high speed, [rifled breech-loading guns](#), iron frames and armoured cladding, and the [propeller](#), in the largest naval ship built to this date.^{[9][10][11]}
- [Copley Medal](#): [Robert Wilhelm Bunsen](#)^[12]
- [Wollaston Medal for geology](#): [Searles Valentine Wood](#)

1861

- May 13 – [Comet C/1861 J1](#) (the "[Great Comet](#) of 1861") first observed from [Australia](#) by [John Tebbutt](#).
- [Anton de Bary](#) publishes his first work on [fungi](#), describing [sexual reproduction](#) in *Peronospora*.
- [Charles Thorp](#), [Archdeacon of Durham](#) (d. 1862), arranges purchase of some of the [Farne Islands](#) off the north-east coast of England and employment of a warden to protect threatened [seabird](#) species.
- March 30 – [William Crookes](#) announces his discovery of [thallium](#).
- [Rubidium](#) is discovered by [Robert Bunsen](#) and [Gustav Kirchhoff](#), in [Heidelberg, Germany](#), in the [mineral lepidolite](#) through the use of their [spectroscope](#).^{[1][2]}
- [Aleksandr Butlerov](#) is instrumental in creating the theory of [chemical structure](#).^[3]
- [Josef Loschmidt](#) publishes *Chemische Studien*, proposing two-dimensional representations for over 300 [molecules](#) and recognising variations in atomic size.^[4]

- [Ernest Solvay](#) develops the [Solvay process](#) for the manufacture of soda ash ([sodium carbonate](#)).
- [Eduard Suess](#) proposes the former existence of the [supercontinent Gondwana](#).
- [Boulton and Watt rotative beam engine](#) of 1788 from the makers' [Soho Foundry](#) in the west midlands of England is acquired for the Museum of Patents, predecessor of the [Science Museum, London](#).^[5]
- First volumes of [Munk's Roll](#) published.
- [Paul Broca](#) identifies the [speech production center](#) of the brain.
- [Franciscus Donders](#) introduces the term [visual acuity](#).
- [Guillaume Duchenne](#) describes [Duchenne muscular dystrophy](#).^[6]
- [Prosper Ménière](#) reports the association of [vertigo](#) with [inner ear](#) disorders.
- [Ádám Politzer](#) publishes the technique of [Politzerization](#) used in [otorhinolaryngology](#).
- [Ignaz Semmelweis](#) publishes [Etiology, Concept and Prophylaxis of Childbed Fever](#) (*Die Ätiologie, der Begriff und die Prophylaxis des Kindbettfiebers*), a treatment of his theory on sanitary conditions during childbirth.
- [Adolf Zsigmondy](#) develops a [dental notation](#) system.
- August 15 – First description of [Archaeopteryx](#), based on a feather found in [Bavaria](#);^[7] in September the first complete identified skeleton is found near [Langenltheim](#) in Germany.^[8]
- January 1 – First steam-powered [carousel](#) recorded, in [Bolton, England](#).^[9]
- July 23 – The term '[drive shaft](#)' is used in the description of the mechanism in a patent reissue for the Watkins and Bryson horse-drawn [mowing machine](#).^[10]
- [William Froude](#) publishes the first results of his research into [ship hull](#) design.^[11]
- [Dr. Richard J. Gatling](#) invents the [Gatling gun](#).^[12]
- [James Clerk Maxwell](#) demonstrates the principle of permanent three-colour photography.^[13]
- German scientist [Philipp Reis](#) succeeds in creating a device that captures sound and converts it to electrical impulses which are transmitted via electrical wires to another device that transforms these pulses into recognizable sounds similar to the original acoustical source. Reis coins the term *telephone* to describe his device, the [Reis telephone](#).
- [Michael Faraday's Royal Institution Christmas Lectures](#) published as [The Chemical History of a Candle](#).
- [Copley Medal](#): [Louis Agassiz](#)^[14]
- [Wollaston Medal for geology](#): [Heinrich Bronn](#)

1862

- January 31 – [Alvan Graham Clark](#) makes the first observation of [Sirius B](#), a [white dwarf](#) star, through an eighteen-inch telescope at [Northwestern University](#).

- May 15 – [Charles Darwin](#) publishes *On the various contrivances by which British and foreign Orchids are fertilised by insects, and on the good effects of intercrossing*.
- [Henry Walter Bates](#) publishes "Contributions to an insect fauna of the Amazon valley. *Lepidoptera: Heliconidae*"^[1] describing [Batesian mimicry](#).
- [George Bentham](#) and [Joseph Dalton Hooker](#) begin publication of *Genera plantarum* based on the collections of the [Royal Botanic Gardens, Kew](#), [England](#).^[2]
- [John Gwyn Jeffreys](#) begins publication of *British Conchology, or an account of the Mollusca which now inhabit the British Isles and the surrounding seas*.
- Chemist and composer [Alexander Borodin](#) describes the first [nucleophilic displacement](#) of chlorine by fluorine in [benzoyl chloride](#).^[3]
- [Mineralogist Alexandre-Emile Béguyer de Chancourtois](#) makes the first proposal to arrange the [chemical elements](#) in order of [atomic weights](#), although this is largely ignored by chemists.^[4]
- [Alexander Parkes](#) exhibits [Parkesine](#), one of the earliest [synthetic polymers](#), at the International Exhibition in London. This discovery forms the foundation of the modern [plastics industry](#).^[5]
- [Friedrich Albert Fallou](#) publishes "Pedologie oder allgemeine und besondere Bodenkunde" ([Pedology](#) or general and special soil science), founding soil science.^[6]
- [Maurice Raynaud](#) describes the vasospastic [syndrome named after him](#) in his doctoral dissertation.^[7]
- [Hermann Snellen](#) publishes the [Snellen chart](#) for testing [visual acuity](#).
- [Brown & Sharpe](#) produce the first Universal [Milling machine](#).^[8]
- [David Kirkaldy](#) publishes *Results of an Experimental Inquiry into the Comparative Tensile Strength and other properties of various kinds of Wrought-Iron and Steel* in [Glasgow](#) describing his pioneering work in [tensile testing](#).
- [Copley Medal](#): [Thomas Graham](#)^[9]
- [Wollaston Medal for geology](#): [Robert Godwin-Austen](#)

1863

- August 1 – [Friedrich Bayer](#) founds the chemical manufacturing company of [Bayer](#) at [Barmen](#) in [Germany](#).
- [Teerfarbenfabrik Meister, Lucius & Co.](#) of [Höchst \(Frankfurt\)](#) in Germany produce a green dye from [coal tar](#).^[1]
- German military officer [Friedrich Kasiski](#) publishes *Die Geheimschriften und die Dechiffir-Kunst* ("Secret writing and the Art of Deciphering"), the first published general method for [cryptanalysis](#) of [polyalphabetic ciphers](#), especially the [Vigenère cipher](#).
- [Max Schultze](#) advances [cell theory](#) with the observation that animal and vegetable [protoplasm](#) are identical.^[2]
- The first outbreak of [phylloxera](#) on the European mainland is observed, in the vineyards of the southern Rhône region of France.

- [Henry Walter Bates](#) publishes *The Naturalist on the River Amazons*.
- February 17 – First meeting of what will become the [International Committee of the Red Cross](#) is held in [Geneva, Switzerland](#), following the lead of humanitarian [Henry Dunant](#).^[3]
- [William Banting](#) publishes *Letter on Corpulence, Addressed to the Public* in [London](#), the first popular [low-carbohydrate diet](#).^[4]
- [Ivan Sechenov](#) publishes *Refleksy golovnogo mozga* ("Reflexes of the brain").^[5]
- The [Paris Observatory](#) begins to publish [weather maps](#).
- [Richard Owen](#) publishes the first description of a fossilised bird, [Archaeopteryx](#).^[6]
- January – [John Tyndall](#) first explains the workings of the [greenhouse effect](#).^[7]
- February 10 – Alanson Crane [patents](#) a [fire extinguisher](#).
- Spring – [John Jonathon Pratt](#) builds a practical form of [typewriter](#) in the United States.^[8]
- July – The tiny [Confederate States of America](#) hand-propelled [submarine](#) [H. L. Hunley](#) is first tested successfully (although thirteen crew – including her inventor [Horace Lawson Hunley](#) – are lost in two sinkings later in the year).^[9]
- October 23 – The [Ffestiniog Railway](#) in [North Wales](#) introduces [steam locomotives](#) into general service, the first time this has been done anywhere in the world on a public railway of such a [narrow gauge](#) (2 ft (60 cm)).^[10]
- December 19 – [Linoleum](#) patented in the United Kingdom.^[6]
- 447March 3 – [National Academy of Sciences](#) incorporated in the [United States](#).
- Summer – The [Chōshū Five](#) leave Japan secretly to study Western science and technology in Britain, at [University College London](#), part of the ending of [sakoku](#).
- November 29 – [Polytechnic University of Milan](#) founded as the *Istituto Tecnico Superiore*.
- January 31 – The first of [Jules Verne](#)'s scientifically inspired [Voyages Extraordinaires](#), the novel *Cinq semaines en ballon* ([Five Weeks in a Balloon](#)), is published in [Paris](#).
- [Copley Medal](#): [Adam Sedgwick](#)^[11]
- [Wollaston Medal](#) for Geology: [Gustav Bischof](#)

1864

- May 14 – The [Orgueil meteorite](#), composed of [carbonaceous chondrite](#), falls in southwestern France.
- August 29 – [William Huggins](#) is the first to take the spectrum of a [planetary nebula](#) when he analyzes [NGC 6543](#).^[1]
- [English](#) botanist [Richard Spruce](#) completes a 15-year expedition to the [Andes](#) and [Amazon Basin](#) during which he has collected more than 30,000 plant specimens.^{[2][3][4]}

- August 20 – [John Alexander Reina Newlands](#) produces the [first periodic table](#) of the [elements](#).^[5]
- November 27 – [Barbituric acid](#) is first synthesized, by German chemist [Adolf von Baeyer](#).
- [Lothar Meyer](#) develops an early version of the periodic table, with 28 elements organized by [valence](#).^{[6][7]}
- [Cato Maximilian Guldberg](#) and [Peter Waage](#), building on [Claude Louis Berthollet](#)'s ideas, propose the [law of mass action](#).^{[8][9][10]}
- June 30 – The [Yosemite Grant](#) is created in the [United States](#).^[11]
- [Alfred Enneper](#) publishes his [parametrization](#) of the [Enneper surface](#) in connection with [minimal surface](#) theory.^[12]
- December 8 – [James Clerk Maxwell](#) presents his paper *[A Dynamical Theory of the Electromagnetic Field](#)* to the [Royal Society](#) in [London](#), treating light as an [electromagnetic wave](#) and presenting [Maxwell's equations](#).^[13]
- February 17 – In the [American Civil War](#), the tiny [Confederate](#) hand-propelled [submarine H. L. Hunley](#) sinks the [USS Housatonic](#) using a [spar torpedo](#) in [Charleston Harbor](#), becoming the first submarine to sink an enemy ship (although the submarine and her crew of eight are also lost).^[14]
- December 8 – The [Clifton Suspension Bridge](#) across the [Bristol Avon](#) in [England](#), designed by [Isambard Kingdom Brunel](#) and completed as a memorial to him, opens to traffic.^[15]
- [Oriel Chambers](#), [Liverpool](#), England, the world's first metal-framed glass [curtain walled](#) building, designed by [Peter Ellis \(architect\)](#), is built.^[16]
- [Henry Roscoe](#) and [Robert Bunsen](#) carry out what is reputed to be the first [flashlight photography](#), using [magnesium](#) as a light source.^[17]
- Possible date – [Siegfried Marcus](#) builds the first motorized cart, in Vienna.
- The species *[Homo neanderthalensis](#)* is formally described by [William King](#).
- The [Central Park Zoo](#) opens in [New York City](#) as a menagerie.
- [Copley Medal](#): [Charles Darwin](#)^[18]
- [Wollaston Medal](#) for Geology: [Roderick Murchison](#)

1865

- [John Lubbock](#) publishes *Pre-historic Times, as Illustrated by Ancient Remains, and the Manners and Customs of Modern Savages*, including his coinage of the term *[Palaeolithic](#)*.^[1]
- [Vassar College Observatory](#) opens at [Poughkeepsie, New York](#), with [Maria Mitchell](#) as its first director.
- [Friedrich Kekulé](#) proposes a ring structure for [benzene](#).^[2]
- [Adolf von Baeyer](#) begins work on [indigo dye](#), a milestone in modern industrial organic chemistry which revolutionizes the dye industry.^[3]

- [Johann Josef Loschmidt](#) determines the exact number of molecules in a [mole](#), later named [Avogadro's number](#).^[4]
- [Louis Pasteur](#) shows that the air is full of [bacteria](#).
- [Joseph Lister](#) begins to experiment with [antiseptic](#) surgery in [Glasgow](#) using [carbolic acid](#).^[5]
- [Max Schultze](#) gives the first known description of the [platelet](#).^[6]
- [Claude Bernard](#) publishes *Principes de Médecine expérimentale*.
- February 8 & March 8 – [Gregor Mendel](#) reads his paper, *Versuche über Pflanzenhybriden* ([Experiments on Plant Hybridization](#)), at two meetings of the Natural History Society of Brünn in [Moravia](#).^[7]
- May 17 – Father [Armand David](#) first observes [Père David's Deer](#) in [China](#).^[8]
- June–August – [Francis Galton](#) formulates [eugenics](#).^[9]
- September – [John Henry Walsh](#) (writing as 'Stonehenge' in the magazine *The Field*) gives the first definition of a [dog breed](#) standard (for the [pointer](#)) based on physical form.^[10]
- September 28 – [Elizabeth Garrett Anderson](#) obtains a licence from the [Society of Apothecaries](#) in London to practice medicine, the first woman to qualify as a doctor in the [United Kingdom](#).^[11] and sets up in her own practice.
- [Rudolf Clausius](#) gives the first mathematical version of the concept of [entropy](#), and also names it.^{[12][13]}
- [James Clerk Maxwell](#) publishes *A Dynamical Theory of the Electromagnetic Field*.^[5]
- [Aveling and Porter](#) produce the world's first [steam roller](#) at [Rochester](#) in [England](#).^[14]
- [Hermann Sprengel](#) produces the [Sprengel pump](#) which is capable of creating a significant [vacuum](#).^[15]
- [Copley Medal](#): [Michel Chasles](#)^[16]
- [Wollaston Medal](#) in Geology: [Thomas Davidson](#)

1866

- May – [William Huggins](#) studies the [emission spectrum](#) of a [nova](#) and discovers that it is surrounded by a cloud of [hydrogen](#).^[1]
- June 4 – [Pluto](#) (not known at this time) reaches its only [aphelion](#) between 1618 and 2113.
- [Giovanni Schiaparelli](#) realizes that [meteor](#) streams occur when the [Earth](#) passes through the [orbit](#) of a [comet](#) that has left debris along its path.
- [Gregor Mendel](#) publishes his [laws of inheritance](#).^[2]
- [Ernst Haeckel](#) challenges the [plant/animal](#) division of life, observing that [single celled organisms](#), the [protists](#), do not fit into either category.
- [Élie Metchnikoff](#) describes the early separation of "polecells" (progenital cells) in [parthenogenetic Diptera](#).^[3]
- [Robert John Lechmere Guppy](#) discovers the [guppy](#) (fish) in [Trinidad](#).
- [Frederick Smith](#) first discovers *Formica candida* in the [Bournemouth](#) district of [England](#), describing it as *Formica gagates*.
- Nikolai Kaufman publishes his [Moscow Flora](#).^[4]

- [Dynamite](#) invented by [Alfred Nobel](#).^[5]
- [August von Hofmann](#) proposes the now standard system of [hydrocarbon](#) nomenclature and invents the [Hofmann voltameter](#).^[6]
- [Emil Erlenmeyer](#) proposes that [naphthalene](#) has a structure of two fused benzene rings.^[7]
- January 26 – [Volcanic eruption](#) in the [Santorini caldera](#) begins.
- The second smallest pair of [amicable numbers](#) (1184, 1210) is discovered by teenager B. Nicolò I. Paganini.
- July – [Elizabeth Garrett Anderson](#) opens the [St Mary's Dispensary](#) in [London](#) where women can seek medical advice from exclusively female practitioners.^[8]
- [Max Schultze](#) discovers two sorts of 'receptors' in the [retina](#).^[9]
- Dr [John Langdon Down](#) publishes his theory that different types of mental condition can be classified by ethnic characteristics, notably "Mongolism", the genetic [developmental disability](#) now known as [Down syndrome](#).^{[10][8]}
- Invention of a [clinical thermometer](#) by [Thomas Clifford Allbutt](#).^[8]
- A [cholera](#) epidemic in London causes over 5,000 deaths.^[8]
- [Patrick Manson](#) starts a school of tropical medicine in [Hong Kong](#).^[citation needed]
- 4American paleontologist [Joseph Leidy](#) describes the new genus and species [Laelaps aquilunguis](#), demonstrating that [theropod dinosaurs](#) walked on their hind limbs rather than on all fours as in earlier reconstructions.^[11]
- [James Clerk Maxwell](#) formulates the [Maxwell–Boltzmann distribution](#) in the [kinetic theory of gases](#).
- January 12 – [Royal Aeronautical Society](#) is formed as 'The Aeronautical Society of Great Britain' in [London](#), the world's oldest such society.
- July 27 – The [SS Great Eastern](#) successfully completes laying the [transatlantic telegraph cable](#) between [Valentia Island](#), Ireland and [Heart's Content, Newfoundland](#), permanently restoring a communications link.^[12]
- August 23 – Ralph H. Twedell patents the [hydraulic riveter](#) in the [United Kingdom](#).^[13]
- [Copley Medal](#): [Julius Plücker](#)^[14]
- [Wollaston Medal for Geology](#): [Charles Lyell](#)

1867

- April – First clear recorded use of the word *science* in [English](#) with today's usage as restricted to the [natural](#) and [physical sciences](#) (by [Catholic theologian](#) and [mathematician](#) [W. G. Ward](#) writing in the [London](#)-published [Dublin Review](#)).^[1]
- [Gorse](#) naturalises in New Zealand and soon becomes the worst invasive weed.
- [Swiss botanist](#) [Simon Schwendener](#) proposes his dual theory of [lichens](#).^[2]
- [Rosa 'La France'](#), the first [hybrid tea rose](#), is cultivated by [Jean-Baptiste Guillot](#).^{[3][4]}

- The Big Trees Ranch at [Felton, California](#), is bought by [San Francisco](#) businessman Joseph Warren Welch to preserve the giant redwoods (*[Sequoia sempervirens](#)*) from logging.^[5]
- [Alfred Nobel](#) patents [dynamite](#) (in the [United Kingdom](#) on May 7, and in [Sweden](#) on October 19).^{[6][7]}
- [Henry Enfield Roscoe](#) isolates [vanadium](#).^[8]
- [Charles-Adolphe Wurtz](#) synthesizes [neurine](#).
- Publication of the first volume of *[Das Kapital](#)* by [Karl Marx](#).
- At [Fountain Point, Michigan](#), an [artesian water](#) spring begins to gush continuously.
- *[Geological Exploration of the Fortieth Parallel](#)* established in the [United States](#) under the directorship of [Clarence King](#).
- [Assyriologist George Smith](#) discovers an inscription recording a [solar eclipse](#) in the month of [Sivan](#) on [British Museum](#) Tablet K51, which he is able to link to 15 June 763 BC, the cornerstone of ancient Near Eastern chronology.^[9]
- [English](#) mathematician Rev. [William Allen Whitworth](#) publishes the first edition of his *Choice and Chance: An Elementary Treatise on Permutations, Combinations, and Probability*.
- March 16 – First publication of an article by [Joseph Lister](#) outlining the discovery of [antiseptic surgery](#), in *[The Lancet](#)*.
- July 17 – In [Boston, Massachusetts](#), the [Harvard School of Dental Medicine](#) is established as the first [dental school](#) in the [United States](#).
- [Henry Maudsley](#) publishes *The Physiology and Pathology of Mind*.
- Viennese psychiatrist [Theodor Meynert](#) observes variations in the [cytoarchitecture](#) of the brain.
- [Yellow fever](#) kills 3093 in [New Orleans](#).
- January 1 – The [Covington–Cincinnati Suspension Bridge](#) opens between [Cincinnati, Ohio](#) and [Covington, Kentucky](#), its 1,057-foot (322 m) main span making it the longest single-span bridge in the world by a margin of 14 m at this time. It will be renamed after its designer, [John A. Roebling](#), in 1983.
- February 17 – The first ship passes through the [Suez Canal](#).
- July 2 – First elevated [railroad](#) in the United States begins service in [New York](#).
- December 14 – [Spanish](#) inventor [Narcís Monturiol](#) submerges his [submarine *Ictineo II*](#) at [Barcelona](#), demonstrating its chemically-fired anaerobic steam propulsion system.^[10]
- [Pierre Michaux](#) invents the front wheel-driven velocipede, the first mass-produced bicycle.
- [Copley Medal](#): [Karl Ernst von Baer](#)^[11]
- [Wollaston Medal](#): [George Poulett Scrope](#)

- January 30 – Publication of [Charles Darwin](#)'s *[The Variation of Animals and Plants Under Domestication](#)* (by [John Murray](#) in [London](#)), including his theory of [heredity](#), which he calls [pangenesis](#).
- [Jules-Emile Planchon](#) and colleagues propose *[Phylloxera](#)* as the cause of the [Great French Wine Blight](#).^[1]
- [Roland Trimen](#) reads a paper to the [Linnaean Society](#) explaining [Batesian mimicry](#) in [African butterflies](#).^{[2][3]}
- [T. H. Huxley](#) discovers what he thinks is primordial matter and names it *[Bathybius haeckelii](#)*. He admits his mistake in 1871.^[4]
- The [Granny Smith apple cultivar](#) originates in [Eastwood, New South Wales, Australia](#), from a [chance seedling propagated](#) by Maria Ann Smith (née Sherwood, 1799–1870).^[5]
- August 18 – The element later named as [helium](#) is first detected in the [spectrum](#) of the [Sun's chromosphere](#) by [French astronomer Jules Janssen](#) during a total [eclipse](#) in [Guntur, India](#), but assumed to be [sodium](#).^[6]
- October 20 – [English astronomer Norman Lockyer](#) observes and names the D₃ [Fraunhofer line](#) in the solar spectrum and concludes that it is caused by a hitherto unidentified [element](#) which he later names [helium](#).^[7]
- [Louis Arthur Ducos du Hauron](#) patents methods of [color photography](#).^[8]
- [Jean-Martin Charcot](#) describes and names [multiple sclerosis](#).^{[9][10]}
- [Adolph Kussmaul](#) performs the first [esophagogastroduodenoscopy](#) on a living human.^{[11][12][13][14]}
- March – French [geologist Louis Lartet](#) discovers the first identified skeletons of [Cro-Magnon](#), the first [anatomically modern humans](#) (early *Homo sapiens sapiens*), at Abri de Crô-Magnon, a rock shelter at [Les Eyzies, Dordogne, France](#).
- October 28 – [American inventor Thomas Edison](#) applies for his first [patent](#), for a form of electronic [voting machine](#).
- Ernest and Auguste Bollée first patent the [Éolienne Bollée wind turbine](#) in France.^[15]
- [Copley Medal](#): [Charles Wheatstone](#)^[16]
- [Wollaston Medal](#) for Geology: [Carl Friedrich Naumann](#)

1869

- November 4 – The first issue of scientific journal *[Nature](#)* is published in [London](#), edited by [Norman Lockyer](#).

Д. Менделѣевъ

[Mendeleev's 1869 periodic table](#)

- March 6 – [Dmitri Mendeleev](#) makes a formal presentation of his [periodic table](#) to the Russian Chemical Society.
- June 15 – [John Wesley Hyatt](#) patents [celluloid](#), in [Albany, New York](#).
- July 15 – [Hippolyte Mège-Mouriès](#) files a patent for [margarine](#) (as *oleomargarine*) in France as a beef [tallow](#) and skimmed milk substitute for butter.
- German chemist [Lothar Meyer](#) makes a formal presentation of the revised and expanded version of his independently-created 1864 periodic table, „Die Natur der chemischen Elemente als Funktion ihrer Atomgewichte”.
- Publication of [Adolphe Wurtz](#)'s *Dictionnaire de chimie pure et appliquée* begins in [Paris](#).
- April 6 – The [American Museum of Natural History](#) is founded in [New York](#).
- June 24 – [Sea Birds Preservation Act](#) passed in the United Kingdom, preventing killing of designated species during the breeding season, the first Act to offer any protection to British wild birds.^[1]
- [Paul Langerhans](#) discovers the [pancreatic islets](#).
- [Friedrich Miescher](#) discovers [deoxyribonucleic acid](#) (DNA) in the pus of discarded surgical bandages. Found in the nuclei of cells, Miescher names it "[nuclein](#)".
- [Neurasthenia](#) is first published as a diagnosis in [psychopathology](#) by Michigan [alienist](#) E. H. Van Deusen of the Kalamazoo asylum^[2] followed a few months later by New York neurologist [George Miller Beard](#).^[3]
- [French missionary](#) and [naturalist](#) Père [Armand David](#) receives the skin of a [giant panda](#) from a hunter, the first time this species has become known to a Westerner;^[4] he also first describes a specimen of the "pocket handkerchief tree", which will be named in his honor as [Davidia involucrata](#).
- [Alfred Russel Wallace](#) publishes [The Malay Archipelago](#).

- [W. Stanley Jevons](#) publishes *The Substitution of Similars* and has a "Logic Piano" constructed to work out problems in [symbolic logic](#).^[5]
- [Hermann Schwarz](#) devises [Schwarz–Christoffel mapping](#).
- Approximate date – [Henry Christopher Mance](#) develops a practical military [heliograph](#) in the [British Raj](#).^{[6][7][8]}
- [Copley Medal](#): [Henri Victor Regnault](#)^[9]
- [Wollaston Medal](#) for Geology: [Henry Clifton Sorby](#)

1870

- January 18 – Gerhard Krefft first describes the [Queensland lungfish](#), in *The Sydney Morning Herald*.
- [Charles Valentine Riley](#) confirms *Phylloxera* as the cause of the [Great French Wine Blight](#).^[1]
- [Norman Lockyer](#) and [Edward Frankland](#) propose that the gas detected in solar observations should be called '[helium](#)'.^{[2][3]}
- [Felix Klein](#) constructs a [model](#) for [hyperbolic geometry](#) establishing its self-consistency and the logical independence of [Euclid](#)'s fifth postulate. (Note: [Eugenio Beltrami](#) had previously given such a model in 1868.)
- [W. Stanley Jevons](#) publishes the popular textbook *Elementary Lessons on Logic*.^[4]
- [Louis Pasteur](#) and [Robert Koch](#) establish the [germ theory of disease](#).
- [Henry Maudsley](#) publishes his lectures on *Body and Mind: an Inquiry into their Connection and Mutual Influence*.
- [Frances Morgan](#) becomes the first [British](#) woman to receive a [Doctor of Medicine](#) degree from a European university, the [University of Zurich](#).
- November 1 – In the [United States](#), the newly created Weather Bureau (later renamed the [National Weather Service](#)) makes its first official [meteorological forecast](#): "High winds at [Chicago](#) and [Milwaukee](#)... and along the Lakes".
- *[Eustreptospondylus oxoniensis](#)* juvenile dinosaur fossil found in [Summertown, Oxford](#).^[5]
- [Rudolf Clausius](#) proves the scalar virial theorem.
- [Ludimar Hermann](#) observes the Hermann [grid illusion](#).^[6]
- February 26 – The [Beach Pneumatic Transit](#) subway in [New York City](#) is opened.
- March 8 – [Joy valve gear](#) for [steam locomotives](#) is [patented](#) in the United Kingdom by David Joy.
- August 2 – Official opening of the [Tower Subway](#) beneath the [River Thames](#) in [London](#), first use of the cylindrical [wrought iron tunnelling shield](#) devised by [Peter W. Barlow](#) and [James Henry Greathead](#)^[7] and of a permanent tunnel lining of [cast iron](#) segments.^[8]

- [Svend Foyn](#) receives a Norwegian patent for the grenade [harpoon cannon](#) for [whaling](#).
- Henry R. Heyl receives a [United States patent](#) for a [magic lantern](#) movie projector.
- A practical [stock ticker](#) is introduced by [Thomas Edison](#).
- First known use of weapons for [anti-aircraft warfare](#), at [Paris](#) during the [Franco-Prussian War](#).
- [Ellen Swallow Richards](#) becomes the first woman admitted to study at the [Massachusetts Institute of Technology](#).
- December 20 – [Missouri University of Science and Technology](#) established as the Missouri School of Mines and Metallurgy.
- [Copley Medal](#): [James Prescott Joule](#)^[9]
- [Wollaston Medal for geology](#): [Gerard Paul Deshayes](#)

1871

- June 8–October 2 – [Hayden Geological Survey of 1871](#) in the United States, including what will next year become the [Yellowstone National Park](#). Between July 21–August 26, the first ever photographs of this region are taken by [William Henry Jackson](#).
- November 17 – [George Biddell Airy](#) presents his discovery that [astronomical aberration](#) is independent of the local medium.^[1]
- [James Clerk Maxwell](#) makes public the [thought experiment](#) which will become known as [Maxwell's demon](#) in the [philosophy of thermal and statistical physics](#), in his book *Theory of Heat*^[2] and establishes [Maxwell relations](#), statements of equality among the second derivatives of the [thermodynamic potentials](#) with respect to different thermodynamic variables.
- [John Strutt](#) publishes his first papers on the theory of [acoustic resonance](#) and on the phenomenon now called [Rayleigh scattering](#), explaining why the sky is blue.^[3]
- [Porphyria](#) is first explained biochemically by [Felix Hoppe-Seyler](#).^[4]
- [Friedrich Trendelenburg](#) describes the first successful elective human [tracheotomy](#) to be performed for the purpose of administering [general anaesthesia](#).^{[5][6][7][8]}
- [Friedrich Miescher](#) publishes his 1869 isolation of what will subsequently be called [nucleic acid](#).^[9]
- [Institution of Electrical Engineers](#) established in the [United Kingdom](#) as the Society of Telegraph Engineers.
- [Souter Lighthouse](#) in [England](#) is the first to use [alternating current](#) electricity.
- [Ralph Hart Tweddell](#) invents the portable hydraulic [riveter](#), manufactured by [Fielding & Platt](#) of [Gloucester](#) in England.
- *Cosmos: A Sketch of a Physical Description of the Universe* by [Alexander von Humboldt](#), covering a large number of topics in scientific exploration and invention.
- *The Descent of Man and Selection in Relation to Sex* by [Charles Darwin](#), outlining his theory for man's origins and his theory of [sexual selection](#), and including his first published use of the term [evolution](#) (published by [John Murray](#) in [London](#), February 24).
- *A History of the Birds of Europe* by [Henry Eeles Dresser](#) (publication begins).

- [Copley Medal](#): [Julius Robert von Mayer](#)^[10]
- [Wollaston Medal](#) for Geology: [Andrew Ramsay](#)

1872

- [Robert Chesebrough](#) patents [Vaseline](#) in the [United States](#)^[1]
- [Eugen Baumann](#) rediscovers [polyvinyl chloride](#)
- [Charles-Adolphe Wurtz](#) discovers the [aldol reaction](#)
- March 1 – [Yellowstone National Park](#) is established in the United States, the world's first [national park](#)^{[2][3]}
- December 21 – [Challenger expedition](#): [HMS Challenger](#) (1858) sails from [Portsmouth](#) in England on the 4-year scientific expedition that lays the foundation for the science of [oceanography](#)^[4]
- [Richard Dedekind](#) publishes *Stetigkeit und irrationale Zahlen*, a theory of [irrational numbers](#)^[5]
- [Felix Klein](#) produces the [Erlangen program](#) on [geometries](#)^[5]
- February 15 – [George Huntington](#) makes the first detailed description of [Huntington's disease](#), in Middleport, Ohio^{[6][7][8]}
- [Moritz Kaposi](#) describes [Kaposi's sarcoma](#)^{[9][10]} and the manifestations of [systemic lupus erythematosus](#)
- Ferdinand Monoyer proposes the [diopetre](#) as a unit for measuring the [optical power](#) of a lens^[11]
- [Ludwig Boltzmann](#) states the [Boltzmann equation](#) for the temporal development of [distribution functions](#) in [phase space](#), and publishes his [H-theorem](#)^[12]
- [John Hopkinson](#) proposes the group flash system for distinguishing [lighthouses](#)^[13]
- Reverend C. M. Ramus of Sussex, England, devizes the single-step [hydroplane](#) hull^[14]
- October 1 – the [Virginia Agricultural and Mechanical College](#) begins its first academic session
- The [Polytechnic Museum](#) in Moscow is founded^[15]
- May – the magazine [Popular Science](#) is first published in the United States
- [Charles Darwin](#) publishes [The Expression of the Emotions in Man and Animals](#)
- [Copley Medal](#): [Friedrich Woehler](#)^[16]
- [Wollaston Medal](#) for geology: [James Dwight Dana](#)

1873

- [Jacobus Henricus van 't Hoff](#) and [Joseph Achille Le Bel](#), working independently, develop a model of [chemical bonding](#) that explains the chirality experiments of Pasteur and provides a physical cause for [optical activity](#) in chiral compounds.^{[1][2]}

- August 7 – [Amalie Dietrich](#) arrives in [Australia](#) to begin a decade of collecting specimens in [natural history](#) and [anthropology](#)
- The [Austro-Hungarian North Pole Expedition](#) discovers [Franz-Josef Land](#)
- [Charles Hermite](#) proves that the [mathematical constant \$e\$](#) is a [transcendental number](#)^[3]
- [Henri Brocard](#) introduces the [Brocard points](#), [Brocard triangle](#) and [Brocard circle](#)^{[3][4][5]}
- September 15 – agreement for establishment of the [International Meteorological Organization](#)
- February 20 – English electrical engineer [Willoughby Smith](#) publishes his discovery of the [photoconductivity](#) of the element [selenium](#)^[6]
- June 14 – [Johannes Diderik van der Waals](#) defends his thesis, *Over de Continuïteit van den Gas en Vloeistofoestand* (On the continuity of the gaseous and liquid state) at [Leiden University](#); in this, he introduces the concepts of molecular volume and molecular attraction; gives a semi-quantitative description of the phenomena of [condensation](#) and critical temperatures; and derives the [van der Waals equation](#)^[7]
- September 22 – [James Clerk Maxwell](#) delivers a discourse on [molecules](#) to the [British Association for the Advancement of Science](#) meeting in Bradford^[8]
- December – [J. Willard Gibbs](#) describes the principle of [Gibbs free energy](#)^[9]
- James Clerk Maxwell's *A Treatise on Electricity and Magnetism* first presents the [partial differential equations](#) known as *Maxwell's equations* which form the foundation of [classical electrodynamics](#), [optics](#) and [electric circuits](#)
- [Frederick Guthrie](#) is the first to report observing [thermionic emission](#)^[10]
- June 18 – [Alice Vickery](#) passes the [Royal Pharmaceutical Society](#)'s examination, becoming the first qualified female pharmacist in the United Kingdom^[11]
- *Mycobacterium leprae*, the causative agent of [leprosy](#), is discovered by Norwegian [physician](#) [Gerhard Armauer Hansen](#). It is the first [bacterium](#) to be identified as [pathogenic](#) in humans.^{[12][13]}
- [Camillo Golgi](#) first publishes a demonstration of [Golgi's method](#).^[14]
- May 20 – [Jacob W. Davis](#) and [Levi Strauss](#) receive United States [patent#139121](#) for using [copper rivets](#) to strengthen the pockets of denim [jeans](#)
- [Carl von Linde](#) installs his first commercial refrigeration system, built by [Maschinenfabrik Augsburg](#) for the [Spaten](#) Brewery and using [dimethyl ether](#) as the refrigerant
- [Christopher Miner Spencer](#) introduces the [fully automatic turret lathe](#)^[15]
- [Copley Medal](#): [Hermann Helmholtz](#)^[16]
- [Wollaston Medal](#) for geology: [Philip de Malpas Grey Egerton](#)

1874

- December 9 – a [transit of Venus](#) across the [Sun](#) is observed in Muddapur, India, by an astronomical expedition led by [Pietro Tacchini](#)

- [Per Teodor Cleve](#) discovers that [didymium](#) is in fact two elements, now known as [neodymium](#) and [praseodymium](#)
- [C. R. Alder Wright](#) synthesizes [heroin](#)
- [Othmar Zeidler](#) synthesises [DDT](#)^[1]
- [Carl Schorlemmer](#) publishes [A Manual of Chemistry of the Carbon Compounds; or, Organic Chemistry](#).^[2]
- [Jacobus van 't Hoff](#) and [Achille Le Bel](#) independently propose that organic [molecular models](#) can be three-dimensional^[3]
- February – the [Challenger expedition](#) provides geological evidence for the existence of the continent of [Antarctica](#)^{[4][5]}
- [John William Draper](#) publishes *History of the Conflict between Religion and Science*
- [Georg Cantor](#)'s paper, "[Ueber eine Eigenschaft des Inbegriffes aller reellen algebraischen Zahlen](#)" ("[On a Property of the Collection of All Real Algebraic Numbers](#)"), published in [Crelle's Journal](#), considered as the origin of [set theory](#)^[6]
- [William Stanley Jevons](#) publishes his comprehensive treatise on [logic](#), *The Principles of Science*^[7]
- [Sofia Kovalevskaya](#) is awarded a [doctorate](#) in mathematics at the [University of Göttingen](#), the first woman in Europe to hold that degree. Her submission includes a paper on [partial differential equations](#) containing a presentation of the [Cauchy-Kovalevski theorem](#).^[8]
- April 1 – Dr [Frances Morgan](#) marries Dr George Hoggan and they set up the first husband-and-wife [general medical practice](#) in the United Kingdom^[9]
- Autumn – [London School of Medicine for Women](#) founded^[10]
- [A. T. Still](#) introduces [osteopathic medicine in the United States](#)^[11]
- [Vladimir Alekseyevich Betz](#) describes giant [pyramidal cells](#) in the [motor cortex](#), later called [Betz cells](#)
- [James Clerk Maxwell](#) produces a model of [Maxwell's thermodynamic surface](#)^[12]
- [Franz Brentano](#) publishes *Psychologie vom Empirischen Standpunkte* (Psychology from an Empirical Standpoint)
- May 20 – [Levi Strauss](#) and [Jacob Davis](#) receive a United States [patent](#) for blue denim [jeans](#) with copper rivets
- July 1 – [Sholes and Glidden typewriter](#), with cylindrical platen and [QWERTY](#) keyboard, first marketed, in the United States
- July 4 – official opening of [Eads Bridge](#) (combined road and rail steel arch) over the [Mississippi River](#) at St. Louis, Missouri, designed by [James B. Eads](#). It is the longest arch bridge in the world at this time, with an overall length of 6,442 feet (1,964 m); the first use of true steel as a primary structural material in a major bridge project;^[13] the first built using [cantilever](#) support methods exclusively; and the first major project to make use of [pneumatic caissons](#).
- Invention of [barbed wire](#) by [Joseph Glidden](#)
- [Copley Medal](#): [Louis Pasteur](#)^[14]

- [Wollaston Medal](#): [Oswald Heer](#)

1875

- [Gallium](#) is discovered [spectroscopically](#) by French chemist [Paul Emile Lecoq de Boisbaudran](#). Later in this year he obtains the free metal by [electrolysis](#) of its [hydroxide](#) and names it. This is the first of [Dmitri Mendeleev's predicted elements](#) to be identified.^{[1][2][3]}
- [Phenylhydrazine](#) is discovered by [Hermann Emil Fischer](#).^[4]
- Swiss [chocolatier Daniel Peter](#) working with [Henri Nestlé](#)'s company perfects a method of manufacturing [milk chocolate](#) using [condensed milk](#).^[5]
- March – [Challenger expedition](#) first records [Challenger Deep](#).
- [Francis Galton](#) publishes *The History of Twins*, as a criterion of the relative powers of nature and nurture.^[6]
- The weekly [medical journal](#), [Deutsche Medizinische Wochenschrift](#), is established in Germany by Paul Börner.^[7]
- May 20 – [International Bureau of Weights and Measures](#) established by signature of the [Metre Convention](#) in Paris.
- May 25 – Romanian inventor [Petrache Poenaru](#) is granted a French [patent](#) for a [fountain pen](#).
- [Copley Medal](#): [August Wilhelm Hofmann](#)^[8]
- [Wollaston Medal](#) for geology: [Laurent-Guillaume de Koninck](#)

1876

- December 7 – First recorded observation of the [Great White Spot](#) on [Saturn](#), made by American astronomer [Asaph Hall](#), who uses it to calculate the planet's rotation period.
- [Robert Koch](#) demonstrates that [Bacillus anthracis](#) is the source of [anthrax](#), the first [bacterium](#) conclusively shown to cause disease.^[1]
- [Koller's sickle](#) in [avian gastrulation](#) is first described by [August Rauber](#).
- [Francis Galton](#) invents the silent [dog whistle](#).^[2]
- [Meiosis](#) was discovered and described for the first time in sea urchin eggs by the German biologist [Oscar Hertwig](#).
- [Josiah Willard Gibbs](#) publishes *On the Equilibrium of Heterogeneous Substances*, a compilation of his work on thermodynamics and [physical chemistry](#) which lays out the concept of [free energy](#) to explain the physical basis of chemical equilibria.^[3]
- May 24 – End of the [Challenger expedition](#).^[4]

- [Édouard Lucas](#) demonstrates that 127 is a [Mersenne prime](#), the largest that will be recorded for seventy-five years.^[5] He also shows that the Mersenne number $2^{67} - 1$, or M_{67} , must have [factors](#).
- February 22 – Swedish woman [Karolina Olsson](#) lapses into a form of [hibernation](#) for 32 years.
- [David Ferrier](#) publishes *The Functions of the Brain*.
- [William Macewen](#) demonstrates clinical diagnosis of the site of [brain tumors](#) and performs the first successful intercranial surgery.
- [Patrick Manson](#) begins studying [filariasis](#) infection in humans.
- [Meharry Medical College](#) founded in [Nashville, Tennessee](#) as the Medical Department of [Central Tennessee College](#); it is the first medical school for [African Americans](#) in the [Southern United States](#).
- February 14 – [Scottish American](#) inventor [Alexander Graham Bell](#) and American electrical engineer [Elisha Gray](#) each file a [patent](#) for the [telephone](#), initiating the [Elisha Gray and Alexander Bell telephone controversy](#).
- March 7 – Alexander Graham Bell is granted a patent for the telephone.^[6]
- March 10 – Alexander Graham Bell makes the first successful bi-directional telephone call, saying "Mr. Watson, come here, I want to see you".
- April – [Joseph Zentmayer](#) makes his Centennial [microscope]] in the United States.
- [Nicolaus Otto](#) builds the first successful [four-stroke engine](#) using the [Otto cycle](#).
- [Francis Edgar Stanley](#) of [Newton, Massachusetts](#), patents an [atomizing](#) paint distributor, a form of [airbrush](#).^[7]
- The Seth Thomas Clock Company is awarded a United States patent for an adjustable wind-up alarm clock.
- [Thomas Hawksley](#) first uses [pressure grouting](#) to control water leakage under an embankment dam at [Tunstall Reservoir](#) in [Weardale](#), County Durham, England.^{[8][9][10][11]}
- October 4 – First classes begin at the [Agricultural and Mechanical College of Texas](#).^[12]
- Elizabeth Bragg becomes the first woman to graduate with a [civil engineering](#) degree in the [United States](#), from [University of California, Berkeley](#).^[13]
- [Copley Medal](#): [Claude Bernard](#)^[14]
- [Wollaston Medal](#): [Thomas Henry Huxley](#)

1877

- June 19 – [Eadweard Muybridge](#) successfully produces a fast-motion sequence of photographs showing a horse in movement, *[Sallie Gardner at a Gallop](#)*, using multiple cameras at [Palo Alto, California](#), demonstrating that a running horse has all four legs lifted off the ground at once. The sequence could be run on a [Zoopraxiscope](#).^[1]
- August 12 – [American](#) astronomer [Asaph Hall](#) discovers [Deimos](#), the smaller of the two [moons of Mars](#). On August 18, he discovers the larger, [Phobos](#).
- [Peirce quincuncial projection](#) devised by [Charles Sanders Peirce](#).^[2]

- [Ludwig Boltzmann](#) establishes statistical derivations of many important physical and chemical concepts, including [entropy](#), and distributions of molecular velocities in the gas phase.^[3]
- June 26 – [Volcanic eruption](#) of [Cotopaxi](#) in [Ecuador](#).
- Dr. [August Eisenlohr](#) publishes the first translation and study of the [Rhind Mathematical Papyrus](#).^[4]
- [American railroad lawyer](#) and [ethnologist](#) [Lewis H. Morgan](#) publishes [Ancient Society](#), linking [social progress](#) with [technological change](#).
- [Georg Cantor](#) advances the [continuum hypothesis](#).
- October 2 – [Berlin urologist](#) [Maximilian Nitze](#) and [Viennese instrument-maker](#) Josef Leiter introduce the first practical [cystourethroscope](#) with an electric light source.^[5]
- [Adolph Kussmaul](#) first describes [dyslexia](#) as "word-blindness".
- [William Macewen](#) at the [Glasgow Royal Infirmary](#) develops the first [bone grafts](#), and also performs [knee](#) surgery using a special instrument (Macewen's [osteotome](#)), for the treatment of [rickets](#).
- [Patrick Manson](#) studies animal carriers of infectious diseases.
- [Ludwig Boltzmann](#) states the relationship between [entropy](#) and [probability](#).
- March 28 – [Frederick Wolseley](#) is granted his first [patent](#) for a sheep shearing machine.
- April 30 – French poet [Charles Cros](#) describes a method of recording sound, the [Paleophone](#).
- June – Emile Berliner files a patent for a "combined telegraph and telephone" incorporating a [microphone](#).^[6]
- June 20 – [Alexander Graham Bell](#) installs the world's first commercial telephone service in [Hamilton, Ontario](#).
- September 4 – [Louis Brennan](#) patents the [Brennan torpedo](#).
- October – Emile Berliner files a patent for a telephone with [induction coils](#).^[7]
- November 4 – Opening of [Gustave Eiffel's](#) [Maria Pia Bridge](#) carrying the railway across the [Douro](#) into [Porto, Portugal](#).
- November 29 – [Thomas Edison](#) first demonstrates his [phonograph](#) sound recording machine.
- December 13 – Thomas Edison files a patent for "telephones or speaking-telegraphs" incorporating a microphone.^[8]
- Surveyor and inventor [George R. Carey](#) of [Boston](#), Massachusetts, creates a [selenium tectroscope](#) — a camera that can project a moving image to a distant point, an ancestor of [television](#). [Constantin Senlecq](#) of [Ardres](#), France, develops the same idea independently at about the same time.^[9]
- [Zeitschrift für Physiologische Chemie](#) is founded by [Felix Hoppe-Seyler](#).
- [Copley Medal](#): [James Dwight Dana](#)^[10]
- [Wollaston Medal](#): [Robert Mallet](#)

1878

- English astronomer [Richard A. Proctor](#) describes the [Zone of Avoidance](#), the area of the night sky that is obscured by our own galaxy, for the first time.
- Death of last confirmed [Cape Lion](#).^[1]
- The [rare earth element holmium](#) is identified in [erbium](#) by [Marc Delafontaine](#) and [Jacques-Louis Soret](#) in Geneva^{[2][3]} and by [Per Teodor Cleve](#) in Sweden.^{[4][5]}
- An [Act of Parliament in the United Kingdom](#) places [Epping Forest](#) in the care of the [City of London Corporation](#) to remain unenclosed.
- June 22 – [Adolf Erik Nordenskiöld](#) sets out on the year-long first navigation of the [Northern Sea Route](#), the shipping lane from the [Atlantic Ocean](#) to the [Pacific Ocean](#) along the [Siberian](#) coast.
- [Clarence King](#) publishes *Systematic Geology*.
- [Charles Lapworth](#) publishes his analysis of the change in [graptolite](#) fossils through sequences of exposed [shales](#) in southern [Scotland](#), establishing the importance of using graptolites to understand stratigraphic sequences.^[6]
- [Belgian](#) mathematician [Victor D'Hondt](#) describes the [D'Hondt method](#) of voting.
- [English](#) mathematician Rev. [William Allen Whitworth](#) is the first to publish [Bertrand's ballot theorem](#).^[7]
- [Cesare Lombroso](#) publishes *L'uomo delinquente*, setting out his theory of criminal atavism.
- [Ádám Politzer](#) publishes *Lehrbuch der Ohrenheilkunde*, a major [otology](#) textbook.^[8]
- Dentists Act in the [United Kingdom](#) limits the title of "dentist" and "dental surgeon" to qualified and registered practitioners.^[9]
- February 11 – The first weekly weather report is published in the [United Kingdom](#).
- 31 [Iguanodon](#) skeletons are discovered in a [coal mine](#) at [Bernissart](#), [Belgium](#).
- The sauropod genus [Diplodocus](#) is first named by [Othniel Charles Marsh](#) as well as the Theropod genus [Allosaurus](#). These are both from the Jurassic aged Morrison formation.
- January 18 – Romanian mathematician [Spiru Haret](#) defends his doctoral thesis,^[10] which proves a result fundamental to the [n-body problem](#) in [celestial mechanics](#).
- February 19 – The [phonograph](#) is patented by [Thomas Edison](#). The oldest known audio recording is recovered from this device in 2012.^[11]
- March – The 'basic' process, enabling the use of [phosphoric iron ore](#) in [steelmaking](#), developed at [Blaenavon Ironworks](#) by [Percy Gilchrist](#) and [Sidney Gilchrist Thomas](#), is first made public.^[12]
- May 22 – [John Philip Holland](#)'s experimental powered [submarine Holland I](#) is launched in [Paterson, New Jersey](#).

- June 15 – [Eadweard Muybridge](#) produces the sequence of stop-motion still photographs [Sallie Gardner at a Gallop](#) in [California](#), a predecessor of [silent film](#) (capable of being viewed as an animation on a [zoopraxiscope](#)) demonstrating that all four feet of a [galloping horse](#) are off the ground at the same time.
- August – [Cleopatra's Needle](#) is raised onto its base in [London](#).
- October 14 – The world's first recorded floodlit football fixture is played at [Bramall Lane](#) in [Sheffield](#).
- December 18 – [Joseph Swan](#) of [Newcastle upon Tyne](#) in [England](#) announces his invention of an [incandescent light bulb](#).^[13]
- December 31 – [Karl Benz](#) produces a two-stroke [gas engine](#).
- [William Crookes](#) invents the [Crookes tube](#) which produces [cathode rays](#).^[14]
- Osbourn Dorsey obtains a [patent](#) in the [United States](#) for a "door-holding device".^[15]
- Gustav Kessel obtains a [patent](#) in [Germany](#) for an [espresso machine](#).^[16]
- Czech painter [Karel Klíč](#) perfects the [photogravure](#) process.
- [Lester Allan Pelton](#) produces the first operational [Pelton wheel](#).^[17]
- [Remington](#), in the United States, introduce their No. 2 [typewriter](#), the first with a [shift key](#) enabling production of [lower](#) as well as upper case characters.
- October 1 – [Virginia Polytechnic Institute and State University](#) opens as Virginia Agricultural and Mechanical College in the [United States](#).
- [Copley Medal](#): [Jean Baptiste Boussingault](#)^[18]
- [Wollaston Medal](#) for Geology: [Thomas Wright](#)

1879

- British children's writer and amateur astronomer [Agnes Giberne](#) publishes the popular illustrated book *Sun, Moon and Stars: Astronomy for Beginners* which sells 24,000 copies on both sides of the [Atlantic](#) in twenty years.^[1]
- April 26 – The National Park, later renamed the [Royal National Park](#), is declared in [New South Wales](#), [Australia](#), the world's second oldest purposed national park (after [Yellowstone](#) in the [United States](#)), and the first to use the term "[national park](#)".
- [Jean Henri Fabre](#) publishes the first of his *Souvenirs entomologiques*.
- [Heinrich Anton de Bary](#) coins the term [symbiosis](#) in his monograph *Die Erscheinung der Symbiose* (Strasbourg).^[2]
- [Peirce quincuncial projection](#) developed by [Charles Sanders Peirce](#).
- January 2 – Publication of first issue of [Journal of the American Chemical Society](#).
- [Per Teodor Cleve](#) discovers the elements [holmium](#) and [thulium](#).
- [Lars Fredrik Nilson](#) discovers the element [scandium](#).
- [Constantin Fahlberg](#) working with [Ira Remsen](#) at [Johns Hopkins University](#) discovers [saccharin](#).
- [Rodolphe Lindt](#) invents the [conching](#) machine for use in chocolate manufacture.^[3]
- [Vasily Dokuchaev](#) introduces the concept of [pedology](#), laying the foundations for the modern study of [soil science](#).^[4]

- [Ferdinand André Fouqué](#) publishes *Santorin et ses éruptions*, a significant text in [volcanology](#).
- [Carl Schorlemmer](#) publishes *The Rise and Development of Organic Chemistry*.
- [Charles L. Dodgson](#) publishes *Euclid and his Modern Rivals* in London.^[5]
- [Gottlob Frege](#) publishes *Begriffsschrift, eine der arithmetischen nachgebildete Formelsprache des reinen Denkens* ("Concept-Script: A Formal Language for Pure Thought Modeled on that of Arithmetic") in Halle, a significant text in the development of [mathematical logic](#).
- [Felix Klein](#) first describes the [Grünbaum–Rigby configuration](#).^[6]
- British psychiatrist [James Crichton-Browne](#) publishes "On the weight of the brain and its component parts in the insane",^[7] a key paper in the [neuropathology](#) of [insanity](#).^[8]
- Viennese physician [Felix von Winiwarter](#) provides an early description of *Thromboangiitis obliterans*.^[9]
- [George Stokes](#) perfects the [Campbell–Stokes recorder](#) (for sunshine).
- *Camptosaurus prestwichii* found at [Cumnor](#), near [Oxford](#).
- Vassili von Anrep of the [University of Würzburg](#) demonstrate the [analgesic](#) properties of [cocaine](#).^[10]
- [Edwin Hall](#) discovers the [Hall Effect](#).
- [Joseph Stefan](#) originates the [Stefan–Boltzmann law](#), stating that the total radiation from a [black body](#) is proportional to the fourth power of its [thermodynamic temperature](#).^[11]
- [Wilhelm Wundt](#) creates the first laboratory of experimental psychology, at the [University of Leipzig](#).
- May 31 – [Werner von Siemens](#) demonstrates the first [electric locomotive](#) using an external power source at Berlin.
- June 6 – [William Denny and Brothers](#) launch the world's first ocean-going ship to be built of [mild steel](#), the SS *Rotomahana*, on the [River Clyde](#) in Scotland.^[12]
- October 22 – [Thomas Edison](#) successfully tests a [carbon](#) filament thread in an [incandescent light bulb](#).
- A [heavy oil engine](#) is built by Jacob Morrison of [Norton, County Durham](#), England.^[13]
- [Copley Medal](#): [Rudolf Clausius](#)^[14]
- [Wollaston Medal](#): [Bernhard Studer](#)

1880

- September 30 – American doctor [Henry Draper](#) takes the first photograph of the [Orion Nebula](#), from [Hastings-on-Hudson, New York](#); this year he also photographs the spectrum of Jupiter.
- F. Landry finds the largest known [Fermat prime](#), [65537](#).

- [John Venn](#) popularises [Venn diagrams](#).^{[1][2]}
- [Moritz Kaposi](#) publishes *Pathologie und Therapie der Hautkrankheiten in Vorlesungen für praktische Ärzte und Studierende* ("Pathology and treatment of diseases of the skin, for practitioners and students"), a significant textbook in [dermatology](#).^[3]
- German professor of pathology [Karl Eberth](#) first visualizes the bacteria which will become known as [Salmonella](#) in the [Peyer's patches](#) and [spleens](#) of typhoid patients.^[4]
- [English surgeon Sampson Gamgee](#) reports on his use of the [medical dressing Gamgee Tissue](#).^[5]
- [Scottish surgeon William Macewen](#) reports on his use of oro[tracheal intubation](#) as an alternative to [tracheotomy](#).^[6]
- February 13 – [Thomas Edison](#) observes the [Edison effect](#).
- The first demonstration of the direct [piezoelectric](#) effect is made by the brothers [Pierre Curie](#) and [Jacques Curie](#).^[7]
- [Johannes Diderik van der Waals](#) formulates the Law of Corresponding States.
- February 19 – The [photophone](#), an optical speech transmission system, is invented by [Alexander Graham Bell](#) and [Charles Sumner Tainter](#) in Washington, D.C.
- [Dugald Clerk](#) builds the first successful [two-stroke engine](#).^[8]
- February – The journal [Science](#) is first published in the United States with financial backing from [Thomas Edison](#).
- Start of publication of [Report Of The Scientific Results of the Exploring Voyage of H.M.S. Challenger during the years 1873-76](#).
- [Copley Medal](#): [James Joseph Sylvester](#)^[9]
- [Wollaston Medal](#): [Auguste Daubrée](#)

1881

- 22 May – [John Tebbutt](#) discover the long-period comet, [C/1881 K1](#) (also known as the Great Comet of 1881, Comet Tebbutt, 1881 III, 1881b).^[1]
- October – [Charles Darwin](#) publishes his last scientific book [The Formation of Vegetable Mould through the Action of Worms](#).
- L. S. Poliakov describes the [wild horse](#) discovered by [Nikolai Przhevalsky](#) in [Mongolia](#) in 1879 as a new [species](#), [Przewalski's Horse](#) (*Equus przewalski poliakov*).^{[2][3]}
- The first systematic study in [forensic entomology](#) is conducted by [physician](#) and [entomologist Hermann Reinhard](#) in [Germany](#).^[4]
- [Friedrich Beilstein](#) publishes the first edition of his [Handbuch der organischen Chemie](#).
- The [birch bark Bakhshali manuscript](#), incorporating perhaps the earliest known use of mathematical [zero](#), is unearthed near [Bakhshali](#) in [British India](#).
- Publication in [England](#) of a pioneering study in [industrial archaeology](#), H. A. Fletcher's "The archaeology of the west Cumberland iron trade".^[5]

- [Simon Newcomb](#) makes the first statement of [Benford's law](#).^[6]
- July 13 – Dr. [George Goodfellow](#) performs the first [laparotomy](#) to remove a bullet.
- September 25 – The first modern [Caesarean section](#) is performed successfully by [German gynecologist Ferdinand Adolf Kehrer](#) in [Meckesheim](#) using the transverse incision technique.
- December – [Eduard von Hofmann](#) carries out [autopsy](#) studies of the nearly 400 victims of the [Vienna Ringtheater](#) fire, [carbon monoxide](#) poisoning being held an underlying cause of death.
- [Louis Pasteur](#) discovers a vaccine for [anthrax](#).
- [Carlos Finlay](#), a [Cuban](#) doctor, first proposes that [yellow fever](#) is transmitted by [mosquitoes](#) rather than direct human contact.^[7]
- [French obstetrician Étienne Stéphane Tarnier](#) introduces a form of [neonatal incubator](#) (*couveuse*) for routine care of premature infants at the Paris Maternité.^[8]
- [English ophthalmologist Waren Tay](#) publishes the first description of the [genetic disorder](#) which will become known as [Tay–Sachs disease](#).^[9]
- *approx. date* – The non-invasive [sphygmomanometer](#), for the measurement of [blood pressure](#), is invented by [Samuel Siegfried Karl von Basch](#).^[10]
- March 1 – The [Cunard Line](#)'s [SS Servia](#), the first [steel transatlantic liner](#), is launched at [J. & G. Thomson](#)'s yard at [Clydebank](#) in Scotland.^[11]
- May 16 – The [Gross-Lichterfelde Tramway](#), the world's first [electric tramway](#), is opened in [Berlin](#) by [Siemens & Halske](#).^[12]
- June – The positive-buoyancy powered [submarine](#) "[Fenian Ram](#)" (*Holland Boat No. II*), designed by [John Philip Holland](#), is first submersion-tested in [New York City](#).
- September 26 – [Godalming](#) in England becomes the first town to have its streets illuminated by [electric light](#) ([hydroelectrically](#) generated).^[13]
- October 10 – [Richard D'Oyly Carte](#)'s [Savoy Theatre](#) opens in [London](#), the world's first public building to be fully lit by electricity, using [Joseph Swan](#)'s [incandescent light bulbs](#).^{[14][15]} The stage is first lit electrically on December 28.^[16]
- December 21 – [SS Aberdeen](#), the first oceangoing ship successfully powered by a [triple expansion](#) steam engine, designed by [Alexander Carnegie Kirk](#), is launched at [Robert Napier and Sons](#)' yard at [Govan](#) in Scotland.
- [Peter Herdic patents](#) the [Herdic](#) horse-drawn cab in the United States.
- [Copley Medal](#): [Karl Adolph Wurtz](#)^[17]
- [Wollaston Medal](#) for Geology: [Peter Martin Duncan](#)

1882

- September – [Great Comet of 1882](#) sighted.^[1]
- December 6 – [Transit of Venus, 1882](#).
- March 24 – [Robert Koch](#) announces his discovery of the [bacterium](#) responsible for [tuberculosis](#), [Mycobacterium tuberculosis](#).
- [Élie Metchnikoff](#) discovers [phagocytosis](#).^[2]

- [Italian physicist Luigi Palmieri](#) detects [helium](#) on [Earth](#) for the first time through its D₃ spectral line when he analyzes the [lava](#) of [Mount Vesuvius](#).^[3]
- [Clarence Dutton](#)'s *Tertiary History of the Grand Cañon District* is published by the [United States Geological Survey](#).
- June – [German](#) mathematician [Ferdinand von Lindemann](#) publishes proof that π is a [transcendental number](#) and that [squaring the circle](#) is consequently impossible.^{[4][5]}
- December – [Swedish](#) mathematician [Gösta Mittag-Leffler](#) establishes the journal [Acta Mathematica](#).
- [Felix Klein](#) first describes the [Klein bottle](#).
- March 28 – [Paul Beiersdorf](#) patents an [adhesive bandage](#) in [Germany](#), the foundation of the [Beiersdorf](#) company.
- [Vladimir Bekhterev](#) publishes *Provodiashchie puti mozga* ("The Conduction Paths in the Brain and Spinal Cord"), beginning to note the role of the [hippocampus](#) in [memory](#).
- January 12 – [Holborn Viaduct power station](#) in the City of London, the world's first coal-fired public electricity generating station, begins operation.^[6]
- By March – [Étienne-Jules Marey](#) invents a [chronophotographic](#) gun capable of photographing 12 consecutive frames per second on the same plate.
- April 29 – [Werner von Siemens](#) demonstrates his [Electromote](#), the first form of [trolleybus](#), in [Berlin](#).
- June 6 – [Henry W. Seeley](#) patents the electric [clothes iron](#) in the [United States](#).^[7]
- September 4 – [Thomas Edison](#) starts the United States' first commercial electrical power plant, lighting one square mile of [lower Manhattan](#).
- English mechanical engineer [James Atkinson](#) invents his "[Differential Engine](#)".
- American electrical engineer [Schuyler Wheeler](#) produces an electric fan.
- [Alfred P. Southwick](#) publishes his proposals for use of the [electric chair](#) as an execution method in the United States.
- First [International Polar Year](#), an international scientific program, begins.
- The [Chartered Institute of Patent Agents](#), the modern-day Chartered Institute of Patent Attorneys, is founded in the [United Kingdom](#).
- [Copley Medal](#): [Arthur Cayley](#)^[8]
- [Wollaston Medal](#) for Geology: [Franz Ritter von Hauer](#)

1883

- [Svante Arrhenius](#) develops [ion](#) theory to explain conductivity in [electrolytes](#).^{[1][2]}
- The [Claus process](#) is first [patented](#) by German chemist [Carl Friedrich Claus](#).^[3]
- The [Schotten–Baumann reaction](#) is first described by chemists [Carl Schotten](#) and [Eugen Baumann](#).
- August 26 – [Krakatoa](#) begins its final phase of eruptions at 1:06 pm local time. These produce a number of [tsunami](#), mainly in the early hours of the next day, which result in

about 36,000 deaths on the islands of [Sumatra](#) and [Java](#). The final explosion at 10:02 am on August 27 destroys the island of Krakatoa itself and is heard up to 3000 miles away.

- [Vasily Dokuchaev](#) publishes *Russian Chernozem*.
- The concept and term [Eugenics](#) are formulated by [Francis Galton](#).^[4]
- [Thomas Clouston](#) publishes *Clinical Lectures on Mental Diseases*.
- [Emil Kraepelin](#) publishes *Compendium der Psychiatrie*.
- [Journal of the American Medical Association](#) first published under this title.
- [Robert Koch](#) isolates [Vibrio cholerae](#), the [cholera bacillus](#).
- [Osborne Reynolds](#) popularizes use of the [Reynolds number](#) in [fluid mechanics](#).^{[5][6]}
- May 24 – [Brooklyn Bridge](#) opens to traffic in [New York](#). Designed by [John A. Roebling](#) with project management assisted by his wife [Emily](#), its main [suspension](#) span of 1,595 feet 6 inches (486.31 m) [exceeds the previous record](#) by 330 feet (100 m), and will not be surpassed for twenty years.
- [Charles Fritts](#) constructs the first [solar cell](#) using the [semiconductor selenium](#) on a thin layer of [gold](#) to form a device giving less than 1% efficiency.
- August 12 – The last [quagga](#) dies at the [Artis Magistra zoo](#) in [Amsterdam](#).
- [Copley Medal](#): [William Thomson](#), Lord Kelvin^[7]
- [Wollaston Medal](#) for Geology: [William Thomas Blanford](#)

1884

- October 14 – [George Eastman](#) is granted his first [patents](#) for photographic [roll film](#) in the United States.
- [J. H. van 't Hoff](#) proposes the [Arrhenius equation](#) for the temperature dependence of the [reaction rate constant](#), and therefore, rate of a chemical reaction.^[1]
- [Hermann Emil Fischer](#) proposes the structure of [purine](#), a key component in many biomolecules, which he synthesizes in 1898; he also begins work on the chemistry of [glucose](#) and related [sugars](#).^[2]
- [Henry Louis Le Chatelier](#) develops [Le Chatelier's principle](#), which explains the response of dynamic [chemical equilibria](#) to external stresses.^[3]
- [Georg Cantor](#) introduces the [Cantor function](#).^[4]
- [Gottlob Frege](#) publishes *Die Grundlagen der Arithmetik* ("The Foundations of Arithmetic") presenting a theory of [logicism](#).
- [Edwin Abbott Abbott](#) (as "A Square") publishes [Flatland: A Romance of Many Dimensions](#), a mathematical [novella](#).
- Dr [Takaki Kanehiro](#) of the [Imperial Japanese Navy](#) conducts a [controlled experiment](#) demonstrating that deficient diet is the cause of [beriberi](#), but mistakenly concludes that sufficient protein alone would prevent it.^[5]

- [Georg Theodor Gaffky](#) isolates the pathogenic [bacillus salmonella typhi](#) as the cause of [typhoid fever](#).^{[6][7]}
- [Robert Koch](#) and [Friedrich Loeffler](#) formulate [Koch's postulates](#) on the causal relationship between [microbes](#) and diseases. Loeffler also discovers the causative organism for [diphtheria](#), *Corynebacterium diphtheriae*.
- [Ophthalmologist Karl Koller](#) announces his use of a [local anesthetic](#) (cocaine) in surgery;^[8] [Jellinek](#) also demonstrates cocaine's effects as an anesthetic on the [respiratory system](#).
- [Friedrich Schultze](#) first describes the disorder that will become known as [Charcot–Marie–Tooth disease](#).^[9]
- Among the papers on [brain function](#) published by [Vladimir Bekhterev](#) is a study on the formation of the human conception of space.^[10]
- [Ludwig Boltzmann](#) derives the [Stefan–Boltzmann law](#) on blackbody radiant flux from thermodynamic principles.
- February 12 – [Lewis Waterman](#) gets his first [patent](#) for a capillary feed [fountain pen](#) in the United States.^[11]
- May 16 – [Angelo Moriondo](#) of [Turin](#) is granted a [patent](#) for an [espresso machine](#).^[12]
- June 13 – [LaMarcus Adna Thompson](#) opens the "Gravity Pleasure [Switchback Railway](#)" at [Coney Island](#), New York City.
- October – [Hiram Maxim](#) first demonstrates the [Maxim gun](#), the first self-powered machine gun.^[13]
- Fall – [Chester H. Pond](#) invents the first electrical self-winding clock.^[14]
- [Charles Renard](#) and [Arthur Constantin Krebs](#) make a fully controllable free-flight in [French Army](#) airship [La France](#) with an electric motor.^[15]
- September 24 – [Smeaton's Tower](#) opened to the public on [Plymouth Hoe](#) as a monument to the history of civil engineering.^[16]
- October 22 – [International Meridian Conference](#) in Washington, D.C. fixes the [Greenwich meridian](#) as the world's prime meridian.
- [Sophie Bryant](#) becomes the first woman in England to be awarded the degree of [Doctor of Science](#), by the [University of London](#). Also in this year, she is the first woman to publish a paper with the [London Mathematical Society](#).
- [Sofia Kovalevskaya](#) is appointed "Professor Extraordinarius" in mathematics at [Stockholm University](#) and becomes the editor of [Acta Mathematica](#).^[17]
- [Copley Medal](#): [Carl Ludwig](#)^[18]
- [Wollaston Medal](#) for Geology: [Albert Jean Gaudry](#)

1885

- August 20 – [Ernst Hartwig](#) discovers [S Andromedae](#), a [supernova](#) in the [Andromeda Galaxy](#), the first supernova discovered beyond the [Milky Way](#).
- The [genus Plasmodium](#) is described by [Ettore Marchiafava](#) and Angelo Celli.
- The [bacterium Escherichia coli](#) (*E. coli*) is discovered by [Theodor Escherich](#).^[1]

- The bacterium [*Salmonella enterica*](#) is discovered by [Theobald Smith](#), working under [Daniel Elmer Salmon](#).^[2]
- [Carl Auer von Welsbach](#) patents his first incandescent [gas mantle](#).
- [Eugene Goldstein](#) names the [cathode ray](#), later discovered to be composed of electrons, and the [canal ray](#), later discovered to be positive hydrogen ions that have been stripped of their electrons in a [cathode ray tube](#); these will later be named [protons](#).^[3]
- [Eduard Suess](#) begins publication in [Vienna](#) of his *Das Antlitz der Erde*^[4] setting out his theory of eustasy, the existence of the former [supercontinent Gondwana](#), and his pioneering concepts in [ecology](#).
- January 4 – The first successful [appendectomy](#) is performed by Dr. William W. Grant on Mary Gartside.
- July 6 – [Louis Pasteur](#) and [Émile Roux](#) successfully test their [rabies vaccine](#). The patient is [Joseph Meister](#), a boy bitten by a rabid dog.
- [Georges Gilles de la Tourette](#) publishes an account of nine patients with what will become known as [Tourette syndrome](#).^[5]
- January 15 – American photographer [Wilson Bentley](#) takes the first known photograph of a [snowflake](#) by attaching a [view camera](#) to a microscope.
- [Johann Balmer](#) publishes an [empirical](#) mathematical formula for the visible [spectral lines](#) of the [hydrogen](#) atom.^{[6][7]}
- [Hermann Ebbinghaus](#) publishes *Über das Gedächtnis* ("On Memory", later translated as *Memory: a Contribution to Experimental Psychology*).
- March 24 – [George H. Pegram](#) is granted a [United States patent](#) for the [Pegram truss](#).^[8]
- April 3 – [Gottlieb Daimler](#) is granted a [German](#) patent for his single-cylinder [water-cooled engine](#) design.
- August 29 – [Gottlieb Daimler](#) is granted a German patent for the [Daimler Reitwagen](#), regarded as the first [motorcycle](#), which he has produced with [Wilhelm Maybach](#).^{[9][10][11]}
- September 30 – [Tolbert Lanston](#) makes his first application for a United States patent on a [typesetting](#) system which includes the basic [Monotype System](#) keyboard.
- Autumn – [Karl Benz](#) produces the [Benz Patent-Motorwagen](#), regarded as the first [automobile](#) (patented and publicly launched the following January).^[12]
- [John Kemp Starley](#) demonstrates the [Rover safety bicycle](#), regarded as the first practical modern bicycle.^[13]
- The first, not yet practical, form of [gyrocompass](#) is patented by Marinus Gerardus van den Bos.^[14]
- Rufus Eastman patents the first known electric [food mixer](#).^{[15][16][17]}
- Completion of the [Home Insurance Building](#) in [Chicago](#), designed by [William Le Baron Jenney](#). With ten floors and a fireproof weight-bearing metal frame, it is regarded as the first [skyscraper](#).^[18]
- Completion of [Sway Tower](#) in [Hampshire, England](#), designed by [Andrew Peterson](#) using concrete made with [Portland cement](#). It remains the world's tallest non-reinforced concrete structure.^{[19][20]}
- The [Nipkow disk](#) is patented by German scientist [Paul Gottlieb Nipkow](#).

- October 13 – The [Georgia Institute of Technology](#) is established in [Atlanta](#) (United States) as the Georgia School of Technology to teach [mechanical engineering](#).
- [Copley Medal](#): [Friedrich August Kekulé von Stradonitz](#)^[21]
- [Wollaston Medal](#) for Geology: [George Busk](#)

1886

- [Dorothea Klumpke](#) takes up a post at the [Paris Observatory](#), becoming Director of the Bureau of Measurements.
- February 6 – German chemist [Clemens Winkler](#) discovers chemical element [Germanium](#).
- June 26 – [Henri Moissan](#) reports the successful isolation of elemental [fluorine](#) by [electrolysis](#) of a [solution](#) of [potassium hydrogen difluoride](#) in liquid [hydrogen fluoride](#).^{[1][2]}
- December 17 – [English](#) adventurer [Thomas Stevens](#) concludes the first [circumnavigation](#) by [bicycle](#) in [Yokohama](#), having set out on his [penny-farthing](#) from [San Francisco](#) in 1884.
- [Dugald Clerk](#) publishes *The Gas and Oil Engine* in [London](#).
- [English](#) mathematician Rev. [William Allen Whitworth](#) is the first to use [ordered Bell numbers](#) to count the number of [weak orderings](#) of a set.^[3]
- March 11 – The first [Indian](#) woman doctor qualifies in Western medicine, [Anandi Gopal Joshi](#) (d. 1887) at the [Woman's Medical College of Pennsylvania](#) (U.S.) She is followed by [Kadambini Ganguly](#) at the [Calcutta Medical College](#).
- [George Assaky](#) describes a method for operating on separated nerve sutures.
- The classic descriptions of [Charcot–Marie–Tooth disease](#) are published by [Jean-Martin Charcot](#) and his pupil [Pierre Marie](#) in [Paris](#)^[4] and by [Howard H. Tooth](#) in London.^{[5][6]}
- Dr [Richard von Krafft-Ebing](#)'s *Psychopathia Sexualis: eine Klinisch-Forensische Studie* ("Sexual Psychopathy: a Clinical-Forensic Study") is published in Stuttgart.
- Heinrich Schule describes [dementia praecox](#).
- Dr [Thomas Allinson](#)'s popular book *A System of Hygienic Medicine* is published in [England](#), promoting health through natural diet and exercise rather than orthodox medicine.^[7]
- [Edinburgh School of Medicine for Women](#) is founded by Dr [Sophia Jex-Blake](#).
- July 9 – [Charles Hall](#) files a [United States patent](#) for the [Hall–Héroult process](#) for converting [alumina](#) into [aluminum](#) by [electrolysis](#) (discovered on February 23).
- November 11 – [Heinrich Hertz](#) verifies at the [University of Karlsruhe](#) the existence of [electromagnetic waves](#).
- July 3 – [Ottmar Mergenthaler](#)'s [Linotype machine](#) is introduced at the [New-York Tribune](#).

- August 13 – Romanian inventor [Alexandru Ciurcu](#) and French journalist [Just Buisson](#) demonstrate a [reaction engine](#), used to power a boat. On December 16 a second engine explodes, killing Buisson.
- September 21 – [William Stanley, Jr.](#) patents the [induction coil](#) in the [United States](#), the first practical [alternating current transformer](#) device.
- October 31 – Opening of [Dom Luís Bridge, Porto](#), a two-hinged double-deck [arch bridge](#) across the [Douro River](#) in [Portugal](#) designed by [Téophile Seyrig](#). Its main span of 172 metres (564 ft) will remain the world's longest in iron.
- December 28 – [Josephine Cochrane](#) patents the first commercially successful automatic [dishwasher](#) in the United States.
- [Gottlieb Daimler](#) produces the first [motorboat](#), *Neckar*, in [Germany](#).^[8]
- The [Lebel Model 1886 rifle] is developed in France, the first military firearm to use [smokeless powder](#) ammunition.
- [Auguste Mustel](#) invents the [celesta](#).
- [Herbert Akroyd Stuart](#) produces his first prototype [heavy oil engines](#), in [England](#).^[9]
- [Schuyler Wheeler](#) produces the first [electric fan](#), in the United States.^[10]
- [Copley Medal](#): [Franz Neumann](#)^[11]
- [Wollaston Medal](#) for Geology: [Alfred Des Cloizeaux](#)

1887

- April – [Carte du Ciel](#) project initiated by [Paris Observatory](#) director [Amédée Mouchez](#).
- [Theodor von Oppolzer](#)'s *[Canon der Finsternisse](#)*, a compilation of the 8,000 solar and 5,200 lunar [eclipses](#) from 1200 BC until 2161 AD, is published posthumously.^[1]
- [Jean Pierre Mégnin](#) publishes *Faune des Tombeaux* ("Fauna of the Tombs"), the founding work of modern [forensic entomology](#).^[2]
- [Sergei Winogradsky](#) discovers the first known form of [lithotrophy](#) during his research with *[Beggiatoa](#)*.^[3]
- The [Petri dish](#) is created by German bacteriologist [Julius Richard Petri](#).
- [Amphetamine](#) is first synthesized in Germany by Romanian chemist [Lazăr Edeleanu](#), who names it *phenylisopropylamine*.
- [Guyou hemisphere-in-a-square projection](#) developed by Émile Guyou.^[4]
- January 28 – In a [snowstorm](#) at [Fort Keogh, Montana](#), in the [United States](#), the largest [snowflakes](#) on record are reported. They are 15 inches (38 cm) wide and 8 inches (20 cm) thick.
- September 28 – Start of the [Yellow River](#) floods in [China](#): 900,000 dead.
- June 23 – The [Rocky Mountains Park Act](#) becomes law in [Canada](#), creating that nation's first [national park](#), [Banff National Park](#).^[5]
- February 23 – The [French Riviera](#) is hit by a large [earthquake](#), killing around 2,000 along the coast of the [Mediterranean Sea](#).

- In [Hawaii](#), the [Mauna Loa](#) volcano eruptions subside, having begun in [1843](#). During the 1887 eruption, about 2½ million tons (2.3 million metric tons) of lava per hour pours out, covering an area of 29 km².
- March 3 – [Anne Sullivan](#) begins to teach language to the deaf and blind [Helen Keller](#).
- July 26 – [L. L. Zamenhof](#) publishes *Lingvo internacia* ("International language") under the [pseudonym](#) "Doktoro [Esperanto](#)".^[6]
- [Joseph Louis François Bertrand](#) rediscovers [Bertrand's ballot theorem](#).^[7]
- [Henri Poincaré](#) provides a solution to the [three-body problem](#).
- January 11 – [Louis Pasteur](#)'s anti-[rabies](#) treatment is defended in the [French Academy of Medicine](#) by Dr. Joseph Grancher.
- August – The U.S. [National Institutes of Health](#) is founded at the Marine Hospital, [Staten Island, NY](#), as the Laboratory of Hygiene.
- October 1 – [Hong Kong College of Medicine for Chinese](#) founded by [Patrick Manson](#).^[8]
- [Franz König](#) publishes "Über freie Körper in den Gelenken" in the journal *Deutsche Zeitschrift für Chirurgie*, first describing (and naming) the disease [Osteochondritis dissecans](#).
- The [Hospitals Association](#) establishes the first (non-statutory and voluntary) register of [nurses in the United Kingdom](#).
- November – The [Michelson–Morley experiment](#) is performed, indicating that the speed of light is independent of motion.
- [Heinrich Hertz](#) discovers the [photoelectric effect](#) on the production and reception of [electromagnetic waves](#) in radio, an important step towards the understanding of the quantum nature of light.
- November – [G. Stanley Hall](#) founds *The American Journal of Psychology*.
- Richard Hodgson and S. J. Davey, in the course of investigations into popular belief in [parapsychology](#), publish one of the first descriptions of eyewitness unreliability.^[9]
- March 8 – Everett Horton of [Connecticut](#) patents a [fishing rod](#) of telescoping steel tubes.
- March 13 – [Chester Greenwood](#) patents [earmuffs](#).
- June 8 – [Herman Hollerith](#) receives a U.S. patent for his [punched card calculator](#).
- July – [James Blyth](#) operates the first working [wind turbine](#) at [Marykirk](#) in [Scotland](#).^{[10][11]}
- July 19 – [Dorr Eugene Felt](#) receives the first U.S. patent for his [comptometer](#).^[12]
- August – [Anna Connelly](#) patents the [fire escape](#).
- November 8 – [Emile Berliner](#) is granted a U.S. patent for his [Gramophone](#).^[13]
- [Adolf Gaston Eugen Fick](#) invents the [contact lens](#), made of a type of brown glass.^[14]
- English engineer [James Atkinson](#) invents his "[Cycle Engine](#)".
- [Mexican general Manuel Mondragón](#) patents the [Mondragón rifle](#), the world's first [automatic rifle](#).^[15]
- [Alfred Yarrow](#) completes the first practical high-pressure [water-tube Yarrow boiler](#), for a [torpedo boat](#).^[16]
- March 7 – [North Carolina State University](#) is established as North Carolina College of Agriculture and Mechanic Arts.

- October 3 – [Florida A&M University](#) opens its doors in [Tallahassee, Florida](#).
- Publication in [Barcelona](#) of [Enrique Gaspar](#)'s *El anacronópete*, the first work of fiction to feature a [time machine](#).^[17]
- June – [William Armstrong](#) created 1st Baron Armstrong of [Cragside](#), the first [engineer](#) to be raised to the [Peerage of the United Kingdom](#)
- [Copley Medal](#): [Joseph Dalton Hooker](#)^[18]
- [Wollaston Medal](#) for Geology: [John Whitaker Hulke](#)

1888

- [International Exhibition of Science, Art and Industry](#), in [Glasgow, Scotland](#).
- January 3 – The 91 cm [refracting telescope](#) at [Lick Observatory](#) is first used. The [James Lick telescope](#) is the [largest refractor in the world](#) at this time, and the [observatory](#) is the first established at the top of a mountain.
- The 76 cm refracting telescope is completed at [Nice Observatory](#).
- [John Louis Emil Dreyer](#)'s *New General Catalogue* is published.^[11]
- June 30 – The [Marine Biological Association of the United Kingdom](#) opens its laboratory on [Plymouth Hoe](#).
- Seventeen biologists found the [Marine Biological Laboratory](#) in [Woods Hole, Massachusetts](#), USA, which will become a major center of applied research.^[12]
- [Peter Hermann Stillmark](#) describes the isolation of [ricin](#), thus founding the field of [lectinology](#).
- [Methyl isocyanate](#) is discovered.
- [Henri-Louis Le Chatelier](#) states that the response of a chemical system perturbed from [equilibrium](#) will be to counteract the perturbation.
- [Emil Fischer](#) establishes the relation between [glucose](#), [fructose](#) and [mannose](#) by passage to a common [osazone](#).^[13]
- January 27 – The [National Geographic Society](#) is founded in [Washington, D.C.](#) by [Gardiner Greene Hubbard](#).
- The [American Mathematical Society](#) is founded by [Thomas Fiske](#).
- [Hilbert's basis theorem](#) is first proved by [David Hilbert](#).
- [Francis Galton](#) introduces the concept of [correlation](#) in statistics.^[14]
- [Richard Dedekind](#) publishes *Was sind und was sollen die Zahlen?* ("What are numbers and what should they be?") which includes his definition of an [infinite set](#).^[15]
- [Sofia Kovalevskaya](#) discovers the '[Kovalevskaya top](#)'.^{[16][7]}
- The global atmospheric temperature returns to normal, five years after the [1883 eruption of Krakatoa](#) (Krakatau). The volcanic dust veil, that has created spectacular atmospheric effects, also acted as a solar-[radiation](#) filter, lowering global temperatures by as much as 1.2 degrees Celsius in the year after the eruption.

- [Heinrich Rudolf Hertz](#) discovers [radio waves](#).
- [Carlo Martinotti](#) describes cortical cells later known as [Martinotti cells](#).
- [Emile Roux](#) and [Alexandre Yersin](#) isolate [diphtheria toxin](#).^[8]
- German ophthalmologist [Adolf Gaston Eugen Fick](#) constructs and fits the first successful glass [contact lens](#).^[9]
- January 3 – [Marvin Stone](#) is granted a [United States patent](#)^[10] for the paper [drinking straw](#).
- April – American engineer [Oliver B. Shallenberger](#) invents a practical [AC induction electricity meter](#).
- May 1 – [Nikola Tesla](#) is granted a US patent^[11] for the [induction motor](#).
- May 15 – [Emile Berliner](#) is granted a US patent^[12] for the [gramophone record](#).
- August 10 – [Gottlieb Daimler](#) flies in an [airship](#) designed by Dr. [Frederich Wölfert](#) powered by a [Daimler Motoren Gesellschaft](#)-built petrol engine.^[13]
- September 4 – [George Eastman](#) is granted a US patent^[14] for his [roll film camera](#), for which he registers the [trademark Kodak](#).
- October 3 – The first patent^[15] for a [ballpoint pen](#) is granted to [John Loud](#), a British [tanner](#) who wishes to produce a writing instrument that can write on [leather](#).^[16]
- October 14 – [Louis Le Prince](#) shoots the first recorded [film](#), [Roundhay Garden Scene](#), in [Leeds, England](#), using a single lens camera and Eastman paper film.^{[17][18]}
- December 7 – [John Boyd Dunlop patents](#) the pneumatic bicycle [tyre](#).^[19]
- [Copley Medal](#): [Thomas Henry Huxley](#)^[20]
- [Wollaston Medal](#) for Geology: [Henry Benedict Medlicott](#)

1889

- [Francis Galton](#) publishes *Natural Inheritance*, a book which summarizes the results of a number of his papers and inspires [Karl Pearson](#), [Raphael Weldon](#) and others to develop the mathematics and statistics of inheritance and biometry.^[1]
- [Joseph von Mering](#) and [Oskar Minkowski](#) at the [University of Strasbourg](#) demonstrate that a function of the mammalian [pancreas](#) is to produce the [hormone insulin](#), the lack of which leads to [diabetes mellitus](#).^[2]
- [Hugo de Vries](#) publishes *Intracellular Pangenesis*,^[3] a book which postulates the existence of [genes](#).
- [Frederick Abel](#) and [James Dewar](#) patent [cordite](#).
- [Svante Arrhenius](#) provides a physical explanation for the [Arrhenius equation](#) on the [reaction rate constant](#).^[4]
- October 6 – [Mount Kilimanjaro](#)'s summit is first reached, by German geologist [Hans Meyer](#).
- Returning to France from his expedition up the [Niger River](#), [Louis Gustave Binger](#) reveals that the [Mountains of Kong](#) do not exist.^[5]
- [Adolf Erik Nordenskiöld](#) publishes the *Facsimile-Atlas to the Early History of Cartography* in [Stockholm](#).

- [Joseph Louis François Bertrand](#) publishes *Calcul des probabilités* ("Calculation of probabilities") containing the [Bertrand's box paradox](#) in [probability theory](#).
- [Giuseppe Peano](#) publishes *Arithmetices principia, nova methodo exposita* ("The principles of arithmetic presented by a new method") containing the [Peano axioms](#) for the [natural numbers](#).
- May – [Johns Hopkins Hospital](#) opens in [Baltimore, Maryland](#), with senior founding staff comprising [pathologist William Henry Welch](#), [surgeon William Stewart Halsted](#), [gynecologist Howard Atwood Kelly](#) and [internist William Osler](#), who originates the concept of a [residency](#) for training junior doctors.^[6]
- The [1889–1890 flu pandemic](#) originates in [Russia](#).
- First [Barosaurus](#) remains excavated in the [Morrison Formation](#) of [South Dakota](#) by [Othniel Charles Marsh](#) and [John Bell Hatcher](#) of [Yale University](#).
- The [Müller-Lyer illusion](#) is devised.^[7]
- January 8 – [Herman Hollerith](#) receives a [patent](#) in the [United States](#) for his electric [tabulating machine](#).^[8]
- March 12 – [Almon B. Strowger](#), an undertaker in [Topeka, Kansas](#), files a patent in the United States for an [automatic telephone exchange](#) using the [Strowger switch](#).^[9]
- May 6–October 31 – [Exposition Universelle](#) in [Paris](#), with the [Eiffel Tower](#) as its entrance arch. At 300 m, the tower's height exceeds the previous [tallest structure in the world](#) by 130 m. The [Galerie des machines](#), designed by architect [Ferdinand Dutert](#) and engineer [Victor Contamin](#), at 111 m, spans the longest interior space in the world at this time.
- June 3 – The first long distance [electric power transmission](#) line in the United States is completed, running 14 miles (23 km) between a generator at [Willamette Falls](#) and downtown [Portland, Oregon](#).
- An early method of [high-voltage direct current](#) transmission as developed by [Swiss](#) engineer [René Thury](#)^[10] is implemented commercially in [Italy](#) by the *Acquedotto de Ferrari-Galliera* company, transmitting 630 kW at 14 kV DC over a distance of 120 km.^{[11][12]}
- Probable date – [Car](#) to the design of [Siegfried Marcus](#) completed in Vienna.
- [Copley Medal](#): [George Salmon](#)^[13]
- [Wollaston Medal](#) for Geology: [Thomas George Bonney](#)

1890

- September 25 – [Sequoia National Park](#) created in the [United States](#).
- October 1 – [Yosemite National Park](#) created in the United States.
- [Walter Heape](#) successfully breeds rabbits from fertilised [ova](#) transferred from the biological mother to the [uterus](#) of an animal of a different breed.^[1]
- [Francis Galton](#) announces a statistical demonstration of the uniqueness and classifiability of individual human [fingerprints](#).^[2]
- [Jacques Loeb](#) publishes his first major work on [tropism](#), *Der Heliotropismus der Thiere und seine Uebereinstimmung mit dem Heliotropismus der Pflanzen*.

- [Henry Luke Bolley](#) at the new [North Dakota Agricultural College](#) isolates the organism responsible for [potato scab](#) and develops an effective treatment.
- [Nikolai Menshutkin](#) discovers that a [tertiary amine](#) can be converted into a [quaternary ammonium salt](#) by reaction with an [alkyl halide](#) – the [Menshutkin reaction](#).^{[3][4]}
- [Emil Fischer](#) establishes the [stereochemistry](#) and [isomeric](#) nature of the [sugars](#) by [epimerization](#) between [gluconic](#) and [mannonic](#) acids and synthesizes [glucose](#), [fructose](#) and [mannose](#) from [glycerol](#).^[5]
- June 1 – The [United States Census Bureau](#) begins using [Herman Hollerith's tabulating machine](#) to record [census](#) returns using [punched card](#) input, a landmark in the [history of computing hardware](#). Hollerith's company eventually becomes [IBM](#).
- The United States city of [Boise, Idaho](#), drills the first [geothermal](#) well.
- The [phosphate mineral messelite](#) (from [Messel](#) in [Germany](#)) is first described.^[6]
- [Philippa Fawcett](#) is placed above the [Senior Wrangler](#) in the [Mathematical Tripos](#) at the [University of Cambridge](#) in England.
- [P. J. Heawood](#) proves the [five colour theorem](#).^[7]
- [Giuseppe Peano](#) is the first to demonstrate a [space-filling curve](#).^[7]
- Discovery by [Emil von Behring](#) and [Kitasato Shibasaburō](#) that an anti-toxin for immunizing people against [diphtheria](#) can be prepared by injecting diphtheria toxin into animals.^[8]
- [Curt Schimmelbusch](#) invents the [Schimmelbusch mask](#) for the safe delivery of [anesthetics](#) to surgical patients.^[9]
- [Santiago Ramón y Cajal](#) publishes the first edition of *Manual de Anatomia Pathologica General*.
- [Robert Koch](#) publishes his [postulates](#) on the causal relationship between [microbes](#) and [diseases](#).
- [William James](#) publishes *The Principles of Psychology*.
- May – [Herbert Akroyd Stuart](#), in collaboration with Charles Richard Binney and [Richard Hornsby & Sons](#), files a [British patent](#) for *Improvements in Engines Operated by the Explosion of Mixtures of Combustible Vapour or Gas and Air*, the first successful design of [hot bulb engine](#), which will be produced as the heavy-oil [Hornsby-Akroyd oil engine](#).^[10]
- August 6 – At [Auburn Prison](#) in [New York](#), [William Kemmler](#) becomes the first person to be [executed](#) in the [AC electric chair](#).
- October 9 – The first brief flight of [Clément Ader's](#) steam-powered [fixed-wing aircraft Eole](#) takes place in [Satory, France](#). It flies uncontrolled approximately 50 m (160 ft) at a height of 20 cm, the first take-off of a powered airplane solely under its own power.^{[11][12][13]}
- Approximate date – British civil engineer [Ernest William Moir](#) invents the [airlock](#) while working in New York.
- Scottish American chemist [William Morrison](#) produces the first successful practical [electric road vehicle](#) in the United States.
- The precut [paperboard](#) box is invented by [Robert Gair](#), a [Brooklyn](#) printer and packaging producer.

- The [Hurter and Driffield film speed](#) measurement system is described.
- [Copley Medal](#): [Simon Newcomb](#)^[14]
- [Wollaston Medal](#) for Geology: [William Crawford Williamson](#)

1891

- March 3 – Yellowstone Timberland Reserve, predecessor of [Shoshone National Forest](#), in [Wyoming](#) is established as the first [United States National Forest](#).
- The [New Zealand](#) government sets aside [Resolution Island](#) in [Fiordland](#) as a [nature reserve](#).^[1]
- The [New York Botanical Garden](#) is founded in [The Bronx](#) largely due to the efforts of [Nathaniel Lord Britton](#).
- Jane Willis Kirkaldy and Catherine Pollard become the first women to sit final examinations in biology at the [University of Oxford](#) (and achieve first class honours).^[2]
- [Agnes Pockels](#) first publishes the results of her researches into [surface tension](#).^{[3][4]}
- The [Fischer projection](#) is devised by German chemist [Hermann Emil Fischer](#),
- [Hans Reusch](#) describes what came to be known as [Reusch's Moraine](#) in northern Norway; [tillite](#) from a [Precambrian glaciation](#).^[5]
- The [Japan Meteorological Agency](#) begins taking records of the [global average temperature](#).^[6]
- [Fyodorov–Schoenflies theorem](#) concluded by [Yevgraf Fyodorov](#) and [Arthur Schoenflies](#) from their work on [crystallographic groups](#).^{[7][8]}
- [Édouard Lucas](#) first formulates the [ménage problem](#).
- Julius Ludwig August Koch begins publication of [Die psychopathischen Minderwertigkeiten](#) in [Ravensburg](#), introducing the concept of [psychopathology](#).^[9]
- [Arnold Pick](#) first uses the term [dementia praecox](#) in this form.^[10]
- [Myxedema](#) is first treated successfully, by [George Redmayne Murray](#) using thyroid extract.
- The earliest recorded attempt at hip replacement is carried out by [Themistocles Gluck](#) in [Berlin](#), using [ivory](#) to replace the [femoral head](#).^[11]
- Viennese pathologist [Hans Chiari](#) describes a form of [Chiari malformation](#).
- October – [Eugène Dubois](#) finds the first fragmentary bones of [Pithecanthropus erectus](#) (later redesignated *Homo erectus*), or 'Java Man', at [Trinil](#) on the [Solo River](#).^[12]
- March 10 – [Almon B. Strowger](#), an undertaker in [Topeka, Kansas](#), is granted a [patent](#) in the United States^[13] for an [automatic telephone exchange](#) using the [Strowger switch](#).^[14]
- March 15 – [Jesse W. Reno](#) patents the first [escalator](#) at [Coney Beach](#) in the United States.
- May 20 – First public demonstration of the [Kinetograph](#) moving picture system developed by [W. K. L. Dickson](#) under the direction of [Thomas Alva Edison](#), a showing of the film known as [Dickson Greeting](#). Edison files patents on the camera and peephole viewer on August 24.^[15]

- [Crompton & Co.](#) introduce the [electric kettle](#), in the United Kingdom.
- [Michelin](#) patent the removable pneumatic [bicycle tire](#).^[16]
- [Panhard et Levassor](#) produce the first *Système Panhard* [automobile layout](#), consisting of four wheels with [front-engine, rear-wheel drive](#) and a sliding-gear [transmission](#), designed by [Émile Levassor](#).^[17]
- [William Le Baron Jenney](#) develops the construction of [steel frame skyscrapers](#) in [Chicago](#) with the [Ludington](#), [Manhattan](#) and [Second Leiter Buildings](#).
- The modern [taximeter](#) is invented by [Friedrich Wilhelm Gustav Bruhn](#) in Germany.
- [Copley Medal](#): [Stanislao Cannizzaro](#)^[18]
- [Wollaston Medal](#) for Geology: [John Wesley Judd](#)

1892

- September 9 – At [Lick Observatory](#), [Edward Emerson Barnard](#) discovers [Amalthea](#), the third moon of [Jupiter](#) and the last [natural satellite](#) found by direct visual observation.
- [Viruses](#) are first described by [Russian–Ukrainian biologist Dmitri Ivanovsky](#).^[1]
- *approx. date* – [James Dewar](#) invents the [Dewar flask](#).^[2]
- May 28 – [Scottish American naturalist John Muir](#) founds the environmental organization the [Sierra Club](#) in [San Francisco](#), aided by a group of professors from the [University of California, Berkeley](#), and [Stanford University](#).
- American environmental chemist [Ellen Swallow Richards](#), in a lecture in [Boston](#), calls for the "christening of a new science" – [oekology](#), to embrace environmental education and consumer nutrition.
- November – Traveller [Isabella Bird](#) becomes the first woman inducted as a Fellow of the [Royal Geographical Society](#) in Britain.^[3]
- [Georg Cantor](#) shows there are different kinds of infinity and studies [transfinite numbers](#).
- [Gino Fano](#) discovers the [Fano plane](#).^[4]
- July 18 – Russian-born bacteriologist [Waldemar Haffkine](#) demonstrates the first [anti-cholera vaccine](#).
- [German](#) pathologist [Curt Schimmelbusch](#) proposes that medical dressings should be [sterilized](#) daily prior to surgery and designs a form of [autoclave](#) to facilitate this.^[5]
- [Czech](#) neurologist [Arnold Pick](#) identifies the clinical syndrome of [Pick's disease](#) and the [Pick bodies](#) that characterise the frontotemporal lobe disorder.
- Johann von Mikulicz-Radecki first describes [Sjögren's syndrome](#).^{[6][7]}
- First edition of [William Osler's](#) textbook *[The Principles and Practice of Medicine, designed for the use of practitioners and students of medicine](#)* is published in [Edinburgh](#) while the author is Professor of Medicine at [Johns Hopkins University](#). It remains internationally significant in medical education for forty years.^[8]
- July – The [American Psychological Association](#) is founded.

- February 23 – [Rudolf Diesel](#) obtains a [patent](#)^[9] for a [compression-ignition engine](#).
- [François Hennebique](#) patents his system of [reinforced concrete](#).^[10]
- Brothers Richard and [Cherry Kearton](#) publish *With Nature and a Camera* in the United Kingdom, the first nature book illustrated entirely from photographs.
- [Copley Medal](#): [Rudolf Virchow](#)^[11]
- [Wollaston Medal for geology](#): [Ferdinand von Richthofen](#)

1893

- July 11 – [Kōkichi Mikimoto](#), in [Japan](#), develops the method to seed and grow cultured [pearls](#).
- [Henry Luke Bolley](#) discovers a method of treating [smut](#) with [formaldehyde](#).
- [Hans Goldschmidt](#) discovers the [thermite](#) reaction.^[1]
- [Nagai Nagayoshi](#) synthesizes [methamphetamine](#) from [ephedrine](#).
- [Alfred Werner](#) discovers the octahedral structure of cobalt complexes, thus establishing the field of [coordination chemistry](#).^[2]
- [Eduard Suess](#) postulates the former existence of the [Tethys Sea](#).
- [Mary Kingsley](#) lands in [Sierra Leone](#) on the first of her journeys through [Africa](#) in the interests of [anthropology](#) and [natural history](#).
- [J. J. Sylvester](#) poses what becomes known as the [Sylvester–Gallai theorem](#) in geometry.^[3]
- *[Geometric Exercises in Paper Folding](#)* by T. Sundara Row is first published in [Madras](#).
- July 9 – [Daniel H. Williams](#) completes the first successful [open heart surgery](#).
- October 5 – [Johns Hopkins Medical School](#) opens in the [United States](#).
- [Emil Kraepelin](#) introduces the concept of [dementia praecox](#) in the [classification of mental disorders](#), distinguishing it from [mood disorder](#) in his *Lehrbuch der Psychiatrie* (4th edition).
- [Ádám Politzer](#) describes [otosclerosis](#) for the first time.
- [Vladimir Bekhterev](#) describes [Ankylosing spondylitis](#).^[4]
- [Wilhelm Wien](#) formulates [Wien's displacement law](#).
- January 2 – [Webb C. Ball](#) introduces [railroad chronometers](#) which become the general railroad timepiece standards in North America.
- February 1 – [Thomas Edison](#) finishes construction of the first [motion picture](#) studio in [West Orange, New Jersey](#).
- February 11 – [János Csonka](#) and [Donát Bánki](#) apply for a [patent](#) for the [carburetor](#) in [Hungary](#).^{[5][6]}

- February 23 – [Rudolf Diesel](#) receives a patent for the [diesel engine](#). In this year he also publishes his treatise *Theorie und Konstruktion eines rationellen Wärmemotors zum Ersatz der Dampfmaschine und der heute bekannten Verbrennungsmotoren*.
- February 28 – [Edward Goodrich Acheson](#) patents the method for making the abrasive [silicon carbide](#) powder.^[7]
- May 9 – Edison's 1½ inch system of [Kinetoscope](#) is first demonstrated in public at the Brooklyn Institute.
- May – William Scherzer (dies July 20, 1893) files a patent for his design of [rolling lift bridge](#).^[8]
- June 21 – The first [Ferris Wheel](#) opens to the public at the [World's Columbian Exposition](#) in [Chicago](#).^{[9][10]}
- July 25 – Completion of the [Corinth Canal](#) in [Greece](#).^[11]
- August 17 – [Wilhelm Maybach](#) patents the [spray nozzle carburetor](#) in [France](#).^[6]
- Scottish scientist [Alan MacMasters](#) invents the first electric bread [toaster](#).^[12]
- Refinery for [Pacific Coast Borax Company](#) in [Alameda, California](#), designed by [Ernest L. Ransome](#), is the first major [reinforced concrete](#) building in the United States.^[13]
- [Copley Medal](#): [George Gabriel Stokes](#)^[14]
- [Wollaston Medal](#) for Geology: [Nevil Story Maskelyne](#)

1894

- March 21 (23:00 [GMT](#)) – [Syzygy](#): [Mercury](#) transits the [Sun](#) as seen from [Venus](#), and Mercury and Venus both simultaneously transit the Sun as seen from [Saturn](#).
- [Patrick Manson](#) develops the thesis that [malaria](#) is spread by [mosquitoes](#).
- [Jean Pierre Ménézin](#) publishes *La faune des cadavres application de l'entomologie à la médecine légale* in [Paris](#), an important text in [forensic entomology](#).^[1]
- [Argon](#) identified by [Lord Rayleigh](#) and Sir [William Ramsay](#).^{[2][3]}
- [Viscose](#), a form of [artificial silk](#) or [rayon](#), is [patented](#) by [Charles Frederick Cross](#) with [Edward John Bevan](#) and Clayton Beadle.
- [Otto Binswanger](#) describes what will become known as [Binswanger's disease](#).
- [Psychological Review](#) established in the [United States](#) by [James Mark Baldwin](#) and [James McKeen Cattell](#).
- February 13 – [Auguste and Louis Lumière patent](#) the *Cinematographe*, a combination [movie camera](#) and [projector](#).
- August 13 – The first [Allan truss bridge](#), designed by [Percy Allan](#), is completed in [New South Wales](#).^[4]
- August 14 – [Oliver Lodge](#) demonstrates "Hertzian waves" i.e. [radio](#) transmission (of [Morse code](#)) in the [University of Oxford](#) from the [Clarendon Laboratory](#) to the [University Museum](#) (200 ft/60 m) for the [British Association for the Advancement of Science](#)^[5] using a modified Branly [coherer](#).
- November 6 – William C. Hooker of [Abingdon, Illinois](#) is granted a United States patent for a spring-loaded [mousetrap](#).^[6]

- Construction of the first oil-engined rail [locomotive](#), an experimental unit designed by [William Dent Priestman](#) and built by his company, [Priestman Brothers](#) of [Hull, England](#).^[7]
- [John Joly](#) of [Dublin](#) devises the [Joly colour screen](#), an [additive colour photographic](#) process for producing images from a single [photographic plate](#).^[8]
- Astronomical photographer [Julius Scheiner](#) devises a [film speed](#) measurement system.
- [Copley Medal](#): [Edward Frankland](#)^[9]
- [Wollaston Medal](#) for Geology: [Karl von Zittel](#)

1895

- April 26 – The New York Zoological Society, the modern-day [Wildlife Conservation Society](#), is chartered.
- [David Bruce](#) discovers the [Trypanosoma](#) parasite carried by the [tsetse fly](#) which causes the fatal cattle disease [nagana](#).^{[1][2]}
- March 26 – [Scottish](#) chemist [William Ramsay](#) isolates [helium](#) on [Earth](#) by treating the mineral [cleveite](#).^{[3][4][5][6][7]} These samples are identified as helium by [Norman Lockyer](#) and [William Crookes](#). It is independently isolated from cleveite in the same year by [Per Teodor Cleve](#) and [Abraham Langlet](#) in [Uppsala, Sweden](#), who determine its [atomic weight](#).^{[8][9][10]}
- [Emil Fischer](#) and Arthur Speier first describe [Fischer–Speier esterification](#).^[11]
- [Carl von Linde](#) files for patent of the [Linde cycle](#).
- December 11 – [Svante Arrhenius](#) delivers quantified data about the sensitivity of global climate to atmospheric carbon dioxide (the "[Greenhouse effect](#)") as he presents his paper "On the Influence of Carbonic Acid in the Air Upon The Temperature of the Ground" to the [Royal Swedish Academy of Sciences](#).^[12]
- [Eugen Warming](#) publishes [Plantesarfund](#) (translated as *Oecology of Plants*, 1909) and founds the scientific discipline [ecology](#).
- The first international meeting for the protection of birds is held in Paris.^[13]
- [Diederik Korteweg](#) and [Gustav de Vries](#) derive the [Korteweg–de Vries equation](#), a description of the development of long solitary water waves in a canal of rectangular cross section.^[14]
- [Georg Cantor](#) publishes the first part of a paper on set theory containing the arithmetic of infinite [cardinal numbers](#) and the [continuum hypothesis](#).^[15]
- [Henri Poincaré](#) publishes his paper "[Analysis Situs](#)", providing the first systematic treatment of [topology](#).^[16]
- The term [naturopathy](#) is coined by Dr John Scheel.^[17]
- May 7 – [Alexander Stepanovich Popov](#) demonstrates a [radio receiver](#) (containing a [coherer](#)) refined as a [lightning detector](#) to the Russian Physico-Chemical Society, recognized as the first practical application of [electromagnetic waves](#).^[18]

- November 8 – [Wilhelm Röntgen](#) discovers a type of [electromagnetic radiation](#) which he calls [X-rays](#).^[19]
- [Sigmund Freud](#) and [Josef Breuer](#) publish *Studien über Hysterie* (*Studies on Hysteria*).
- February 13 – [Auguste and Louis Lumière](#) patent their [cinematograph](#) motion picture film camera/projector in France.
- May 6 – The [Metropolitan West Side Elevated Railroad](#) is opened in [Chicago](#)^[20] as the first electrically operated [rapid transit](#) system in the [United States](#), including the first completed [Scherzer rolling lift bridge](#).^[21]
- December 31 – Ogden Bolton Jr. is granted [U.S. Patent 552,271](#) for an [electric bicycle](#).^{[22][23]}
- The world's first portable handheld electric [drill](#) is developed by brothers [Wilhelm](#) and Carl Fein in Germany.
- [Ernest A. Hummel](#) invents the [telediagraph](#).
- May – Publication of [H. G. Wells](#)' first "[scientific romance](#)", the [novella](#) *The Time Machine* (serial publication completed and first book editions).
- July 25 – [Maria Skłodowska](#) marries [Pierre Curie](#) in the town hall at [Sceaux](#).
- [Copley Medal](#): [Karl Weierstrass](#)^[24]
- [Wollaston Medal](#) for Geology: [Archibald Geikie](#)

1896

- [Svante Arrhenius](#) formulates the "greenhouse law" and becomes the first person to predict that emissions of carbon dioxide from the burning of fossil fuels and other combustion processes are large enough to cause [global warming](#) through the [greenhouse effect](#).
- June 15 – The [1896 Sanriku earthquake](#) of 7.2 [surface wave magnitude](#) and [tsunami](#) in [Japan](#) kill 27,000.
- August – Conclusion of [Nansen's Fram expedition](#).
- The [prime number theorem](#) on the [distribution of primes](#) is proved.^[1]
- [Charles L. Dodgson](#) publishes the first part of *Symbolic Logic*.
- [Karl Pearson](#) publishes significant contributions to [correlation](#) and regression.^[1]
- *International Cloud Atlas* first published.
- [Ernest Duchesne](#) discovers the [antibiotic](#) properties of [penicillin](#)^[2] as part of his doctoral research, but this is not followed up at this time.
- March 1 – [French](#) physicist [Henri Becquerel](#) discovers the principle of [radioactive decay](#) when he exposes [photographic plates](#) to [uranium](#).
- [German](#) physicist [Wilhelm Wien](#) derives [Wien approximation](#).
- July – [Victor Despeignes](#) pioneers [radiation oncology](#) in [Lyon](#).^[3]

- [Antoine Marfan](#) first describes the symptoms of [Marfan syndrome](#).^{[4][5][6]}
- An improved [sphygmomanometer](#), for the measurement of [blood pressure](#), is described by [Scipione Riva-Rocci](#).^[7]
- The 12th edition of [Richard von Krafft-Ebing](#)'s *Psychopathia Sexualis* introduces the term 'paedophilia'.
- Belgian psychiatrist [Jean Crocq](#) publishes *Les nèvroses traumatiques: étude pathogénique & clinique*.
- Thomas Ellis Brown produces an innovative design of [rolling bascule bridge](#) for [Brooklyn](#).^[8]
- [Jesse W. Reno](#) produces the first working [escalator](#) ("inclined elevator"), installed at [Coney Island](#), Brooklyn.
- [Gottlieb Daimler](#) produces the first [truck](#).^[9]
- [Léon Serpollet](#) invents the [flash boiler](#) for the [steam car](#).
- Captain [Neville Bertie-Clay](#), Superintendent of the [British Army](#) arsenal at [Dum Dum](#) in [Bengal](#), invents an [expanding bullet](#).
- December 11 – [William Preece](#) introduces [Guglielmo Marconi](#)'s work in [wireless telegraphy](#) to the general public at a lecture, "Telegraphy without Wires", at the [Toynbee Hall](#) in [London](#).
- [Copley Medal](#): [Karl Gegenbaur](#)^[10]
- [Wollaston Medal for geology](#): [Eduard Suess](#)

1897

- April 30 – [J. J. Thomson](#) first describes his discovery of the [electron](#), in England.^{[11][2]}
- June 12 – [1897 Assam earthquake](#) of magnitude of 8.0 rocks [Assam](#), [India](#), killing over 1,500 people.
- [Adolf Erik Nordenskiöld](#) publishes *Periplus: An Essay on the Early History of Charts and Sailing Directions* in [Stockholm](#).
- [Boulton and Watt](#)'s [Smethwick Engine](#) of 1779 (superseded 1892) is dismantled for preservation by the [Birmingham Canal Navigations](#) company, initially at its [Ocker Hill](#) depot in the West Midlands of England.
- [David Hilbert](#) unifies the field of [algebraic number theory](#) with his treatise *Zahlbericht*.
- [John Edward Campbell](#) originates the [Baker–Campbell–Hausdorff formula](#) for multiplication of exponentials in [Lie algebras](#).^[3]
- [Raoul Bricard](#) investigates and classifies [flexible polyhedra](#), defining the [Bricard octahedron](#).^[4]
- [Henri Brocard](#) begins publication of his source book on geometric [curves](#), *Notes de Bibliographie des Courbes Géométriques*, in [Bar-le-Duc](#).^{[5][6]}
- May 6 – [John Jacob Abel](#) announces the successful isolation of [epinephrine](#) ([adrenaline](#)) in a paper read before the Association of American Physicians.^[7]
- August 10 – [History of aspirin](#): At the German [Bayer](#) chemical and dyestuffs company, pharmacist [Felix Hoffmann](#) successfully synthesizes [acetylsalicylic acid](#), a synthetically

altered version of [salicin](#), as a less-irritating replacement for standard common salicylate medicines, after isolating a compound from a plant of the [Spiraea](#) family; the company markets it under the brand name '[Aspirin](#)'.^[8]

- August 20 – [Ronald Ross](#) discovers the [malaria Plasmodium](#) in an [Anopheles mosquito](#), demonstrating the [transmission](#) mechanism for the disease.^[9]
- [Danish veterinarian Bernhard Bang](#) isolates [Brucella abortus](#) as the agent of [Brucellosis](#).
- [L. Emmett Holt](#) publishes the standard textbook *The Diseases of Infancy and Childhood* in [New York](#).
- [Charles Sherrington](#) introduces the term '[synapse](#)'.
- [Émile Durkheim](#) publishes his classic study [Le Suicide](#).
- January 22 – The word [computer](#) is first used to refer to a mechanical calculation device, in this date's issue of the journal *Engineering*.^[10]
- May 11 – A patent is awarded for the invention of the first automotive [muffler](#), with the granting by the U.S. Patent Office of application number 582,485 to [Milton Reeves](#) and his brother Marshall T. Reeves, of the Reeves Pulley Company of [Columbus, Indiana](#).^[11]
- May 13 – [Guglielmo Marconi](#) sends the first ever [wireless](#) communication over open sea when the message "Are you ready" is transmitted across the [Bristol Channel](#) from [Lavernock Point](#) in [South Wales](#) to [Flat Holm](#) Island, a distance of 6 kilometres (3.7 mi).^[12]
- May 17 – Launch of the *Holland VI* (later [USS Holland \(SS-1\)](#)), designed by [John Philip Holland](#), at [Lewis Nixon's Crescent Shipyard](#) in [Elizabeth, New Jersey](#); this is the first [submarine](#) having power to run submerged for any considerable distance, and the first to combine [electric motors](#) for submerged travel and gasoline ([Otto](#)) engines for use on the surface.
- June 26 – At the [British Fleet Review](#), [Charles Parsons](#) gives a spectacular display of the unprecedented speed attainable by his [steam turbine](#)-powered [Turbinia](#).^[13]
- August 10 – [Rudolf Diesel](#) builds his first working prototype [Diesel engine](#) in [Augsburg](#).
- August 31 – [Thomas Edison](#) is granted a [patent](#) for the [Kinetoscope](#), a precursor of the [movie projector](#).
- [Hiram P. Maxim](#) develops the [muffler](#) in conjunction with the firearm silencer ([suppressor](#)).
- The [Dahlander pole changing motor](#) is patented.
- The Daimler Victoria, the world's first [meter](#)-equipped (and gasoline-powered) [taxicab](#), is built by [Gottlieb Daimler](#).
- [Copley Medal](#): [Albert von Kölliker](#)^[14]
- [Wollaston Medal](#): [Wilfred Hudleston](#)

1898

- The [Narmer Palette](#) is discovered in [Hierakonpolis, Egypt](#).
- [Annie Scott Dill Maunder](#) photographs the [sun's](#) outer [corona](#) during a [solar eclipse](#) in [India](#).
- [433 Eros](#), the first [near-Earth object](#), is discovered.^{[1][2]}
- [George Darwin](#) proposes that the Earth and Moon had once been one body.^[3]

- March 26 – The Sabi Game Reserve in [South Africa](#), the first officially designated [game reserve](#), is created.
- [William Ramsay](#) and [Morris Travers](#) discover the [noble gases krypton](#) (May 30), [neon](#) (June 7) and [xenon](#) (July 12) at [University College London](#).^{[4][5]}
- July 28 – [Marie](#) and [Pierre Curie](#) announce (at the [French Academy of Sciences](#)) discovery of a substance they call [Polonium](#).
- December 26 – [Marie](#) and [Pierre Curie](#) announce discovery of a substance they call [radium](#). It is the only moment where 5 elements are discovered the same year.
- [Emil Fischer](#) synthesizes [purine](#).
- [Richard Willstätter](#) analyzes the structure of the [cocaine molecule](#) in a synthesis derived from [tropinone](#).^[6]
- [Polycarbonates](#) are first discovered by German chemist [Alfred Einhorn](#).
- [Polyethylene](#) is first synthesized by German chemist [Hans von Pechmann](#).
- January 30–February 13 – The [Belgian Antarctic Expedition](#) led by [Adrien de Gerlache](#) on the [Belgica](#) discovers the [Gerlache Strait](#) (originally named the Belgica Strait) and [Lemaire Channel](#) off the west coast of [Graham Land](#) on the [Antarctic Peninsula](#). The expedition then becomes the first to winter in [Antarctica](#).^[7]
- [Ladislaus Bortkiewicz](#) publishes a book about the [Poisson distribution](#), *The Law of Small Numbers*,^[8] first noting that events with low frequency in a large population follow a Poisson distribution even when the probabilities of the events vary.
- [Vilhelm Bjerknes](#) produces the [primitive equations](#) used in [climate modeling](#).
- June 23 – [Royal Army Medical Corps](#) formed within the [British Army](#).^[9]
- October 28 – [French serial killer Joseph Vacher](#) is convicted, based largely on [forensic](#) evidence presented by [Alexandre Lacassagne](#).
- [Paul Flechsig](#) divides the [cytoarchitecture](#) of the human brain into 40 areas.^[10]
- [Peter Borovsky](#), a Russian military surgeon working in [Tashkent](#), publishes the first accurate description of the causative parasite for "*Sart sore*" (later known as [leishmaniasis](#)).^[11]
- [Patrick Manson](#) publishes *Tropical Diseases: a manual of the diseases of warm climates* in [London](#), a pioneering [English language](#) textbook in [tropical medicine](#).
- [Copley Medal](#): [William Huggins](#)^[12]
- [Wollaston Medal](#) for Geology: [Ferdinand Zirkel](#)

1899

- December 2 – During the [new moon](#), a near-grand [conjunction](#) of the [classical planets](#) and several [binocular Solar System](#) bodies occur. The Sun, Moon, [Mercury](#), [Mars](#) and [Saturn](#) are all within 15° of each other, with [Venus](#) 5° ahead of this conjunction and [Jupiter](#) 15° behind. Accompanying the classical planets in this grand conjunction are [Uranus](#) (technically visible unaided in [pollution-free](#) skies), [Ceres](#) and [Pallas](#).
- The 80 cm [refracting telescope](#) is completed at [Potsdam Observatory](#).

- May 1 – The [National Trust](#) in the [United Kingdom](#) acquires its first part of [Wicken Fen](#), making it the country's oldest [wetland nature reserve](#).
- November 8 – The [New York Zoological Society](#) opens the [Bronx Zoological Park](#) to the public in [New York City](#) under the direction of [William Temple Hornaday](#).
- [Actinium](#) is discovered by [Andre-Louis Debierne](#).
- [International Committee on Atomic Weights](#) established.
- January 23 – The British [Southern Cross Expedition](#) crosses the [Antarctic Circle](#). Later in the year, it first charts [Duke of York Island](#).
- [Élie Cartan](#) first defines the [exterior derivative](#) in its modern form.^[1]
- [David Hilbert](#) publishes *Grundlagen der Geometrie*, proposing a formal set, [Hilbert's axioms](#), to replace [Euclid's elements](#).
- [Georg Alexander Pick](#) publishes his [theorem](#) on the area of [simple polygons](#).^[2]
- [Bubonic plague](#) enters [Brazil](#) through the seaport of [Santos](#).
- March 6 – [Felix Hoffmann](#) patents [Aspirin](#) and [Bayer](#) registers its name as a trademark.
- October 2 – The [London School of Hygiene & Tropical Medicine](#) is established by [Patrick Manson](#) at the [Albert Dock Seamen's Hospital](#).
- [Ernest Rutherford](#) classifies two types of [radiation](#), [alpha rays](#) and [beta rays](#).
- [Henri Becquerel](#) discovers that radiation from [uranium](#) consists of charged particles and can be deflected by [magnetic fields](#).
- [Hertha Ayrton](#) becomes the first woman to read her own paper (on the [electric arc](#)) before the [Institution of Electrical Engineers](#) in [London](#), of which soon afterwards she is elected the first female member.^[3]
- [Sigmund Freud](#)'s *Die Traumdeutung* (*The Interpretation of Dreams*) is published (dated 1900).
- February 14 – [Voting machines](#) are approved by the [U.S. Congress](#) for use in federal [elections](#).
- March 22 – London inventor [Edward Raymond Turner](#) applies for a [patent](#) for his [additive colour](#) process for [colour motion picture film](#).^[4]
- [Hugo Lenz](#) first demonstrates Lenz [poppet valve](#) gear, for [stationary steam engines](#).
- The world's first successful self-propelled steam [fire engine](#), the 'Fire King', is built by [Merryweather & Sons](#) in London and dispatched to [Port Louis](#) on [Mauritius](#).^[5]
- [Copley Medal](#): [Lord Rayleigh](#)^[6]
- [Wollaston Medal for Geology](#): [Charles Lapworth](#)

1900

- July 2 – The first [rigid airship](#) flight is made by the [LZ1](#) designed by [Ferdinand von Zeppelin](#).
- c. October 3 – The [Wright brothers](#) begin their first manned [glider](#) experimental flights at [Kitty Hawk, North Carolina](#).

- [Moses Gomberg](#) identifies the first [organic radical](#) (according to the modern definition), [triphenylmethyl radical](#).
- [Johannes Rydberg](#) refines the expression for observed [hydrogen](#) line wavelengths.
- [Richard Dixon Oldham](#) distinguishes between primary, secondary and tertiary [waveforms](#) as recorded by [seismometers](#).^[1]
- [American](#) explorer [Robert Peary](#) first sights [Kaffeklubben Island](#), [the northernmost point of land on Earth](#).
- [Hugo de Vries](#) publishes the results of his experiments in [Mendelian inheritance](#).^[2]
- [Max Dehn](#) introduces two examples of [Dehn plane](#) and the [Dehn invariant](#).
- [David Hilbert](#) states [his list of 23 problems](#) which show where some further mathematical work is needed.
- [Russell's paradox](#) is first discovered by [Ernst Zermelo](#) but he does not publish it, and it is known only to [Hilbert](#), [Husserl](#) and other members of the [University of Göttingen](#).
- [Gaston Tarry](#) confirms [Euler's](#) conjecture that no 6×6 orthogonal [Graeco-Latin square](#) is possible.^{[3][4][5][6]}
- [Alfred Young](#) introduces the [Young tableau](#).
- English surgeon and ophthalmologist [Edward Treacher Collins](#) describes the essential traits of [Treacher Collins syndrome](#).^{[7][8]}
- German gynecologist [Hermann Johannes Pfannenstiel](#) publishes his description of the "[Pfannenstiel incision](#)", a transverse incision used in genitourinary surgery that continues to be widely used.
- [Barnum Brown](#) finds the first partial skeleton of [Tyrannosaurus rex](#) in eastern Wyoming.
- Dr. [James K. Hampson](#) identifies the [Island 35 Mastodon](#) skeleton in the [Mississippi River](#).
- [Kodak](#) introduce their first [Brownie \(camera\)](#).
- April 26 – [Guglielmo Marconi](#) patents the [tuned circuit](#).
- October 19 – [Max Planck](#) produces [Planck's law](#) of [black-body radiation](#) and [Planck constant](#), marking the birth of [quantum physics](#).^{[9][10]}
- December 7 – Max Planck states his [quantum hypothesis](#).
- December 23 – [Reginald Fessenden](#), experimenting with a high-frequency spark transmitter, successfully transmits speech over a distance of about 1.6 kilometers (one mile), from [Cobb Island, Maryland](#), which appears to have been the first audio radio transmission.
- [Gamma rays](#) discovered by [Paul Villard](#) while studying [uranium](#) decay.
- [Karl Landsteiner](#) makes the first discovery of [blood types](#), identifying the [ABO blood group system](#).^[11]
- [Carl Rasch](#) coins the term '[polymorphous light eruption](#)'.
- [Jōkichi Takamine](#) and Keizo Uenaka discover [adrenaline](#).^{[12][13]}
- [Richard J. Ussher](#) and [Robert Warren](#) publish *The Birds of Ireland*.^[14]

- [Copley Medal](#): [Marcellin Berthelot](#)^[15]

1901

- [Okapi](#), a relative of the [Giraffe](#) found in the [rainforests](#) around the [Congo River](#) in north east [Zaire](#), is discovered (previously known only to local natives).
- Publication of [Robert Ridgway](#)'s *The Birds of North and Middle America* by the [Smithsonian Institution](#) begins.
- [Edmund Selous](#) publishes the book *Bird Watching* in the U.K., giving rise to the term *birdwatching*.
- May 27 – The [Edison Storage Battery Company](#) is founded in [New Jersey](#).
- [Europium](#) is discovered by [Eugène-Anatole Demarçay](#).
- [Emil Fischer](#), in collaboration with [Ernest Fourneau](#), synthesizes the [dipeptide](#), [glycylglycine](#), and also publishes his work on the [hydrolysis](#) of [casein](#).
- [Edith Humphrey](#) becomes (probably) the first British woman to obtain a doctorate in chemistry, at the [University of Zurich](#).^[11]
- December 13 (20:45:52) – Retrospectively, this becomes the earliest date representable with a signed [32-bit](#) integer on digital computer systems that reference time in seconds since the [Unix epoch](#).
- August 6 – [Discovery Expedition](#): [Robert Falcon Scott](#) sets sail on the [RRS Discovery](#) to explore the [Ross Sea](#) in [Antarctica](#).
- September 25 – Establishment of *Deutsche Gesellschaft für Geschichte der Medizin und der Naturwissenschaften*, the world's first [history of science](#) society.^[12]
- April – [Henri Lebesgue](#) defines [Lebesgue integration](#) for some function $f(x)$.^[13]
- May/June – [Russell's paradox](#): [Bertrand Russell](#) shows that [Georg Cantor](#)'s [naive set theory](#) leads to a contradiction.^[14]
- [Élie Cartan](#) develops the [exterior derivative](#).
- [Leonard Eugene Dickson](#) publishes *Linear groups with an exposition of the Galois field theory* in [Leipzig](#), advancing the [classification of finite simple groups](#) and listing almost all [non-abelian simple groups](#) having order less than one billion.^[15]
- [Aleksandr Lyapunov](#) proves the [central limit theorem](#) rigorously using characteristic functions.^[16]
- Publication begins of *A Monograph of British Graptolites* by [Gertrude L. Elles](#) and [Dr Ethel M. R. Wood](#), edited by [Charles Lapworth](#).
- [Eastman Kodak](#) introduce the [120 film](#).
- January 23 – [Guglielmo Marconi](#) sends a [radio](#) signal 299 km (186 mi) 'over the horizon' in the British Isles from [Niton](#) on the [Isle of Wight](#) to [The Lizard](#) in [Cornwall](#).^[17]
- December 12 – Marconi receives the first trans-[Atlantic](#) radio signal, sent from [Poldhu](#) in Cornwall, [England](#), to [Newfoundland](#), the letter "S" in [Morse](#).^[18]
- [Albert Einstein](#) publishes his conclusions on [capillarity](#).^[19]

- [Owen Richardson](#) describes the phenomenon in [thermionic emission](#) which gives rise to Richardson's Law.^[10]
- [Ivan Yarkovsky](#) describes the [Yarkovsky effect](#), a [thermal](#) force acting on rotating bodies in space, in a pamphlet on "The density of light ether and the resistance it offers to motion" published in [Bryansk](#).^[11]
- November 25 – [Auguste Deter](#) is first examined by Dr [Alois Alzheimer](#) in [Frankfort](#) leading to a diagnosis of the [condition that will carry Alzheimer's name](#).^[12]
- [Jōkichi Takamine](#) isolates and names [adrenaline](#) from mammalian organs.^[13]
- [Ivan Pavlov](#) develops the theory of the "[conditional reflex](#)".^[14]
- [Georg Kelling](#) of [Dresden](#) performs the first "coeloscopy" ([laparoscopic surgery](#)), on a dog.^[15]
- [William C. Gorgas](#) controls the spread of [yellow fever](#) in [Cuba](#) by a [mosquito](#) eradication program.^[16]
- Scottish military doctor [William Boog Leishman](#) identifies organisms from the spleen of a patient who had died from "[Dum Dum](#) fever" (later known as [leishmaniasis](#)) and proposes them to be [trypanosomes](#), found for the first time in [India](#).^[17]
- An improved [sphygmomanometer](#), for the measurement of [blood pressure](#), is invented and popularized by [Harvey Cushing](#).
- [Karl Landsteiner](#) discovers the existence of different human [blood types](#)
- [Edward B. Titchener](#)'s textbook *Experimental Psychology* popularizes the [Ebbinghaus illusion](#).
- May 16 – [TS King Edward](#) is launched at [William Denny and Brothers'](#) shipyard in [Dumbarton, Scotland](#). The first commercial merchant vessel propelled by [steam turbines](#), she enters excursion service on the [Firth of Clyde](#) on July 1.
- July 10 – The world's first passenger-carrying [trolleybus](#) in regular service operates on the [Biela Valley Trolleybus](#) route at [Koenigsstein](#) in Germany, pioneering Max Schiemann's under-running trolley current collection system.^[18]
- August 30 – [Hubert Cecil Booth](#) patents the electrically powered [vacuum cleaner](#) in the [United Kingdom](#).^[19]
- November 30 – [Frank Hornby](#) of [Liverpool](#) is granted a U.K. patent for the construction toy that will become [Meccano](#).^[20]
- December 3 – [King C. Gillette](#) files a U.S. patent application for his design of [safety razor](#) utilizing thin, disposable blades of stamped [steel](#).^[21]
- [Ernest Godward](#) invents the [spiral hairpin](#) in [New Zealand](#).
- [Theodor Rall](#) patents his design of [rolling lift bridge](#).^{[22][23]}
- [H. G. Wells](#)' "[scientific romance](#)" *The First Men in the Moon* and his collected articles on [futurology](#) *Anticipations of the Reaction of Mechanical and Scientific Progress Upon Human Life and Thought*.
- First [Nobel Prizes](#) awarded
 - [Physics](#) – [Wilhelm Röntgen](#)
 - [Chemistry](#) – [Jacobus Henricus van 't Hoff](#)
 - [Medicine](#) – [Emil Adolf von Behring](#)
- [Copley Medal](#) – [J. Willard Gibbs](#)^[24]

- [Wollaston Medal for Geology](#) – [Charles Barrois](#)

1902

- May 15 – [Lyman Gilmore](#) claims to have flown his [steam-powered fixed-wing aircraft](#), although his proof is supposedly destroyed in a 1935 fire.
- [Hermann Emil Fischer](#) and [Joseph von Mering](#) discover that [barbitone](#) (barbital or Veronal) is an effective [hypnotic](#) agent.^[1] It becomes the first commercially marketed [barbiturate](#), being used as a treatment for [insomnia](#) from 1903.
- [Auguste Verneuil](#) develops the [Verneuil process](#) for making synthetic [rubies](#).
- German chemist [Wilhelm Ostwald](#) developed the [Ostwald process](#) and patented it in 1902.
- April–August – Eruption of [Mount Pelée](#) in [Martinique](#).
- [Mercalli intensity scale](#) introduced as a [seismic scale](#) for [earthquakes](#) by [Giuseppe Mercalli](#).
- December 30 – [Discovery Expedition](#): British explorers [Scott](#), [Shackleton](#) and [Wilson](#) reach the furthest southern point reached thus far by man, south of 82°S.
- [Walter Sutton](#) (in the [United States](#)) and [Theodor Boveri](#) (in [Germany](#)) independently develop the [Boveri–Sutton chromosome theory](#), explaining the mechanism underlying the laws of [Mendelian inheritance](#) by identifying [chromosomes](#) as the carriers of [genetic](#) material.^[2]
- May 17 – [Archaeologist Valerios Stais](#) identifies the [Antikythera mechanism](#), now considered to be the oldest known [analog computer](#).^[3]
- June 16 – [Bertrand Russell](#) writes to [Gottlob Frege](#) informing him of the problem in [naive set theory](#) that will become known as [Russell's paradox](#).^[4]
- [Gyula Farkas](#) publishes the first proof of [Farkas' lemma](#).^[5]
- [Henri Lebesgue](#) introduces the theory of [Lebesgue integration](#).^[6]
- January 1 – [Nurses Registration Act 1901](#) comes into effect in [New Zealand](#), making it the first country in the world to require state registration of [nurses](#). On January 10, [Ellen Dougherty](#) becomes the world's first registered nurse.
- February – A commission on [yellow fever](#) in the United States announces that the disease is carried by [mosquitoes](#).
- Remains of the second [Tyrannosaurus rex](#) specimen, the first recognized as such, are excavated by [Barnum Brown](#) in the [Hell Creek Formation](#) of [Montana](#).^[7]
- [Oliver Heaviside](#) and [Arthur E. Kennelly](#) independently predict the existence of what will become known as the [Kennelly-Heaviside Layer](#) of the [ionosphere](#).
- [James Jeans](#) finds the length scale required for gravitational perturbations to grow in a static nearly homogeneous medium.

- [Philipp Lenard](#) observes that maximum [photoelectron](#) energies are independent of illuminating intensity but depend on frequency.
- [Gilbert N. Lewis](#) develops the [cubical atom](#) atomic model.
- [Theodor Svedberg](#) suggests that fluctuations in molecular bombardment cause the [Brownian motion](#).
- [William Bayliss](#) and [Ernest Starling](#) make the first discovery of a hormone, [secretin](#).
- [Vienna Psychoanalytic Society](#) begins to meet as the Wednesday Psychological Society in [Sigmund Freud](#)'s apartment.
- January 1 – [Nathan Stubblefield](#) demonstrates his [wireless telephone](#) device in [Kentucky](#).
- April 13 – A new land speed record of 74 mph (119 km/h) is set in [Nice](#), France, by [Léon Serpollet](#) driving a steam car.
- July 17 – [Willis Carrier](#) devises the first modern [air conditioning](#) system for a plant in [New York City](#).
- December 10 – [Old Aswan Dam](#), designed by [William Willcocks](#), completed across the [River Nile](#) in [Egypt](#).
- First [Vierendeel bridge](#) built, across the [Scheldt](#) at [Avelgem](#) in [Belgium](#).
- October – First [Mountain gorillas](#) (*Gorilla beringei beringei*) discovered by Captain [Robert von Beringe](#) in [German East Africa](#).^[8]
- January 28 – The [Carnegie Institution](#) is founded in Washington, D.C., to promote scientific research with a \$10 million gift from [Andrew Carnegie](#).
- [Nobel Prizes](#)
 - [Physics](#) – [Hendrik Lorentz](#), [Pieter Zeeman](#)
 - [Chemistry](#) – [Hermann Emil Fischer](#)
 - [Medicine](#) – [Ronald Ross](#)
- [Hughes Medal](#) first awarded by the [Royal Society](#) of London to [J. J. Thomson](#)
- June 26 – First recipients of the [Order of Merit](#) in the [United Kingdom](#) include
 - [Lord Rayleigh](#)
 - [Lord Kelvin](#)
 - [Lord Lister](#)
 - Sir [William Huggins](#)

1903

- June 27 – 19-year-old [American](#) socialite [Aida de Acosta](#) becomes the first woman to fly a powered aircraft solo when she pilots [Santos-Dumont](#)'s motorized [dirigible](#), "No. 9", from Paris to [Château de Bagatelle](#) in France.^[1]
- December 17 – First documented, successful, controlled, powered flight of a heavier-than-air [aircraft](#) with a [petrol engine](#) by [Orville Wright](#) in the [Wright Flyer](#) at [Kill Devil Hills, North Carolina](#).
- [Konstantin Tsiolkovsky](#) begins a series of papers discussing the use of [liquid fuel rockets](#) to reach outer space, [space suits](#), and colonization of the [solar system](#).

- The type specimen of the [vampire squid](#) (*Vampyroteuthis infernalis*) is described by [Carl Chun](#).
- [Fauna and Flora International](#) is founded as the Society for the Preservation of the Wild Fauna of the Empire by a group of British naturalists and American statesmen in Africa.
- [Peter Cooper Hewitt](#) demonstrates the [mercury-vapour lamp](#).
- [Mikhail Semyonovich Tsvet](#) invents [chromatography](#), an important analytic technique.
- The [International Committee of Atomic Weights](#) publishes the inaugural atomic weights report.
- October – [Frank Nelson Cole](#) demonstrates that the [Mersenne number](#) $2^{67}-1$, or M_{67} , is [composite](#) by [factoring](#) it as $193,707,721 * 761,838,257,287$.^[2]
- [Fast Fourier transform](#) algorithm presented by [Carle David Tolmé Runge](#).^[citation needed]
- [Edmund Georg Hermann Landau](#) gives considerably simpler proof of the prime number theorem.
- [George Darwin](#) and [John Joly](#) claim that radioactivity is partially responsible for the [Earth's](#) heat.
- [Prosper-René Blondlot](#) claims to have detected [N rays](#).
- March–April – [David Bruce](#) identifies the parasitic [Trypanosoma](#) [protist](#) as the source of [African trypanosomiasis](#) ("sleeping sickness").^[3]
- May 10 – [Antoni Leśniowski](#) publishes the first article implicating what will later be known as [Crohn's disease](#), in the [Polish](#) weekly medical newspaper *Medycyna*.^[4]
- [Alfred Walter Campbell](#) divides the [cytoarchitecture](#) of the human brain into 14 areas.^[5]
- [Ernest Fourneau](#) synthesizes and [patents](#) [Amylocaine](#), the first synthetic [local anesthetic](#), under the name *Stovaine* at the [Pasteur Institute](#).^[6]
- [Willem Einthoven](#) discovers [electrocardiography](#) (ECG/EKG)
- [Percy Furnivall](#) carries out the first known case of [cardiac surgery](#) in Britain.
- The 12th and final edition of Dr [Richard von Krafft-Ebing](#)'s *Psychopathia Sexualis: eine Klinisch-Forensische Studie* ("Sexual Psychopathy: a Clinical-Forensic Study") published during the author's lifetime introduces the term *paedophilia erotica*.
- Formal opening of the [Johnston Laboratories](#) at the [University of Liverpool](#), [Liverpool](#), [England](#).
- November – [Windscreen wiper](#) for automobiles is first [patented](#) by [Mary Anderson](#) in the [United States](#).
- The first [diesel](#)-powered ships are launched, both for inland waters: *Petite-Pierre* in [France](#), powered by Dyckhoff-built diesels, and the tanker [Vandal](#) in [Russia](#), powered by [Swedish](#)-built diesels with an electrical transmission.
- [Norwegian](#) engineer [Egidius Elling](#) builds the first [gas turbine](#) to generate power, using a [centrifugal compressor](#).^[7]
- [Laminated glass](#) is invented by Edouard Benedictus.
- [Baker valve gear](#) for [steam locomotives](#) is first patented in the United States.^[8]
- The [Lune Valley boiler](#) is patented by John G. A. Kitchen and Ludlow Perkins.^[9]
- [Nobel Prizes](#)
 - [Physics](#) – [Antoine Henri Becquerel](#), [Pierre Curie](#), and [Marie Curie](#)^[10]

- [Chemistry](#) – [Svante August Arrhenius](#)
- [Medicine](#) – [Niels Ryberg Finsen](#)

1904

- [Johannes Franz Hartmann](#) discovers the [interstellar medium](#).^[1]
- [Edward Walter Maunder](#) plots the first [sunspot "butterfly diagram"](#).
- Notable asteroid [522 Helga](#) is discovered by [Max Wolf](#) in [Heidelberg](#).
- December 3 – The sixth moon of [Jupiter](#), later called [Himalia](#), is discovered at [Lick Observatory](#).
- [Van der Grinten projection](#) proposed.
- [Henri Poincaré](#) discovers the [Poincaré homology sphere](#), leading him to formulate the [Poincaré conjecture](#).
- [Helge von Koch](#) describes the "[Koch snowflake](#)", one of the earliest [fractal curves](#) described.^{[2][3]}
- [Charles Spearman](#) develops his [rank correlation coefficient](#).^[4]
- [Ernst Zermelo](#) formulates the [axiom of choice](#) to formalize his proof of the [well-ordering theorem](#).^[5]
- September 17 – An early study on the relationship between [alcohol and cardiovascular disease](#) is published in the United States.^[6]
- [Epinephrine](#) first artificially synthesized by [Friedrich Stolz](#).
- [Antoni Leśniowski](#) presents to a meeting of the Warsaw Medical Society a surgical specimen of an inflammatory tumour of the [terminal ileum](#) with a fistula to the ascending colon, consistent with what will later become known as [Crohn's disease](#).^[7]
- [Vacuum tube](#) invented by [John Ambrose Fleming](#).
- [James H. Jeans](#)'s *The Dynamical Theory of Gases* is published in [Cambridge](#).
- [J. J. Thomson](#) proposes the [plum pudding model](#) for the [atom](#).
- [Hantaro Nagaoka](#) develops the Saturnian model for the atom.
- July 4 – [Piero Ginori Conti](#) demonstrates the use of [geothermal power](#) to generate electricity, at [Larderello](#) in Italy.
- July 23 – A [continuous track tractor](#) is [patented](#) by [David Roberts](#) of [Richard Hornsby & Sons](#) of [Grantham](#) in England.^[8]
- November 16 – [John Ambrose Fleming](#) patents the first [thermionic vacuum tube](#), the two-electrode [diode](#) ("oscillation valve" or [Fleming valve](#)).^[9]
- November 24 – A continuous track tractor is demonstrated by the [Holt Manufacturing Company](#) in the United States.
- The first [diesel engine submarine](#), the Z, is built in [France](#).
- The [Heckelphone](#) variety of [oboe](#) is invented by [Wilhelm Heckel](#) and his sons.
- The [sleeve valve](#) is invented by Charles Yale Knight.
- The [turbine](#)-powered [Bliss-Leavitt torpedo](#), designed by [Frank McDowell Leavitt](#) and manufactured by the [E. W. Bliss Company](#) of [Brooklyn](#), is put into service by the [United States Navy](#).^[10]

- [Lucien Bull](#) produces the first successful [chronophotography](#) (of insect flight), working in France.^[11]
- Rue Franklin Apartments, Paris, are completed by [Auguste Perret](#) and his brother Gustave, an early example of an exposed [reinforced concrete](#) frame building.^[12]
- First identification and last confirmed sighting of the [Choiseul pigeon](#) in the [Solomon Islands](#).^[13]
- [Nobel Prizes](#)
 - [Physics](#) – [John William Strutt, 3rd Baron Rayleigh](#)
 - [Chemistry](#) – Sir [William Ramsay](#)
 - [Medicine](#) – [Ivan Pavlov](#)

1905

- January 2 – [Charles Dillon Perrine](#) at [Lick Observatory](#) discovers [Elara](#), one of [Jupiter's natural satellites](#).
- The [Dominion Observatory](#) opens in [Ottawa](#).
- Various astronomers discover the [minor planets 554 Peraga](#) through [583 Klotilde](#) (see [List of minor planets/501–600](#)).
- The [nova V604 Aquilae](#) appears in the [constellation Aquila](#).
- The [Umov effect](#) is noted by [Nikolay Umov](#).^[1]
- April 18 – [William Bateson](#) coins the term "[genetics](#)" in a letter to Adam Sedgwick.
- [Reginald Punnett's](#) *Mendelism* is published in Cambridge (U.K.), probably the first [popular science](#) book on genetics.
- [Frederick Blackman](#) proposes his law of limiting factors in relation to [photosynthesis](#).^[2]
- [Nettie Stevens](#) and [Edmund Beecher Wilson](#) independently describe the [XY sex-determination system](#).
- [Stamen Grigorov](#) identifies the [bacterium *Lactobacillus bulgaricus*](#), a major agent in the creation of [yogurt](#).
- [Maltese](#) doctor and archaeologist [Themistocles Zammit](#) identifies [unpasteurized](#) milk as the major source of the pathogen causing [Brucellosis](#).
- [National Association of Audubon Societies for the Protection of Wild Birds and Animals](#) established in the [United States](#).
- [Carl von Linde](#) obtains pure [liquid oxygen](#) and [nitrogen](#) by cooling air.^[3]
- [Alfred Einhorn](#) synthesises the [local anesthetic novocaine](#).^[4]
- The first commercial use of the [Frank–Caro process](#) for the [nitrogen fixation](#) reaction of [calcium carbide](#) and atmospheric [nitrogen](#) to produce [calcium nitrate](#) as a [fertilizer](#).^[3]
- [Fritz Haber](#) and [Carl Bosch](#) develop the [Haber process](#) for making [ammonia](#) from its elements, a milestone in industrial chemistry with deep consequences in agriculture.
- [Pierre Fatou](#) defines the [Mandelbrot set](#).
- [Oswald Veblen](#) proves the [Jordan curve theorem](#).
- [Martin Kutta](#) describes the popular fourth-order [Runge-Kutta method](#).
- [James Cullen](#), [S.J.](#), begins the study of [Cullen numbers](#).

- [Emanuel Lasker](#) proves the [Lasker–Noether theorem](#) for the special case of [polynomial rings](#).
- [Karl Pearson](#) proposes the [random walk](#) in a letter to *Nature*.
- The [Saurian Expedition](#) led by [John C. Merriam](#) recovers many specimens of [ichthyosaur](#).
- [Tyrannosaurus rex](#) is described and named by [Henry Fairfield Osborn](#).
- [Albert Einstein](#) (at this time resident in [Bern](#)) completes his doctoral thesis, *A New Determination of Molecular Dimensions*^[5] on April 30, submitting it to the [University of Zurich](#) on July 30, and publishes his four *Annus Mirabilis papers* in *Annalen der Physik* (Leipzig). Because of this, 1905 is said to be the miraculous year for [physics](#), and its 100th anniversary (2005) is declared the [World Year of Physics](#).
 - "On a [Heuristic](#) Viewpoint Concerning the Production and Transformation of [Light](#)", received March 18 and published June 9, explains the [photoelectric effect](#) through [quantum mechanics](#).^[6]
 - "[Über die von der molekularkinetischen Theorie der Wärme geforderte Bewegung von in ruhenden Flüssigkeiten suspendierten Teilchen](#)" ("On the Motion of Small Particles Suspended in a Stationary Liquid, as Required by the Molecular Kinetic Theory of Heat"), based on his doctoral research, received May 11 and published July 18, delineates a [stochastic](#) model of [Brownian motion](#).^[7]
 - "On the Electrodynamics of Moving Bodies", received June 30 and published September 26, formulates his theory of [special relativity](#).^[8]
 - "Does the Inertia of a Body Depend Upon Its Energy Content?", received September 27 and published November 21, deduces the law of [mass–energy equivalence](#), $E = mc^2$.^[9]
- [Nikolai Korotkov](#) first describes [auscultatory blood pressure measurement](#).^[10]
- [Karl Landsteiner](#) first describes [Meconium ileus](#).^[11]
- [Fritz Schaudinn](#) and [Erich Hoffmann](#) discovered the bacterium that was responsible for [syphilis](#), a spiral-shaped spirochete called [Treponema pallidum](#).
- [Sigmund Freud](#) publishes *Drei Abhandlungen zur Sexualtheorie* (*Three Essays on the Theory of Sexuality*) and *Der Witz und seine Beziehung zum Unbewußten* (*Jokes and their Relation to the Unconscious*).
- June – [Alfred Binet](#) and [Théodore Simon](#) publish the first [Binet-Simon Intelligence Test](#) for [intelligence testing](#) of children with [mental retardation](#).^[12]
- January 17 – Samuel J. Bens of San Francisco is granted the earliest patent for a practical "[endless chain saw](#)" for felling trees.^[13]
- [Pathé Frères](#) colorise black-and-white films by machine.
- [Alfred Buchi](#) files a patent for the [turbocharger](#).
- [Paul de Vivie](#) invents a two-speed rear-wheel [derailleur gear](#) for [bicycles](#).^[14]
- [Pipe](#) manufactures the first [automobile](#) with a [hemi engine](#).
- [Walter Griffiths](#) invents a manually powered domestic [vacuum cleaner](#).
- [Reginald Fessenden](#) invents the [superheterodyne receiver](#).^[15]
- [Marconi](#) invents the [directional antenna](#).^[16]
- First [bascule bridge](#) to the design of [Joseph Strauss](#) built.^[17]
- [Canal Lake Concrete Arch Bridge](#) built in [Ontario](#).

- [Nobel Prizes](#)
 - [Physics](#) – [Philipp Eduard Anton von Lenard](#)
 - [Chemistry](#) – [Johann Friedrich Wilhelm Adolf von Baeyer](#)
 - [Medicine](#) – [Robert Koch](#)

1906

- [Charles Barkla](#) discovers that each element has a characteristic [X-ray](#) and that the degree of penetration of these X-rays is related to the [atomic weight](#) of the element.
- [Mikhail Tsvet](#) first names the [chromatography](#) technique for organic compound separation, in the course of demonstrating that [chlorophyll](#) is not a single [chemical compound](#).^{[1][2]}
- April 18 – The [San Francisco earthquake](#), an estimated 7.9 on the [Richter scale](#) and centered on the [San Andreas fault](#), strikes near [San Francisco, California](#). The [earthquake](#) and fire destroy over 80% of the buildings in the city, and kill as many as 6,000 people. [Harry Fielding Reid](#) devises the [elastic-rebound theory](#) to account for earthquake mechanism.^[3]
- [Richard Oldham](#) argues that the [Earth](#) has a molten interior.^[4]
- [Andrey Markov](#) produces his first theories on [Markov chain](#) processes.
- [Axel Thue](#) uses the [Thue–Morse sequence](#) to found the study of [combinatorics on words](#).
- September – Last death from [yellow fever](#) in the [Panama Canal Zone](#) following a [mosquito](#) eradication program led by [William C. Gorgas](#).^[5]
- October–December – Martha Baer undergoes [sex reassignment surgery](#) to become [Karl M. Baer](#) in Germany.
- November 3 – A speech given by [Alois Alzheimer](#) for the first time presents the pathology and clinical symptoms of pre-senile [dementia](#) together;^{[6][7]} the condition will rapidly become known as [Alzheimer's disease](#).^[8]
- [BCG](#) (Bacilli-Calmette-Guerin) immunization for [Tuberculosis](#) first developed.
- Transmission of [dengue fever](#) by the [Aedes mosquito](#) is confirmed.^[9]
- [Frederick Hopkins](#) proposes the existence of [vitamins](#) and suggests that a lack of them causes [scurvy](#) and [rickets](#).
- [Charles Sherrington](#) publishes *The Integrative Action of the Nervous System*.
- [Clemens Peter von Pirquet](#), with [Béla Schick](#), coins the term "[allergy](#)" to describe hypersensitive reactions.
- [Royal Victoria Hospital, Belfast](#), is completed, the first such [air conditioned](#) building in the world.
- [George Newman](#) publishes *Infant Mortality: a Social Problem* in England.
- [August von Wassermann](#) develops a [complement fixation](#) test for the diagnosis of [syphilis](#).
- [Walther Nernst](#) presents a formulation of the [third law of thermodynamics](#).
- January – [Lee De Forest](#) files a patent for the [Audion vacuum tube](#), which helps usher in the age of electronics.^[10]
- February 10 – Launch of British [battleship HMS Dreadnought](#).

- March 18 – At [Montesson](#) in France, [Romanian](#) inventor [Traian Vuia](#) becomes the first person to achieve an unassisted takeoff in a heavier-than-air powered [monoplane](#), but it is incapable of sustained flight.
- October 18 – [German](#) inventor [Arthur Korn](#) demonstrates the transmission of a photograph electronically over a distance of 1800 km^[11] using his *Bildetelegraph* or [phototelaugraph](#) system.
- December 24 – [Reginald Fessenden](#) makes the first [radio](#) broadcast, including a musical recording, a violin solo, and readings, from [Brant Rock, Massachusetts](#).
- The first practicable [gyrocompass](#) is invented by [Hermann Anschütz-Kaempfe](#) in [Germany](#).^{[12][13]}
- November 12 – First displays of the [Deutsches Museum](#) open to the public in [Munich](#).
- [African Invertebrates](#) begins publication as *Annals of the Natal Government Museum*; it will be continuing publication more than a century later.
- [Nobel Prizes](#)
 - [Physics](#) – Sir [J. J. Thomson](#)
 - [Chemistry](#) – [Henri Moissan](#)
 - [Medicine](#) – [Camillo Golgi](#), [Santiago Ramón y Cajal](#)
- [Hughes Medal](#) – [Hertha Ayrton](#)

1907

- [Emil Fischer](#) artificially synthesizes [peptide amino acid](#) chains and thereby shows that amino acids in [proteins](#) are connected by amino group-acid group bonds.
- [Hermann Staudinger](#) prepares the first synthetic [β-lactam](#).
- [Georges Urbain](#) discovers [Lutetium](#) (from *Lutetia*, the ancient name of [Paris](#)).
- January 14 – [1907 Kingston earthquake](#): [Earthquake](#) in [Kingston, Jamaica](#).
- c. March 28 – [Volcanic eruption](#) of [Ksudach](#) in the [Kamchatka Peninsula](#).
- [Bertram Boltwood](#) proposes that the amount of lead in uranium and thorium ores might be used to determine the Earth's age and crudely dates some rocks to have ages between 410–2200 million years.
- The [Moine Thrust Belt](#) in [Scotland](#) is identified by [Ben Peach](#) and [John Horne](#), one of the first to be discovered.^{[1][2]}
- The rare [phosphate mineral](#) [tarbuttite](#) is first discovered at [Broken Hill](#), [Barotziland-North-Western Rhodesia](#).^{[3][4]}
- [Ludovic Mrazek](#) describes and names [diapirs](#).^{[5][6]}
- [Paul Koebe](#) conjectures the result of the [Koebe quarter theorem](#).
- [Paul Ehrlich](#) develops a chemotherapeutic cure for [sleeping sickness](#).
- [George Soper](#) identifies "[Typhoid Mary](#)" Mallon as an [asymptomatic carrier](#) of [typhoid](#) in [New York](#).^[7]
- [Dengue fever](#) becomes the second disease shown to be caused by a [virus](#).^[8]
- October 21 – Jaw of [Homo heidelbergensis](#) ([Mauer 1](#)) found.^[9]

- The [Ehrenfest model](#) of [diffusion](#) is proposed by [Tatiana](#) and [Paul Ehrenfest](#) to explain the [second law of thermodynamics](#).^[10]
- [Albert Einstein](#) introduces the principle of equivalence of gravitation and inertia and uses it to predict the [gravitational redshift](#).
- [Ivan Pavlov](#) demonstrates conditioned responses with salivating [dogs](#).
- [Vladimir Bekhterev](#) begins publication of *Objective Psychology*.^[11]
- August 10 – [Peking to Paris](#) motor race concludes after 2 months, won by [Prince Scipione Borghese](#) driving a 7-litre 35/45 hp [Itala](#).
- August 29 – The partially completed [Quebec Bridge](#) collapses.^[12]
- [Lee de Forest](#) invents the [triode](#) thermionic amplifier, starting the development of [electronics](#) as a practical technology.
- Furuholmen Lighthouse in [Sweden](#) is the world's first to be equipped with [AGA's Dalén light](#) incorporating [Gustaf Dalén's](#) invention of the [sun valve](#) which turns the beacon's accumulator gas supply on and off using daylight,^[13] and for which Dalén will be awarded the [Nobel Prize in Physics](#) in 1912.^[14]
- [Ole Evinrude](#) invents the first practical [outboard motor](#), in the United States.
- [Rudge-Whitworth](#) of [Coventry](#) (England) produce the first detachable wire wheel for automobiles.^[15]
- The [Autochrome Lumière](#) is the first [color photography](#) process marketed.
- Samuel Simon [patents](#) a [screenprinting](#) process in the [United Kingdom](#).
- [Carl Hagenbeck](#) opens the [Tierpark Hagenbeck](#) in Stellingen, near [Hamburg, Germany](#), the first [zoo](#) to use open moated enclosures, rather than barred cages, to better approximate animals' natural environments.^{[16][17]}
- December 28 – Last confirmed sighting of a [Huia](#) in [New Zealand](#).
- [Nobel Prizes](#)
 - [Physics](#) – [Albert Abraham Michelson](#)
 - [Chemistry](#) – [Eduard Buchner](#)
 - [Medicine](#) – [Charles Louis Alphonse Laveran](#)
- [Order of Merit](#): [Florence Nightingale](#)

1908

- A 40,000-year-old [Neanderthal](#) boy skeleton is found at [Le Moustier](#) in southwest [France](#) by [Otto Hauser](#).
- If its start and end are defined using [mean solar time](#) then due to the extreme [length of day](#) variation this is the longest year of the [Julian calendar](#) or [Gregorian calendar](#), having a duration of 31622401.38 seconds of [Terrestrial Time](#) (or [ephemeris time](#)).^[1]
- June 30 [O.S. June 17] – [Tunguska event](#) in [Siberia](#), an [explosion](#) believed to have been caused by the [air burst](#) of a large [meteoroid](#) or [comet](#) fragment at an altitude of 5–10 kilometres (3–6 mi) above the [Earth's](#) surface.^{[2][3][4]}
- [Kikunae Ikeda](#) discovers [monosodium glutamate](#), the chemical behind the taste of [umami](#).^[5]

- [Heike Kamerlingh Onnes](#) liquefies [helium](#).
- [G. H. Hardy](#) and [Wilhelm Weinberg](#) independently formulate the [Hardy–Weinberg principle](#) which states that both [allele](#) and [genotype frequencies](#) in a population remain in equilibrium unless disturbed.^[6] proposes that genetic defects cause many inherited diseases.
- Site of [Ulugh Beg Observatory](#) located in [Samarkand](#) by [Russian](#) archaeologist V. L. Vyatkin.
- [National Technical Museum \(Prague\)](#) founded.
- [Ernst Zermelo](#) axiomizes [set theory](#), thus avoiding Cantor's contradictions.
- [Josip Plemelj](#) solves the Riemann problem about the existence of a differential equation with a given [monodromic group](#) and uses Sokhotsky-Plemelj formulae.
- [Student's t-distribution](#) published by [William Sealy Gosset](#) (anonymously).^[7]
- [Edmontosaurus mummy AMNH 5060](#), an exceptionally well-preserved [fossil dinosaur](#), is discovered near [Lusk, Wyoming](#).
- [Hans Geiger](#) and [Ernest Rutherford](#) invent the [Geiger counter](#).
- [Gustav Mie](#) publishes the [Mie solution](#) to [Maxwell's equations](#) on the [scattering of electromagnetic radiation](#) by a [sphere](#).^[8]
- April 27 – First Congress for Freudian Psychology, held in [Salzburg](#).
- [Swiss psychiatrist Eugen Bleuler](#) introduces the term [schizophrenia](#).^[9]
- [Austrian American pathologist Leo Buerger](#) gives the first accurate pathological description of [Thromboangiitis obliterans](#) ("Buerger's disease") at [Mount Sinai Hospital \(Manhattan\)](#).^[10]
- [Victor Horsley](#) and R. Clarke invents the [stereotactic method](#).
- [Margaret Reed Lewis](#), working in Berlin, becomes probably the first person successfully to grow mammalian tissue *in vitro*.^[11]
- January 12 – A long-distance [radio](#) message is sent from the [Eiffel Tower](#) for the first time.
- [Henry Ford](#) develops the assembly line method of automobile manufacturing and produces the first [Model T](#) automobile.
- [Nobel Prizes](#)
 - [Physics](#) – [Gabriel Lippmann](#)
 - [Chemistry](#) – [Ernest Rutherford](#)
 - [Nobel Prize in Physiology or Medicine](#) – [Ilya Ilyich Mechnikov](#) and [Paul Ehrlich](#)

1909

- [Comet Halley](#) first becomes visible on a photographic plate.
- Danish plant physiologist [Wilhelm Johannsen](#) introduces the term "[Gene](#)".^[1]
- [Thomas Hunt Morgan](#) produces heritable mutant [Drosophila melanogaster](#).

- February 5 – [Leo Baekeland](#) announces the creation of the early [plastic Bakelite](#), a hard [thermosetting phenol formaldehyde resin](#), to the [American Chemical Society](#).^[2]
- Summer – [Fritz Haber](#) and [Carl Bosch](#) first demonstrate the [Haber process](#), the [catalytic](#) formation of [ammonia](#) from [hydrogen](#) and atmospheric [nitrogen](#) under conditions of high temperature and pressure.^{[3][4]}
- The concept of [p\[H\]](#) as a measure of the [acidity](#) or [basicity](#) of an [aqueous solution](#) is introduced by [Danish chemist Søren Peder Lauritz Sørensen](#) at the [Carlsberg Laboratory](#).^[5]
- A team under German chemist [Fritz Hofmann](#) first synthesizes [synthetic rubber](#) (*Methylkautschuk*).
- January 16 – [Ernest Shackleton](#)'s expedition locates the [South Magnetic Pole](#).^[6]
- April 6 – [Robert Peary](#), [Matthew Henson](#), and four [Eskimo](#) explorers come within a few miles of the [North Pole](#).
- October 8 – An earthquake in the [Zagreb](#) area leads [Andrija Mohorovičić](#) to identify the [Mohorovičić discontinuity](#).
- [L. E. J. Brouwer](#) makes a proof of the [Brouwer fixed-point theorem](#).^[7]
- August 30 – Discovery of the [Burgess Shale Cambrian fossil](#) site in the [Canadian Rockies](#) by [paleontologist Charles Walcott](#) of the [Smithsonian Institution](#).
- Excavation of the [dinosaur bone beds](#) at what will become [Dinosaur National Monument](#) in the [Uinta Mountains](#) of the United States by paleontologist [Earl Douglass](#) working for the [Carnegie Museum of Natural History](#).^[8]
- [Paul Ehrenfest](#) presents the [Ehrenfest paradox](#).^[9]
- [Albert Einstein](#) together with [Marcel Grossmann](#) starts to develop a theory which would bind [metric tensor](#) g_{ik} , which defines a [space geometry](#), with a source of gravity, that is with [mass](#).
- [Hans Geiger](#) and [Ernest Marsden](#) discover large angle deflections of alpha particles by thin metal foils.
- [Ernest Rutherford](#) and [Thomas Royds](#) demonstrate that [alpha particles](#) are doubly [ionized](#) helium atoms.
- July – [Ivy Evelyn Woodward](#) is admitted as the first woman Member of the [Royal College of Physicians](#) in the United Kingdom.^{[10][11]}
- September – [Sigmund Freud](#) delivers his only lectures in the United States, on [psychoanalysis](#), at [Clark University](#), Worcester, Massachusetts, giving public recognition to the subject in the anglophone world.
- German neurologist [Korbinian Brodmann](#) defines the [cytoarchitecture](#) of the [Brodmann area](#) of the [cerebral cortex](#).^[12]
- Brazilian physician and [infectologist](#) [Carlos Chagas](#) first describes [Chagas disease](#).^{[13][14][15][16]}
- French [otolaryngologist](#) [Étienne Lombard](#) discovers the [Lombard effect](#).^{[17][18]}
- In [psychology](#), [Edward B. Titchener](#) makes the first published coinage of the term [Empathy](#) as a translation of the [German](#) *Einfühlungsvermögen*.^[19]
- March 18 – Einar Dessau uses a [shortwave radio](#) transmitter in Denmark.^[20]

- July 23 – [White Star Liner RMS Republic](#) (15,400 tons), sinking following a collision off [Nantucket](#), becomes the first ship in history to issue a [CQD](#) distress signal, using [Marconi wireless telegraphy](#).^{[21][22]}
- July 25 – [Louis Bleriot](#) is the first man to fly across the [English Channel](#) in a heavier-than-air craft.
- [Kinemacolor](#), the first commercial "natural color" system for [movies](#) is invented.
- [Johann Stumpf](#) popularises the [uniflow steam engine](#).^[23]
- June 26 – The [Science Museum, London](#) is established as an institution in its own right.^[24]
- Commencement of fieldwork for the multidisciplinary [Clare Island Survey](#) (Ireland), under the direction of [Robert Lloyd Praeger](#).
- [Nobel Prizes](#)
 - [Physics](#) – [Guglielmo Marconi](#), [Karl Ferdinand Braun](#)
 - [Chemistry](#) – [Wilhelm Ostwald](#)
 - [Medicine](#) – [Emil Theodor Kocher](#)

1910

- May 18 – [Earth](#) passes through the [tail](#) of [Halley's Comet](#).
- Approximate date – The [Hertzsprung–Russell diagram](#) is developed by [Ejnar Hertzsprung](#) and [Henry Norris Russell](#).
- [Behrmann projection](#) introduced.
- [Albert Einstein](#) and [Marian Smoluchowski](#) find the Einstein-Smoluchowski formula for the attenuation coefficient due to density fluctuations in a gas.
- [Umetaro Suzuki](#) isolates the first [vitamin](#) complex, [aberic acid](#).^[1]
- [Hoechst AG](#) market [Arsphenamine](#) under the [trade name](#) *dagggga*, the first organic antisypilitic, its properties having been discovered the previous fall by bacteriologist [Sahachiro Hata](#) during systematic testing in the laboratory of [Paul Ehrlich](#); it rapidly becomes the world's most widely prescribed drug.^[2]
- [George Barger](#) and James Ewens of [Wellcome](#) Laboratories in London first synthesize [dopamine](#).^[3]
- Publication of the 1st volume of [Principia Mathematica](#) by [Alfred North Whitehead](#) and [Bertrand Russell](#), one of the most important and seminal works in mathematical logic and philosophy.
- First known use of the term "[Econometrics](#)" (in [cognate](#) form), by [Paweł Ciompa](#).^[4]
- [German physicist Theodor Wulf](#) climbs the [Eiffel Tower](#) with an [electrometer](#) and discovers the first evidence of [cosmic rays](#).
- [Hans Reissner](#) and [Gunnar Nordström](#) define the [Reissner-Nordström singularity](#); [Hermann Weyl](#) solves the special case for a point-body source.
- March – [International Psychoanalytical Association](#) established.

- May 18 – At the annual meeting of the American Association for the Study of the [Feeble-Minded](#), [Henry H. Goddard](#) introduces a system for classifying individuals with mental retardation based on [intelligence quotient](#) (IQ): [moron](#) for those with an IQ of 51-70, [imbecile](#) for those with an IQ of 26-50, and [idiot](#) for those with an IQ of 0-25.
- July 15 – Publication of the eighth edition of [Emil Kraepelin](#)'s *Psychiatrie: Ein Lehrbuch für Studierende und Ärzte*, naming [Alzheimer's disease](#) as a variety of [dementia](#).^[5]
- Late December – A form of [pneumonic plague](#) spreads through northeastern [China](#), killing more than 40,000.^{[6][7][8]}
- [Thomas Hunt Morgan](#) discovers that [genes](#) are located on [chromosomes](#).
- [Chicago cardiologist James B. Herrick](#) makes the first published identification of [sickle cells](#) in the blood of a patient suffering from [anemia](#).^[9]
- [Platelets](#) are first named by [James Homer Wright](#).^[10]
- [Peyton Rous](#) demonstrates that a malignant tumor can be transmitted by a virus (which becomes known as the [Rous sarcoma virus](#), a [retrovirus](#)).^{[11][12]}
- [Hans Christian Jacobaeus](#) of [Sweden](#) performs the first [thoracoscopic](#) diagnosis with a [cystoscope](#).^{[13][14]}
- January 12–13 – [Birth of public radio broadcasting](#): [Lee De Forest](#) conducts an experimental broadcast of part of a live performance of *Tosca* and, the next day, a performance with the participation of the Italian tenor [Enrico Caruso](#) from the stage of [Metropolitan Opera House](#) in [New York City](#).^{[15][16]}
- March 28 – [Henri Fabre](#) makes the first flights in a [seaplane](#), at [Martigues, France](#).
- June 7 – William G. Allen of the [Allen Manufacturing Company](#) is granted a United States [patent](#) for a [hex key](#).^[17]
- October – First publication of [infrared photographs](#), by [American](#) optical [physicist Robert W. Wood](#) in the [Royal Photographic Society's Journal](#).
- December 3–18 – [Georges Claude](#) demonstrates the first modern neon light at the [Paris Motor Show](#).
- Lieutenant-Colonel Dr. [George Owen Squier](#) of the [United States Army](#) invents telephone carrier [multiplexing](#).
- Completion of [Delaware, Lackawanna and Western Railroad's Paulinskill Viaduct](#) on its [Lackawanna Cut-Off](#), the world's largest [reinforced concrete](#) structure at this time, built under the supervision of Lincoln Bush, its chief engineer.^[18]
- March 17 – The [Smithsonian Institution](#)'s Natural History Building, later the [National Museum of Natural History](#), opens its doors to the public in [Washington, D.C.](#)^[19]
- [Nobel Prizes](#)
 - [Physics](#) – [Johannes Diderik van der Waals](#)
 - [Chemistry](#) – [Otto Wallach](#)
 - [Medicine](#) – [Albrecht Kossel](#)

1911

- June 28 – The [Nakhla meteorite](#) (from [Mars](#)) lands in the area of [Alexandria, Egypt](#), purportedly killing a dog.^[1]

- May 19 – [Parks Canada](#), the world's first [national park](#) service, is established as the Dominion Parks Branch under the [Department of the Interior](#).
- July 7 – The United States, Russia, the United Kingdom and Japan, meeting in Washington, D.C., sign the [North Pacific Fur Seal Convention of 1911](#), prohibiting open-water [seal hunting](#) of the endangered [fur seal](#) in the North [Pacific Ocean](#),^[2] the first international [treaty](#) to address [wildlife conservation](#) issues. In the next six years, the seal population increases by 30%.^[3]
- January 3 – [1911 Kebin earthquake](#): An [earthquake](#) of 7.7 [moment magnitude](#) strikes near [Almaty](#) in [Russian Turkestan](#).^[4]
- July 24 - Would-be [American](#) archeologist [Hiram Bingham](#) "found" the Incan city of [Machu Picchu](#) and introduced it to the world.
- December 14 – [Norwegian](#) explorer [Roald Amundsen](#) and a team of four become the first people to reach the [South Pole](#).
- [Robert Remak](#)'s doctoral dissertation *Über die Zerlegung der endlichen Gruppen in indirekte unzerlegbare Faktoren* establishes that any two decompositions of a [finite group](#) into a [direct product](#) are related by a central automorphism.
- [Traian Lalescu](#) publishes *Introduction to the Theory of Integral Equations*, the first ever monograph on the subject of [integral equations](#).
- [Eugen Bleuler](#) expands on his definition of [schizophrenia](#) as a condition distinct from [Dementia praecox](#), in *Dementia Praecox oder Gruppe der Schizophrenien*.^{[5][6][7]}
- April 8 – [Heike Kamerlingh Onnes](#) discovers the phenomenon of [superconductivity](#).^[8]
- June 24–30 – [Domenico Pacini](#) runs a series of measurements of underwater ionization in the [Gulf of Genoa](#), demonstrating that the radiation later recognised as [cosmic rays](#) cannot be originated by the Earth's crust.
- October – The first [Solvay Congress](#) of physicists convenes.
- [Ernest Rutherford](#) explains the [Geiger–Marsden experiment](#) and derives the Rutherford [cross section](#) by deducing the existence of a [compact atomic nucleus](#) from [scattering experiments](#). He proposes the [Rutherford model](#) of the atom and demonstrates that [J. J. Thomson's plum pudding model](#) is incorrect.
- [Charles Wilson](#) finishes a sophisticated [cloud chamber](#).
- The [Ponzo illusion](#), a [geometrical-optical illusion](#), is first demonstrated by [Italian](#) psychologist [Mario Ponzo](#).^[9]
- January 18 – [Eugene Ely](#) lands on the deck of the [USS Pennsylvania](#) anchored in [San Francisco Bay](#), the first aircraft [landing](#) on a ship.
- June 5 – [Charles F. Kettering](#) files a United States [patent](#) for an electric [starter motor](#).^[10]
- November 4 – [MS Selandia](#), the first large ocean-going [diesel](#) ship, is launched in Denmark; [Ivar Knudsen](#) is the diesel engineer. The 1909-launched Dutch diesel [tanker Vulcanus](#) also enters service this year.
- [John Joseph Rawlings](#) files a United Kingdom patent for a [wall plug](#).^[11]
- The [Lewis automatic light machine gun](#) is invented by [United States Army](#) Colonel [Isaac Newton Lewis](#), based on initial work by Samuel Maclean.^[12]

- March–May – A serialized version of [Frederick Winslow Taylor's monograph, *The Principles of Scientific Management*](#) appears in [The American Magazine](#), boosting the efficiency movement.
- [Nobel Prizes](#)
 - [Physics](#) – [Wilhelm Wien](#)
 - [Chemistry](#) – [Marie Curie](#)^[13]
 - [Medicine](#) – [Allvar Gullstrand](#)

1912

- December 6 – The [Nefertiti bust](#) is found at [Amarna](#) in Egypt by the [German Oriental Company](#) (Deutsche Orient-Gesellschaft – DOG), led by German archaeologist [Ludwig Borchardt](#).
- At the beginning of this year an extreme decadal variation in [length of day](#) produces mean solar days having a duration of 86400.00389 seconds of [Terrestrial Time](#) (or [ephemeris time](#)), the slowest rotation of [Earth's crust](#) ever to be recorded.^[1]
- July 23 – [Horace Donisthorpe](#) first discovers [Anergates atratulus](#) in the [New Forest](#), England.
- [Reginald Punnett](#) is appointed as first [Arthur Balfour Professor of Genetics](#) in the [University of Cambridge](#) (U.K.), probably the oldest chair of [genetics](#) in the English-speaking world.
- [Peter Debye](#) derives the [T-cubed law](#) for the low temperature [heat capacity](#) of a [nonmetallic](#) solid.
- [Casimir Funk](#) introduces the concept of [vitamins](#).^[2]
- [Fritz Klatte](#), a [German](#) chemist working for Griesheim-Elektron, discovers [polyvinyl acetate](#) and applies for a [patent](#) for preparing the monomer, [vinyl acetate](#), by addition of [acetic acid](#) to [acetylene](#) using a [mercuric chloride catalyst](#)^[3] although it is not successfully commercialized at this time.
- [Wilbur Scoville](#) devises the [Scoville scale](#) for measuring the heat of peppers.
- December 24 – [Merck](#) files [patent](#) applications for synthesis of the [entactogenic](#) drug [MDMA](#), developed by [Anton Köllisch](#).^{[4][5][6]}
- January – [Alfred Wegener](#) proposes a fully formulated [theory](#) of [continental drift](#) and gave the supercontinent [Pangaea](#) its name.^{[7][8]}
- June 6 – The [Novarupta](#) volcano on the [Alaska Peninsula](#) comes into being through a [VEI 6](#) eruption, the largest this century.
- January 17 – British polar explorer [Robert Falcon Scott](#) and a team of four reach the [South Pole](#) to find that [Amundsen](#) has beaten them to it. They will die on the return journey, just eleven miles from a polar base (March 16–29).^[9]
- March 7 – [Roald Amundsen](#) announces in [Hobart](#) that his expedition reached the [South Pole](#) on last December 14.

- November 20 – [History of Medicine Society](#) holds its first meeting, under the chairmanship of Sir [William Osler](#), in London.
- [Georgius Agricola](#)'s *[De re metallica](#)* (1556) is first published in an [English](#) translation, made by [Herbert](#) and [Lou Henry Hoover](#), in London.
- [Voynich manuscript](#) discovered.
- Publication of the 2nd volume of *[Principia Mathematica](#)* by [Alfred North Whitehead](#) and [Bertrand Russell](#), one of the most important and seminal works in mathematical logic and philosophy.
- [Karl F. Sundman](#) solves the [n-body problem](#) for $n=3$.
- [Harvey Cushing](#) identifies [Cushing's disease](#), caused by a malfunction of the [pituitary gland](#).
- [Solomon Carter Fuller](#) first names [Alzheimer's disease](#).
- [Hakaru Hashimoto](#) first describes the symptoms of [Hashimoto's thyroiditis](#).^[10]
- [Krupp](#) engineers Benno Strauss and Eduard Maurer patent [austenitic stainless steel](#) (October 17)^[11] and [Elwood Haynes](#) (in the United States) and [Harry Brearley](#) (of [Brown-Firth](#) in [Sheffield](#), England) independently discover [martensitic](#) stainless steel alloys.^{[12][13]}
- April 5 – [Milutin Milanković](#)'s *[Contribution to the mathematical theory of climate](#)*, his first work in this field, is published in [Belgrade](#).
- December 18 – Skull of "[Piltdown Man](#)" presented to the [Geological Society of London](#) as the [fossilised](#) remains of a previously unknown form of [early human](#). It is revealed to be a hoax in 1953.^[9]
- November 11 – [William Lawrence Bragg](#) presents his derivation of [Bragg's law](#) for the angles for coherent and incoherent [scattering](#) from a [crystal lattice](#).^[14]
- [Max von Laue](#) suggests using crystal lattices to [diffract X-rays](#).
- [Walter Friedrich](#) and [Paul Knipping](#) diffract X-rays in [zinc blende](#).
- [Victor Hess](#) discovers that the [ionization](#) of air increases with altitude, indicating the existence of [cosmic radiation](#).
- [Carl Jung](#) publishes *Wandlungen und Symbole der Libido* (*[Psychology of the Unconscious](#)*), based on lectures delivered at [Fordham University](#) and precipitating a break with [Sigmund Freud](#).
- [Sabina Spielrein](#) delivers her paper on "Destruction as the Cause of Coming Into Being" to the [Vienna Psychoanalytic Society](#).
- April 14–15 – [Sinking of the RMS Titanic](#): The [ocean liner RMS Titanic](#) strikes an [iceberg](#) and sinks on her maiden voyage from the United Kingdom to the United States.^{[9][15]}
- The British [Royal Navy](#) introduces the director [ship gun fire-control system](#) using the [Dreyer Table](#), a mechanical [analogue computer](#).^[16]
- The [Sperry Corporation](#) develops the first [gyroscopic autopilot](#) ("gyroscopic stabilizer apparatus") for aviation use.
- The [earth inductor compass](#) is first [patented](#) by Donald M. Bliss.

- American ornithologist [Robert Ridgway](#) publishes *Color Standards and Color Nomenclature*.
- Conférence internationale de l'heure radiotélégraphique.
- First International Congress of [Eugenics](#) held in London with the support of [Leonard Darwin](#), [Winston Churchill](#), [Auguste Forel](#), [Alexander Graham Bell](#), [Charles Davenport](#) and other prominent scientists.^[17]
- Nobel Prize
 - [Physics](#) – [Nils Gustaf Dalén](#)^[18]
 - [Chemistry](#) – [Victor Grignard](#); [Paul Sabatier](#)
 - [Medicine](#) – [Alexis Carrel](#)

1913

- February 9 – [Meteor procession of February 9, 1913](#) visible along a [great circle](#) arc 6,040 miles (9,720 km) across the [Americas](#). Astronomer [Clarence Chant](#) concludes that the source was a small, short-lived [natural satellite](#) of the Earth.^{[1][2]}
- [Berlin Observatory](#) moves to [Babelsberg](#).
- [William Temple Hornaday](#) publishes *Our Vanishing Wild Life: Its Extermination and Preservation*.
- February – Daniel J. O'Connor and Herbert A. Faber file for a [United States patent](#) on the [composite plastic laminate Formica](#).^[3]
- [Elmer McCollum](#) and [Marguerite Davis](#) at the [University of Wisconsin–Madison](#), and [Lafayette Mendel](#) and [Thomas Burr Osborne](#) at [Yale University](#) independently discover [Vitamin A](#).^[4]
- [Protactinium](#) is first identified by [Oswald Helmuth Göhring](#) and [Kasimir Fajans](#).
- [Henry Moseley](#) shows that nuclear charge is the real basis for numbering the elements and discovers a systematic relation between [wavelength](#) and [atomic number](#) by using [x-ray spectra](#) obtained by diffraction in crystals.^[5] [Frederick Soddy](#) proposes that [isotopes](#) (a term which he introduces) may have differing atomic weights.^[6]
- [J. J. Thomson](#) shows that charged subatomic particles can be separated by their mass-to-charge ratio, the technique known as [mass spectrometry](#).^[7]
- The [Bergius process](#) was first developed and patented by German chemist [Friedrich Bergius](#) in 1913.
- [Charles Fabry](#) and [Henri Buisson](#) discover the [ozone layer](#).
- [Albert A. Michelson](#) measures [tides](#) in the solid body of the [Earth](#)
- March – First publication of *Isis*, the journal of the history of science edited by [George Sarton](#), in [Ghent](#).
- [Pierre Duhem](#) begins publication of *Le Système du Monde: Histoire des Doctrines cosmologiques de Platon à Copernic* in [Paris](#).

- March 6 – First publication of [Ludwig Wittgenstein's philosophy of mathematics](#), a polemical review of [Peter Coffey's](#) *The Science of Logic*^[8] written in 1912 when Wittgenstein was an undergraduate studying with Bertrand Russell.
- Publication of the 3rd volume of *Principia Mathematica* by [Alfred North Whitehead](#) and [Bertrand Russell](#), one of the most important and seminal works in mathematical logic and philosophy.
- [Émile Borel](#) first states the [infinite monkey theorem](#) in the way it will subsequently become known.^[9]
- [William Henry Bragg](#) and [William Lawrence Bragg](#) work out the Bragg condition for strong X-ray reflection.
- [Niels Bohr](#) presents his [quantum model of the atom](#).^{[10][11][12]}
- [William Crookes](#) creates [sunglass](#) lenses.
- [Robert Millikan](#) measures the [fundamental unit of electric charge](#).
- [Georges Sagnac](#) demonstrates the [Sagnac effect](#), showing that light propagates at a speed independent of the speed of its source.^{[13][14][15]}
- [Johannes Stark](#) demonstrates that strong electric fields will split the Balmer spectral line series of hydrogen.
- [Nikolay Anichkov](#) first demonstrates the significance and role of [cholesterol](#) in [atherosclerosis](#) pathogenesis.^[16]
- [Albert Schweitzer](#) sets up the [Albert Schweitzer Hospital](#) at [Lambaréné](#) in [French Equatorial Africa](#).
- [John B. Watson](#) publishes the article "[Psychology as the Behaviorist Views It](#)" — sometimes called "[The Behaviorist Manifesto](#)".^[17]
- April 29 – [Swedish American](#) engineer [Gideon Sundback](#) of [Hoboken, New Jersey](#), [patents](#) the all-purpose [zipper](#).
- May 26 (May 13 [O.S.](#)) – [Igor Sikorsky](#) flies the world's first 4-engine [fixed-wing aircraft](#), his [Bolshoi Baltisky biplane](#), near [Saint Petersburg](#).^{[18][19]}
- August – Invention of [stainless steel](#) by [Harry Brearley](#) in [Sheffield](#), England (concurrent with the invention of another type in the United States by [Elwood Haynes](#)).^[20]
- [Oskar Barnack](#) of [Leitz](#) produces the first [35 mm film](#) miniature still camera.
- [French](#) inventor [René Lorin](#) [patents](#) the [ramjet](#), but attempts to build a prototype fail due to inadequate materials.^[21]
- *Die [Naturwissenschaften](#)* first published by [Die Kaiser-Wilhelm-Gesellschaft zur Förderung der Wissenschaften e. V.](#)
- *[Journal of Ecology](#)* first published.
- [Nobel Prize](#)
 - [Physics](#) – [Heike Kamerlingh Onnes](#)
 - [Chemistry](#) – [Alfred Werner](#)
 - [Medicine](#) – [Charles Richet](#)

- [Sinope](#), the outermost known [moon](#) of [Jupiter](#), is discovered by [Seth Barnes Nicholson](#) at [Lick Observatory](#).
- A 76 cm [refracting telescope](#) is built at [Allegheny Observatory](#) in [Pittsburgh, Pennsylvania](#). It is the fifth largest refractor in the world.
- [Robert Goddard](#) begins building [rockets](#).
- [Walter Sydney Adams](#) determines an incredibly high [density](#) for [Sirius B](#).
- March 27 – [Belgian](#) surgeon [Albert Hustin](#) makes the first successful non-direct [blood transfusion](#), using [anticoagulants](#).
- August 1 – [Swiss National Park](#) (*Parc Naziunal Svizzer*) established in the [Engadin](#) region of Switzerland.
- September 1 – [Martha](#), the last known [passenger pigeon](#), dies, in the [Cincinnati Zoo](#).
- November 6 – [Jacques Loeb](#) publishes a paper on artificial [parthenogenesis](#) in [sea urchins](#).^[1]
- November 26 – [Karl von Frisch](#) publishes his first significant paper on [honey bee](#) behavior, "Der Farbensinn und Formensinn der Biene".^[2]
- [Julian Huxley](#) publishes *The Courtship Habits of the Great Crested Grebe*, a key text in [ethology](#).
- [John Joly](#) develops a method of extracting [radium](#) and applying it in [radiotherapy](#).^[3]
- [Edward Calvin Kendall](#) isolates [thyroxine](#).
- [Morris Simmonds](#) first reports [hypopituitarism](#).^[4]
- [Oxymorphone](#), a powerful narcotic analgesic closely related to morphine, is first developed in Germany.^[5]
- In analysis of the [Riemann hypothesis](#)
 - [G. H. Hardy](#) shows there are infinitely many [zeros on the critical line](#).^[6] [Harald Bohr](#) and [Edmund Landau](#) show that for any positive ε , all but an infinitely small proportion of zeros lie within a distance ε of the critical line;^[7] and R. J. Backlund introduces a better method of checking the zeros.
 - [J. E. Littlewood](#) shows that the [prime number theorem](#) underestimates the cumulative total of [primes](#).^[8]
- [Pascoite](#) is first described.^[9]
- April 24 – [James Franck](#) and [Gustav Hertz](#)'s [experiment on electron collisions](#) showing internal quantum levels of atoms is presented to the [Deutsche Physikalische Gesellschaft](#).
- October 1 – [Edgar Buckingham](#) introduces use of the symbol " π_i " for the dimensionless variables (or parameters) in what becomes known as the [Buckingham \$\pi\$ theorem](#), significant to [dimensional analysis](#).^[10]
- [Ernest Rutherford](#) suggests that the positively charged atomic nucleus contains [protons](#).
- February 3 – [Willis Carrier](#) patents an [air conditioner](#) in the United States.
- September 5 – British [Royal Navy scout cruiser HMS Pathfinder \(1904\)](#) is sunk by [German submarine U-21](#) in the [Firth of Forth](#) (Scotland), the first ship ever to be sunk by a locomotive [torpedo](#) fired from a [submarine](#).
- November 3 – [Polly Jacob](#) patents a backless [bra](#) in the United States.
- [Kodak](#) introduce the [Autographic](#) system.

- October 23 – [Manifesto of the Ninety-Three](#) proclaimed in Germany.
- [Nobel Prize](#)
 - [Physics](#) – [Max von Laue](#)
 - [Chemistry](#) – [Theodore William Richards](#)
 - [Medicine](#) – [Robert Bárány](#)

1915

- January – British physicist Sir [Joseph Larmor](#) publishes his observations on "The Influence of Local Atmospheric Cooling on Astronomical Refraction".^[1]
- March 19 – [Pluto](#) is photographed for the first time but is not classified as a [planet](#).
- [Einstein's](#) new theory of [general relativity](#) is used to explain [Mercury's](#) strange motions that baffled [Urbain Le Verrier](#).
- [Robert Innes](#) discovers [Proxima Centauri](#), the closest star to Earth after the Sun.
- [Thomas Lyle Williams](#) produces the [mascara Maybelline](#).
- May 22 – [Lassen Peak](#), one of the [Cascade Volcanoes](#) in [Northern California](#), erupts, sending an ash plume 30,000 feet in the air and devastating the nearby area with [pyroclastic flows](#) and [lahars](#). It is the only volcano to erupt in the [contiguous United States](#) between 1900 and 1980.
- [Alfred Wegener](#) publishes his [theory](#) of [Pangea](#), which he calls *Urkontinent*.^[2]
- The new [theropod](#) dinosaur genus and species [Spinosaurus aegyptiacus](#) is assigned by German paleontologist [Ernst Stromer](#).^[3]
- A global [pandemic](#) of [encephalitis lethargica](#) begins.^{[4][5][6]}
- [Trench nephritis](#) is first reported as affecting soldiers of the [British Expeditionary Force](#) in Flanders in the [British Medical Journal](#); the name is coined by [Nathan Raw](#).^[7]
- [Walter Bradford Cannon](#) coins the term *fight or flight* to describe an animal's response to threats.^[8]
- [Thomas Hunt Morgan](#), demonstrates non-inherited [genetic mutation](#) (in [Drosophila melanogaster](#)), undermining the conceptual basis of [eugenics](#).^[9]
- [Reginald Punnett's](#) *Mimicry in Butterflies* is published in Cambridge (U.K.)
- [Clara H. Hasse](#) publishes a paper identifying the cause of [citrus canker](#) which leads to the development of methods for controlling the disease, saving the [citrus](#) crops in the [southern United States](#) from being wiped out.^[10]
- [Emmy Noether](#) proves [her theorem](#) that any [differentiable symmetry](#) of the [action](#) of a physical system has a corresponding [conservation law](#).^[11]
- [Wacław Sierpiński](#) describes the [Sierpinski triangle](#).
- August – [Ada Hitchins'](#) experimental results indicating that [radium](#) is formed by the decay of [uranium](#) are published.^[12]
- November 25 – [Albert Einstein](#) presents to the [Prussian Academy of Sciences](#) the [Einstein field equations](#) of [general relativity](#).^[13] He abandons his [hole argument](#) for general relativity.^[14]

- [Arnold Sommerfeld](#) develops a modified [Bohr atomic model](#) with elliptic orbits to explain relativistic [fine structure](#).
- [Danish psychologist Edgar Rubin](#) publishes *Synsoplevede Figurer* ("Visual Figures") introducing the [optical illusion](#) which becomes known as the [Rubin vase](#).
- January 19 – [Georges Claude](#) patents the [neon](#) discharge tube for use in [advertising](#).
- February 4 – John G. A. Kitchen patents the [reversing rudder](#).^[15]
- March 3 – The [National Advisory Committee for Aeronautics](#), the predecessor of [NASA](#), is established in the [United States](#).
- July 1 – First use of [synchronization gear](#) in [aerial warfare](#).
- August – [Brodie helmet](#) patented in the United Kingdom.
- September 9 – [William Foster & Co.](#) of [Lincoln, England](#), complete the first prototype [military tank](#) "[Little Willie](#)".
- [Wolfgang Gaede](#) invents the [diffusion pump](#).^[16]
- [William Mills](#) patents, develops and manufactures the [Mills bomb](#), a [hand grenade](#), at the Mills Munition Factory in [Birmingham](#), England.^[17]
- [Dagobert Müller von Thomamühl](#) produces a form of [hovercraft](#).
- [Nobel Prize](#)
 - [Physics](#) – Sir [William Henry Bragg](#) and Sir [William Lawrence Bragg](#)
 - [Chemistry](#) – [Richard Martin Willstätter](#)

1916

- [Barnard's Star](#) is discovered by [Edward Emerson Barnard](#).
- [Harlow Shapley](#) finds that the spectrum of [S Sagittae](#) and other [Cepheid variables](#) varies with brightness, recording it as [spectral type](#) F0 leading to maximum, F4 at maximum, and G3 just before minimum brightness.^[1]
- [Gilbert N. Lewis](#) and [Irving Langmuir](#) formulate an electron shell model of [chemical bonding](#).^[2]
- The [Born–Haber cycle](#), an approach to analyze reaction energies, is developed by German scientists [Max Born](#) and [Fritz Haber](#).
- [Sydney Chapman](#) and [David Enskog](#) systematically develop a [kinetic theory of gases](#).
- [Jan Czochralski](#) invents a method for growing single crystals of metals.
- [Ludwig Bieberbach](#) presents the [Bieberbach conjecture](#).^[3]
- [Wacław Sierpiński](#) gives the first example of an [absolutely normal number](#) and describes the [Sierpinski carpet](#).
- 1 January – The British [Royal Army Medical Corps](#) carries out the first successful [blood transfusion](#) using blood that had been stored and cooled.
- 16 October – [Margaret Sanger](#) opens a [family planning](#) and [birth control](#) clinic in [Brownsville, Brooklyn](#), the first of its kind in the [United States](#).^{[4][5]} Nine days later, she is arrested for breaking a [New York](#) state law prohibiting distribution of [contraceptives](#).^[6] This same year, she publishes *What Every Girl Should Know*, providing information about such topics as [menstruation](#) and sexuality in adolescents.

- [Georges Guillain](#), [Jean Alexandre Barré](#) and [André Strohl](#) diagnose two soldiers with [Guillain–Barré syndrome](#) of the [peripheral nervous system](#) and describe the key diagnostic abnormality of increased [spinal fluid](#) protein production, but normal cell count.^[7]
- [Eugen Bleuler](#) publishes his *Lehrbuch der Psychiatrie*, including a definition of complexes arising from diffuse [brain damage](#), known as "Bleuler's psycho syndrome".^[8]
- [Medication Suramin](#) against [African sleeping sickness](#) and [river blindness](#) is first made by German company [Bayer AG](#).
- [Albert Einstein](#) publishes "[Die Grundlage der allgemeinen Relativitätstheorie](#)" on [general relativity](#) in *Annalen der Physik* **49** and shows that the field equations of general relativity admit wavelike solutions. This will be demonstrated in [2016](#).^[9]
- [Karl Schwarzschild](#) solves the Einstein [vacuum field equations](#) for [uncharged](#) spherically-symmetric non-rotating systems and calculates [Schwarzschild radius](#).
- [Lewis M. Terman](#) of [Stanford University](#) develops the first of the [Stanford–Binet Intelligence Scales](#) for [intelligence testing](#).
- February – [Stahlhelm](#) steel helmet first issued to German soldiers.
- 18 April – Capt. [Peter Nissen](#) completes the prototype [Nissen hut](#).^[10]
- 11 September – The almost-completed [Quebec Bridge](#) collapses for the second time.^[11]
- Chemist [Chika Kuroda](#) becomes the first woman in [Japan](#) to receive a [Bachelor of Science](#) degree.^[12]

1917

- [D'Arcy Wentworth Thompson](#)'s *On Growth and Form* is published.
- [Paul Ehrenfest](#) gives a conditional principle for a three-dimensional space.
- [Shinobu Ishihara](#) publishes his [color perception test](#).^[1]
- [Julius Wagner-Jauregg](#) discovers [malarial pyrotherapy](#) for [general paresis of the insane](#).
- [Albert Einstein](#) introduces the idea of [stimulated radiation emission](#).
- [Nuclear fission](#): [Ernest Rutherford](#) (at the [Victoria University of Manchester](#)) achieves [nuclear transmutation](#) of nitrogen into oxygen, using alpha particles directed at nitrogen $^{14}\text{N} + \alpha \rightarrow ^{17}\text{O} + \text{p}$, the first observation of a [nuclear reaction](#), in which he also discovers and names the [proton](#).^[2]
- September 13 – Release in the United States of the first film made in [Technicolor](#) System 1, a two-color process, *The Gulf Between*.
- Alvin D. and [Kelvin Keech](#) introduce the "banjulele-banjo", an early form of the [banjolele](#).
- [Gilbert Vernam](#) jointly reinvents the [one-time pad encryption](#) system.
- [Nobel Prize](#)

- [Physics](#) – [Charles Glover Barkla](#) (announced 12 November 1918; presented 1 June 1920)
- [Chemistry](#) – not awarded
- [Medicine](#) – not awarded

1918

- June 8 – [Nova Aquila](#), the brightest observed since [1604](#), is discovered.
- [Kiyotsugu Hirayama](#) identifies several groups of [main belt asteroids](#), now known as [Hirayama families](#).
- [Harlow Shapley](#) demonstrates that [globular clusters](#) are arranged in a spheroid or halo whose center is not the [Earth](#), but the center of the [galaxy](#).
- [Heber Curtis](#) discovers a [relativistic jet](#) of matter emerging from [Elliptical galaxy M87](#).
- February 21 – The last known [Carolina parakeet](#) (the only [parrot](#) species native to the [eastern United States](#)) dies in [Cincinnati Zoo](#).
- Around 1000 [pilot whales strand](#) in the [Chatham Islands](#).
- [R. A. Fisher](#) puts forward a [genetic](#) model that shows that continuous variation could be the result of [Mendelian inheritance](#) in his paper "[The Correlation Between Relatives on the Supposition of Mendelian Inheritance](#)".
- [J. Henri Fabre's](#) *The Sacred Beetle, and others* published in [English](#).
- [Jacques Loeb's](#) *Forced Movements, Tropisms, and Animal Conduct* published in the United States.
- February 23 – [Arthur Scherbius](#) applies to [patent](#) the [Enigma machine](#).^[1]
- [Edward Hugh Hebern](#) patents the [Hebern rotor machine](#).
- [Technisches Museum Wien](#) opens in [Vienna](#).
- [Felix Hausdorff](#) introduces the concept of the fractional [Hausdorff dimension](#).^[2]
- [Gaston Julia](#) describes the iteration of a [rational function](#).^[3]
- July 26 – [Emmy Noether](#) introduces what becomes known as [Noether's theorem](#), from which [conservation laws](#) are deduced for symmetries of [angular momentum](#), linear [momentum](#) and [energy](#), at [Göttingen](#), Germany.
- [Josef Lense](#) and [Hans Thirring](#) find the gravitomagnetic precession of [gyroscopes](#) in the equations of [general relativity](#).
- [Hans Reissner](#) and [Gunnar Nordström](#) solve the [Einstein](#) and [Maxwell field equations](#) for charged spherically-symmetric non-rotating systems.
- [Friedrich Kottler](#) gets a Schwarzschild solution without Einstein vacuum field equations.
- January – [1918 flu pandemic](#): "Spanish 'flu" ([influenza](#)) first observed in [Haskell County, Kansas](#).^[4]
- March 26 – Dr. [Marie Stopes](#) publishes her influential book [Married Love](#) in the U.K., following it with *Wise Parenthood*, a treatise on birth control.
- June–August – "[Spanish 'flu](#)" becomes [pandemic](#).^[5]
- September 7 – [J. B. Christopherson](#) publishes his discovery that [antimony potassium tartrate](#) is an effective cure for [bilharzia](#).^[6]

- [Hartog Jacob Hamburger](#) describes the [chloride shift](#).^[7]
- April 10 – [Alexander M. Nicholson](#) files a United States patent for the [radio crystal oscillator](#).^[8]
- [Edwin Howard Armstrong](#) develops the [superheterodyne receiver](#).^[9]
- [George Constantinescu](#) publishes *Theory of sonics: a treatise on transmission of power by vibrations*,^[10] originating the study of this branch of [continuum mechanics](#).
- [Theodore von Karman](#) and [Asbóth Oszkár](#) build the first co-axial [helicopter](#).
- [Charles Strite](#) invents the [pop-up toaster](#).^[11]
- [Nobel Prize](#)
 - [Physics](#) – [Max Karl Ernst Ludwig Planck](#)
 - [Chemistry](#) – [Fritz Haber](#)^[12]
 - [Medicine](#) – not awarded

1919

- The [International Astronomical Union](#) is established in Paris.
- June 1 – The term *covalence* in relation to [chemical bonding](#) is first used by [Irving Langmuir](#).^[1]
- [Leonard Eugene Dickson](#) begins publication of *History of the Theory of Numbers*.
- [Viggo Brun](#) proves [Brun's theorem](#) B_2 for [twin primes](#).
- Dr [George Newman](#) is appointed as the first [Chief Medical Officer](#) to the [Ministry of Health](#) in [England and Wales](#).
- May 29 – [Einstein's](#) theory of [general relativity](#) is tested by [Arthur Eddington's](#) observation of the "bending of light" during the total [solar eclipse](#) on this day observed in [Principe](#), and by [Andrew Crommelin](#) in [Sobral](#), [Ceará](#), [Brazil](#) (confirmed November 6).^[2]
- [Arnold Sommerfeld](#) and [Walther Kossel](#) publish their [displacement law](#).^[3]
- [James Jeans](#) discovers that the dynamical constants of motion determine the distribution function for a system of particles.
- [Betz's law](#) is published by German physicist [Albert Betz](#), indicating the maximum power that can be extracted from the wind, independent of the design of a wind turbine in open flow.
- In [Berlin](#) Dr [Magnus Hirschfeld](#) and [Arthur Kronfeld](#) found the [Institut für Sexualwissenschaft](#).^{[4][5][6][7]}
- First crossings of the [Atlantic Ocean](#) by air.
 - May 8–27 – [United States Navy Curtiss flying boat NC-4](#) commanded by [Albert Cushing Read](#) makes the first [transatlantic flight](#), from [Naval Air Station Rockaway](#) to [Lisbon](#) via Newfoundland and the [Azores](#).

- June 14–15 – A [Vickers Vimy](#) flown by [John Alcock](#) and [Arthur Whitten Brown](#) makes the first [nonstop transatlantic flight](#), from [St. John's, Newfoundland](#), to [Clifden, Ireland](#).
- July 2–6 – British [airship R34](#) makes the first transatlantic flight by dirigible, and the first westbound flight, from [RAF East Fortune, Scotland](#), to [Mineola, New York](#).
- May 29 – [Charles Strite](#) files a [United States patent](#) for the pop-up electric bread [toaster](#).^[8]
- October 17 – Dr. [Frank Conrad](#) begins broadcasting from [8XK](#) in [Pittsburgh](#) (United States).
- [Lee De Forest](#) files his first United States patent for the [Phonofilm sound-on-film](#) process.
- [United States](#) firearms designer [John Browning](#) finalizes the design of the [M1919 Browning machine gun](#).
- United States firearms designer [John T. Thompson](#) finalizes the design of the [Thompson submachine gun](#).
- A United States patent for the self-folding [shirt collar](#) is obtained by the [Phillips-Jones Corporation](#).
- [Nobel Prize](#)
 - [Physics](#) – [Johannes Stark](#)
 - [Chemistry](#) – not awarded
 - [Medicine](#) – [Jules Bordet](#)

1920

- January 13 – [The New York Times](#) ridicules rocket scientist [Robert H. Goddard](#), stating that [spaceflight](#) is impossible; in 1969 with [Apollo 11](#) on its way to the Moon, the newspaper will publicly retract this position.^[1]
- December 13 – The red giant star [Betelgeuse](#) is the first to have its diameter determined by an optical [astronomical interferometer](#), the [Michelson stellar interferometer](#) on [Mount Wilson Observatory](#)'s reflector telescope.^[2]
- [Andrew Douglass](#) proposes [dendrochronology](#) dating.
- Approximate date – The [HIV pandemic](#) almost certainly originates in Léopoldville, modern-day [Kinshasa](#), the capital of the [Belgian Congo](#).^[3]
- [Newcomen Society](#) founded in the [United Kingdom](#) for the study of the history of engineering and technology.
- [Frederick Banting](#) and [Charles Best](#) co-discover [insulin](#).^[citation needed]
- [Hans Gerhard Creutzfeldt](#) first describes some of the symptoms of what will become known as [Creutzfeldt–Jakob disease](#).
- [Hydrocodone](#), a [narcotic analgesic](#) closely related to [codeine](#), is first synthesized in [Germany](#) by [Carl Mannich](#) and Helene Löwenheim.^[4]
- [Black Cross Nurses](#) founded in the United States.
- [Milutin Milanković](#) proposes that long term climatic cycles may be due to changes in the eccentricity of the Earth's orbit and changes in the Earth's obliquity ("[Milankovitch cycles](#)").^[5]

- [Megh Nad Saha](#) states his ionization equation.
- [Albert Einstein](#) delivers his [Leiden Lecture](#).
- [Ernest Rutherford](#) predicts the existence of the [neutron](#).
- [James Jeans](#) discovers that the dynamical constants of motion determine the distribution function for a system of particles.
- Publication of [Alan A. Griffith](#)'s analysis of the process of [brittle fracture](#).^[6]
- [John B. Watson](#) conducts the [Little Albert experiment](#) in [classical conditioning](#).
- July 25 – The first transatlantic two-way [radio](#) broadcast is made.^[7]
- September 29 – First domestic radio sets come to stores in the [United States](#) – a [Westinghouse](#) radio costs \$10.^[citation needed]
- October – Young [Russian](#) physicist [Lev Sergeyevich Termen](#) first develops the [electronic musical instrument](#) which will become the [Theremin](#).^[8]
- April 26 – [Emil Racoviță](#) establishes the world's first institute for the academic study of [speleology](#) at the [Upper Dacia University](#) in [Cluj](#) (Romania).
- Publication in [Prague](#) of [Karel Čapek](#)'s drama [R.U.R: Rossum's Universal Robots](#), introducing the word [Robot](#) to the world.^{[9][10]}

1921

- [Winkel tripel projection](#) proposed.
- [Étienne Biéler](#) and [James Chadwick](#) publish a key paper on the [strong interaction](#).^[1]
- [Thomas Midgley](#) discovers the effective anti-knocking properties of [tetraethyllead](#), which is used in "leaded" [gasoline](#) (petrol).
- [Danish](#) explorer [Lauge Koch](#) first sets foot on and names [Kaffeklubben Island](#), [the northernmost point of land on Earth](#).
- [John Maynard Keynes](#) publishes *A Treatise on Probability*.
- [Marston Morse](#) applies the [Thue–Morse sequence](#) to [differential geometry](#).
- [Emmy Noether](#) publishes *Idealtheorie in Ringbereichen*, developing [ideal ring theory](#), an important text in the field of [abstract algebra](#).^{[2][3]}
- First publication of [Ludwig Wittgenstein](#)'s *Tractatus Logico-Philosophicus*, as "Logisch-Philosophische Abhandlung" in *Annalen der Naturphilosophie*.
- April–August – [Nicolae Paulescu](#) publishes papers on the preparation and therapeutic effects in animal subjects of an aqueous [pancreatic](#) extract.
- July 18 – The first [BCG](#) vaccination against [tuberculosis](#).
- July 27 – Researchers at the [University of Toronto](#) led by [biochemist Frederick Banting](#) announce the discovery of the [hormone insulin](#).
- [American](#) biochemist [Elmer McCollum](#) identifies the presence of a component in [cod liver oil](#) which cures [rickets](#), which he calls [vitamin D](#).^{[4][5][6]}
- [Fidel Pagés](#) pioneers [epidural anesthesia](#).

- July – [Wolfgang Pauli](#) is awarded his [Doctor of Philosophy](#) at [Ludwig Maximilian University of Munich](#) for his thesis *Über das Modell des Wasserstoff-Moleküls* ("About the Hydrogen Molecular Ion Model").
- [T. Kaluza](#) demonstrates that a five-dimensional version of [Albert Einstein](#)'s equations unifies [gravitation](#) and [electromagnetism](#).
- [Hermann Rorschach](#) publishes *Psychodiagnostik*, proposing the [inkblot test](#).
- [Gaëtan Gatian de Clérambault](#) publishes *Les Psychoses passionnelles*, a comprehensive review of [erotomania](#).
- Spring and summer – 14-year-old farm boy [Philo Farnsworth](#) devises the [image dissector](#), the basis for the first version of [television](#).
- October 25 – Hugo A. F. Abt is granted a patent for his design of [bascule bridge](#).^[7]
- The [vibraphone](#) in its original form is invented in the United States.
- Journalist [E. W. Scripps](#) and biologist [William Emerson Ritter](#) found *Science Service*, later renamed [Society for Science and the Public](#), in the United States with the goal of keeping the public informed of scientific developments.
- [Nobel Prize](#)
 - [Physics](#) – [Albert Einstein](#) – awarded 1922
 - [Chemistry](#) – [Frederick Soddy](#)
 - [Physiology or Medicine](#) – not awarded

1922

- November 4 – [British](#) archaeologist [Howard Carter](#) and his men find the entrance to King [Tutankhamen](#)'s tomb in the [Valley of the Kings](#) of [Egypt](#).
- August – The [California grizzly bear](#) is hunted to extinction.
- Last known wild [Barbary lion](#) (*P. l. leo*) shot in the [Atlas Mountains](#) of [Morocco](#).^[1]
- The [Amur tiger](#) becomes extinct in [South Korea](#).^[2]
- [H. J. Muller](#) sets out the basic properties of [genetic heredity](#).^{[3][4]}
- June 20 – [Degesch](#) applies to [patent](#) the [cyanide](#)-based [insecticide Zyklon B](#) (credited to Walter Heerdt) in [Germany](#).^[5]
- [Vitamin E](#) is discovered by [Herbert McLean Evans](#) and Katharine Scott Bishop at the [University of California, Berkeley](#)^[6] and [Vitamin D](#) by [Elmer McCollum](#) and others.
- [Czech](#) chemist [Jaroslav Heyrovský](#) invents [polarographic methods](#) of chemical analysis.
- [German](#) chemist [Hermann Staudinger](#) proposes what he will come to call [macromolecules](#).^[7]
- [Bronisław Malinowski](#)'s influential [ethnological](#) text *Argonauts of the Western Pacific* is published.
- First publication of [Ludwig Wittgenstein](#)'s *Tractatus Logico-Philosophicus* in an [English](#) translation.

- [Jarl Waldemar Lindeberg](#) provides a proof of the "Lindeberg condition" of the [central limit theorem](#).^[8]
- [Ernst Steinitz](#) proves [Steinitz's theorem](#) in [polyhedral combinatorics](#).^[9]
- January 11 – First successful [insulin](#) treatment of [diabetes](#), by [Frederick Banting](#) in [Toronto](#), using a pure preparation intravenously injected; on the same date [Nicolae Paulescu](#) makes an apparently successful rectal administration of an insulin preparation.
- English mathematical physicist [Lewis Fry Richardson](#) proposes a scheme for [weather forecasting](#) by solution of [differential equations](#), the method used in modern times, in his work *Weather Prediction by Numerical Process*.^[10]
- First of four successive [American Museum of Natural History](#) expeditions to [Mongolia](#) under [Roy Chapman Andrews](#) which will discover fossils of [Indricotherium](#) (a gigantic hornless [rhinoceros](#) then named "[Baluchitherium](#)"), [Protoceratops](#), a nest of [Protoceratops](#) eggs (found in 1995 to be from [Oviraptor](#)), [Pinacosaurus](#), [Saurornithoides](#), [Oviraptor](#) and [Velociraptor](#), none of which were known before.
- [Arthur Compton](#) studies X-ray photon [scattering](#) by electrons.
- [Otto Stern](#) and [Walther Gerlach](#) show "space quantization".
- [Hilding Faxén](#) introduces [Faxén's law](#) for the velocity of a sphere in [fluid dynamics](#).^[11]
- [Albert Einstein's](#) *The Meaning of Relativity: Four Lectures Delivered at Princeton University, May 1921* is published by [Princeton University Press](#).
- February 14 – The world's first regular wireless broadcasts for entertainment, made by [Peter Eckersley](#), begin transmission on [radio](#) station [2MT](#) from a hut at the [Marconi Company](#) laboratories at [Writtle](#) near [Chelmsford](#) in England. This is followed in the [United Kingdom](#) on May 11 by station [2LO](#) from [Marconi House](#) in London, which from November 22 becomes the [British Broadcasting Company](#) ([BBC](#)).
- [Lancia Lambda](#) is the first [automobile](#) to use [monocoque](#) construction.
- Approximate date – [Madeleine Vionnet](#) introduces the [bias cut](#) dress in Paris.
- [Nobel Prize](#)
 - [Physics](#) – [Niels Bohr](#)
 - [Chemistry](#) – [Francis William Aston](#)
 - [Physiology or Medicine](#) – [Archibald Vivian Hill](#) and [Otto Fritz Meyerhof](#)

1923

- January 17 (or 9) – First stable flight of the first [rotorcraft](#), [Juan de la Cierva's Cierva C.4 autogyro](#), in Spain.
- June – [Hermann Oberth](#) publishes *Die Rakete zu den Planetenräumen* ("By Rocket into Planetary Space").
- October 21 – First official public showing of a [planetarium](#) projector, a [Zeiss](#) model at the [Deutsches Museum](#) in [Munich](#).^[1]

- [Karl von Frisch](#) publishes "Über die 'Sprache' der Bienen. Eine tierpsychologische Untersuchung" ("On the 'language' of bees: an examination of animal psychology").^[2]
- [Dirk Coster](#) and [George de Hevesy](#) publish their discovery of the [transition metal element hafnium](#) ($_{72}\text{Hf}$) in [zirconium](#) ore, working in [Copenhagen](#) (Latin: *Hafnia*).^{[3][4]}
- [Niels Bohr](#) and Dirk Coster, working in Copenhagen, produce a paper on [X-ray spectroscopy](#) and the [periodic system](#) of the elements.^[5]
- [Gilbert N. Lewis](#) and [Merle Randall](#)'s textbook *Thermodynamics and the Free Energy of Chemical Reactions* is influential in the replacement of the concept of [chemical affinity](#) by [free energy](#).^[6]
- [Enigma machine](#) first produced commercially.^[7]
- [Otto Julius Zobel](#) of [Bell Labs](#) describes the type of [signal processing filter](#) sections based on the [image impedance](#) design principle which will become known as [Zobel networks](#).^[8]
- December 29 – [Vladimir K. Zworykin](#) files his first [patent](#) (in the [United States](#)) for "television systems".
- [Tanager Expedition](#).
- February – The [Maudsley Hospital](#), established jointly by the [London County Council](#) and [Henry Maudsley](#), admits its first psychiatric patients.
- First vaccine for [Diphtheria](#)
- July 13 – An [American Museum of Natural History](#) expedition to [Mongolia](#) under [Roy Chapman Andrews](#) is the first in the world to discover [fossil dinosaur eggs](#). Initially thought to belong to the [ceratopsian](#) *Protoceratops*, they are determined in 1995 actually to belong to the [theropod](#) *Oviraptor*.^[9] On August 11 Peter Kaisen recovers the first *Velociraptor* fossil known.^[10]
- [Arthur Eddington](#) publishes the textbook *The Mathematical Theory of Relativity* in [Cambridge](#).
- [Herbert Grove Dorsey](#) invents the first practical [fathometer](#).
- [Nobel Prizes](#)
 - [Physics](#): [Robert Andrews Millikan](#)
 - [Chemistry](#): [Fritz Pregl](#)
 - [Medicine](#): [Frederick Grant Banting](#) and [John James Rickard Macleod](#)
- [Copley Medal](#): [Horace Lamb](#)
- [Wollaston Medal](#) for Geology: [William Whitaker](#)

1924

- November 23 – [Edwin Hubble](#) announces his discovery that [Andromeda](#), previously believed to be a [nebula](#), is actually another [galaxy](#), and that the [Milky Way](#) is only one of many such galaxies in the universe.^[1]

- The [Einstein Tower](#) near [Potsdam, Germany](#), designed by [Erich Mendelsohn](#), becomes operational as an astrophysical observatory.
- [Mount Stromlo Observatory](#) near [Canberra](#), Australia, is established as the Commonwealth Solar Observatory.
- [1056 Azalea](#) is discovered.
- The term "[ectogenesis](#)" is coined by British scientist [J. B. S. Haldane](#) to describe the growth of mammalian embryos in artificial environments.^{[2][3]}
- [California grizzly bear](#) last sighted.
- The first inactive [tetanus toxoid](#) is discovered and produced.^[4]
- December 17 – Dismantling of [James Watt](#)'s workshop for display in the [Science Museum, London](#), commences.^[5]
- [Stefan Banach](#) and [Alfred Tarski](#) publish the [Banach–Tarski paradox](#).^[6]
- [David Hilbert](#) proposes [Hilbert's paradox of the Grand Hotel](#).^[7]
- German physiologist and psychiatrist [Hans Berger](#) records the first human [electroencephalogram](#).^[8]
- The first specimen of [Australopithecus africanus](#), the [fossil](#) skull of the "[Taung Child](#)", is identified in [South Africa](#).^[9]
- [S. N. Bose](#) and [Albert Einstein](#) publish papers in *Zeitschrift für Physik* applying [Bose–Einstein statistics](#) to [light quanta](#) and to atomic models and predicting existence of the [Bose–Einstein condensate](#).
- [E. C. Stoner](#) publishes a paper^[10] pointing out that for a given value of the [principal quantum number](#) (n), the number of energy levels of a single electron in the [alkali metal](#) spectra in an external magnetic field, where all [degenerate energy levels](#) are separated, is equal to the number of electrons in the closed shell of the [rare gases](#) for the same value of n. This leads to discovery of the [Pauli exclusion principle](#).
- [Louis de Broglie](#) introduces the wave-model of atomic structure, based on the ideas of [wave–particle duality](#).^[11]
- End – [Wolfgang Pauli](#) first proposes his [exclusion rule](#) in a letter.
- February 5 – Hourly time signals from [Royal Greenwich Observatory](#) are broadcast for the first time.
- February – [John Logie Baird](#) sends rudimentary [television](#) pictures over a short distance.^[12]
- [Václav Holek](#) designs the [ZB vz. 26 light machine gun](#) for [Zbrojovka Brno](#).
- The [earth inductor compass](#) is developed by [Morris Titterton](#) at the [Pioneer Instrument Company](#) in [Brooklyn, New York](#).
- [Nobel Prizes](#)
 - [Physics](#): [Karl Manne Georg Siegbahn](#)
 - [Medicine](#): [Willem Einthoven](#)

- July 21 – [Scopes Trial](#): In [Dayton, Tennessee](#), high school biology teacher [John T. Scopes](#) is found guilty of teaching [evolution](#) in class and fined \$100.
- September – Official opening of [Thijssse's Hof](#) (Garden of [Thijssse](#)), the first [wildlife garden](#) in the Netherlands, in [Bloemendaal](#) near [Haarlem](#).
- Approximate date – [Extinction](#) of the [Bubal hartebeest](#) in [North Africa](#).
- [Adams hemisphere-in-a-square projection](#) published by American cartographer Oscar Sherman Adams.^[1]
- May – [Rhenium](#) is discovered by [Walter Noddack](#) and [Ida Tacke](#) in [Berlin](#), the last stable, non-radioactive naturally occurring [element](#) to be found.^[2]
- The [Fischer–Tropsch process](#) for production of [hydrocarbons](#) is first developed by [Franz Fischer](#) and [Hans Tropsch](#) at the Kaiser-Wilhelm-Institut für Kohlenforschung in Mülheim an der Ruhr, Germany.
- [Museum of the History of Science](#) opens in the [Old Ashmolean](#) building in [Oxford](#), set up by [Robert Gunther](#) based largely on the collection given by Dr [Lewis Evans](#).^[3]
- [Pharmazie-Historisches Museum der Universität Basel](#) established by donation of the collection of [pharmacist](#) Josef Anton Häfliger.
- [Edwin Arthur Burt](#)'s *The Metaphysical Foundations of Modern Physical Science* is published.
- January – [Wolfgang Pauli](#) announces his [exclusion rule](#).^[4]
- [Werner Heisenberg](#), [Max Born](#) and [Pascual Jordan](#) set out the [matrix formulation](#) of [quantum mechanics](#).
- June 13 – [Charles Francis Jenkins](#) achieves the first synchronized transmission of pictures and sound, using 48 lines, and a mechanical system. A 10-minute film of a miniature windmill in motion is sent across 5 miles from [Anacostia](#) to [Washington, DC](#). The images are viewed by representatives of the [Bureau of Standards](#), the [U.S. Navy](#), the [Department of Commerce](#) and others. Jenkins calls this "the first public demonstration of radiovision".
- October 2 – [John Logie Baird](#) successfully transmits the first television pictures with a greyscale image, in London.^[5]
- October 22 – [Julius Edgar Lilienfeld](#) files the first [patent](#) for a form of [field-effect transistor](#).^[6]
- November 4 – [Charles F. Brannock](#) files a patent for the [Brannock Device](#) for measuring shoe sizes.^[7]
- *late 1925 or early 1926* – [Vladimir K. Zworykin](#) demonstrates a [cathode ray tube](#) television system using Braun tubes at the [Westinghouse Electric](#) laboratories in [Pittsburgh, Pennsylvania](#).
- [Jonas Hesselman](#) introduces the [Hesselman engine](#).
- [Sinclair Lewis](#)'s novel [Arrowsmith](#) is published in the [United States](#), notable in having the culture of medical science as a principal theme.^[8]
- [Nobel Prizes](#)
 - [Physics](#) – [James Franck](#), [Gustav Ludwig Hertz](#)

- [Chemistry](#) – [Richard Adolf Zsigmondy](#)

1926

- March 16 – [Robert Goddard](#) launches the first liquid-fueled [rocket](#), at [Auburn, Massachusetts](#).
- American [microbiologist Selman Waksman](#) publishes *Enzymes*.
- *The Quarterly Review of Biology* is established by [Raymond Pearl](#) in the United States.
- [Waldo Semon](#) and the [B.F. Goodrich](#) Company develop a method of [plasticizing polyvinyl chloride](#), giving it commercial potential.
- [Phencyclidine](#) (*PCP*, *angel dust*) is first synthesized.
- [Vladimir Vernadsky](#) popularises the concept of the [biosphere](#) in a book (in Russian) of this title.
- May 12 – [Roald Amundsen](#), [Umberto Nobile](#) and crew fly over the [North Pole](#) in the [airship Norge](#).
- [Otakar Borůvka](#) publishes [Borůvka's algorithm](#), introducing the [greedy algorithm](#).^{[1][2][3][4]}
- First vaccine for [pertussis](#).
- American [biogerontologist Raymond Pearl](#) publishes his book *Alcohol and Longevity*^[5] demonstrating that drinking [alcohol](#) in [moderation](#) is associated with greater longevity than either abstaining or drinking heavily.^[6]
- Finnish physician [Erik Adolf von Willebrand](#) first describes *Hereditär pseudohemofili* ("Hereditary pseudohemophilia"),^[7] later known as [Von Willebrand disease](#).
- German-Jewish dermatologist [Walter Freudenthal](#) gives the earliest clear [histopathological](#) description of keratoma senile ([actinic keratosis](#)), distinguishing it from verruca senilis ([seborrheic keratosis](#)), in [Breslau](#).^[8]
- [Gerhard Heilmann](#) publishes *The Origin of Birds* (in English) on [bird evolution](#).
- [Wolfgang Pauli](#) uses [Werner Heisenberg's](#) [matrix theory](#) of [quantum mechanics](#) to derive the observed spectrum of the [hydrogen atom](#).
- January 26 – Scottish inventor [John Logie Baird](#) demonstrates his pioneering greyscale [mechanical television](#) system (which he calls a "televisor") at his London laboratory for members of the [Royal Institution](#) and a reporter from *The Times*.^{[9][10][11][12]}
- February – [Hidetsugu Yagi](#) and [Shintaro Uda](#) publish the first description of the [Yagi–Uda antenna](#).
- June 28 – A [patent](#) for an electric percussion [fuse](#) for explosive projectiles, invented by Herbert Rühlemann, is filed in Germany.
- July
 - [Alan A. Griffith](#) publishes *An Aerodynamic Theory of Turbine Design*, proposing an [airfoil](#) shape for [turbine blades](#).^{[13][14]}

- [Carl Zeiss, Jena](#), open a [planetarium](#) housed in a [geodesic dome](#) designed by [Walther Bauersfeld](#).^[15]
- November 23 – The [aerosol spray](#) can is patented by [Erik Rotheim](#), a [Norwegian](#) chemical engineer.^[16]
- The [Einstein refrigerator](#) is invented by [Albert Einstein](#) and [Leo Szilard](#).
- [Ulster](#)-born engineer [Harry Ferguson](#) is granted a British patent for his 'Duplex' hitch linking [tractor](#) and [plough](#).
- German engineer [Andreas Stihl](#) patents and develops an electric [chainsaw](#).^[17]
- [Nobel Prizes](#)
 - [Physics](#) – [Jean Baptiste Perrin](#)
 - [Chemistry](#) – [Theodor Svedberg](#)
 - [Medicine](#) – [Johannes Andreas Grib Fibiger](#)^[18]
- [Copley Medal](#): [Frederick Hopkins](#)
- [Wollaston Medal](#) for Geology: [Henry Fairfield Osborn](#)

1927

- [Edward Emerson Barnard](#)'s *A Photographic Atlas of Selected Regions of the Milky Way* is published posthumously.
- The [Cholodny-Went model](#) of [tropism](#) in emerging [monocotyledon](#) shoots is first proposed by [Nikolai Cholodny](#) of the [University of Kiev](#).
- [Fritz London](#) and [Walter Heitler](#) apply quantum mechanics to explain covalent bonding in the hydrogen molecule,^[1] which marks the birth of [quantum chemistry](#).^{[2][3]}
- [Carbon emissions](#) from fossil fuel burning and industry reach one billion tonnes per year.^[4]
- [American biologist Raymond Pearl](#) publishes an influential attack on the basic assumptions of [eugenics](#).^{[5][6]}
- Publication of the 2nd edition of *Principia Mathematica* by [Alfred North Whitehead](#) and [Bertrand Russell](#), one of the most important and seminal works in mathematical logic and philosophy.
- [António Egas Moniz](#) develops [cerebral angiography](#).^[7]
- February 23 – [German theoretical physicist Werner Heisenberg](#) writes a letter to fellow physicist [Wolfgang Pauli](#) in which he describes his [uncertainty principle](#) for the first time.
- April – Abbé [Georges Lemaître](#) publishes in the *Annales de la Société Scientifique de Bruxelles* "Un Univers homogène de masse constante et de rayon croissant rendant compte de la vitesse radiale des nébuleuses extra-galactiques"^[8] proposing the theory of the [expansion of the Universe](#), deriving what will become known as [Hubble's law](#), making the first estimation of what will become called the [Hubble constant](#),^{[9][10][11][12]} and proposing what becomes known as the [Big Bang](#) theory of the origin of the [Universe](#), which he calls his 'hypothesis of the [primeval atom](#)'.^{[13][14]}

- October – The fifth [Solvay Conference](#) meets in [Brussels](#) to discuss the newly formulated [quantum mechanics](#). [Albert Einstein](#) attacks the theories of [Niels Bohr](#) and [Werner Heisenberg](#).
- August 2 – American electrical engineer [Harold Stephen Black](#) invents the [negative-feedback amplifier](#).
- September 7 – [Philo Farnsworth](#)'s electronic [image dissector](#) television camera tube transmits its first image at his laboratory at 202 Green Street in [San Francisco](#).
- November 5 – Completion of a bridge by [Westinghouse Electric and Manufacturing](#) in [Turtle Creek, Pennsylvania](#), the world's first railroad bridge of wholly [welded](#) construction.^[15]
- Date unknown
 - [Emil Lerp](#) invents the transportable gasoline [chainsaw](#).
 - [Vibraphone](#) developed in its modern form by Henry Schluter of [J.C. Deagan, Inc.](#) in the United States.
- Last known specimens of the [Syrian wild ass](#) die.
- [Nobel Prizes](#)
 - [Physics](#) – [Arthur Holly Compton](#), [Charles Thomson Rees Wilson](#)
 - [Chemistry](#) – [Heinrich Otto Wieland](#)
 - [Medicine](#) – [Julius Wagner-Jauregg](#)
- [Copley Medal](#): [Charles Sherrington](#)
- [Wollaston Medal](#) for Geology: [William Whitehead Watts](#)

1928

- [American](#) anthropologist [Margaret Mead](#) publishes *[Coming of Age in Samoa](#)*, "a psychological study of primitive youth for Western civilization".
- The old [Canaanite](#) city of [Ugarit](#) is rediscovered.
- January – [Frederick Griffith](#) reports the results of [Griffith's experiment](#), indirectly proving the existence of [DNA](#).^{[1][2]}
- September 3 – [Alexander Fleming](#), at [St Mary's Hospital, London](#), accidentally rediscovers the [antibiotic Penicillin](#), forgotten since [Ernest Duchesne](#)'s original discovery in 1896.^{[3][4]}
- [American biogerontologist](#) [Raymond Pearl](#) publishes his *[Rate of Living Hypothesis](#)*, proposing that lifespan is shorter in animals with faster metabolisms.^[5]
- The [Diels-Alder reaction](#) was first described by German chemists [Otto Diels](#) and [Kurt Alder](#) in 1928.
- [Bubble gum](#) is invented by [Walter Diemer](#) in the United States.
- April – [Leslie Comrie](#) publishes an article "On the Construction of Tables by Interpolation", describing the use of [punched card](#) equipment for [interpolating](#) tables of data, and becomes the first to use such equipment for scientific calculations, using [Fourier synthesis](#) to compute the principal terms in the motion of the [Moon](#) for 1935–2000.

- [Florian Cajori](#) begins publication of [A History of Mathematical Notations](#).
- [David Hilbert](#) and [Wilhelm Ackermann](#) publish [Grundzüge der theoretischen Logik](#), a pioneering elementary text in [first-order logic](#) stating the [Entscheidungsproblem](#).^[6]
- [John von Neumann](#) publishes *Zur Theorie der Gesellschaftsspiele*, a text in [game theory](#).
- October 12 – An '[iron lung](#)' [medical ventilator](#) designed by [Philip Drinker](#) and [Louis Agassiz Shaw, Jr.](#), is used for the first time, at [Boston Children's Hospital](#) in the United States for treatment of [poliomyelitis](#).
- [Dementia pugilistica](#) is first described by forensic pathologist Dr. [Harrison Stanford Martland](#), chief medical examiner of [Essex County, New Jersey](#).^[7]
- February 28 – [C. V. Raman](#) and [K. S. Krishnan](#) discover [Raman scattering](#) in liquids.^[8]
- [Paul Dirac](#) proposes the [Dirac equation](#) as a [relativistic equation of motion](#) for the [wavefunction](#) of the [electron](#),^[9] leading him to predict the existence of the [positron](#), the electron's [antiparticle](#).^[10]
- February 8 – British inventor [John Logie Baird](#) broadcasts a transatlantic television signal from London to [Hartsdale, New York](#).^[11]
- June 11 – [Hungarian](#) inventor [Kálmán Tihanyi](#) files [patents](#) in [Germany](#), the [United Kingdom](#) and [France](#) for a [cathode ray](#) television transmission system.^[12]
- July 3
 - British inventor [John Logie Baird](#) demonstrates the world's first [color television](#) transmission, using scanning discs.^[13]
 - [Ulster-born](#) engineer [Harry Ferguson](#) obtains a British patent for his [three-point linkage](#) for [tractors](#).^[14]
- July 7 – The first machine-sliced and machine-wrapped loaf of bread is sold in [Chillicothe, Missouri](#), using [Otto Frederick Rohwedder](#)'s technology.
- September 3 – [Philo Farnsworth](#) demonstrates to the Press the world's first working [all-electronic television](#) system, employing electronic scanning in both the pickup and display devices.^{[15][16]}
- December – Completion of the [Maurzyce Bridge](#) near [Łowicz](#) in central [Poland](#), the world's first road bridge of wholly [welded](#) construction, designed by [Stefan Bryła](#).^{[17][18][19]}
- The [concrete pump](#) is invented by German [Max Giese](#).
- [Magnetic tape](#) is invented by German [Fritz Pfeleumer](#).
- [Arthur Eddington](#) publishes the popular text *The Nature of the Physical World* in the [United Kingdom](#), including a statement of the [infinite monkey theorem](#).^[20]
- [Nobel Prizes](#)
 - [Physics](#) – [Owen Willans Richardson](#)
 - [Chemistry](#) – [Adolf Otto Reinhold Windaus](#)
 - [Medicine](#) – [Charles Jules Henri Nicolle](#)

- July 17 – [Robert H. Goddard](#) tests the first [rocket](#) to carry scientific instruments (a [barometer](#) and a [camera](#)).
- [Edwin Hubble](#) publishes his discovery that the speed at which [galaxies](#) recede positively correlates with their distance, which becomes known as [Hubble's law](#), the basis for understanding that the [universe](#) is expanding.
- [George Gamow](#) proposes [hydrogen fusion](#) as the energy source for [stars](#).
- [Clyde Tombaugh](#) discovers several [asteroids](#): [2839 Annette](#), [3583 Burdett](#), [3824 Brendalee](#), [1929 VS](#), [1929 VD1](#).
- [Harold Horton Sheldon](#) writes about the serious possibility of man visiting other planets through the use of rockets.^[1]
- [Konstantin Tsiolkovsky](#) proposes the construction of [multistage rockets](#) in his book «Космические поезда» ("Cosmic Trains").
- July 5 – The [Curtiss-Wright](#) corporation is founded.
- August 8–29 – The German airship [Graf Zeppelin](#) makes a round-the-world flight.
- September 24 – [Jimmy Doolittle](#) takes off, flies over a set course, and lands by [flight instruments](#) alone.
- November 29 – US Admiral [Richard Byrd](#) becomes the first person to fly over the [South Pole](#).
- December 16 – The British airship [R100](#) makes its maiden flight, incorporating [Barnes Wallis'](#) pioneering use of a [geodetic airframe](#).
- December 5 – [Grumman Aircraft Engineering Corporation](#) is founded.
- [Carl](#) and [Gerty Cori](#) propose the [Cori cycle](#), describing how the human body processes [carbohydrates](#).^{[2][3]}
- [Adenosine triphosphate](#) (ATP), an important cell [coenzyme](#), is discovered by German biochemist Karl Lohmann, and independently by Cyrus Fiske and [Yellapragada Subbarow](#) of Harvard Medical School.
- [Estrogen](#) was isolated and purified estrone, the first estrogen to be discovered by [Adolf Butenandt](#).
- [C. B. van Niel](#) makes the first announcement of his discovery that [photosynthesis](#) is a [light-dependent redox](#) reaction.^[4]
- Professor Frederick Gericke of the [University of California, Los Angeles](#), demonstrates that [plants](#) can be grown soil-free all the way to maturity, the basis of [hydroponics](#).
- [Sir John Lennard-Jones](#) introduces his [linear combination of atomic orbitals molecular orbital method](#) for approximation of [molecular orbitals](#).
- [Lars Onsager](#) publishes his [reciprocal relations](#) equations in [thermodynamics](#), for which he will receive the [1968 Nobel Prize in Chemistry](#).
- [Linus Pauling](#) publishes [Pauling's rules](#), key principles for the use of [X-ray crystallography](#) to deduce molecular structure.^{[5][6]}
- [Styrene-butadiene](#) was developed by German chemist [Walter Bock](#).
- June 27 – The first public demonstration of [color television](#) is held by [Herbert E. Ives](#) and colleagues at [AT&T's Bell Telephone Laboratories](#) in [New York](#). The first images are a bouquet of roses and an [American flag](#). A mechanical system is used to transmit 50-line images to [Washington](#).

- August 20 – First transmissions of [John Logie Baird](#)'s experimental 30-line television system by the [British Broadcasting Corporation](#).^[7]
- November – [Vladimir Zworykin](#) takes out a [patent](#) for color television.
- First practical [coaxial cable](#) patented by [Lloyd Espenschied](#) and [Herman Affel](#) of [Bell Labs](#).
- [Rudolf Hell](#) receives a patent for the [Hellschreiber](#), an early [fax](#) machine.
- November 18 – [Grand Banks earthquake](#): Off the south coast of [Newfoundland](#) in the [Atlantic Ocean](#), a [Richter magnitude](#) 7.2 submarine [earthquake](#) centered on [Grand Banks](#), breaks 12 submarine [transatlantic telegraph cables](#) and triggers a [tsunami](#) that destroys many south coast communities in the [Burin Peninsula](#) area.
- October 21 – [Henry Ford](#)'s [Edison Institute](#) is inaugurated at [Dearborn, Michigan](#) on the 50th anniversary of the [invention](#) of the [incandescent light bulb](#), in the presence of [President of the United States Herbert Hoover](#), [Thomas Edison](#), [Walter Chrysler](#), [Marie Curie](#), [George Eastman](#) and [Orville Wright](#) (among others).^[8] Exhibits include the 17th century [Newcomen atmospheric engine](#) [Fairbottom Bobs](#).
- [Edwin Boring](#) publishes *A History of Experimental Psychology*.
- [Kurt Gödel](#) proves his [completeness theorem](#).
- [Kurt Mahler](#) shows that the [Prouhet–Thue–Morse constant](#) is a [transcendental number](#).^[9]
- [Dimitrie Pompeiu](#) poses the [Pompeiu problem](#).^[10]
- [Holbrook Working](#) and [Harold Hotelling](#) devise the [Working–Hotelling procedure](#) for [linear regression](#).^[11]
- [Alexander Fleming](#) publishes an article about [penicillin](#) in the *British Journal of Experimental Pathology*, for which he will receive the [1945 Nobel Prize in Physiology or Medicine](#).
- [Hans Berger](#) discovers human [electroencephalography](#).
- [Ernst Gräfenberg](#) introduces [Gräfenberg's ring](#), an [intrauterine device](#), in Germany.
- Clinical application of [cardiac catheterization](#) begins with German [Werner Forssmann](#) who inserts a catheter into the vein of his own forearm, guides it fluoroscopically into his right atrium, and takes an X-ray picture of it.
- January 7 – Robert Bureau flies (and names) the first [radiosonde](#) using [telemetry](#), in France.^{[12][13]}
- [Tilly Edinger](#) publishes *Die fossilen Gehirne (Fossil Brains)*, pioneering [paleoneurology](#).
- [Robert J. Van de Graaff](#) develops the [Van de Graaff generator](#).
- [Oskar Klein](#) discovers the [Klein paradox](#).
- Oskar Klein and [Y. Nishina](#) derive the [Klein–Nishina cross section](#) for high energy photon scattering by electrons.
- Sir [Nevill Francis Mott](#) derives the [Mott cross section](#) for the Coulomb scattering of relativistic [electrons](#).
- [Paul Dirac](#) and [Werner Heisenberg](#) develop the quantum theory of [ferromagnetism](#).
- [Ernest Lawrence](#) invents the [cyclotron](#), for which he will receive the [1939 Nobel Prize in Physics](#).
- [Edwin H. Land](#) patents [Polaroid polarizing film](#).^[14]

- [Sunglasses](#) made from [celluloid](#) are first produced by [Foster Grant](#) for sale in [Atlantic City, New Jersey](#).
- [Nobel Prize](#)
 - [Physics](#): [Prince Louis-Victor Pierre Raymond de Broglie](#)
 - [Chemistry](#): [Arthur Harden](#), [Hans Karl August Simon von Euler-Chelpin](#)
 - [Physiology or Medicine](#): [Christiaan Eijkman](#), Sir [Frederick Gowland Hopkins](#)

1930

- January 15 – The [Moon](#) moves into [perigee](#) at the same time as the [lunar phase](#) reaches its fullest. This is the closest moon distance (at 356,397 km) in recent memory and it will not come closer until 2257.^[1]
- February 18 – [Pluto](#) is identified by [Clyde Tombaugh](#) from photographs taken during January at the [Lowell Observatory](#).
- [Bernhard Schmidt](#) invents the [Schmidt Camera](#).^[2]
- January 30 – [Pavel Molchanov](#) launches a [radiosonde](#) from [Pavlovsk](#) in the [Soviet Union](#).
- [Sydney Chapman](#) explains the [ozone-oxygen cycle](#), the process by which [ozone](#) is continually regenerated in [Earth's stratosphere](#).
- [Elena Ivanovna Barulina](#) produces the first study of the international distribution of [lentils](#).^[3]
- April 17 – [Neoprene](#) is invented by [DuPont](#).^[4]
- [Soviet Orientalist Vasily Vasilievich Struve](#), with [Boris Turaev](#), provides solutions to the problems in the [Moscow Mathematical Papyrus](#).^[5]
- [Vojtěch Jarník](#) first discovers '[Prim's algorithm](#)'.
- [Kazimierz Kuratowski](#) characterizes his [planar graph](#) theorem.^[6]
- [Bartel van der Waerden](#) publishes *Moderne Algebra*.^[6]
- March 5 – Danish painter Einar Wegener begins to undergo [sexual reassignment](#) surgery in Germany and takes the name [Lili Elbe](#).
- July 10 – [Mental Treatment Act 1930](#) in the United Kingdom provides for free voluntary treatment for psychiatric conditions and for psychiatric outpatient clinics, replaces the term "asylum" with "[mental hospital](#)" and reorganises the [Board of Control for Lunacy and Mental Deficiency](#).
- November 25 – Cecil George Paine, a [pathologist](#) at the [Sheffield Royal Infirmary](#) in [England](#), achieves the first recorded cure (of an eye infection) using [penicillin](#).^[7]
- [DPT vaccine](#) (against [diphtheria](#), [tetanus](#) and [pertussis](#)) is first used.
- December 4 – [Wolfgang Pauli](#) postulates the existence of the particle later identified as the [electron neutrino](#).^[8]
- August 18 – [Salginatobel Bridge](#) in Switzerland, designed by [Robert Maillart](#), opened.

- November 13 – [Rotolactor](#) rotating platform [milking machine](#) first operates.^[9]
- [Israel Aharoni](#) collects [golden hamsters](#) near [Aleppo](#) from which all modern domesticated specimens will be bred.^[10]
- [Lyell Medal](#) (Geological Society of London) – [Frederick Chapman](#)
- [Nobel Prizes](#)
 - [Physics](#) – [C. V. Raman](#)
 - [Chemistry](#) – [Hans Fischer](#)
 - [Physiology or Medicine](#) – [Karl Landsteiner](#)

1931

- French astronomer [Bernard Lyot](#) invents the [coronagraph](#).
- [Erich Hückel](#) proposes [Hückel's rule](#), which explains when a planar ring molecule will have [aromatic](#) properties.^[1]
- [Harold Urey](#) and associates at [Columbia University](#) demonstrate the existence of [heavy water](#).^[2]
- Modified [Mercalli intensity scale](#) introduced as a [seismic scale](#) for [earthquakes](#) in the United States.
- [Het Nederlandsch Historisch Natuurwetenschappelijk Museum](#) ("The Dutch Historical Museum of the Natural Sciences") opens in [Leiden](#).
- January – [Kurt Gödel](#)'s "[On Formally Undecidable Propositions...](#)" is published in *Monatshefte für Mathematik*.
- November 26 – [Harold Urey](#) discovers [deuterium](#) by the fractional distillation of [liquid hydrogen](#).
- [Ernst Ruska](#) and [Max Knoll](#) build the first prototype [electron microscope](#).
- [Paul Dirac](#) proposes that the existence of a single [magnetic monopole](#) in the universe would suffice to explain the quantization of electrical charge.^[3]
- May–October – American pathologists [Ernest William Goodpasture](#) and [Alice Miles Woodruff](#) publish their results on growing [influenza](#) and several other [viruses](#) in fertilised chicken eggs.^{[4][5]}
- December 3 – The drug [Alka-Seltzer](#) is placed on the market.
- [Adolf Butenandt](#) discovers [androsterone](#).
- [John Haven Emerson](#) and [August Krogh](#) introduce new forms of [negative pressure ventilator](#).
- The first [electroencephalography](#) is performed by [Hans Berger](#) in [Germany](#).
- [Lucy Wills](#), working in India, demonstrates that [anemia](#) in pregnancy can be reversed using [brewer's yeast](#).^[6]
- May 27 – [Swiss](#)-born scientist [Auguste Piccard](#) and his assistant, engineer Paul Kipfer, taking off from [Augsburg](#), [Germany](#), reach a record altitude of 15,785 m (51,788 ft) in

a [balloon](#) with a pressurized gondola, gathering data on the [upper atmosphere](#) and measuring [cosmic rays](#), the first human flight into the [stratosphere](#).

- October 5 – [American](#) aviators [Clyde Edward Pangborn](#) and Hugh Herndon, Jr., complete the first [non-stop flight](#) across the [Pacific Ocean](#), from [Misawa, Japan](#), to [East Wenatchee, Washington](#), in 41½ hours.^[7]
- October 24 – The [George Washington Bridge](#) across the [Hudson River](#) in the United States is dedicated; it opens to traffic the following day. At 3,500 feet (1,100 m), it nearly doubles the previous record for the [longest suspension span in the world](#).
- December 14 – British electronics engineer [Alan Blumlein](#) of [EMI](#) submits a UK [patent](#) application for "Improvements in and relating to Sound-transmission, Sound-recording and Sound-reproducing Systems" – binaural or [stereophonic sound](#).
- [László Bíró](#) first exhibits his [ballpoint pen](#), in [Budapest](#).
- [George Beauchamp](#) invents the [electric guitar](#).^[8]
- John H. Sharp of Chicago files the first [patent](#) for a [torque wrench](#).
- Construction of the [Hoover Dam](#) begins on the [Colorado River](#) in the United States (chief designing engineer: [John L. Savage](#)).
- January 3 – [Albert Einstein](#) begins doing research at the [California Institute of Technology](#), along with astronomer [Edwin Hubble](#). In October the Caltech Department of Physics faculty and graduate students meet with Einstein as a guest.
- November 21 – Release of [James Whale](#)'s film of [Frankenstein](#) in [New York](#), with electrical [effects](#) designed by [Kenneth Strickfaden](#).
- [Nobel Prizes](#)
 - [Chemistry](#) – [Carl Bosch](#), [Friedrich Bergius](#)
 - [Medicine](#) – [Otto Heinrich Warburg](#)

1932

- August 10 – A 5.1 kg [chondrite](#)-type [meteorite](#) breaks into fragments and strikes earth near the town of [Archie, Missouri](#).
- [Estonian](#) astronomer [Ernst Öpik](#) postulates that [long-period comets](#) originate in an orbiting cloud (the [Öpik–Oort cloud](#)) at the outermost edge of the [Solar System](#).^[1]
- English [geneticist](#) [C. D. Darlington](#) publishes *Recent Advances in Cytology*, describing the mechanics of [chromosomal crossover](#)^[2] and its role in [evolutionary](#) science.
- English geneticist [J. B. S. Haldane](#) publishes *The Causes of Evolution*, unifying the findings of Mendelian [genetics](#) with those of evolutionary science.
- American [physiologist](#) [Walter Bradford Cannon](#) publishes *The Wisdom of the Body*, developing and popularising the concept of [homeostasis](#).
- A flock of [Soay sheep](#) is translocated from [Soay](#) to [Hirta](#) (also in the depopulated [archipelago](#) of [St Kilda, Scotland](#)) by conservationist [John Crichton-Stuart, 4th Marquess of Bute](#).
- The [heath hen](#) becomes extinct in North America.
- [Braggite](#) is first described, the first mineral discovered with the assistance of [X rays](#).^{[3][4]}
- [Menger–Nöbeling theorem](#).

- [John von Neumann](#) makes foundational contributions to [ergodic theory](#) in a series of papers.^{[5][6][7]}
- [Rózsa Péter](#) presents the results of her paper on [recursive function theory](#), "Rekursive Funktionen," to the [International Congress of Mathematicians](#) in Zurich, Switzerland.
- December – [Marian Rejewski](#) of the [Polish Biuro Szyfrów](#) applies pure mathematics – [permutation group](#) theory – to breaking the [German armed forces' Enigma machine](#) ciphers.^{[8][9]}
- January 5 – The [pathology](#) of [Cushing's syndrome](#) is first described by [Harvey Cushing](#).^{[10][11]}
- [American gastroenterologist Burrill Bernard Crohn](#) and colleagues describe a series of patients with "regional ileitis", inflammation of the [terminal ileum](#), the area most commonly affected by the condition which will become known as [Crohn's disease](#).^[12]
- [Grace Medes](#) discovers tyrosinosis, the [metabolic disorder](#) later known as [Type I tyrosinemia](#).
- Swedish neurosurgeon [Herbert Olivecrona](#) performs the first surgical excision of an intracranial [arteriovenous malformation](#).
- [Rudolph Schindler](#) introduces the first semi-flexible [gastroscope](#), in Germany.^[13]
- Commencement of the 40-year [Tuskegee syphilis experiment](#) by the [U.S. Public Health Service](#) to study the natural progression of untreated [syphilis](#) in poor [African-American sharecroppers](#) in [Alabama](#) without their [informed consent](#).^[14]
- First published use of the term [Medical genetics](#), in an article by [Madge Thurlow Macklin](#).^[15]
- [Gerhard Domagk](#) develops a chemotherapeutic cure for [streptococcus](#)
- [Albert Szent-Györgyi](#) and [Charles Glen King](#) identify [ascorbic acid](#) as an [anti-scorbutic](#).
- December 25 – [IG Farben](#) file a [patent](#) application in Germany for the medical application of the first [sulfonamide](#) drug, Sulfonamidochrysoidine (KI-730; which will be marketed as [Prontosil](#)), following [Gerhard Domagk](#)'s laboratory demonstration of its properties as an [antibiotic](#) at the conglomerate's [Bayer](#) laboratories.^[16]
- April 14 – [John Cockcroft](#) and [Ernest Walton](#) focus a proton beam on lithium and split its nucleus.
- May 10 – [James Chadwick](#) discovers the [neutron](#).^{[17][18]} [Werner Heisenberg](#) explains its symmetries by introducing the concept of [isospin](#).^[19]
- August 2 – The [positron](#) is observed by [Carl Anderson](#).^[20]
- The [Kennedy–Thorndike experiment](#) shows that measured time as well as length are affected by motion, in accordance with the theory of [special relativity](#).^[21]
- [John von Neumann](#) rigorously establishes a mathematical framework for [quantum mechanics](#) in *Mathematische Grundlagen der Quantenmechanik*.
- [Zero-length springs](#) are invented, revolutionizing [seismometers](#) and [gravimeters](#).
- [Nobel Prizes](#)
 - [Physics](#) – [Werner Karl Heisenberg](#)
 - [Chemistry](#) – [Irving Langmuir](#)
 - [Medicine](#) – Sir [Charles Sherrington](#), [Edgar Adrian](#)

- October 13 – The [British Interplanetary Society](#) is founded.
- [Walter Baade](#) and [Fritz Zwicky](#) invent the concept of the [neutron star](#), a new type of celestial object, suggesting that [supernovae](#) might be created by the collapse of a normal star to form a neutron star.
- Sir [Arthur Eddington](#) publishes *The Expanding Universe: Astronomy's 'Great Debate', 1900–1931* in [Cambridge](#).
- Comedian [Will Hay](#) observes the periodic [Great White Spot](#) on [Saturn](#) from his private observatory in London.^[1]
- [Fritz Zwicky](#) postulates the existence of [dark matter](#).^[2]
- [Gilbert N. Lewis](#) isolates the first sample of pure [heavy water](#) by [electrolysis](#).^[3]
- [Morris S. Kharasch](#) and [Frank R. Mayo](#) propose that [free radicals](#) are responsible for [anti-Markovnikov addition](#) of [hydrogen bromide](#) to [allyl bromide](#).^{[4][5]}
- March 10 – [Long Beach earthquake](#) in [Southern California](#): First recording of earthquake strong ground motions by an [accelerograph](#) network, installed in 1932 by the [United States Coast and Geodetic Survey](#).
- [Andrey Kolmogorov](#) publishes *Foundations of the Theory of Probability*, laying the modern axiomatic [foundations of probability theory](#).^[6]
- [David Champernowne](#), while still a [Cambridge](#) undergraduate, publishes his work on the [Champernowne constant](#) in [real numbers](#).^{[7][8]}
- [Alfréd Haar](#) introduces [Haar measure](#).^[9]
- [Jerzy Neyman](#) and [Egon Pearson](#) publish the [Neyman–Pearson lemma](#).^[10]
- [Stanley Skewes](#) discovers [Skewes' number](#).^[11]
- April 3 – First attempted human [kidney transplant](#), by Dr [Yuri Voronoy](#) in the Soviet city of [Kherson](#); the recipient dies 2 days later due to incompatibility of blood type with the (cadaveric) donor.^{[12][13][14][15]}
- July 14 – [Law for the Prevention of Hereditarily Diseased Offspring](#) enacted in [Nazi Germany](#)^[16] allowing [compulsory sterilization](#) of citizens suffering from a list of alleged [genetic disorders](#).
- [Manfred Sakel](#) begins to practice [insulin shock therapy](#) on [psychiatric](#) patients in [Vienna](#).^[17]
- September 12 – [Leó Szilárd](#), waiting for a red light on [Southampton Row](#) in [Bloomsbury](#) (London), conceives the idea of the [nuclear chain reaction](#).
- June – A research group at [RCA](#) headed by [Vladimir K. Zworykin](#) publicly launches the [iconoscope](#), the first practical [cathode ray tube](#) television camera.^{[18][19][20][21]}
- June 26 – [American Totalisator](#) unveils its first [tote board](#), the electronic pari-mutuel betting machine, at the [Arlington Park](#) race track near [Chicago](#).
- [Museum of Science and Industry \(Chicago\)](#) first opens to the public, as part of the [Century of Progress](#) Exposition.
- The [Institute for Advanced Study](#) opens at [Princeton, New Jersey](#), attracting [Albert Einstein](#), [John von Neumann](#) and [Kurt Gödel](#).
- [Sheffield](#) Trades Historical Society (later South Yorkshire Industrial History Society) established in England.

- [Nobel Prizes](#)
 - [Physics](#) – [Erwin Schrödinger](#) and [Paul Dirac](#)
 - [Chemistry](#) – *not awarded*
 - [Physiology or Medicine](#) – [Thomas Hunt Morgan](#)

1934

- [Richard Tolman](#) shows that [black-body](#) radiation in an expanding universe cools but remains thermal.
- [Georges Lemaître](#) interprets the [cosmological constant](#) as due to a [vacuum energy](#) with an unusual perfect fluid [equation of state](#).
- The [Mulliken scale](#) of [chemical element electronegativity](#) is developed by [Robert S. Mulliken](#).
- [Norman Haworth](#) and [Edmund Hirst](#) report the first synthesis of [vitamin C](#).^[1]
- [J. D. Bernal](#) and [Dorothy Crowfoot](#) first successfully apply the technique of [X-ray crystallography](#) to analysis of a biological substance, [pepsin](#).^[2]
- The first commercial [heavy water](#) plant is built at [Vemork](#) in [Norway](#); production also starts this year at [Dnepropetrovsk](#) in the [Soviet Union](#).
- January 18 – [The Iron Bridge](#) in [Shropshire](#), dating from the [Industrial Revolution](#) period, becomes an officially [scheduled monument](#) in [England](#).
- [Lewis Mumford](#) publishes *[Technics and Civilization](#)*.
- [Penrose triangle](#) devised.
- [Sonoluminescence](#) is discovered at the [University of Cologne](#).
- [Gregory Breit](#) and [John A. Wheeler](#) describe the [Breit–Wheeler process](#).
- [Henri Coandă](#) obtains his first patent, in France, on the [Coandă effect](#).
- March 8 – [Sodium thiopental](#), the first intravenous [anesthetic](#), synthesized by [Ernest H. Volwiler](#) with Donalee L. Tabern of [Abbott Laboratories](#),^[3] is first administered to human subjects.
- November 1 – [William F. Wells](#) publishes the [Wells curve](#) (or Wells evaporation falling curve of droplets) giving an explanation of the behavior of exhaled [respiratory droplets](#) and their influence on the transmission of infectious respiratory diseases.^[4]
- Outbreak of "atypical poliomyelitis", strongly resembling what would later be called [chronic fatigue syndrome](#), affects a large number of medical staff at the [Los Angeles County Hospital](#).^[5]
- [George de Hevesy](#) uses [heavy water](#) in one of the first biological [tracer](#) experiments, to estimate the rate of turnover of water in the human body.^[6]
- Austrian biochemist [Regina Kapeller-Adler](#) develops an innovative early [pregnancy test](#) based on the presence of [histidine](#) in urine.
- [Tudor Thomas](#)' work on [corneal grafting](#) restores the sight of a man who had been nearly blind for 27 years.
- April 3 – [Percy Shaw patents](#) the [cat's eye](#) road-safety device in [Britain](#).^[7]

- April 18 – [Citroën Traction Avant](#) introduced, the world's first [front-wheel drive monocoque](#) (welded steel unit body) production [automobile](#), designed by [André Lefèvre](#) and [Flaminio Bertoni](#).
- April 24 – [Laurens Hammond](#) patents the [Hammond organ](#) in the [United States](#).^[8]
- The [135 film](#) cartridge is introduced in Germany and the United States with the Kodak Retina camera, making 35mm film easy to use.
- The first commercial electronic [television sets](#) with [cathode ray tubes](#) are manufactured by [Telefunken](#) in [Germany](#).
- Samuel C. Bradford proposes [Bradford's law](#) of scattering, an example of [Pareto distribution](#) applicable in the [bibliometrics](#) of scientific literature and beyond.^[9]
- [Karl Popper](#) publishes *[Logik der Forschung](#)*.
- [Nobel Prize](#)
 - [Physics](#): not awarded
 - [Chemistry](#): [Harold Clayton Urey](#)
 - [Physiology or Medicine](#): [George Hoyt Whipple](#), [George Richards Minot](#), [William Parry Murphy](#)

1935

- May 14 – Opening of the [Griffith Observatory](#) in [Los Angeles, California](#).
- October 3 – Opening of the [Hayden Planetarium](#) in [New York City](#).
- February 28–March 1 – Working with [polyamides](#) to develop a viable new fiber for chemical company [DuPont](#), [American](#) chemist [Gérard Berchet](#) working under the direction of [Wallace Carothers](#) first synthesizes the [synthetic polymer nylon](#) at [Wilmington, Delaware](#).^[1]
- April 13 – [Dorothy Hodgkin](#) publishes her first solo paper, on the methodology of [X-ray crystallography](#) of [insulin](#).^[2]
- [Vitamin E](#) is first isolated in a pure form by [Gladys Anderson Emerson](#) at the [University of California, Berkeley](#).^[3]
- [Eastman Kodak](#) first market [Kodachrome subtractive color reversal film](#) as [16 mm movie film](#).^{[4][5]} It has been invented by two professional musicians, [Leopold Godowsky Jr.](#) and [Leopold Mannes](#).^{[6][7][8]}
- [English botanist Arthur Tansley](#) introduces the concept of the [ecosystem](#).^{[9][10]}
- [Charles Richter](#) and [Beno Gutenberg](#) develop the [Richter magnitude scale](#) for quantifying [earthquakes](#).
- American [bacteriologist Hans Zinsser](#) publishes *[Rats, lice and history: being a study in biography, which... deals with the life history of typhus fever](#)*.^[11]
- [Cornish Engines Preservation Committee](#) formed to conserve the [Levant Mine beam engine](#) in [Cornwall](#), England.

- April 19 – [Alonzo Church](#) presents his paper "An unsolvable problem of elementary number theory", introducing his theorem on the *Entscheidungsproblem*, to the [American Mathematical Society](#).^[12]
- [Octav Onicescu](#) and [Gheorghe Mihoc](#) develop the notion of the "chain with complete links" in [probability theory](#).^[13]
- [George Pólya](#) develops counting techniques for graphs as algebra.^[14]
- [George K. Zipf](#) proposes [Zipf's law](#) on [probability distribution](#).^[15]
- January 2 – [IG Farben](#) are granted a [patent](#) in [Germany](#) for the medical application of the first [sulfonamide prodrug](#), Sulfonamidochrysoidine (KI-730; marketed as [Prontosil](#)). In February, [Gerhard Domagk](#) and others publish (in *Deutsche Medizinische Wochenschrift*) the first clinical results on its properties as an [antibiotic](#), the first commercially available; and in November a team directed by [Ernest Fourneau](#) at the [Pasteur Institute](#) identify [sulfanilamide](#) as the active component.^[16]
- January 8 – [A.C. Hardy](#) patents the [spectrophotometer](#).
- February 26 – [Robert Watson-Watt](#) and [Arnold Wilkins](#) first demonstrate the reflection of radio waves from an aircraft, near [Darent](#) in [England](#);^[17] on June 17, the first radio detection of an aircraft by ground-based [radar](#) is made at [Orford Ness](#).
- [Einstein](#), [Podolsky](#), and [Rosen](#) publish a paper arguing that quantum mechanics is not a complete physical theory (the [EPR paradox](#)).^[18] Discussion of this introduces the '[Schrödinger's cat](#)' [thought experiment](#).^[19]
- [Jacques Yvon](#) introduces *S*-particle distribution functions in classical statistical mechanics;^[20] they will later be included in the [BBGKY hierarchy](#).
- January 28 – [Iceland](#) becomes the first country to legalize [abortion](#) on medical grounds.
- May – The hormone [testosterone](#) is first isolated and named by a team at [Organon](#) in the Netherlands led by German scientist Ernst Laqueur.^[21] In August, the [chemical synthesis](#) of testosterone from cholesterol is achieved by [Adolf Butenandt](#) and Günther Hanisch.^[22] A week later, the [Ciba](#) group in Zurich, [Leopold Ruzicka](#) and A. Wettstein, publish their synthesis of the hormone.^[23]
- [Ladislav J. Meduna](#) discovers [metrazol shock therapy](#).
- First vaccine for [yellow fever](#).
- German physician Karl Matthes develops the first two-wavelength ear O₂ saturation meter.^[24]
- January 24 – The first [beer can](#) is sold in [Richmond, Virginia](#), United States, by the [Gottfried Krueger Brewing Company](#).^[25]
- June 12 – Conrad Bahr and George Pfefferle file a United States [patent](#) for an adjustable ratcheting [torque wrench](#).^[26]
- July 16 – The world's first [parking meter](#) is installed in [Oklahoma City](#) to a design by Holger George Thuesen and Gerald A. Hale [patented](#) by [Carl Magee](#).^{[27][28][29][30][31][32][33][34]}
- November 6
 - [Edwin H. Armstrong](#) presents his paper on [FM broadcasting](#), "A Method of Reducing Disturbances in Radio Signaling by a System of Frequency Modulation", to the New York section of the [Institute of Radio Engineers](#).
 - First flight of the [Hawker Hurricane](#) British [fighter aircraft](#), designed by [Sydney Camm](#).

- [Callender-Hamilton bridge](#) patented by [A. M. Hamilton](#).
- September 16–21 – [First Congress for the Unity of Science](#) is held at the [Sorbonne](#).^[35]
- [Nobel Prizes](#)
 - [Physics](#) – [James Chadwick](#)
 - [Chemistry](#) – [Frédéric Joliot](#), [Irène Joliot-Curie](#)
 - [Medicine](#) – [Hans Spemann](#)

1936

- February 4 – [Radium](#) E (bismuth-210) becomes the first [radioactive](#) element to be made synthetically.
- December 23 – The first [nerve agent](#), [Tabun](#), is discovered (accidentally) by a research team headed by Dr [Gerhard Schrader](#) of [IG Farben](#) in [Germany](#).^{[1][2]}
- May 28 – [Alan Turing](#)'s paper "[On Computable Numbers](#)" is received by the [London Mathematical Society](#) for publication, introducing the concept of the theoretical "a[utomatic]-machine" or [Turing machine](#). Its formal publication is on November 12.^[3]
- [Rózsa Péter](#) presents a paper entitled "Über rekursive Funktionen der zweite Stufe" to the [International Congress of Mathematicians](#) in Oslo,^[4] helping to found the modern field of [recursive function theory](#).^{[5][6]}
- [Inge Lehmann](#) argues that the [Earth](#)'s molten interior has a solid [inner core](#).^{[7][8]}
- Economist [John Maynard Keynes](#) buys a trunk of [Isaac Newton](#)'s papers at auction.^[9]
- March – [Alonzo Church](#)'s "A Note on the [Entscheidungsproblem](#)" is published.^[10]
- Dutch mathematician [Cornelis Simon Meijer](#) introduces the [Meijer G-function](#).^[11]
- July 4 – First publication recognizing [stress](#) as a biological condition.^{[12][13]}
- December 7 – Streptococcal [meningitis](#) (a condition previously 99% fatal) is successfully treated for the first time with a [sulfonamide](#).^[14]
- [António Egas Moniz](#) publishes his first report of performing a prefrontal [leukotomy](#) on a human patient.^[15]
- [Guido Fanconi](#) describes a connection between [celiac disease](#), [cystic fibrosis](#) of the [pancreas](#) and [bronchiectasis](#).^[16]
- [Harry Himsworth](#) distinguishes the two principal types of [diabetes](#).^[17]
- Sherif's experiment on [conformity](#).^[18]
- June 26 – [Focke-Wulf Fw 61](#), the first fully controllable [helicopter](#), makes its first flight.
- November 2 – The world's first regular daily high-definition (at this time defined as at least 200 lines) television broadcast service is begun by the [British Broadcasting Corporation](#) from [Alexandra Palace](#) in London (following test transmissions since August). The service initially alternates on a weekly basis between [John Logie Baird](#)'s 240-line electromechanical system and the [Marconi-EMI](#) all-electronic [405-line television system](#).

- September 7 – Death of the last recorded [thylacine](#), in [Hobart Zoo](#).^[19]
- November 9 – [American](#) explorer [Ruth Harkness](#) encounters and captures in [China](#) a live [giant panda](#), a cub named [Su Lin](#), the first to enter the United States.^[20]
- [Fields Prize in Mathematics](#) (first award): [Lars Ahlfors](#) and [Jesse Douglas](#)
- [Nobel Prizes](#)
 - [Physics](#) – [Victor Franz Hess](#), [Carl David Anderson](#)
 - [Chemistry](#) – [Peter Debye](#)
 - [Medicine](#) – Sir [Henry Hallett Dale](#), [Otto Loewi](#)

1937

- June 8 – First total [solar eclipse](#) to exceed 7 minutes of totality in over 800 years; visible in the Pacific and Peru.
- September 27 – Last definite record of a [Bali tiger](#) shot.^[1]
- Meredith Crawford first publishes results of the [cooperative pulling paradigm](#), with [chimpanzees](#) in the [United States](#).^[2]
- [Jay Laurence Lush](#) publishes the influential textbook *Animal Breeding Plans* in the United States.^[3]
- The [citric acid cycle](#) is finally identified by [Hans Adolf Krebs](#).
- [Carlo Perrier](#) and [Emilio Segrè](#) at the [University of Palermo](#) confirm [discovery of the chemical element](#) which will become known as [Technetium](#).^{[4][5][6]}
- The [opioid Methadone](#) is synthesized in Germany by scientists working at [Hoechst AG](#).^[7]
- [Otto Bayer](#) and his coworkers at IG Farben in [Leverkusen](#), Germany, first make [polyurethanes](#).
- January – [Alan Turing](#)'s 1936 paper "[On Computable Numbers](#)" first appears in print.^[8] [Alonzo Church](#)'s review of it in [Journal of Symbolic Logic](#) introduces the term [Turing machine](#).
- [Claude Shannon](#)'s Master's [thesis](#) at [MIT](#) demonstrates that electronic application of [Boolean algebra](#) could construct and resolve any logical numerical relationship.^[9]
- [Konrad Zuse](#) submits [patents](#) in [Germany](#) based on his [Z1 computer](#) design anticipating [von Neumann architecture](#).
- [British Graham Land Expedition](#) (1934–1937) concludes its work, having determined that [Graham Land](#) is an integral part of the [Antarctic Peninsula](#) and not an independent [archipelago](#).^[10]
- [Bruno de Finetti](#) publishes "La Prévision: ses lois logiques, ses sources subjectives" in *Annales de l'Institut Henri Poincaré*, his most influential treatment of [his theorem](#) on exchangeable sequences of [random variables](#).^[11]
- [Hans Freudenthal](#) proves the [Freudenthal suspension theorem](#) in [homotopy](#).^[12]
- [Goldberg polyhedron](#) first described.^[13]
- November 2 – English clinical pathologist [Lionel Whitby](#) discovers [sulphapyridine M&B 693](#), a first-

generation [sulphonamide antibiotic](#) which in 1938 is first prescribed to treat [pneumonia](#).^[14]

- [Both respirator](#) designed in Australia.
- Italian psychiatrist [Amarro Fiamberti](#) is the first to document a transorbital approach to the brain, which becomes the basis for the controversial medical procedure of [transorbital lobotomy](#).
- Publication in the [United Kingdom](#) of Dr [A. J. Cronin](#)'s novel *[The Citadel](#)*, promoting the cause of socialised medicine.^[15]
- January – [Albert Einstein](#) and [Nathan Rosen](#) publish a paper denying that [gravitational waves](#) can exist.^[16]
- [Eugene Wigner](#) introduces the term *[isospin](#)*.^[17]
- April 12 – [Frank Whittle](#) ground-tests the first [jet engine](#) designed to power an aircraft, at [Rugby, England](#).
- May 28 – [Rocker Shovel Loader](#) patent applied for in the United States.
- June 5 – [Alan Blumlein](#) is granted a [patent](#) for an [ultra-linear](#) amplifier.^[18]
- [Alec Reeves](#) invents [pulse-code modulation](#).
- [Nobel Prizes](#)
 - [Physics](#) – [Clinton Joseph Davison](#), [George Paget Thomson](#)
 - [Chemistry](#) – [Walter Haworth](#), [Paul Karrer](#)
 - [Medicine](#) – [Albert von Szent-Györgyi Nagrapolt](#)
- [Copley Medal](#) – [Henry Dale](#)
- [Wollaston Medal for geology](#) – [Waldemar Lindgren](#)

1938

- June 28 – A 450-[ton meteorite](#) strikes the earth in an empty field near [Chicora, Pennsylvania](#), United States.
- December 22 – [Marjorie Courtenay-Latimer](#) discovers a [Coelacanth](#), formerly seen only in [fossils](#) millions of years old, in a fisherman's catch in [South Africa](#).
- Last known (captive) specimen of [Schomburgk's deer](#) is killed.^[1]
- Bawden and Pirie publish the first crystal of a spherical [virus](#), [Tomato bushy stunt virus](#).^[2]
- April 6 – [Roy J. Plunkett](#) of [DuPont](#) accidentally discovers [polytetrafluoroethylene](#) (Teflon).
- September 20 – The first [patents](#) for [nylon](#) (first [synthesized](#) in [1935](#)) are granted in the name of [Wallace Carothers](#) to DuPont.^[3] The first items produced in the new material are [toothbrush bristles](#).
- November 16 – [Lysergic acid diethylamide](#) is first synthesized by [Albert Hofmann](#) from [ergotamine](#) at the [Sandoz Laboratories](#) in [Basel](#).^[4]
- [Melamine](#) thermosetting resin is developed by [American Cyanamid](#).
- [Konrad Zuse](#) in [Berlin](#) completes his [Z1 computer](#), a [floating point binary](#) mechanical calculator with limited programmability, using [Boolean logic](#) and reading instructions from perforated 35 mm film.^[5]

- [Albert Einstein](#) and [Leopold Infeld](#) publish *The Evolution of Physics*.
- [Frank Benford](#) restates the [law of distribution of first digits](#).^[6]
- [Alan Turing](#) completes his Ph.D. thesis, *Systems of Logic Based on Ordinals*, at [Princeton University](#); it is presented to the [London Mathematical Society](#) on June 16.^{[7][8]}
- June 4–6 – [Sigmund Freud](#) and his immediate family leave [Vienna](#) for exile in London.
- March 4 – [American biogerontologist Raymond Pearl](#) demonstrates the negative health effects of [tobacco smoking](#).^{[9][10]}
- October – [Robert Edward Gross](#) becomes the first surgeon successfully to [ligate](#) an uninfected [patent ductus arteriosus](#), in [Boston](#).^[11]
- [Dorothy Hansine Andersen](#) describes the characteristic [cystic fibrosis](#) of the [pancreas](#) and correlates it with the [celiac](#), [respiratory](#) and [intestinal diseases](#) prominent in the condition, also first hypothesizing that cystic fibrosis is a [recessive](#) disorder.^[12]
- [Hans Asperger](#) first adopts the term [autism](#) in its modern sense in referring to *autistic psychopaths* in a lecture (in [German](#)) on [child psychology](#).^[13]
- [Ugo Cerletti](#) and [Lucio Bini](#) discover [electroconvulsive therapy](#).
- American endocrinologist [Henry Turner](#) describes [Turner syndrome](#).^[14]
- December 17 – [Discovery of nuclear fission](#) by [Otto Hahn](#), [Lise Meitner](#) and [Fritz Strassmann](#) with [Otto Robert Frisch](#).
- [Herbert E. Ives](#) and G. R. Stilwell execute the [Ives–Stilwell experiment](#), showing that [ions](#) radiate at [frequencies](#) affected by their motion.^[15]
- [Nuclear magnetic resonance](#) is first described and measured in [molecular beams](#) by [Isidor Rabi](#).^[16]
- The [Vlasov equation](#) is first proposed for description of [plasma](#) by [Anatoly Vlasov](#).^[17]
- [László Bíró](#) obtains his first [patent](#) for a [ballpoint pen](#), in France.
- [Stefan Odobleja](#) begins publication of his *Psychologie consonantiste* in Paris, originating the study of [cybernetics](#).
- [Nobel Prizes](#)
 - [Physics](#) – [Enrico Fermi](#)
 - [Chemistry](#) – [Richard Kuhn](#)
 - [Medicine](#) – [Corneille Jean François Heymans](#)
- [Copley Medal](#): [Niels Bohr](#)
- [Wollaston Medal for geology](#): [Maurice Lugeon](#)

1939

- [Robert Oppenheimer](#) jointly predicts two new types of celestial object:
 - With [George Volkoff](#) he calculates the structure of [neutron stars](#).^[1]
 - With [Hartland Snyder](#) he predicts the existence of what will come to be called [black holes](#).^[2]
- Autumn – [DDT](#)'s properties as an [insecticide](#) are discovered by [Paul Müller](#) of [Geigy](#).^[3]

- [Kavrayskiy VII projection](#) devised by [Vladimir V. Kavrayskiy](#).^[4]
- January 7 – French physicist [Marguerite Perey](#) identifies [francium](#), the [last chemical element](#) first discovered in nature, as a decay product of ^{227}Ac .^[5]
- April 30 – [Nylon](#) fabric is first introduced to the general public at the [New York World's Fair](#).
- July – [Edward Adelbert Doisy](#) of [Saint Louis University](#) publishes the chemical structure of [vitamin K](#).^[6]
- [Linus Pauling](#) publishes *The Nature of the Chemical Bond*, a compilation of a decade's work on [chemical bonding](#), explaining [hybridization theory](#), [covalent bonding](#) and [ionic bonding](#) as explained through electronegativity, and [resonance](#) as a means to explain, among other things, the structure of [benzene](#).^[7]
- September 4 – [Alan Turing](#) and [Gordon Welchman](#) report to the United Kingdom [Government Code and Cypher School](#), [Bletchley Park](#).^[8]
- October – [John V. Atanasoff](#) with [Clifford Berry](#) demonstrate the first prototype [Atanasoff–Berry Computer](#) at [Iowa State University](#).^[9]
- Publication of [Vannevar Bush](#)'s article "Mechanization and the Record" proposing a [proto-hypertext collective memory](#) machine which he soon afterwards calls '[memex](#)'.
- [Cornelis de Waard](#) begins to publish the *Journal* of [Isaac Beeckman](#).
- Philosopher and historian [Alexandre Koyré](#) originates the term *scientific revolution* to describe the emergence of [modern science](#) during the [early modern period](#), from the late [Renaissance](#) to the late 18th century.^[10]
- [Quarry Bank Mill](#), an 18th-century working (at this time) [cotton mill](#) in north west England, is donated to the [National Trust for Places of Historic Interest or Natural Beauty](#).
- [Richard von Mises](#) poses the [birthday problem](#) in [probability](#).^[11]
- January–February – Discovery of [nuclear fission](#) is announced independently by [Otto Hahn](#) and [Lise Meitner](#).^{[12][13][14]} On January 26 [Niels Bohr](#) reports the splitting of the uranium nucleus with a release of two hundred million electron volts of energy to a conference on the campus of [George Washington University](#) in Washington, D.C.^[15]
- August 2 – The [Einstein–Szilárd letter](#) is signed, advising President of the United States [Franklin D. Roosevelt](#) of the potential use of [uranium](#) to construct an [atomic bomb](#). It is delivered on October 11.
- October 21 – First meeting of the [Advisory Committee on Uranium](#) under [Lyman James Briggs](#), authorised by President Roosevelt to oversee [neutron](#) experiments.
- [John H. Lawrence](#) uses beams of energized [neutrons](#) from a [particle accelerator](#) to treat a patient with [leukemia](#).
- Drs [Philip Levine](#) and Rufus Stetson published a first case report on the clinical consequences of non-recognized *Rh factor*, hemolytic [transfusion reaction](#) and [hemolytic disease of the newborn](#) in its most severe form.^[16]
- [Maudsley Hospital](#) moves to an evacuated school in north London as the [Mill Hill](#) Emergency Hospital where treatment of [combat stress](#) is pioneered.
- [Intramedullary rod](#) was first used by German [Gerhard Küntscher](#).

- January 1 – [Hewlett-Packard](#) is founded as an electronics company in [Palo Alto, California](#).
- January 11 – First flight of the [Lockheed P-38 Lightning](#).
- August 27 – Flying the [Heinkel He 178](#), [Erich Warsitz](#) makes the first flight entirely on [turbojet](#) power (the [HeS 3 jet engine](#)).
- November 1–2 – [Physicist Hans Ferdinand Mayer](#) writes the [Oslo Report](#) on German weapons systems and passes it to the British [Secret Intelligence Service](#).
- December 9 – First flight of the Consolidated XB-24 "[Liberator](#)" bomber prototype.
- [Homer Dudley](#) and Robert Riesz of [Bell Labs](#) in the United States publicly demonstrate the [Voder](#) (voice operating demonstrator) [speech synthesis](#) machine.
- [Kirlian photography](#) is invented by [Semyon Kirlian](#).
- American industrial psychologist [Fritz Roethlisberger](#), with William J. Dickson, publishes *Management and the Worker: an account of a research program conducted by the Western Electric Company, Hawthorne works, Chicago*.
- November 6 – [Sonderaktion Krakau](#): The [Gestapo](#) arrests scientists from the [Jagiellonian University](#) and other institutions in [Kraków, Poland](#); on November 27 they are sent to [Sachsenhausen concentration camp](#).
- Nobel Prizes
 - [Physics](#) – [Ernest Lawrence](#)
 - [Chemistry](#) – [Adolf Friedrich Johann Butenandt](#), [Lavoslav Ruzicka](#)
 - [Medicine](#) – [Gerhard Domagk](#)

TECHNOLOGY – PHOTOGRAPHY, TRANSPORT, TELECOMMUNICATION, INVENTIONS, ENERGY

SEE CHAPTER “SCIENCE – FORMAL, NATURAL, SOCIAL”

SEE CHAPTER “SCIENCE, TECHNOLOGY, ETC. IN THE TWELFTH 1820-1939”

September 27, 1825 – The world's first modern railway, the Stockton and Darlington Railway, opens in England.

April 26 – May 24, 1827 - The Royal Netherlands Navy's British-built paddle steamer Curaçao makes the first Transatlantic Crossing by steam, from Hellevoetsluis to Paramaribo.

July 4, 1829 – George Shillibeer begins operating the first bus service in London.

September 15, 1830 – The Liverpool and Manchester Railway opens, the world's first intercity passenger railway operated solely by steam locomotives.

April 8 – April 23, 1838 – Isambard Kingdom Brunel's paddle steamer SS Great Western (1838) makes the Transatlantic Crossing to New York from Avonmouth, England, in fifteen days, inaugurating a regular steamship service.

January 2, 1839 – First photo of the Moon taken by photographer Louis Daguerre and on 7/1/1839 – Daguerre went public with his invention of the camera photograph. In 1829, Daguerre partnered with Nicéphore Niépce, an inventor who had produced the world's first heliograph in 1822 and the oldest surviving camera photograph in 1826 or 1827. Niépce died suddenly in 1833, but Daguerre continued experimenting, and evolved the process which would subsequently be known as the daguerreotype. After efforts to interest private investors proved fruitless, Daguerre went public with his invention in 1839. At a joint meeting of the French Academy of Sciences and the Académie des Beaux Arts on 7 January of that year, the invention was announced and described in general terms, but all specific details were withheld. Under assurances of strict confidentiality, Daguerre explained and demonstrated the process only to the Academy's perpetual secretary François Arago, who proved to be an invaluable advocate. Members of the Academy and other select individuals were allowed to examine specimens at Daguerre's studio. The images were enthusiastically praised as nearly miraculous, and news of the daguerreotype quickly spread. Arrangements were made for Daguerre's rights to be acquired by the French Government in exchange for lifetime pensions for himself and Niépce's son Isidore; then, on 19 August 1839, the French Government presented the invention as a gift from France "free to the world", and complete working instructions were published. In 1839, Daguerre was elected to the National Academy of Design as an Honorary Academician.

Daguerre's name is one of the 72 names of prominent French scientists inscribed on the Eiffel Tower: Polonceau, Petiet, Daguerre, Wurtz, Le Verrier, Perdonnet, Delambre, Malus, Breguet, Dumas, Clapeyron, Borda, Fourier, Bichat, Sauvage, Pelouze, Carnot, Lame, Cauchy, Belgrand, Regnault, Fresnel, De Prony, Vicat, Ebelmen, Coulomb, Poinot, Foucault, Delaunay, Morin, Haüy, Combes, Thenard, Arago, Poisson, Monge, Jamin, Gay Lussac, Fizeau, Schneider, Le Chatelier, Berthier, Barral, De Dion, Gouin, Joussetin, Broca,

Becquerel, Coriolis, Cail, Triger, Giffard, Perrier, Sturm, Seguin, Lalande, Tresca, Poncelet, Bresse, Lagrange, Belanger, Cuvier, Laplace, Dulong, Chasles, Lavoisier, Ampere, Chevereul, Flachat, Navier, Legendre, Chaptal.

April 9, 1839 – The world's first commercial electric telegraph line comes into operation alongside the Great Western Railway line, from Paddington Station to West Drayton.

July 4, 1840 – The Cunard Line's 700-ton wooden paddlewheel steamer RMS Britannia departs from Liverpool, bound for Halifax, Nova Scotia, on the first steam transatlantic passenger mail service.

May 24, 1844 - The first electrical telegraph sent by Samuel Morse from Baltimore to Washington, D.C..

March 10, 1876 – A test between two rooms in a single building in Boston showed that the telephone worked, but so far, only at a short range. The prototype telephone was invented by Alexander Graham Bell in 1876.

November 21, 1877 - Thomas Alva Edison conceived the principle of recording and reproducing sound between May and July 1877 as a byproduct of his efforts to "play back" recorded telegraph messages and to automate speech sounds for transmission by telephone. His first experiments were with waxed paper.

He announced his invention of the first *phonograph*, a device for recording and replaying sound, on November 21, 1877 (early reports appear in Scientific American and several newspapers in the beginning of November, and an even earlier announcement of Edison working on a 'talking-machine' can be found in the Chicago Daily Tribune on May 9), and he demonstrated the device for the first time on November 29 (it was patented on February 19, 1878 as US Patent 200,521). "In December, 1877, a young man came into the office of the SCIENTIFIC AMERICAN, and placed before the editors a small, simple machine about which very few preliminary remarks were offered. The visitor without any ceremony whatever turned the crank, and to the astonishment of all present the machine said: "Good morning. How do you do? How do you like the phonograph?" The machine thus spoke for itself, and made known the fact that it was the phonograph..."

December 31, 1879 - In 1878, Edison formed the Edison Electric Light Company in New York City with several financiers, including J. P. Morgan, Spencer Trask, and the members of the Vanderbilt family. Edison made the first public demonstration of his incandescent light bulb on December 31, 1879, in Menlo Park. It was during this time that he said: "We will make electricity so cheap that only the rich will burn candles".

On August 9, 1884, "La France", a French Army airship, makes its maiden flight. Launched by Charles Renard and Arthur Constantin Krebs. Krebs piloted the first fully controlled free-flight with the *La France*. The 170-foot (52 m) long, 66,000 cubic feet (1,900 m³) airship, electric-powered with a 435 kg battery completed a flight that covered 8 km (5.0 mi) in 23 minutes. It was the first full round trip flight with a landing on the starting point. On its seven flights in 1884 and 1885 the *La France* dirigible returned five times to its starting point. "La France was the first airship that could return to its starting point in a light wind. It was 165 feet (50.3 meters) long, its maximum diameter was 27 feet (8.2 meters), and it had a capacity of 66,000 cubic feet (1,869 cubic meters)." Its battery-powered motor "produced 7.5 horsepower (5.6 kilowatts). This motor was later replaced with one that produced 8.5 horsepower (6.3 kilowatts)."

October 9, 1875 – Amedee Bollee (1844-1917) drives during 18 hours, on board of the car l'Obeissante, 250 kms. Between Le Mans and Paris. He is considered as the first inventor who commercialized cars.

Isaac Peral of Cartagena, Spain launches his pioneering submarine on September 8, 1888. Created for the Spanish Navy, el Peral was "roughly 71 feet long, with a 9-foot beam and a height of almost 9 feet amidships, with one horizontal and two small vertical propellers, Peral's "cigar," as the workers called it, ... had a periscope, a chemical system to oxygenate the air for a crew of six, a speedometer, spotlights, and a launcher at the bow capable of firing three torpedoes. Its two 30-horsepower electrical motors, powered by 613 batteries, gave it a theoretical range of 396 nautical miles and a maximum speed of 10.9 knots an hour at the surface." It underwent a series of trials in 1889 and 1890, all in the Bay of Cádiz. On June 7, 1890, it "successfully spent an hour submerged at a depth of 10 meters, following a set course of three and a half miles". He was celebrated by the public and honored by Maria Christina of Austria, Queen Regent of Spain. But Navy officials ultimately declared the submarine a "useless curiosity", scrapping the project.

July 2, 1900 – The first zeppelin flight occurs over Lake Constance near Friedrichshafen, Germany.

12 December 1901 – The first radio receiver (successfully received a radio transmission). This receiver was developed by Guglielmo Marconi. Marconi established a wireless transmitting station at Marconi House, Rosslare Strand, County Wexford, Ireland in 1901 to act as a link between Poldhu in Cornwall and Clifden in County Galway. He soon made the announcement that on 12 December 1901, using a 152.4-meter (500 ft) kite-supported antenna for reception, the message was received at Signal Hill in St John's, Newfoundland (now part of Canada), signals transmitted by the company's new high-power station at Poldhu, Cornwall. The distance between the two points was about 3,500 kilometers (2,200 mi). Heralded as a great scientific advance, there was—and continues to be—some skepticism about this claim, partly because the signals had been heard faintly and sporadically. There was no independent confirmation of the reported reception, and the transmissions, consisting of the Morse code letter S sent repeatedly, were difficult to distinguish from atmospheric noise. (A detailed technical review of Marconi's early transatlantic work appears in John S. Belrose's work of 1995.) The Poldhu transmitter was a two-stage circuit. The first stage operated at a lower voltage and provided the energy for the second stage to spark at a higher voltage.

17/7/1902 – The first airconditioner began working in Buffalo, New York, USA, designed and built by Carrier.

October 23, 1906, in Paris – Alberto Santos-Dumont and his Santos-Dumont 14-bis make the first public flight of an airplane. The flying machine was the first fixed-wing aircraft officially witnessed to take off, fly, and land. Santos Dumont is considered the "Father of Aviation" in his country of birth, Brazil.^[72] His flight is the first to have been certified by the Aéro-Club de France and the Fédération Aéronautique Internationale (FAI). On November 12, 1906, Santos Dumont succeeded in setting the first world record recognized by the Aero-Club De France by flying 220 metres in less than 22 seconds.

December 24, 1906 – Reginald Fessenden of East Bolton, Quebec, Canada made what appear to be the first audio radio broadcasts of entertainment and music ever made to a general audience. (Beginning in 1904, the United States Navy had broadcast daily time signals and weather reports, but these employed spark-gap transmitters, transmitting in Morse code). On

the evening of December 24, 1906 ([Christmas Eve](#)), Fessenden used the alternator-transmitter to send out a short program from [Brant Rock, Plymouth County, Massachusetts](#). It included a phonograph record of [Ombra mai fù](#) (Largo) by [George Frideric Handel](#), followed by Fessenden himself playing the song [O Holy Night](#) on the [violin](#). Finishing with reading a passage from the [Bible](#): 'Glory to God in the highest and on earth peace to men of good will' ([Gospel of Luke](#) 2:14). On December 31, [New Year's Eve](#), a second short program was broadcast. The main audience for both these transmissions was an unknown number of shipboard radio operators along the [East Coast of the United States](#). Fessenden claimed that the Christmas Eve broadcast had been heard "as far down" as [Norfolk, Virginia](#), while the New Year Eve's broadcast had reached places in the Caribbean. Although now seen as a landmark, these two broadcasts were barely noticed at the time and soon forgotten—the only first-hand account appears to be a letter Fessenden wrote on January 29, 1932, to his former associate, Samuel M. Kinter.

September 27, 1908 – [Henry Ford](#) of the [Ford Motor Company](#) introduces the [Ford Model T](#). The first production Model T was built on September 27, 1908, at the [Ford Piquette Avenue Plant](#) in [Detroit](#). It is generally regarded as the first affordable automobile, the car that "put America on wheels"; some of this was because of Ford's innovations, including [assembly line](#) production instead of individual hand crafting, as well as the concept of paying the workers a wage proportionate to the cost of the car, so that they would provide a ready made market.

December 11, 1910 – [Georges Claude](#) invented the [neon lamp](#). He applied an electrical discharge to a sealed tube of [neon](#) gas, resulting in a red glow. Claude started working on neon tubes which could be put to use as ordinary light bulbs. His first public display of a neon lamp took place on December 11, 1910, in Paris. In 1912, Claude's associate began selling neon discharge tubes as [advertising signs](#). They were introduced to U.S. in 1923 when two large neon signs were bought by a Los Angeles [Packard](#) car dealership. The glow and arresting red color made neon advertising completely different from the competition.

[Charles Lindbergh](#) becomes the first person to fly solo across the Atlantic Ocean (May 20–21, 1927), nonstop from [New York](#) to [Paris](#).

HIGHLIGHTS

- 1822: [Thomas Blanchard](#) invents the pattern-tracing lathe (actually more like a [shaper](#)) and was completed by for the U.S. Ordnance Dept. The lathe can copy symmetrical shapes and is used for making gun stocks, and later, ax handles. The lathe's patent is in force for 42 years, the record for any U.S. patent.^{[343][344]}
- 1822: [Nicéphore Niépce](#) invents [Heliography](#), the first photographic process.
- 1822: [Charles Babbage](#), considered the "[father of the computer](#)",^[345] begins building the first programmable [mechanical computer](#).
- 1823: [Johann Wolfgang Döbereiner](#) invents the [first lighter](#).
- 1824: [Johann Nikolaus von Dreyse](#) invents the [bolt-action rifle](#).^[346]
- 1825: [William Sturgeon](#) invents the [electromagnet](#).
- 1826: [John Walker](#) invents the friction [match](#).^[347]
- 1828: [James Beaumont Neilson](#) develops the [hot blast](#) process.
- 1828: [Patrick Bell](#) invents the [reaping machine](#).

- 1828: Hungarian physicist [Ányos Jedlik](#) invents the first commutated rotary [electromechanical machine](#) with electromagnets.
- 1829: William Mann invents the compound [air compressor](#).
- 1830: [Edwin Budding](#) invents the [lawn mower](#).
- 1831: [Michael Faraday](#) invents a method of [electromagnetic induction](#). It would be independently invented by [Joseph Henry](#) the following year.
- 1834: [Moritz von Jacobi](#), a German-born Russian, invents the first practical [electric motor](#).
- 1835: [Joseph Henry](#) invents the electromechanical [relay](#).
- 1837: [Samuel Morse](#) invents [Morse code](#).
- 1838: [Moritz von Jacobi](#) invents [Electrotyping](#).
- 1839: [William Otis](#) invents the [steam shovel](#).
- 1839: [James Nasmyth](#) invents the [steam hammer](#).
- 1839: [Edmond Becquerel](#) invents a method for the [photovoltaic effect](#), effectively producing the first [solar cell](#).
- 1841: [Alexander Bain](#) devises a printing telegraph.^[348]
- 1842: [William Robert Grove](#) invents the first [fuel cell](#).
- 1842: [John Bennet Lawes](#) invents [superphosphate](#), the first man-made [fertilizer](#).
- 1844: [Friedrich Gottlob Keller](#) and, independently, [Charles Fenerty](#) come up with the wood pulp method of paper production.
- 1845: [Isaac Charles Johnson](#) invents Modern [Portland cement](#).
- 1846: Henri-Joseph Maus invents the [Tunnel boring machine](#).
- 1847: [Ascanio Sobrero](#) invents [Nitroglycerin](#), the first explosive made that was stronger than [black powder](#).
- 1848: Jonathan J. Couch invents the [pneumatic drill](#).
- 1849: [Walter Hunt](#) invents the first [repeating rifle](#) to use metallic cartridges (of his own design) and a spring-fed magazine.
- 1849: [James B. Francis](#) invents the [Francis turbine](#).
- 1850: [Sir William Armstrong](#) invents the [hydraulic accumulator](#).
- 1852: [Robert Bunsen](#) is the first to use a [chemical vapor deposition](#) technique.
- 1852: [Elisha Otis](#) invents the safety brake elevator.^[349]
- 1852: [Henri Giffard](#) becomes the first person to make a manned, controlled and powered flight using a [dirigible](#).
- 1853: [François Coignet](#) invents [reinforced concrete](#).
- 1855: [James Clerk Maxwell](#) invents the first practical method for [color photography](#), whether chemical or electronic.
- 1855: Sir. [Henry Bessemer](#) patents the [Bessemer process](#) for making steel, with improvements made by others over the following years.
- 1856: [James Harrison](#) produces the world's first practical ice making machine and refrigerator using the principle of vapour compression in Geelong, Australia.^[350]
- 1856: [William Henry Perkin](#) invents [Mauveine](#), the first [synthetic dye](#).
- 1857: [Heinrich Geissler](#) invents the [Geissler tube](#).
- 1859: [Gaston Planté](#) invents the [lead acid battery](#), the first [rechargeable battery](#).
- 1860: [Joseph Swan](#) produces [carbon fibers](#).^[351]

- 1862: [Alexander Parkes](#) invents [parkesine](#), also known as [celluloid](#), the first man-made [plastic](#).
- 1864: [Louis Pasteur](#) invents the [pasteurization](#) process.
- 1865: [Carl Wilhelm Siemens](#) and [Pierre-Émile Martin](#) invented the Siemens-Martin process for making steel.
- 1865: [Gregor Mendel](#) publishes 'Versuche über Pflanzenhybriden' ("Experiments on Plant Hybridization"), effectively founding the science of [genetics](#), though the importance of his work would not be appreciated until later on.
- 1867: [Alfred Nobel](#) invents [Dynamite](#), the first safely manageable explosive stronger than [black powder](#).
- 1867: Lucien B. Smith invents [barbed wire](#), which [Joseph F. Glidden](#) will modify in 1874, leading to the taming of the West and the end of the cowboys.
- 1872: J.E.T. Woods and J. Clark invented [Stainless steel](#). [Harry Brearley](#) was the first to commercialize it.^[352]
- 1873: [Frederick Ransome](#) invents the [rotary kiln](#).
- 1873: [Sir William Crookes](#), a chemist, invents the [Crookes radiometer](#) as the by-product of some chemical research.
- 1873: [Zénobe Gramme](#) invents the first commercial [electrical generator](#), the [Gramme machine](#).
- 1874: [Gustave Trouvé](#) invents the first [metal detector](#).
- 1876: [Nicolaus August Otto](#) invents the [Four-stroke cycle](#).
- 1876: [Alexander Graham Bell](#) has a patent granted for the [telephone](#). However, other inventors before Bell had worked on the development of the telephone and the invention had several pioneers.^[353]
- 1877: [Thomas Edison](#) invents the first working [phonograph](#).^[354]
- 1878: [Henry Fleuss](#) is granted a patent for the first practical [rebreather](#).^[355]
- 1878: [Lester Allan Pelton](#) invents the [Pelton wheel](#).
- 1879: [Joseph Swan](#) and [Thomas Edison](#) both patent a functional [Incandescent light bulb](#). Some two dozen inventors had experimented with electric incandescent lighting over the first three-quarters of the 19th century but never came up with a practical design.^[356] Swan's, which he had been working on his since the 1860s, had a low resistance so was only suited for small installations. Edison designed a high-resistance bulb as part of a large-scale commercial electric lighting utility.^{[357][358][359]}
- 1881: [Nikolay Benardos](#) presents [carbon arc welding](#), the first practical [arc welding](#) method.^[360]
- 1884: [Hiram Maxim](#) invents the [recoil-operated Maxim gun](#), ushering in the age of semi- and fully automatic firearms.
- 1884: [Paul Vieille](#) invents [Poudre B](#), the first [smokeless powder](#) for firearms.
- 1884: Sir [Charles Parsons](#) invents the modern [steam turbine](#).
- 1884: Hungarian engineers [Károly Zipernowsky](#), [Ottó Bláthy](#) and [Miksa Déri](#) invent the closed core high efficiency transformer and the AC parallel power distribution.
- 1885: [John Kemp Starley](#) invents the modern [bicycle](#).^{[361][362]}
- 1886: Carl Gassner invents the [zinc-carbon battery](#), the first [dry cell battery](#), making portable electronics practical.
- 1886: [Charles Martin Hall](#) and independently [Paul Héroult](#) invent the [Hall–Héroult process](#) for economically producing aluminum in 1886.

- 1886: [Karl Benz](#) invents the first petrol or gasoline powered auto-mobile (car).^[363]
- 1887: [Carl Josef Bayer](#) invents the [Bayer process](#) for the production of alumina.
- 1887: [James Blyth](#) invents the first [wind turbine](#) used for generating electricity.
- 1887: [John Stewart MacArthur](#), working in collaboration with brothers Dr. Robert and Dr. William Forrest develops the process of [gold cyanidation](#).
- 1888: [John J. Loud](#) invents the [ballpoint pen](#).^[364]
- 1888: [Heinrich Hertz](#) publishes a conclusive proof of [James Clerk Maxwell](#)'s electromagnetic theory in experiments that also demonstrate the existence of [radio waves](#). The effects of electromagnetic waves had been observed by many people before this but no usable theory explaining them existed until Maxwell.
- 1890s: [Frédéric Swarts](#) invents the first [chlorofluorocarbons](#) to be applied as refrigerant.^[365]
- 1890: [Clément Ader](#) invents the first aircraft, airplane, fly machine called [Eole \(aircraft\)](#) or [Ader Éole](#)
- 1891: [Whitcomb Judson](#) invents the [zipper](#).
- 1892: [Léon Bouly](#) invents the [cinematograph](#).
- 1893: [Rudolf Diesel](#) invents the [diesel engine](#) (although [Herbert Akroyd Stuart](#) had experimented with compression ignition before Diesel).
- 1895: [Guglielmo Marconi](#) invents a system of wireless communication using radio waves.
- 1895: [Wilhelm Conrad Röntgen](#) invented the first radiograph (xrays).
- 1898: [Hans von Pechmann](#) synthesizes [polyethylene](#), now the most common [plastic](#) in the world.^[366]
- 1899: [Waldemar Jungner](#) invents the rechargeable [nickel-cadmium battery](#) (NiCd) as well as the [nickel-iron electric storage battery](#) (NiFe) and the rechargeable alkaline [silver-cadmium battery](#) (AgCd)
- 1900: The first [Zeppelin](#) is designed by [Theodor Kober](#).
- 1901: The first motorized cleaner using suction, a powered "[vacuum cleaner](#)", is patented independently by British engineer [Hubert Cecil Booth](#) and American inventor [David T. Kenney](#).^[367]
- 1903: The first successful [gas turbine](#) is invented by [Ægidius Elling](#).
- 1903: Édouard Bénédictus invents [laminated glass](#).
- 1903: First manually controlled, fixed wing, motorized aircraft flies at [Kitty Hawk, North Carolina](#) by [Orville and Wilbur Wright](#). See [Claims to the first powered flight](#).
- 1904: The [Fleming valve](#), the first [vacuum tube](#) and [diode](#), is invented by [John Ambrose Fleming](#).
- 1907: The first free flight of a rotary-wing aircraft is carried out by [Paul Cornu](#).
- 1907: [Leo Baekeland](#) invents [bakelite](#).
- 1907 (at some time during the year),^[368] the tuyères thermopropulsives^[369] after 1945 ([Maurice Roy \(fr\)](#)) known as the *statoreacteur*^{[369][370]} a *combustion subsonique* (the [ramjet](#))^[371] – [R. Lorin](#)^{[372][373]}
- 1908: [Cellophane](#) is invented by [Jacques E. Brandenberger](#).
- 1909: [Fritz Haber](#) invents the [Haber process](#).
- 1909: The first instantaneous transmission of images, or [television](#) broadcast, is carried out by Georges Rignoux and A. Fournier.

- 1911: The [cloud chamber](#), the first [particle detector](#), is invented by [Charles Thomson Rees Wilson](#).
- 1913: The [Bergius process](#) is developed by [Friedrich Bergius](#).
- 1913: The [Kaplan turbine](#) is invented by [Viktor Kaplan](#).
- 1915: The first operational military [tanks](#) are designed, in Great Britain and France. They are used in battle from 1916 and 1917 respectively. In Britain the designers are [Walter Wilson](#) and [William Tritton](#); in France, [Eugène Brillié](#). (Although it is known that vehicles incorporating at least some of the features of the tank were designed in a number of countries from 1903 onwards, none reached a practical form.)
- 1916: The [Czochralski process](#), widely used for the production of single crystal [silicon](#), is invented by [Jan Czochralski](#).
- 1917: The [crystal oscillator](#) is invented by [Alexander M. Nicholson](#) using a crystal of [Rochelle Salt](#) although his priority was disputed by [Walter Guyton Cady](#)
- 1925: The [Fischer–Tropsch process](#) is developed by [Franz Fischer](#) and [Hans Tropsch](#) at the [Kaiser-Wilhelm-Institut für Kohlenforschung](#).
- 1926: The [Yagi-Uda Antenna](#) or simply Yagi Antenna is invented by [Shintaro Uda](#) of Tohoku Imperial University, Japan, assisted by his colleague [Hidetsugu Yagi](#). The Yagi Antenna was widely used by the US, British, and Germans during [World War II](#). After the war they saw extensive development as home [television antennas](#).
- 1926: [Robert H. Goddard](#) launches the first [liquid fueled rocket](#).
- 1927: The [quartz clock](#) is invented by Warren Marrison and J.W. Horton at [Bell Telephone Laboratories](#).^[374]
- 1928: [Penicillin](#) is first observed to exude antibiotic substances by Nobel laureate [Alexander Fleming](#). Development of medicinal penicillin is attributed to a team of medics and scientists including [Howard Walter Florey](#), [Ernst Chain](#) and [Norman Heatley](#).
- 1928: [Frank Whittle](#) formally submitted his ideas for a turbo-jet engine. In October 1929, he developed his ideas further.^[375] On 16 January 1930 in England, Whittle submitted his first patent (granted in 1932).^[376]
- 1928: [Philo Farnsworth](#) demonstrates the first practical [electronic television](#) to the press.
- 1929: The [ball screw](#) is invented by Rudolph G. Boehm.
- 1930, the [supersonic combustng ramjet](#) — [Frank Whittle](#)^[377]
- 1930: The [Phase-contrast microscopy](#) is invented by [Frits Zernike](#).
- 1931: The [electron microscope](#) is invented by [Ernst Ruska](#).
- 1933: [FM radio](#) is patented by inventor [Edwin H. Armstrong](#).
- 1935: [Nylon](#), the first fully [synthetic fiber](#) is produced by [Wallace Carothers](#) while working at [DuPont](#).^[378]
- 1938: [Z1](#) built by [Konrad Zuse](#) is the first freely programmable [computer](#) in the world.
- 1938, December: [Nuclear fission](#) discovered in experiment by [Otto Hahn](#) ([Nazi Germany](#)), coined by [Lise Meitner](#) (fled to Sweden from [Nazi](#)-occupied Austria) and [Fritz Strassman](#) (Sweden). The [Manhattan Project](#), and consequently the [Soviet atomic bomb project](#) were begun based on this research, as well as the [German nuclear energy project](#), although the latter one declined as its physicists were drafted into Germany's war effort.
- 1939: G. S. Yunyev or [Naum Gurvich](#) invented the electric current [defibrillator](#)

EVENTS – HISTORICAL, SPORT, RELIGION, INAUGURATIONS, MISCELLENEOUS

June 16, 1824 – Society for the Prevention of Cruelty to Animals is established in Great Britain. Various social reformers who were not parliamentarians and an informal network had gathered around the efforts of Reverend Arthur Broome (1779–1837) to create a voluntary organisation that would promote kindness toward animals. Broome canvassed opinions in letters that were published or summarised in various periodicals in 1821. Broome organised a meeting and extended invitations to various reformers that included parliamentarians, clergy and lawyers. The meeting was held on Wednesday 16 June 1824 in Old Slaughter's Coffee House, London. The meeting was chaired by Thomas Fowell Buxton MP (1786–1845) and the resolution to establish the society was voted on. Among the others who were present as founding members were Sir James Mackintosh MP, Richard Martin, William Wilberforce, Basil Montagu, John Ashley Warre, Rev. George Bonner, Rev. George Avery Hatch, Sir James Graham, John Gilbert Meymott, William Mudford, and Lewis Gompertz. The organisation was founded as the **Society for the Prevention of Cruelty to Animals**. Broome was appointed as the society's first honorary secretary. The foundation is marked by a plaque on the modern day building at 77–78 St Martin's Lane

February 11, 1826 – University College London is founded, under the name *University of London*.

February 5, 1840 – The murder of a Capuchin friar and his Greek servant leads to the Damascus affair, a highly publicized case of blood libel against the Jews of Damascus.

April 15, 1840 – King's College Hospital opens in London.

May 6, 1840 – The Penny Black, the world's first postage stamp, becomes valid for the pre-payment of postage.

August 15, 1843 – Tivoli Gardens, one of the oldest still intact amusement parks in the world, opens in Copenhagen, Denmark.

March 21, 1844 – The Bahá'í calendar begins.

May 23, 1844 – Persian Prophet The Báb privately announces his revelation to Mullá Husayn, just after sunset, founding the Bábí faith (later evolving into the Bahá'í Faith as the Báb intended) in Shiraz, Persia (now Iran). Contemporaneously, on this day in nearby Tehran, was the birth of `Abdu'l-Bahá; the eldest Son of Bahá'u'lláh, Prophet-Founder of the Bahá'í Faith, the inception of which, the Báb's proclaimed His own mission was to herald. `Abdu'l-Bahá Himself was later proclaimed by Bahá'u'lláh to be His own successor, thus being the third "central figure" of the Bahá'í Faith.

June 6, 1844 – George Williams founds the Young Men's Christian Association (YMCA) in London.

October 12, 1847 – German inventor and industrialist Werner von Siemens founds Siemens AG & Halske.

July 19, 1848 – Women's rights, 1848 – Seneca Falls Convention: The 2-day Women's Rights Convention opens in Seneca Falls, New York, and the "Bloomers" are introduced at the feminist convention.

1 May to 15 October 1851 - The Great Exhibition of the Works of Industry of All Nations or The Great Exhibition (sometimes referred to as the Crystal Palace Exhibition in reference to the temporary structure in which it was held), an international exhibition, took place in Hyde Park, London. It was the first in a series of World's Fairs, exhibitions of culture and industry that became popular in the 19th century. The Great Exhibition was organised by Henry Cole and by Prince Albert, husband of the reigning monarch of the United Kingdom, Queen Victoria.

Famous people of the time attended, including Charles Darwin, Karl Marx, Michael Faraday (who assisted with the planning and judging of exhibits), Samuel Colt, members of the Orléanist Royal Family and the writers Charlotte Brontë, Charles Dickens, Lewis Carroll, George Eliot, Alfred Tennyson and William Makepeace Thackeray.

2 July 1865 – the Christian Mission, later renamed The Salvation Army, is co-founded by William and Catherine Booth in London, England.

17/11/1869 – Inauguration of the Suez Canal, Ismailia, Egypt. The canal opened under French control in November 1869. In 1854 and 1856, Ferdinand de Lesseps obtained a concession from Sa'id Pasha, the Khedive of Egypt and Sudan, to create a company to construct a canal open to ships of all nations. The company was to operate the canal for 99 years from its opening. Work started on the shore of the future Port Said on 25 April 1859. The opening ceremonies began at Port Said on the evening of 15 November, with illuminations, fireworks, and a banquet on the yacht of the Khedive Isma'il Pasha of Egypt and Sudan. The royal guests arrived the following morning: the French Empress Eugenie in the Imperial yacht *L'Aigle*; the Crown Prince of Prussia; and Prince Louis of Hesse, followed by Ferdinand de Lesseps and the administrators of the Canal on board of the ship *Peluse*. In the afternoon there were blessings of the canal with both Muslim and Christian ceremonies, a temporary mosque and church having been built side by side on the beach. In the evening there were more illuminations and fireworks. On the morning of 17 November, a procession of ships entered the canal, headed by the *L'Aigle*. Among the ships following was *HMS Newport*, captained by George Nares, which would survey the canal on behalf of the Admiralty a few months later. The first day of the passage ended at Lake Timsah, 41 nautical miles south of Port Said. Ismailia was the scene of more celebrations the following day, including a military "march past", illuminations and fireworks, and a ball at the Governor's Palace. The convoy set off again on the morning of 19 November, for the remainder of the trip to Suez. After Suez, many of the participants headed for Cairo, and then to the Pyramids, where a new road had been built for the occasion. The opera *Aida* was not performed on the opening of the Canal, but another opera by Verdi *Rigoletto* was performed in the new Khedivial Opera House on 1 November 1869. Verdi's new opera, *Aida*, received its world premiere on 24 December 1871 in the same Khedivial Opera House, but more than two years after the opening of the Canal.

8 May 1886 — [Coca-Cola](#) was invented.

31/3/1889 – Inauguration of the Eiffel Tower in Paris, France by the Prime Minister Pierre Tirard. It was built in 2 years and 2 months. 2000000 people visited it from May 15 to November 6, the last day of the Paris Exposition Universelle of 1889, commemorating 100 years of the French revolution. It was boycotted by most of the kingdoms – Germany, Austro-Hungary, UK, Belgium, Spain, Italy, Netherlands, Portugal, Russian and Sweden. In spite of criticism by many artists the tower is a tremendous success and ultimately is not destroyed after the end of the exposition as planned. The **Exposition Universelle of 1889** was a [world's fair](#) held in [Paris](#), France, from 6 May to 31 October 1889. It was the fourth of eight expositions held in the city between 1855 and 1937. It attracted more than 32 million visitors. The most famous structure created for the Exposition, and still remaining, is the [Eiffel Tower](#).

Celebrities and dignitaries from around the world visited the Exposition. [Thomas Edison](#), with his wife and daughter, visited the Exposition on August 14, 1889, his third day in France, to visit the exhibit where his improved [phonograph](#) was being demonstrated. He also ascended to the viewing platform of the Eiffel Tower, where he was met by a group of [Sioux](#) Indians who were at the Exposition to perform in Buffalo Bill's Wild West Show. He returned to the Eiffel Tower later in his visit, where he was hosted for a lunch in Eiffel's private apartment on the Tower, along with the composer [Charles Gounod](#). Other prominent visitors included the Shah of Persia [Nasereddin Shah](#), Prince of Wales (the future [Edward VII](#)) and his wife, [Princess Alexandra](#); artists [James McNeill Whistler](#), [Edvard Munch](#), [Rosa Bonheur](#), [Paul Gauguin](#) and [Vincent van Gogh](#); U.S. journalist and diplomat [Whitelaw Reid](#); author [Henry James](#); Filipino patriot [José Rizal](#); and inventors [Nikola Tesla](#) and [Thomas Edison](#). A central attraction in the French section was the [Imperial Diamond](#), at the time the largest diamond in the world. The Mexican pavilion featured a model of an exotic [Aztec](#) temple, a "combination of archeology, history, architecture, and technology." The presentation of [Joseph Farcot](#)'s steam engine, that had already won a prize in 1878.

5/1/1895 – Alfred Dreyfus is degraded at the Cour d'honneur of the Ecole Militaire, Invalides, Paris. At the degrading the mobs shouted Mort au juif! – Death to the Jew. On 5 January 1895, Dreyfus was summarily convicted in a secret court martial, [publicly stripped](#) of his army rank, and sentenced to [life imprisonment](#) on [Devil's Island](#) in [French Guiana](#). Following French military custom of the time, Dreyfus was formally degraded ([cashiered](#)) by having the rank insignia, buttons and braid cut from his uniform and his sword broken, all in the courtyard of the École Militaire before silent ranks of soldiers, while a large crowd of onlookers shouted abuse from behind railings. Dreyfus cried out: "I swear that I am innocent. I remain worthy of serving in the Army. Long live France! Long live the Army!"

Theodor Herzl covered the event, as the Paris correspondent for *Neue Freie Presse*, a Viennese newspaper. Herzl followed the [Dreyfus affair](#), a political scandal that divided the Third French Republic from 1894 until its resolution in 1906. It was a notorious [antisemitic](#) incident in France in which a [Jewish French](#) army captain was falsely convicted of spying for [Germany](#). Herzl was witness to mass rallies in Paris following the Dreyfus trial. Herzl stated that the Dreyfus case turned him into a Zionist and that he was particularly affected by chants of "Death to the Jews!" from the crowds.

6/4/1896 – First modern Olympic Games – Athens, Greece. The **1896 Summer Olympics** (Greek: Θερινοί Ολυμπιακοί Αγώνες 1896, romanized: *Therinoí Olympiakoi Agónes* 1896), officially known as the **Games of the I Olympiad**, was the first international [Olympic Games](#) held in [modern history](#). Organised by the [International Olympic](#)

Committee (IOC), which had been created by Pierre de Coubertin, it was held in Athens, Greece, from 6 to 15 April 1896.

Fourteen nations and 241 athletes (all males) took part in the games. Participants were all European, or living in Europe, with the exception of the United States team. Winners were given a silver medal, while runners-up received a copper medal. Retroactively, the IOC has converted these to gold and silver, and awarded bronze medals to third placed athletes. Ten of the 14 participating nations earned medals. The United States won the most gold medals, 11, host nation Greece won the most medals overall, 46. The highlight for the Greeks was the marathon victory by their compatriot Spyridon Louis. The most successful competitor was German wrestler and gymnast Carl Schuhmann, who won four events. Over 65% of the competing athletes were Greek.

Athens had been unanimously chosen to stage the inaugural modern Games during a congress organised by Coubertin in Paris on 23 June 1894, during which the IOC was also created, because Greece was the birthplace of the Ancient Olympic Games. The main venue was the Panathenaic Stadium, where athletics and wrestling took place; other venues included the Neo Phaliron Velodrome for cycling, and the Zappeion for fencing. The opening ceremony was held in the Panathenaic Stadium on 6 April, during which most of the competing athletes were aligned on the infield, grouped by nation. After a speech by the president of the organising committee, Crown Prince Constantine, his father officially opened the Games. Afterwards, nine bands and 150 choir singers performed an Olympic Hymn, composed by Spyridon Samaras, with words by poet Kostis Palamas.

The 1896 Olympics were regarded as a great success. The Games had the largest international participation of any sporting event to that date. The Panathenaic Stadium overflowed with the largest crowd ever to watch a sporting event.^[4] After the Games, Coubertin and the IOC were petitioned by several prominent figures, including Greece's King George and some of the American competitors in Athens, to hold all the following Games in Athens. However, the 1900 Summer Olympics were already planned for Paris and, except for the Intercalated Games of 1906, the Olympics did not return to Greece until the 2004 Summer Olympics, 108 years later.

29/8/1897 – The first Zionist Congress in Stadtcasino, Basel, Switzerland, convened and chaired by Theodor Herzl. First Zionist Congress (Hebrew: הקונגרס הציוני הראשון) was the inaugural congress of the Zionist Organization (ZO) held in Basel (Basle), Switzerland, from August 29 to August 31, 1897. 208 delegates and 26 press correspondents attended the event. It was convened and chaired by Theodor Herzl, the founder of the modern Zionism movement. The Congress formulated a Zionist platform, known as the Basel program, and founded the Zionist Organization. It also adopted the Hatikvah as its anthem (already the anthem of Hovevei Zion and later to become the national anthem of the State of Israel). The conference was covered by the international press, making a significant impression; the publicity subsequently inspired the antisemitic forgery The Protocols of the Elders of Zion.

The first Zionist Congress was convened by Theodor Herzl as a symbolic parliament for the small minority of Jewry in agreement with the implementation of Zionist goals. While Jewish majority opposition to Zionism would continue until after revelation of the Holocaust in World War II, some proponents point to several directions and streams of this early Jewish opposition. "Alongside the dynamic development of the Zionist movement, which generated waves of enthusiasm throughout the Jewish public, sharp criticism began to appear about Zionism, claiming that Zionism could not hope to resolve the Jewish problem and would only serve to harm the status of Jewish laborers and sabotage its own recognition as an

independent class." As a result of the vocal opposition by both the [Orthodox](#) and [Reform](#) community leadership, the Congress, which was originally planned in [Munich, Germany](#), was transferred to [Basel](#) by Herzl.

13/1/1898 – The Article/Open Letter *J'accuse* by Emile Zola on the Dreyfus Affair is published in the Parisian newspaper *L'Aurore*. "*J'Accuse...!*" ("I Accuse...!") was an [open letter](#) published on 13 January 1898 in the newspaper *L'Aurore* by the influential writer [Émile Zola](#). In the letter, Zola addressed [President of France Félix Faure](#) and accused the [government](#) of [anti-Semitism](#) and the [unlawful jailing](#) of [Alfred Dreyfus](#), a French Army General Staff officer who was sentenced to lifelong penal servitude for [espionage](#). Zola pointed out judicial errors and lack of serious evidence. The letter was printed on the front page of the newspaper and caused a stir in France and abroad. Zola was prosecuted for [libel](#) and found guilty on 23 February 1898. To avoid imprisonment, he fled to England, returning home in June 1899. Other pamphlets proclaiming Dreyfus's innocence include [Bernard Lazare's](#) *A Miscarriage of Justice: The Truth about the Dreyfus Affair* (November 1896). As a result of the popularity of the letter, even in the English-speaking world, *J'accuse!* has become a common generic expression of outrage and accusation against someone powerful. Following the letter and as a result of the affair France was divided between Dreyfusards, mostly progressists, believing that Dreyfus was innocent and anti-Dreyfusards, believing that he was guilty, mostly conservatives and anti-Semites.

14/4/1900 – The **Exposition Universelle of 1900**, better known in English as the **1900 Paris Exposition**, was a [world's fair](#) held in Paris, France, from 14 April (opened by President Emile Loubet) to 12 November 1900, to celebrate the achievements of the past century and to accelerate development into the next. The fair, visited by nearly 50 million, displayed many technological innovations, including the [Grande Roue de Paris Ferris wheel](#), the moving sidewalk, [diesel engines](#), [talking films](#), [escalators](#), and the [telegraphone](#) (the first magnetic audio recorder). It also brought international attention to the [Art Nouveau](#) style. Additionally, it showcased France as a major [colonial](#) power through numerous pavilions built on the hill of the Trocadero Palace. Major structures remaining from the Exposition include the [Grand Palais](#), the [Petit Palais](#), the [Pont Alexandre III](#), the [Gare d'Orsay](#) railroad station (now the [Musée d'Orsay](#)) and two original entrances of [Paris Métro](#) stations by [Hector Guimard](#). The most celebrated actress during the Exposition was [Sarah Bernhardt](#), who had her own theater, The Théâtre Sarah Bernhardt (now the [Théâtre de la Ville](#)), and premiered one of her most famous roles during the Exposition. This was *L'Aiglon*, a new play by [Edmond Rostand](#) in which she played the [Duc de Reichstadt](#), the son of [Napoleon Bonaparte](#), imprisoned by his unloving mother and family until his melancholy death in the [Schönbrunn Palace](#) in Vienna. The play ended with a memorable death scene; according to one critic, she died "as dying angels would die if they were allowed to." The play ran for nearly a year, with standing-room places selling for as much as 600 gold francs. At the Grand Palais during the exposition were exhibited work of arts by the best French painters of the 19th century - [Ingres](#), [Vigée-Lebrun](#), [Delacroix](#), [Courbet](#), [Millet](#), [Monet](#), [Pissarro](#), [Renoir](#), [Degas](#), [Berthe Morisot](#).

14 May- October 28/1900 – Paris Olympic Games. The Paris Games were the second occurrence of the modern [Olympic Games](#). The second modern Olympic competition was relegated to a sideshow of the World Exhibition, which was being held in Paris in the summer of 1900. [Pierre, baron de Coubertin](#), founder of the modern Olympics and president of the [International Olympic Committee](#) (IOC), lost control of his hometown Games to the French government. The Games suffered from poor organization and marketing, with events conducted over a period of five months in venues that often were inadequate. The track-and-field events were held on a grass field that was uneven and often wet. Broken telephone poles

were used to make hurdles, and hammer throwers occasionally found their efforts stuck in a tree. The swimming events were contested in the Seine River, whose strong current carried athletes to unrealistically fast times. There was such confusion about schedules that few spectators or journalists were present at the events. Officials and athletes often were unaware that they were participating in the Olympics.

Nevertheless, the Games were attended by nearly 1,000 athletes representing 24 countries. There was an infusion of new events, some of which were not officially part of the Olympic program or were later discontinued (e.g., golf, rugby, cricket, and croquet). Archery, football (soccer), rowing, and equestrian events were among those introduced at the 1900 Games. Women, competing in sailing, lawn tennis, and golf, participated in the Olympics for the first time even though women's events were not officially approved by the IOC. The confusion surrounding the events led to similar confusion over who was the first woman to win an Olympic gold medal: Swiss yachswoman Hélène de Pourtalés, tennis player Charlotte Cooper of Great Britain, and golfer Margaret Abbott of the United States could all lay claim to that honour.

Despite the problems of the Paris Games, the quality of athletic performance improved. Athletes from the United States, led by jumper [Ray Ewry](#) and sprinter [Alvin Kraenzlein](#), again dominated the track-and-field competition. American athletes won 17 of the 23 track-and-field events, while French athletes earned more than 100 medals, by far the most for any nation at the 1900 Games.

10/3/1914 – Mary Richardson, a Canadian suffragette active in the [women's suffrage movement in the United Kingdom](#), entered the [National Gallery](#) in London to attack a painting by [Velázquez](#), the [Rokeby Venus](#) using a chopper she smuggled into the gallery. She wrote a brief statement explaining her actions to the WSPU which was published by the press:

"I have tried to destroy the picture of the most beautiful woman in mythological history as a protest against the Government for destroying Mrs [Pankhurst](#), who is the most beautiful character in modern history. Justice is an element of beauty as much as colour and outline on canvas. Mrs Pankhurst seeks to procure justice for womanhood, and for this she is being slowly murdered by a Government of Iscariot politicians. If there is an outcry against my deed, let every one remember that such an outcry is an hypocrisy so long as they allow the destruction of Mrs Pankhurst and other beautiful living women, and that until the public cease to countenance human destruction the stones cast against me for the destruction of this picture are each an evidence against them of artistic as well as moral and political humbug and hypocrisy."

17 February 1923 - After a systematic search, beginning in 1915, Howard Carter discovered the actual tomb of Tutankhamun (KV62) in November 1922. By February 1923 the antechamber had been cleared of everything but two sentinel statues. A day and time were selected to unseal the tomb with about twenty appointed witnesses that included Lord Carnarvon, several Egyptian officials, museum representatives and the staff of the Government Press Bureau. On 17 February 1923 at just after two o'clock, the seal was broken.

4/5/1924 – 27/7/1924 –The Paris Games were the seventh occurrence of the modern [Olympic Games](#). The 1924 Games represented a coming of age for the Olympics. Held in Paris in tribute to [Pierre, baron de Coubertin](#), the retiring president of the [International Olympic Committee](#) (IOC) and founder of the Olympic movement, the Games featured a high calibre of competition. International federations had gained more influence over their respective

sports, standardizing the rules of competition, and national Olympic organizations in most countries conducted trials to ensure that the best athletes were sent to compete. More than 3,000 athletes, including more than 100 women, represented a record 44 countries. Fencing was added to the women's events, although the total number of events decreased because of a reduction in the number of shooting and yachting competitions.

The Finnish team, led by [Paavo Nurmi](#) and [Ville Ritola](#), ruled the distance running races. For the first time, the swimming competition attracted as much attention as track and field. The men's events featured a rare collection of talent, including [Duke Kahanamoku](#) and [Clarence \("Buster"\) Crabbe](#) of the United States, [Andrew \("Boy"\) Charlton](#) of Australia, Yoshiyuki Tsuruta of Japan, and [Arne Borg](#) of Sweden. The star of the competition, however, was American [Johnny Weissmuller](#), who won three gold medals as well as a bronze medal as a member of the water polo team. [Helen Wills](#) of the United States won gold medals in the singles and doubles tennis events. After the 1924 Games, tennis was dropped from Olympic competition because of questions over the amateur standing of many participants. The sport did not return to the Olympics until 1988.

1/4/1925 – Opening ceremony of the Hebrew University of Jerusalem on Mount Scopus in Jerusalem, now Israel. The ceremony was very impressive and was attended by many respected figures: Lord Balfour, Chaim Weizmann, Rabbi Kook, Sir Herbert Samuel, Viscount Allenby, Menahem Usishkin, Nahum Sokolov, Rabbi Israel Levi, Rabbi Joseph Herz, Rabbi Meir Bar Ilan, Ehad Haam, Rabbi Yaakov Meir, Yehuda Magnes, Lord James de Rothschild and Hayim Nahman Bialik. Thousands of guests participated at the ceremony, including representatives of universities from around the world. The first Board of Governors of the university included Albert Einstein, Sigmund Freud, Martin Buber, Chaim Weizmann.

October 29, 1929 - The [Great Depression](#) is considered to have begun with the fall of stock prices on September 4, 1929 and then the [stock market crash](#) known as [Black Tuesday](#) on October 29, 1929, and lasted through much of the 1930s.

On March 8, 1930, the first [frozen foods](#) of [Clarence Birdseye](#) were sold in [Springfield, Massachusetts](#), United States.

1-16/8/1936 – Berlin Olympic Games. The **1936 Summer Olympics** (German: *Olympische Sommerspiele 1936*), officially known as the **Games of the XI Olympiad** (German: *Spiele der XI. Olympiade*), were an international [multi-sport event](#) held from 1 to 16 August 1936 in [Berlin, Germany](#). Berlin won the bid to host the Games over [Barcelona](#) at the 29th IOC Session on 26 April 1931. The 1936 Games marked the second and most recent time the [International Olympic Committee](#) gathered to vote in a city that was bidding to host those Games.

To outdo the [1932 Los Angeles Games](#), Reich Chancellor Adolf Hitler had a [new 100,000-seat track and field stadium](#) built, as well as six gymnasiums and other smaller arenas. The Games were the first to be [televised](#), with radio broadcasts reaching 41 countries. Filmmaker [Leni Riefenstahl](#) was commissioned by the German Olympic Committee to film the Games for \$7 million. Her film, titled *Olympia*, pioneered many of the techniques now common in the filming of sports.

Hitler saw the 1936 Games as an opportunity to promote his government and ideals of racial supremacy and [antisemitism](#), and the official Nazi party paper, the *Völkischer Beobachter*, wrote in the strongest terms that Jews should not be allowed to participate in the Games. German Jewish athletes were barred or prevented from taking part in the Games by a

variety of methods, although some women swimmers from the Jewish sports club [Hakoah Vienna](#) did participate. Jewish athletes from other countries were said to have been side-lined to avoid offending the Nazi regime.

Total ticket revenues were 7.5 million [Reichsmark](#), generating a profit of over one million *℞ℳ*. The official budget did not include [outlays](#) by the city of Berlin (which issued an itemized report detailing its costs of 16.5 million *℞ℳ*) or outlays of the German national government (which did not make its costs public, but is estimated to have spent US\$30 million).

[Jesse Owens](#) of the [United States](#) won four gold medals in the sprint and [long jump](#) events, and became the most successful athlete to compete in Berlin, while Germany was the most successful country overall with 89 medals total, with the United States coming in second with 56 medals. These were the final Olympic Games under the presidency of [Henri de Baillet-Latour](#) and the final Games for 12 years due to the disruption of the [Second World War](#).

October 30, 1938 - [Orson Welles](#)' radio adaptation of *The War of the Worlds* is broadcast, causing panic in various parts of the United States.

The world's tallest building (for the next 35 years) was constructed, opening as the [Empire State Building](#) on May 3, 1931, in New York City, USA;

The [Golden Gate Bridge](#) was constructed, opening on May 27, 1937, in [San Francisco](#), USA.

TIMELINE OF THE HISTORY OF THE CITY - PARIS

- 1820
 - March 8 – First stone laid for the [*École des Beaux-Arts*](#).
 - First student demonstrations against the royal government.
 - December 20 – [*Académie royale de Médecine*](#) (now the *Académie nationale de Médecine*) founded by royal ordinance.^[80]

A CENTURY OF ZARZUELA (1839-1939) IN A CONVULSED SPAIN: SOME EXTEMPOREANOUS CONSIDERATIONS BY JOSE LUIS FERNANDEZ FERNANDEZ

A century of zarzuela (1839-1939) in a convulsed Spain

Some extemporaneous considerations

José Luis Fernández Fernández

Musical theater next to a small, almost irrelevant bramble

A *zarzuela*, in Spanish, is a small bramble to whom the suffix "*ela*" connotes with a certain tone of irrelevance, if not contempt. However, by extension it also points to the musical theater which, as a relevant part of the Spain as a nation cultural heritage, we are going to briefly consider in this pages. For the rest, *La Zarzuela*, thus, written with initial capital letter, is the name of the palace where the current King of Spain, don Felipe VI, lives. Located a few kilometers from the center of Madrid, it is a privileged setting, with gentle hills and charming oaks among which you can see rabbits running around, hares jumping and partridges flying. If this is the case today, in the 21st century, in a place where highways and roads are full with hundreds of vehicles every day, in the 16th and 17th centuries, the area must have been a true paradise for cynegetic activities.

The Spanish monarchs of the *Siglo de Oro* -Golden Century- were, among other things, very fond of hunting. When in the kingdoms that made up the Spanish Empire, as in the times of the more austere Philip II, *the sun still did not set* -especially during the reigns of Philip III and Philip IV- hunting filled up a good part of the leisure time of those monarchs. The little mountains of El Pardo were an ideal environment to practice this activity. For this reason, as a place to rest after hunting, in the place known at the time as *La Zarzuela*, a building had been constructed in which, after a pleasant day's hunting, the king and his entourage of nobles and aristocrats relaxed, in the so-called "La Zarzuela" festivities, with another of their main passions: theatrical performances which, as had been the norm since the times of classical Greece, combined the representation plot of the spoken theater with music, in an inseparable way.

In fact, the opera as a completely musical theater - of which Claudio Monteverdi, with *L'Orfeo. Favola in musica* (Mantua, 1607) must be considered the founding father - it had to be born, at the beginning of the Renaissance, at the impulse of the *Camerata Fiorentina*. Those who were part of that group of poets, musicians and singers that Count Bardi welcomed in his home in Florence, dreamed of an impossible one: to recreate, without any partiture and, because of that, with none options to succeed with their effort, the universe of musical theater of the times of Aeschylus, Euripides and Sophocles. Anyway, as a resul of

that commitment and due to their attempt, opera was born, as a cultural expression of high register; and, as time went by, when the themes of the classical mythology started to stop being the source of the arguments of these works, to align themselves with the less sophisticated tastes of a less cultivated people, the simplest shows appeared, with popular types, satirical and carefree tone, typical of the Italian *commedia dell' arte*.

From humble hunting lodge to magnificent Royal Palace

But let's start our journey at *La Zarzuela* Palace. After the routine control at the entrance of the enclosure and once the *Guardia Civil* gives way to the visitor who is on his way to the royal audience, he lines up the car for five or ten minutes on gentle ramps, along which the driving is extremely pleasant: as the car goes along, tracing the wide curves that draw the rise, the scents of thyme and rosemary, serve as a balm and as an occasion for the visitor of the royal residence to finish their *composition of the place*: what am I coming for to see the king? Just to dispatch with the monarch? Maybe to present him some business project from a company or the civil society? Perhaps it is a reception of homage? Anyway, although the agenda will be different, depending on whether the visitor travels by cab, in his own vehicle, together with others in a bus... or in an official car, the time that takes to arrive to the top of the small hill where the palace is located, will serve for anyone to prepare hir or herself for the meeting.

If you are an ordinary citizen, you will probably go expectantly, aware of the honor of crossing the entrance, climbing slowly -never more than 40 kilometers per hour!- the sweet slopes of the path. You will enter the anteroom which gives access to the place of reception, receive the pertinent indications from His Majesty's civil and militar assistants, and finally, be received: you will shake don Felipe's firm hand, while, with great probability, you will be forced to smiling back at him looking up, because few of the visitors surpass the king's stature... Once the official photo had been taken that attests to having been received at *La Zarzuela*, and after having talked for a few minutes about the matter that justified the visit, you would go back on the road, with satisfaction and awareness of having had a sort of privilege, going back down the hill that leads the traveler again to *El Pardo* road; and from there, to Madrid.

If the one who is going to be received in the audience is the president of the government; some minister of his team; a representative of the public administrations or of some of the high institutions of the State -the Cortes; the militia; judges, magistrates or representatives of the Judiciary Power; some president of one of the autonomies that make up Spain as a political entity since the Constitution of 1978 configured the model of State in the current terms-; or some politician in office... the visit will surely have a less exceptional character, but it will not cease to be equally useful to the visitor, to slowly approach the ascent ramp, while he or she arranges in his or her head the ideas, reviews the protocol and checks fleetingly by the rear-view mirror that, depending on the case, the knot in the tie or the lipstick is conveniently fitted...

The place where *La Zarzuela* Palace is located is pleasant, very pleasant, an excellent place to set the residence of the Spanish Head of State: with very good judgment, the now controversial King Emeritus, don Juan Carlos de Borbón, decided at the beginning of the *Transición* -the name given to the political process that led Spain from the authoritarian regime of General Francisco Franco (1936-1975) to democracy-, to establish *La Zarzuela* Palace as his official residence. This had been his home since the time when he held the title of *Prince of Spain* -and not that of *Prince of Asturias*, as the heir to the Spanish Crown was

once again called, once the Spaniards had democratically endorsed the new Constitution. By so doing, the magnificent, spectacular building in the Plaza de Oriente, the very *Royal Palace*, remained just as a facility for receiving the ambassadors who came to Madrid to present the mandatory credentials that legitimized them as representatives of their respective countries in Spain... and little else.

Operas y zarzuelas

As if it were an allegory, *La Zarzuela*, with the charm that *El Pardo* little mountain lends it, managed to displace from the heart of Spanish life the most impersonal and administrative Royal Palace, located in Madrid's Plaza de Oriente, right next to the Teatro Real. This theater, which had been promoted in 1818 by King Fernando VII as a building destined to host the Opera House, would be inaugurated years later, in 1850, by Queen Isabel II.

And what about *la zarzuela*, like this, written with small initial letter? What is the meaning of what beats behind that name, when it refers to that artistic expression, typically of the Spanish musical theater? *La zarzuela*, in this respect, must be placed alongside other similar, homologous expressions, proper of another contexts and countries: in addition to the opera itself, it is worth mentioning the so-called *Italian comic opera*; the most modern *operetta*, mainly from Vienna; the *ópera-comique* in France, the *singspiel* in Germany and the *ballad opera* in England. In all of them the theater is combined with music. As we shall see later on this article, in the case of Spain, a repertoire has been created which, without doubt, should be considered as one of the most substantial and consistent signs of cultural identity of the Spanish heritage.

The monograph in which this contribution on *la zarzuela* is inserted, expressly seeks to explore some of the most distinctive cultural expressions produced by the human spirit -no doubt, poetry, novel, theater, opera, *ballet*, classical music, the first cinema films... but also, science, psychology, inventions...-, throughout the abundant century that spans the historical period from 1830 to 1939. It is within this framework, that it is worthwhile to give an brief account of the significance of what *la zarzuela* represented.

Telling the history of *la zarzuela*, even if a succinct way, will give news to the curious reader of the evolution of a phenomenon that has not always been given the attention that would have been desirable. And, above all, diving into some of the possible causes that may explain this circumstance, will allow us to venture some extemporaneous considerations close to a sort of Philosophy of History.

La zarzuela, as a musical theater, is simple to define: it combines spoken parts - generally in Spanish; eventually, in some of the other Spanish official languages or dialects, but always in a vernacular one; instead of be written in Italian, as used to be the case in operas, which were incomprehensible to a large part of the public. *La zarzuela* presents musical numbers and a wide score where, besides the human voice -*romanzas*, duets, choirs, *concertantes*-, the symphonic orchestra takes the leading role. To this, sometimes, folk instruments are added, which contribute to give it the popular tone of which, frequently, the plot of the *zarzuelas* is covered.

Chronology and evolution of *la zarzuela grande* and *el género chico*

In order to specify more accurately the concept of *la zarzuela*, it is necessary to establish a double distinction, one chronological and another structural¹. First of all, it is necessary to distinguish between *la zarzuela antigua* -the ancient one-, corresponding to the 17th and 18th centuries, today almost forgotten, in which composers like Sebastián Durón, Antonio Líteres, Joaquín Martínez de la Rosa or José de Nebra stood out; and *la zarzuela moderna*, whose starting date can be fixed, precisely, in the year 1839. From the structural point of view, it is also convenient to distinguish -in this case, taken into consideration its length- between what is known as *la zarzuela grande* -the big one- and the so-called *el género chico* -the tiny. This latter -sometimes giving rise to a truly *género ínfimo*- includes one-act pieces. It became fashionable from 1870 onwards, during the years of *la Restauración*, i. e., the restoration of the Bourbon monarchy in the Spaniard throne. It extends into the period of the end and the beginning of the new century; and it finally declines again in favour of *la zarzuela grande*, which revived from 1910-1915 onwards, under the influence of Viennese operetta.

What is called *la zarzuela moderna* is reborn as a kind of *Ave Phoenix* from the ashes of *la zarzuela antigua*. This one had almost completely disappeared from the stages at the end of the 18th century, overwhelmed perhaps by the thrust and the undeniable quality of an Italian-style opera. Those operas, however, did not manage to satisfy the taste of all audiences, especially those spectators who did not find it easy to understand arguments, dialogues and lyrics written in Italian language.

If to this fact, which pointed to the felt need to offer a musical theater in Spanish, one adds a certain dose of the nationalist romanticism characteristic of the time, one will understand that, precisely around 1830 -the year that marks the starting point of the works in this book and, moreover, the date on which the Royal Conservatory of Music is established in Madrid-, both the public and the specialized critics begin to dream of giving life to a kind of national opera in Spain, as will happen in other contexts and latitudes.

Capturing the opportunity that that more or less explicit demand implied, three professors of the Real Conservatory -Ramón Carnicer, Mateo Albéniz and Baltasar Saldoni- composed *Los enredos de un curioso*, a work that, as we say, seeks to inaugurate a Spanish style opera, what it did was to link with the spirit of the old *zarzuela* that half a century ago had almost completely disappeared from the stages. However, it was the work *El novio y el concierto*, with lyrics by Breton de los Herreros and music by an Italian living in Madrid, Basilio Basili, premiered at the Teatro del Príncipe in the capital of Spain on March 12th, 1839, which happens to be the starting point of modern *zarzuela*. This title was followed by *El contrabandista* (1841), *El ventorrillo de Crespo...* and, after giving up -by way of the strength of the facts- the possibility of giving way to a Spanish national opera -in impossible comparison with the romantic works of a Gioachino Rossini, a Gaetano Donizetti or a Vincenzo Bellini-, the modern *zarzuela* would end up consolidating definitively and successfully in Spain, as a musical native theater. This happened mostly from the year 1850

¹ It is not our task to make an erudite presentation about *la zarzuela* and its history. For our objective, it will be sufficient to limit ourselves to leaving some basic data that will allow us to sufficiently understand the evolution of the Spanish musical theater *par excellence*, in order to be able to weave together some more general, extemporaneous considerations to what we have already mentioned above. The interested reader will find easily good sources, both *on-line* and in monographs, dedicated to *la zarzuela*. For its precision, quality and abundant documentation, we recommend the access to the extensive bibliography of Roger Alier, which can be identified on the Internet.

and especially, when on October 10th of 1856, the *Teatro de la Zarzuela* is inaugurated, in Jovellanos street of Madrid, with capacity for about 2500 spectators.

Thirty selected zarzuelas over a century

Before closing this section with some general considerations, even without intending to provide an exhaustive list of titles and authors, it is worthwhile, at least, to give an indication of some of the ones that *"the undersigned"* considers among the most outstanding throughout the century that we are dealing with. In a selective way, we would like to call the reader's attention to the following thirty zarzuelas or fragments of them. We indicate the year, the title of the work, the name of the author or authors, and we provide a link to access all or some of the well-known fragments.

Some extemporaneous considerations

To follow the history of Spain to the rhythm of *zarzuela* music, from approximately 1839 to 1939, is a very instructive exercise.

By setting the limit on the latter, we would be closing one of the saddest episodes in the history of Spain, that of the Civil War (1936-1939), the result of the reaction of the nationalist side, which would eventually triumph on the battlefield, in the face of a fanaticism that was unsustainable politically and unbearable socially, with, among other things, the greatest and most arbitrary religious persecution ever known in the West against Catholic Christians, at least since the times of pagan Rome.

The year 1939 also marked the end of a decade lost, due to the excesses of a capitalism without compass, drunk on freedom without responsibility, and, as a result of that, unable to overcome the hangover of that *Black Thursday* of October 24th, 1929, with the *crack* of the New York Stock Exchange.

The world was about to enter an even more dramatic and saddening stage: World War II, with the Nazi barbarism, the Holocaust, and the evidence of the extreme levels of refinement to which human evil can lead, when added to it, among other things, the convenient dose of hatred of the different; a significant amount of the most genuine stupidity; the guilty silence of many; the mindless fanaticism of others; the short-sighted and narrow-minded selfishness of much of the intelligentsia; and a world leadership far removed from the stature and level that would have been desirable to pilot the ship of history in seas as stormy as those of the 1930s.

And what can we say about the Spain that evolved from the 19th century to the year 1940, *the first one of the Victory*, but that could hardly have known a more convulsive historical stage?

Indeed: it had started the 19th century with the War of Independence of the Spanish nation against Napoleón and his brother, the intruder king José I Bonaparte, the French invader. The struggles between liberals, more or less exalted, and conservatives, more or less immobilist, would be the dynamics of a sadly century, during which enormous parts of Spain and its empire would have been losing, with the independence of the new American republics and the final humiliating loss of Cuba, Puerto Rico and the Philippines, after a war, provoked in a tyrannical and demagogic way by the then emerging power that the United States represented, after having let its future be guided by the victory of the north over the south in its own Civil Secession War.

Among other things, throughout the years that concern us, Spain had to know the promulgation of about ten Constitutions or similar texts, of different tone and nuance; it suffered a considerable number of military pronouncements and *coups d'état*; it experienced

various civil wars - the three *Guerras Carlistas*, plus the one already mentioned in 1936-1939; it went through various regime changes and saw how the State changed its political configuration -First Republic, with five presidents in one year; expulsion of the Bourbon dynasty, with the exile of Queen Isabel II; later restoration -*la Restauración*- in the person of Alfonso XII, after the failed attempt to establish a new dynasty with Amadeo I of Savoy; a dictatorship, that of General Primo de Rivera, at the beginning of the 1920's; a new march into exile of a Bourbon king, Alfonso XIII, the advent of the Second Republic, of unfortunate memory; the assault on the Republican order by the parties of the extreme left which, in the end, would create the objective conditions for a new -hopefully definitive- *Guerra Civil*, and the subsequent consolidation of the Franco regime. There were also in between skirmishes and colonials wars in the Americas and North Africa. And, of course, as we have already said, there was finally the loss of the last possessions of the Spanish Empire, as a result of the defeat suffered in 1898 by the Spanish Navy against the United States of America.

In this whole *iter*, the zarzuela was always sounding, as a kind of continuous bass of its own music, with tones and cadences capable of vibrating to the sound of the spirit of a people who assumed it as their own and expression of some of the most distinctive features of their soul.

It is certain and therefore we must acknowledge it without any shadow of a doubt, that *la zarzuela* does not have the quality of Italian opera, neither in its romantic expression nor in the *verista* one. Surely *la Zarzuela* neither does reach the levels of the French *grande opera* or of the total spectacle that the works of Wagner constitute. And nevertheless, it neither needs to be compared with those, nor -in case of doing it- it should end up being considered as an cultural expression of minor value. These are different realities and, to a certain extent, not measurable with the same measurement pattern. Each one in its own style had its reason to be; and all together contribute to mark a chapter in the history of human culture: the one represented by musical theater, which, in turn, constitutes a kind of *objectification of the spirit*, insofar as it crystallizes into a series of objective realities -the works and the titles- which, in turn, have a limited path, which ends up closing in on itself, as the vital impulse that, responding to the circumstances of its moment, animated an innovative creativity that necessarily has to close its cycle, disappears.

Many things will depend on whether we learn to approach these cultural creations with an open mind, a conciliatory attitude and eyes willing to let ourselves be surprised, out of admiration and respect, by the creative capacity of the human soul: tolerance, altruism, collaboration with one another, solidarity ... even - and above all - peace and some of the most essential balances, outside of which the future of humanity could be seriously compromised.

Between Autonomy and State Regulation: J.S. Mill's Elastic Paternalism²

Raphael Cohen-Almagor³

Human nature is not a machine to be built after a model, and set to do exactly the work proscribed for it, but a tree, which requires to grow and develop itself on all sides, according to the tendency of the inward forces which make it a living thing.

J.S. Mill, 1859.

Abstract

This paper analyses J.S. Mill's theory on the relationships between individual autonomy and State powers. It will be argued that there is a significant discrepancy between Mill's general liberal statements aimed to secure individual largest possible autonomy and the specific examples which provide the government with quite wide latitude for interference in the public and private spheres. The paper first explains Mill's methodology. Next it outlines the boundaries of government interference in the Millian theory. Subsequently it describes Mill's elastic paternalism designed to prevent people from inflicting harm upon others as well as upon themselves, from soft paternalism on issues like compulsory education to hard paternalism on very private matters such as marriage, having children, and divorce by consent.

Key words: J.S. Mill, individualism, autonomy, soft/hard/elastic paternalism, state interference, regulation

Introduction

The chief characteristic of the liberal theory from Thomas Hobbes (1588–1679) to John Rawls (1921–2002) lies in its individualism, and the development from J.S. Mill (1806–1873), through Thomas Hill Green (1836–1882) and Leonard Trelawney Hobhouse (1864–1929) is often interpreted as a series of attempts to correct the defects of the autonomous, individualistic idea. These 'defects' are the result of the primary emphasis, some would say too much emphasis, that is placed in the democratic tradition on the worth, freedom and well-being of the individual rather than on those of the community. The tension is between allowing the citizen to develop her capacities without interference and the conducting of civil life, a process which requires reconciliation between different demands and thus is bound to invade the privacy of citizens. The notion of autonomy involves the ability to reflect upon beliefs and actions, and the ability to form an idea regarding them, so as to decide the way in which to lead a life. For by deciding between

² This article was originally published in *Philosophy*, Vol. 87 / Issue 04 (October 2012): 557–582.

³ I thank Daniel Callahan, Wayne Sumner and Steve Newman for their constructive comments.

their own conflicting trends agents consolidate their opinions more fully and review the ranking of values for themselves with a clear frame of mind. The central idea of autonomy is of self-rule, or self-direction. Accordingly, the view is that individuals should be left to govern their business without being overwhelmingly subject to external forces. We are said to be free when our acts are not dominated by external impediments, thus enabling us to form judgment, to decide between alternatives, and to act in accordance with the action-commitments implied by our beliefs.

Liberalism holds that autonomous individuals who are capable of acting rationally and deliberately, of being self-governed and self-controlled rather than subordinated to external forces and inspection, are entitled equally to a respectful treatment. Two requirements have to be fulfilled in order to enable the development of individuality: first, as Sidney Ball argues, the State must recognize that it "can have no end which is not also an end of individuals; its end can be realized only in the free wills of individuals; its end is, in fact, the development of the character."⁴

Secondly, the individual must be able to share equally in deciding what is essential for the flourishing of society. She also must not view herself as an isolated object who is interested only in herself, but as an object who could satisfy her needs and ambitions, and accomplish self-realization in the community, through community and with the help of others. The individual lives within a certain social framework and has to respect those who share with her the benefits of democracy.⁵ Extreme individualism, i.e. egoism, is rejected. As Hobhouse writes: "Democracy is not founded merely on the right or the private interest of the individual. This is only one side of the shield. It is founded equally on the function of the individual as a member of the community. It founds the common good upon the common will, in forcing which it bids every grown-up, intelligent person to take a part."⁶

Liberal social democracies assume responsibilities for many activities that were in the past under the control of separate organizations. The State provides social services and engages in economic activities that were formerly done by smaller associations. Governments take upon themselves to initiate and to perform policies designed to promote the welfare of their citizens, and to lead their societies to further progress. In their capacity as an umpire, social liberal democracies/welfare states assist other associations by giving them legal recognition and, when they see it right, impose on them certain limitations and duties. The justification that is usually given for these regulations is that they are necessary for the protection of the citizens' liberties. The creation of governmental monopolies is similarly vindicated by saying that it is being done "for society's benefit." Subsequent privatization of the same major companies is also done "for society's benefit."

Increasing the public good might thus entail the danger of limiting the liberty enjoyed by citizens to lead their lives as they choose. The difficulty lies in deciding the level of interference in the citizen's life. In this context, three major questions are pertinent: in

⁴ Michael Freedman, *The New Liberalism* (Oxford: Clarendon Press, 1978), 171.

⁵ Ronald Dworkin, "Liberalism," in *A Matter of Principle* (Oxford: Clarendon Press, 1985): 181-204.

⁶ L.T. Hobhouse, *Liberalism* (London: Oxford University Press, 1945), 228. Hobhouse maintained that there is no thought except in the mind of an individual thinker, and there is no such thing as a unitary social mind or will: only individuals, not society, have a distinct personality.

what spheres interference in one's affairs may be warranted; for what reasons, and whether the citizen has a private sphere which is immune to interference.

The claim or the right of society to exercise certain powers over the individual, as well as the counter-argument of the individual to have certain powers secured by the state, rest on the justification that these powers are necessary for the fulfilment of the citizen's vocation as a moral being, to the development of her capacities and liberties. The danger is, of course, that not only society via its social mores but also the government would invade every field and sphere of life, exploiting its powers to coerce the individual rather than allowing her sufficient latitude to pursue her conception of the good.⁷ The following discussion is dedicated to this problem. I shall first consider the boundaries of state interference; I proceed by focusing on the subject of paternalism. These subjects are inter-related; both might introduce dangers to the citizens' well-being as well as to democracy itself.

In considering the complexity or, rather, the pros and cons involved in this issue, I shall avail myself of the Millian theory. Mill started by formulating in general terms his rejection of state interference in public life. Then, in the following discussion, he reviewed every sphere of action separately, adopting specific suppositions for every single case with the result of curbing his general principle to a considerable degree. Thus, while Mill was against extending the scope of political authority since he suspected that this might involve the use of compulsory powers, Mill nevertheless welcomed labour legislation, supported aid to voluntary groups, and advocated governmental responsibility for some services which concerned the public at large, services which individuals found no interest to run. Moreover, in specific matters Mill did not trust individuals to know how to conduct their personal affairs in a fully rational way, thus he allowed latitude for intervention. His elastic paternalism stretches from prescribing compulsory education to very personal matters such as preventing unripe marriage, prescribing birth control and discouraging divorce by mutual consent.

Mill carefully parsed the distinction between government and society and considered each to pose a distinctly different threat to individual freedom. In the opening chapter of *On Liberty* he explicitly warns against conflating the two. The tyranny of majority was considered to be "operating through the acts of the public authorities"⁸ before insisting that "reflecting persons" now see "when society itself is the tyrant... its means of tyrannizing are not restricted to acts which it may do by the hands of its political functionaries."⁹ Moreover, this "social tyranny" is not only distinct from "political oppression" but is far more insidious, precisely because it leaves "fewer means of escape, penetrating much more deeply into the details of life," and has as its objective

⁷ A conception of the good comprises a basic part of our over-all moral scheme and that it is public in the sense that it is something one advances as good for others as well as oneself, consequently one would want others to hold a certain conception for their own sake. For further discussion on this issue, see R. Cohen-Almagor, "Between Neutrality and Perfectionism," *The Canadian Journal of Law and Jurisprudence* VII, No. 2 (1994): 217-236.

⁸ J.S. Mill, *On Liberty*, 68. All references to *On Liberty* and to *Representative Government* are to the Everyman's edition of *Utilitarianism, Liberty and Representative Government* (London: J.M. Dent. 1948).

⁹ *Ibid.*

the enslavement of the individual's "soul".¹⁰ There is a limit to the legitimate interference of collective opinion in one's life, and while finding that limit is complicated yet it is most necessary as protection against political despotism.

Ideally, it is possible to discern between one's conduct that *affects only oneself*, and one's conduct that *may affect others*. If this distinction made possible, the guiding principle were quite simple: Individuals will be left free (with some qualifications, see below) to master all affairs that concern only the person in concern, and there will be room for interference when affairs are other-regarding. Alas, most affairs have *some* bearing on others. Indeed, it is almost impossible to think of pure self-regarding conduct. And then, "As soon as any part of a person's conduct affects prejudicially the interests of others, society has jurisdiction over it, and the question whether the general welfare will or will not be promoted by interfering with it, becomes open to discussion."¹¹ Thus Mill opened a lengthy discussion on the complexity of the subject, providing many examples to clarify and untangle the entanglement but, at the end, achieved very modest success in his clarification attempts. While appreciating the Millian Herculean efforts, at the end of the day one wonders whether the distinction is at all viable and worth the effort.

Mill's methodology

The end, as ever, was Utility. Though Mill abandoned the traditional version of utilitarianism, according to which every maximization of happiness was desired, whatever were the means, he still implied that every interference which was conducive to the utility of the individual and society, might be regarded as legitimate. If the state could perform an activity better than a private agency, with the result of increasing happiness in terms of productivity, efficiency, profit, and contribution to progress, then state interference was welcomed. Nevertheless, Mill was still cautious in his attitude towards government activity, still had reservations and suspicions that harmful results might incur as a result of interference. Therefore, he advocated future withdrawals from those spheres which he thought demanded intervention, but might be left in private hands in the future.

Hence, a certain pattern in the Millian methodology can be discerned. Mill emphasized the basic principles, held to be most important in the formulation of his theory. Then, in the following discussions, he proceeded by qualifying them. Thus the general, 'absolute' rules, as they seem to be from a preliminary reading, lose their apparent immunity. This way of writing is characteristic to Mill on many issues discussed in *On Liberty*, where he advocated *laissez faire*, anti-interventionist and anti-paternalistic rules. But then he went on to curb the rules by commending qualifications. By this method Mill wanted to emphasize his general starting point which put limitations on government's activities. After adopting the rule, when one aimed at applying it to reality, then the involved complexities were acknowledged, thus prescribing the working instruments for its operation. Yet again, the first and foremost important thing was to accept the rule.

The same pattern can be discerned in Mill's discussion of paternalistic activity. He started with the presumption that every person was the best judge in everything that

¹⁰ *Ibid.*

¹¹ J.S. Mill, *On Liberty*, 132.

concerned only herself, believing that the individual's own good was never a sufficient warrant for the exercise of compulsion either by society as a whole or by its individual members, because a person's mode of laying out her existence was the best (not because it was the best in itself, but because it was *her own* decided mode). Yet again, Mill soon realized that the distinction he made between self- and other-regarding was not simple, to say the least, and that society had quite a comprehensive role in helping individuals to decide and to reach their goals. Then, instead of these unqualified statements we find a totally different statement, that "[T]he proposition that the consumer is a competent judge of the commodity, can be admitted only with numerous abatements and exceptions."¹²

I will argue that there is great discrepancy between Mill's general statements that advocate the promotion of human individuality and against intervention in one's affairs, on the one hand, and his particular examples that suspect individual good judgment and ability to make the "right" decisions (i.e., those that advance human happiness/utility), on the other. While his general statements do not warrant seeing Mill as a hard paternalist, an analysis of his scholarship shows that he was an *elastic* paternalist, allowing intervention even in the most private matters to varying degrees.

Boundaries of interference

General Principles

The main question that Mill had put to himself to answer in *On Liberty* was: What were the limits of power which could be legitimately and justifiably exercised by society over the individual?

In Chapter IV, *Of The Limits to the Authority of Society Over the Individual*, Mill defended the right of the individual in the private sphere on utilitarian grounds, insisting that if society interfered it was bound to be in an erroneous way, and that it would not be for the citizen's benefit: "But the strongest of all the arguments against the interference of the public with purely personal conduct is that, when it does interfere, the odds are that it interferes wrongly, and in the wrong place."¹³

In Chapter V, *Applications*, Mill presented objections to government interference, arguing that there was no one so fit to conduct any business, or to determine how or by whom it should be conducted, "as those who are personally interested in it."¹⁴

Furthermore, it was desirable that citizens would conduct their own affairs, as a means to their own mental education - "a mode of strengthening their active faculties, exercising their judgment, and giving them a familiar knowledge of the subjects with which

¹² J.S. Mill, *Principles of Political Economy* (London: Longmans, Green, Reader and Dyer, 1869), Bk. V, Chap. 11, Section 8, 575.

¹⁴ J.S. Mill, *On Liberty*, 164.

they are thus left to deal.”¹⁵ Education meant for Mill the cultivation of the intellect, of moral powers, and of aesthetic. Education is not to *teach*, “but to fit the mind for learning from its own consciousness and observation”.¹⁶ The reasoning is: A good government cultivates moral education; moral education makes human beings moral, thinking people who do not merely act as machines and, in the long run, makes people to claim control over their own actions and inspires them to intensely seek the truth.¹⁷

Finally, the most cogent reason for objection to such an interference was “the great evil” of adding unnecessarily to the power of government, both in the form of authority, and still more, in the indirect form of influence: “Every function superadded to those already exercised by the government causes its influence over hopes and fears to be more widely diffused....”¹⁸ Mill, like many liberals, was suspicious of the government, very cognizant of its powers and tendency to exaggerate and to overstep its conduct beyond necessary when exaggeration deemed to yield partisan benefits.

Against the general principles against government interference Mill pitted government’s responsibility to promote happiness. Generally speaking, whenever there was a probability that by interference the government would impede individual’s development, it should not interfere. Since this probability was usually present, governments - as a rule - should not intervene in the business of the individual. Moreover, governments should encourage all segments of the community to manage their joint concerns by voluntary cooperation. Thus it appeared that the general principles supplement one another and can be reconciled. But then Mill went on to qualify his arguments, explaining that there were cases in which the reasons against interference did not turn upon the principle of liberty.

Qualifications

Mill wrote: “the question is not about restraining the actions of individuals, but about helping them; it is asked whether the government should do, or cause to be done, something for their benefit, instead of leaving it to be done by themselves, individually or in voluntary combination.”¹⁹ Moreover, against the “evil” of adding unnecessarily to the power of government we need to weigh the “evil” that someone might wish to impose on us which can be alleviated only by government interference. Mill consistently wrote that such interference was justified if the conduct to be deterred was harmful to others: “... the

¹⁵ *Ibid.* For further discussion, see R. Cohen-Almagor, “Ends and Means in J.S. Mill’s Utilitarian Theory,” *The Anglo-American Law Review* **26**, No. 2 (1997): 141-174.

¹⁸ Mill, *On Liberty*, 165. In *Principles of Political Economy* Mill wrote: “Every additional function undertaken by the government, is a fresh occupation imposed upon a body already overcharged with duties. A natural consequence is that most things are ill done” (570).

¹⁹ J.S. Mill, *On Liberty*, 164.

conduct from which it is desired to deter him must be calculated to produce evil to some one else.”²⁰ Mill insisted on the idea of prevented evil and harm to others, resorting to different phrases: “affects prejudicially the interests of others,”²¹ and “damage, or the probability of damage, to the interests of others.”²² Citizens and government alike have the freedom to unite for any purpose not involving harm to others, and to prevent harm to others.

Thus, one should not rule out governmental interference for the benefit of the individual as a rule of thumb. Instead, we should consider the specific applications as they conjoin with the given circumstances. Mill distinguished in *Political Economy* between two kinds of governmental intervention: first was the authoritative, meaning that government may interdict all persons from doing certain things; or from doing them without its authorization; or may order them certain things to be done, or a certain manner of doing things which it was left optional with them to do or to abstain from.

The second kind of interference was when a government adopted the course of giving advice or promulgating information, or when, “leaving individuals free to use their own means of pursuing any object of general interest, the government... establishes... an agency of its own for a like purpose.”²³

Mill maintained that the authoritative form of government interference had a much more limited sphere of legitimate action than the non-authoritative. It required stronger justification in every case, and from many instances of human conduct it was all together excluded.

There is a conflict between the Utility Principle when this meant enriching autonomy and individuality, and the Utility Principle when this meant government’s responsibility to enrich general happiness. An orthodox utilitarian would agree to intervene with one’s freedom against one’s will if by this public happiness would be enriched. Although Mill generally resisted this opinion, he could not reject it altogether. He thought that the best way to qualify his general rule of non- interference was by proscribing specific spheres where interference was legitimate, though it might concern the most private life of the individual. Mill was careful to write that in “the great majority of things” the individual should be left alone to take care of her own business.²⁴ “Great majority” does not mean everything. There were prominent cases which preoccupied Mill, where government interference was even welcomed. On some issues, only the government acts for the public good. On some other matters, only the government knows a person’s interests better than the person herself.

1. Necessary and optional functions

In *Principles of Political Economy*, Mill distinguished between necessary and optional functions of government, explaining that by the term 'optional' it was not meant to imply that it could ever be a matter of indifference, or of arbitrary choice, whether the government should or should not take upon itself the functions in question; but only that the expediency of its exercising them did not amount to necessity, and was a subject on which diversity of opinion did or might exist. Mill went on saying that the ground of the practical principle of non-interference was that most persons took a just and more intelligent view of their own interest, and of the means of promoting it, than can either be prescribed to them by a general enactment of the legislature, or pointed out to them by any public functionary. Nevertheless, there were "some very large and conspicuous exceptions to it,"²⁵ which included taking care of lunatics, idiots, children, and animals as those who were not capable of rationally deciding upon their own interests; government intervention when owners decided to delegate authority to managers who had no interest in the success of the enterprise; legislation allowing legitimate interests of workers to be pronounced through the formation of trade unions; colonization; the maintenance of a learned class,²⁶ and a multitude of enterprises which were conducive to general convenience. These enterprises are of little interest to the general public or are such that people are unable to undertake due to their high cost. Yet they are absolutely essential for progress thus the government must make provision for them. These included coining money, prescribing a set of standard weights and measures, making and improving harbours, raising dykes, geographical and scientific expeditions, security for navigation, research involving assiduous devotion of time and labour, and the like.²⁷ In addition, public charity²⁸ and public services, such as cleaning of the streets, lighting, paving, water supply, etc., all of which should be taken over by the State. Enterprises such as the operation of canals and railways should be the property of the State, but it was best to allow independent agencies to work them: "...they will almost always be better worked by means of a company, renting the railway or canal for a limited period from the state."²⁹

Mill concluded by offering the following generalization:

... anything which it is desirable should be done for the general interest of mankind or of future generations, or for the present interests of those members of the community who require external aid, but which is not of a nature to remunerate

²⁵ J.S. Mill, *Principles of Political Economy*, 577.

²⁹ J.S. Mill, *Principles of Political Economy*, Bk. V, 482, 581, 589.

individuals or associations for undertaking it, is in itself a suitable thing to be undertaken by government.³⁰

Mill was quick to qualify his generalization by recommending:

... though, before making the work their own, government ought always to consider if there be any rational probability of its being done on what is called the voluntary principle, and if so, whether it is likely to be done in a better or more effectual manner by government agency, than by the zeal and liberality of individuals.³¹

Thus, whenever the government provides services which people are free to use if they so choose, then its conduct does not restrict anyone's freedom; non-coercive government performances which are for the benefit of all are justified.

2. Education

Governments must provide proper facilities for education designed for the benefit of society as a whole, but it must not control all educational institutions: "The case is one to which the reasons of the non-interference principle do not necessarily or universally extend."³² At the same time, Mill who objected to monopolies on principle was consistent in his objection also in this sphere. Private education should be allowed.³³ Mill was in favour of compulsory education which contradicted the freedom one enjoyed in choosing for oneself and one's children the form and level of education. Education is both a means towards liberty and one of the ends for which liberty existed.³⁴ Education is essential for good government,³⁵ and for according equal rights to man and women.³⁶ Furthermore, education is beneficial to the child and also to society because it teaches the child social norms which are useful to all. Mill did not advocate compulsory education of adults.

Indeed, welfare states commonly reason today that they know better what is good for their citizens, thus enforcing a certain level of education upon them. This compulsory education may seem to be an invasion on the individual's rights, but it can be defended on the grounds that, in final analysis, it may guarantee more freedom than it destroys. For if

ignorance may be viewed as a sort of unfreedom, education increases the number of alternatives open for a person to pursue her interests. This kind of governmental coercion is justifiable for it opens for the individual more paths for liberty in the long run.

At the same time, Mill insisted that the parents, especially fathers, were responsible for the proper education of their children. He suggested fixing a certain age at which every child must be examined, ascertaining reading ability. If the child was unable to read, the father must explain why his child was unable to meet the requirement, and if the explanation deemed to be unsatisfactory he "might be subjected to a moderate fine."³⁷ In Mill's time, people were not sufficiently cognizant of learning deficiencies. Present common problems such as dyslexia³⁸ were unknown and obviously were not diagnosed during the 19th Century.

3. Perpetual contracts

Governments may control, through legislation, contracts in general, especially those in perpetuity. For it is not enough that one person, not being either cheated or compelled, makes a promise to another. There are promises by which it is not for the public good that persons should have the power of binding themselves, although this conduct is purely self-regarding in character. Thus there remain the questions "Whether, for example, the law should enforce a contract to labour, when the wages are too low, or the hours of work too severe; whether it should enforce a contract by which a person binds himself to remain, for more than a very limited period, in the service of a given individual; whether a marriage vow, entered into for life, should continue to be enforced against the deliberate will of the persons, or of either of the persons who entered into it."³⁹ Mill summarized his argument by saying that every question which could possibly arise as to the policy of contracts was a question for the legislator, which she could not escape from considering.⁴⁰

Thus, in cases of perpetual contracts, the presumption that individuals know their own private interests better than others does not hold. Mill's most prominent example in this context concerned slavery contracts. He urged that one did not have the right to impede one's own freedom in an irreversible way, which definitely meant that one's self-development, one's personal sovereignty, would be damaged. Any contract of even a voluntary servitude would be null and void, for by selling oneself to slavery, one abdicates one's liberty, defeating the very purpose which is the justification of allowing one to

³⁹ J.S. Mill, *Principles of Political Economy*, Bk.V, 481. In *On Liberty*, Mill supported his argument by Humboldt's writings, reminding of the latter's statement that engagements which involved personal relations or services should never be legally binding beyond a limited duration of time, and that "the most important of these engagements, marriage... should require nothing more than the declared will of either party to dissolve it" (p 158).

⁴⁰ J.S. Mill, *Principles of Political Economy*, Bk.V, 481. For further discussion, see G.L. Williams, "Mill's Principle of Liberty," *Political Studies* 24 (1976): 132-140; Richard Wollheim, "John Stuart Mill and the Limits of State Action," *Social Research* 40, No. 1 (1973): 1-30; Nadia Urbinati and Alex Zakaras (eds.), *J.S. Mill's Political Thought: A Bicentennial Reassessment* (Cambridge: Cambridge University Press, 2007).

dispose of oneself: "The principle of freedom cannot require that he should be free not to be free. It is not freedom to be allowed to alienate his freedom."⁴¹ Liberty does not mean that every person, regardless of character or capacity, should claim to do as she pleases without respect to the common good.⁴²

Mill implicitly assumed that one who decides to become a slave is not rational enough to have full responsibility of one's future life. Therefore, the State was legitimate in not respecting such contracts, and in liberating the individual from the situation in which she entered without realizing its absolute implications. The State is also justified to require people to accept upon themselves certain civic obligations that benefit all society. As always, Mill tries to merge between the collective benefit and individual benefit. In promoting the view that it is legitimate to ask people to participate in protective social institutions, such as juries, military and the militia, Mill explained that there is an obvious civic utility but also that this service would enhance people's own mental education, strengthening their active faculties, exercising their judgment, and providing them with the required knowledge of the subjects they need to address.

Mill maintained that an exception to the doctrine that individuals are the best judges of their own affairs when "an individual attempts to decide irrevocably now, what will be the best for his interest at some future and distant time."⁴³ From this we may possibly deduce that Mill would object to medical living wills and advance directives. One's directives should not be predetermined and unchangeable but flexible, in accordance with the changing circumstances. We are not able to say that values and priorities that are important to us now will be as important to us until the very last day. The notion of an unchangeable, unified personality is doubtful. People do change and these changes may become meaningful to us in circumstances that we cannot envisage. Indeed, the very ideas of self-development and self-reflections reflect our ability and desire to construct and reshape realities, to re-evaluate values and ideas, to renounce old beliefs, and to accommodate ourselves to new situations.

Contra Mill, Ronald Dworkin assumes that people, as rational agents, may have certain attitudes regarding dementia and decide beforehand that some forms of life are repugnant, meaningless, and not worth living. In his opinion, people may try to assess how their situation might look in the future and decide on their destiny according to the data they currently have on the demented state.⁴⁴ Similarly, Wayne Sumner commented (January 20, 2012) that for Mill what was objectionable about perpetual contracts was that they alienated the individual's later freedom. This objection presupposes a person who will later have the capacity to exercise that freedom (i.e., who will be competent) and whose will would then be constrained by her own earlier choice. Advance directives, by contrast, come into play only when the individual is no longer capable of exercising her freedom. As such, Sumner does not see how Mill could have any objection to them or at least not the same objection.

⁴⁴ Ronald Dworkin, *Life's Dominion* (NY: Knopf, 1993).

However, with Mill I think that people are not only thinking creatures. Not all factors can be grasped by our rational faculties. Not all data can be digested by applying reason and judgment. Sometimes we do things we could not imagine doing. Sometimes people act in accordance with their sentiments, rather than their brains. Sometimes people are pushed to do something by their instincts, their impulses, factors that they find difficult to explain in rational terms. On some occasions people are overpowered, overwhelmed by the reality they confront. They accommodate themselves to situations imposed on them.⁴⁵ Living life in the present situation as one wills is more important than living the life now in accordance with a contract prepared in the past under very different circumstances.

Indeed, we should acknowledge that a person's priorities are not always fixed, and, therefore, we should not renounce the idea of having the ability to change them. People are **not** prophets. We can appraise possibilities upon evidence, data, and experience, but we cannot know with absolute certainty that these assessments will prove to be true for us. Mill, like Aristotle, was of the opinion that people are capable to alter their character, and that we do so under the influence of certain circumstances, some of which we can control; others we cannot.⁴⁶ There are mutual relationships between people and circumstances: People change circumstances, and circumstances change people.

4. Birth control

Mill did not believe in the power of laws alone to shape society. The shaping of society is a matter of moral development. Birth control was both a matter for State interference and social stigma.⁴⁷ Mill was an ardent advocate of birth control. For him this was an issue about one's health, personal liberty and mental development. Mill suggested that society can be justified not only to prevent harm to others but also in requiring people to aid one another with various sorts of positive assistance. Indeed, in 1823, when Mill was seventeen, he went with a friend to visit the poor sections of London, professing and advocating the use of contraceptives.⁴⁸ From the fact that he did not mention this experience in his *Autobiography*⁴⁹ we can learn that he was not too proud of this act, nor of the result, i.e., his arrest by the police for contravening laws on obscenity.⁵⁰ Mill held

Merrill (eds.) *Ethical Communication: Five Moral Stances in Human Dialogue* (Columbia, MO.: University of Missouri Press, 2009): 25-32.

the view that one should consider the pros and cons in bringing children to the world in economical terms; that a family should bring children only if it had the means to support them. In his obsession with this issue, Mill rationalised that since no person had the right to bring creatures into life, to be supported by other people, laws which forbade marriage unless the parties can show that they had means of supporting a family, "do not exceed the legitimate powers of the State" and "are not objectionable as violations of liberty."⁵¹

Mill's ideas should be considered in the context of his time, when young couples could not live together if they were not married. Such things were not to be done. Thus the State was able and, in Mill's opinion, legitimate to prevent unripe marriages. This is quite an intervention into one's private life. According to McCloskey, in a letter to Harriet Taylor, Mill also approved of social pressure to discourage the joint self-regarding act of divorce by mutual consent, where no other party is harmed.⁵² The State knows better than the couples whether they should come into unity or divorce. The good of society precedes individual autonomy and liberty. Here, Mill's paternalism is hard, and is difficult to be reconciled with the grounds against government interference *supra*, and with Mill's statement that "all restraint, *qua* restraint, is an evil."⁵³

Mill, the practical utilitarian, did not pay attention to emotional considerations which may lead to private priorities different from his. Sentiments such as 'children are joy', thinking that it may be of more importance for one to be surrounded with the noise of eight children and to live a modest life, than to live much more wealthy life with two kids and a dog, would have probably been rejected by Mill. He argued that Malthus was the great friend of the poor, for he showed them the 'right' way to live, and how they should help themselves in reducing their misery.⁵⁴ On this subject Mill implied that he and Malthus knew better than the common person what is good for her. We can safely assume that he would have welcomed the idea of paternalistic consulting offices for family planning.

Birth control is an important matter in which society and the government may intervene. Mill considered two other matters for social reproach on the individual and, if prove insufficient, might necessitate State intervention. Both have to do with offense, which supplements the Millian Harm Principle.

5. Social offences

⁵¹ J.S. Mill, *On Liberty*, 163. For discussion on Harriet Taylor's views on marriage as related to J.S. Mill's views, see Jo Ellen Jacobs, *The Voice of Harriet Taylor Mill*, 21-23.

⁵² H.J. McCloskey, *John Stuart Mill: A Critical Study* (London: Macmillan, 1971), 111. In *On Marriage*, Mill, however, objected to compelling a woman to remain in marriage if the perpetual contract between her and the husband enslaves the woman to her master. See <http://oll.libertyfund.org/readinglists/print/177-john-stuart-mill-s-and-harriet-taylor-s-writings-on-women>

⁵³ J.S. Mill, *On Liberty*, 150.

⁵⁴ John M. Robson, *The Improvement of Mankind* (Toronto: University of Toronto Press, 1968), 261. For discussion on utilitarianism and the classical economists – Adam Smith, Malthus and Ricardo, see John Plamenatz, *The English Utilitarians* (Oxford: Blackwell, 1966), 110-121.

The underpinning rationale is that liberty is important but it must be contained. People cannot uphold liberty as a license to do as they please with little thinking about the consequences of their conduct. If the conduct inflicts harm upon oneself, Mill advocated reproach. If the conduct inflicts harm upon others, then liberty needs to be restrained. Intervention in one's liberty is warranted if the benefits of doing so outweigh the costs. But from the slavery discussion it is clear that even if the benefits do not necessarily weigh the costs, still interference is justified because no one should be forced to surrender her liberty.

Mill also thought that the State may restrain individuals from thoughtless and irresponsible mistakes in major decisions of their lives that may concern others. While people should not be punished simply for being drunk, if they develop an addiction to such a bad habit (drinking, taking drugs, gambling, visiting prostitutes) they deserve reproach for their unkindness. Furthermore, if because of their addiction they are unable to pay their debts and could not undertake moral responsibility of their families, unable to support them and to educate their children, then they are deservedly reprobated and "might be justly punished."⁵⁵ People have some definite duties incumbent on them to the public and if they fail to perform them then they are guilty of a "social offence." In short, wrote Mill, whenever there is a definite damage, "or a definite risk of damage," either to an individual or to the public at large, "the case is taken out of the province of liberty, and placed in that of morality or law."⁵⁶

6. Indecent conduct

Mill allowed interference with indecent, offensive conduct which breaches good manners. It is one thing to undress in one's bedroom; it is quite another thing to appear nude in public. Indeed, Mill acknowledged that there are many actions that are not in themselves condemnable, nor supposed to be so, as long as they are done privately; but the moment they are done in public they come within the category of offences against others and then they rightly be prohibited.⁵⁷

In reviewing Mill's abatements and exceptions to his apparent powerful general statement that "neither one person, nor any number of persons, is warranted in saying to another human creature of ripe years, that he shall not do with his life for his own benefit what he chooses to do with it. He is the person most interested in his own well-being,"⁵⁸ it becomes quite difficult to determine exactly when the individual is *indeed* the best judge in her own interests; for even in the most private things the State is justified in interfering

⁵⁵ J.S. Mill, *On Liberty*, 138.

⁵⁶ *Ibid.* Mill repeated this reasoning in p. 153. For further analysis, see D.G. Brown, "Mill on Harm to Others' Interests," *Political Studies* 26 (1978): 395-399.

⁵⁸ J.S. Mill, *On Liberty*, 133.

with the citizen's business. Moreover, the interference may not solely be to protect or promote the individual's own good, but also for the sake of society and future generations.

Mill's elastic paternalism

Traditionally, the term 'paternalism' has been used to refer to practices of treating individuals in the way that a father treats his children. The two assumed features of the paternal role are the father's beneficence, i.e., the father is assumed to hold the interests of his children paramount; and the father's authority, that is, that he makes certain decisions for his children and controls certain affairs rather than letting them make the decisions or take control.⁵⁹

Loyal to his methodology which sets out simple underpinning principles, Mill believed that paternalism, as a general rule, was counter-productive, and that in the long run general welfare would be best served by non-interference. He also believed that paternalism tends to degrade people, to delay their growth and self-development, and to put obstacles on the discovery of truth.⁶⁰ However, we have seen that Mill allowed quite comprehensive criteria for interference. Thus it is difficult to view Mill as an anti-paternalism theorist. A helpful device for clarification in this context may be Joel Feinberg's distinction between weak and strong forms of paternalism.⁶¹

Feinberg asserts that the basis of paternalistic intervention is confined to the interests of the person with whom we interfere. According to the weak version we are justified in interfering with a self-harming conduct only when a person is not fully capable of grasping the meaning of her act; whereas by strong paternalism we are justified in interfering to prevent a person from harming herself even when her decision is fully voluntary.

From Mill's arguments and examples we may learn, adopting Feinberg's terminology, that he sometimes favoured a degree of weak, or it may be preferable to call it *soft paternalism*, but on some matters, such as unripe marriage and irresponsible divorce, he did not shrink from strong (or *hard*) paternalism. Thus, I suggest that Mill's paternalism may be best described as *elastic*. Mill endorsed soft paternalism when he exempted children and barbarians from his Liberty Principle and also when he allowed stopping a person from crossing an unstable bridge when we suspect that that person is oblivious to

the risk.⁶² But if the person, after being warned, choose nevertheless to cross the bridge, then we need to respect her decision. In the spirit of liberalism, Mill supported regulation rather than coercion or outright prohibition.

Another example with a similar reasoning relates to the use of poisonous articles. Mill acknowledged that those substances can be abused but an outright ban on their sale would make legitimate use impossible. Regulation, however, is in place due to the nature of the articles. Thus registration of purchasers, including a statement of intended use, is permissible. This is interference in one's freedom that does not challenge autonomy.⁶³ As long as such regulation is no material impediment to obtaining the dangerous articles, people are free to make their own decisions.⁶⁴ Mill held that the State had the right to prevent self-regarding harmful conduct only when it was substantially non-voluntary, or when temporary intervention was necessary to establish whether it was voluntary or not. He generally opposed the strong version: "with respect to his own feelings and circumstances, the most ordinary man or woman has means of knowledge immeasurably surpassing those that can be possessed by any one else."⁶⁵

Mill's elitism

Mill maintained that interference of society to overrule one's judgement and purposes in what only concerned oneself must be grounded on general presumption, which might be altogether wrong, and even if right, it was as likely as not to be misapplied to individual cases. Mill seemed to have struggled with this issue as his liberalism came into conflict with his elitism. The common people, by virtue of being common, are prone to err, and they need some guidance offered by not-so-common people, i.e., the legislators who see the good of society and understand the broader, complex picture. Thus, Mill wrote, it is quite possible that people may demand the legislator's intervention in their affairs, and the "regulation by law of various things which concern them, often under very mistaken ideas of their interest."⁶⁶ Still, Mill maintained, this kind of intervention does not negate their liberty and autonomy because "it is their own will, their own ideas and suggestions."⁶⁷ For Mill, it is natural for the common people to respect superiority of intellect and knowledge and to defer to the intellectuals and society's knowledgeable people. Again, this is absolutely fine and does not negate the Liberty Principle and the fundamental belief in

⁶⁵ *Ibid.*, 133. For further discussion, see C.L. Ten, "Mill on Self-Regarding Actions," *Philosophy* 43 (1968): 29-37; Richard Wollheim, "John Stuart Mill and Isaiah Berlin," in Alan Ryan (ed.), *The Idea of Freedom* (Oxford: Oxford University Press, 1979): 253-269.

⁶⁶ J.S. Mill, *Principles of Political Economy*, 459.

⁶⁷ *Ibid.* Although Mill did not use the term "autonomy," he certainly had in mind a concept that relates to the ability to reflect upon beliefs and actions, and the ability to form an idea regarding them, so as to decide the way in which to lead a life.

human autonomy because the people judge for themselves who are the persons who are entrusted by the powers to make decisions for them. Mill wrote in his straightforward, elitist fashion that was so natural to him:

It is not necessary that the many should themselves be perfectly wise; it is sufficient if they be duly sensible of the value of superior wisdom. It is sufficient if they be aware, that the majority of political questions turn upon considerations of which they, and all persons not trained for the purpose, must necessarily be very imperfect judges; and that their judgment must in general be exercised rather upon the characters and talents of the persons whom they appoint to decide these questions for them, than upon the questions themselves.⁶⁸

Mill's insistence that persons without the means to support a child may be prevented by the State from having children exhibits both paternalism and elitism. In conformity with his Liberty Principle, Mill could have insisted that parents have a responsibility for supporting the children they bring into the world. But Mill understood the facts of economic life to be such that in some (and perhaps many) instances the poor laborer would not be able to find any employment, or employment at a wage adequate to the maintenance of a family. But this was not the only reason, for if it were Mill could have suggested that the State create a jobs program or be the employer of last resort. Mill, the elitist, did not trust the common people to be responsible enough to cater for their children, thinking that they would prefer satisfying their immediate pleasures (drinking, gambling etc.) over responsible parenthood.

Private v. public good

There are certain activities of the government which restrict the people's freedom to a certain extent but nevertheless are implemented so as to contribute to the civic society in general. When a certain government is trusted to act for the benefit of society, without exploiting its authority at the expense of its citizens, and its reasons are to increase the individual safety, to contribute to her well-being, and to defend her interests, then paternal acts would not harm the autonomy of the individual, but rather be instrumental to its improvement.

Moreover, the role of the State is not only to prevent one from inflicting harm upon others, but also from inflicting harm to oneself. Thus, for example, it has been argued that paternalism designated to affect matters that are regarded by all as having merely instrumental value, such as improving safety, makes the activities affected more likely to realize their aim, rather than interfering with one's autonomy. Such restrictions of liberty do not only have positive characteristics, but also carry some essential benefits for the

⁶⁸ J.S. Mill, "Appendix," in *Dissertations and Discussions*, Vol. I, 470. See also J.S. Mill, "On Genius," 329-339, http://oll.libertyfund.org/?option=com_staticxt&staticfile=show.php%3Ftitle=242&chapter=7739&layout=html&Itemid=27.

maintaining of public good. Let me illustrate this assertion by considering the following quite simple but much to-the-point example.

Suppose that the Beverley Municipality decides to set a new traffic light near my home. In a certain sense, this act would restrict my freedom because now I cannot cross the road whenever I wish; now I have to consider the changing of lights. Nevertheless people (included myself) do accept this limitation on our freedom because people do understand that the decision was made for their own safety and for ensuring the public good. Even if they think that they know how and when to cross the road, and they believe that the setting of traffic lights would be a nuisance for them, they are willing to accept this regulation because they recognize that some people are not blessed with the capacity of making rational and safe judgement; this introduction of restriction on their freedom will be regarded as a trivial one in comparison to its contribution to the public good.

A much more complicated issue is the concern for the fastening of seat belts. Here the claim is that the State should take upon itself to secure one's life, health and security, even if one does not recognize, nor believes in the importance of certain policies, designed for one's own good. This subject may be considered as one of the striking examples of the idea of 'force her to be free', since here we are talking about matters of life and death. In many countries today seat-belts are installed in every car, and they are considered to be an indispensable part of the machine. But this is a relatively recent development. Up until the 1980s, many liberal democracies left this issue to the people's discretion. Every individual, as a rational adult who knows what is best for her, was left to decide for herself whether or not to use the seat-belt. Statistics from many Western democracies showed that during the 1970s many did not use the belt, and that people in general were not aware of the efficiency of this device and preferred not to bear the inconvenience involved in fastening themselves to their seats. Even today, some drivers see seat-belts as a nuisance that restricts their liberty and are not convinced that the belts are effective despite concrete evidence that seat-belts significantly decrease human fatalities.⁶⁹

In most of these countries the governments have decided that they know better what is good for the health and lives of their citizens, and special ordinances were enacted that made the fastening of seat-belts compulsory. The high costs involved in caring for the injured in car accidents certainly played a significant part in putting the legislation in motion. Seat belts relieve public care systems of some of the costly burdens. Another common paternalistic act widely performed in welfare states which was discussed earlier and exemplifies that view is the concern for a certain level of education.

On the other hand, paternalism will raise active objection when a government would intervene in the very private spheres, where the individual alleges to know how to perform her own conduct better than any other person willing to do it for her, and even if she does not, still no evil is committed nor to others, neither to herself. Thus, while in the

⁶⁹ See the data introduced by Karin Berard Anderson regarding the efficiency of seat-belts in securing lives, and the patterns of the use of safety belts prior to and after the enforcement of law. *Use and Effects of Seat Belts in 21 Countries* (Oslo: Inst. of Transport Economics, 1978); GunillaFhaner and Monica Hane, *Seat Belts: Relations between Belief, Attitude and Use* (The Swedish Road Safety Office, February 1973); L. Evans, "The Effectiveness of Safety Belts in Preventing Fatalities," *Accid Anal Prev.* 18(3) (June 1986): 229–241; Alma Cohen and LiranEinav, "The Effects of Mandatory Seat Belt Laws on Driving Behavior and Traffic Fatalities," *The Review of Economics and Statistics* 85(4) (November 2003): 828–843; Rocco Pendola, "The Effects of Wearing Seat Belts," *eHow*(2010), http://www.ehow.com/list_6374409_effects-wearing-seat-belts.html

case of safety- belts paternalistic regulations are justified since they concern lives of others, not only the performer's life, in matters such as pornography the State is legitimate to encourage, and even to fight against this phenomena, but it cannot coerce individuals not to enjoy it in their private homes, as long as no *personal* harm to others is done.⁷⁰ For paternalistic activities in such spheres make the self-imposition of duties and morals an impossible performance for the individual, thus coming into contradiction with her fundamental freedoms.⁷¹ Here we are facing the basic question concerning the inner discrepancy that lies between caring for one's well being, and restricting one's freedom. In any event, it should be emphasized that in any case of paternalistic legislation, the burden of proving the necessity of these laws lies on the government. The government has to explain what would be the effects of the legislation on society. This was Mill's stand regarding government interference with the economy, stating that in every instance the burden of making a strong case should be thrown not on those who resist but on those who recommend government interference. Non-interference, Mill maintained, should be the general practice, while every departure from it, unless required by some greater good, was a certain evil.

Mill's paternalism is exemplified also on the issue of gambling. Mill recognized that gambling might harm the individual as well as her family because this addiction might come at the expense of supporting the family. Mill thus advocated a responsible State conduct, prohibiting public gambling houses, yet he argued that people should be able to gamble in their own or each other's houses, or "in any place of meeting established by their own subscriptions, and open only to the members and their visitors."⁷² Mill was struggling with this matter, and his proposed formula may be contested by liberals. After all, people freely choose to enter this institution, and no undue pressure on them can be said to be used. Mill's paternalism accords himself and the State the right and competence to decide what is evil. But the formula enables people to gamble in private forums. The formula tries to juggle between State responsibility, personal freedom, and not conferring legitimacy on a practice that might waste one's resources at the expense of one's family, acknowledging that one's autonomy is not complete when it comes to gambling as addiction may come to play.

I spoke of restricting the individual's liberty by the State, emphasising the evils that it might bring on its citizens by excessive invasion of one's life. However, the tension between individuality and the collective might be increased not only as a result of too much activity on the part of government at the expense of the citizens, but also as a result of lack of activity on the part of the citizens. Practising of one's individuality demands not only

⁷⁰ Feminists argue that pornography undermines the status of women in society and degrades them. Liberals insist on having a substantive proof that tangible harm was inflicted on an individual to prohibit such speech. All agree that no person should be coerced to participate or watch pornography. See the debate between Andrew Altman, "The Right to Get Turned On: Pornography, Autonomy, Equality," in Andrew I. Cohen and Christopher Heath Wellman (eds.), *Applied Ethics* (Oxford: Blackwell, 2005): 223-235, and Susan J. Brison, "The Price We Pay"? Pornography and Harm," in the same volume, 236-250. See also Ronald Dworkin, "Do We Have A Right to Pornography?," in *A Matter of Principle* (Oxford: Clarendon Press, 1986): 335-372.

⁷¹ For further discussion on the issue of pornography, see T.M. Scanlon, "Freedom of Expression and Categories of Expression," *University of Pittsburgh Law Review* 40, No. 3 (1979), section V, and David Dyzenhaus, "John Stuart Mill and the Harm of Pornography," *Ethics* 102(3) (1992): 534-551.

⁷² J.S. Mill, *On Liberty*, 155.

participation but also cooperation: it requires that one would find one's place within the community in which one lives, learn the give-and-take in sharing communal life, and then one would be able to see that one's individuality would not be endangered, but conversely, that through community it would be increased to levels which otherwise one would not be able to achieve.

Thus, the citizen must not view herself selfishly, but as an object who could satisfy her needs and ambitions through community and cooperation with others. Following Mill's distinction between self- and other-regarding conduct, a distinction can be made between *private* liberty and *civil* liberty, arguing that governments should develop both of these types of liberty, and not prefer the one over the other. Private liberty includes only those issues that concern the individual and her close spheres (family, work, friends and alike business); whereas civil liberty refers to her involvement and participation in the community level, on a scale which varies from participation on election days, to active involvement in public life, whether in voluntary organizations, pressure groups or organized parties. In developing and encouraging the latter the government has a very significant part. Though it might be more convenient for a governing party that people will be preoccupied with their own business, thus would not 'bother' the system with overwhelming demands that would require efforts and time to reconcile, democracies should sustain and encourage both types of liberty. Democracy that encourages only the individual liberty might find itself at some future point in difficulties to survive, for people would neglect their civic duties, and by their lack of involvement and, in turn, lack of control, would encourage undemocratic trends and opinions.

In addition, the *isolated island reasoning* is emphasised as an attempt to bridge the tension between individuality and community. Mill wrote: "No person is an entirely isolated being; it is impossible for a person to do anything seriously or permanently hurtful to himself, without mischief reaching at least to his near connections, and often far beyond them."⁷³ This reasoning, as employed here, focuses not only on the affects of one's conduct but also on the *drives* of human beings. Each and every person is seeking to develop her inherent capacities and to realize her ends and interests to the point of maximal satisfaction, restrained by the circumstances within which we live. Most of us do not wish to live all our lives in an isolated island. Human beings are social creatures who wish to live in a community with others, to feel that they belong to some larger entity. Therefore, one has to find the mode of action which would allow one self-development as well as self-realization, while still respecting the rights and liberty of others, practicing one's individuality within the community, through communication and the help of others.

Conclusion

The idea that the liberty granted by democracy is not to injure and to prejudice someone else's liberty is the idea of *significant liberty*, in the sense that one's liberty is significant for creating and maintaining one's views and actions as long as one does not interfere with, and damages the other's liberty. People are free and autonomous creators but they do not live in isolation, nor in a vacuum; they live within humanity and need to consider the

⁷³ J.S. Mill, *On Liberty*, 136.

effects of their deeds on the liberties of others. Only if people have absolute and substantive reason to believe that their liberty is in jeopardy, could they delimit the liberty of fellow citizens.

As for the role of the State, the impression that the reader may receive from the opening pages of *On Liberty* about the limits of interference in individual dealings is quite misleading. Mill wrote that “The object of this Essay is too assert one very simple principle,”⁷⁴ indeed so simple that even most (average people) may understand, “that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number is self-protection”⁷⁵ or, in other words, to prevent harm to others. From this one may infer that the State is analogous to a traffic warden of sort, whose duty is to help law-abiding motorists to travel where they like, and to intervene and punish whenever they infringe the prevailing rules. But we have seen that the role of the State is far more complex and comprehensive, as Mill ascribed it significant powers of elastic paternalism to enhance the end of utilitarianism. While Mill was suspicious of the government tendency to abuse its powers for personal gains, he still expected decision-makers to weigh short and long-term implications of any given conduct, to interfere directly and indirectly in maintaining a well-ordered liberal society, to take special interest in the upbringing of future generations, and to protect society’s moral codes. Modern-day liberals have adopted Mill’s anxieties of government abuse and belittled the trust they are willing to confer on politicians. Liberals are ever so suspicious of politicians who might promote their own partisan interests at the expense of the public good. There are historical grounds for this healthy distrust. Unfortunately, many governments did not act in accordance with Mill’s expectations and lofty, other-regarding paternalistic aspirations.⁷⁶ Theoretical principles should always be tested against the brute facts of reality.

EXTRACTS: JOSHUA SOBOL'S PLAY "WAGNER'S HAZE"

WAGNER'S HAZE

A play by

Joshua Sobol

CHARACTERS: (maximal cast)

WAGNER (Playing 5 facets of Wagner's character: Alberich-Wagner, Wotan-Wagner, Logi-Wagner, Mime-Wagner, Siegfried-Wagner.)

AHASVER - Wagner's Chimera of "The Eternal Jew"

MINNA PLANER - Wagner's first wife

MATHILDE WESENDONCK - A married woman Wagner loved

MATHILDE MAIER - An un-married woman Wagner almost loved

COSIMA VON BUELOW - A married woman Wagner loved; his second wife

JUDITH GAUTIER - A married (later divorced) woman Wagner Loved

CARRIE PRINGLE - An un-married woman Wagner almost loved

HEINRICH HEINE - A poet who gave Wagner the plots of Tannhäuser and The Flying Dutchman and later won Wagner's disrespect for being a Jew.

SAMUEL LEHRS - A Jewish scholar who introduced Wagner to the Nordic mythology and sagas that inspired Wagner to develop the RING.

GIACOMO MEYERBEER - A Jewish composer whom Wagner hated but flattered to advance his career.

HANS VON BUELOW - A conductor whom Wagner abused and stole his wife.

NIETZSCHE - A philosopher who first adored and later abhorred Wagner.

RITTER - Wagner's friend.

Dr. KEPPLER - Wagner's Physician.

6 FEMALE DANCERS (THE “FLOWER MAIDENS” - They play all female parts.)

WAGNEROCK - A Wagnerian Rock band

MINIMAL CAST:

WAGNER

MINNA PLANER - (Played by one of the Flower Maidens)

MATHILDE WESENDONCK - (Played by one of the Flower Maidens)

MATHILDE MAIER - (Played by one of the Flower Maidens)

COSIMA VON BUELOW - (Played by one of the Flower Maidens)

JUDITH GAUTIER - (Played by one of the Flower Maidens)

CARRIE PRINGLE - (Played by one of the Flower Maidens)

AHASVER - (Plays Samuel Lehrs, Giacomo Meyerbeer, Dr. Keppler)

HEINE - (Plays Hans von Bülow, Nietzsche, Ritter)

TIME AND PLACE

It is a dreary afternoon on Piazza San Marco in Venice, in February, 1883. A heavy fog fills the air, hiding the buildings surrounding the square. Heavy clouds hang over the city. Rags of fog are hanging from the sky all the way down to the pavement, while curls of fog are growing from the floor and rising up to the sky. It feels as if the entire universe was swallowed up by fog.

A black piano half hidden by the fog stands down stage right.

The fog fills up the space throughout the show. The fog constitutes actually the set of the entire show, except for the first and the final scenes.

SOUND AND MUSIC

A Wagnerian Rock Band - ”Wagnerock“ - provides the sound and music of the show. It will accompany the dramatic action, wherever needed, with rock

cover versions of Wagner preludes and Wagnerian leitmotifs. It will bridge the gap and reveal the connection between Wagner's music and the realm of rock music.

Yehoshua Sobol ([Hebrew](#): יהושע סובול) (born August 24, 1939), is an Israeli playwright, writer, and [theatre director](#).

Yehoshua Sobol was born in [Tel Mond](#). His mother's family fled the pogroms in Europe in 1922 and his father's family [immigrated](#) from Poland in 1934. Sobol is married to Edna, set and costume designer. They have a daughter, Neta, and a son, [Yahli Sobol](#), a singer and writer. Sobol studied at the [Sorbonne](#), Paris, and graduated with a diploma in [philosophy](#).

Sobol's first play was performed in 1971 by the Municipal Theatre in [Haifa](#), where Sobol worked from 1984 to 1988 as a playwright and later assistant artistic director. The performance of his play *The [Jerusalem Syndrome](#)*, in January 1988, led to widespread protests, whereupon Sobol resigned from his post as artistic director.

In 1983, after the Haifa production of his play *Weininger's Night* (The Soul of a Jew), he was invited to participate in the official part of the [Edinburgh Festival](#). Between 1983 and 1989 Sobol wrote three related plays: *[Ghetto](#)*, *Adam* and *Underground*, which constitute together The Ghetto triptich.

Ghetto premiered in Haifa in May 1984. It won the David's Harp award for best play. That year, [Peter Zadek](#)'s German version of the play was chosen by *Theater Heute* as best production and best foreign play of the year. It has since been translated into more than 20 languages and performed in more than 25 countries. Following [Nicholas Hytner](#)'s production of the English-language version by [David Lan](#) at the [Royal National Theatre](#) of Great Britain in 1989, the play won the [Evening Standard](#) and the London Critics award for Best Play of the Year and was nominated for the [Olivier Award](#) in the same category. It was coldly received in New York, however. In his review of the play in the New York Times, [Frank Rich](#) described it as a "tedious stage treatment of the Holocaust."

Since 1995, Sobol has collaborated with Viennese director [Paulus Manker](#) on a number of projects exploring new forms of the theatrical experience.

In 1995, *Der Vater* (The Father) a work by [Niklas Frank](#) and Joshua Sobol commissioned for the Wiener Festwochen (Vienna Festival) opened at the Theater an der Wien under the direction of [Paulus Manker](#). The play is about Niklas Frank's father, [Hans Frank](#), who was [Hitler](#)'s Governor general in Poland and was hanged in [Nuremberg](#) in 1946. In 1996, they created *[Alma](#)* for the Wiener Festwochen. *Alma* is a polydrama based on the life of [Alma Mahler-Werfel](#). It played in [Vienna](#) for six successive seasons and toured to [Venice](#), [Lisbon](#), Los Angeles, Berlin, [Jerusalem](#) and [Prague](#). In the Vienna production, the scenes of Alma's life were performed simultaneously on all floors and in all rooms of a former Jugendstil sanatorium near Vienna. The guests were invited to abandon the immobilized position of *spectator* in a conventional drama, replace it with the mobile activity of *traveller*, thus partaking in a "theatrical journey". By choosing the events, the path, and the person to follow after each event, each participant constructed her or his personal version of the "Polydrama". In 2000, Sobol and Manker created *F@LCO – A CYBER SHOW*, a multimedia musical about the Austrian pop singer [Falco](#). Staged in the former Varieté theatre Ronacher in Vienna, *F@LCO* offered the audience a choice between a more expensive, passive ticket for the boxes or the balconies, from which spectators could only watch the show from distance, or a cheap, "active" ticket on the floor, close to the rostrum (in the shape of @, the Internet *at* symbol) on which the show was performed. This position allowed the active spectator to move around during the show, dance and buy drinks at the bars installed under the catwalks.

MEETING BETWEEN HEINE AND WAGNER IN PARIS

(SCENES 5 AND 6, PP. 21-33)

SCENE 5. FLIGHT FROM RIGA. 1839

MIM-WAG (MIME-WAGNER - that is: the dwarfish, miserable side of Wagner) emerges from the fog, dragging a trunk. Minna appears from the fog following Mim-Wag. She is pregnant. She is dragging another trunk. They start packing up bed sheets, towels, glasses, plates, cutlery and various household items in two trunks. They work in silence. At a certain point Wagner stops working.

MINNA Have you applied for a visa?

MIM-WAG We don't need a visa. We are not going to travel by train. We will cross the border the way birds and wolves do it.

MINNA I see. We are going to travel by coach at night on country dirt ways...

MIM-WAG Abraham Moeller will smuggle us over the border in a light carriage, and then we take a sailing boat through the Skagerrak.

MINNA You forgot I'm with child, Richard. We'll lose our baby.

MIM-WAG You can stay in Riga. Your lover will be happy to welcome you.

MINNA My love affair is dead. If you can't forgive me - forget me.

MIM-WAG You are not a woman to forget. Your love is like a blazing spear. When you leave a man you loved, you leave an unhealed wound that burns and eats into the flesh.

MINNA This is very poetic. I will be happy to know that I inspired you to write a new opera. But I'm not a blazing spear. I am just a woman. When I love I give myself away without restraint. That's how I am.

MIM-WAG So will you come with me to Paris?

MINNA I will, though it is the end of my career as an actress.

MIM-WAG Why should it be the end? You will learn French, and start a new career in Paris.

MINNA My dear Richard, Paris is not waiting for me.

- MIM-WAG Paris is the world capital of the arts. It is waiting for the art of the future. Paris is waiting for a piece of drama one has rarely seen equalled. Paris will embrace and celebrate a new kind of opera that in music, design, direction and in ensemble and individual performance will reach heights not often reached on the stage. Paris will remain eternally grateful for whoever will offer it such a total experience as my "Rienzi" can be.
- MINNA I implore you: let us not arrive in Paris with a half baked Rienzi. The artistic directors of the opera houses in Paris receive dozens of new scores every year. They will not read your score twice. You must offer them the most perfect score you can accomplish. Let us stay here as long as it will take you to finish the entire opera, and bring it to the best form you can. Bear the humiliation of being Dorn's subordinate for another few months, and bring Rienzi to full fruition. Then we'll go to Paris with something to show the manager of the opera.
- MIM-WAG I cannot stay another day in Koenigsberg. The creditors are after me.
- Do you wish me to end up in a Russian prison for bankrupt debtors?
- MINNA You will land in Paris with a half baked "Rienzi". before we know, we will be again heavily in debt.
- MIM-WAG The first act of Rienzi is ready. I will find a way to show it to Giacomo Meyerbeer. He is the shining sun of the Grande Opera in Paris. He will see at once my great potential, and he will open for me the gates of the Paris Opera.
- MINNA At best Meyerbeer will urge you to accomplish "Rienzi", and to bring it back to him when you finish writing it. Then if he will like it he will pass it on to the management of the opera, and they will decide either to produce it or not to do it. How are we going to survive in Paris waiting for all this to happens?
- MIM-WAG I'll write to Apel and to other friends. They will lend me money.
- MINNA I see. I will have to pawn my jewellery and my theatre costumes. And when we will run out of that little money, I will have to scrub floors. How will I do it with a babe in my arms, if I don't lose our unborn child on the way to Paris.
- MIM-WAG If you are afraid of losing the child, you can stay. I will manage.

MINNA I will not leave you alone, my grown up child. I am coming with you to Paris, whatever the price may be.

SCENE 6. Wagner's Jewish Guides to Nordic Myths

(Jacques Offenbach's Cancan music is heard and a line of Cancan dancers appears from the fog. A typical Parisian café table emerges from the fog. A young man is sitting at the table. This is the philologist and hystorian of northern mythology, Prof. Lehrs. "ALB-WAG" stands for Alberich-Wagner, hinting that in this scene we discover Alberich-like characteristics in Wagner's person. He is unkempt and looks like a poor devil.)

(Note: During his stay in Paris from 1839-1842 Wagner met Heine and Samuel LEHRS who introduced him to Nordic myths. The scene takes place at Café Berogie opposite the Opera. LEHRS sits at a table. He is deeply absorbed in reading a voluminous book. He is annotating the text. Heine enters.)

HEINE Good evening LEHRS. (LEHRS is absorbed in the book. He doesn't react. Heine raises his voice) Good evening LEHRS! (LEHRS doesn't react. Heine touches him to see if he is alive) Professor Samuel LEHRS?...

LEHRS Eh? (He lifts his eyes from the book)

HEINE Are you with us, Shmuel?

LEHRS Oh! Heine! What brings you here?

HEINE Laube told me you were going to meet here a young German revolutionist, some er--- what's his name---

LEHRS Richard Wilhelm Wagner---

HEINE Yes, Laube recommended him to me. But what is this book that made you forget the world?

LEHRS You won't believe what I'm going to tell you. I found the oldest version of the Tannhäuser legend.

HEINE You don't say! Don't tell me I should consider rewriting my Tannhäuser!

LEHRS Believe it or not - your poem is so close to this version that it looks like you

had it before your eyes when you were writing your Tannhäuser.

HEINE All I had before my eyes was the prettiest, the noblest and most refined Princess Belgioso, with whom I was not in love, while my heart was filled with yearnings and lust for the earthy MATHILDE. I was trying in vain to set myself free of her spell, but all I could do was write my Tannhäuser... But have you met him already, that guy - what's his name--?

LEHRS Richard Wagner? No, never.

HEINE Maybe he is sitting here already, waiting for us?

(Heine turns to the audience:) Is anyone of you Richard Wilhelm Wagner?

LEHRS He is not here. Laube described him to me.

HEINE What should he look like, this young revolutionist?

LEHRS He is one meter fifty tall, he has short legs, and a very big head. a bulging forehead, a vulture's nose and a protruding chin. He wears a black cap and he grows a strange beard surrounding the bottom of his chin.

HEINE Oh! Another Jew...

LEHRS I didn't have a chance to look under his trousers.

HEINE What you described is a typical caricature of a Jew.

LEHRS I think I see him coming.

(Alberich-Wagner enters. He looks around, trying to identify LEHRS and Heine)

HEINE Look at him, and you'll understand why the Germans abhor us, Jews: (He describes Alb-Wag's behaviour) Weird, arrogant, nervous, restless elves.

LEHRS Mr. Wagner?

ALB-WAG Are you----?

LEHRS LEHRS, Samuel LEHRS.

ALB-WAG Samuel who?

HEINE **Professor LEHRS** - for you. Take off your cap to him.

ALB-WAG Oh, yes? Why should I take off my cap to him?

HEINE If you had in your head what he has in his little finger---

LEHRS Please, Heinrich!---

HEINE You shouldn't allow any by-passing pisser to treat you as a nonentity.

ALB-WAG Excuse me, it is certainly my fault, but I still don't know who is Professor LEHRS. Please enlighten me.

HEINE Professor LEHRS is a great philologist. If the German mythology will rise from the dead, it will be thanks to him. You'd better remember his name and listen well to every word he says, Mr. ---- (To LEHRS) What's his name?

ALB-WAG Richard Wagner.

HEINE Richard who?

LEHRS Don't be so vicious, Heinrich. He's a young man who landed here in Paris not long ago. He is still confused. (To Wagner) Heine can be very nasty for the sake of nastiness. It has nothing to do with you.

ALB-WAG Heine?!...(Is he) the great poet Heinrich Heine?---

LEHRS Yes. That's him.

ALB-WAG My God! Please forgive my rough manners---

HEINE Your manners are not my problem. You'd rather improve them, if you want to survive in Paris.

ALB-WAG Heinrich Heine! I can't believe I am so fortunate!

HEINE Fortune has nothing to do with it. I came here to meet you.

ALB-WAG Oh! I feel so privileged! Thank you so much for that!

HEINE You should thank Laube for this, not me.

ALB-WAG Oh! Laube told you about me?

- HEINE He told me you are a fervent leftist, and an adherent of "Young Germany", and I'm always glad to meet people who share my opinions.
- ALB-WAG More than your opinions I admire your style. It's unique, it's goddamn inimitable! How do you do it?
- HEINE Try not to imitate anybody, and you'll be inimitable too.
- ALB-WAG Oh! It's so simple! Shit! Why didn't I have the idea?
- HEINE You gave me the idea.
- LEB-WAG I did? How do you mean--?
- HEINE You did it by asking me the right question.
- LEB-WAG You mean the answer wasn't ready before?
- HEINE I am not a politician. I never have ready made answers. I hear you are an aspiring German composer. What on earth brings you to the Old Prostitute? (reacting to Wagner's bewilderment) I mean - Paris.
- ALB-WAG That's a good question to ask a musical hermit of the fifth floor of a provincial German back-street.
- HEINE And what's the answer?
- ALB-WAG I couldn't resist the temptation of tearing myself from the squalor of the German provinces, and, without tasting the far sublimer pinches of a German capital, throwing myself straight upon the centre of the world, where the arts of every nation stream together to one focus; where the artists of every race find recognition; and where I hope for satisfaction of the tiny morsel of ambition that Heaven—apparently in inadvertence—has set in my own breast.
- HEINE Bravo! That was a well prepared speech. But for the sake of our informal chat try to improvise your spiel.
- LEHRS I was deeply impressed by Mr. Wagner's words.
- HEINE Mr. Wagner isn't passing right now a first year high school exam in rhetoric. So let's come down to earth. have you got a settled income?

ALB-WAG No, not at all

HEINE Do you enjoy the protection of some rich patron or relative so that you can stay in Paris for ten years, if you are to make a name here at all, or have you won the grand prize of a lottery?

ALB-WAG Nothing of the kind. We sub-let our rooms and Minna, my wife, polishes every morning the shoes of our temporary sub-tenants. We are very poor. If I don't get one of my compositions performed, in a few weeks we will be left without a sou.

HEINE That's too bad. Living in Paris without money is like drinking urine from a bottle of champagne.

LEHRS Don't discourage him, Heinrich!

HEINE You must have some resources that enable you to wear this "luxury fancy costume".

ALB-WAG I believe in my talent.

HEINE Here you shall soon find out if you really own any.

ALB-WAG If I'll be disenchanted, I'll return to my garret-home and the world will never know there was once a Richard Wagner who had trodden this earth.

LEHRS (Sympathetic) You remind me of my first days in Paris. I got all worked up about taking leave from Germany; I felt like Tannhauser at the moment of regaining his liberty from the spell of his Venus. And then came the aftermath...

ALB-WAG Who is Tannhauser? What's the story with Venus?

LEHRS Oh! You don't know Heine's poem?

ALB-WAG No, I must apologise...Where can I get the poem?

HEINE You'd better ask Professor Lehrs to give you the original legend.

LEHRS No! He MUST read your poem!

HEINE Leave alone my poem. I'm doing my best to help you face reality. How are

you going to bring your talent to market? What plans have you made?

ALB-WAG I have some finished works, some half-finished, and a number of sketches for all kinds of — both grand and comic opera.

HEINE No one will want to listen to sketches and half baked pieces. What was your first meaningful work?

ALB-WAG It is "Die Feen".

HEINE An opera?

LEHRS Laube told me about it. He wrote the libretto, didn't he?

ALB-WAG Laube offered me his text, but it convinced me I had to write my own libretto. And of course I composed also the music.

HEINE What is the opera all about?

ALB-WAG It's a romantic opera about a legendary love between human beings.

HEINE (Sneering) A "legendary love"? What's that?

ALB-WAG I used mythical elements: the fairies.

HEINE Who needs fairies in a love story?

ALB-WAG I need them.

HEINE What for?

LEHRS (Takes Wagner's defence) The fairy symbolises the contradiction between the short-lived world of us mortals and the ever-lasting world of the celestial creatures.

HEINE What's the gist of the story - in one sentence?

ALB-WAG It's the power of salvation and redemption that sticks in Love.

HEINE You believe in "Salvation and Redemption"...?

LEHRS It's like in your "Memoirs of Herr. von Schnabelewopski"

ALB-WAG Don't you believe every human soul is worthy of salvation?

- HEINE I'm sure God will forgive me my sins. It's his profession.
- LEHRS Where was your opera performed?
- ALB-WAG I sent it to the Leipzig Opera house, but the production manager Franz Hauser refused to produce it.
- HEINE What were his arguments?
- ALB-WAG It's not only my opera , this philistine hates my guts. It's my entire approach that he doesn't begin to understand.
- HEINE What is your approach?
- ALB-WAG You don't expect me to say it in one sentence.
- HEINE Say it in as many as you wish.
- ALB-WAG Our contemporary German composers try hard to sound like scholars and intellectuals. It all begins with Bach whose music is considered to be intellectual, pure and true.
- HEINE Bach brought it to perfection in the form of the fugue. That much we know.
- ALB-WAG Our composers try to use this form. They try to be what they are not. Therefore their music sounds so stiff and artificial.
- HEINE Is Mozart's music stiff and artificial?
- ALB-WAG Mozart's music owes its charm to the Italian songs.
- HEINE I thought it owes its charm to Mozart's genius. But I'm only human. Let's go back to your approach.
- ALB-WAG Our composers are influenced by the French opera.
- HEINE I thought the French opera owes its dramatic qualities to the influence of the German composers von Gluck, von Weber and Ludwig Spohr.
- ALB-WAG Yes, but it lacks the sensitivity required for vocal music.
- HEINE That's a highly arguable assumption.

- ALB-WAG The vocal line of the French opera has no sense of real drama.
- HEINE In short, what's your point?
- ALB-WAG If we Germans manage to get rid of the influence of this un-natural culture on our spirit, if we manage to transcribe the voice of our German people and to express the truth, the enthusiasm and the vitality it contains - we may produce a truthful operatic art.
- HEINE Do you hope to impose this "approach" on the French Operatic world?
- ALB-WAG I consider the operatic form as an artistic expression that unifies all the arts under the principles of drama connected to the social reality.
- HEINE Young man, you didn't listen to my question.
- ALB-WAG I'm sorry, what was it?
- HEINE If you hope to impose on the French bright spirit the dark mystical elements of German folkish fables, you'd better go back to Germany the quicker the better.
- ALB-WAG I am ready to contend with difficulties of all sorts. I am not afraid of competition.
- HEINE You are too full of theories. Your ambition is much bigger than the goods you can offer at the present.
- ALB-WAG I wrote an Opera that proves the viability of "my theories".
- HEINE You don't mean "The Ban on Love"?
- ALB-WAG Who told you about it?
- HEINE I hear the premiere in Magdeburg was a disaster.
- ALB-WAG The casting consisted of provincial miserable bunglers.
- HEINE Is this why the lead singer bungled the words of your bungling libretto.
- ALB-WAG My libretto was perfect.

- HEINE I read it.
- ALB-WAG You did?
- HEINE I'm not a bungler. I came prepared for this meeting.
- ALB-WAG So you can slash me with the sharp razor of your formidable tongue? Here I am at your feet. Slaughter me and drink my blood.
- HEINE Don't be stupid. I care for you more than you imagine.
- ALB-WAG May I ask - why?
- HEINE There's a je-ne-sais-quoi about you that provokes me. You are a heavy-handed poet and a clumsy musician. And yet you insist on combining the two elements. Your "Ban on Love" is long, pretentious, and overloaded with ideas. The music is poor, too monumental, very complicated and disappointing.
- ALB-WAG The opera flopped in Magdeburg because of the poor quality of the performers, and the provincial audience that wasn't capable of appreciating the innovative quality of the music.
- HEINE A poet should never accuse the quality of the paper.
- LEHRS Mr. Wagner might be right. Maybe the Parisian sophisticated audience will be more receptive to his innovative opera.
- HEINE Don't help him to cherish illusions.
- LEHRS You are too cruel, Heinrich! Let him try his chance in Paris. Here in Paris merit alone can win the plaudits of a great incorruptible public.
- HEINE "The incorruptible public?" What are you talking about, Samuel? You know to what extent the Parisian Opera public has already been corrupted by "Giacomo Machiavelli The Great."
- ALB-WAG Who is Giacomo Machiavelli the great?
- LEHRS It's the nickname Heine gave Meyerbeer.

- ALB-WAG Why Machiavelli?
- HEINE What's all this lavish and spectacular design and stage effects of the so called "Grand Opera" if not a Machiavellian ruse to disarm the innocent spectator of any resistance to bad taste?
- ALB-WAG You consider the Grand Opera as bad taste?
- HEINE It's worse than bad taste: it's the prostitution of art.
- ALB-WAG But it's a big success in Paris.
- HEINE Yes, it's a huge success in this modern Sodom.
- ALB-WAG Why are you so angry with Paris? Wasn't she good to you?
- HEINE This Babylon, this whore of a city is good to anyone who is ready to sell his soul to buy her favours, if that's what you want to do----
- ALB-WAG I want to express the soul of the new age and the new kind of Man that's coming. The domestic drama is too petit to come to grips with the new world that is waiting to be born.
- LEHRS Are you familiar with the legend of the flying Dutchman?
- ALB-WAG The flying Dutchman? what's that?
- LEHRS If you want to express the spirit and the human ordeal of the Century to come, you should look for the old dark myths.
- ALB-WAG Why the old dark myths
- HEINE Humanity is heading towards an age of darkness.
- ALB-WAG What makes you think this is the future of humanity?
- LEHRS Have you read Heine's "Almansur"?
- ALB-WAG "Almansur"? No, what's that?
- HEINE It's a clumsy drama. A name to forget.
- LEHRS I don't agree. It's an allegoric drama he wrote some twenty years ago. It deals

with the burning of Koran books in Granada in the 16th Century.

ALB-WAG What's the allegory of?

LEHRS Heine wanted to protest against the burning of so-called "anti-German" books that took place in Thuringia. Or am I wrong?

HEINE You are always right, Samuel, always!

ALB-WAG They burnt books in Thuringia? When was it?

LEHRS It was in 1817 at the Wartburg citadel.

ALB-WAG And Heine protested against it?

LEHRS He wrote in that play that the burning of books is only a prelude, because where you throw books into the fire you'll end up throwing people into the fire.

ALB-WAG I would like to put the whole world on fire. To reduce the entire human race together with its Gods to ashes.

LEHRS You speak like Alberich

ALB-WAG Who is Alberich?

LEHRS **Alberich** is a legendary sorcerer in the epic sagas of the Frankish Merovingian Dynasty of the 5th to 8th century.

ALB-WAG And he wants to destroy the world?

LEHRS He doesn't love the world.

ALB-WAG Why not?

LEHRS Because no one loves him.

ALB-WAG Why?

LEHRS Because he is an ugly elf.

ALB-WAG Oh...!

LEHRS "Alberich" means "king of the elves".

ALB-WAG Who were dwarves-?

LEHRS Not exactly. In my studies of the origins of the Niebelungen Saga I found out versions that represent them as a kind of human beings of a size that is less than normal, who are over compensated with magical powers and a spirited character.

ALB-WAG And how does he react?

LEHRS Who--?

ALB-WAG Alberich.

LEHRS Oh, Alberich! He doesn't care. That is, he gave up love. He sneers at love and reviles it. He replaced the unavailable love with an unquenchable thirst for power. And when he gets a grip on power, he becomes arrogant, cock sure of himself and domineering.

ALB-WAG And what stops him from destroying the world?

LEHRS It's Loki.

ALB-WAG Who is Loki?

LEHRS He is the master and guardian of fire. He represents all the destructive drives we are filled with. He is the scientist who will one day discover the ultimate magic formula that will enable Loge to pulverise the entire world in a split of a second.

ALB-WAG But who is Loge?

LEHRS Oh, Loge is the German name I gave to Loki. I prefer it to Loki because Loge reminds you of "Logos" or "Logic" while Loki resounds with "Loco" which is "crazy", and I believe science is a mixture of madness and logic--

ALB-WAG That's what art is all about---

LEHRS Yes, you see, Alberich would like sometimes to blow up the world, but he can't do it without Loge's collaboration. The leader needs the scientist to annihilate the world, but so long as Loge the scientist gives logic the primacy

over madness, the leader's destructive urge is being neutralised by the scientist's logic.

ALB-WAG That's beautiful, that's so inspirational! It's simply mind blowing! What on earth made you plunge into the maze of these old Germanic sagas?

LEHRS I consider Alberich as a negative Jewish stereotype.

ALB-WAG In what sense?

LEHRS Well! With his race expressed through distorted music and muttering speech. All these old Germanic sagas have a mysterious affinity with Jewish sources and the Jewish ordeal.

HEINE And with our Kabbalist sagas.

ALB-WAG You mean your Kabbalist sagas.

LEHRS They're yours as well, or aren't you--- ?

HEINE You are more Jewish than the two of us, as it looks.

ALB-WAG What makes you think---

HEINE Well! Look at you and err---

ALB-WAG And - what?

HEINE It's obvious! Isn't it?

ALB-WAG Is it?

LEHRS It is... it is.

HEINE Don't look so shocked! You might as well be a Jew, if you haven't got anything better to do.

ALB-WAG I am not a Jew.

HEINE Every Christian is a converted Jew, as every Jew is a potential Christian.

ALB-WAG I tell you I've never been a Jew.

HEINE That's good news. It's nice to see there are Germans who can fool you to believe they are Jews. Let's celebrate it! One Jew less!

ALB-WAG Though I've got nothing against Jews.

HEINE It will come, don't worry.

ALB-WAG I believe all people are born equal and free.

HEINE But they overcome it easily.

ALB-WAG I'm not joking. I've always been a fervent supporter of the full emancipation of our Jewish co-citizens.

HEINE That's because you are a liberal leftist, but don't tell us you like Jews.

ALB-WAG Jews have always been good to me. It's a Jewish friend Abraham Meller who smuggled me out of Riga when the Russian authorities were trying to arrest me. And it was a noble Jewish lady, Mrs. Manson and her daughter whom I met on the ship from Koenigsberg to London who gave me a letter of introduction to Meyerbeer.

HEINE Oh, Meyerbeer again!

ALB-WAG I understood that you don't think much of his operas...

HEINE He is a skilled builder of huge, crushing musical cathedrals.

ALB-WAG Do you have any specific work of his in mind?

HEINE Have you seen "Les Huguenotes"?

ALB-WAG I know the opera...

HEINE This work is a Gothic cathedral in music. Its columns rise to heaven, while the innumerable daintily fine festoons, rosettes, and arabesques which are spread over it, like a veil of lace in stone, testify to the unwearied patience of dwarfs. Meyerbeer is a giant in the conception and forming of the whole, and a dwarf in the laborious execution of details. As the architect of the *Huguenots* Meyerbeer is as far beyond our intelligence as the composers of the old cathedrals.

- ALB-WAG He admires my work and he strongly believes in my talent. He urged me to accomplish my opera *Rienzi*, but it has been refused so far by everybody here in Paris. It is only thanks to my publisher Schlesinger who saved me from starvation by commissioning a new adaptation of Donizetti's "*la Favorita*"---
- HEINE Oh! Schlesinger! You are really surrounded with Jews.
- ALB-WAG Yes...
- HEINE That son of a bitch Schlesinger is your publisher! Take care to get paid in cash money.
- ALB-WAG Has he cheated you?
- HEINE Not me. It's the Viennese composer Joseph Dessauer. Schlesinger gave him a golden watch as fee for his work. After a while Dessauer complained to him the watch doesn't function. - And your music, replied Schlesinger, does it function?
- ALB-WAG You don't like your fellow Jews too much.
- HEINE They remind me I'm another eternal Jew, living in exile.
- ALB-WAG But you converted to Protestantism?
- HEINE I was a non-Jewish Jew, now I am a non-Christian Christian.
- ALB-WAG What's the title of your dramatic poem?
- HEINE You mean "*Tannhaeuser*"?
- ALB-WAG The other one, The "*Memoirs of Herr von err*"---
- HEINE Schnabelewopski. It's not a poem. It's a satirical short story.
- ALB-WAG What is it about?
- HEINE It's about the legend of the Flying Dutchman.
- LEHRS You should read it. There's a great opera sticking in it.
- ALB-WAG Oh, really?

- LEHRS Read also his Tannhauser! There's another opera waiting to be written.
- HEINE Stay another five minutes with Rabbi LEHRS and he will bombard you with motives of the Niebelungen, the Valkyries and Siegfried with the Magic Sword Notong that enables its owner to conquer the world...
- ALB-WAG One thing at a time, please.
- HEINE One thing at a time.
- ALB-WAG "The Flying Dutchman"...
- (Wagner stands up and walks to the front stage. He mutters:)
- WAGNER **"The Flying Dutchman"**... What a title for an opera!
- (The Parisian cafe table with Heine and Lehre disappears in the fog. Wagner has an imaginary memory-vision of sailing in the storm through the Skagerrak strait.)

MEETING BETWEEN WAGNER, MEYERBEER & NIETZSCHE

(SCENE 14, PP. 65-69)

SCENE 14. The Abused and The Disenchanted

(Meyerbeer appears from the fog, reading Wagner's letter:)

MEYERBEER "Very honoured Mr. Meyerbeer,

You alone can help me by promising to write an opera for Mr. Joly's Renaissance Theatre. Terrorism is the only means, and you alone, my revered master of all notes, can use terrorism efficiently. I have no hope of salvation in this world save from you. The sense of gratitude that animates me in your regard, my generous protector, knows no bounds... I shall be a true and faithful slave, for I frankly confess to having within me a servile nature...Therefore buy me, Sir. You will not be making a wholly valueless purchase. Goethe is dead. and he was no musician anyway. I have no one left but you..."

And then after all this distasteful flattery comes your shameless attack on my

person... worse: on my integrity as an artist?

WAGNER I always felt instinctively repelled by any contact with you...

MEYERBEER I felt repelled by any contact with you too, but it didn't make me write to you letters of flattery...

WAGNER I am talking about the Jews in music - in general. You are only one example. By the way, I attacked also Mendelssohn and Heine...

MEYERBEER Mr Wagner, I don't like you and I am not an admirer of your music, but this lack of interest in your operas did not make me call the entire German nation to commit suicide and free us of your existence.

WAGNER How can you compare! You Jews you fill us with a repugnance in spite of all our Liberal bedazzlements....You are fighting for emancipation, yet it is much rather *we* who must fight for emancipation from the Jews.

MEYERBEER Carry on. I listen.

WAGNER The Jew is already more than emancipate: he rules, and will rule, so long as Money remains the power before which all our doings and our dealings lose their force....

MEYERBEER Go on! This is very interesting.

WAGNER This has also brought the public Art-taste of our time between the busy fingers of the Jew... to-day everything is turned to money by the Jew. The guileless-looking scrap of paper is slimy with the blood of countless generations. What the heroes of the arts, with untold strain consuming lief and life, have wrested from the art-fiend of two millennia of misery, to-day the Jew converts into an art-bazaar ...

MEYERBEER In simple words, we commercialise the arts?

WAGNER Yes! We can conceive no representation of an antique or modern stage-character by a Jew, be it as hero or lover...

MEYERBEER: Have you ever looked in the mirror? Can you imagine yourself in the role of a hero or a lover? You - with your look? ---

WAGNER: (Shoves away Meyerbeer's remarks) By far more weighty is the effect the Jew produces on us through his *speech*. This is the main point at which to sound the Jewish influence upon Music. —The Jew talks the modern European languages merely as learnt, and not as mother tongues. Our whole European art and civilisation have remained to the Jew a foreign tongue. The Jew can only after-speak and after-patch—not truly make a poem of his words, an artwork of his doings...The first thing that strikes our ear as quite outlandish and unpleasant, in the Jew's production of the voice-sounds, is a creaking, squeaking, buzzing snuffle ...this mode of speaking acquires at once the character of an intolerably jumbled blabber (*eines unertraglich verwirrten Geplappers...*)

(A fiery person with a huge moustache emerges from the fog. It is Nietzsche.)

NIETZSCHE: Look who is talking about a creaking, squeaking, buzzing snuffle! Look who is talking about a jumbled blabber! The man whose orchestration is so morbid! Whose music has the effect of a hot, dry, dusty wind blowing from the Sahara! It covers me with unpleasant sweat. It blinds my eyesight.

WAGNER: Who are you?

NIETZSCHE: Stop playing your farce. You recognise me. I was one of the most corrupted Wagnerites. I was capable of taking Wagner seriously... I am Friedrich Nietzsche.

WAGNER: Friedrich Nietzsche! I'll deal with you after I annihilate the Jews and kick them out from the world of music.

NIETZSCHE: You have got nothing to do with real, living music. You are the clumsiest, most vulgar genius in the world. You take us all for idiots. You keep repeating things until you bewilder your audience, until one gives in and believes you. With what you call your "Music" you can annihilate not only the Jews, but the entire human kind.

WAGNER: You are a sick miserable creature! Where was I? Yes! The music-works of modern Jews... If we hear a Jew speak, we are unconsciously offended by the entire want of purely-human expression in his discourse: the cold indifference of its peculiar blubber never by any chance rises to the ardour of a higher, heartfelt passion...

NIETZSCHE: (Addressing the audience) Look who talks of passion! His operas are operas of redemption. Not of passion. In his operas there is always someone who needs to be saved. Sometimes it's a lost fellow, sometimes a damsel in distress... that's his problem. And what riches in the variations of his leitmotiv! And what rare, what wise detours!

WAGNER: (He waves off Nietzsche like chasing away a fly) What was I saying?

MEYERBEER: "Passion."

WAGNER: What---?

MEYERBEER: "Heartfelt passion."

WAGNER: Yes! A far-famed Jewish tone-setter of our day---

MEYERBEER: That's me! Giacomo Meyerbeer.

WAGNER: ---has addressed his products to a section of our public whose total confusion of musical taste worked out to his profit....The places in our halls of entertainment are mostly filled by that section of our citizen society whose only ground for going to the opera is utter 'boredom' (*Langeweile*).

NIETZSCHE: Boredom? Look who speaks of boredom!

WAGNER: The disease of boredom is not remediable by Art; it can only be duped into another form of boredom.

NIETZSCHE: Look who speaks of boredom!

WAGNER: Now, that famous Jewish opera-composer ---

MEYERBEER: He means me - Meyerbeer.

WAGNER: ---has made the catering for this deception the task of his artistic life...

NIETZSCHE: You talk about boredom? Your operas are the epitome of boredom. You cater your audience here and there a pleasant prelude - but then it is being followed by long extended scenes of morbid boredom! Who taught us, if not Wagner, the boring lesson that innocence saves the most intriguing sinners? See

Tannhauser. Even the Wandering Jew finds his salvation and his rest if he gets married! See the Flying Dutchman. That even depraved old sluts can be rescued by chaste youths. See Kundry. That pretty young girls prefer to be saved by a Wagnerian knight! See Isolde... That even "Old God" after getting morally compromised, end up by being saved by a free-thinking immoralist... See the Ring. What a profound discovery!... Do you grasp its depth? - I don't.

WAGNER: So long as the art of Music had a real life in it, down to the epochs of Mozart and Beethoven, there was nowhere to be found a Jew composer. Only when a body's death is manifest, do outside elements win the power to burgeon in it—yet merely to destroy it. Then that body's flesh dissolves into a swarming colony of insect-life. Take HEINRICH HEINE. At the time when Goethe and Schiller sang among us, there was no poetising Jew. Now when our poetry became a lie, there is Heine - a highly-gifted Jew who duped himself into a poet, and his versified lies are being set to music by our own composers. Judaism is the evil conscience of our modern Civilisation....

NIETZSCHE: Look who speaks about the death of Art! In his art there is the most seductive mixture which the world today needs most - the three worst drugs of the sick-unto-death: brutality, artificiality and idiocy. Yes, Wagner's operas are brutal, artificial and idiotic. If anyone is to blame for the degeneration of Art - it is Wagner. I stop being an inoffensive spectator when this degenerate destroys our health - and music on top of it.

WAGNER: The Jew can deliver us only through self-annihilation; one only thing can redeem the Jew from the burden of his curse: the redemption of Ahasverus — *Going under! Annihilation!*

NIETZSCHE: Is Wagner a man? Is he not rather a disease? He sickens everything he touches - he rendered music sick.

WAGNER Enough, enough, enough!

(Meyerbeer and Nietzsche vanish in the fog.)

Marie and Pierre Curie and the discovery of polonium and radium
 by Nanny Fröman

Introduction

[Marie](#) and [Pierre Curie](#)'s pioneering research was again brought to mind when on April 20 1995, their bodies were taken from their place of burial at Sceaux, just outside Paris, and in a solemn ceremony were laid to rest under the mighty dome of the Panthéon. Marie Curie thus became the first woman to be accorded this mark of honour on her own merit. One woman, Sophie Berthelot, admittedly already rested there but in the capacity of wife of the chemist Marcelin Berthelot (1827-1907).

It was François Mitterrand who, before ending his fourteen-year-long presidency, took this initiative, as he said "in order to finally respect the equality of women and men before the law and in reality" ("pour respecter enfin ...l'égalité des femmes et des hommes dans le droit comme dans les faits"). In point of fact – as the press pointed out – this initiative was symbolic three times over. Marie Curie was a woman, she was an immigrant and she had to a high degree helped increase the prestige of France in the scientific world.

At the end of the 19th century, a number of discoveries were made in physics which paved the way for the breakthrough of modern physics and led to the revolutionary technical development that is continually changing our daily lives.

Around 1886, Heinrich Hertz demonstrated experimentally the existence of radio waves. It is said that Hertz only smiled incredulously when anyone predicted that his waves would one day be sent round the earth. Hertz died in 1894 at the early age of 37. In September 1895, [Guglielmo Marconi](#) sent the first radio signal over a distance of 1.5 km. In 1901 he spanned the Atlantic. Hertz did not live long enough to experience the far-reaching positive effects of his great discovery, nor of course did he have to see it abused in bad television programs. It is hard to predict the consequences of new discoveries in physics.

On November 8, 1895, [Wilhelm Conrad Röntgen](#) at the University of Würzburg, discovered a new kind of radiation which he called X-rays. It could in time be identified as the short-wave, high frequency counterpart of Hertz's waves. The ability of the radiation to pass through

opaque material that was impenetrable to ordinary light, naturally created a great sensation. Röntgen himself wrote to a friend that initially, he told no one except his wife about what he was doing. People would say, “Röntgen is out of his mind”. On January 1, 1896, he mailed his first announcement of the discovery to his colleagues. “... und nun ging der Teufel los” (“and now the Devil was let loose”) he wrote. His discovery very soon made an impact on practical medicine. In physics it led to a chain of new and sensational findings. When [Henri Becquerel](#) was exposing salts of uranium to sunlight to study whether the new radiation could have a connection with luminescence, he found out by chance – thanks to a few days of cloudy weather – that another new type of radiation was being spontaneously emanated without the salts of uranium having to be illuminated – a radiation that could pass through metal foil and darken a photographic plate. The two researchers who were to play a major role in the continued study of this new radiation were Marie and Pierre Curie.

Marie

Marie Curie.

Marie Skłodowska, as she was called before marriage, was born in Warsaw in 1867. Both her parents were teachers who believed deeply in the importance of education. Marie had her first lessons in physics and chemistry from her father. She had a brilliant aptitude for study and a great thirst for knowledge; however, advanced study was not possible for women in Poland. Marie dreamed of being able to study at the Sorbonne in Paris, but this was beyond the means of her family. To solve the problem, Marie and her elder sister, Bronya, came to an arrangement: Marie should go to work as a governess and help her sister with the money she managed to save so that Bronya could study medicine at the Sorbonne. When Bronya had taken her degree she, in her turn, would contribute to the cost of Marie's studies.

So it was not until she was 24 that Marie came to Paris to study mathematics and physics. Bronya was now married to a doctor of Polish origin, and it was at Bronya's urgent invitation to come and live with them that Marie took the step of leaving for Paris. By then she had been away from her studies for six years, nor had she had any training in understanding rapidly spoken French. But her keen interest in studying and her joy at being at the Sorbonne with all its opportunities helped her surmount all difficulties. To save herself a two-hours journey, she rented a little attic in the Quartier Latin. There the cold was so intense that at night she had to pile on everything she had in the way of clothing so as to be able to sleep. But as compensation for all her privations she had total freedom to be able to devote herself wholly to her studies. “It was like a new world opened to me, the world of science, which I was at last permitted to know in all liberty,” she writes. And it was France's leading mathematicians and physicists whom she was able to go to hear, people with names we now encounter in the history of science: Marcel Brillouin, Paul Painlevé, [Gabriel Lippmann](#), and Paul Appell. After two years, when she took her degree in physics in 1893, she headed the list of candidates and,

in the following year, she came second in a degree in mathematics. After three years she had brilliantly passed examinations in physics and mathematics. Her goal was to take a teacher's diploma and then to return to Poland.

Pierre

Pierre Curie.

Now, however, there occurred an event that was to be of decisive importance in her life. She met Pierre Curie. He was 35 years, eight years older, and an internationally known physicist, but an outsider in the French scientific community – a serious idealist and dreamer whose greatest wish was to be able to devote his life to scientific work. He was completely indifferent to outward distinctions and a career. He earned a living as the head of a laboratory at the School of Industrial Physics and Chemistry where engineers were trained and he lived for his research into crystals and into the magnetic properties of bodies at different temperatures. He had not attended one of the French elite schools but had been taught by his father, who was a physician, and by a private teacher. He passed his baccalauréat at the early age of 16 and at 21, with his brother Jacques, he had discovered piezoelectricity, which means that a difference in electrical potential is seen when mechanical stresses are applied on certain crystals, including quartz. Such crystals are now used in microphones, electronic apparatus and clocks.

Marie, too, was an idealist; though outwardly shy and retiring, she was in reality energetic and single-minded. Pierre and Marie immediately discovered an intellectual affinity, which was very soon transformed into deeper feelings. In July 1895, they were married at the town hall at Sceaux, where Pierre's parents lived. They were given money as a wedding present which they used to buy a bicycle for each of them, and long, sometimes adventurous, cycle rides became their way of relaxing. Their life was otherwise quietly monotonous, a life filled with work and study.

Persuaded by his father and by Marie, Pierre submitted his doctoral thesis in 1895. It concerned various types of magnetism, and contained a presentation of the connection between temperature and magnetism that is now known as Curie's Law. In 1896, Marie passed her teacher's diploma, coming first in her group. Their daughter Irène was born in September 1897. Pierre had managed to arrange that Marie should be allowed to work in the school's laboratory, and in 1897, she concluded a number of investigations into the magnetic properties of steel on behalf of an industrial association. Deciding after a time to go on doing research, Marie looked around for a subject for a doctoral thesis.

Becquerel's discovery had not aroused very much attention. When, just a day or so after his discovery, he informed the Monday meeting of *l'Académie des Sciences*, his colleagues

listened politely, then went on to the next item on the agenda. It was Röntgen's discovery and the possibilities it provided that were the focus of the interest and enthusiasm of researchers. Becquerel himself made certain important observations, for instance that gases through which the rays passed become able to conduct electricity, but he was soon to leave this field. Marie decided to make a systematic investigation of the mysterious "uranium rays". She had an excellent aid at her disposal – an electrometer for the measurement of weak electrical currents, which was constructed by Pierre and his brother, and was based on the piezoelectric effect.

Surprising results

Results were not long in coming. Just after a few days, Marie discovered that thorium gives off the same rays as uranium. Her continued systematic studies of the various chemical compounds gave the surprising result that the strength of the radiation did not depend on the compound that was being studied. It depended only on *the amount* of uranium or thorium. Chemical compounds of the same element generally have very different chemical and physical properties: one uranium compound is a dark powder, another is a transparent yellow crystal, but what was decisive for the radiation they gave off was only the amount of uranium they contained. Marie drew the conclusion that the ability to radiate did not depend on the arrangement of the atoms in a molecule, it must be linked to the interior of the atom itself. This discovery was absolutely revolutionary. *From a conceptual point of view it is her most important contribution to the development of physics.* She now went through the whole periodic system. Her findings were that only uranium and thorium gave off this radiation.

Marie's next idea, seemingly simple but brilliant, was to study the natural ores that contain uranium and thorium. She obtained samples from geological museums and found that of these ores, pitchblende was four to five times more active than was motivated by the amount of uranium. It was her hypothesis that a new element that was considerably more active than uranium was present in small amounts in the ore.

Marie and Pierre – a fruitful collaboration

Fascinating new vistas were opening up. Pierre gave up his research into crystals and symmetry in nature which he was deeply involved in and joined Marie in her project. They found that the strong activity came with the fractions containing bismuth or barium. When Marie continued her analysis of the bismuth fractions, she found that every time she managed to take away an amount of bismuth, a residue with greater activity was left. At the end of June 1898, they had a substance that was about 300 times more strongly active than uranium. In the work they published in July 1898, they write, "We thus believe that the substance that we have extracted from pitchblende contains a metal never known before, akin to bismuth in its analytic properties. If the existence of this new metal is confirmed, we suggest that it should be called *polonium* after the name of the country of origin of one of us." It was also in this work that they used the term *radioactivity* for the first time. After another few months of work, the Curies informed the *l'Académie des Sciences*, on December 26, 1898, that they had demonstrated strong grounds for having come upon an additional very active substance that behaved chemically almost like pure barium. They suggested the name of *radium* for the new element.

Arduous work

In order to be certain of showing that it was a matter of new elements, the Curies would have to produce them in demonstrable amounts, determine their atomic weight and preferably isolate them. To do so, the Curies would need tons of the costly pitchblende. However, it was known that at the Joachimsthal mine in Bohemia large slag-heaps had been left in the surrounding forests. Marie considered that radium ought to be left in the residue. A sample was sent to them from Bohemia and the slag was found to be even more active than the original mineral. Several tons of pitchblende was later put at their disposal through the good offices of the Austrian Academy of Sciences.

It was now that there began the heroic époque in their life that has become legendary. At this stage they needed more room, and the principal of the school where Pierre worked once again came to their aid. They could use a large shed which was not occupied. There the very laborious work of separation and analysis began. Marie carried out the chemical separations, Pierre undertook the measurements after each successive step. Physically it was heavy work for Marie. She processed 20 kilos of raw material at a time. First of all she had to clear away pine needles and any perceptible debris, then she had to undertake the work of separation. "Sometimes I had to spend a whole day stirring a boiling mass with a heavy iron rod nearly as big as myself. I would be broken with fatigue at day's end," she writes.

In a preface to Pierre Curie's collected works, Marie describes the shed as having a bituminous floor, and a glass roof which provided incomplete protection against the rain, and where it was like a hothouse in the summer, draughty and cold in the winter; yet it was in that shed that they spent the best and happiest years of their lives. There they could devote themselves to work the livelong day. Sometimes they could not do their processing outdoors, so the noxious gases had to be let out through the open windows. The only furniture were old, worn pine tables where Marie worked with her costly radium fractions. Since they did not have any shelter in which to store their precious products the latter were arranged on tables and boards. Marie could remember the joy they felt when they came into the shed at night, seeing "from all sides the feebly luminous silhouettes" of the products of their work. The dangerous gases of which Marie speaks contained, among other things, radon – the radioactive gas which is a matter of concern to us today since small amounts are emitted from certain kinds of building materials. [Wilhelm Ostwald](#), the highly respected German chemist, who was one of the first to realize the importance of the Curies' research, traveled from Berlin to Paris to see how they worked. Neither Pierre nor Marie was at home. He wrote: "At my earnest request, I was shown the laboratory where radium had been discovered shortly before ... It was a cross between a stable and a potato shed, and if I had not seen the worktable and items of chemical apparatus, I would have thought that I was been played a practical joke."

Marie Presents her doctoral thesis

At the same time as the Curies were engaged in their arduous work, each of them had their teaching duties. From 1900 Marie had had a part-time teaching post at the École Normale Supérieure de Sèvres for girls. After thousands of crystallizations, Marie finally – from several tons of the original material – isolated one decigram of almost pure radium chloride and had determined radium's atomic weight as 225. She presented the findings of this work in her doctoral thesis on June 25, 1903. Of the three members of the examination committee, two were to receive the Nobel Prize a few years later: [Lippmann](#), her former teacher, in 1908 for physics, and [Moissan](#), in 1906 for chemistry. The committee expressed the opinion that the findings represented the greatest scientific contribution ever made in a doctoral thesis.

A little celebration in Marie's honour, was arranged in the evening by a research colleague, Paul Langevin. The guests included [Jean Perrin](#), a prominent professor at the Sorbonne, and [Ernest Rutherford](#), who was then working in Canada but temporarily in Paris and anxious to meet Marie Curie. He had good reason. His study of the deflection of radiation in magnetic fields had not met with success until he had been sent a strongly radioactive preparation by the Curies. By that time he was already famous and was soon to be considered as the greatest experimental physicist of the day. It was a warmish evening and the group went out into the garden. Pierre had prepared an effective finale to the day. When they had all sat down, he drew from his waistcoat pocket a little tube, partly coated with zinc sulfide, which contained a quantity of radium salt in solution. Suddenly the tube became luminous, lighting up the darkness, and the group stared at the display in wonder, quietly and solemnly. But in the light from the tube, Rutherford saw that Pierre's fingers were scarred and inflamed and that he was finding it hard to hold the tube.

Serious health problems

A week earlier Marie and Pierre had been invited to the Royal Institution in London where Pierre gave a lecture. Before the crowded auditorium he showed how radium rapidly affected photographic plates wrapped in paper, how the substance gave off heat; in the semi-darkness he demonstrated the spectacular light effect. He described the medical tests he had tried out on himself. He had wrapped a sample of radium salts in a thin rubber covering and bound it to his arm for ten hours, then had studied the wound, which resembled a burn, day by day. After 52 days a permanent grey scar remained. In that connection Pierre mentioned the possibility of radium being able to be used in the treatment of cancer. But Pierre's scarred hands shook so that once he happened to spill a little of the costly preparation. Fifty years afterwards the presence of radioactivity was discovered on the premises and certain surfaces had to be cleaned.

In actual fact Pierre was ill. His legs shook so that at times he found it hard to stand upright. He was in much pain. He consulted a doctor who diagnosed neurasthenia and prescribed strychnine. And the skin on Marie's fingers was cracked and scarred. Both of them constantly suffered from fatigue. They evidently had no idea that radiation could have a detrimental effect on their general state of health. Pierre, who liked to say that radium had a million times stronger radioactivity than uranium, often carried a sample in his waistcoat pocket to show his friends. Marie liked to have a little radium salt by her bed that shone in the darkness. The papers they left behind them give off pronounced radioactivity. If today at the *Bibliothèque Nationale* you want to consult the three black notebooks in which their work from December 1897 and the three following years is recorded, you have to sign a certificate that you do so at your own risk. People will have to do this for a long time to come. In fact it takes 1,620 years before the activity of radium is reduced to a half.

Rutherford was just as unsuspecting in regard to the hazards as were the Curies. When it turned out that one of his colleagues who had worked with radioactive substances for several months was able to discharge an electroscope by exhaling, Rutherford expressed his delight. This confirmed his theory of the existence of airborne emanations.

In view of the potential for the use of radium in medicine, factories began to be built in the USA for its large-scale production. The question came up of whether or not Marie and Pierre should apply for a patent for the production process. They were both against doing so. Pure research should be carried out for its own sake and must not become mixed up with industry's

profit motive. Researchers should be disinterested and make their findings available to everyone. Marie and Pierre were generous in supplying their fellow researchers, Rutherford included, with the preparations they had so laboriously produced. They furnished industry with descriptions of the production process.

Nobel Prize

In 1903, Marie and Pierre Curie were awarded half the [Nobel Prize in Physics](#). The citation was, “in recognition of the extraordinary services they have rendered by their joint researches on the radiation phenomena discovered by Professor Henri Becquerel.” Henri Becquerel was awarded the other half for his discovery of spontaneous radioactivity. In a letter to the Swedish Academy of Sciences, Pierre explains that neither of them is able to come to Stockholm to receive the prize. They could not get away because of their teaching obligations. He adds, “Mme Curie has been ill this summer and is not yet completely recovered.” That was certainly true but his own health was no better. Not until June 1905 did they go to Stockholm, where Pierre gave a Nobel lecture.

At the prize award ceremony, the president of the Swedish Academy referred in his speech to the old proverb: “union gives strength.” He went on to quote from the Book of Genesis, “It is not good that the man should be alone; I will make him an help meet for him.”

Although the Nobel Prize alleviated their financial worries, the Curies now suddenly found themselves the focus of the interest of the public and the press. Their seemingly romantic story, their labours in intolerable conditions, the remarkable new element which could disintegrate and give off heat from what was apparently an inexhaustible source, all these things made the reports into fairy-tales. At the center was Marie, a frail woman who with a gigantic wand had ground down tons of pitchblende in order to extract a tiny amount of a magical element. Even *Le Figaro*, otherwise a sensible newspaper, began with “Once upon a time ...” They were pursued by journalists from the whole world – a situation they could not deal with. Marie wrote, “The shattering of our voluntary isolation was a cause of real suffering for us and had all the effects of disaster.” Pierre wrote in July 1905, “A whole year has passed since I was able to do any work ... evidently I have not found the way of defending us against frittering away our time, and yet it is very necessary. It is a question of life or death from the intellectual point of view.”

But as Elisabeth Crawford emphasizes in her book *The Beginnings of the Nobel Institution*, from the latter’s viewpoint, the awarding of the 1903 Prize for Physics was masterly. Formerly, only the Prize for Literature and the Peace Prize had obtained wide press coverage; the Prizes for scientific subjects had been considered all too esoteric to be able to interest the general public. The commotion centered on the award of the Prize to the Curies, especially Marie Curie, aroused once and for all the curiosity of the press and the public. The work of researchers was exciting, their findings fascinating.

The health of both Marie and Pierre Curie gave rise to concern. Their friends tried to make them work less. All their symptoms were ascribed to the drafty shed and to overexertion. Their dearest wish was to have a new laboratory but no such laboratory was in prospect. When Paul Appell, the dean of the faculty of sciences, appealed to Pierre to let his name be put forward as a recipient for the prestigious Legion of Honor on July 14, 1903, Pierre replied, “... I do not feel the slightest need of being decorated, but I am in the greatest need of a laboratory.” Although Pierre was given a chair at the Sorbonne in 1904 with the promise of a

laboratory, as late as 1906 it had still not begun to be built. Pierre was given access to some rooms in a building used for study by young medical students. Pierre Curie never obtained a real laboratory.

Dreadful catastrophe

On April 19, 1906, Pierre Curie was run over by a horse-drawn wagon near the Pont Neuf in Paris and killed. Now Marie was left alone with two daughters, Irène aged 9 and Ève aged 2. Shock broke her down totally to begin with. But even now she could draw on the toughness and perseverance that were fundamental aspects of her character. When she was offered a pension, she refused it: I am 38 and able to support myself, was her answer. She was appointed to succeed Pierre as the head of the laboratory, being undoubtedly most suitable, and to be responsible for his teaching duties. She thus became the first woman ever appointed to teach at the Sorbonne. After some months, in November 1906, she gave her first lecture. The large amphitheater was packed. As well as students, her audience included people from far and near, journalists and photographers were in attendance. Many people had expected something unusual to occur. Perhaps some manifestation of the historic occasion. When Marie entered, thin, pale and tense, she was met by an ovation. However the expectations of something other than a clear and factual lecture on physics were not fulfilled. But Marie's personality, her aura of simplicity and competence made a great impression.

Irène was now 9 years old. Marie had definite ideas about the upbringing and education of children that she now wanted to put into practice. Her circle of friends consisted of a small group of professors with children of school age. Marie organized a private school with the parents themselves acting as teachers. A group of some ten children were accordingly taught only by prominent professors: Jean Perrin, Paul Langevin, Édouard Chavannes, a professor of Chinese, Henri Mouton from the Pasteur Institute, a sculptor was engaged for modeling and drawing. Marie took the view that scientific subjects should be taught at an early age but not according to a too rigid curriculum. It was important for children to be able to develop freely. Games and physical activities took up much of the time. Quite a lot of time was taken for travel, too, for the children had to travel to the homes of their teachers, to Marie at Sceaux or to Langevin's lessons in one of the Paris suburbs. The little group became a kind of school for the elite with a great emphasis on science. The children involved say that they have happy memories of that time. For Irène it was in those years that the foundation of her development into a researcher was laid. The educational experiment lasted two years. Subsequently the pupils had to prepare for their forthcoming *baccalauréat* exam and to follow the traditional educational programs.

A second Nobel Prize

In 1908 Marie, as the first woman ever, was appointed to become a professor at the Sorbonne. She went on to produce several decigrams of very pure radium chloride before finally, in collaboration with André Debierne, she was able to isolate radium in metallic form. André Debierne, who began as a laboratory assistant, became her faithful collaborator until her death and then succeeded her as head of the laboratory. In 1911 she was awarded the [Nobel Prize in Chemistry](#). The citation by the Nobel Committee was, "in recognition of her services to the advancement of chemistry by the discovery of the elements radium and polonium, by the isolation of radium and the study of the nature and compounds of this remarkable element."

Now that the archives have been made available to the public, it is possible to study in detail the events surrounding the awarding of the two Prizes, in 1903 and 1911. In a letter in 1903, several members of the *l'Académie des Sciences*, including Henri Poincaré and Gaston Darboux, had nominated Becquerel and Pierre Curie for the Prize in Physics. Marie's name was not mentioned. This caused Gösta Mittag-Leffler, a professor of mathematics at Stockholm University College, to write to Pierre Curie. That letter has never survived but Pierre Curie's answer, dated August 6, 1903, has been preserved. He wrote, "If it is true that one is seriously thinking about me (for the Prize), I very much wish to be considered together with Madame Curie with respect to our research on radioactive bodies." Drawing attention to the role she played in the discovery of radium and polonium, he added, "Do you not think that it would be more satisfying from the artistic point of view, if we were to be associated in this manner?" (plus joli d'un point de vue artistique).

Some biographers have questioned whether Marie deserved the Prize for Chemistry in 1911. They have claimed that the discoveries of radium and polonium were part of the reason for the Prize in 1903, even though this was not stated explicitly. Marie was said to have been awarded the Prize again for the same discovery, the award possibly being an expression of sympathy for reasons that will be mentioned below. Actually, however, the citation for the Prize in 1903 was worded deliberately with a view to a future Prize in Chemistry. Chemists considered that the discovery and isolation of radium was the greatest event in chemistry since the discovery of oxygen. That for the first time in history it could be shown that an element could be transmuted into another element, revolutionized chemistry and signified a new epoch.

A terrible year

Rejected by the academy

Despite the second Nobel Prize and an invitation to the first Solvay Conference with the world's leading physicists, including [Einstein](#), Poincaré and [Planck](#), 1911 became a dark year in Marie's life. In two smear campaigns she was to experience the inconstancy of the French press. The first was started on 16 November 1910, when, by an article in *Le Figaro*, it became known that she was willing to be nominated for election to *l'Académie des Sciences*. Examples of factors other than merit deciding an election did exist, but Marie herself and her eminent research colleagues seemed to have considered that with her exceptionally brilliant scientific merits, her election was self-evident. Notwithstanding, it turned out that it was not merit that was decisive. The dark underlying currents of anti-Semitism, prejudice against women, xenophobia and even anti-science attitudes that existed in French society came welling up to the surface. Normally the election was of no interest to the press. The most rabid paper was the ultra-nationalistic and anti-Semitic *L'Action Française*, which was led by Léon Daudet, the son of the writer Alphonse Daudet. Dreyfus had got redress for his wrongs in 1906 and had been decorated with the Legion of Honour, but in the eyes of the groups who had been against him during his trial, he was still guilty, was still "the Jewish traitor." The pro-Dreyfus groups who had supported his cause were suspect and the scientists who were supporting Marie were among them. Jokes in bad taste alternated with outrageous accusations. It was said that in her career, Pierre's research had given her a free ride. She came from Poland, though admittedly she was formally a Catholic but her name Skłodowska indicated that she might be of Jewish origin, and so on. A week before the election, an opposing candidate, Édouard Branly, was launched. The vote on January 23, 1911 was taken in the presence of journalists, photographers and hordes of the curious. The election took

place in a tumultuous atmosphere. In the first round Marie lost by one vote, in the second by two. In all, fifty-eight votes were cast. A Nobel Prize in 1903 and support from prominent researchers such as Jean Perrin, Henri Poincaré, Paul Appell and the permanent secretary of the *Académie*, Gaston Darboux, were not sufficient to make the *Académie* open its doors. This event attracted international attention and indignation. It deeply wounded both Marie and indeed Édouard Branly, too, himself a well-merited researcher.

...

Marie had opened up a completely new field of research: radioactivity. Various aspects of it were being studied all over the world. In Uppsala Daniel Strömholm, professor of chemistry, and [The Svedberg](#), then associate professor, investigated the chemistry of the radioactive elements. In 1909 they were close to the discovery of isotopes. However it was the British physicist [Frederick Soddy](#) who in the following year, finally clarified the concept of isotopes. Marie's laboratory became the Mecca for radium research. Eva Ramstedt, who took a doctorate in physics in Uppsala in 1910, studied with Marie Curie in 1910-11 and was later associate professor in radiology at Stockholm University College in 1915-32. The Norwegian chemist Ellen Gleditsch worked with Marie Curie in 1907-1912.

War

When, in 1914, Marie was in the process of beginning to lead one of the departments in the Radium Institute established jointly by the University of Paris and the Pasteur Institute, the First World War broke out. Marie placed her two daughters, Irène aged 17 and Ève aged 10, in safety in Brittany. She herself took a train to Bordeaux, a train overloaded with people leaving Paris for a safer refuge. But Marie had a different reason for her journey. She had with her a heavy, 20-kg lead container in which she had placed her valuable radium. Once in Bordeaux the other passengers rushed away to their various destinations. She remained standing there with her heavy bag which she did not have the strength to carry without assistance. Some official finally helped her find a room where she slept with her heavy bag by her bed. The next day, having had the bag taken to a bank vault, she took a train back to Paris. It was now crowded to bursting point with soldiers. Throughout the war she was engaged intensively in equipping more than 20 vans that acted as mobile field hospitals and about 200 fixed installations with X-ray apparatus.

She trained young women in simple X-ray technology, she herself drove one of the vans and took an active part in locating metal splinters. Sometimes she found she had to give the doctors lessons in elementary geometry. Irène, when 18, became involved, and in the primitive conditions both of them were exposed to large doses of radiation.

After the Peace Treaty in 1918, her Radium Institute, which had been completed in 1914, could now be opened. It became France's most internationally celebrated research institute in the inter-war years. Even so, as her French biographer Françoise Giroud points out, the French state did not do much in the way of supporting her. In the USA radium was manufactured industrially but at a price which Marie could not afford. She had to devote a lot of time to fund-raising for her Institute. She also became deeply involved when she had become a member of the Commission for Intellectual Cooperation of the League of Nations and served as its vice-president for a time. She frequently took part in its meetings in Geneva, where she also met the Swedish delegate, Anna Wicksell.

Missy

Marie regularly refused all those who wanted to interview her. However, a prominent American female journalist, Marie Maloney, known as Missy, who for a long time had admired Marie, managed to meet her. This meeting became of great importance to them both. Marie told Missy that researchers in the USA had some 50 grams of radium at their disposal. “And in France, then?” asked Missy. “My laboratory has scarcely more than one gram,” was Marie’s answer. “But you ought to have all the resources in the world to continue with your research. Someone must see to that,” Missy said. “But who?” was Marie’s reply in a resigned tone. “The women of America,” promised Missy.

Missy, like Marie herself, had an enormous strength and strong inner stamina under a frail exterior. She now arranged one of the largest and most successful research-funding campaigns the world has seen. First of all she got the New York papers to promise not to print a word on the Langevin affair and – so as to feel safe – unbelievably enough managed to take over all their material on the Langevin affair. Due to the press, Marie became enormously popular in America, and everyone seemed to want to meet her – the great Madame Curie. Missy had to struggle hard to get Marie to accept a program for her visit on a par with the campaign. Finally, she had to turn to Paul Appell, now the university chancellor, to persuade Marie. In spite of her diffidence and distaste for publicity, Marie agreed to go to America to receive the gift – a single gram of radium – from the hand of President Warren Harding. “I understand that it will be of the greatest value for my Institute,” she wrote to Missy. When all this became known in France, the paper *Je sais tout* arranged a gala performance at the Paris Opera. It was attended by the most prominent personalities in France, including [Aristide Briand](#), then Foreign Minister, who was later, in 1926, to receive the Nobel Peace Prize. Jean Perrin made a speech about Marie’s contribution and the promises for the future that her discoveries gave. The great Sarah Bernhardt read an “Ode to Madame Curie” with allusions to her as the sister of Prometheus. After being dragged through the mud ten years before, she had become a modern Jeanne d’Arc.

Missy Maloney, Irène, Marie and Ève Curie in the USA.

Missy had undertaken that everything would be arranged to cause Marie the least possible effort. In spite of this Marie had to attend innumerable receptions and do a round of American universities. Outwardly the trip was one great triumphal procession. She became the recipient of some twenty distinctions in the form of honorary doctorates, medals and membership in academies. Great crowds paid homage to her. But for Marie herself, this was torment. Where possible, she had her two daughters represent her.

Marie and Missy became close friends. The inexhaustible Missy organized further collections for one gram of radium for an institute which Marie had helped found in Warsaw. Marie's second journey to America ended only a few days before the great stock exchange crash in 1929.

In the last ten years of her life, Marie had the joy of seeing her daughter Irène and her son-in-law Frédéric Joliot do successful research in the laboratory. She lived to see their discovery of artificial radioactivity, but not to hear that they had been awarded the [Nobel Prize in Chemistry for it in 1935](#). Marie Curie died of leukemia on July 4, 1934.

Epilogue

It is worth mentioning that the new discoveries at the end of the nineteenth century became of importance also for the breakthrough of modern art. X-ray photography focused art on the invisible. The human body became dissolved in a shimmering mist. Wassily Kandinsky, one of the pioneers of abstract painting, wrote about radioactivity in his autobiographical notes from 1901-13. He claimed that in his soul the decay of the atom was synonymous with the decay of the whole world. The thickest walls had suddenly collapsed. Everything had become uncertain, unsteady and fluid. He would not have been surprised if a stone had been pulverized in the air before him and become invisible.

For the physicists of Marie Curie's day, the new discoveries were no less revolutionary. Although admittedly the world did not decay, what nevertheless did was the classical, deterministic view of the world. Radioactive decay, that heat is given off from an invisible and apparently inexhaustible source, that radioactive elements are transformed into new elements just as in the ancient dreams of alchemists of the possibility of making gold, all these things contravened the most entrenched principles of classical physics. For radioactivity to be understood, the development of quantum mechanics was required. But it should be noted that the birth of quantum mechanics was not initiated by the study of radioactivity but by Max Planck's study of radiation from a black body in 1900. It was an old field that was not the object of the same interest and publicity as the new spectacular discoveries. It was not until 1928, more than a quarter of a century later, that the type of radioactivity that is called alpha-decay obtained its theoretical explanation. It is an example of the tunnel effect in quantum mechanics.

Much has changed in the conditions under which researchers work since Marie and Pierre Curie worked in a drafty shed and refused to consider taking out a patent as being incompatible with their view of the role of researchers; a patent would nevertheless have facilitated their research and spared their health. But in one respect, the situation remains unchanged. Nature holds on just as hard to its really profound secrets, and it is just as difficult to predict where the answers to fundamental questions are to be found.

THE TANGO AND THE SEPHARDIM

By Prof. Liliana Benveniste

(Extract from a work by Liliana Benveniste that includes musical examples and comparative texts.)

The musical tradition of the Sephardic Jews was not limited to preserving and transmitting the songs they brought with them from Spain and after their diaspora in the Mediterranean, but it was always a community open to new artistic styles and fashions.

This is how the 'tango' enters in this repertoire, then we can find Sephardic tangos recreated in lands as far away from their origin as: Turkey, Greece (Thessaloniki and Rhodes), ex-Yugoslavia (Sarajevo), Bulgaria or Macedonia ... that go back to the first half of the 20th century.

Brief introduction about tango ...

Tango is a musical genre and a characteristic dance of the 'Río de la Plata' region, mainly of the city of Buenos Aires, Argentina and Montevideo, Uruguay.

As a musical genre, it emerged in the Río de la Plata between 1850 and 1890 and is the result of the fusion between different cultures that are difficult to identify. Some investigations indicate six main musical styles that left their mark on tango: the Andalusian tango, the Cuban habanera, the candombe, the milonga, the mazurka and the European polka.

It is this mixed nature that made it conducive to being embraced and continually transformed during its amazing journey through the world.

It can be performed through a wide variety of instrumental formations, the classical is the orchestra and also the sextet, and the traditional instruments are: bandoneon, violin, piano and double bass. Without being exclusive, the bandoneon occupies a central place in the interpretation.

Many of the lyrics of its songs are written in a local Rio de la Plata slang called "lunfardo" and they usually express the emotions and sadness felt by men and women of the town, especially "in the matters of love."

Tango was introduced in Europe at the beginning of the 20th century through recordings on discs and Paris was the place of its beginnings on an international level.

The tango and the Sephardim

After the expulsion, for more than five hundred years, the musical repertoire of the Sephardim was influenced by the musical styles of the people from where they had settled. From them, it adopted particularities and musical characteristics, both from the Turkish and Berber musical traditions and, later, from European styles, including popular music, operetta, zarzuela and Argentine tango.

An early reference to the spread of tango among Sephardic people are the publications of booklets with compilations of songs among which tangos were frequently found, such as those published in Salonica in 1924, "Los cantes de la Trumpeta", and in 1927, "Los cantes de La Gata". (Sadik and Gazoz).

Unlike other musical creations incorporated into the Sephardic repertoire, tangos are clearly based on existing tango models, used in different modes or degrees of recreation or adaptation that have their authorship recognized, which makes identification with the original version easier.

In the field work carried out by different researchers, it has been possible to verify that the tangos occupy an important place in the musical treasure of the informants who, ignoring their true origin, treasure them as authentic values of the Hispanic heritage.

In the Sephardic repertoire, the tangos can be found:

- a) **Interpreted as similar as possible to the original imitated**, maintaining the content and formulation, with differences from the original caused by memory failure or lack of understanding of the informants.
- b) **Translated the text partially**, that is, substituting unclear terms for the Judeo-Spanish-speaking by others that make sense (more or less) and that do not interrupt the versification and rhyme. Thus, for example, the words of the 'lunfardo' that are absolutely incomprehensible to non-porteños have been substituted. ("porteños" is one of the names of those who live in Buenos Aires)
- c) **As a counterfact**, using the melodies of well-known tangos, probably popular at the time, to sing new texts, invented or created by the Sephardic poets, in the colloquial language spoken by the community. The contents of the new texts could be lyrical –expression of loving feelings, generally of love sorrows– as in the original tangos, or, also frequently, specific content relevant to community life: criticism of the customs of society family relationship problems, new fashions, innovations in customs; in these cases the texts generally have a humorous disposition, like that of a satirical cabaret. It is important to note that the name of the original tango that served as a model and musical framework is usually expressly declared.
- d) Tangos from Sephardic creation itself

There are two informative modalities on which the Sephardic tangos are worked

- **oral sources** - that is, recordings of informants in the context of surveys or spontaneous occasions

• **written sources** - those tangos that were published in aljamiados brochures and in the newspapers of the time.

Of special importance were also the “aljamiado” pamphlets titled Popular Songs, published in Thessaloniki by Sadik Gershon and Moshe Casez.

These two artists used to perform with great success before the Sephardic public in Thessaloniki, creating new texts as counterfactuals on popular music in their time. Of these songs that they presented under the pseudonyms of Sadik and Gazoz, they had already published in the Sephardic newspapers of Thessaloniki: La Vara, El Rayo, El Culebro and el Risón, and then they grouped them in eight brochures or booklets that they published between 1924 and 1935 .

In one of these booklets is the tango “**Florika, la servidera**” (NSA D-30/51 – Rene Bivas, Salónica-Grecia. Recording in Tel Aviv, Israel, 1993), a Sephardic version of an Argentine tango. In the little book the explanation is written that says that it is sung to the sound of the Argentine tango “**Garufa**” (1927 - Music by Juan Antonio Collazo - lyrics by Víctor Soliño / Roberto Fontaina), to indicate what the music of the text is.

The Sephardic text is of picaresque intention, reflecting the relationships between masters and servants in Selaniklí society: Florika, the seductive servant (“enguerkada”, from Guerko = Demon, in Ladino) flirts with the men of the house belonging to three generations, and ends up marrying the youngest, paragon of virtues and “buen par par”: one of the abundant terms in Turkish incorporated in Judeo-Spanish, ‘par par’ refers to the brilliance of the young man, using a double repetition, common in the Turkish language, from the verb parmalak = to shine.

Original tango: GARUFA

Del barrio La Mondiola sos el más rana
y te llaman Garufa por lo bacán;
tenés más pretensiones que bataclana
que hubiera hecho suceso con un gotán.

Durante la semana, meta laburo,
y el sábado a la noche sos un doctor:
te encajás las polainas y el cuello duro
y te venís p'al centro de rompedor.

Garufa, ¡pucha que sos divertido!
Garufa, ya sos un caso perdido;
tu vieja dice que sos un bandido
porque supo que te vieron
la otra noche
en el Parque Japonés.

Caés a la milonga en cuanto empieza
y sos para las minas el vareador;
sos capaz de bailarte la Marsellesa,
la Marcha a Garibaldi y El Trovador.

Con un café con leche y una ensaimada

rematás esa noche de bacanal
y al volver a tu casa, de madrugada,
decís: "Yo soy un rana fenomenal".

Garufa, ¡pucha que sos divertido!
Garufa, ya sos un caso perdido;
tu vieja dice que sos un bandido
porque supo que te vieron
la otra noche
en el Parque Japonés.

Sephardic version: FLORIKA LA SERVIDERA

*Yo so una servidera en una kaza
I so muy enguerkada al kaminar,
Los rayos de mis ojos son komo
brasas,
I tengo en kada kara un lunar.*

*Ayá ande yo siervo tengo un viejo:
El padre de mi mestro, ya lo kansé;
Yo paso i lo provoko por el espejo
El me aze del ojo, me dize ansí:*

*Florika, tráeme a beber, mi alma,
Florika, sin que vea la madama,
Florika, aunke ya pazó mi tiempo,
El perfume de tu kuerpo
Me rende la manseves.*

*Ayá en la mediodía viene el mestro,
I éste tiene danyo kon me mirar,
Kon el devantal blanko si entra adientro
Él me aze del ojo kon sospirar.*

*Florika, las tus karas son mansanas,
Florika, koreladas, traíen ganas.
Florika, aunke pazó mi tiempo,
El perfume de tu kuerpo
Me rende la manseves.*

*El mas enteresante, es el mansevo,
El iijo regalado de este par,
Redondo, lindo i blanko, komo es el guevo,
Koketo i estruido i buen par par.*

*A él kuando lo kuido tengo mansías,
Ma i él tambien me ama en kuantidad,
Kuando estamos solos, lo más de días,
Él me dize estos biervos, ma sin maldad:*

*Florika, tú ke sos la ninya sola,
 Florika, la ke mi alma konsola,
 Florika, de mi kaza sal kazada,
 Yo salí entusiasmada,
 I devine su mujer.*

It is interesting to note how tangos are articulated in individual repertoires: after intensive work over years of surveys, the researchers affirm that tangos are represented in almost all individual repertoires, that is, there are almost no Sephardic informant who does not know any tango.

Without a doubt, the diffusion of tango in the Sephardic world was very great. Many were rooted in the musical heritage and were transmitted orally, functioning within the framework of family life as part of the living tradition.

Curiously, an important part of the interviewees were unaware of the origin of the tango they reported, in some cases stubbornly insisting that the song came from the Iberian Peninsula pre-expulsion, without having the slightest idea of the musical genre, origin and time of it.

Many testimonies of tangos have been collected in different geographical areas, and from the mouth of informants from different countries such as Pazargik, Dupnitze and Plovdiv in Bulgaria, Sarajevo, ex Yugoslavia; Rhodes and Thessaloniki, Greece; Monastir and Skopje, Macedonia, among others. Versions of the same tango with different lyrics have been recorded, to a greater or lesser degree similar to the lyrics of the tango to which they refer.

For example, 'Yo la kería más ke mi vida' (NSA Y6009d / 3 - Avraham Sadicario, Monastir, Macedonia, recorded in Skopje, Macedonia, 1993) and the original "Donde estas corazón" (Tango 1930 - Music: Luis Martínez Serrano / Augusto Berto - Lyrics: Luis Martínez Serrano)

The ways in which tangos were incorporated into the Sephardic musical repertoire have to do with the opportunities in which contacts were established between Sephardic people and the centers of creation and dissemination of tango, directly or indirectly.

An important route is the one that was forged as a consequence of the waves of emigration of Sephardic Jews who, pressured by the bad economic situation, by fears of anti-Semitism and by the hope of better job opportunities and security, left their places of residence. origin towards Latin America, and especially, towards the countries of the Rio de la Plata.

These immigrants over the years returned to their native places or went to visit their families in their cities of origin and, as part of their baggage, they brought with them the tangos learned in Buenos Aires or Montevideo.

Tango recordings produced in Argentina helped bring their interpreters to Europe as early as 1910, causing a sensation in dance halls in Paris, Berlin and London and later in Eastern Europe and Morocco.

A second way of importing the tango was precisely these dance halls, and "the plates", the dance records used in the phonograph; These classrooms and their

activities were new frameworks that flourished in the Sephardic communities, together with the rise of French influence that arrived with the schools of the Alliance Israelite Universelle, and that was imposed despite the opposition of orthodox referents. Undoubtedly, the social dances ("los ballos", "soirees", "ziafet") that were the main entertainment of the youth, offered a space in which the frequent repetitions of the dances allowed young people to become familiar with the tangos River Plate and French.

A third way by which tangos were introduced is an indirect way, something like a detour from the path from tango in Castilian Spanish to Sephardic tango, through creation, translation or adaptation to another intermediate language, different from Spanish.

To complete it, it is necessary to show the creation of the Sephardic tango, made by the popular poet, as an expression of his own feelings, which serve to expose the author's reaction to the events of the time.

For the Sephardic people who arrived in Argentina, unlike other immigrants, the Spanish language did not present difficulties for their understanding, the tango sung was at that time a very important means for their cultural integration. The Sephardic people of Buenos Aires frequented bars and cafes where recorded tangos were heard or where the live orchestra was in the box. It will be in the golden decade of the forties when the children of these Jews express themselves as dancers and as amateur singers.

This is how our own, new creations of tangos in Ladino arose here. Nowadays also as part of this musical heritage, such as "Tangito para Esterina" or "Pebeta de Villa Crespo", written by the contemporary Argentine poet Beatriz Mazliah.

Even today the adaptation and counterfactual modalities continue to be used. In this way we have the tangos "El día ke me keras" adapted by me, Liliana Benveniste from the original "El día que me quieras" (Music Carlos Gardel -Lyrics Alfredo Le Pera, 1935), Kalishika adaptation by Luis León and Liliana Benveniste of the tango "Caminito" (Lyrics: Gabino Coria Peñalosa - Music: Juan de Dios Filiberto – 1926) and "Los shasheados" translation by José Mantel of the tango "Los mareados" (Lyrics Enrique Cadícamo -Music Juan Carlos Cobián 1942)

Original tango: CAMINITO

Caminito que el tiempo ha borrado
Que juntos un día nos viste pasar
He venido por última vez
He venido a contarte mi mal.

Caminito que entonces estabas
Bordeado de trébol y juncos en flor
Una sombra ya pronto serás
Una sombra lo mismo que yo.

Desde que se fue triste vivo yo
Caminito amigo yo también me voy
Desde que se fue nunca más volvió
Seguiré sus pasos caminito, adiós

Caminito que todas las tardes
 Feliz recorría cantando mi amor
 No le digas si vuelve a pasar
 Que mi llanto tu suelo regó.

Caminito cubierto de cardos
 La mano del tiempo tu huella borró
 Yo a tu lado quisiera caer
 Y que el tiempo nos mate a los dos.

Desde que se fue triste vivo yo
 Caminito amigo yo también me voy
 Desde que se fue nunca más volvió
 Seguiré sus pasos caminito, adiós

Sephardic

version:

KALISHIKA

https://www.youtube.com/watch?v=5DBAf1I_BnU

*Kalishika ke el tiempo a ahashado
 Ke endjuntos un día mos vido pasar
 e vinido por ultima vez
 A kontarte mi hal i mi dert*

*Kalishika ke entonses estavas
 Bodrada de trevol i djunkos en flor
 Una sombra ya pronto seras
 Una sombra de mesmo ke yo*

*Desde ke fuyó triste vivo yo
 Kalishika amiga yo también me vo
 Desde ke fuyó ya nunca tornó
 Yo tambien me fuygo ¡Asiviva el Dio!*

*Kalishika ke todas las tadres
 Filís dolasheavas kantando mi amor
 No le digas, si eya tornó
 Ke mi enguaye tu suelo moshó*

*Kalishika kuvierta d'espinas
 La mano del tiempo a ti te eskoló
 Yo a tu lado kijera kaer
 I ke el guerko mos yeve a los dos*

*Desde ke fuyó triste vivo yo
 Kalishika amiga yo también me vo
 Desde ke fuyó ya nunca tornó
 Yo también me fuygo ¡ Asisiva el Dio!*

Sephardic Jews knew how to preserve their musical heritage at the same time that they managed to take the new and different, adopted it, assimilated it and ratified it as something of their own and alive within their repertoire.

With lyrics adapted to the Judeo-Spanish language about the fashionable tango, with new creations or simply trying to learn the original lyrics, respectful and admirers of tango, either at the dawn of the 20th century or in the 21st century, in distant countries or On the banks of the Río de la Plata, tango conquered their hearts.

This vitality, this curiosity, this thirst for new things is characteristic of Sephardic Jews, at the same time that they preserve their romances, cantigas and verses with a deep affective weight, they continue to learn and incorporate new pieces into their poetry and musical repertoire.

Finally, it remains for me to say that, without a doubt, the tango was incorporated into the traditional Sephardic repertoire, many of them were rooted in the musical heritage and were transmitted orally, functioning within the framework of family life as part of living tradition.

Liliana Benveniste (born Tchukran),

She was born and lives in Buenos Aires, Argentina and received Spanish nationality for Sephardic Jews in 2017. She is singer, songwriter, teacher, researcher and Computer Systems Analyst. She comes from a Sephardic family origin that came to Argentina in 1927 from Istanbul, Turkey.

She has been dedicated for more than 20 years to research, recreation and dissemination of Sephardic culture, dedicated to studying the history, language, customs and songs according to the tradition of this rich

cultural heritage.

She is a member of the Erensyia Platform, created by the Sefarad-Israel Center in Madrid, a global cooperation network in which members share the projects carried out in their countries to maintain Sefarad's cultural roots.

In August 2016 she was appointed a member of the SHADARIM group (ambassadors, emissaries) of the ANL - National Authority of the Ladino - an organization created by the Israeli government based in Jerusalem.

In January 2018 she received the Medal of the Four Sephardic Synagogues of Jerusalem in recognition of her work with Sephardic culture in all facets of it.

In May 2018, she was appointed Ambassador of the Network of Jewish Quarters of Spain for Latin America.

She has composed the music for several contemporary poems written in Judeo-Spanish receiving international awards such as the Sephardic Music Festival "Festiladino 2005" in Jerusalem. Two of his songs, original compositions, are included in the books "Se lo dije a la noche" from 2011 and "Tierra, Fuego y Deseo" from 2015, both made in Burgos, Spain, which bring together poems and songs in all Iberian languages including the Ladino. She also collaborates in the translation of

texts into the Sephardic language and writes research articles in various international media and publications and is co-author of the Anthem of Ladino released in March 2021

She has presented various artistic performances that reflect the heritage of Sephardic music, recreating traditional, liturgical and new songs in the Sephardic language, in important places in South America, North America, Europe, Africa and Asia.

She teaches workshops, courses and seminars on Ladino and also on Sephardic music and culture.

She is a speaker at conferences and symposia on Sephardic themes: history, music, traditions and customs. In March 2013 she was a keynote speaker at the UCLadino Symposium of the University of California (UCLA), also at the Erensy Platform, in Izmir, Turkey and in 2017 she was invited by the University of Murcia, Spain to give the main conference of the commemoration of the International Day of the Ladino.

She coordinates the weekly cycle RAÍCES DE SEFARAD that offers Sephardic-themed activities with invited professors; She is also editor of the eSefarad.com website and the eSefarad Newsletter-News of the Sephardic World.

Is Vice President of the Sefarad Cultural Center based in Buenos Aires, a non-profit institution dedicated to the dissemination of Sephardic culture.

The Huguenots' Attitude Towards Jews Particularly during the Dreyfus Affair.

By Emmanuel Tchividjian

I remember a comment made decades ago by a Swiss friend, Lisette Henri, who, speaking of her mother (nee Vuffray) mentioned that she was a descendant of the Huguenots and that she had been pro-Dreyfuss, against anti-Semitism during WWI and a pro-Zionist.

I always wondered if there was a connection.

There is and it is an amazing history.

Indeed, there has always been a strong historical connection between the Huguenots and the Jews.

The Huguenots, or French Protestants, were members of the Reformed Church established in 1550 by John Calvin. Like Jews, they suffered persecution by the Catholic Church. On January 29th, 1536, France issued an edict encouraging the extermination of Huguenots. On the night of August 23, 1572, more than 8,000 Huguenots were murdered in Paris in what has been called the St. Bartholomew Massacre. Following these events, some 200,000 French Huguenots went into exile to countries such as Switzerland, Holland, Germany, England and America.

Jews and Huguenots share a common tragic history of persecution and expulsion by the hand of the Catholic Church. That history created a strong affinity, an emotional identification and a bond between them.

An example of the Huguenots special relationship with Jews can be found in their response to the shocking and dreadful late 1800s "Dreyfus Affair". Alfred Dreyfus, a brilliant captain in the French Army, came from Alsace. He was also Jewish. He was wrongfully accused of being a spy for Germany. The accusation was based on a forged document created by Lieutenant-Colonel Hubert-Joseph Henry in order to vindicate Major Ferdinand Walsin Esterhazy, who turned out to be the actual German spy. Alfred was arrested, publicly humiliated by having his military decorations stripped from him and his sword broken in two.

He was court-martialed, sentenced to life in prison and sent to the Devil's Island, a French penal colony in Guiana.

When his arrest became public, several known virulent anti-Semites condemned him, publicly, calling him a “Jew traitor” who had committed “the worst crime imaginable, selling out his country to Germany.” The Catholic newspaper *La Croix* published in a series of anti-Semitic, anti-Dreyfus articles.

Alfred’s brother, Mathieu, convinced of his innocence rallied support in his defense.

He recruited, among others, Gabriel Monod (1844-1912), an influential protestant French historian and the co-founder of the League of Human Rights. He published an expose of the Affair and testified in court in Dreyfus’ favor.

He also recruited, August Scheurer-Kestner, (1833-1899) a Huguenot, the vice-president of the French Senate. Scheurer-Kestner defended the cause of Dreyfus both to the French President and to the Minister of War. Furthermore he informed Emil Zola of the injustice that had been perpetrated against Dreyfus.

Emil Zola, a self-proclaimed atheist, did play a key role in shifting public opinion in favor of Dreyfus with the publication, on January 13, 1898 in the newspaper *L’Aurore* of his open letter to the French President, Felix Faure, entitled “J’accuse.” An estimated of 300,000 copies were sold.

The “Affair” tore France apart. The historian, Vincent Duclert, in a new biography of Dreyfus says that:

The Dreyfus affair split French society, pitting artist against artist, intellectual against intellectual. Among the Dreyfusards were: Camille Pissarro, Claude Monet, Paul Signac and Mary Cassatt. The ranks of the anti-Dreyfusards were equally formidable, among them Edgar Degas, Paul Cezanne, Auguste Rodin and Pierre-Auguste Renoir. Marcel Proust used the bickering and backbiting in French society over the affair as background noise in his monumental *In Search of Lost Time*.

To be fair there were some Catholic voices in support of Dreyfus such as the poet, Charles Peguy who wrote: “We were prepared to die for Dreyfus, but Dreyfus was not.” However, the Huguenots represented a large majority among Dreyfus’ defenders.

Justice prevailed, finally, and Alfred Dreyfus, after more than 7 years, was finally vindicated.

We should not forget the young Jewish journalist who covered the trial for a Viennese newspaper and who witnessed the public humiliation of Dreyfus. He became convinced that Jews could never be safe in Europe. He said:

“It has been established that Justice could be refused to a Jew, just because he was a Jew.”

The journalist was Theodor Herzl, the founder of Zionism!

Paula E. Hyman, in her article, *New Perspective on the Dreyfus Affair* published in *Historical Reflections* published by Berghan Books in 2005 wrote:

“The Affair remains a source of historical interest not only because it was the most egregious episode of antisemitism in Western Europe before the Nazis, but because it raises the issues, that still resonate today: state collaboration in the miscarriage of justice, the impact of the media on public perception of events, the role of the intellectual in public life, and a contested definition of nationalism.”

Perhaps the most striking example of the unique affinity and empathy between Huguenots and Jews is the story of the French Protestant pastor, Andre Trocme. Born in 1901, he came from a long line of French Huguenots. Under his leadership and because of his religious convictions, he organized, with the collaboration of the entire village of Chambon-sur-Lignon, the rescue of more than 5,000 Jews during WWII.

Andre Trocme

The Germans knew that Jews were hidden in the area, they called Le Chambon, “the nest of Jews in Protestant country.” They were never able to obtain any information from the villagers nor find any of the hidden Jews. It was a conspiracy for good.

This short review of the connection of French protestants with Jews and Judaism would be incomplete if I did not mention men like Charles Westphal and Marc Boegner.

Charles Westphal was born on the 24th of November 1896. He was a pastor from Grenoble and one of the first editor of the protestant publication *Foi & Vie* (Faith

and Life). He not only personally saved Jews during WWII but was an outspoken supporter of a new understanding of what should be the relation between the Church and the Synagogue. In an editorial he wrote that the publication, *Foi et Vie* should be a testimony of a Church that begs forgiveness to God for the past conduct of the Church towards Jews.

Charles Westphal

Theologian and Pastor Marc Boegner was born on the 21st. of February 1881. He was the first President of the French Protestant Federation and as such advocated for Jews during WWII. He wrote the first public declaration of a Christian Church against the persecution of Jews. As a member of the French Resistance he personally saved Jews as well.

Marc Boegner

Both Charles Wesphal and Marc Boegner as well as the whole community of Le Chambon were awarded the title of *Righteous Among the Nations* by Yad Vashem.

I believe at the root of this special, fraternal relationship between the Huguenots and the Jews is found in John Calvin's theology concerning Jews and Judaism which differs drastically from the theology of both Luther's and of the Catholic Church. Calvin did not espouse the concept that the Church had replaced Israel, the so-called replacement theology, whereas all the promises God made to Israel are now transferred to the Church and therefore Judaism is irrelevant in God's plan for the salvation of the world. Calvin, to the contrary, argued in favor of a predestination or election of the Jews as eternal and quoting Paul, "without repentance."

The author and editor of the magazine *Commentaire*, Armand LaFerrere wrote, in his article "The Huguenots, The Jews and Me" published online by Asure.org that: "Calvin's theology, unlike Luther's, represents a historical breakthrough in the Christian apprehension of the Jews. For the first time in fifteen centuries, since Paul's epistle to the Romans, a major Christian thinker laid the groundwork for a perception of Israel that is both positive and non-missionary. So, too for the first time in Christian thought are Jews described as the clear and direct object of God's love, and not as merely precursors to Christianity or a group that should be targeted for conversion."

It is my profound hope that more, in the Christian world, would come to that understanding. This could lead to the dawn of a new, true relation between the Church and the Synagogue.

Mr. Tchividjian is the owner and principal of The Markus Gabriel Group, an ethics in communication consulting practice that he created in 2017 to provide ethics counsel to public relations firms as well as for nonprofit organizations.

Mr. Tchividjian was the ethics officer of the PR firm of Ruder Finn that he joined 1997.

Prior to joining Ruder Finn, Emmanuel worked for the Government of Switzerland organizing special media events on the issue of the Swiss banks and the Shoah.

He has been engaged in Jewish – Christian relations for more than 30 years.

Emmanuel has also been engaged in public speaking on ethics and communication to academic institutions and not-for-profit and for-profit organizations. He has published numerous articles in PR trades.

He was certified Compliance & Ethics Professional in 2006, by the *Society of Corporate Compliance and Ethics* (SCCE.)

MY TWO GRANDFATHERS: Two Ottoman Jewish Gentlemen in An Era of Transformation

Rachel Amado Bortnick

Although there was an age difference of about 20 years among them, both of my grandfathers lived in Izmir, Turkey, during a deeply transformative and frequently violent era which saw the end of the Ottoman Empire and the birth of the Turkish Republic in 1923. As you can see in the images provided, there was a great difference in the way each dressed: one with the long, fur-trimmed *djubbé* and a fez on his head, and the other in his absolutely European dress style. Certainly, their clothes give an idea about which of them was the older, but both of these style of attires were to be found in the years in which they were both alive, and that each of these two men in this and many other ways typified the Ottoman Jewish gentleman of that era.

Samuel Amado, my father paternal grandfather, was born in around 1855 and died in December of 1923, six weeks after the declaration of the Turkish Republic on the 29th of October in 1923. Since my parents were married much later, in 1930, even my mother didn't know him, and what I know about his life is the little that my father told me. (I greatly regret that I didn't ask my father for more information about him.) The only image we have of my Amado grandfather is the drawing, seen here, bearing the signature seal of the artist: "Samuel Telias, Smyrna, 1915." We were told that Grandpa Samuel never allowed himself to be photographed, but Mr. Telias, who was his neighbor, drew this portrait of him and presented it to the family as a souvenir. This portrait used to hang on the wall in our living room in Izmir, and now it hangs in my home in Dallas, Texas.

Samuel Amado was a religious man, very learned in Torah. He had a little *yeshiva* in the family home in Pinarbashi, a village outside of Izmir, where he instructed young boys in Hebrew and the sacred Jewish texts. For a living he used to sell insurance to Turkish villagers, traveling in horse-drawn carriages from one village to another once or twice a year. Therefore, his dress was typical of a venerable Ottoman man, both because he was a teacher, and probably also for reason of his dealings with Muslim country people. Later in life he went to work as an accountant at the American Tobacco Company, Inc., of Izmir, and I imagine that he wore western attire at that time, though always with a fez on his head.

In contrast, my maternal grandfather Salamon Algranti, a tall and very handsome man, always dressed elegantly *a la franka*, in European style, as in the photo taken in 1927. I remember him well because I was already fifteen years old when he died in 1954, at the age of 79. We have many photographs of him, dressed in the same western manner even in those taken in 1911 and 1914 where he is posed with his wife and his young family. He operated a store that sold men's textiles and employed tailors who made men's suits on order. He was truly an urban gentleman, had traveled to Italy, and had customers of the upper class who dressed as elegantly as he did.

Both of these gentlemen were Sephardic Jews, descendants of those exiled from Spain in 1492 and Portugal 1496. The Algranti (originally Algranati) family name denotes an origin in Granada, Spain, and the Amado name, meaning "beloved" in Spanish, may have been a

translation of the Hebrew *Habib* (Habif in its Ladino pronunciation), which is also a popular Sephardic family name. Both gentlemen spoke Ladino at home and with their Jewish acquaintances and wrote that language in the Hebrew cursive known as *soletreo*. The printed Ladino books and newspapers they read used the special Hebrew font known as Rashi. The both could speak several other languages, though Salamon Algranti was the weaker of the two in that respect. He knew just enough Turkish, Italian, Greek, and French to get by in his business. He could, as all Jewish men, also read Hebrew, but not speak it. I only remember him speaking Ladino and writing from right to left in the Ladino cursive which I, as a child, called *ganchos*, hooks.

Samuel Amado on the other hand, belied the impression his oriental attire might give. For he mastered not only Ladino, Turkish and Hebrew, but also the western languages of French and English, all of which he could also read and write in its proper alphabet. He could also speak Greek, as my other grandfather and most Jewish men of Izmir (Smyrna in Greek), a city largely populated by Greeks until 1922.

The following events took place in Turkey during the lifetime of both my grandfathers:

- **1876-1908:** The despotic reign of Sultan Abdulhamit II.
 - Decline of Ottoman power
 - War with Russia (1877-78)
 - Rise of nationalism and independence of Balkan states.
 - In 1892, 400th anniversary of the arrival of Sephardic exiles to the Ottoman Empire.
- **1908: The Young Turk Revolution** and the start of Constitutional Government.
 - Non-Muslims obligated to do military service.
 - Jewish Ottomans begin to emigrate to Europe and the Americas
- **1909 Sultan Abdulhamit is deposed.** Mehmet V ascended to the throne.
- **1911-12: Turkish-Italian War.** Italy occupies the island of Rhodes and other Aegean islands.
- **1912-13 Balkan War.** Ottomans lose much territory in Europe. Salonica, a major Jewish center, is lost to the Greek state.
- **1914-18 World War I** (Avram, youngest son of Samuel Amado, is drafted and disappears in 1915.)
 - **1915 Battle of Gallipoli** - Mustafa Kemal becomes hero of that bloody war. Many Jewish soldiers among the dead.
- **1920 (Aug. 10) The Treaty of Sevres:** Partitioning of the Ottoman Empire. Large parts of Ottoman territory ceded to France, the United Kingdom, Greece, and Italy.
- **Greco-Turkish War, 15 May 1919 - 9 September 1922.** Izmir was at the center of that war. Victory for the Turkish popular army.
- **The great fire of Smyrna/Izmir, 13-22 September 1922.**
 - Destroyed a large section of the city, principally the Greek district.
 - It changed the cosmopolitan character of Izmir. Before the fire, more than half the population of Izmir was non-Moslem, most of it Greek, but also Armenians and Levantines (Europeans who lived there for many generations), as well as Jews. Approximately 100,000 Greeks left after the fire.
- **The Treaty of Lausanne (signed on 24 July, 1923)** End of wars on Turkish land; determined the boundaries of the new Turkish Republic. Jews supported the new Turkey with much hope.

- **Declaration of the Turkish Republic: 29th of October, 1923., with Ankara as its capital.**

How did these momentous events affect the lives of the Jews of Izmir, and my grandfathers in particular?

Frankly, we could probably write a book if we knew more, or if we could use our imaginations. However, we can state the following as facts: Both of the gentlemen were already married and with children in 1908, the year of the Young Turk Revolution. Therefore, they did not have to serve in the Ottoman army. Their male children and grandchildren eventually did serve, but the most dramatic and tragic case worthy of describing is that of Avram Amado, my father's youngest brother, in the First World War, as indicated above. On the 21st of June 1915, he was taken from his home by force and conscripted to the army, even though he had French nationality. (The Amado family had come to the Ottoman Empire from Bayonne, France, in the beginning of the 19th century.) Turkish historian Rifat Bali, has researched this case (and of others of French nationality that were arrested for refusing to enlist in the Ottoman army) and published an article on this subject. The article can be found at: http://www.rifatbali.com/images/stories/dokumanlar/toplumsal_tarih_subat_2010.pdf. The article contains the letters written by the prisoners and their families, among which is the letter written by Samuel Amado in English to the American Consul asking for help. But Avram never returned.

In the Turkish Republic

Samuel Amado saw the end of the Ottoman Sultanate in 1922 and the declaration of the Turkish Republic, with Ankara as its capital, in October of 1923. But he died soon after, before seeing the many reforms which Atatürk brought to the new nation. However, Salomon Algranti lived more than 30 years in the Republic, and like all the Turkish citizens, was profoundly affected by the various changes that took place in this time span, as the list below indicates.

- **1924**
 - The caliphate was abolished on March 3, 1924, and all members of the Ottoman dynasty were expelled from Turkey.
 - A national education system established.
 - A new Constitution adopted.
- **1925**
 - The Hat Law: prohibition of the fez and turban for men. (25 November.)
 - Prohibition of religious attire in public, and adoption of European style clothing for men and women.
 - The Western (Gregorian) calendar to replace the Islamic calendar.
- **1926**
 - New civil law, criminal law, and laws of commerce based on European standards.
 - Civil marriages, and prohibition of polygamy.
 - End of the *millet* system. All Turkish citizens to have equal rights and obligations.
- **1928**
 - Turkey became officially a secular republic. (April 10.)
 - Latin alphabet adopted, with some modifications (November 1.)
- **1934**

- Women get the right to vote and to be elected to government office.
- The Law of Surnames. Moslems had no surnames until now. The National Assembly granted Mustafa Kemal the surname of Ataturk (Father of the Turks.)
- **1935:** Sunday became the national day of rest. (Previously it had been Friday, the Moslem holy day.)

For my grandfather Salamon, the alphabet reform was to be the most difficult to adapt to. He knew the Ottoman alphabet, which was Arabic, but mostly he used to read the Jewish Ladino newspapers printed in Rashi type, and wrote Ladino in *soletreo*, as I have described. But now that the Jewish press also switched to the Latin script, he must have been at a loss. Ironically, it would have been my Amado grandfather, the one in the Ottoman garb, that would have been most comfortable with that change, as he was fluent in the western languages, as he was with the Turkish language.

The Surname Law of 1928 did not affect Jews, as they already had surnames. Some, however, chose to take on Turkish-language surnames anyway. My grandfather Salamon simply changed his surname from Algranati to Algranti. I don't know the reason, but only know that among the Sephardic people there are many with the Algranti surname who have nothing to do with our family.

Conclusion

The clothing of my two grandfathers in these pictures may give some correct impressions, but some wrong ones also. It would be right to conclude that one (Amado) was older than the other (Algranti.) But in the years they shared in the Izmir Jewish community, a man, whether Jewish or Muslim, could be dressed either way. The western dress had begun to make inroads into the elite Turkish class back during the first *Tanzimat* period (1839-1876). I think that Samuel Amado, had he lived longer, would have had an easy time adapting to the ways of the Turkish Republic. He already knew the Latin alphabet because he knew the western languages, and he certainly would feel comfortable in European clothes. As we say in English, it is not right to judge a book by its cover. But, if a picture is worth a thousand words, then the pictures of my two grandfathers describe a period of the greatest transition in Turkish history, from the Ottoman Empire, symbolized by Samuel Amado's attire in one picture, and the Turkish Republic, symbolized by the European outfit of Salamon Algranti.

Rachel Amado Bortnick, a resident of Dallas, Texas, was born and raised in Izmir Turkey. She is a retired ESL (English as a Second Language) teacher who is an active promoter of Sephardic history and language. In 1999 she founded Ladinokomunita, an on-line forum for correspondence in Ladino, which is still going strong with over 1500 members worldwide. Rachel is featured in a documentary film, "Trees Cry for Rain; a Sephardic Journey", produced in 1988.

Rusalka/ Dvořák - The Mute Character in Opera

By Merav Barak

The Opera "Rusalka" by Dvořák premiered in March 1901. The opera is based on the fairy tale "the Little Mermaid" in which the mermaid sacrifices her voice in order to meet the prince. This decision, which causes her to become mute, is an integral part of the adaptation of the story's plot to the opera medium, and therefore the choice of this fairy tale as the basis for an opera is puzzling. Furthermore, the decision to mute the main character raises questions regarding the viability of having an opera character with no voice. Thus, "Rusalka" is an opera that investigates the omission of the human voice in opera. "Rusalka" is the first among several operas of the twenties century that have mute characters in leading roles.

The appearance of a mute character as a central figure in an opera is surprising, because the muteness seems to contradict the operatic medium, which is a vocal medium. A mute character as a central figure in an opera is strange and requires an explanation: why would the creators choose to withhold from one of the main figures the ability to express herself in the opera's medium? After all, it would seem that in an opera a figure lacking a vocal presence would have no presence at all.

The phenomenon of the mute character in opera is a manifestation of changes that occurred in the operatic medium from the beginning of the 20th century, from a medium that was almost entirely based on music to one that requires both musical and visual (theatrical or cinematic) expression.

During the nineteenth century, at the height of the Romantic Period, Richard Wagner revolutionized the operatic medium. Wagner believed that the theatrical-dramatic element is as important to the opera as the musical element. He refers to his works as "music dramas". According to this approach, the music must support and complement the drama and not only serve the "musical pretentiousness", as he believed the Italian composers did. The creative world of the opera has undergone an important transformation since the days of Wagner, a transformation that deepened during the twentieth century which witnessed an artistic and technological revolution with the birth of film and later television. Wagner's theory is the basis of the transformation of the opera from an art form that greatly favored music and singing to a more complete art form based on a balance among the various elements: music, singing, dramatic text, creative and complex directing, stage design, costuming and lighting. Thus, the

implementation of the operatic work requires a new type of artistic collaboration between the two persons responsible for implementation: the conductor and the director.

The operas written in the twentieth century were influenced by the conceptual revolution initiated by Wagner and by stylistic movements that influenced the arts in general, and the opera specifically. "Rusalka", an opera composed by Antonín Dvořák at the beginning of the twentieth century, was directly influenced by Wagner's writings and works. In analyzing "Rusalka", one can discern musical and theatrical elements that are similar to two of Wagner's works: "Das Rheingold" and "Der fliegende Holländer". In addition, there is a dominant dramatic-theatrical element in "Rusalka" that allows the main character to be present even when she is mute for about half of her time on the stage.

Dvořák composed "Rusalka" from the perspective that views the opera as a dramatic medium, as much as a musical one. This perspective enabled Dvořák to make Rusalka a mute character. This muteness is an endeavor to question the centrality of voice in the operatic medium in an attempt to expand the role of drama and physical gestures in operatic productions.

In the first act, Rusalka sings an aria to the moon, in which she expresses her desire for the prince whom she saw hunting near the lake. From the day she fell in love with the prince, she thinks only of him and is no longer able to fit in with the tranquil life of the creatures of the lake, represented by the three happy nymphs at the beginning of the act. Following the melancholy aria, in which Rusalka asks the moon to deliver a love message to the prince, Rusalka summons the witch Jezibaba and asks her to turn Rusalka into a human being, so that she can meet the prince. When the witch asks Rusalka to sacrifice her voice in exchange for the spell, Rusalka does so without hesitation. Rusalka's first aria highlights the rare beauty of her voice. The aria is romantic and moving, similar to the final arias sung by the prima donnas prior to their death in the operas of the nineteenth century. The call for Jezibaba, at the end of the impressively beautiful aria, emphasizes the heavy price that Rusalka will have to pay. Rusalka answers Jezibaba's requests impulsively and naively without thinking about the difficulties her muteness will cause in her encounters with humans, particularly with her loved prince. Dvořák "takes advantage" of the few moments at the beginning of the plot, in which Rusalka has a voice and gives the singer the opportunity to display her vocal abilities, and at the same time emphasizes to the listener the heavy price that Rusalka is willing to pay for love.

The voice in "Rusalka" is a tangible object, an article that one can trade with and transfer to another. Dvořák emphasizes the importance of the voice by presenting it as an object that can be removed or disconnected from the body.

Its necessity is emphasized by its absence, and thus like a silent cry, the resulting effect is paradoxical and dramatic. Rusalka ignored one fatal fact: without her ability to sing, she lacks the magical beauty that she possessed before she handed her delightful voice over to the witch Jezibaba. This is true, of course, from the perspective of the plot, but it takes on an added dimension when we analyze the plot from an operatic perspective: Rusalka pays the witch in the most important expressive medium of an operatic character. She does not only “lack the magical beauty . . .” but much more: she loses the ability to function as a normal operatic character. Rusalka’s fatal choice is accentuated by the appearance of the foreign princess with her commanding soprano voice. The strong dominant voice stands out in the backdrop of Rusalka’s silence, as if it is seeking to replace the mute voice that is not being heard.

Rusalka chooses to sacrifice her voice and to become mute, thereby realizing her dream of becoming human, but also sentencing herself to complete devastation. The muteness in “Rusalka” that results from a willful decision is the main dramatic element of the storyline, at the expense of the main character’s singing. Unlike the heroines of the operas of the nineteenth century, Rusalka’s difficulties are not expressed in the singing, but rather in the silence. The muteness leads to her failure, and eventually to her and the prince’s tragic death.

The silence and the muteness require some kind of musical substitute. When a mute character is integrated into an opera, there cannot be “vacuums” of total silence in which the character appears with no voice. Therefore, there must be a musical substitute for the voice of the character that represents it during the character’s physical presence on the stage. By identifying Rusalka with an instrumental and not a vocal motif, Dvořák succeeds in providing Rusalka with a musical motif, even while she is not singing. The presence of the motif between the verses of her first aria, as a separate and prominent musical element, identifies her character with a general musical motif in the first aria. When this motif returns and appears as a leitmotif in acts in which she does not sing, the listener identifies the motif with the character and thus she receives a musical expression.

Rusalka is similar to the heroines of the operas of the nineteenth century and therefore her ultimate fate must be to die. However, Dvořák’s operatic heroine, the soprano who represents the victim, sacrifices her life because of the muteness, as opposed to the heroines of the nineteenth century operas, who self-destruct through their singing. It is as if Dvořák is saying that even the sacrifice of the voice cannot save the soprano from her inevitable fate, since one can interpret Rusalka’s sacrifice of her soprano voice as an attempt to avoid the fate awaiting all opera sopranos. This is similar to the myth of Oedipus who tries to avoid his fate and to refrain from murdering his father and sleeping with his mother by running away to a different city. Like Oedipus who ultimately

could not avoid his fate, Rusalka cannot run away from the inevitable fate of the soprano-victim. Even though her voice is not heard, it exists, it is part of her and she cannot escape it. Thus, we can relate to Rusalka's fist aria as the canonical death aria, since the sacrifice of the voice in opera is like death itself.

Relating to death as the inevitable fate of the soprano, who both sings and is muted, is an attempt to examine the operatic medium and the possibility of changing its essence. Rusalka's death represents an attempt to self-examine the muteness of a main character in an operatic work. In this respect, "Rusalka" is a reflective work that explores the principles of art itself and its characteristics. Through the inevitable fate of Rusalka, Dvořák examines the operatic medium as both a theatrical and musical art form. Rusalka is present on the stage during a substantial portion of the opera, but half of her time on the stage is spent in the muteness she inflicted on herself. Dvořák, in essence, introduces multiple reasons for her death: on the one hand, Rusalka is a soprano and therefore her fate is inevitable despite the attempt to neutralize the cause of death (the voice); and on the other, because of her inability to function among singing characters, she must pay the ultimate price. She has no chance to survive without her voice in a world of voices. Dvořák thereby emphasizes that the muteness does not neutralize the voice's fate.

"Rusalka" paved the way for operas that contain completely mute characters in central roles, and therefore it represents, in my opinion, the beginning of the theatricalization of the opera. As a pioneering work, it presents partial muteness and explores whether the fate of mute is different from the fate of singing. During the remainder of the twentieth century, other operas that integrate mute characters, even completely mute characters, in central roles were written. These include: the opera "The Seven Deadly Sins" by Kurt Weill; and the opera "The Medium" by Gian Carlo Menotti.

The writer, Merav Barak, is an opera lecturer and researcher. She holds a Masters in Musicology from Tel Aviv University. For additional information, please see www.opusfocus.co.il

CHAPTER OF THE BOOK “THE LAST VISIT TO BERLIN” BY RUVIK ROSENTHAL

CHAPTER ONE: GERTRUDE

1.

One summer day in 1902, a mail courier arrived at the door of Doctor Moritz Freyer, Chief Physician of Pomerania Province and Crown-appointed Officer for Public Health, carrying a telegram. The telegram was received by the housekeeper, who then tiptoed to the office of Moritz Freyer and presented him with it.

Moritz Freyer, a compact man whose face was adorned with a thick handlebar mustache and a beard meticulously trimmed in the Prussian style, opened the envelope containing the telegram and learned that his father, Simon Freyer, the rabbi of the eastern town of Marggrabowa, is very ill. He immediately asked Fräulein Brigitta Saranow, the devoted nanny and housekeeper, to cancel all his appointments, and summoned his eldest daughter Trude to see if she'd like to accompany him. Trude flitted to her room and packed a suitcase with a week's worth of clothes, as well as toiletries and a few books, and Herr Holzfuß, the family's regular coachman, drove them to the train station.

The train from Stettin to the City of Lyck, on the east border of Prussia, ran for many hours. Trude and Moritz exchanged few words and dozed often. Occasionally they glanced out the window at the small Prussian towns or attempted to fathom the enigma of the dense woods. The sun shone on harvested wheat fields, and farmers straightened their tired backs as they watched the train go by. At noon they got off at the Lyck train station and found a small hotel, where they washed up before heading out for a lunch. Later, Moritz led Trude down the streets of the comely city and through the gates of the secondary school. He eagerly skipped down the stairs, peeked into the classes which remained nearly unchanged over the past forty years, and even met an old professor and spoke with him briefly. The professor's face shone when he told Trude, “Your father was an exceptional pupil, a student of the utmost aptitude!” And her face shone as well.

The following day, Moritz and Trude set out toward Marggrabowa, which was perched nearly on top of the Russian border, in a small coach drawn by two horses. The coach carried them through the thick of the woods. Moritz, his face jubilant, was enthralled by the view. Suddenly he spoke: “Here, this is where it happened.”

“Where what happened, Father? What are you talking about?” asked Trude, and Moritz replied, “Why, the Egg Miracle, of course.”

Trude looked at him, bewildered. “But that was just a story.”

“A story?” Moritz grimaced in mock offense. “How can you say such a thing, Trüdchen. It was nothing of the sort, nothing but the absolute truth. This is where the coach crashed, and they found me here, on that very tree, swinging like a pendulum in a clock.” He asked the coachman to stop for a moment and they got off. Moritz happily pranced around the small clearing, bounding about like a child until Trude became concerned that someone else might drive by and think him mentally unwell.

The Egg Miracle was a matter of great importance at the Freyer household. Moritz recounted the tale to each of the children upon their seventh birthday. Trude heard it from her father as she accompanied him along the Oder River to a visit at the Bergquelle Neurological Hospital. Excitedly and in great detail he told her how on one Ascension Day, which according to Christian tradition is a time of miracles, Simon Freyer's family, with its eleven children, took a coach to

their new home in the town of Marggrabowa; and how all of the passengers fell asleep, and the coachman did as well, and the coach crashed, children flying everywhere; and how four-year-old-Moritz, the youngest of the boys, was found hanging from a tree branch; and how among the pristine egg basket that Mother Zerlina had brought, not a single one had so much as cracked. Regarding the eggs, Trude and her brother Kurt were confident that such a thing defied possibility, while Erich claimed that such a miraculous happenstance could occur, though special circumstances might be necessary. Despite their skepticism, Moritz had made Trude swear to impart the story upon her own children, and they would tell it to theirs, as the story was in itself a talisman for good fortune and success.

Come evening, Moritz and Trude had arrived in Marggrabowa. Zerlina was waiting for them at the front door in a loose muslin-hemmed dress, her face small and concerned. Moritz inquired as to his father's wellbeing and she replied, "He's sleeping right now." They sat at the table and Zerlina served them the roast beef and hot dumplings she had labored over that entire day.

Grunts and gurgles arose from the nearby room. Moritz went to stand at his father's bedside while Trude leaned against the doorjamb. Simon's face was ashen. Moritz sat beside him and took his hand. Simon opened his eyes.

"Theresa didn't come with you," Simon said weakly.

"She needs to look after the house," said Moritz, "and Käthe is still too young, but here is our Trude."

Trude placed her hand in Simon's translucent and somewhat clammy one. Moritz asked, "Are they taking good care of you?"

Simon replied, "I have no complaints."

Moritz said, "Tomorrow I'll have words with your doctor."

"That is completely unnecessary," said Simon. "I want for nothing – pray with me, Moritz."

Moritz took the large yarmulke from the bedside table, wore it, and together they murmured a prayer.

"You haven't prayed in a long while," said Simon.

Moritz, shifting his weight uncomfortably, said, "That isn't important now, Father."

Some men wearing white tallit came into the room and blessed Simon. They seemed to hold him in high esteem. After they left Simon was plunged into an uneasy sleep. Placing his hand on his father's forehead, Moritz started and called to Zerlina. She brought wet towels and Moritz placed them on the heated brow. Simon opened his eyes, which now seemed agitated, begging in the way the eyes of the deathly ill often are, yearning to say the words which for so long escaped them, words of resentment or forgiveness, of all times now, when seemingly nothing could make any difference.

"We'll get the doctor," said Moritz. "Perhaps the medicine is ill-suited."

Simon shook his head and said, "One must have faith," and again muttered fervently, "one must have faith, Moritz."

And Moritz said, "Yes, Father, of course."

Simon suddenly rose up in his bed and stared at his son with small, red eyes, and said, "Who do you pray to, Moritz, one must have someone to pray to."

Moritz said, "Not now, Father, you need to rest." | 9

Simon fell quiet, and his face lit up as he said, "One must pray every day."

Moritz was growing somewhat desperate. Trude approached the bed, leaned close to Simon and said, "Father believes in good living and in family, he prays that people are healthy and happy."

Softly Simon whispered, "Life, Trude, is but a passing shadow, and men are rotting flesh."

Trude attempted to lift his pained spirit and said, "We follow the holidays and eat kosher, Grandfather, and that is also because we love and honor you so."

Simon waved his hand derisively, saying, "That won't do, Trude. Great destruction cometh."

Moritz became genuinely alarmed at that, saying, "Father, do not overexert yourself."

Simon said, "Mortal danger is upon us, I hear the voices, children, here in Marggrabowa they curse the Lord's name and there is no one to fight back, not even a minyan to beg for mercy, sound a prayer before the cataclysm comes." His lips instantly formed a prayer: "Judge me, O Lord, for I have walked in mine integrity; I have trusted also in the Lord, therefore I shall not slide." And his voice echoed yet again, "I will wash mine hands in innocence, so will I compass thine altar, O Lord, that I may publish with the voice of thanksgiving, and tell of all thy wondrous works."

Moritz responded, "Amen," and a darkness came over his proud face.

Trude looked anxiously at her father and gripped his hand. He responded with a light squeeze. Simon's gaze lingered over Trude and he said, "In a year, you shall be wed." Trude backed away slightly, disturbed by this, and he went on, "It will be a lovely wedding, Trude – I will handle the matchmaking in heaven."

"Don't say things like that, Grandfather," said Trude. "You'll get better and come to my wedding in the flesh."

"You must beget children, Trude," Simon said. "Many of them – a man must have many children," and he heaved a great sigh and wept a bit and said, "It was a fine life, I had a fine life." He then rose from his bed despite Moritz's protests and stumbled toward the small, bent front gate, and looked for a moment at the sky, at the people walking past on the cracked tiles, at a carriage driving away. He listened to the sound of bells and the chatter of children and the horses neighing and clacking on the pavement, raised his hands toward the heavens and fell. Moritz ran to him, cradled him in his arms and wiped the froth from his silent lips.

2.

Simon Freyer was buried in the Jewish cemetery of Marggrabowa. The family congregated in Moritz Freyer's large house in Stettin, including seven of his brothers and sisters who haven't yet left for North America or Palestine, to reminisce over Grandfather Simon, whom they had all loved dearly. After that they each returned to their respective business, and his father's prophecy of doom seemed to Moritz as no more than a dying man's folly.

Trude was occupied with her numerous suitors, who had been relentlessly storming the walls of her home, hoping to win her heart and her hand, nearly all of whom hailed from Pomerania Province. Among them were classmates, who suddenly recalled how very fond of her they'd been during their school days. Several of them were the sons of Stettin Jewish community bigwigs. | 11

One of her suitors was even a Christian boy, the son of a highly decorated officer in the Red Order of Nobility, which included among its ranks the Pomeranian elite and close associates of the Kaiser, and of which Moritz was the only Jewish member. Trude's was a subtle beauty – she was not like those glamorous, gorgeous young women. In her heart she knew that it was not her the boys sought, but a way into the prosperous household of Moritz Freyer. She did not outright reject these men but remained timid in their presence and provided them with little conversation. At times she grew morose, and eventually they stopped coming.

More than once, Trude pondered the possibility of traveling to a faraway town, getting herself an education and a profession, and there – where no one knows her, surely she would meet a bright-eyed young man who had never heard of one Doctor Moritz Freyer of Stettin, nor ever visited the colossal house, or wandered the dozen rooms and the dining hall, and the huge kitchen, and the sausage larder and wine cellar in the basement, or peeked into the experiment laboratory that served as an excuse for several medical students to drop in on Trude and attempt to probe her intentions. Together they would walk the streets of an unfamiliar city and sit and laugh with friends at some enchanted plaza. But at this Trude was gripped by a terrible anxiety, and she hurried to put these thoughts out of her mind.

Her two younger brothers, Erich and Kurt, had very little in common with Trude. Kurt had left for Munich, to study art; Erich was apprenticing in a small shop in the Lastadie quarter, near a large laboratory in which Moritz spent his spare time searching for a chickenpox vaccine. The magical strolls the three of them used to take along the streets of Stettin—with Fräulein Sarnow to the statue of Sedina, the goddess of Stettin, on the riverbank, and the weekend trips to Buchenwald—had gone up in the smoke of time.

The year predicted by Grandfather Simon as her wedding year had passed, leaving Trude to deduce that, seeing as this prophecy fell flat, perhaps his prophecy of doom will disappoint as well. She spent her days working as a clerk in the mayor's office – a job given to her by the mayor as a gesture of goodwill toward province physician Moritz Freyer. Sometimes he would even stop by her desk and make small talk with her. On the weekends, Trude would walk along the river with her younger sister Käthe – a clever, opinionated child. With her mother, Theresa, she conversed mostly on everyday matters. Teresa was a somber, heavysset woman who ruled the large household with an iron fist. Trude sensed that her mother was eager for her to make her move, to choose the man she would marry; but she chose the standard Jewish-German course of action and told her daughter nothing of this, explicitly.

When Trude was the community was abuzz with talk of Moritz Freyer's daughter rotting away in her house and is well on her way to officially become an old maid. She now rejected the notion of going to university, since she could not stand the idea of studying with men and women so much younger than she – it seemed to her not only insufferable but unconventional. Käthe grew up and they no longer went on their weekly excursions by the river. In the evenings, after returning from her tedious work at the mayor's office, she dined with Moritz and Theresa. She felt herself growing fat and dull, fading away. In Marggrabowa, standing over the freshly laid tomb of her grandmother, Zerlina, who had been buried beside Simon, her husband of 60 years, Trude wished for the release of death. As the days went by, her prospective suitors grew scarcer, and her fondness for them diminished. Her colleagues at the mayor's office were mostly gaunt old women who either fussed over the details of office etiquette or muttered and grumbled about the visitors and passersby. The department heads were usually men, taciturn and brimming with self-importance. One day, she noticed a young-looking man in the hallway. His name was Gerhard, and though he was not particularly handsome, Trude could not seem to look away from him as he passed by her, carrying mail for distribution and papers for signing. Upon investigation, she found that he had arrived in Stettin less than a month before and replaced the retired mailroom courier.

When Gerhard walked by her desk, he would say pleasant things, such as, "Fräulein Freyer, you've brought a piece of sunlight into the office today," and Trude would giggle self-consciously and lightly admonish him. One day he waited for her in the broad lobby of the town hall and, in a

sort of excited stutter, inquired whether he could walk her home, and immediately added, "My deepest apologies for asking to accompany you."

She said, "No, it's fine, it's perfectly fine."

They started walking, and her way home grew uncharacteristically longer. They went down to the riverbank and sat there.

Gerhard told her, without the haughtiness that usually accompanies young people's telling of their own exploits, how he left his parents' house in Frankfurt am Main and settled in Weimar for a year or so, to soak up the spirit of Goethe and Schiller, but to his disappointment found nothing of the sort in the provincial city. "Not so much as a single poetic word still dwells there," he said. He then spent a year in the bustling Berlin, leaving when he grew tired of the glittering city lights and the constant swarm of subjects surrounding Kaiser Wilhelm. Then he said, "Perhaps Stettin on the riverbank will grant me some solace."

After that they continued to the Freyer estate, on Königstorstraße, where Gerhard bid her good night. Trude felt light as a feather. At dinner Theresa asked her if everything was all right. Trude laughed, and Theresa looked at her, her eyes knowing.

The following days, as well, Gerhard was waiting for her. They walked along the river again, and he recited poetry for her. In the mornings she began dreading her reflection in the mirror in the large bathroom with the polished green tiles, thinking to herself that he would soon leave, soon he will no longer want me – this is nothing but a cruel game. At meals she hardly ate. The hunger made her eyes burst out like deep wells of sorrow, leaving her more beautiful than she had been. Theresa would ask what was wrong with her, but Trude divulged nothing, and Theresa said simply, "I know everything, Trude, just talk to me, I can help."

Trude ran off to work, and that evening, when Gerhard waited for her in the lobby of the town hall, she told him, "I must go home now; please, I ask of you, do not speak to me again." He smiled and went away but did not return to work after that.

Trude spent the following few evenings secreted away in her home, until eventually she came to her senses and come evening, went down to the bank of the Oder. Gerhard was sitting there, his feet nearly touching the water. He glanced at her, and she smiled, and with a small gesture invited him to come sit beside her.

"I'm sorry," said Gerhard. "I went too far."

And Trude said, "All these days I'd been thinking of you," and they were again silent for a while.

"I've been thinking of you for a long while, Trude," he said. "You know this." And she said, "I am neither young nor attractive, not this fairytale princess you seem to imagine."

"All that is meaningless," said Gerhard. "I see into your heart. You are a caged bird, Trude."

Trude felt bitter tears threatening to burst from her. Fear gripped her and she fell silent and wished to leave.

They met again near the river over the following days and gradually their bodies met as well. One time he told her, "Next month I'm leaving this place." Alarmed, she asked where to, and Gerhard said, "Germany suffocates me; rot spreads deep within it."

She asked, "And what of us?"

He said, "Come with me, you'll come with me, Trude."

They were silent for a long while after that, until Trude got up and heavily went home, to toss and turn that entire night in her bed. For a week, she spoke to no one. Several times she walked to the sea and watched from afar as Gerhard looked at the boats in the harbor until one day he was gone, and she sat at her desk and wrote a letter to the medical student Martin Hendelson, who had asked several times for her hand in marriage and for whom her heart felt nothing. In the meantime, Martin had become a young physician and opened a small clinic in Stettin. In her letter Trude inquired whether he would accept her acceptance of his marriage proposal, though it had been three years since last they spoke. She sent the letter in the hands of their regular coachman, Herr Holzfuss, who had been happy to carry out this mission.

The following evening, the young physician Martin Hendelson appeared in the home of Doctor Moritz Freyer. He was dressed impeccably, and his goateed face was tense. He stared at length at Trude, who stood unmoving in the lobby, and then walked over to Moritz, whose eyes glistened with the wisdom of age, and asked for the hand of his daughter, Fräulein Gertrude Freyer, in marriage. The two of them withdrew to Moritz' study, and when they emerged from it both shared an air of deep satisfaction. Martin approached Trude and kissed her right cheek, then her left, exchanged some pleasant words with her, and left.

Three months later, the town of Stettin celebrated the wedding of Chief Physician of Pomerania Province Doctor Moritz Freyer's daughter – who had already started down the old-maid path – with Martin Hendelson, also of Stettin, of whom it was said that his strange ways and sharp tongue would put him in the grave wifeless and without sons to say kaddish over him, which did not bother him in the slightest, as the man ate pork as if to spite, and shunned the synagogue even on Yom Kippur. At Moritz' explicit behest the wedding took place at the Great Stettin Synagogue, and was conducted by the community rabbi, Heiman Vogelstein.

Many of Stettin's aristocracy had been in attendance: Community leaders, the members of the Red Order of Nobility in their finest uniforms – the ones they would wear upon meeting the Kaiser and his representatives – as well as guests hailing from hospitals and clinics all over Pomerania. The president of Stettin made a brief appearance and was received with much reverence and veneration. Kurt came from faraway Munich, where he had been studying art history. He now had the appearance of an educated young man, with a small goatee trimmed in the same style as Martin's, and he observed the guests with great attentiveness and fascination. Erich came all the way from Antwerpen, where he had been learning French, so that he could assimilate more easily into the culture and commerce of Europe. The guests dined on delicacies diligently prepared by the resourceful Theresa. Moritz strolled among the guests, greeting and blessing, while Martin seemed somewhat troubled and surly, avoiding nearly all conversation. Barely noticeable under her glittering white dress and bridal bonnet decorated with white flowers, Trude's sad eyes now blurred, after long years of heartache, with the mist of new hope.

3.

The Great War, which had been declared with great pomp in the spring of 1914, soon became a vile, fruitless ordeal. Kaiser Wilhelm deflated his puffed-up chest and holed up in a series of well-dug headquarters, attempting to solve one bad strategy with another. Doctor Moritz Freyer, a peaceful man by nature, had always treated Wilhelm's war habits as he would the mischief of a child playing with a new toy – but now the game had gotten out of hand, and Moritz grew solemn and dour, stooped in stature, and his gleaming copper cheeks yellowed.

The wounded, those who could no longer contribute to the war effort, were flowing into Stettin from the front. They filled the recovery homes and the Bergquelle Neurological Hospital. Moritz came to call and found men staring at ceilings, terrified, shrieking in their sleep. The postmen carried in their satchels letters from the Ministry of War informing of a son who heroically fell during a crucial battle, a husband who had vanished or was buried in a mass grave in faraway earth, or interred somewhere and marked with an austere cross, nameless, dateless.

Moritz would return agitated from the hospitals. He no longer went out in the evenings, instead opting to remain in his study, reading medical books and making notes. The local theater was no longer operating at any rate; neither was the concert hall. The Red Order of Nobility dispersed. Some of the younger members left proudly for the front and returned with limbs missing or unsound of mind. The elderly remained in the city, gradually graying, their jutting mustaches wilting.

The sickness progressed in a slow crawl through Moritz' body. Theresa still directed the house on Königstorstraße with a firm hand, but it had become nearly vacant, most of its rooms uninhabited, and even Fräulein Sarnow was reluctantly sent away, having been compensated

handsomely and provided with glowing recommendations. Nearly every day Theresa sat down to write to some family member or other, many of whom had scattered across Germany or left for America or Palestine.

Every Tuesday afternoon, Theresa would visit her daughter Trude at her house on Lindenstraße. There they would sit and sip afternoon tea and discuss current affairs and family matters. An envelope sent from the northern town of Flensburg contained small photographs of the children of Anna and Kurt Freyer – Lotte who was three already, and one-year-old Minchen dressed like a little angel, and Anna with her warm, pleasant face, holding them next to Kurt and his pointed goatee. Trude's eyes shone slightly when she looked at the photographs, and Theresa looked at her daughter and shook her head.

"It's no good, Mutti," said Trude, sensing her mother's gaze. "We've tried everything, I honestly don't understand."

Theresa asked, "It's Martin, isn't it, Trude?"

"We spoke to Doctor Gershon," said Trude. "He says it's a mystery, that there's a great deal of mystery in matters such as this."

"I don't believe in such mysteries," said Theresa. "Everything has an explanation." Trude was perhaps about to reply, but Martin came in, as he did every day at six o'clock sharp, after the last patient had left. He bowed slightly toward Theresa and sat down silently.

Martin, who was not particularly young and prone to all manner of illness, was not drafted to the army. He opened a small ENT clinic in their apartment. It seemed that, during the war more than ever, the clinic was always brimming with old men and women with difficulty breathing, all waiting patiently and inertly for their appointment. At noon he would nap briefly, then return to the clinic. After supper he would meticulously read the local newspaper, which provided news from the front along with commentary pieces. Then he would flip through large books of sheet music, occasionally playing several notes on the piano, or humming along. More than anything, Martin enjoyed playing parts from Wagner's *Der Ring des Nibelungen*. When the mood struck him, he would accompany his playing with poignant, exhilarated singing.

All his life, Martin Hendelson played Wagner. He read his congested, meandering books, and went to every lecture on Wagner given at the local music club. He went to listen to Wagner's concerts in the Stettin opera house, as well, though he barely listened to other composers, apart from Beethoven, whom he considered "The spring from which the fountain erupts." Trude shared but little of Martin's love, and he would make a point to share with her his mockery of others.

"Mozart," he would say, "such sweet, sentimental, vernal beauty, the music of a plump Austrian metropolitan, but we are after all of the forest, and this Mozart, even when he goes into the forest he finds there dainty ministering angels making love in a lush drawing room amid glasses of white wine and foie gras."

The royal symphony from Hamburg came to Stettin once, part of a concert tour in East Pomerania, playing Bach concertos and chorales. Martin sat grimacing in the concert hall and during the break left and walked back home, leaving a mortified Trude in his wake. She returned home to find him pounding the keys.

"This time, Martin, you truly went too far," she said to him, angrily.

"Ach, please," said Martin, "the whole world kneels in front of this spoiled servant of the church."

"But how can you say such a thing, Martin!" said Trude. "Bach is divine!"

"Precisely!" fumed Martin. "Precisely! God, God everywhere! you all run to him, to this so-called god, make petty arguments of who owns him, the Jews or the Christians, of whether he sired a bastard or did not."

"And what does any of this have to do with music?" said Trude. "Your Wagner has a dire beauty and Bach has a divine beauty, and you pit them against each other in some absurd competition."

Martin stopped playing for a while, retreating into his thoughts. Eventually he gazed at her at length and said, "Wagner screams from the bowels of my soul. I scream through him. It is the

only way I know to scream, my precious Gertrude.” She shuddered, because he so rarely called her that, ‘my precious Gertrude,’ and stroked his hair. Then they quietly made love, and he rolled over and fell asleep, moaning in his sleep, as was his way.

The funeral of Moritz Freyer, on a summer day in 1916, was attended by a small gathering of mourners. The mayor and some state representatives appeared at the Freyer estate to pay their respects, after which life quickly returned to its usual course.

The Great War lasted another two years, then ended as well. The men returned defeated from the front, and the women received them with warm embraces and open legs. In the larger cities the music halls reopened, and the theaters dazzled audiences with new plays. The cabarets were overflowing. It was a time for new dreams.

The large and mostly empty Freyer estate, parts of which had been rented out as clinics, had once again been permeated by children. The next generation of Freyers had arrived upon Grandmother Theresa and Aunt Trude and Uncle Martin. Anna and Kurt came from Berlin with their daughters, Lotte and Minchen and little Susi, and they would go with Trude to the town square to buy groceries for the family lunch, which had regained something of its former glory, in the finest Freyer years. Trude would take them to walk along the Oder, where she told them, as dictated by family tradition, The Legend of the Egg Miracle – adding and subtracting details as she saw fit, inwardly snickering over the liberties she had taken.

When the girls came to visit the Hendelson home, Trude would bring out the collection of toys, games and dolls she had kept just for them. The living room carpets were filled with miniature painted wooden buildings, processions of soldiers and dolls, small musical instruments – xylophone and triangle and drums, and the shrieks of children. At 6 p.m. Martin would leave his clinic, which was once again attended by men, women and children, and his reputation spread throughout the region as a meticulous physician, who always imparts the accurate medical truth – even when said truth is unpleasant to its receiver. He would linger in the rumpus room, examine the girls with a light, amused frown, and say, “Well – and the earth was Tohuwabohu.”

He would chuckle to himself and then traverse the room with extreme caution, entered his study and pound the piano keys. Once he started playing, the three girls would cluster up against the door of the study, listening.

“What are you playing, Uncle Martin?” Minchen was first to dare ask.

“The compositions of the wonderful Richard Wagner. Do you like it?” Martin replied, awkwardly.

“Not very much,” Lotte admitted. “It’s a bit scary.”

“Ah,” said Martin. “But ‘Hansel and Gretel’ is also a bit scary, isn’t it, Lotte? But still – you like it, don’t you? Do you like ‘Hansel and Gretel’?”

“I like it a lot,” said Lotte. “But that’s only a children’s story, only a fairytale.”

“Wagner writes fairytales, too,” Martin explained. “Only, he writes them in music – usually it’s older children who enjoy it, like you’ll be some day.”

“But you and Aunt Trude don’t even have little children,” Susi piped up, as the mortified Lotte and Minchen scrambled – and failed – to silence her, “so how will you ever have older children?”

“Well, Suschen, I’m afraid that probably won’t be happening,” said Martin, “and I suppose you find that unfortunate, as well, because otherwise you’d have someone to play with when you come to visit.”

“So why not make some little children, like us?” Susi persisted.

A dark spark of mischief glinted in Martin’s eye. He turned away from the piano, ponderously stroked his goatee, and said, “Well, it is a long story, too long for so late an hour.” The girls widened curious eyes at him, and he cleared his throat and added, “Indeed, it is also a fairy tale of sorts.” The girls were now utterly spellbound, even daring to come closer and sit at his feet. Martin furrowed his brow and said, “Once upon a time, there was a city by the name of Stettin, on the famous Oder River.

“What kind of fairy tale is this, Uncle Martin,” Minchen protested. “There really is a city named Stettin, and it’s really on the Oder, and we are here right now as we speak, all of us, in Stettin.”

“Wait till the end – or I’ll pluck off your head!” Martin rhymed playfully. “Well, is this town of Stettin, many children were born – too many. The city was packed full of children – there was no more room in the schools, or in the playgrounds, or on the ships in the river, and even the forest paths were so crowded and full of children that there was literally no room to step in!”

“That *is* a fairytale,” Lottchen declared. “The forest is room enough for all the children in the world, even if every child from China comes to take a stroll.”

“One day, the head of the kingdom, Kaiser Wilhelm himself, came to Stettin,” Martin carried on with the tale, himself wondering where it would lead him. “‘It is time,’ he said, ‘to solve this famous Stettin problem, or else other towns will follow this dangerous path, and that will be very unfortunate indeed. There will be so many children in Germany, that no one would be able to move at all – how, then, will we go to war if necessary? How will we work the factories? Who will grow the apples and wheat to feed all these children? From now on,’ decreed the Kaiser, ‘there will be no more children in Stettin! It will be a special city – a childless city. Anyone who dares parent children regardless, will be unceremoniously tossed into the Oder, and their children will be sold to slavery!’”

The girls listened, mouths agape. Martin, appearing slightly discomfited by the dark turn the story had taken, cleared his throat once again and said, “Well, then, this is why everyone who lives in Stettin, like your Auntie Trude and your Uncle Martin, is childless – by royal decree. One cannot go against the Kaiser, now could he? And now, girls, I require some peace and quiet.”

The girls scattered to their affairs, pensive. Martin raised his head and saw Trude, who had been standing by the door all that while, looking at him intently. Martin returned to pound the piano keys and thunderous notes filled the house.

4.

In the spring of 1924, Erich and Hilde visited Stettin with their daughter, Yvonne, a cheerful, golden-haired toddler. She had just turned three and immediately enchanted everyone who saw her. Even Martin went out of his way to read fairytales to her from the books that were slowly piling in the Hendelson home.

Erich frolicked through the streets of Stettin like a boy in love. He and Trude rediscovered the riverside path they used to walk with Fräulein Sarnow. The Great War had scored deep gashes in the people, but left the streets untouched, and now cars were driving through them, procured by the town’s wealthy upper class. The gates of Stettin stood true. New ships were still built and launched from the Oder shipyard, though now the launching ceremonies were modest affairs, with none of the military and orchestral splendor which accompanied them during Wilhelm’s heyday.

Erich and his little family lived with Theresa, who was growing ever more tired, though she was not yet seventy years old. Mostly she would sit around the house and reread her favorite books, organize and sort the gold and silver cutlery, the candlesticks, the embroidered pillows and the pearls, necklaces and earrings and rings, and even help the housekeeper scrub the heavy wooden furniture that age seemed only to improve.

Now, lounging with Hilde and Erich, she was saying, “This is what’s left; who remembers us? What do we leave in this world? Things.”

“Come now, Mother,” said Erich. “Look – Father wrote at least one notable book on the use of animals in human vaccination. Surely it will serve many generations to come.”

“Tomorrow someone will invent a better vaccination,” sighed Teresa. “Who will remember Moritz Freyer? Only these will remain,” she added, gesturing at the large library whose shelves carried the ranks of black books, thick of binding, the complete works of Goethe, the complete works of Schiller, Hölderlin, Heinrich Heine. “And what became of the Torah books that your

grandfather wrote with his very hands in the Marggrabowa Synagogue, now that there is no one left to pray there, and who knows what sort of goy barbarian is using them as kindling?"

"Your Moritz left many behind who owe him their life," said Hilde, "and the city archive keeps a record of his works, and surely they will name a hospital after him. I am truly heartbroken that I never had the chance to meet him. We are what we give to our fellow men – it is our only remnant."

"Ach, that's nice. That's very nice, what you said," said Theresa, and her eyes were soft and wet. She blew her nose. Erich became uncomfortable, as he often did, and went to sit by Yvonne, who fell asleep in his childhood crib, clutching a frayed old teddy bear.

"Erich, why don't we go for a stroll?" Hilde suggested. "Get some air."

The evening Stettin air smelled of spring. Winds from the ocean and the river and surrounding valleys converged to fill their lungs with the scents of the forest. Hilde suddenly embraced Erich, as she hadn't in quite some time, saying, "Ach, Erich, I'm in love with this Stettin of yours! This is a city made for children – these streets, and the river, not like that silly Spree back in Berlin, and Yvonne is doing so well here." Her elation infected Erich, as well, and he took her into the Kuhberg wine cellar.

Several groups of burly young men were sitting there, singing rowdily and guzzling beer by the mugful like farmers, boastful and desperate, and Erich recoiled momentarily, nearly tripping over the stairs, but quickly composed himself and said, "Well then, here is where we founded the October Thirteenth Association, and in two years we'll be meeting here to mark our twentieth anniversary, and anyone who dares miss it will be held fully accountable!"

Hilde and Erich wandered the streets of Stettin. They found themselves on Lindenstraße and knocked on the Hendelson's door. Trude opened it, and a glint of cheerfulness ignited in her sad eyes and she called out into the apartment, "Martin, dear, look who's come to visit."

Martin came out from one of the rooms, appearing slightly troubled and bewildered, saying, "Well, how nice, how very nice indeed, please won't you come in, well this is most unusual, we've only just finished dinner, but this is a perfect time, a perfectly fitting time for a little glass of schnapps and some of Trude's magnificent butter cakes, and a cup of frankincense tea, yes? Won't you say, Trude?"

And she said, "Settle down, Martin, and I'll take care of everything."

Hilde spoke at length of the beauty and wonder of Stettin in spring, and Martin, who had poured several consecutive glasses of schnapps down his throat, muttered something about spring being nothing but a transient fantasy, and Hilde said, "What's so wrong with a bit of fantasy?"

Trude, who was slightly apprehensive about the bluntly argumentative nature of her 'exemplar' – as she would call Martin during occasional moments of grace, asked about Berlin which is the subject of so many newspaper articles.

And Erich said, "Really, Trude, you simply must come and visit Berlin, there is so much to do there." And after that, more silence.

"Why don't you play something for us, Martin," said Hilde, "I hear that you are a superb pianist."

Martin, who by this point had become quite inebriated, replied, "As you wish, madam – and what shall I play for you, ladies and gentlemen?"

Hilde said, "On a spring day such as this – only Vivaldi will do!"

Martin's face grew dark, and Trude could sense the oncoming storm, but was relieved when he did not raise his voice but hoarsely replied, "Vi... Vivaldi, here you have it, a flower blossoms in a rose garden, a butterfly flutters in a beam of sunlight, and poof, it is gone."

Embarrassed, Hilde amended, "Only if you wish to, of course, Martin..."

Martin raised his voice; Trude's dread rose along with it. "If I wish?" he giggled, an eerie sort of sound, "If I wish? Perhaps the lady wishes that I chirp some Meyerbeer for her? An operetta for demure Parisian mademoiselles? Candy music? Or perhaps, if I could be so bold, Ro... Rossini? Fun little quintets?" Martin was coming threateningly close to Hilde, now, saying, "Or, perhaps, he-he, Tchaikovsky? The very one? A fistful of honey?!"

"This is unnecessary, Martin." Erich spoke, annoyed. "You, as far as you're concerned, only what you love exists, just one obsession alone, and nothing else matters."

"Correct!" Martin replied, "I don't flutter about from one flower to the next, a bit of Zionismus pollen, a little Socialismus nectar, not I, my dear Erich!"

"I do nothing of the sort," Erich protested, "but study every subject profoundly – nothing that is human can be foreign to me."

"Clichés, Erich, clichés!" Martin maintained his assault under the combined astonishment of both Hilde and Trude, "The Jew's final refuge, and who better to employ it than the long-distance Zionist Erich Freyer, who set out to travel to Palestine with Doctor Herzl and Doctor Landau, and on the way found a blushing *shiksa* bride!"

Erich grew exceedingly pale, and Hilde feared he might collapse to the floor. Trude desperately tried to herd Martin into the bedroom, her arms flailing about, but he was flushed and livid and sweating profusely. Intently he marched toward the piano and began to slam the opening notes of *Tannhäuser*, crying out, "Here is your Vivaldi, here is your Tchaikovsky!" Erich stared at him with mounting amazement as Martin whispered into the music, as if orating some ancient spoken poetry, "And what are you now, my wandering brother-in-law? Where do you sojourn today, second-rate socialist, book peddler, and tomorrow, who knows? Maybe some petty bourgeois in New York, a Manhattan furrier? The Jew does not touch the soul of things, he floats above them, the Jew is unaffected by the mythical power of music, and the two of you, Erich and Kurt, the brain and the heart, David and Jonathan, you are the Jew, because of you we are vomited, expelled, spat on, and what do you say to that! What do you say!"

Silence fell. Hilde stared at Martin, horrified. Trude dropped her head into her hands.

Erich, whose nearly bald head sported an array of bulging veins which now threatened to burst, faced the slightly taller Martin, shook his head and quietly said, "I look for answers, Martin, I haven't sold my soul to anyone, I go to where I see good people working for the benefit of mankind, and that is where I found Hilde, and if the Zionismus will not permit me to marry a good woman such as her, then the Zionismus can go to hell, yes, Martin?"

"Yes, well," Martin muttered, "Humanismus, Socialismus, good people all around, the new face of Judeo-Christianity, you've made man into a god but still that pale mantle remains, words without spirit, a beautiful house founded on lies, yes, beauty for beauty's sake, morality for morality's sake, and where is the root? The root of the soul, where? It is in the darkness, that is where it dwells, but you search only in the light because it is comfortable, it is pretty in the light, but there is nothing, Erich, nothing there, eh? Only fanciful ideals, fantasies, Hilde, fantasies."

"But this is preposterous," said Erich, and his customarily tentative, hesitant voice grew sure and clear, "this talk of the dark root of the soul is nothing but your fantasy, Martin. That darkness holds nothing but decay and death." Martin stared at him, staggered. "I hear this nonsense of dark roots from people you never want to meet, Martin," Erich said, distraught, "yes, yes, vulgar, boorish people. They fill Berlin, like rats in a colossal burrow, and for some reason wherever they are Wagner is never far behind. Your Wagner makes my stomach turn. Yes, Martin, great music – but poisoned, evil."

"Wagner is Germany," said Martin. "Take Wagner away and Germany is gone, faded away, a soulless abomination."

Erich looked at Martin once again, briefly, then turned toward the door. "We're leaving now, Hilde," he said. "Let's go to Yvonne. I long to see her face. I'm so sorry, Trude. We should not have come like this, unannounced."

Trude stood there, eyes moist. Martin seemed dazed and dumbfounded, and Trude led him to his bed. In the morning he woke up, horrified, and ran breathless and gasping down the streets of Stettin to the Freyer home, wishing to apologize, but Erich and Hilde and their little Yvonne were already at the train station, headed for Berlin.

5.

The years went by, Theresa passed away, and of the proud Freyer family, the heart of Stettin's Jewish community, only the childless Trude and Martin Hendelson remained. Germany had suffered quite the ordeal, and nearly half of its Jews packed their bags and scattered to Europe, America, and Palestine – among these were Trude's sister and two brothers, along with their children. The effects of the new regime were evident in Stettin, but Martin and Trude's life seemed unaffected by the changes, and the possibility of following their kin never seemed to come up during the brief, fragmented conversations they had over their evening meals.

In the summer of 1933, as they did every year, Trude and Martin traveled to the Wagner festival at the Bayreuth Festspielhaus. The annual voyage to the festival was facilitated by extensive preparations which had begun back in winter, when they received the program and mail-ordered their tickets, as well as a room in their favorite guesthouse. This year, the entire duration of the festival was dedicated to Martin's favorite piece – *Der Ring des Nibelungen*.

They spent nearly an entire day on the train, and they had to switch in Berlin and Leipzig before finally arriving at small, rural Bayreuth, nestled in woods.

Each summer the sleepy streets of Bayreuth awakened for the Wagner festival, celebrated by admirers and enthusiasts from all over Europe. This year, however, the bustle was notably greater. Every government building displayed flags and placards bearing swastikas, and the image of Kanzler Hitler glared from every display window. Groups of men in brown uniforms marched through the streets, carrying flags and slogans denigrating the Jews and the enemies of Germany. Martin looked at them, disgusted, and said to Trude, "Playing music for these people is like feeding liverwurst to a pig."

Trude grasped his hand and he patted her arm and she said, "But Martin, you've read what they've been writing there."

"Poppycock," stated Martin. "Nothing but nonsense and the folly of adolescence."

It was late at night when Martin and Trude arrived at their guesthouse. The clerk at the reception looked at them intently as he wrote down their names. They stopped by their room and then found a small café, nearly empty, where they nibbled on a ham sandwich and took some solace in coffee and whipped cream before heading back and falling silently to sleep.

The next morning Martin and Trude made their annual pilgrimage to Wagner's grave, which was uncharacteristically deserted – perhaps because the other festival attendees were still sleeping off last night's drink. They ate a hearty breakfast and prepared themselves for the wonderful voyage, which was to start in the afternoon and end only toward midnight. At the foot of the stairs a tightly packed mob clustered, some dressed in eveningwear and others in those brown uniforms, and from the heart of the circle a shriek rose which grew louder, deafening, until there was no longer a doubt in Trude's mind that in there, amid that tight ring, stood that man whose name was never uttered in the Hendelson house. The man whose name was shunned like an ancient sorcerer's curse, whose voice was cause only to turn off the radio; from his mouth the German that Trude loves so much had lost the murmur of waves and the whisper of the forest until all that remained was the clanking of axes against steel and the hard cracks of explosions. Now she could see his arm rising and falling. In between shrieks, the crowd exploded into rhythmic cheers.

Martin edged closer, Trude remained behind. For a moment it seemed as though he was engulfed by the crowd, then Trude looked, horrified, as several people surrounded him and expelled him from their space, shoving and pushing until he lost his footing and fell to the ground. A tight ring of people, shrill with profanities and laughter, encircled his prone form. Trude ran to him, her face ashen, and crouched beside him. He looked at her, agitated. A thin stream of blood flowed from his forehead and she took a small handkerchief from her purse and dabbed at it. Somewhat unsteadily, Martin rose to his feet.

"What did they want from you, Martin?" Trude asked.

"I tripped," said Martin. "Bad luck, nothing more."

"But, Martin," said Trude, "this is inconceivable."

Martin shot her a hard look, then turned to face forward. His graying goatee trembled when they walked into the concert hall, which hummed with the last whispers and murmurs before the curtain rose, final coughs, the racket of instruments. Trude's heart was no longer with the music that soon filled the hall. Again and again she glanced at Martin, who sat there, his face expressionless, even during the intermission, as though he had been paralyzed.

The next morning, they took the first train to Leipzig. As the train hurtled through the woods between Berlin and Stettin, Trude said, "Martin, we cannot stay. We'll sell the apartment before the month is out, go to Amsterdam, to Kurt and Erich, or to America. Or London, perhaps."

Martin glanced sharply at her, then muttered, "Well, yes, certainly," folded his pale hands together and looked at his wristwatch. Evening had fallen by the time the train crossed the Oder River.

Trude began making arrangements for their departure. She wrote letters to her brother Kurt in Amsterdam, and to her brother Erich, whose wife Hilde had in the meanwhile separated from and returned to Germany, and to her little sister Käthe, who had just left Berlin along with her husband Albert and their children Rachel and Gabriel, to Palestine. She wrote her beloved cousin Leo Freyer in Brooklyn, and even purchased a small ad in the local paper, where she had put up for sale 'A cozy flat, with option for private office and nursery, 29 Lindenstraße.' Strangers began turning up at the Hendelson home, making inquiries and taking interest, and never failing to be confounded by the owner, who vanished into one of the rooms instead of conducting the tour.

After a great deal of inconvenience and many potential deals that fell through, one Brukenthal, Esq. informed Trude that he had taken an interest in the house, "Which perfectly suits his needs both as a family man whose sons have set out on their own paths, and as a lawyer who requires an office." Overwhelmed by enthusiasm and hope, Trude told Martin about the buyer, saying that this time, he would unfortunately have no choice but to come at the agreed upon time to sign the sales contract. Once they receive payment, they could travel to Amsterdam, and from there plan their next steps.

Martin stared at her, unseeing, and left. For hours he wandered the streets of Stettin. Patients who arrived at the clinic found the door closed, and the lawyer Brukenthal also noticed the distinct absence of the house owner. After spending an interminable hour nibbling on butter cookies with the deeply embarrassed Frau Gertrude Hendelson, who had assured him several times that any minute now her husband should be back from work "which for some reason is taking so long today," he got up and left, not without adding a perfunctory insult.

Trude felt the blood draining from her body and her throat becoming a crucible of tears and her chest filling with lurching sobs, but she could not cry. She stood by the window instead. From the darkness, shifting in and out of the quivering light of the gas lamps, Martin returned to the house, sat down, looked at her, and then got up and went to the piano, but Trude stood in his way.

"Enough, Martin," she said, "say something, now, you cannot stay quiet all the time, I won't bare this silence any longer."

He sat down in front of the piano, but she was there shutting the piano's lid and saying, "Stop that, stop running away," and he burst into laughter, a loud, shrieking laughter.

"Come now," he said, laughing, "stop running away, really, stop running, well, isn't this just delightful, this hardly bears listening, Trude."

"What the hell is wrong with you, then!" Trude yelled, "What is it you want, just speak plainly."

Martin got up from the piano and began pacing back and forth across the room, frantically shaking his head and striking his beard, "Indeed someone here is running, Trude," he spoke in precise, clipped sentences, "but who is running? Am I running? I am not running anywhere, Trude. And you, it is you who are running, up and off you go, like all the pale Freyers talking themselves to death, fleeing alongside them from a passing shadow, from a mob of loud thugs, they run from the barbarians and thus grant the barbarians their victory! Victorious is the barbarian at last, over the Jew and the German in one fell swoop! And I, Trude, I am not going

anywhere, and when the screeching Austrian will be wiped from the face of the earth I will be here to spit on his grave.”

Trude was stunned into stillness, while Martin appeared reborn. He roamed the house noisily consuming a sweet roll with cream cheese. When he noticed her sitting, his eyes softened. He sat facing her, placing a long, translucent hand on hers, and said, “My precious Gertrude, everything will be all right. These challenging times are bound to pass, and Kurt and Erich will come back, their very souls are rooted here. There is nowhere else they will find their books, their hidden gems, their museums, their music. They are running from themselves, Trude, and your Käthe, she will flee Palestine screaming bloody murder once the first Arab charges at her on camelback.”

Trude raised her head, and Martin saw moisture and misery in her eyes. “But I’m afraid, Martin,” she said, “so afraid. They burned Erich and Hilde’s books at the Opernplatz in Berlin, and they’ve been drawing swastikas on the storefronts, and here in Stettin, well – it must get here at some point, and what will we do then? I’m already afraid to go to the market, even to take an evening stroll! And what will we do when they shut down your clinic?”

“There wouldn’t be a decent lawyer or doctor left in the entire town,” said Martin, sucking his teeth, and Trude thought she heard a measure of contempt. “Even these imbecile Stettinites cannot afford that.”

Trude did not reply. They went to bed and made love slowly, as if it was their last act of love, and Trude felt the descent of old age which for so long had been waiting on her doorstep and cried that entire night tearlessly.

6.

It was a winter day in 1935. The skies bombarded the streets with hard salvos of rain, and the cracked pavement was blacker and muddier than ever. Trude went out to the curb, just for a moment, to check the mailbox. In it she found some letters from the bank and the medical insurance company, as well as a thin booklet sent from the Pomerania Ministry of Employment titled “Stettin Businesses by Occupation.” And beneath that, in smaller print, the subtitle: “Do not accept any treatment, consultation or craft from these businesses.” She leafed through it, skipping to page 45. The category “Free Professions” consisted of five names, and the category “Chemists” of another three, and the architect Siegfried Pavel from No. 8 Friedrich-Karl-Straße, whom she knew from school. Her eyes spotted the title “Physicians”, which was a larger category.

Trude traced her finger down the list of names, all of them familiar. Adler, A., an ENT specialist from No. 2 Hohenzollern square. Aaronheim, L., A general practitioner from No. 9 Bismarckstraße. She went through the names quickly, her heart pounding. Ehrlich, P., A nurse. Gershon, A., an obstetrician whose name pierced her heart. She used to frequent his clinic on 29 Parade Square, back when she was still trying to get pregnant, and he knew her deepest secrets. Hammerschmidt, H., a general practitioner, No. 73 Oberstraße. For a brief moment, a mist of hope shielded her eyes – but there the letters were, yelling out from the page, Hendelson, M., general practitioner, 29 Lindenstraße. She read it and reread it, the small booklet burning in her hands.

Trude ran to the clinic where Martin was examining a thick-necked, paunchy man. She stormed in and smacked the booklet down in front of him. Martin glanced at her and said nothing. He returned to his patient and waved her away. When the man left, Martin walked slowly to the empty waiting room. For a moment, he was so old and so green. He sat on a large floral-patterned sofa in the middle of the room, and Trude thought that he would expire right then and there. She tried to say something, but he silenced her with a gesture, went to his bed, and did not leave it for a week.

Dr. Erich Weltmann, 43 Kaiser-Wilhelm-straße, an internal physician who would occasionally come to visit, and whose name was the very last on the list, was summoned urgently to examine Martin. He determined that Martin was suffering from tension and anxiety “on levels far exceeding the ordinary, which can affect and possibly harm the immune system,” and

recommended that Martin avoid all activity until further notice, especially seeing as he was 62 and close to retiring age. The doctor supposed that “he wouldn’t exactly be drowning in patients, even if he was fit as a fiddle,” said Dr. Weltmann, laughing drily.

After a week, Martin rose from his sickbed and even ventured out on morning strolls again. He was visited, furtively, by the occasional Jewish patient, who apologized in advance for not being able to pay his full fee. He even returned to the piano, to his Wagner. Now that he had time to spare, he returned to the colossal sheet music books, their bindings adorned with drawings of angels, musical notes and ornately illuminated letters. He would play and play, book after book he would play, and between books he would mutter to himself with an odd sort of exasperation, “They took him to themselves, the barbarians, but I’ll guard him, the geniuses must be guarded, so they don’t fall into the hands of the ignorant and the vulgar,” thus he would drone.

Trude would comment from the other room, “Martin, if you’ve something to tell me, please speak up so that I can hear.”

But again and again he would be back at it, after a while, muttering, “They took Germany, and they bought it cheap for such a treasured gift.” And he would make little speeches at the piano about “the squealing Austrian with the dive-bar-German,” talking and playing to himself. Even when he sat with Trude for dinner he would mumble as if no one was listening, until she would snap at him and he would fall silent like a child scolded. On the date of the festival in Bayreuth he paced the apartment like a caged lion for a full day and then fell ill, burning with fever. Dr. Weltmann came at once and prescribed sedatives.

Trude wrote to her family in Palestine and they sent back concerned, sad replies. Whenever a letter came, she would read it to Martin over dinner, and he would listen attentively, making his comments. He was not fond of Käthe, saying that she was “a bigger Zionist than Herzl.” Erich was staying at Käthe and Albert’s house, in Kiryat Bialik in northern Palestine – when his name came up, Martin would only say that Erich was “a wretched man.” He felt sorry for Anna, wondering “what can she possibly have to do in that desert, this girl who never learned a trade, perhaps her brother can build her a bank there.” For it was known that Otto Heymann, Anna’s brother, was a highly successful banker who worked all over Germany, and even the Nazi leadership sought his financial counsel.

In one of the letters from Kurt, he’d told them how he hopes to become involved in the profound academic research of Israeli art. Martin chuckled and said, “Well, finally he can become a museum administrator – the only trouble is that he’s arrived at a country where no one has heard of such an institution!”

Trude, who usually avoided offering a response to Martin’s comments, could not help herself this time and said, “And you, you never wanted this family, but it is your family, the Freyer family, and it is nothing to be ashamed of.”

“Oh yes, proud people,” said Martin, “but not always justifiably, Trude – not always justifiably.”

“If things would have been different, Kurt could have been a great scholar here in Germany, respectable, renowned,” Trude protested.

Martin said, “I suppose we’ll never know, now, will we?”

Finally Trude erupted at him, “Then why the hell did you marry into this family that you so despise?!”

He sneered. “Well, nothing to do about that now, is there, a bit late to discuss it at this point.”

Trude said, “You wanted to be close to Doctor Moritz Freyer, didn’t you, to be well-connected, the young doctor caught the scent of a fat, juicy bone.” Martin flushed a deep red and retired to his piano, pounding the keys with a vengeance until she came to him, contrite, and again the coughing and the frailty overtook him.

They usually weren’t inclined to talk much, and so the days passed slowly. Trude would occasionally bring up the notion of leaving Germany, always indirectly, telling him incidentally about “Bruno and Rosa Fischer, who had just left thanks to their daughter Carolina, who found a husband in America.” And once she spoke at length of a friend her age from Berlin, who “despite

having no children received a scholarship at a London research institute, securing him an entry visa."

Martin listened absently and suddenly spoke, "And why tell me all this, Trude, when it is nothing but idle talk, when different men have different fates and there is nothing else to it?"

"Perhaps something can still be done, Martin," said Trude.

"And for what," he said, though no longer livid as he was in the past. "What else could happen to us which has not already happened, Trude? And after all we are here, in Stettin, at the heart of the kingdom, eating three meals a day, are things really that terrible?"

"But all these rules, all these restrictions, we barely have a life," said Trude.

"This is our life thus far," stated Martin. "There wouldn't be much to the lives of old relics like us even if we were heirs to the House of Habsburg, and if we are to spend the rest of it imprisoned I prefer a prison on the bank of the Oder rather than be exiled to the east, don't you? After all, the eastern sun would eradicate you within the week."

Trude giggled lightly and smacked his beard playfully, but the sadness never left her eyes, not since that cursed morning in the winter of 1935, when someone placed the booklet in their mailbox listing the boycotted Jewish businesses of Stettin, or perhaps since that damned festival at Bayreuth in the summer of 1933, or perhaps since Martin's hard words drove away Erich and Hilde, or perhaps since the death of her beloved father during the Great War, and perhaps that sadness had always remained there, with her, all her life.

July 18, 1939, Trude sent a letter to her family in Palestine, in sharp, scrambling letters, chasing one another as if fleeing the armored footfalls of soldiers.

16.7.39

My Beloved Dears!

Your last letter, and its heartwarming abundance of good wishes, brought me immense joy. Thank you for all of it. When I read your words, I forget about the distance, and feel unconditionally close to you. But after that, when I feel it so strongly, the separation is that much more painful. It hurts that now, when I so urgently need one of my siblings here with me, like I've never needed you before, I can't reach any of you. I know it is hard for you, as well, having no option to stand by my side.

But fate halts for no one! Who would have thought I would ever present such a problem to the family? Now it is my life you discuss on your strolls, and you will unavoidably reach the same conclusion as I have: It is hopeless. The route to emigration is fraught with obstacles, especially for us. Even if we could get somewhere, there is still the problem of income, livelihood. We would always need people to vouch for us, and where would we find those?

Moreover, we are old, and can only live someplace where we have some connections. Under no condition can the two of us wander the world alone, especially with Martin's health being how it is. This is different, of course, when you have children who can somehow carry their parents along.

And now, all these new restrictions! I was shocked when I read of them. It was as if the thin twig I had been clutching suddenly blew away in the wind. Everything disappeared into the distance, hidden in mist. No point in thinking or planning until something new turns up. It seems mad anyway, that I have not suffocated these wishes yet, when my mind tells me only that there is no solution. And so I oscillate between dreams and hopelessness.

My greatest concern is Martin's health. For a while he was better, and then deteriorated again, and again with all this uncertainty. He ran a fever, and one can never know what that leads to. During those hours I go through hell. Anxiety eats me alive, and there is no one, literally no one I can call for help. I wonder, where are all the people who used to be here, who used to help us – how alone we are these days. Better not to think of it at all. | I've heard nothing about Hilde. I thought Erich should know. He might be suffering quietly, wondering what happened to her, even more so wondering about Yvonne. He should be spoken to cautiously and reassured. Kurt, please write to me about Erich, since you've met him a few times. Käthe wrote a bit about him,

but I'd like to hear from you as well. His letters are a bit odd – some seem confused while others are fine, perfectly pleasant. All very loving. He is the same kind, considerate, loyal and devoted man he has always been. We all carry with us a chapter of a broken life, some longer, some shorter.

Trude

7.

On February 12, 1940, at around 8 p.m., the large brass bell hanging above the front door of Martin and Trude Hendelson rang. Trude was a bit startled, as they had no company planned for that evening, and people tended to keep to their homes in the evenings ever since the war started. Martin was lying in bed. The night before he scarcely slept and in the morning his fever rose, and he would not eat. Trude opened the door to find an officer who introduced himself as Oberleutnant Kurz, accompanied by two soldiers.

Officer Kurz greeted Trude and she replied courteously and asked if they'd like to come in. "That won't be necessary, Frau Hendelson," said the officer. "I've been instructed to inform you that by special decree you and any family residing with you must leave Germany within ten hours."

Trude looked at the officer and did not reply. Snakes of ice slithered in the veins of her legs.

"In order to carry out this decree," Kurz continued, "you will be provided with transportation services from the eastern train station starting early next morning."

"My husband is lying in the next room," said Trude. "We have no children; it is only the two of us."

"In that case your instructions are clear, Madam," stated Kurz. "You and your husband are requested to follow these instructions and bring with you two suitcases, one for each of you, measuring no more than fifty centimeters in breadth."

"But my husband is very ill," said Trude.

"Regarding that," said the officer in the same measured monotone, "I can merely assure you that your husband will receive the best available treatment once you have passed the border and reached your new destination in the Polish territories."

For a moment Trude was assaulted by new hope, though she knew it must be as fruitless as all the other sparks of hope which ignited in her life only to be extinguished again, all those years with despair as an ever-present houseguest, dour and burdensome. Poland seemed suddenly like a mysterious new world, an unknown universe of small, distant cities, whose streets perhaps are not so filled with the constant march of soldiers. Perhaps there would be some forgotten corner, some hidden place where they could find a home and lay down the tired and sick body and go to the marketplace without fear.

Trude looked at Oberleutnant Kurz and his soldiers, seeking some sort of confirmation for her new hope, but the door closed after them, and she heard them muttering the details of the next address across the street. She stumbled to Martin's bed and heard herself groan in a voice not her own, Oh, God, oh my God, and she sat beside him, and he woke, startled, from his troubled sleep.

"Tomorrow we are leaving, Martin," she said.

Martin shook his head and she did not know what he tried to say. "I must pack," and again he could not reply and she said, "they said you would be taken care of, that people who were unwell would receive medical treatment, it said so in their orders."

She got up and went to the walk-in closet, opened two suitcases and stared at them for a long while and wondered, what does one pack for such a journey, how many pairs of underwear will they need in the east? She tried to recall the trips they used to take to her grandfather Simon and Grandmother Zerlina, but those always took place in summer, when the air was clear and wet with dew. After she had packed a few trousers and shirts and underclothes and still had plenty of room

in the suitcase, so she rummaged through the floral chests of drawers in which the treasured jewels and pearls had been collected over the generations. She gathered them in her hands and tossed them into the bags, then took them out again, silently furious, and sat there helplessly. Eventually she changed her mind and placed a thick brown envelope inside the suitcase, filled with photographs and letters she had kept, an empty letter book, some envelopes and a pen, and a half-full inkwell, carefully wrapped.

Martin was fast asleep. He had not slept so deeply in a long time, long enough that Trude was momentarily alarmed, but he was breathing soundly, warmly. A small, peaceful snoring rose from him. On the dresser by the piano there was a tall, dusty stack of books upon books of sheet music, with the names of pieces and melodies in heavily crowned Gothic script. She tried to pick two or three of them to shove into the suitcase, but promptly muttered to herself, "Ach, nonsense." She went to arrange a small medicine bag to last at least a week, until Martin is brought to a hospital where he could receive proper care, like Oberleutnant Kurz had said.

By the time she was done packing both suitcases it was 1 a.m. She lay on the sofa in the living room which barely accommodated her height, tried to sleep but failed, and got up to look out the window. The heavy rain was still bombarding the streets and she thought, *What will be of Martin, how will we walk in this rain, perhaps the rain will show lenience and abate in the morning?* She was startled by a loud, hard cough from Martin's room, and she ran to him. He had woken up. She served him a spoonful of thick medicine. She then hurried to the kitchen, set the pot on the stove, and came back.

Martin lay on the bed, his eyes wide, his face white and heavy. "Well," he said, "it is still raining."

"I wish it would stop. It has to stop sometime," said Trude.

"And you are not sleeping. Perhaps you could try and get some sleep," said Martin.

"I've tried to, Martin, but no matter, in any case it will be morning soon," she said. "I'll probably sleep on the train, maybe we could find a decent seat, well, we have to find a decent seat so you can be comfortable, it will probably by a long ride."

"Yes," said Martin, "we'll leave on time, no other choice. And if the rain persists, my raincoat is highly effective even in pouring rain, and it is vital that we bring the large umbrella with us. Best to have all of this prepared in advance."

"Everything will be ready, Martin," said Trude. "We should have a cup of tea, perhaps eat something around five-thirty, so that by six we'll be ready to depart. That way we can be among the first to board. After that it will be hard to find someone to talk to about providing you with appropriate seating."

"Five-thirty, good," said Martin. They were silent for a long while, and suddenly he coughed, a sharp, deep cough, like a harsh scream, and his body writhed on the moist sheets, and she leaned toward him and placed a cloth on his forehead until he became calm. He held her hand like an adolescent boy touching the hand of his beloved, tried to say something to her.

She said, "I know, everything will be alright, we will stay together, no matter what happens we will always stay together, I will sit by your side, in the hospital hallway if I must, and stay there." But Martin was shaking his head in disagreement, swaying from side to side, and she said, "Martin, what is it?"

His eyes filled with tears. "My precious Gertrude," he said, "I ask for your forgiveness. From the depths of my soul, with everything I hold dear, I beg for your forgiveness, will you forgive me, Gertrude?"

Trude looked at him, astonished, and said, "But Martin, what is all this, there is nothing to forgive."

But he shook his head again and this time impatiently, with an anger that intensified, his white face reddening, and he yelled, "Forgive me, Gertrude, my beloved Gertrude, I have brought you so much sorrow, I am a blind man, Trude, a blind man who deserves neither forgiveness nor love, and still, forgive me, Gertrude!" The words flowed jumbled from his mouth and became a

lingering, keening sob, slowly waning. Martin fell to the mattress, defeated, and fell asleep once more, but yelled in his sleep and moaned and groaned.

Trude looked at his sleeping form, concerned at first, then astounded, and her eyes which had been accustomed to stopping the tears were now overflowing with them. She wept, violently, a ceaseless rhythm of heaving sobs. She hadn't cried like that in years, in all her years. She wept for her barren womb, for her days which had been used up between the restaurants and the market-place, for the books devoured and forgotten and for the sounds of music that faded away in the river air. She wept for her brothers, Kurt and Erich, and her sister Käthe, who had gone to Palestine, whom she will never see again, and for their young girls who used to come every spring and walk to the market with her or stroll through the picturesque forest paths of Pomerania, and for the image of Gerhard which also flickered momentarily through the river mist and dissipated. She wept for her love for Moritz, her beautiful, proud father, an endless lament, a fire consuming the breast, many waters cannot quench it.

When Trude's crying died out so did the rain. Dawn rose over Stettin.

This is a chapter of Ruvik Rosenthal's book *THE LAST VISIT TO BERLIN: A HISTORICAL FAMILY SAGA BASED ON A TRUE STORY* ([link](#)). Translated into English by Tal Keren, originally published in Hebrew by Keter Publishing House.

Ruvik Rosenthal is a well known Israeli writer and linguist. He has published 24 books on various topics, as well as hundreds of articles, essays and journalistic features. He is known for his linguistic writing for which he has won the prestigious Sokolov Award. For his best-selling children's books, he has won the Ramat-Gan Prize for Children's Literature. Over the years in his books and articles Rosenthal deals with the core-issues affecting Israel: wars, bereavement, social conflicts and the cultural and ethnic diversity of Israeli society. Rosenthal has been praised for his rich, flowing style and his profound insights to the human condition. His website The Language Arena on www.ruvik.co.il, offers his ongoing writing endeavors open and free to the public.

FIRST CHAPTERS OF THE BOOK “17 SHEIKH HAMZA STREET, CAIRO” BY AVRAHAM BAR-AV

Prelude

Someplace in Bulgaria, winter of 1913

Pvt. Shalom Passy has lost track of the days amid the routine of the fighting. Before climbing out of his trench, he cups some rainwater and mud in his hands and covers his face, making sure to coat his white eyebrows and mustache. Very gently he tightens the strap of his wet cap and bends down to fix his leggings, releasing the two rusty buckles on either side, then tucking the damp hems of his trousers into them. When he finally emerges with his bayonet-mounted carbine, he finds himself at the back of the line.

Winter, summer, winter again. If there is going to be an end to this war – the Second Balkan War – it will be a personal end. Each soldier will finish his war at the time and place that fate summons for him. The lucky ones will be killed on the spot; the unlucky ones will die of their wounds, suffering horribly. Others are fated to die of more or less natural causes – the rampant diseases and infections. Only for the immortal ones, like Shalom Passy, is the war eternal. It's as if a supreme force watches over him, saving him for some mysterious purpose. Comrades in arms, who saw him kiss the silver mezuzah hanging over his heart, used to tease him: “Jewish witchcraft in action.” Where are they all now? Gone, every last one. The youngsters drafted to fill the ranks are curious about the tall, white-haired man in their midst. They don't know that, until a year ago, he too was dark-haired and full of energy, just like them. His hair, including his eyebrows and mustache, turned white overnight.

The line where the plain meets the hills is the Bulgarians' starting line. The sun at their back is good for them: it dries their rain-soaked uniforms and blinds the enemy. “Onwards!” the captain's breath condenses for a moment and fades. “For our king and for Bulgaria!” Pvt. Passy answers “Hurrah!” and lengthens his stride. Storming the Serbs' positions with chest exposed is an expression of utmost dedication. Passy's lips tighten. No one may teach him the meaning of loyalty. At the same time, his heart longs to meet the bullet or piece of shrapnel that will end his war. “Onwards!” means straight uphill. With the faded greatcoat and the leather strap across his chest, he resembles one of those beat-up wooden soldiers he played with as a child, the difference being that toy soldiers don't need to breathe. When Passy tries to leap to the head of the line, his tin canteen bangs upon his hip, reminding him he forgot to relieve himself – an unforgivable blunder under the circumstances. Encountering a bullet on a full bladder could make him lose control. Whoever comes to collect his body will slander him: “The Jew-boy pissed his pants!” Passy turns aside and urgently unbuttons his fly. The mountain fog covers the sounds of the fighting like a feather quilt. The morning chirp of the guns stops; the bark of the cannons is silenced; Passy's ears are totally with the urine splash on the rain saturated soil.

There's something hypnotic in the lush stream of the morning. Only a man would get it, something shedding light on reality from a different angle. Is a hero's death the only way out?

It's already a pretty nice puddle, with tiny bubbles and whitish steam. Golden droplets hop and glint in the wintry sun. The puddle now overflows its banks and the merry stream flows downhill, happy and carefree... downhill, free and happy. As Passy buttons his fly, it's as if he awakens from a hypnotic trance in which he's been given a mission he is now compelled to perform. He sticks the carbine's bayonet in the ground, hangs his hat on the stock, and wiggles out of his backpack. Instead of hurrying to the intimate meeting with a bullet or shell,

he listens to a mysterious voice commanding him, "Get thee, Pvt. Shalom Passy, out of thy country, and from thy kindred, and from thy father's house, unto the land I will show thee." He will never set foot on Bulgarian soil again, never see his parents or siblings or any other relatives remaining in Philippopolis.

Whatever happened after that fateful buttoning of the fly is an enigma wrapped in deep silence. We only know what he told Albert, his grandson, three decades later, namely that a huge stork picked him up with its beak and deposited him on the golden sands of Port Said.

Calm wavelets lap the muddy shores of the Nile. The chewing of the water buffalos is slow and peaceful. Egypt is a sun-drenched plain, with no lashing rains, no shouts of "Hurrah", no wailing of the wounded and without the permanent weight of fear in his gut. Egypt is the serenity of the felucca gliding up the river to Cairo. Passy sits on a wooden bench watching the billowing sail, staring at the slowly shifting scenery. The sailboat and the three colorfully outfitted camels move at the same speed. The camels undulate like a visual echo of the river. A loose rope ties them to each other and to the small donkey leading them. On the donkey, there is an old man riding sideways, as if on a bench. He wears a long dress, his bare feet crossed, rocking to the motion of the donkey's walk. Riding that way one cannot spur a horse and send it galloping into battle. Passy's eyes meet the old man's. For a moment, he feels the need to wave "hello" to the noble rider, but then just offers a small smile. Between his thighs he holds a small leather suitcase which is his only possession. In his hand he holds a sweat-stained piece of paper reading, in Cyrillic letters, "The Savariego Family."

At the time, the British are in control of this magical oasis. They're there to safeguard the slender shipping route linking them to their colonies in Africa and India. In order control this lifeline, they'll do everything a superpower can afford to do. They'll overrun the land with their lackeys, pay off local bigwigs to open Egypt's gates to anyone whose veins burble with European blood to come and partake of its goodies. And come they did, by streams and hordes, to become the upper crust of whitish masters.

Sultana Savariego opens the glass lid of one of the pickle jars sitting on the windowsill. With the tip of a fork, she moves aside the dill and the thin whitish layer of mold, and extricates a few cucumbers she intends to put on the lunch table. Congratulations! As of today they have a new tenant. His name is Shalom Passy. Sultana looks upon her houseguest with the eyes of a mother of five daughters. There is no doubt in her mind: He is just the man she has prayed for. Her eldest daughter Fortuna is no longer a little girl. All the signs point that way. A month ago she entered her fourteenth year. No, the age difference is not an issue. A maiden her age needs an older man, a man with both feet on the ground. His white hair is very misleading. He's only twenty-nine.

Through the window she sees Fortuna skipping rope with her Greek friends. Sultana calls out to her in Bulgarian: "Haydeh Fortuna, prebireyse, imameh gosti" (hurry home, we have guests). Fortuna's friends giggle and whisper. Fortuna doesn't understand why. The next time mother calls her, it will be in Ladino: "Ya basta jugar, ija mia, to marido vino del lavoro" (enough playing, my child, your husband's home from work). A few months later, Fortuna will apologize to her friends and bid them farewell forever. She'll feel the new heaviness of her breasts. Skipping rope will be painful. Besides, she'll already be nauseous. Fortuna will have Moïse when she is fifteen. Eleven months later she will give birth to Sophie.

Chapter 1: A Swarm of morning gnats

Cairo – 1925

Leaving the house for school is a ritual ingrained in Sophie's memory. Mother wears a long housecoat, her hair unpinned. One hand holds her large cup of coffee, the other tilts Moïse's chin towards her. Gently she licks a thumb and wipes an invisible speck of breakfast off his face. There is always something about Moïse she has to fix before they go, whether it's to smooth down a collar point or brush aside some hair that's fallen in his eyes. While fussing over him, she reminds him of their little secret: "Don't forget what I told you before." The scent of her coffee runs with Sophie as she skips down the stairs. After Mother closes the door, she will go to the balcony. She will lean on the blue-painted iron railing, and wait. Before the turn in the road, Moïse is expected to wave to her one last time. Mother is bent over the railing. In a moment she'll spread her robe wide open and fly high above them, circling over their heads like the guardian angels, Michael and Gabriel, along with little Isaac.

The usual swarm of early morning gnats surrounds Sophie's head, a dense, gray cloud of insects. Sophie waves both hands madly to keep them out of her curls. That's all she needs, to get gnats caught in there. They don't go after Moïse, and even if they did, his hair is straight. He'd only have to tip his head forward to avoid them. Both of them are wearing the new school uniform Mother sewed them: a long, black pinafore topped with a round white collar. In the uniform they look like equals. It doesn't matter what's underneath; the pinafore hides the difference between skirt and trousers.

An hour's leisurely walk lies between the family home in Cairo's Daher district and Ecole Alliance Israélite Universelle, the Jewish community school. What did Mother say to Moïse? Why is she always fussing over him and talking to him? Who does he think he is? He's only a year older. So what if he's a boy and she's a girl? Only boys count? What about girls? What are they – nothing? Nona Sultana had tried her best to explain: "Thank God there's no equality. Girls and boys are not the same. The Almighty in His wisdom made it so. We praise Him for that every day in our morning benedictions." Nona Sultana had taken Sophie's hand with utmost tenderness and led her to the kitchen. "Now, my little one. I've made some bagel dough. Help me sprinkle the sesame seeds." Near the soft rings of dough, Nona Sultana delivered a Ladino saying that summarizes all the advantages of being a girl. "Boys think twice; girls feel tenfold." Why only tenfold? Sophie feels one-hundredfold.

The sun is peeking out over the rooftops, its first rays announcing "It's going to be a hot one today, a real scorcher." The school pinafores are an odd invention, clearly hailing from colder climes. The only ventilation is the hot steam rising from the asphalt. It creeps under the pinafore, moves up along the row of buttons and stops at the collar. The Arab children wear pale, loose *galabiehs* with nothing underneath – no underpants, no undershirt. With their wide sleeves and open collars, they're always free and cheerful and exempt from the daily trek to school.

Moïse and Sophie have already reached Suleiman Pasha Square, with the large bronze horseman at its center, surrounded by spiky agave bushes. Were it not for his fierce look and hook-like mustaches, she'd leap over the chain, hop on the horse, and ride right behind him. "Al-Faransawi" reads the metal plaque fastened to the stone, and in parentheses: "Joseph Anthelme Sève."⁷⁷ Several dirt roads branch off from the square, teeming with immigrant

⁷⁷ A Lyon-born member of Napoleon Bonaparte's army who converted to Islam and was recruited to help build the Egyptian army on the European model, Sève changed his name to Suleiman and married an Egyptian

children making their way to their respective schools. In the opposite direction, Egyptian peasant children hasten the asses they ride with kicks of their bare heels while clutching boxes holding two or three dew-damp heads of lettuce, a few bundles of fresh radishes, and washed bunches of scallions.

Every minority group has its own private school. One can tell a child's nationality by the uniform: Jews, British, Italians or Greeks. Greek children wear light blue garrison caps. "Look, Moïse, the kids with the upside-down rowboats on their heads." Moïse yanks Sophie by her forearm. "Who cares about rowboats?" Sophie wriggles out of his grasp. "It looks like they're wearing chamber pots." The little Greek boy behind them understands French. He runs past them and stretches his arms. "You're not passing until you apologize." The little cricket! He's rude, and Sophie's right: he does have a chamber pot on his head. Moïse is well aware of what Mother told him. His fists are clenched around the shoulder straps of his schoolbag. Two quick steps and he's past the pesky kid, an easy maneuver that Sophie is supposed to duplicate. "No passage," says the boy. A quick tilt of his head towards his Greek friends invites them to join him. He tips his chin towards Sophie. His eyes home in on the pink satin ribbon Mother had tied over her curls. Moïse shouts at her to run. "Come on, Sophie, I'm waiting." The kid's hand just misses the pink ribbon. He utters a musical-sounding curse in Greek. He can curse till he's blue in the face. Sophie holds her hand up to the kid's face. "Whatever you say is bouncing right back at you." His friends are closing in behind her. On his next lunge, the little Greek manages to grab one end of the ribbon. Moïse's sharp warning reaches him too late. His cap was already on the ground. While Sophie's right hand grabs a fistful of his hair, the nails of her left hand are gouging his face. When she attacks, she combines the speed of a cat with the resolve of a crocodile. She shakes her victim's head, ripping clumps of hair from his scalp then tossing him to the ground. She leaps over his body and sprints after Moïse towards the school's gates. The stunned little Greek remains seated on the ground, one hand checking his face for blood, the other holding Sophie's pink ribbon. The lizard may have lost its tail but gained its freedom. The Greek kids are speechless: a little girl with a pink ribbon has just trounced one of their classmates. They don't pursue her, they don't even help their friend stand up, just yell the usual threats: "Just wait till after school... Just wait and see..." Moïse and Sophie are far away. The large leather schoolbags bounce on their backs. The pencils, eraser and pencil sharpener clatter merrily in their cases.

The Ecole Alliance is surrounded by a high stone wall. Entrance is via green iron double gates on top of which large Stars of David have been welded. Beyond the wide open gates there are two paved porticos. The one going right leads to the girls' section, named for Marie Suaretz, the left to the boys' section, named for Qatawi Pasha. The campus is covered by a concrete dome insulating and protecting the *crème de la crème* of European culture. The teachers' polished French bespeaks their origins. They pronounce the pure-bred Parisian "r," the kind that can't be faked. Most of the Jewish pupils and their parents, who've come to Egypt from all corners of Europe and North Africa, will never sport such an aristocratic "r"; they can barely manage the "u" and the "e." The teachers have their hair pulled into tight buns on top of their heads. Their gaze is serious, their lips compressed, their blouses buttoned tightly up to the very top. Only their exquisite Parisian perfume wafts around them unfettered.

The third grade girls are being tested on *La Fontaine*. One by one, they will take their place at the front of the class, their backs to the blackboard, their arms held tight against the pinafore's side-seams, and recite "Par Coeur". Woe to the girl who skips a line from "The

woman. One of their great-granddaughters was Queen Nazli of Egypt, wife of King Fuad, and mother of King Farouk.

Grasshopper and the Ant” or misses a word in “The Crow and the Fox”. It’s La Fontaine in the morning and the exploits of Charlemagne at noon. Charlemagne the Great, king of the Gauls who, in campaigns of conquests, founded the French nation. His name is pronounced with the teacher’s rising, trilling “r”: “Charrrrlemagne.” There’s also the legendary warrior Roland who, with his unearthly strength, pulled an enchanted sword from a rock as if the rock were butter. In the scorching midday heat, the brain goes soft. The teacher unbuttons the top button of her blouse; the next two open on their own. Sophie looks at her teacher sleepily. Her hand supports her chin to prevent her head from lolling. Roland the Dreaded walks between the rows of desks brandishing his broad sword above the girls’ heads. No, it’s not his sword, only the blades of the large ceiling fan churning the rising hot air, then pushing it back down again.

At five past four in the afternoon, Moïse is waiting by the gate for the girls to finish up. He sincerely hopes that the Greeks learned their lesson and won’t be coming back looking for trouble. He has good reason to be worried. Last night, Mother made it perfectly clear to him. “This year... In all seriousness, I’ve had it. I don’t want to hear about any fighting. Un point, c’est tout. Period. You’re bullied? Somebody says something nasty? Shut up and move to the other footpath.” Mother always addresses him. He’s the boy and he’s the elder. He will lead them safely and bring them back safely. Mother Fortuna means every word she says. Woe to Moïse if as much as a single stitch of the new clothes pops open. She points a single warning finger to heaven: “One stitch.” She doesn’t want to think what she’ll do. “Best if you don’t come home. Best if you sleep in the street.”

It’s a real pity Mother isn’t there just then to tell Moïse how to safely pass the group of upside-down rowboats blocking their way and chanting: “Kra... Kra... Kra... Katano Patakiki...” Sophie and Moïse are two against five, actually six, if you count the little cricket from this morning. The inevitable fight involves biting, scratching, lock holds, and tearing clumps of hair from the scalp – Sophie’s secret weapon. Shoving to the ground, kicks to the shinbone, and fists to the face are Moïse’s well-known specialties. When the group of Italian kids approaches, the rowboats must withdraw in a hurry. Nobody messes with the Italians. Two light blue caps and one necktie are left behind. Sophie and Moïse stand up shoulder to shoulder, fists clenched. Will the Italians pick up where the Greeks left off? Wonder of wonders! The Italian ruffians give them a round of applause, especially little Sophie who still holds some strands of hair, torn out by their roots. Sophie’s pinafore sleeve has come loose. Moïse’s white collar is hanging off one shoulder. His eyes scan the ground. “The button’s missing,” he says. Sophie pulls on Moïse’s elbow. “Just forget it. There are a million buttons at home.” They’d better get out of there. You can’t trust the Italians for long. Even after he stops looking for his button, Moïse’s gaze is fixed on the ground. He yanks off what’s left of his collar and shoves it into a pocket. Instead of rejoicing in their victory, he tells Sophie he has no intention of going home. Those, after all, were Mother’s instructions. Sophie is sure that, by the time they reach home, she’ll have convinced him to go in with her. Maybe they should take off the torn pinafores and put them in their schoolbags? Maybe they should say that kids were picking on Sophie, hitting her, and he only came to her rescue? But Moïse has made up his mind. “I’ll sleep in some stairwell. In the morning, on your way to school, bring me something to eat.” Before they part, she is forced to give him her word of honor that she won’t say where he’s hiding. Sophie marches home feeling bold. They were two against six and won. Maybe Mother will learn her lesson. If she really doesn’t want them to get into any fights she must put Sophie in charge.

When Sophie comes home, she opens the doors quietly and tries to sneak straight to the shower, but Nona Sultana is in the doorway. “Hey... hey... what happened? La buena hora malakhim” (angels – may it be a favorable moment). Mother Fortuna rushes out of the tailor shop. Straight pins are still clenched between her lips, the measuring tape hanging around her

neck. She's been measuring a dress on some customer. Father Passy follows, holding the large tailor's shears. Sultana peers into the murk of the stairwell. "I Moïse onde sta?" (And where is Moïse?) Sophie doesn't answer. Mother ignores Sophie's torn sleeve. With the straight pins between her teeth, she repeats Nona's question in French: "Où est Moïse?" All they care about is Moïse. Sophie stays quiet. Not a word about the scratches on her face. Mother wears the look of a she-wolf. The metal pins fly from her mouth as she speaks: "Parle, je te dis. Où est il?" (Speak, I tell you. Where is he?) She grabs Sophie's shoulder and shakes. The shaking seals her lips. Mother won't get a word out of her. Not a single word, not even a syllable. Mother's hand lifts but stops midair. "If you want to hit me, go ahead." Sophie slaps herself with both hands, "Here, I'm hitting myself, do whatever you want. I won't tell you where he is."

Father Passy tries a gentler tack. "Sophie chérie, tu veux bien nous dire où est ton frère?" (Sophie dear, you do want to tell us where your brother is?) His French is funny, with traces of a Bulgarian accent.

The look on her mother's face brings Sophie back to the most horrible of nights: the same bulging eyes, the sickly pallor, the pinched lips, the little white spots in the corners of her mouth. Almost four years have passed since they lost their Isaac. The loss of a male child is so much harder. Poor little Isaac, taken by diphtheria when he was two years old. "A boy's body is weaker and therefore catches illness," Nona Sultana had explained. "A girl's body is built strong. It has to withstand the pains of childbirth." Now Fortuna backs off, making room for Passy. "Mother is giving you her 'parole d'honneur' that she isn't going to punish you. Isn't that right, Mother? You'll tell us where he is, won't you? It's almost dark out."

Mother's customer comes out of the sewing room wearing an unfinished suit. She realizes that she's caught up in some minor family crisis. "Should I come back tomorrow?" "Oui, beizn el-llah, demain apres-midi" (Yes, with God's consent, tomorrow afternoon). Fortuna's apology begins and ends in French, sandwiching the Arabic middle. Mother wipes the spittle away with her thumb and forefinger. Her lips plump up as she speaks. Her hands help the customer remove the jacket without dislodging any of the pins.

Sophie leads them at her own pace. Father Passy, tall, erect and silver-haired, Mother Fortuna, walking ahead of him, small, energetic, leaning forward. Sophie is unsure. She stops, changes direction, enters the yard of a house, her parents on her heels.

"He was supposed to be here," says Sophie.

"Oh my God!" Fortuna yells, "Where did you leave your brother? How are we going to find him in the dark?"

Father Passy leans towards Sophie's face and puts a hand on her shoulder.

"Try hard to remember. It's important. Where did you split up?"

"Here. He asked me to bring him food in the morning."

"Are you sure it was here?"

"Well, if not here, then over there."

"Where there?"

"There."

Moïse is found sitting on the pavement, his arms wrapped around his knees, his eyes peering through the damp gloom of the stairwell. When he sees them in the doorway, he jumps to his feet. What's that look on his face? Fear, surprise, blame? What's he blaming her for? He should be thanking Sophie a thousand times. Just for him she held up under Mother's questioning. She got him an unbelievable deal. Instead of hitting or pinching him, or screaming at him, Mother throws herself at him and envelopes him in an embrace. And where is Sophie in this love fest? Next time she'll hide in the stairwell and send him home to face Mother's inquisition. She wonders if they'd rush out looking for her as they did for him.

Father puts a large pot of water on the Primus stove. Mother gets a large basin of lukewarm water ready and fits both children into it. She rubs their bruises hard with soap and water. That's what she's like when she's mad. Maybe a slap or two would release some of her anger, but she can't, because Passy made her promise. But then the urge to react becomes too much to control. "Didn't I tell you to watch the girl? Look at her face! Because of you, she'll be left with scars." A warm wave rises within Sophie, only to dissipate as fast as it came. "What man will marry a woman with a face like that?" Suddenly it becomes clear why she's so carefully watched – for some future husband who'll agree to take her. Well, she'll show them. She'll scar herself a thousand times in the face so that no man will ever want her.

Fortuna is furious with her Passy. At night, alone in bed, she'll tell him what she thinks of his soft touch with the children. She might even give him a little pinch or two to break through his annoying composure. Passy will only smile. He's a solid rock. He loves the little wavelets that come splashing against him. She can feel her parental authority dissolving in the sudsy water of the washbasin. "It's all for the best," he always says. How is this "for the best"? The children clearly violated the most explicit instructions, and now her hands are tied by the stupid word of honor he made her give. Fortuna organizes her thoughts in Bulgarian, but speaks the punch lines in French. "Did I not tell you to mind your new clothes?" The first pinch goes to Moïse, the second to Sophie. In Mother's book, pinches on the arms don't count as corporal punishment. It's simply her way of saying, "I'm angry now," or "I'm very angry now." The size of the bruise is relative to the level of her anger. When Mother goes to get them towels and clean clothes, Sophie spritzes some soap in Moïse's eyes. The ingrate is mad at her for telling their parents where he was hiding instead of thanking her. After their bath, they stand in their underwear in front of the fogged-up mirror to compare their bruises. Moïse's bruise is obviously bigger. He always gets more. Two or three swipes of the comb and he's swept his hair back, sticking the tip of his tongue out, concentrating on getting his part razor straight. His soft hair is easily moved left and right. Like the colorful drawing in the Passover Haggadah, Moïse – like Moses of old – just has to point, and, voila!, the sea parts. Sophie tugs on her wet curls, trying to smooth them down.

*

Despite their differences, some people think they're twins. They're always together. Sophie has no girlfriends; Moïse's friends are her friends. Their games are her games. They play soccer together with the new ball Mother sewed Moïse out of fabric remnants. The large doll Mother sewed her, she threw under her bed. She competes with the boys at running and wins, goes up against them in arm-wrestling and wins. The losers have many and varied explanations: her forearm is shorter so her leverage is better. She can do more chin-ups because she weighs less. She has skinny legs - that's why she runs so fast. It doesn't matter what she does or how often she wins, she will always be a girl and Moïse a boy. She will always be the little one, while he'll always be the eldest and the one who assumes responsibility. He has soft, straight, obedient hair, while she has curls. He must pay for this unfairness. He must even pay for getting a bigger bruise. Without warning, she swings the hairbrush back and whacks him full-force in the chest. Let him get mad already. Let him respond, fight back. Fighting with him is the most vexing thing in the world: she kicks and pinches while he just stands there.

Moïse will never lift a hand against her. "A boy should never hit a girl, not even with a flower," says Nona Sultana. Moïse's lack of reaction leaves no mark on her skin but hurts her deep inside. He paces the living room back and forth, clutching his arithmetic notebook to his chest. Once in a while he stops to peek into his notebook. "Five times six... Five times seven..." Sophie listens to his fluent recitation. The multiplication table flows from his mouth with musical rhythm. At times, it even rhymes. "Six fois six, trente-six." When he realizes she's staring at him, he stares right back. The nerve! Next year, she too will be learning

multiplication. She'll already remember that rhyme: "six fois six, trente-six." Moïse sweeps his hair back with his hand, something she'll never be able to do with her curls. In slow motion, she watches his hand disappear into the black mass in front and emerge in the back, over and over again, every hair falling back into its proper place. The urge to scratch his smooth, calm face, or grab a fistful of his hair and yank hard, rises in her chest. Now he walks past her; he's only an arm-length away. It's better if she controls herself this time. It's better if she opens a schoolbook and start studying. If he must know, she has her own memorization to do: rhymes by La Fontaine. The same verses that Moïse studied just a year before and even quoted to her during one of their arguments: "La raison du plus fort est toujours la meilleure" ("The reason of the stronger is always the best").

Chapter 2: Onion tears

Nono Solomon is the lord and master of the house. That is how Sophie remembers him: always erect and elegant in a black suit and a white shirt, with a high collar that almost reaches his ears, his big mustache always combed and brushed. He has a silver watch, which he often pulls out of his pocket and looks at with utmost importance.

Sophie loves watching Nona when she irons a whole stack of Nono's white shirts. She even irons his long-sleeved undershirts. Sophie is enthralled by the purple flame of the Primus stove and its noisy roar. A copper tray with two irons sits above the fire. While waiting for the irons to get hot, Nona sets up the ironing surface. She spreads on it a freshly laundered shirt, dips her hand in a bowl of water, and splashes the clean-smelling fabric two or three times. Sophie gets some drops on her face. Nona Sultana smiles: "I told you to step back." Nona grasps the handle of one of the irons and moves it back and forth over the cloth. The whooshing sound made when the hot iron meets the damp is pleasing. When the iron grows cold, Nona puts it back on the hot tray and takes the other one. Nono won't let Sultana send his shirts to be ironed out. "It's a source of disease – the people out there spray the water with their mouths."

Nono must dress to the latest fashion because he's an accountant. Sometimes he'll bring home a thick folder from the office. When he sits at the table to go through his papers, all the members of the household must be silent. Fortuna sits on the sofa and sews, Passy wets the end of the thread with his lips to thread the needle for her, Moïse does his homework at the other end of the table. Only Fortuna's unmarried sisters find it hard not to talk. They sit in the corner, embroidering. "Where's my thimble?" "Who has the red?" Lilly whispers her questions in utmost silence while Rose answers in a shout: "Are you blind or something? Can't you see you're sitting on it?" Rachelle, Rebecca and Lilly embroider flowers. Rose always embroiders a prince and princess, either with a peacock, or with a fawn. The tip of Nono's pencil goes down the column of numbers, muttering his addition in Bulgarian. When Rose raises her voice, the pencil stops moving, only to go to the top of the column and begin again. After it happens three times, Nono bangs the table hard, sending Moïse's notebook flying. "Asiktir!" he curses in Turkish. "What does one have to do around here to get some peace and quiet?" Nono's raised voice has sent him into a coughing fit. Rose sticks her needle into her prince and flees the room. Nono digs out of his pocket a folded handkerchief and brings it to his lips.

In the morning, Fortuna's sisters leave the house to learn their profession at some women's clothing store, all but Rose. She wakes up as late as she wants and yells at whomever she

wants. She even yells at her embroidered peacock. When Sultana asks her, “Why are you yelling?” she answers, “I’m not yelling. That’s the way I speak.”

Early in the morning, Mahmoud, *thekhadam* (the servant), descends from his attic room. Before he starts his daily house chores, he must first shop at the *souk*. The long list of supplies is delivered to him, orally, by Sultana. It includes herbs, different vegetables, rice, meat and fish. She tells him exactly who he should buy from and who he shouldn’t, under no circumstance, shop from; how much he should pay and how much he should never pay; how to choose the meat and how to ensure the freshness of the fish – by the color of its eyes and redness of the gills. Mahmoud already knows most of the rules. When she decides to switch something on the list, she tells him to forget it. “Forget the eggplant. Just remember the zucchini and the peppers. That’s it. No, that’s not it. I also need vine leaves.” Throughout the recitation, Mahmoud nods to indicate that he got it. “Aha...aha...aha...” When Sultana amends the list, Mahmoud must repeat after her: “Forget the eggplant, just remember the zucchini, peppers and vine leaves.”

*

Nona tells Sophie and Moïse that they’re staying home today. “There will be many more days of school, but it’s not every day that your mother brings home a baby sister from the hospital.” In honor of the special occasion, Sultana is going to cook *molokheyyah*, a special soup she’s learned about from her neighbors. They say it contains a lot of vitamins and nutrients, important to a woman who’s just given birth.

The kitchen table is covered by a white oilcloth. Nona shares her plan for today’s menu with little Sophie: “For the first course, we’ll have *kashkitas*⁷⁸ and then the *molokheyyah*. For the main course, we’ll have stuffed vegetables – *kusa* and *filfel mahshi* and *yapraces*.⁷⁹ For side dishes, we’ll make some peas and roast chicken with lots of garlic and onions.” Nona smiles at Sophie and says, “No pain – no gain.” She then quotes her famous maxim again: “Sans un peu de travail, on n’a point de plaisir.” Nona Sultana is a font of wise sayings that she generously shares with Sophie. “How do you tame horses? You give them sugar cubes. And children? You give them stories and sayings – wondrous candies that never harm the teeth.” Sultana’s sweets are the lubricant capable of making Sophie do some kitchen work such as tearing apart the mallow leaves for the *molokheyyah*, shell the peas, and participate in the tiresome task of sorting the rice. It wouldn’t occur to Sophie to refuse her grandmother’s request for help, surely not on this very special day when Mother is bringing home a new baby, but she sets a condition: Moïse, too, must be asked to help.

“Moïse doesn’t do things like this.”

“How come?”

“Because Moïse is a boy, that’s how come.”

“So what if he’s a boy? Father Passy is also a boy and so is Mahmoud the *khadam*, and they help, so why shouldn’t Moïse?”

Nona lifts an enormous stack of mallow leaves out of the shopping basket and places it between them. While doing this she thinks of an answer to Sophie’s question.

“Well, let’s think about it together. Father Passy volunteers his help because he likes to. Mahmoud helps because it’s his job. You’re helping because I asked you to.”

“It’s not right that Moïse doesn’t do anything.”

“Did I ever tell you the story about Chilibi’s lazy servant? Well, once upon a time, Chilibi had a very lazy servant who did exactly what he was told – never less, but never more, either. One night,...”

⁷⁸ Thick zucchini peels in a sweet-and-sour tomato sauce; the dish is served cold.

⁷⁹ Zucchini, peppers and vine leaves; the vegetables are stuffed with a mixture of rice, ground beef and herbs.

As the plot twists, the mallow leaves fill the bowl until they reach the brim. Mahmoud puts the leaves in a colander and rinses them with plenty of water. After they're clean, he puts them on a cutting board and chops them very finely with the curved blade that he calls *makhrata*⁸⁰. Sophie volunteers to help with the chopping.

"No, no, dear, you can't do this yet. It's a very heavy knife and very sharp too."

"If Moïse asked, would you refuse him too?"

"But why would Moïse ask?"

"I said 'if.' 'If' he asked."

While Mahmoud is chopping the leaves for the *molokheyyah*, Sultana is busy covering the meat with generous amounts of coarse salt. "Want to help? Come here, add a small handful. Now I'm going to let you in on a secret that's been passed down through the generations, from mother to daughter and from grandmother to granddaughter. Jewish women make sure to salt the meat. They did it even when salt was as precious as gold and rubies. Imagine that we're opening our jewelry box and sprinkling the meat with our jewels: a handful of gold here, a handful of diamonds there." The salt crystals glitter like gemstones on the smooth texture of the meat. "The salt has mysterious properties that protect the body against disease. When gentile children died like flies, our children survived and thrived. The gentiles never understood why. They were sure the Jews were poisoning their wells." Sultana covers the meat with a cloth and sets the dish aside to let the salt work its magic. "Did I ever tell you about the blood libel?" After the salt has been left on for the prescribed amount of time, Sultana rinses the meat with lots of water. She sets aside two nice cuts for the soup. The rest she grinds in her meat grinder for the stuffed vegetables. Sophie watches Nona turn the handle, the pieces of beef swallowed in the maw of the machine. The iron screw pushes the chunks forward, forcing them down to the perforated plate. Worms of meat and fat dangle from the holes, falling into the white enamel bowl. Sophie asks Nona if she may turn the handle, but when Nona wears the expression that says she's busy, she doesn't hear a thing. Her brows draw together and her lips pout. After she's done grinding the meat, she puts peeled onion wedges in the machine. Sophie asks Nona to at least let her grind the onions. "The onions are the unpleasant part," Sultana smiles. She opens her eyes wide at Sophie and says, "Look at me! See how they make me cry." Sophie is actually looking at Nona's nose: a small, clear droplet is suspended from its tip. It is growing bigger and thicker, it might fall any second now. Where would it fall? As Nona turns the handle, the drop, swings back and forth. Just before it falls, Nona wipes her nose with the back of her hand and swipes it against her apron. That's it. The crystal drop show is over.

Nona washes the blade of the *makhrata* with plenty of water, getting it ready to chop the herbs. She also uses the opportunity to wash her hands. While Nona is busy chopping the herbs, Sophie inspects the meat grinder, moving its handle and watching the screw move back and forth. She completes a full turn of the handle and sees clearly how the screw moves forward. How is it that the screw doesn't continue forward to emerge on the other side? She stops the motion of the handle, sticks a finger into the opening, and moves the handle ever so slowly. She feels her finger being pinched a bit. Before it starts to hurt for real, she moves the handle back. When Nona is done with the herbs, Sophie clasps her hands behind her back. The meat grinder handle swings left and right. Nona gives her a smiling look and shakes her head. She wipes the sharp blade with a dry cloth and places it on the counter. She proceeds to the living room and asks Sophie to join her.

Now Sophie has to participate in shelling the peas. Mahmoud puts the cloth bag with the *bisella* – the fresh peas – on the table. Aunt Lilly spills its contents onto the middle of the

⁸⁰Makhrata (Arabic) – a curved blade with two handles, one on each side.

table. The green pods must be opened one by one, the peas popped into the palm of the hand, then tossed into the pot. When the pot is empty, the peas make a high clinking sound; as it fills, the sound grows increasingly dull until it stops. Occasionally, Sophie will pop some peas into her mouth. She's allowed to eat them raw. Their flavor is sweetish.

Before it's time to sort the rice, Rachelle, Rebecca and even Aunt Rose, who just got out of bed, join them. Not a single male is going through the rice today, certainly not Father Passy who left this morning for the maternity ward. And what about Moïse? He's probably standing in front of the mirror, sweeping his straight hair back to the sides. Or lying in bed, fully dressed, reading a book. Sophie would also like to be reading. Why not? Of course she's going to have spelling mistakes if, instead of reading books, she's busy playing Cinderella. Now Sultana is walking into the living room with a terrifyingly huge mound of rice and an empty bowl for the cleaned grains. Each sorter takes a white plate and a handful of rice, which is placed along the far edge of the plate. The cleaned rice is pulled back. Pieces of straw, small pebbles and grains deemed unfit for consumption are moved to the side and dumped over the edge of the plate to land on the table. Whenever Lilly discovers something alive in the rice, she shouts out, "Quelque chose qui marche!" Sophie isn't bothered by the bugs. She sweeps them aside together with the inanimate debris. Just to be on the safe side, she squishes the bugs against the table with her thumbnail so that they don't creep back into the cleaned rice.

After the rice is sorted, it's time to stuff the vegetables. Thank God Sophie is exempt from this part of the proceedings. While Sultana starts to core the zucchinis, Sophie slips into the kitchen where she finds herself alone. On the counter, at eye level, lies the *makhrata* with its gleaming blade. Until the peppers are beheaded and are ready to be stuffed, and until every one of them is tasted to make sure no hot pepper accidentally snuck into their midst, and until each one is stuffed with the rice and ground beef mixture, and until the vine leaves are filled, Sophie has plenty of time to experiment with the heavy blade. If she's ever allowed to use it, she'll already know how. She looks around for some leftover herbs to practice on, and sees a stalk of parsley left in the colander. Parsley in one hand, the *makhrata* in the other, she walks to the table where she puts the curly victim on the oilcloth. A quick glance at the doorway and the cutting begins: hand up, hand down, just like Mahmoud. At first the wiggly stalk tries to take evasive action but the sharp blade is quicker. She gets it right in the middle. With each movement of her hand, the stalk is further crushed and chopped. But along with the parsley, the oilcloth is also getting slashed, and now the wooden tabletop is peaking through. By the time Sophie notices, the damage has already been done. A panicked look at the doorway and Sophie puts the knife down and covers the ribbons of oilcloth with the cutting board. When Sophie returns to her room, she sees Moïse, dressed, lying on top of her bedspread, reading *Gulliver's Travels* in English. Why is he on her bed? She looks around for an object she can throw at him.

When the stuffed vegetables are in their pots, Sultana brings them to the kitchen and puts them over the flame. Over the front burner – the best of the lot – she blanches the dinner's highlight, the *molokheyyah*, and tosses the chunks of meat into the bubbling pot. She adds a shank bone and a halved tomato, and seasons the dish with seven garlic cloves, black pepper, salt and, most importantly, a heaping tablespoon of freshly ground coriander seeds. When the scents start rising from the pot, Sultana hurries to open the windows to make all the neighbors' mouths water.

Just as Sultana makes the horrifying discovery of the mutilated oilcloth, the wheels of a carriage can be heard stopping right outside. "Ils sont venus!" (They came,) says Aunt Lilly and hurries to the window. "Oui, ils sont là." (Yes, they're here.) Lilly and Rebecca quickly run downstairs to greet the arrivals from the maternity hospital: Father Passy, Mother Fortuna and tiny little Suzy. "Avagar," (Slowly) Sultana calls after them, "don't run on the stairs." She

remains at the entrance. “Kon el pie deretcho,” Sultana instructs her daughter, “Step into the house with your right foot.” Sultana kisses Fortuna on the cheeks and peeks at Suzy, asleep in her mother’s arms. “Don’t tell me you made *molokheyyah*,” says Fortuna. “I was sure the smell was coming from the neighbors.”

A new sister is a twofold reason for rejoicing. As long as Mother is busy with Suzy, no one will investigate the little matter of the slashed oilcloth.

*

In the Savariego family, one joy follows another. A few days after Suzy’s birth, Sultana orders her unmarried daughters to dress in their finest, and invites Vitaly, a short, rotund Jewish merchant who wears a gold watch, for a visit. Rachelle is the one who was told to sweeten his stay. She comes in with a plate of *dulce de leche* and a glass of cold water. A freckled blush blooms on his face and the wide expanse of his bald dome. Solomon sits in his embroidered armchair, mashing a hankie with his fingers. So as to avoid any misunderstandings, it was agreed that Vitaly would take Rachelle “as is,” which means without a dowry. Vitaly is the fate the good Lord decreed her. It’s her luck to be marrying a rich merchant whose head barely reaches her bosom. Sultana is polishing the silver candlesticks that Vitaly brought her as a present. While doing this, she hums an old song praising the virtues of married life: “Marriage is a sweet-and-sour fruit. / The husband sets sail on business / His beautiful wife stays home to care for his sick mother. / When he comes back, he’ll bring her a ring and a necklace / and eyeglasses framed in solid gold.”

Chapter 3: Embroidery at every turn

When Nona Sultana is mad at her husband, she calls him “Monsieur Savariego.” But these last few weeks Nona hasn’t been able to get angry at Nono because he has a terrible cough. He isn’t spitting blood yet, but Dr. Rauf said it’s only a matter of time. He also said Nono should be served with separate utensils that only he may use, and all visitors leaving his room must dip their hands in a bowl of Lysol. Sophie overheard Mother trying to convince Sultana to send Nono to the hospital in Helwan. When Sophie sees them exchange whispers, she creeps closer, bouncing a yoyo or seemingly memorizing her multiplication table.

“The air in Helwan would be wonderful for him. They have the best doctors.”

“We can’t make him leave the house. We’ll be killing him with our own hands.”

“On the contrary. He’ll love it. People will take good care of him. Compared to the stifling room he’s in now, Helwan is paradise.”

“I don’t want him in paradise. I want him alive.”

“Well, at least think about it.”

“It’s out of the question.”

It all changed the day Sophie was caught threatening Moïse with Solomon’s cane. Sophie knew perfectly well that she wasn’t allowed to touch Nono’s things but when Nono went to the bathroom and left his cane just outside the door, she couldn’t help herself. Her mischief was cut short. Mother grabbed her arm and shook it so hard that the canecattered to the floor. “You found yourself who to play with?! With the Angel of Death?!” She dragged Sophie to the shower as if she were a baby of six or seven. When they passed Sultana in the hallway, Mother hissed, “Mos va tomar a todos kon el (He’ll take all of us with him).” In the bathroom, Mother pushed Sophie’s arms deep into the sink and scrubbed them, soaped her with an enormous cube of soap, scrubbed and rinsed, scrubbed and rinsed, four or five times. For the finalé, she roughly shook the water off Sophie’s hands and poured an entire bottle of

Lysol over them. She didn't care that Sophie's skin would peel. While rubbing and rinsing, Mother kept repeating, "Je t'ai dis mille fois, de ne pas toucher ses choses (I've told you a thousand times not to touch his things)."

Nobody blames Sophie for the fact that Nono is being taken to Helwan. But still, the truth is that it was only after her horsing around with his cane that it was decided to send him away. Sophie stares at Nono through the open door. His eyes are closed. He is seated on his throne, his hands grasping the armrests. Sophie calls it the throne because of the beautifully embroidered seat cushion and elegant backrest.

*

In the early years of their marriage, Sultana embroidered many items for Solomon, perhaps as compensation for the fact that they spoke very little. She'd sit by the light of the lamp, working late into the night, trying to communicate with him through her colored threads: a decorated cushion for his feet or his monogram on snow-white handkerchiefs. After their tenth wedding anniversary, she stopped embroidering. "Embroidery is for younger eyes. When their girls grow up a little, they'll embroider for him." Sultana gave Solomon five daughters, one after another, but not a single male child. With each birth, his silence deepened. Where was he going to get five dowries from? The Book of Psalms from which Solomon liked to read – it had the Hebrew on one side of the page and the French translation on the opposite side – it says: "Your sons are like olive plants around your table." Why was Solomon so accursed that he got only daughters from his wife? Healthy daughters, thank God, who are growing into full-figured and pleasant looking young women. Two of them – Rose and Rebecca – even have blue eyes. However, blue eyes are no substitute for a *shushulika* (little "willy"). When they mature, they'll take their beauty and femininity and fly off to some greedy husband, and the Savariego name will die out and be forgotten.

The music of the house is the music of the women: the soft pianissimo murmur of Sultana's wisdom, the percussion of Fortuna's firm declarations, the clash of Rose's cymbals, and the ring of Rebecca and Lilly's bells – sometimes giggling, sometimes whispering that turns into wailing. The sounds are in harmony with the scents: the fragrances of young desirous, virginal bodies mixed with the aromas of the herbal cosmetics Sultana cooks up for them. Their silent embroidery screams from every corner: on every sideboard and under every vase the colorful threads throb as if alive. Flowers with fawns and peacocks, a prince murmuring to his princess. The labor born of passion that finds no redemption. When Solomon seeks refuge from the clamor, he retreats to his room, flings the shutters wide open, hoping to fill his lungs with a little bit of fresh air. On the laundry lines in the yard, the wind blows through his daughters' dresses and undergarments, sending them into a wild dance.

One night Solomon had an impure dream. In his dream he is Lot, fleeing with his daughters from Sodom and Gomorrah. Back in the valley of Sodom, the earth opens up and shoots fire and brimstone into the air. Is this the end of all flesh? The wife of his bosom looked back and became a pillar of salt. But inside the cave it is pleasantly cool. The blood-red wine pools in his throat. Two of his daughters are by his side, giving him so much wine he loses his bearings. They are there to salvage his seed. In his dream, they are not their modest, obedient selves. As the dream climaxes, Solomon wakes up in a sweat. His forehead is burning. A terrible ache is pounding in his temples. A good father doesn't have such dreams about his daughters. A decent father teaches his daughters to maintain their innocence until the time comes for them to be taken from the nest. God will surely punish him for his wanton dream. After the fever and headache, came the chills and his coughing fits grew worse by the day. Despite his weakness, he's still the man of the house, but how can a man rule his roost if, instead of clear, crisp speech, all that comes out from his mouth is phlegm and coughs?

The dense silence that has descended on the house can be cut with a knife. Who drew his look? Who did he lay his hand on? On whom did he cough? His daughters walk past him with

expressionless faces. He can hear them picking up their pace as they pass. Sultana slinks away to her housework while he – silence being his final refuge – closes his eyes or fixes his gaze on a distant point and listens to the siren’s song of his illness: “I am your one and only, I and not the women surrounding you. Forget your wife, forsake your daughters. I am flesh of your flesh. I doze with you and awaken with you. I am your destination. And I will never leave you.”

His impure dreams and his illness are a twin source of the house pollution. The drainage hole for the filth is located deep down. Somebody has to take the plunge and feel for it on the bottom. For everyone’s sake, Rose, the most daring of the girls, has a go at it. Sophie remembers her, lying on the floor like a limp rag, soaked by the buckets of water Fortuna threw on her. Passy ran to flag down a Red Crescent carriage. They said she drank something, perhaps a bottle of disinfectant. Now she’s throwing up. Excellent! Just to be on the safe side, they’ll pump her stomach at the hospital.

The echoes of the drama in the living room have made Nono rock harder in his chair. In one hand he grasps a shredded handkerchief and in the other his cane. He groans, coughs, and prays that his “one and only” comes and takes him away. Suddenly, in the depths of his despair, a consoling ray of light peeks through. He’ll send Rose away. That’s what he should have done to begin with. It is as clear as the sun that she cannot stay home. For her recovery and happiness, he will overcome his sick desire and send her to Constantinople,⁸¹ the Turkish stronghold of the Savariego family. The young men in the Savariego family are hale and hearty, they will turn to mush in the presence of Rose’s abundant charm. “Hilwei’ah zai al Amar” – as beautiful as the moon. With her round face, full chin, and flashing blue eyes, they’ll take her even without a dowry; they’ll beg him for her hand, and he, out of the goodness of his heart, will grant it. Solomon, whose wife failed to give him sons, will soon be blessed with male grandsons bearing the Savariego name. Why didn’t he think of it before? Well, the thought may have crossed his mind but he just couldn’t let her go.

Solomon’s living space grows smaller every day. At first he was limited to his bedroom where he used to pace, one hand on the cane, the other behind his back. Now all he has is his throne. He moves directly from bed to his decorated armchair. That’s what’s left of his kingdom. There he spends his days, there he eats his meals. Until not long ago, he still listened to records on the gramophone, cranking the handle that winds the spring and gently placing the needle in the first groove. Then the Turkish singer’s warm trills of longing would sooth his soul, much like the overly sweet tea Sultana forces on him soothes his throat. Rose is surely listening to similar music as she walks down the promenade in Constantinople, arm-in-arm with Nissim, her new husband, and proudly parades her growing belly. But in the last few days, the gramophone has been silent and the spark in Solomon’s eye has faded. Since Rose left, his mustache has grown sparse and pale. His newly sunken cheeks challenge the razorblade. The era of whispers is over; Fortuna now says it loud and clear: “He has to be moved to Helwan. End of story.” Gone are the “It’ll be good for him” and the extravagant praise of the fresh air and doctors’ expertise. “He has to go before it’s too late.”

Nona leaves Solomon’s room holding a tray with a cup and a teapot, which she takes straight to the sink. Not Mahmoud. She herself will soap the utensils, twice, wash them and rinse them and dip them in a basin filled with the red potassium permanganate solution. Throughout her work, Nono’s door stays open. Sophie leans against the hallway wall, her gaze lingering inside the forbidden room. Nono’s gramophone is just a dumb piece of furniture, its lid locked in place and covered with an embroidered doily. Nono’s bowl of porridge sits on the sideboard. He refuses to eat any of it. Sophie is sure she saw a hasty tear

⁸¹The former name of Istanbul.

escape his eye and hide in his mustache. Unexpectedly, moisture in Sophie's eyes gathers, threatening to spill over any second. The little heroine who stands up to beatings and pinching melts with sorrow over Nono's impending departure. Her stupid game with his cane, that's why he's being sent to Helwan. A barely audible squeak from her throat makes Nono open his eyes. "There's nothing to cry about, my little one." His eyes are very red. She's sure that he, too, has been crying. She wants to run to him, hug him, ask his forgiveness, but she knows she's not allowed near him, so she runs and shuts herself away in her room. It was the last Sabbath with Nono at home. The two large suitcases he'd bring with him to Helwan were packed that very night.

It's early Sunday morning. A carriage is waiting outside, and Solomon and Sultana are standing next to it. Sultana tries to wrap a travel blanket around Solomon's shoulder, but he pushes her hands away. Sophie is watching them from the window, she is also looking at the horses – one white, one black. They're wearing leather blinkers so that they can only see straight ahead. Their harnesses are ornamented with tiny brass bells that tinkle softly when they shake their heads. The carriage driver, reins held loosely in his hands, patiently waits for Nona and Nono to climb aboard. Mahmoud is busy at the rear of the carriage's loading Nono's throne, whereupon the driver twists around. Sophie thinks he looks familiar. Immediately she lifts the lace curtain and covers her face. She and Moïse used to play this really hilarious prank. When they saw an available carriage by the side of the road, Moïse would ask in Arabic "Fadi ya osta? (Available, sir?)" The driver would straighten up and answer "Aywah (Yes)," whereupon both children would chant in unison: "Insha-allah daiman! (May it always be so!)" They would have just enough time to see him get mad and threaten them with his whip before they'd break into a run, giggling all the way. Three times they played the prank on the same hapless driver and three times he fell for it.

Sophie has positively identified her and Moïse's victim from the street corner: his rounded back, gray jacket, faded fez, almost pink by now, with the bedraggled tassel missing most of its fringe. The driver looks up at the window through which Sophie has been watching the scene and lifts his whip. Sophie quickly crouches out of sight. Is he about to take his revenge? She's sure she saw a threatening look on his face. He surely remembers how they ridiculed him. He saw where they ran, the courtyard they entered. The open window lets in the clippety-clop of the horses' hooves and the creaking of the large metal wheels. The driver can't have forgotten. When Moïse wants to scare her, he tells her horror stories. "Revenge is the essence of a Bedouin's life. The Bedouin will climb out of their graves for vengeance." In Sophie's imagination, the driver stops the carriage in the middle of the desert and tells Nono and Nona they have to continue on foot; this would be his revenge for what their grandchildren did to him.

After Nono and Sultana have left, Mahmoud swoops down on the house, rolling up the carpets and putting them in the corner, scouring the floor tiles with a stiff brush and soap. Streams of water flow down the stairwell into the street. After he's done, Mother gives him a bottle of disinfectant for the toilets and tells him to wash down Nono's room with extra care.

A minute after Mahmoud is done, after Nono's empty room has been purged and reeks of cleanliness, the postman arrives with a joyous telegram from Constantinople: Rose has had a boy, a proud scion of the Savariego tribe.

*

No contest between them is ever going to be fair. Hopscotch challenges one's precision and equilibrium. Sophie tries needling Moïse to make him lose concentration. "You're good at squares and straight lines, that's why you're ahead." Moïse says nothing and continues to lead. At "fifth" he's pulled so far ahead that it's not just a victory – it's a rout. The problem with competing against Moïse is that he always wins; even when he supposedly loses, or lets her win, he is showered with Mother's praise. How long will Moïse be the level-headed,

responsible eldest, and she the younger, disobedient one? After all, she's not a little girl anymore. She has a secret from Moïse. Mother says she's become a "big girl," whereas Nona goes a little overboard with "woman." Yesterday, Sultana showed her how to care for herself when the womanly flow comes. She mustn't run or jump, certainly not hop on one foot playing hopscotch. Sophie remembers Nona's instructions. When it's her turn to play, she lets the stone fly and hits Moïse in the forehead. His hands go up to grope the wound. When he realizes he's bleeding, he leans forward and runs to the faucet. She, a twelve-year-old girl-woman, is two fingers taller than he. Surely she didn't mean to hurt him. Both of them are bleeding now – she in secret, he out in the open. Moïse is bent over the tap, holding his elbows out to the sides so that the water and blood running down his forearms won't stain his trousers. After a while, the bleeding stops and Moïse stands up. "It's just a scratch," he says, "I don't think I'll need stitches." Sophie's arms hang limply by her sides. She wants to cry. Moïse combs his wet hair back with his fingers. "It's getting late," he says, a serious expression on his face, and starts walking home.

That night, in front of the bathroom mirror, she sees that her nipples have become even bigger. Two months ago they were the size of hazelnuts; now they're more like chestnuts. Sophie folds an arm over her chest, feeling the cloth of her undershirt. This is a gesture she's going to have to practice, to hide her chest. Are they going to force that disgusting item – the *soutien gorge* (bra) – on her? Her unwed aunts need one – hah, do they ever! "Forte de poitrine" – big breasted – is said of both of them. Exactly five years from now, she'll start going to balls and parties with them. Thanks to the small age difference between them, she doesn't have to call them *tante*.

Chapter 4: Releasing the soul

The name Helwan sounds like the Arabic word "helw," which means "nice" or "sweet." Unfortunately, there's been nothing nice or sweet about Sultana's recent visits. Sophie looks at Nona as she returns home, all sweaty and pale. "The heat outside... It's hellish." Nona peels the long gloves off her forearms and holds them out to Fortuna who will fold them up in newsprint and boil them sterile later on. "Take them, take them away." On her way to the armchair in the living room, she opens the top two buttons of her dress, and sinks into her seat.

"No, Mother, don't sit. Go straight to the shower," says Fortuna.

"Tell that to my feet. I really can't take another step. You know, God is punishing us for having sent him to that awful place."

Fortuna hurries to sit down near Nona.

"Everyone says it's a fine place."

"Fine? Really? You go in walking, and come out in a coffin. Your father's face is as white as this wall. He reminded me of the story about the man who whitewashed his face so that the angel of death wouldn't recognize him."

At this point, Sophie gets her courage up to participate in the grown-ups' conversation.

"Not so that he wouldn't recognize him but so that he'd think he was already dead and leave him alone."

"Bravo Sophie, I see that you remember the story better than me. Believe me, Fortuna, he and his friends are experts in fooling the angel of death. From one visit to the next they look less like living beings and, *el Dio que no de* (God forbid), more like ghosts."

"Sophie, please go get Nona a glass of water," orders Fortuna.

Reluctantly, Sophie goes to the kitchen. Had she kept her big mouth shut, she wouldn't have been sent out of the room. On the way, she recalls Sultana's stories about ghosts: Despite their odd appearance, Sultana says, one mustn't be afraid of them. There are some perfectly lovely ghosts that are very helpful to people, because they're making up for the bad things they did in life. Sophie is certain that Nono Solomon is going to be a good ghost. She feels a pang; she really misses him. Once he is free of his ill body, will he be able to come home? Will she see him then? Sophie doesn't hear the next part of the conversation.

"How long has it been since we took him to Helwan? Seven months?"

"Not quite," says Sultana. "I remember the first time I went to see him. I was convinced the place worked miracles. Imagine, Fortuna, we went into the garden together and sat down on a bench. I thought, 'this is just like when we were engaged. What a beautiful time that was.' I knew the thought might irritate Satan, but I couldn't block it out. Indeed, since then, everything's gone downhill. His condition is much worse. Nowadays, he barely gets up to go to the bathroom. Straight from his afternoon nap to the wheelchair, waiting for an angel of mercy to put a wool blanket on his knees and push him onto the veranda. The nurse told him I was there but he didn't even open his eyes. I sat next to him on the veranda and together we listened to the orchestra from hell: that one coughing, the other one groaning, the third one clearing her throat, the fourth one spitting phlegm into a bowl. Every once in a while he, too, will let out a little cough, and then goes right back to sleep. He tilts his head back so that his nostrils line up with the breeze and then nods off. I thought, 'Look at them, how miserable they are, all because they can't get enough air into their lungs.' Simple everyday air that you can't even see or touch."

Sophie came back from the kitchen and held a glass of water out to Nona.

"What took you so long? Did you go out and draw the water from the well? Thank you, *kerrida* (loved one). Oh no! I can tell you've been crying. It's perfectly all right to cry."

"That's not true. I didn't cry."

"Look at her eyes, Fortuna. She says she didn't cry. She really loves her Nono."

"Did you give him the handkerchiefs I sewed for him?" asked Fortuna.

"Of course I did. Didn't I stay up a whole night monogramming them? I spread a new one out on his knees so that he'd notice. I said to him, 'Look at the letters for Solomon Savariego; they're the very same letters as *'Salud and Salvacion'* (Health and Salvation). It's a good omen."

Sultana took a long, deep drink of water and gave the glass back to Sophie.

"I'm sure that made him feel better," said Fortuna.

"Well, that depends. He opened his eyes a bit and traced the first 'S' with his finger and then whispered '*Solo*.' I didn't understand what he was trying to say, but then he said, '*Solo Salvacion*' (Only Salvation). I understood exactly what he meant I said, 'Excuse me,' left the package on the chair, and ran outside to cry."

*

Sophie and Passy were about to go into town to buy her school supplies: three notebooks, a package of blotting paper, and a dual-purpose eraser – one half for ink, the other half for pencil. Sophie loves her outings with her father. On their way home, he'll pamper her with hot corn on the cob whose aroma wafts enticingly down the street, but she'll wheedle him a bit for a few bits of chewing resin wrapped in newsprint and then chew it right in Moïse's face. If she's feeling nice she may let him have a few grains, and if she's not – she won't. Father was already in the doorway when Fortuna noticed them.

"Wait a minute. If you're going out, there are a few things I need for the shop. I'm all out of organdy. And bring a packet of needles for the sewing machine, and... oh yes, order a bolt of black cloth."

"Why do you want a whole bolt?"

“It’s good to have some spare.”

“But why black?”

“What’s with all these questions? And in front of the child yet!”

The telegram with the sad news from Helwan came two weeks later. Even before Fortuna read it out loud, Sultana had guessed its contents. “*Salavacion* came before *Salud*,” she said quietly. Sophie looked at Sultana’s peaceful face. “This is what he hoped for, this is what he wanted. While he was alive and suffering, we had to cry and pray for him. Now that he’s passed away, he is free of suffering. Why should we weep?” This is what Sultana said before she went into her room and closed the door. No member of the household saw her cry.

*

In the funeral procession, Sophie walks just behind Moïse. The dome of the black velvet skullcap floats on his thick hair like a nutshell. To their left and right are long rows of headstones inscribed with names – no doubt the names of the ghosts that frolic in the cemetery after sunset. Moïse’s stride exudes confidence. Sophie closes the distance between them and walks by his side. If only she didn’t consider it a sign of weakness, she’d have stretched her arm out and linked it in his. Moïse looks straight ahead, totally indifferent to the six figures in black rapidly swooping down on them from between the graves. All are wearing headscarves that lend their skulls a triangular appearance and black skirts that goes down to their ankles. Fear grips Sophie’s guts. Female demons always hide their feet with a long skirt so that they cannot be identified. Any child knows that demons feet look like claws of a bird of prey. Indeed the one with the wart on the tip of its nose does look like a crow. Apparently, a secret sign has been given: the six break into heart-wrenching howls, start slapping themselves and stretch their arms to heaven. It’s as if they have just lost their nearest and dearest, rather than Sultana and Fortuna and the three aunts – Lilly, Rachelle and Rebecca – who are holding one another up in silence, from time to time wiping away their tears. Sophie’s arm moves as if it has a mind of its own and fits itself around Moïse’s dangling one.

Just before the rending ceremony,⁸² the wailing of the professional mourners stopped. An unshaven man handed the crow-faced woman a straight razor. Her eyes glittered, her nose grew sharper and drooped, as if weighted by the wart. The man pointed to Sultana and said, “She’s first.” With one hand, crow-face brought the blade close to Sultana’s throat, the other clutching the edge of her collar. At that moment, Sophie was released from the paralyzing terror. She flung Moïse’s arm away and leaped forward to grab the skeletally thin hand holding the razor. “No!” Sophie screamed. Her scream was swallowed by her aunts’ outburst of tears. Mother managed to block Sophie’s leap and hold her tight against her in a powerful hug. The man focused on Sultana. With the razor held close to her face, he ordered her to repeat his words precisely, syllable by syllable. Sultana said nothing, only breathed deeply. After a while, she uttered a single sentence, in Ladino. “What did I do to deserve this?” Crow-face yanked on Sultana’s collar and cut the cloth, exposing Sultana’s white undershirt. After the ceremony was completed with Sultana, it was Fortuna’s turn, followed by the three aunts. Whether or not they repeated what they were told to say, their shirts were slashed. Sophie snuck a quick peek below the hem of the woman’s dress. Perfectly human ankles jutted above the heels of the worn, dusty pumps. At the rear, Suzy was crying without letup. Usually, when Suzy cries like that, Sultana picks her up and bounces her while crooning, “Ho... Ho... Ho...” until Suzy calms down, but there’s no way that’s going to happen now, not when she herself is weeping and her blouse has been cut with a razor. Suzy twists and kicks in Marcelle’s arms. Marcelle is Mother’s shop assistant. It’s a shame they didn’t leave Suzy at home. But with whom? The servant?

⁸²The Jewish custom is to tear one’s clothing upon the death of a first-degree relative.

*

Sultana will bounce Suzy on her knees and play “La gainika el coco”⁸³ with her only after the official seven-day mourning period. During that week, the visitors come and go in a steady stream. The large dining table has been moved out of the living room, and the space is now filled with row after row of wooden chairs, like in the moving picture theater. The mattress on the floor across from the seats has been covered with an embroidered bedspread. Sultana sits in the middle, wiping her nose with a white rag, four of her daughters by her sides: Fortuna and Rebecca on the left, Rachelle and Lilly on the right. From time to time, one visitor or another will shake the head and say a few words about the departed. “He was such a good man,” “He was so generous,” or “He suffered so much.” And “How will the women manage without their crown and glory?”

“Go and see if everything is ready for the blessings,”⁸⁴ Sultana whispers, and Rebecca hurries to the kitchen to do as she is told.

Before the afternoon prayer service, the room fills with serious-looking, mustached men. They, with their neckties and black hats, remind Sophie of Nono Solomon. Before sitting down, they give a little tug at the crease of their sharply pressed trousers. Suzy climbs down from Mother’s knees and crawls over to Sultana’s lap where she curls herself into a ball. Still seated, the men begin to pray in silence, then rise to their feet as one. All of a sudden, the low murmuring is interrupted by a chorus of “Amen. Yehey shmey rabba mevorakh”⁸⁵ followed by shouted amens, said loudly enough to break the very windows of heaven. Here on earth they succeed only in scaring Suzy. “Amen” and, again, “amen.” Suzy’s increasingly loud shrieks draw disapproving looks from some of the men. How does the baby dare interfere in the holy task of releasing the soul? Worse still, how do the women – who are merely asked to maintain silence – not put an end to this racket, with force if need be? It’s a well-known fact that, during the seven days of mourning, the spirit of the deceased is still stuck beneath the living room ceiling and is begging the praying men to help it rise to heaven. Sophie looks at Sultana’s calm face and is surprised: where is the apologetic, submissive look? One mustachioed look should have paralyzed her, the way Nono’s look did when she failed to place his slippers next to his feet at precisely the right moment. Sultana signaled Marcelle to take Suzy out of the room. A small tip of her chin was all it took. Marcelle hurried to sweep the child up in her arms, clasp the little one to her chest, and slip out of the room with a hand over the baby’s still bawling mouth. One by one, the men finished their silent prayers, shuffled the three prescribed steps back and bowed the three slight bows – to the left, the right and the center – then kissed the open prayer books and again slumped down in their seats.

Between the afternoon and evening prayer services, Marcelle entered with the blessings tray: saucers with slices of apple and peeled cucumbers cut lengthwise, small bowls of raisins, halved hard-boiled eggs, and a large bowl of salty pretzels sprinkled with sesame seeds. Sophie and Moïse both help themselves to a pretzel or two and go back to sit on their cushions near the mattress. Very soon, Monsieur Albagli will clear his throat, a signal that he is about to relate yet another story about a quick-witted Hakham Bashi⁸⁶ in some European provincial town or other. Moïse and Sophie sit a little straighter on their cushions and hug their knees.

⁸³ The Ladino version of “This Little Piggy.”

⁸⁴ In the Jewish tradition, one recites a blessing before eating; The blessing depends on the type of food: annually grown vegetables (e.g., cucumbers), perennially growths (e.g., apples), baked goods (e.g., cake, pretzels), other (e.g., hard boiled eggs and drinks). It is considered meritorious to recite many blessings, thus snacks from the various categories of blessings are brought out in a house of mourning.

⁸⁵ The communal response to the prayer called Kadish.

⁸⁶ Chief rabbi in Turkish.

“One day, His Majesty ordered the Hakham Bashi to appear at the palace and told him, in these very words, ‘I demand to see the Jewish God by tomorrow night. Unless I see Him by then, I will issue an already signed proclamation forbidding circumcision, kosher slaughter and Sabbath observance. Anyone who transgresses will be put to death.’” Monsieur Albagli raised his eyes to the ceiling, as if looking for something, and, after a deep sigh, continued: “The soul of Solomon son of Fortuna, the departed holy one, is certainly looking down on us now, and would certainly agree that the king’s decree was horrible. What could the rabbi do? Of course he fasted, prayed, recited psalms, and in short did all he could. By the first light of day, he knew exactly what he would tell the king. After he washed and immersed himself in the ritual bath, he presented himself at court. Standing tall, he declared, ‘Let the king and his ministers come to the town square tomorrow at noon, bringing along the three strongest men in the kingdom. There, the glory of God will be seen by one and all.’”

Yet again Albagli stopped his narration and stared at the ceiling. Sophie and Moïse didn’t know where to look: up at the blank ceiling or the flexible thread of white spittle that stretched and shrank as the storyteller opened and closed his mouth. Tense, they waited for Albagli to continue.

“The next day, at the appointed time, when the sun was at its highest, everyone gathered at the central square, just as we’re all gathered here. Then the Hakham Bashi approached the three strong men and said, ‘In the name of His Majesty the King, I command you to stare at the center of the sun. Concentrate and look right at it. Keep your eyes open; don’t dare blink, because in just a moment, His almighty eye will peek out at you.’ A hush fell over the square.”

A hush had also fallen over the Savariego living room while the spittle in Albagli’s mouth had stretched to an impossible length. After a short silence, Albagli picked the story up again.

“The strong men started squinting and blinking. One by one, they cast their tear-filled eyes to the ground. The Hakham Bashi then said to them, ‘If the king’s fiercest men cannot look into the eye of the sun, how can a mortal man see God whose light and glory is like a million suns combined? The Master of the Universe has acted mercifully with His Majesty the King and all those who gathered here at the square by not showing Himself today, because it is as the holy Torah says: ‘No man shall see Me and live.’”

As he was concluding the reassuring, happy end of the story, Monsieur Albagli took a hankie from his pocket and wiped his lips. “Immediately, the king was filled with awe and became a God-fearing man. He invited the Hakham Bashi to live in the palace and teach him about God, and the Jews of that kingdom had ‘light and gladness and joy and honor’ as it says in the Scroll of Esther.”

Albagli sent a last look at the ceiling, and added, “May it be His will that the prayers we recite and miraculous stories we tell will help elevate the soul of the departed, Solomon son of Fortuna, whose seven days of grieving end tomorrow.”

Eleven months later, the veil of mourning is finally lifted. Moïse and Sophie can get back to their loud squabbling in the hallway and play with Nono’s old gramophone. Sophie’s young aunts can once again wear brightly colored clothing, go out for coffee and cake in the afternoon and to dance parties at night. Only Sultana remains in black. She enters her calm stretch of widowhood. She has plenty of black dresses in her closet, she has a loving family that accepts her authority and, as if that weren’t enough, she now has a personal emissary in heaven. Whenever she decides to pray, she’ll steer her thoughts his way, and he will pass her requests on and attend to matters on her behalf.

Chapter 5: A royal invitation to minuet

Moïse was happy to include Sophie in the arm wrestling and running contests in which he and his friends competed. “Before you even dare go up against me, you have to take my little sister on.” Sophie was only too glad to teach the boys a lesson. Her mighty right arm was already a legend. Just between the two of them, she had proven to Moïse that even he couldn’t beat her. Sophie’s victorious reign lasted until she turned thirteen. Moïse’s friends were a year or more older than her. When she realized that the balance of power was now in their favor, her enthusiasm for competing with them waned. Besides, by now the boys’ bodies were changing in ways that told her to keep her distance: pointy Adam’s apples, shadowy upper lips, yellow pimples on their foreheads and, worst of all, their unpleasant body odor. Sophie remembers well the day that Moïse positioned himself in his doorway, a mysterious smile on his face, and said, “Sorry, no girls allowed.” What she saw past the open door was new and baffling. Instead of their usual arm wrestling on the rug, the boys, bare-chested, were passing around a measuring tape Moïse had appropriated from the tailor shop. The measuring tape was supposed to determine with absolute mathematical certainty who had the more triangular body – skinny André or muscular Samir. According to Moïse, triangles are a matter of pure geometry and looks can be deceiving. The quality of a triangle is measured by the difference between the chest’s circumference and the waist’s. Muscular Samir strikes a pose and sucks in his breath, just as he did earlier in front of the mirror. Moïse measures and announces: “Waist – 51. Chest only 45.”

“That’s impossible!” cries Samir.

“What do you mean impossible? We measured you right under your nose.”

Skinny André grabs one end of the tape and quickly loops it round and round his hand before the prank he and Moïse planned is discovered.

“Samir’s triangle is upside-down.
Downside-up upside-down
Most amusing clown in town!”

André is pleased with his rhyme.

Samir won’t back down and grabs the other end of the tape, peering at it closely. One side is white, the other yellow. Samir yanks on it, angry.

“Wiseasses! You think I don’t know? One side is centimeters, the other’s inches.”

“OK, fine. Joke’s over,” Moïse warns. “You’re ruining Mother’s tape.”

“It can go to sixty hells,” Samir curses in Arabic, “the tape measure’s a fake.”

In the final scene Sophie witnesses, André is jumping up and down on Moïse’s springy bed, twirling the shorter piece of the torn measuring tape above his head. Samir is standing in the middle of the room, the longer piece wound around his hand.

“You’re all a bunch of idiots. You didn’t fool me for a second,” Samir fumes.

If anybody asked Sophie, she’d say that all the boys in the room, including Moïse, are jealous of Samir’s well-developed body. Because of the somewhat protruding vein Samir has in the middle of his forehead, Moïse says that Samir is growing a muscle instead of a brain. Mother Fortuna’s frantic cry ricochets down the hallway leading to the tailor shop: “Has anyone seen my measuring tape?” The fumes of acrid sweat coming out of the room are making Sophie gag.

“I am a swan,” she tells herself, flying away from them forever. From the height of her flight, she can still hear André’s chanted taunts. Samir is boxing André with closed fists, but André – even through his tears – continues to rhyme:

“Your papa’s a peasant, he digs up a ditch.
Your mama’s a laundress, she sleeps on the beach.”

She whelps like rabbit and loves like a bitch.
She breastfeeds two pups and a cat with a twitch!"

*

"The bud awakens, the flower appears," Sultana whispers softly, a gleam of youthful mischief in her eyes. Sophie's school uniform buttons are strained to their limit by her rounding body. There's no point sewing her a new outfit, because she'll be done with high school in just a few months. Sophie's gait has become wavelike. In her black, waist-hugging skirt, she walks down the school hallway like a wind parting the reeds. She's learned to like the masses of curls framing her face, giving some of them free rein while taming others.

When the math teacher, Monsieur Joseph, asks Sophie to solve an equation with two unknowns, it's a royal invitation to minuet. "Mademoiselle Sophie, would you be so good as to come to the board?" His deep voice sets her off a thrum deep down in her belly; secondary vibrations rise all the way to the roots of her hair. Calm down, calm down, she tells herself. As she walks to the board, her fingers worry her collar point. She crosses the no-man's-land of his gaze with her head cast down. With her back to him, her fingers let go of her blouse to grasp the chalk. "We're all waiting for you, Mademoiselle Sophie." She lifts the chalk slowly, making sure her blouse doesn't escape the confines of her skirt, and writes a long string of letters and symbols. Light gliding steps bring Sophie to the far end of the board and, pacing herself, she glides back to the left to begin a new line. She's deep into the equation now. Symbols are moved right to left, left to right, accompanied by the appropriate changes in mathematical symbols; white lines cross out the cancelled parts. The diagonal scrapes of the chalk are the bow on a violin; the taps on the board are a flamenco clatter. Despite her best efforts, her blouse has ridden up; her curls bounce wildly. The chalk breaks, shooting white flakes into Sophie's hair. The farther down the board she has to go, the shorter the lines grow. The equation shrinks and is finally concentrated into the last equal sign. Then – silence.

"*Jolie, Mademoiselle Sophie.*" Monsieur Joseph's voice breaks the brief pause. "Nice, Miss Sophie." What does he mean? The solution or her? He didn't say, as he usually does, "Well done." Sophie lets the smidgen of chalk fall. How should she return to her seat? Her shoulders hunch forward; the fingers of her right hand grasp her left collar-point. As she walks down the aisle, her thighs rub together. He said "*jolie.*" Many of the girls are jealous of her right now. Some are more beautiful than she, but none has her beauty.

Monsieur Joseph bites the stem of his pipe as he calculates several steps ahead. Sophie will complete her studies at the end of the academic year, but she intends on coming back to school as an apprentice teacher. Then the barriers will fall. He will no longer be her *professeur* and she will no longer be his student.

Moïse, too, bids his brawling friends adieu and joins a group of do-gooders that includes Muslim, Jewish and Christian intellectuals – boys and girls, without regard for differences of religion or sex. Together, shoulder to shoulder, they are the embodiment of *fraternité* and *égalité*. At the secret group meetings, impassioned debates last long into the night. There are four levels of existence: inanimate objects, plant life, animal life and humans capable of speech. Words have power. Words are artillery shells, throats cannon barrels, tongues sparks. Moïse is very able at talking. He feels that the future of all humanity rests on the young shoulders of people such as he, and he will not be silent. He believes that the revolutionary message from cells such as his will soon sweep the world like brushfire. At the end of every meeting, all rise to their feet and fervently sing "*Debout les damnés de la terre.*"⁸⁷

⁸⁷ The opening words of "The International" in French: "Stand up, damned of the earth."

First chapters of the book ([link](#)) "17 Sheikh Hamza Street, Cairo: Life on the back of a sleeping crocodile" by Avraham Bar-Av (Bentata), translated by Susann Codish and the author. The Hebrew version of this novel was published by "Rimonim".

Avraham Bar-Av (Bentata) was born in Egypt and currently lives in the Galilee. He studied Theater Arts and English Literature at Tel Aviv University. He has written, published and directed plays, including "The Industry of Cow Disease" and "The Floating Circus." He also published short stories in major literary magazines. Bar-Av is a member of The Hebrew Writers Association. His collection of short stories, "Moroccan Pushkin", won the 2013 literary prize of the General Union of Writers in Israel.

APPENDIX

LIST OF MOST IMPORTANT EVENTS IN PERIOD 1820-1939

To put in context the culture in this twelfty, I'll bring here from Wikipedia [a list of the most important events in this twelfty](#), although I am not sure that they influenced too much culture:

- [1820: Missouri Compromise](#).
- [1820: Regency period](#) ends in the United Kingdom.
- [1820: Revolutions of 1820](#) in Southern Europe
- [1820: Discovery of Antarctica](#).
- [1820: Joseph Smith's first vision](#) God the father and Jesus Christ appear to Joseph.
- [1820: Liberia](#) founded by the [American Colonization Society](#) for freed American slaves.
- [1820: Dissolution of the Maratha Empire](#).
- [1820–1835](#): At least 5000 Mexicans die in [Apache](#) raids, and 100 settlements are destroyed.
- [1821: Napoleon Bonaparte](#) dies in exile on the island of [Saint Helena](#).
- [1821: Mexico](#) gains independence from Spain with the [Treaty of Córdoba](#).
- [1821: Peru](#) declares its independence from Spain.
- [1821: Navarino Massacre](#).
- [1821–1830: Greece](#) becomes the first country to break away from the [Ottoman Empire](#) after the [Greek War of Independence](#).
- [1822–1823: First Mexican Empire](#), as Mexico's first post-independent government, ruled by Emperor [Agustín I of Mexico](#).
- [1822: Prince Pedro](#) of [Brazil](#) proclaimed the [Brazilian independence](#) on 7 September. On 1 December, he was crowned as Emperor [Dom Pedro I of Brazil](#).
- [1823–1887](#): The British Empire annexed [Burma](#) (now also called Myanmar) after three [Anglo-Burmese Wars](#).
- [1823: Monroe Doctrine](#) declared by US President [James Monroe](#).
- [1824: Premiere of Beethoven's Ninth Symphony](#).
- [1824: Cadbury](#) is established in Birmingham.
- [1825: Erie Canal](#) opened connecting the [Great Lakes](#) to the [Atlantic Ocean](#).
- [1825: First isolation of aluminum](#).
- [1825: Independence of Bolivia](#).
- [1825: The Stockton and Darlington Railway](#), the first public railway in the world, is opened.
- [1825: The Decembrist revolt](#).
- [1825–1828: The Cisplatine War](#) results in the independence of [Uruguay](#).
- [1825: Java War](#). (to 1830)
- [1826: Samuel Morey](#) patents the [internal combustion engine](#).
- [1826–1828](#): After the final [Russo-Persian War](#), the [Persian Empire](#) took back territory lost to Russia from the previous war.

- [1826: Auspicious Incident](#); the end of [Janissaries](#) in the [Ottoman Empire](#)
- [1827: Death of William Blake, Ludwig van Beethoven](#)
- [1828–1832: Black War](#) in [Tasmania](#) leads to the near extinction of the [Tasmanian aborigines](#)
- [1829: Johann Wolfgang von Goethe's *Faust*](#) premieres.
- [1829: First electric motor](#) built.
- [1829: Robert Peel](#) founds the [Metropolitan Police Service](#), the first modern police force.
- [1829: Treaty of Edirne \(1829\)](#) following the [Russo-Turkish War of 1828-1829](#)
- [1830: Opening of the Liverpool and Manchester Railway.](#)
- [1830: The Church of Jesus Christ of Latter Day Saints](#) is established on 6 April 1830.
- [1830: Anglo-Russian rivalry over Afghanistan, the Great Game](#), commences and concludes in 1895.
- [1830: July Revolution](#) in [France](#).
- [1830: The Belgian Revolution](#) in the [United Kingdom of the Netherlands](#) led to the creation of Belgium.
- [1830: Greater Colombia](#) dissolved and the nations of [Colombia](#) (including modern-day Panama), [Ecuador](#), and [Venezuela](#) took its place.
- [1830: November Uprising](#) in [Poland](#) against [Russia](#).
- [1830: End of the Diponegoro war.](#) The whole area of Yogyakarta and Surakarta Manca nagara Dutch seized. 27 September, Klaten Agreement determines a fixed boundary between Surakarta and Yogyakarta and permanently divide the kingdom of Mataram was signed by Sasradiningrat, Papatih Dalem Surakarta, and Danurejo, Papatih Dalem Yogyakarta. Mataram is a de facto and de yure controlled by the Dutch East Indies.
- [1831: France invades and occupies Algeria.](#)
- [1831: Ioannis Kapodistrias](#), the First [Governor of Greece](#) is murdered at [Nauplion](#).
- [1831: The Belgian constitution](#) is ratified and [Leopold I](#) is crowned as first "King of the Belgians".
- [1831: Great Bosnian uprising](#) against Ottoman rule occurs.
- [1831–1836: Charles Darwin's journey aboard HMS Beagle.](#)
- [1831: November Uprising](#) ends with crushing defeat for Poland in the [Battle of Warsaw](#).
- [1831–1833: Egyptian–Ottoman War.](#)
- [1831: Second phase of Padri War.](#) (to 1838)
- [1832: The British Parliament passes the Great Reform Act.](#)
- [1833: Slavery Abolition Act](#) bans slavery throughout the [British Empire](#).
- [1833–1876: Carlist Wars](#) in [Spain](#).
- [1834: The German Customs Union](#) is formed.
- [1834: Spanish Inquisition](#) officially ends.
- [1834: Britain amends the Poor Law](#) demanding that any paupers requesting assistance must go to a [workhouse](#).
- [1834–1859: Imam Shamil's rebellion](#) in Russian-occupied [Caucasus](#).
- [1835–1836: The Texas Revolution](#) in Mexico resulted in the short-lived [Republic of Texas](#).
- [1836: Battle of the Alamo](#) ends with defeat for Texan separatists.
- [1836: Battle of San Jacinto](#) leads to the capture of [General Santa Anna](#).

- 1836: Samuel Colt popularizes the revolver and sets up a firearms company to manufacture his invention of the Colt Paterson revolver a six bullets firearm shot one by one without reloading manually.
- 1836–1839: War of the Confederation begins between Chile and the Peru-Bolivian Confederation, ending with Chilean victory.
- 1837: Telegraphy patented.
- 1837: Charles Dickens publishes *Oliver Twist*.
- 1837: Death of Alexander Pushkin.
- 1837–1838: Rebellions of 1837 in Canada.
- 1837–1901: Queen Victoria's reign is considered the apex of the British Empire and is referred to as the Victorian era.
- 1838: By this time, 46,000 Native Americans have been forcibly relocated in the Trail of Tears.
- 1838–1840: Civil war in the Federal Republic of Central America led to the foundings of Guatemala, El Salvador, Honduras, Nicaragua, and Costa Rica.
- 1839: Kingdom of Belgium declared.
- 1839–1851: Uruguayan Civil War.
- 1839–1860: After the First and Second Opium Wars, France, the United Kingdom, the United States and Russia gain many trade and associated concessions from China resulting in the start of the decline of the Qing dynasty.
- 1839–1919: Anglo-Afghan Wars lead to stalemate and the establishment of the Durand line
- 1840s: Railway Mania sweeps UK and Ireland.
- 1840: New Zealand is founded, as the Treaty of Waitangi is signed by the Māori and British.
- 1840: Upper and Lower Canada are merged into the Province of Canada.
- 1841: The word "dinosaur" is coined by Richard Owen
- 1842: Treaty of Nanking cedes Hong Kong to the British.
- 1842: Anaesthesia used for the first time.
- 1843: The first wagon train sets out from Missouri.
- 1843: Short stories *A Christmas Carol* and *The Tell-Tale Heart* published.
- 1844: Persian Prophet the Báb announces his revelation on 23 May, founding Bábism. He announced to the world of the coming of "He whom God shall make manifest". He is considered the forerunner of Bahá'u'lláh, the founder of the Bahá'í Faith.
- 1844: First publicly funded telegraph line in the world—between Baltimore and Washington—sends demonstration message on 24 May, ushering in the age of the telegraph. This message read "What hath God wrought?" (Bible, Numbers 23:23)
- 1844: Millerite movement awaits the Second Advent of Jesus Christ on 22 October. Christ's non-appearance becomes known as the Great Disappointment.
- 1844: The great auk is rendered extinct.
- 1844: Dominican War of Independence from Haiti.
- 1844: Heinrich Heine coins the term "Lisztomania" in regards to the public's frenzied reaction to the pianist Franz Liszt.
- 1845: Unification of the Kingdom of Tonga under Tāufa'āhau (King George Tupou I).
- 1845: Lunacy Act 1845 passes through Parliament.
- 1845–1846: First Anglo-Sikh War.
- 1845–1872: The New Zealand Wars.

- [1845–1849](#): The [Irish Potato Famine](#) leads to the [Irish diaspora](#).
- [1846–1848](#): The [Mexican–American War](#) leads to Mexico's cession of much of the modern-day [Southwestern United States](#).
- [1846–1847](#): [Mormon](#) migration to [Utah](#).
- [1847](#): The [Brontë sisters](#) publish [Jane Eyre](#), [Wuthering Heights](#) and [Agnes Grey](#).
- [1847](#): [Ignaz Semmelweis](#) proposes [hand washing](#) as a way to stop the spread of diseases.
- [1847–1901](#): The [Caste War of Yucatán](#).
- [1848–1849](#): [Second Anglo-Sikh War](#)
- [1848](#): [The Communist Manifesto](#) published.
- [1848](#): [Revolutions of 1848](#) in Europe.
- [1848](#): [Seneca Falls Convention](#) is the first [women's rights](#) convention in the United States and leads to the [battle for women's suffrage](#).
- [1848–1858](#): [California Gold Rush](#).
- [1848](#): [William Holman Hunt](#), [John Everett Millais](#) and [Dante Gabriel Rossetti](#) found the [Pre-Raphaelite Brotherhood](#).
- [1849](#): The first boatloads of gold prospectors arrive in [California](#), giving them the nickname [49ers](#).
- [1849](#): [Roman Republic's constitutional law](#) becomes the first to abolish [capital punishment](#).
- [1849](#): The [safety pin](#) and the [gas mask](#) are invented.
- [1849](#): Earliest recorded [air raid](#), as Austria launches from land and from the ship [SMS Vulcano](#) some 200 [incendiary balloons](#) against [Venice](#).
- [1850](#): The [Little Ice Age](#) ends around this time.
- [1850](#): [Alfred Tennyson](#) is appointed [Poet Laureate](#) after the death of [William Wordsworth](#).
- [1850–1864](#): [Taiping Rebellion](#) is the bloodiest conflict of the century, leading to the deaths of 20 million people.
- [1851](#): The [Great Exhibition](#) in London was the world's first international Expo or [World Fair](#).
- [1851](#): [Louis Napoleon](#) assumes power in France in a coup.
- [1851–1852](#): The [Platine War](#) ends and the [Empire of Brazil](#) has the hegemony over South America.
- [1851–1860s](#): [Victorian gold rush](#) in Australia
- [1851](#): [Herman Melville](#) publishes [Moby-Dick](#).
- [1852](#): [Frederick Douglass](#) delivers his speech "The Meaning of July Fourth for the Negro" in [Rochester, New York](#).
- [1853](#): [William Wells Brown](#) (1814–1884) wrote first novel published by an African American, [Clotel](#)
- [1853](#): [Twelve Years a Slave](#) is a [memoir](#) and [slave narrative](#) by American [Solomon Northup](#) as told to and edited by [David Wilson](#).

Literature in the 19th century - Wikipedia

Main articles: [Romantic poetry](#) and [19th century in literature](#)

[Charles Dickens](#), [Fyodor Dostoyevsky](#), [Mark Twain](#), [Jane Austen](#), [Edgar Allan Poe](#), [Arthur Rimbaud](#), [Anton Chekhov](#), [Ralph Waldo Emerson](#), [Émile Zola](#).

On the literary front the new century opens with [romanticism](#), a movement that spread throughout Europe in reaction to 18th-century rationalism, and it develops more or less along

the lines of the Industrial Revolution, with a design to react against the dramatic changes wrought on nature by the [steam engine](#) and the [railway](#). [William Wordsworth](#) and [Samuel Taylor Coleridge](#) are considered the initiators of the new school in England, while in the continent the German *[Sturm und Drang](#)* spreads its influence as far as Italy and Spain. French arts had been hampered by the [Napoleonic Wars](#) but subsequently developed rapidly. [Modernism](#) began.

The Goncourts and [Émile Zola](#) in France and [Giovanni Verga](#) in Italy produce some of the finest naturalist novels. Italian naturalist novels are especially important in that they give a social map of the new unified Italy to a people that until then had been scarcely aware of its ethnic and cultural diversity. On 21 February 1848, [Karl Marx](#) and [Friedrich Engels](#) published the Communist Manifesto. There was a huge literary output during the 19th century. Some of the most famous writers included the Russians [Alexander Pushkin](#), [Nikolai Gogol](#), [Leo Tolstoy](#), [Anton Chekhov](#) and [Fyodor Dostoyevsky](#); the English [Charles Dickens](#), [John Keats](#), [Alfred, Lord Tennyson](#) and [Jane Austen](#); the Scottish [Sir Walter Scott](#); the Irish [Oscar Wilde](#); the Americans [Edgar Allan Poe](#), [Ralph Waldo Emerson](#), and [Mark Twain](#); and the French [Victor Hugo](#), [Honoré de Balzac](#), [Jules Verne](#), [Alexandre Dumas](#) and [Charles Baudelaire](#). Some other important writers of note included: [Leopoldo Alas](#), [Louisa May Alcott](#), [Hans Christian Andersen](#), [Machado de Assis](#), [Jane Austen](#), [Gertrudis Gómez de Avellaneda](#), [Gustavo Adolfo Bécquer](#), [Elizabeth Barrett Browning](#), [Anne Brontë](#), [Charlotte Brontë](#), [Emily Brontë](#), [Georg Büchner](#), [Ivan Bunin](#), [Lord Byron](#), [Lewis Carroll](#), [Rosalía de Castro](#), [François-René de Chateaubriand](#), [Anton Chekhov](#), [Kate Chopin](#), [Samuel Taylor Coleridge](#), [James Fenimore Cooper](#), [Stephen Crane](#), [Eduard Douwes Dekker](#), [Emily Dickinson](#), [Charles Dickens](#), [Arthur Conan Doyle](#), [Alexandre Dumas, père](#), [José Maria Eça de Queirós](#), [José Echegaray](#), [George Eliot](#), [Ralph Waldo Emerson](#), [Gustave Flaubert](#), [Margaret Fuller](#), [Elizabeth Gaskell](#), [Johann Wolfgang von Goethe](#), [Nikolai Gogol](#), [Manuel González Prada](#), [Juana Manuela Gorriti](#), [Brothers Grimm](#), [Henry Rider Haggard](#), [Ida Gräfin Hahn-Hahn](#), [Thomas Hardy](#), [Francis Bret Harte](#), [Nathaniel Hawthorne](#), [Friedrich Hölderlin](#), [Heinrich Heine](#), [Henrik Ibsen](#), [Washington Irving](#), [Henry James](#), [John Keats](#), [Caroline Kirkland](#), [Jules Laforgue](#), [Giacomo Leopardi](#), [Mikhail Lermontov](#), [Stéphane Mallarmé](#), [Alessandro Manzoni](#), [José Martí](#), [Clorinda Matto de Turner](#), [Herman Melville](#), [Friedrich Nietzsche](#), [José María de Pereda](#), [Benito Pérez Galdós](#), [Marcel Proust](#), [Aleksandr Pushkin](#), [Fritz Reuter](#), [Arthur Rimbaud](#), [John Ruskin](#), [George Sand](#) (Amandine-Aurore-Lucile Dupin), [Mary Shelley](#), [Percy Shelley](#), [Stendhal](#) (Marie-Henri Beyle), [Robert Louis Stevenson](#), [Bram Stoker](#), [Harriet Beecher Stowe](#), [Alfred, Lord Tennyson](#), [Henry David Thoreau](#), [Leo Tolstoy](#), [Ivan Turgenev](#), [Mark Twain](#), [Juan Valera y Alcalá-Galiano](#), [Paul Verlaine](#), [Jules Verne](#), [Lew Wallace](#), [H. G. Wells](#), [Walt Whitman](#), [Oscar Wilde](#), [William Wordsworth](#), [Émile Zola](#), [José Zorrilla](#).

SCIENCE, TECHNOLOGY, ETC. IN THE TWELFTY 1820-1939

1820s

From Wikipedia, the free encyclopedia

The **1820s** (pronounced "eighteen-twenties") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1820, and ended on December 31, 1829.

It saw the rise of the [First Industrial Revolution](#). [Photography](#), [rail transport](#), and the [textile industry](#) were among those that largely developed and grew prominent over the decade, as [technology](#) advanced significantly. European [colonialism](#) began gaining ground in [Africa](#) and [Asia](#), and trade between the [Qing Dynasty](#) began to open up more towards foreign traders, particularly those from Europe. As [European imperialism](#) gained momentum, opposition from affected/exploited societies resulted, with wars such as the [Java War](#) and the [Greek War of Independence](#). Resistance in the form of separatism and nationalism (particularly in the [Spanish American wars of independence](#)) led to the independence of many countries around the world, such as [Brazil](#), [Peru](#), and [Bolivia](#).

Economics and commerce

- 1821: High-quality [cotton](#) is introduced in [Egypt](#).
- [1822](#) – [Ashley's Hundred](#) leave from [St. Louis](#), setting off a major increase in [fur trade](#).
- [1822](#) – [Coffee](#) is no longer banned in Sweden.
- 1824 – The [Fort Vancouver](#) trading post is established on the lower [Columbia River](#) by the [Hudson's Bay Company](#).
- [August 18](#), 1825 – [Gregor MacGregor](#) issues a £300,000 loan with 2.5% interest through the London bank of Thomas Jenkins & Company. His actions lead to the [Panic of 1825](#), the first modern [stock market crash](#) in London.

Slavery, serfdom and labor

- [March 3](#), 1820 and [March 6](#), 1820 – [Slavery](#) in the United States: The [Missouri Compromise](#) becomes law.
- 1820: [Robert Owen](#) devises the [labour voucher](#).
- 1820: 18,957 black slaves leave [Luanda](#), [Angola](#).
- [1828](#) – 32,000 [Angolans](#) are sold in [Rio de Janeiro](#), [Brazil](#).
- [June 5](#), 1829 – [Slave trade](#): [HMS Pickle](#) captures the armed slave ship *Voladora* off the coast of [Cuba](#).

Science and technology

- [January 28](#), 1820 – A [Russian](#) expedition led by [Fabian Gottlieb von Bellingshausen](#) and [Mikhail Petrovich Lazarev](#) approaches the [Antarctic coast](#) (see [History of Antarctica](#)).
- [January 30](#), 1820 – [Edward Bransfield](#) lands on the [Antarctic mainland](#) (see [History of Antarctica](#)).
- April 1820 – [Hans Christian Ørsted](#) discovers the relationship between [electricity](#) and [magnetism](#).
- [May 11](#), 1820 – [HMS Beagle](#) (the ship that later takes young [Charles Darwin](#) on his scientific voyage) is launched.
- 1820: The 6th edition of the [Encyclopædia Britannica](#) appears.

- [June 14, 1822](#) – [Charles Babbage](#) proposes a [Difference engine](#).
- [1822](#) – [Hieroglyphs](#) are deciphered by [Thomas Young](#) and [Jean-François Champollion](#), using the [Rosetta Stone](#).
- [1822](#) – [Galileo Galilei](#)'s *[Dialogue](#)* is taken off the [Index Librorum Prohibitorum](#), the [Roman Catholic Church](#)'s list of banned books.
- [1822](#) – The [Graham Cracker](#) is developed in [Bound Brook, New Jersey](#) by the [Presbyterian](#) minister [Sylvester Graham](#).
- [1823](#) – [Olbers' paradox](#) is described by the [German astronomer Heinrich Wilhelm Olbers](#).
- [January 8, 1824](#) – After much controversy, [Michael Faraday](#) is finally elected as a member of the [Royal Society](#) with only one vote against him.
- [October 21, 1824](#) – [Joseph Aspdin](#) patents [Portland Cement](#).
- [1824](#) – The [Panoramagram](#) is developed, creating the first volumetric display.
- [1825](#) – [Hans Christian Ørsted](#) reduces [aluminium chloride](#) to make [aluminium](#).
- [June 1826](#) – [Photography](#): [Nicéphore Niépce](#) makes a true photograph.
- [1826](#) – [Aniline](#) is first isolated from the destructive distillation of [indigo](#) by [Otto Unverdorben](#).
- [May 25, 1827](#) – [Romanian](#) inventor [Petrache Poenaru](#) receives a [French patent](#) for the invention of the first [fountain pen](#) with a replaceable ink cartridge.
- [1827](#) – [Englishman John Walker](#) invents the first [friction match](#) which he names *Lucifer*.
- [1828](#) – [Friedrich Wöhler](#) synthesizes [Urea](#), possibly discrediting a cornerstone of [vitalism](#).
- [1828](#) – [Ányos Jedlik](#) creates the world's first [electric motor](#).
- [1828](#) – [Casparus van Houten Sr.](#) (father of [Coenraad Johannes van Houten](#)) patents an inexpensive method for pressing [cocoa butter](#) from roasted [cocoa beans](#),^[19] leaving [cocoa solids](#). This is an important step in modern solid [chocolate](#) production.
- [May 6, 1829](#) – The patent for an instrument called the [accordion](#) is applied for by [Cyrill Demian](#) (Officially approved on [May 23](#).)
- [July 23, 1829](#) – In the United States, [William Burt](#) obtains the first [patent](#) for a form of [typewriter](#).

Transportation

- [1825](#) – The first horse-drawn [omnibuses](#) established in [London](#).
- [September 27, 1825](#) – The world's first modern railway, the [Stockton and Darlington Railway](#), opens in [England](#).
- [October 26, 1825](#) – The [Erie Canal](#) opens, providing passage from [Albany, New York](#) to [Buffalo](#) and [Lake Erie](#).
- [1825](#): The [Ohio and Erie Canal](#) is dug to extend settlement access and commercial traffic to the [Ohio River](#).
- [January 30, 1826](#) – The [Menai Suspension Bridge](#), built by engineer [Thomas Telford](#), is opened between the island of [Anglesey](#) and the mainland of [Wales](#).
- [April 1, 1826](#) – [Samuel Morey](#) patents the [internal combustion engine](#).
- [October 1, 1826](#) – Opening of the [Monkland and Kirkintilloch Railway](#) in Scotland.^[20]
- [September 21, 1826](#) – Construction of the [Rideau Canal](#) begins in Canada.
- [October 7, 1826](#) – The first train operates over the [Granite Railway](#) in [Massachusetts](#).^{[21][22]}
- [1826](#) – The first [railway tunnel](#) is built en route between [Liverpool](#) and [Manchester](#) in [England](#).

- [February 28, 1827](#) – The [Baltimore & Ohio Railroad](#) is incorporated, becoming the first [railroad](#) in United States offering commercial transportation of both people and freight.
- [April 26–May 24, 1827](#) – The [Royal Netherlands Navy's](#) British-built [paddle steamer Curaçao](#) makes the first [Transatlantic Crossing](#) by steam, from [Hellevoetsluis](#) to [Paramaribo](#).^[23]
- [July 4, 1829](#) – [George Shillibeer](#) begins operating the first [bus](#) service in London.^[24]
- [October 8, 1829](#) – Rail transport: [Stephenson's Rocket](#) wins the [Rainhill Trials](#).
- [November 30, 1829](#) – The original [Welland Canal](#) opens for a trial run with a ceremony at Port Dalhousie.

Culture

Music

- [February 3, 1823](#) – [Gioachino Rossini's](#) [Semiramide](#) is first performed.
- [April 13, 1823](#) – Eleven-year-old [Franz Liszt](#) gives a concert after which he is personally congratulated by [Ludwig van Beethoven](#).
- [May 7, 1824](#) – One of [Beethoven's](#) most notable pieces, his [Symphony No. 9](#), premieres in [Vienna](#).
- Early July, [1826](#) – [Ludwig van Beethoven](#) puts the finishing touches on the [String Quartet in C sharp Minor, Opus 131](#).
- [1826](#) – [Ludwig Van Beethoven](#) composes the [Große Fuge](#).
- [March 11, 1829](#) – [Felix Mendelssohn](#) performs [Bach's St Matthew Passion](#).
- April–September – [Felix Mendelssohn](#) pays his first visit to Britain. This includes the first [London](#) performance of his [concert overture](#) to [A Midsummer Night's Dream](#) and his trip to [Fingal's Cave](#).^[25]

Art

- 1820: [Venus de Milo](#) is found on the island of [Melos](#) (*Milos*).

Poetry

- 1820: [John Keats](#) completes [Ode on Melancholy](#), one in a series of his famous Odes.
- 1820: John Clare 13 July 1793 - 20 May 1864 publishes Poems Descriptive of Rural life 1820
- 1826: [Felicia Hemans](#) publishes [Casabianca](#), a poem commemorating the sinking of a French ship called the [Orient](#) during [The Battle of the Nile](#) in 1798.

Sports

- 1823 – [William Webb Ellis](#) "invents" [Rugby football](#).
- [August 10, 1826](#) – The first [Cowes Regatta](#) is held on the [Isle of Wight](#) in the UK.^[24]
- [June 10, 1829](#) – The [Oxford University Boat Club](#) wins the very first [boat race](#).^{[7][26]}
- [August 10, 1829](#) – First ascent of [Finsteraarhorn](#), the highest summit of the [Bernese Alps](#).

Theatre

- [January 19, 1829](#) – [August Klingemann's](#) adaptation of [Johann Wolfgang von Goethe's](#) [Faust](#) premieres in [Braunschweig](#).^[27]

Fashion

During the 1820s in European and European-influenced countries, fashionable women's clothing styles transitioned away from the classically influenced "Empire"/"Regency" styles of ca. [1795–1820](#) (with their relatively unconfining [empire silhouette](#)) and re-adopted elements that had been characteristic of most of the 18th century (and were to be characteristic of the remainder of the 19th century), such as full skirts and clearly visible [corseting](#) of the natural waist.

The silhouette of men's fashion changed in similar ways: by the mid-1820s [coats](#) featured broad shoulders with puffed sleeves, a narrow waist, and full skirts. [Trousers](#) were worn for smart day wear, while [breeches](#) continued in use at court and in the country.

Miscellaneous

- [May 26, 1828](#) – [Feral child](#): [Kaspar Hauser](#) is discovered in [Nuremberg](#), Germany.
- [1822](#) [Jean-François Champollion](#) cracks the [hieroglyphic code](#) by using the [Rosetta Stone](#).

Establishments

- [July 20](#), 1820 – [Saint Cronan's Boys National School](#) opens in [Bray, County Wicklow, Ireland](#) under the title *Bray Male School*. It is the oldest school in Bray and its notable past pupils include the former [President of Ireland](#), [Cearbhall Ó Dálaigh](#).
- 1820: [Indiana University](#) is founded as the Indiana State Seminary and renamed the Indiana College in 1846, to later be renamed [Indiana University](#).
- [February 9](#), 1821 – [The George Washington University](#) is chartered as The Columbian College of the District of Columbia by President Monroe.
- [June 27](#), 1821 – The [New Hampton School](#) is founded in the United States state of [New Hampshire](#).
- [September 18](#), 1821 – [Amherst College](#) is founded in [Massachusetts](#).
- [August 12, 1822](#) – [St David's College](#) (now the [University of Wales, Lampeter](#)) is founded by [Bishop Thomas Burgess](#).
- [November 13, 1822](#) – founding of the [Congregation of St. Basil](#)
- [June 5](#), 1823 – [Raffles Institution](#), then the Singapore Institution, was founded by the founder of Singapore, Sir Stamford Raffles.
- 1823 – Jackson Male Academy, precursor of [Union University](#), is founded in [Tennessee](#).
- 1823 – The [Oxford Union](#) is founded.
- [January 24](#), 1824 – [The Westminster Review](#), No1. is published.
- [June 16](#), 1824 – [Society for the Prevention of Cruelty to Animals](#) is established in [Great Britain](#).
- [October 10](#), 1824 – The [Edinburgh](#) Town Council makes a decision to found the Edinburgh Municipal Fire Brigade, the first [fire brigade](#) in Britain.
- [November 5](#), 1824 – [Rensselaer Polytechnic Institute](#) (the first [technological university](#) in the English-speaking world) is founded in [Troy, New York](#).
- [December 24](#), 1824 – The First American Fraternity, [Chi Phi](#) (XΦ), is founded at Princeton University.
- 1824 – The [Cimetière du Montparnasse](#) is established in [Paris](#), France.
- September 1825 – The [Lady Margaret Boat Club](#) is founded by 12 members of [St John's College, Cambridge](#).

- [1825](#) – The [City of Brisbane](#) is founded (see [History of Brisbane](#)).
- [1825](#) – The [United States Postal Service](#) started a [dead letter office](#).
- [February 11, 1826](#) – [University College London](#) is founded, under the name *University of London*.
- [February 13, 1826](#) – The [American Temperance Society](#) is founded.
- [March 16, 1827](#) – [Freedom's Journal](#), the first [African-American](#) owned and published newspaper in the United States, is founded in [New York City](#) by [John Russwurm](#).
- [1827](#) – [Egypt: Cairo University School of Medicine](#) is established as the first African medical school in the Middle East.
- [1827](#) – [J. J. Audubon](#) begins publishing [Birds of America](#).
- [April 11, 1828](#) – [Bahía Blanca](#) is founded.
- [June 1, 1829](#) – [The Philadelphia Inquirer](#) is founded as *The Pennsylvania Inquirer*.
- [October 1, 1829](#) – [South African College](#) inaugurated in [Cape Town](#).
- [1829](#) – [King's College London](#) is founded under the patronage of [King George IV](#) and the [Prime Minister The Duke of Wellington](#). It will become the third official [university](#) in [England](#).
- [1829](#) – The [Chalmers University of Technology](#) is founded in [Gothenburg](#).

Disasters, natural events, and notable mishaps

- [November 20, 1820](#) After the sinking of the [Essex \(1799 whaleship\)](#) of [Nantucket](#) by a [whale](#) the survivors were left floating in three small whaleboats. They eventually resorted, by common consent, to [cannibalism](#) to allow some to survive.
- [1820](#): [Mount Rainier](#) erupts over what is today Seattle.
- [February 6, 1822](#) – [Chinese junk Tek Sing](#) sinks in the [South China Sea](#) with the loss of around 1600 people on board.
- [May 26, 1822](#) – 116 people die in the [Grue Church fire](#), the biggest fire disaster in Norway's history.
- [1822](#) – An [earthquake](#) in [Chile](#) raises the coastal area.
- [July 15, 1823](#) – The [Basilica of Saint Paul Outside the Walls](#) in [Rome](#) is almost completely destroyed by fire.
- [November 7, 1824](#) – In the worst flood to date in [Saint Petersburg](#), water rises 421 cm above normal and 200 lose their lives.
- [October 7, 1825](#) – The [Miramichi Fire](#) breaks out in New Brunswick.
- August, [1826](#) – The town of [Crawford Notch](#) suffers a [landslide](#), killing nine people. Those killed include seven members of the Willey family, after whom [Mount Willey](#) is named.
- [1828](#) – A [typhoon](#) kills approximately 10,000 people in [Kyūshū](#), Japan.

Religion

- [1820](#): [Joseph Smith](#) receives his [First Vision](#) in the spring in [Palmyra, New York](#).
- [September 22, 1823](#) – [Joseph Smith](#) says that he was directed by God through the angel Moroni to the place where the [Golden plates](#) are stored.
- [February 11, 1826](#) – [Swaminarayan](#) writes the [Shikshapatri](#), an important text within the [Swaminarayan faith](#).
- [July 26, 1826](#) – The last *auto-da-fé* is held in [Valencia, Spain](#).
- [March 31, 1829](#) – [Pope Pius VIII](#) succeeds [Pope Leo XII](#) as the 253rd [pope](#).

- [June 19, 1829](#) – [Robert Peel](#)'s [Metropolitan Police Act](#) establishes the [Metropolitan Police Service](#) in London, the first modern police force. The first officers, known by the nicknames "bobbies" or "peelers", go on patrol on [September 29](#).^[7]

People

World leaders

[1820](#) – [1821](#) – [1822](#) – [1823](#) – [1824](#) – [1825](#) – [1826](#) – [1827](#) – [1828](#) – [1829](#)

Authors

- [Nathaniel Hawthorne](#)
- [Mary Shelley](#)
- [Alexandre Dumas](#)

1830s

From Wikipedia, the free encyclopedia

The **1830s** (pronounced "eighteen-thirties") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1830, and ended on December 31, 1839.

In this decade, the world saw a rapid rise of [imperialism](#) and [colonialism](#), particularly in [Asia](#) and [Africa](#). Britain saw a surge of power and world dominance, as [Queen Victoria](#) took to the throne in 1837. Conquests took place all over the world, particularly around the expansion of [Ottoman Empire](#) and the [British Raj](#). New outposts and settlements flourished in Oceania, as Europeans began to settle over [Australia](#) and [New Zealand](#).

Science and technology

Astronomy

- [Robert's Quartet](#), a group of galaxies, is discovered.
- [March 14, 1834](#) – [John Herschel](#) discovers the open cluster of stars now known as [NGC 3603](#), observing from the [Cape of Good Hope](#).^[21]
- [May 15, 1836](#) – [Francis Baily](#), during an [eclipse](#) of the [sun](#), observes the phenomenon named after him as [Baily's beads](#).
- [1838](#) – [Friedrich Bessel](#) makes the first accurate measurement of distance to a [star](#).
- [1839](#) – The first [parallax](#) measurement of the distance to [Alpha Centauri](#) is published by [Thomas Henderson](#).

Mechanical Engineering

- [July 17, 1830](#) – [Barthélemy Thimonnier](#) is granted a [patent](#) (#7454) for a [sewing machine](#) in [France](#); it chains stitches at 200/minute.
- [August 31, 1830](#) – [Edwin Beard Budding](#) is granted a patent for the invention of the [lawnmower](#).
- [February 25, 1836](#) – [Samuel Colt](#) receives a United States [patent](#) for the [Colt revolver](#), the first revolving barrel multishot firearm.
- [February 24, 1839](#) – [William Otis](#) receives a [patent](#) for the [steam shovel](#).

Photography

L'Atelier de l'artiste. An 1837 [daguerreotype](#) by [Louis Daguerre](#), the first to complete the full process.

- 1832 – [Joseph Plateau](#) invented an early [stroboscopic](#) device, the "[phenakistoscope](#)", which gives the illusion of a moving image. This invention was an important [precursor to cinema](#).^[22]
- August 1835 – [H. Fox Talbot](#) exposes the world's first known [photographic negatives](#) at [Lacock Abbey](#) in England.^[23]
- [Louis Daguerre](#) develops the [daguerreotype](#).
- January 2, 1839 – First photo of the [Moon](#) taken by photographer [Louis Daguerre](#)
- January 9, 1839 – The [French Academy of Sciences](#) announces the [Daguerreotype photography](#) process.
- June 22, 1839 – [Louis Daguerre](#) receives a patent for his camera (commercially available by September at the price of 400 francs).
- August 19, 1839 – The French government gives [Louis Daguerre](#) a pension and gives the [daguerreotype](#) "for the whole world".

Electricity

Many key discoveries about electricity were made in the 1830s. [Electromagnetic induction](#) was discovered independently by [Michael Faraday](#) and [Joseph Henry](#) in 1831; however, Faraday was the first to publish the results of his experiments.^{[24][25]} Electromagnetic induction is the production of a [potential difference](#) (voltage) across a [conductor](#) when it is exposed to a varying [magnetic field](#). This discovery was essential to the invention of [transformers](#), [inductors](#), and many types of [electrical motors](#), [generators](#) and [solenoids](#).^{[26][27]}

In 1834, [Michael Faraday](#)'s published his research regarding the quantitative relationships in electrochemical reactions, now known as [Faraday's laws of electrolysis](#).^[28] Also in 1834, [Jean C. A. Peltier](#) discovered the [Peltier "effect"](#), which is the presence of heating or cooling at an electrified junction of two different conductors. In 1836, [John Daniell](#) invented a primary cell in which [hydrogen](#) was eliminated in the generation of the electricity.

Telegraph

- May 6, 1833 – [Carl Friedrich Gauss](#) and [Wilhelm Weber](#) obtain permission to build an [electromagnetic telegraph](#) in [Göttingen](#).
- May 1837 – [Samuel Morse](#) patents the [telegraph](#).
- April 9, 1839 – The world's first commercial electric [telegraph](#) line comes into operation alongside the [Great Western Railway](#) line, from [Paddington Station](#) to [West Drayton](#).

Computers

- [June 5, 1833](#) – [Ada Lovelace](#) is introduced to [Charles Babbage](#) by [Mary Somerville](#).^[29]
- [1834](#) – [Charles Babbage](#) begins the conceptual design of an "[analytical engine](#)", a mechanical forerunner of the modern computer. It will not be built in his lifetime.^{[30][31]}

Chemistry

- [1833](#) – The dawn of [biochemistry](#): The first [enzyme](#), [diastase](#), is discovered by [Anselme Payen](#).
- [October 24, 1836](#) – The earliest United States [patent](#) for a [phosphorus friction match](#) is granted to Alonzo Dwight Phillips of [Springfield, Massachusetts](#).
- [1839](#) – [Charles Goodyear](#) [vulcanizes rubber](#).

Biology

[Darwin's](#) voyage aboard [HMS Beagle](#).

- [December 27, 1831](#) – [Charles Darwin](#) embarks on his [historic voyage](#) aboard [HMS Beagle](#).
- [January 7, 1835](#) – [HMS Beagle](#) anchors off the [Chonos Archipelago](#) on the voyage of 1831–1836 with [Charles Darwin](#).
- [September 7, 1835](#) – [Charles Darwin](#) arrives at the [Galapagos Islands](#) aboard [HMS Beagle](#).
- [January 12, 1836](#) – [HMS Beagle](#) with [Charles Darwin](#) reaches [Sydney](#).
- [July 20, 1836](#) – [Charles Darwin](#) climbs Green Hill on [Ascension Island](#).
- [October 2, 1836](#) – [Charles Darwin](#) returns to [England](#) aboard [HMS Beagle](#) with biological data he will later use to develop his [theory of evolution](#), having left [South America](#) on [August 17](#).
- [1838](#) – [Proteins](#) are discovered by [Jöns Jakob Berzelius](#).

Archaeology

- [1836](#) – [Chatsworth Head](#) found near [Tamassos](#) on [Cyprus](#).^[32]
- [1838](#) – [Chatsworth Head](#) acquired by the [6th Duke of Devonshire](#) at [Smyrna](#) from [H. P. Borrell](#).
- [1839](#) – An archaeological excavation on [Copan](#) begins.

Sociology

- [July 2, 1832](#) – [Andre-Michel Guerry](#) presents his *Essay on moral statistics of France*, to the French Academy of Sciences, a significant step in the founding of empirical [social science](#).

Transportation

Rail

- [September 15, 1830](#) – The [Liverpool and Manchester Railway opens](#), the world's first intercity passenger [railway](#) operated solely by [steam locomotives](#).
- [1834](#) – The [Wilmington and Raleigh Railroad](#) is chartered in [Wilmington, North Carolina](#).^[33]
- [Railroad](#) construction begins in earnest in the United States.
- [May 5, 1835](#) – [Rail transport in Belgium](#): a railway is opened between [Brussels](#) and [Mechelen](#), the first in [continental Europe](#).
- [December 7, 1835](#) – The [Bavarian Ludwig Railway](#) opens between [Nuremberg](#) and [Fürth](#), with a train hauled by *Der Adler* ("The Eagle"), the [first railway in Germany](#).
- [December 21, 1835](#) – The [Raleigh and Gaston Railroad](#) is chartered in [Raleigh, North Carolina](#).^[34]
- [February 8, 1836](#) – [London and Greenwich Railway](#) opens its first section, the first railway in [London, England](#).^[35]
- [July 13, 1836](#) – The first numbered [U.S. Patent 1](#) (after filing 9,957 unnumbered patents) is granted, to [John Ruggles](#) for improvements to railroad [steam locomotive](#) tires.
- [July 21, 1836](#) – The [Champlain and St. Lawrence Railroad](#) opens between [St. John](#) and [La Prairie, Quebec](#), the first steam-worked passenger railroad in [British North America](#).
- [October 25, 1836](#) – Construction begins on the [Wilmington and Raleigh Railroad](#) in [North Carolina](#). Due to a lack of support in [Raleigh](#), the route is revised to run from [Wilmington](#) to the [Petersburg Railroad](#) in [Weldon](#).^[36]

Flight

- [May 24, 1832](#) – Francois Arban, early French balloonist makes his 1st ascent.^[37]

Automobile

- [1834](#) – [Thomas Davenport](#), the inventor of the first American [DC](#) electrical motor, installs his motor in a small model car, creating one of the first [electric cars](#).

Steamships

- [August 18, 1833](#) – The [Canadian](#) ship [SS Royal William](#) sets out from [Pictou, Nova Scotia](#), on a 25-day passage of the [Atlantic Ocean](#) largely under steam to [Gravesend, Kent, England](#).
- [April 4 – April 22, 1838](#) – The [paddle steamer SS Sirius \(1837\)](#) makes the [Transatlantic Crossing](#) to [New York](#) from [Cork, Ireland](#), in eighteen days, though not using steam continuously.^[38]
- [April 8 – April 23, 1838](#) – [Isambard Kingdom Brunel's](#) paddle steamer [SS Great Western](#) (1838) makes the Transatlantic Crossing to New York from [Avonmouth, England](#), in fifteen days, inaugurating a regular steamship service.^[10]

Economics

- A period of economic [prosperity](#) in America and [Europe](#), mainly due to increasing [trade](#), the mass production of [railroads](#), and the [Erie Canal](#).
- Dutch-speaking farmers known as [Voortrekkers](#) emigrate northwards from the [Cape Colony](#).

- The destruction of the 17th bank of the United States occurred in 1836

Literature

- [Charles Dickens](#) publishes his first novel *[The Pickwick Papers](#)* followed by *[Oliver Twist](#)* and *[Nicholas Nickleby](#)*
- [January 14, 1831](#) – *[The Hunchback of Notre Dame](#)* is first published by [Victor Hugo](#).
- [1832](#) – Publication of the first [Baedeker](#) guidebook, *Voyage du Rhin de Mayence à Cologne*, in [Koblenz](#).
- [1832](#) – Publication begins (posthumously) of [Carl von Clausewitz](#)'s *Vom Kriege* ("[On War](#)").
- [June 10, 1834](#) – [Thomas Carlyle](#) moves to [Cheyne Row](#) ([Carlyle's House](#)) in London.
- [August 25, 1835](#) – In the U.S., the *[New York Sun](#)* prints the first of six installments of the [Great Moon Hoax](#).
- [December 1, 1835](#) – [Hans Christian Andersen](#) publishes his first book of fairy tales.
- March [1836](#) – First monthly part of [Charles Dickens](#)' *[The Pickwick Papers](#)* ("*The Posthumous Papers of the Pickwick Club ...*, edited by Boz") published in London.
- [1836](#) – The first printed literature in [Assyrian Neo-Aramaic](#) is produced by [Justin Perkins](#), an American [Presbyterian missionary](#).
- February [1837](#) – [Charles Dickens](#)'s *[Oliver Twist](#)* begins publication in serial form in [London](#).
- [March 23, 1839](#) – The *[Boston Morning Post](#)* first records the use of "OK" ([oll korrekt](#)).

Theatre

- [March 1, 1836](#) – [Antonio García Gutiérrez](#)'s play *El Trovador* is performed for the first time in [Madrid](#), [Spain](#).

Music

Main article: [1830s in music](#)

- [December 5, 1830](#) – [Hector Berlioz](#)'s most famous work, *[Symphonie Fantastique](#)*, has its world premiere in Paris.
- [Richard Wagner](#) completes his first opera, *[Die Feen](#)* (The Fairies).
- [November 17, 1839](#) – [Giuseppe Verdi](#)'s first opera, *[Oberto, conte di San Bonifacio](#)*, opens in [Milan](#).

Sports

Main article: [1830s in sports](#)

- [Croquet](#) invented in [Ireland](#).

Fashion

Main article: [1830s in fashion](#)

- Innovations in [roller printing on textiles](#) introduced new dress fabrics.
- Broad, exaggerated sleeves for women and padded shoulders for men contrasted a narrow, idealized waist.
- [Brocades](#) come back into style.
- Low boots with [elastic](#) insets appear.
- *Greatcoats*, overcoats with wide sleeves, become fashionable for men to wear with day wear.

Religion

- [March 26, 1830](#) – The [Book of Mormon](#) is published in [Palmyra, New York](#).
- [April 6, 1830](#) – [Joseph Smith](#) and 5 others organize the [Church of Christ](#) (later renamed the [Church of Jesus Christ of Latter Day Saints](#)), the first formally organized church of the [Latter Day Saint movement](#), in northwestern [New York](#).
- [February 2, 1831](#) – [Pope Gregory XVI](#) succeeds [Pope Pius VIII](#) as the 254th [pope](#).
- [August 7, 1831](#) – American [Baptist](#) minister [William Miller](#) preaches his first sermon on the Second Advent of Christ in Dresden, New York, launching the Advent Movement in the United States.
- [March 24, 1832](#) – In [Hiram, Ohio](#), a group of men beat, [tar and feather](#) [Latter Day Saint movement](#) founder [Joseph Smith](#).
- [October 27, 1838](#) – Missouri Governor [Lilburn W. Boggs](#) declares Mormons to be enemies of the state and encourages the extermination or the exile of the religious minority, forcing nearly 10,000 Mormons out of the state.^[39]
- [1838](#) – [Biblical criticism](#): [Christian Hermann Weisse](#) proposes the [two-source hypothesis](#).

Disasters, natural events, and notable mishaps

- [June 29, 1833](#) – [William Fraser Tolmie](#) experiences an earthquake at [Fort Nisqually](#). His journal entry records the first written eyewitness account of an earthquake in the [Puget Sound](#) region.
- [November 12](#) – [November 13, 1833](#) – [Stars Fell on Alabama](#): A spectacular occurrence of the [Leonid meteor shower](#) is observed in [Alabama](#).
- [November 25, 1833](#) – A major 8.7 [earthquake](#) strikes [Sumatra](#).
- [October 16, 1834](#) – The [Palace of Westminster](#) is destroyed by fire.
- [February 20, 1835](#) – [Concepción, Chile](#), is destroyed by an [earthquake](#).
- [November 16, 1835](#) – [Comet Halley](#) reaches [perihelion](#), its closest approach to the sun.
- [December 16](#) – [December 17, 1835](#) – The [Great Fire of New York](#) destroys 530 buildings, including the [New York Stock Exchange](#).
- [December 15, 1836](#) – The [United States Patent Office](#) burns in [Washington, D.C.](#)
- [December 27, 1836](#) – [Lewes avalanche](#): An [avalanche](#) at [Lewes](#) in [Sussex](#), England, kills eight of fifteen people buried when a row of cottages is engulfed in snow.
- [December 30, 1836](#) – In [Saint Petersburg](#), the Lehman Theater catches fire, killing 800 people.
- [January 1, 1837](#) – [Galilee earthquake](#).
- [December 17, 1837](#) – [Fire in the Winter Palace, Saint Petersburg](#).
- [January 10, 1838](#) – A fire destroys [Lloyd's Coffee House](#) and the [Royal Exchange](#) in [London](#).
- [September 7, 1838](#) – [Grace Darling](#) and her father rescue thirteen survivors from the [SS Forfarshire](#) off the [Farne Islands](#).
- [September 9, 1839](#) – In the Great Fire of [Mobile, Alabama](#), hundreds of buildings are burned.
- [November 25, 1839](#) – A disastrous [cyclone](#) slams [India](#) with terrible winds and a giant 40-foot [storm surge](#), wiping out the port city of [Coringa](#); 300,000 people die.

Cholera

Main article: [Second cholera pandemic](#)

Historians believe that the [first cholera pandemic](#) had lingered in Indonesia and the Philippines in 1830. The second cholera pandemic spread from India to Russia and then to the rest of Europe claiming hundreds of thousands of lives.^[40] It reached [Moscow](#) in August 1830, and by 1831, the epidemic had infiltrated Russia's main cities and towns.

Russian soldiers brought the disease to Poland during the [Polish–Russian War 1830–31](#).^[41] "[Cholera Riots](#)" occurred in Russia, caused by the anti-cholera measures undertaken by the [tsarist](#) government.

The epidemic reached western Europe later in 1831. In London, the disease claimed 6,536 victims; in Paris, 20,000 died (out of a population of 650,000), with about 100,000 deaths in all of France.^[42] In 1832 the epidemic reached [Quebec](#), [Ontario](#), and [Nova Scotia](#), Canada; and [Detroit](#) and [New York City](#) in the United States. It reached the Pacific coast of North America between 1832 and 1834.^[43]

Establishments

- [January 11, 1830](#) – [LaGrange College](#) (now the [University of North Alabama](#)) opens its doors, becoming the first publicly chartered college in [Alabama](#).
- [July 13, 1830](#) – The General Assembly's Institution, now the [Scottish Church College](#), one of the pioneering institutions that ushered the [Bengal Renaissance](#), is founded by [Alexander Duff](#) and [Raja Ram Mohan Roy](#), in [Calcutta](#), [India](#).
- [1830](#) – [Austins of Derry](#) established in [Northern Ireland](#). As of 2010 it will be the world's oldest independent [department store](#).
- [March 10, 1831](#) – The [French Foreign Legion](#) is founded.
- [December 31, 1831](#) – [Gramercy Park](#) is deeded to [New York City](#).
- [April 18, 1831](#) – [University of Alabama](#) founded.
- [1831](#) – Founding of [Denison University](#) in [Granville, Ohio](#)
- [1831](#) – Founding of [Wesleyan University](#) in [Middletown, Connecticut](#)
- [1831](#) – Founding of [New York University](#) in [New York City](#)
- [1831](#) – Founding of [Xavier University](#) in [Cincinnati, Ohio](#) (as "The Athenaeum")
- [1831](#) – [The Sydney Morning Herald](#) newspaper is first published.
- [July 4, 1832](#) – [The University of Durham](#) is founded by an act of Parliament and given royal assent by King William IV.
- September – [Belvedere College](#), Dublin, is founded by the order of the Jesuit Society of Ireland.^[44]
- [October 19, 1832](#) – [Alpha Delta Phi](#) fraternity is founded at Hamilton College.
- [November 21, 1832](#) – [Wabash College](#), a small, private, liberal arts college for men, is founded.
- [August 1, 1833](#) – [King William's College](#) on the [Isle of Man](#) officially opens.
- [1833](#) – Foundation of [Kalamazoo College](#) in [Kalamazoo, Michigan](#)
- [1833](#) – Foundation of [Madras College](#), [St Andrews](#)
- [1833](#) – Foundation of [Oberlin College](#) in [Oberlin, Ohio](#)
- [March 19, 1834](#) – Founding of Cavendish Villa Football Club.^[where?]
- [November 4, 1834](#) – [Delta Upsilon](#) fraternity is founded at [Williams College](#).
- [1834](#) – Medical School of Louisiana is founded, later to become [Tulane University](#) in [New Orleans](#).
- [March 23, 1835](#) – The [Mexican Academy of Language](#) is established.
- [June 1, 1835](#) – [Kingston Penitentiary](#) in [Kingston, Ontario](#), opens.

- [July 14, 1835](#) – Organisation of the universal [Catholic Apostolic Church](#), initially in the U.K.
- [August 28, 1835](#) – [Castleknock College](#) is founded by the Vincentian order in [Dublin, Ireland](#).
- [October 3, 1835](#) – [Staedtler Company](#) founded by J.S. Staedtler in [Nuremberg](#), Germany.
- [1835](#) – The [British Geological Survey](#) is founded as the world's first national [geological survey](#).
- [1835](#) – The Cachar Levy, forerunner of the [Assam Rifles](#), is founded in [India](#).
- [1835](#) – The first [Bulgarian](#)-language school opens in the [Ottoman Empire](#).
- [1835](#) – [Charles-Louis Havas](#) creates [Havas](#), the first news agency in the world (which later spawns [Agence France-Presse](#)).
- [1836](#) – The [New Board](#) brokerage group is founded in [New York City](#).
- [February 25, 1837](#) – In [Philadelphia](#), The [Institute for Colored Youth](#) (ICY) is founded as the first institution for the higher education of black people in the United States.
- [March 4, 1837](#) – The city of Chicago is incorporated.
- [1837](#) – At [Le Mans](#), France, Father [Basil Moreau](#), CSC, founds the [Congregation of Holy Cross](#) by joining the Brothers of St. Joseph and the Auxiliary Priests of Le Mans.
- [November 8, 1837](#) – Mount Holyoke Female Seminary, later [Mount Holyoke College](#), is founded in South Hadley, Massachusetts.
- [1838](#) – [Duke University](#) is established in [North Carolina](#).
- [November 3, 1838](#) – [The Bombay Times and Journal of Commerce](#) is founded (renamed [The Times of India](#) in 1861).
- [February 11, 1839](#) – The [University of Missouri](#) is established, becoming the first public university west of the [Mississippi River](#).
- [March 5, 1839](#) – [Longwood University](#) is founded in [Farmville, Virginia](#).
- [March 7, 1839](#) – [Baltimore City College](#), the third public high school in the United States, is established in [Baltimore, Maryland](#).
- [March 26, 1839](#) – The first [Henley Royal Regatta](#) is held.
- [August 8, 1839](#) – The [Beta Theta Pi](#) fraternity is founded in [Oxford, Ohio](#).
- [November 11, 1839](#) – The [Virginia Military Institute](#) is founded in Lexington, [Virginia](#).
- [November 27, 1839](#) – In [Boston, Massachusetts](#), the [American Statistical Association](#) is founded.
- [1839](#) – [Episcopal High School](#) in Alexandria, Virginia, is founded.
- [1839](#) – The [Anti-Corn Law League](#) is founded in [Manchester](#).

People

World leaders

[1830](#) – [1831](#) – [1832](#) – [1833](#) – [1834](#) – [1835](#) – [1836](#) – [1837](#) – [1838](#) – [1839](#)

1840s

From Wikipedia, the free encyclopedia

The **1840s** (pronounced "eighteen-forties") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1840, and ended on December 31, 1849.

Throughout the decade, many countries (particularly in [Europe](#)) worldwide saw many revolts and uprisings, with the most prominent ones [happening in 1848](#). Aside from uprisings, the [United States](#) began to see a shifting population that [migrated to the West Coast](#), as the [California Gold Rush](#) ensued in the latter half of the decade.

Science and technology

Astronomy

- April – [Eta Carinae](#) is temporarily the second-brightest star in the night sky.
- [September 23, 1846](#) – [Discovery of Neptune](#): The planet is observed for the first time by German astronomers [Johann Gottfried Galle](#) and [Heinrich Louis d'Arrest](#) as predicted by the British astronomer [John Couch Adams](#) and the French astronomer [Urbain Le Verrier](#).
- [September 16, 1848](#) – [William Cranch Bond](#) and [William Lassell](#) discover [Hyperion](#), [Saturn's moon](#).

Photography

The 1840s saw the rise of the Daguerreotype. Introduced in 1839, the Daguerreotype was the first publicly announced photographic process and came into widespread use in the 1840s. Numerous events in the 1840s were captured by photography for the first time with the use of the Daguerreotype. A number of daguerrotypes were taken of the occupation of Saltillo during the Mexican–American War, in 1847 by an unknown photographer. These photographs stand as the first ever photos of warfare in history.

Telegraph

- The first [electrical telegraph](#) sent by [Samuel Morse](#) on May 24, 1844, from [Baltimore](#) to [Washington, D.C.](#).

Computers

- [1843](#) – [Ada Lovelace](#) translates and expands [Menabrea's](#) notes on [Charles Babbage's analytical engine](#), including an [algorithm](#) for calculating a sequence of [Bernoulli numbers](#), regarded as the world's first [computer program](#).^{[36][37][38]}

Chemistry

- [June 15, 1844](#) – [Charles Goodyear](#) receives a [patent](#) for [vulcanization](#), a process to strengthen [rubber](#).
- [1844](#) – Swedish chemistry professor [Gustaf Erik Pasch](#) invents the [safety match](#).
- [1846](#) – [Abraham Pineo Gesner](#) develops a process to refine a liquid fuel, which he calls [kerosene](#), from [coal](#), [bitumen](#) or [oil shale](#).
- 1844 John Dalton Dies

Geology

- [1840](#) – [Louis Agassiz](#) publishes his *Etudes sur les glaciers* ("Study on Glaciers", 2 volumes), the first major scientific work to propose that the Earth has seen an [ice age](#).

Physics

- [1840](#) – The first English translation of Goethe's *Theory of Colours* by [Charles Eastlake](#) is published.
- [1842](#) – [Julius Robert von Mayer](#) proposes that [work](#) and [heat](#) are equivalent.^[39]

- [October 16, 1843](#) – [William Rowan Hamilton](#) discovers the calculus of [quaternions](#) and deduces that they are non-commutative.^[40]
- [1843](#) – [James Joule](#) experimentally finds the [mechanical equivalent of heat](#).^[41]

Biology

- [July 3, 1844](#) – The last definitely recorded pair of [great auks](#) are killed on the [Icelandic](#) island of [Eldey](#).
- [1844](#) – The anonymously written [Vestiges of the Natural History of Creation](#) is published and paves the way for the acceptance of [Darwin's](#) book [The Origin of Species](#).

Paleontology

- [1842](#) – [English palaeontologist Richard Owen](#) coins the name *Dinosauria*, hence the [Anglicized dinosaur](#).^[42]

Psychology

- [November 13, 1841](#) – Scottish surgeon [James Braid](#) first sees a demonstration of [animal magnetism](#) by [Charles Lafontaine](#) in [Manchester](#), which leads to his study of the phenomenon that he (Braid) eventually calls [hypnotism](#).

Economics

- [June 20, 1842](#) – Anselmo de Andrade, Portuguese economist and politician, is born in [Vila Real de Santo António](#).
- [August 28, 1844](#) – [Friedrich Engels](#) and [Karl Marx](#) meet in [Paris, France](#).
- [1845](#) – [Friedrich Engels'](#) treatise [The Condition of the Working Class in England in 1844](#) is published in [Leipzig](#) as *Die Lage der arbeitenden Klasse in England*.
- [June 1, 1847](#) – The first congress of the [Communist League](#) is held in London.
- [February 21, 1848](#) – [Karl Marx](#) and [Friedrich Engels](#) publish [The Communist Manifesto](#) (*Manifest der Kommunistischen Partei*) in London.

Medicine

- [March 30, 1842](#) – [Anesthesia](#) is used for the first time in an operation (Dr. [Crawford Long](#) performed the operation using [ether](#)).
- [December 27, 1845](#) – [Anesthesia](#) is used for childbirth for the first time (Dr. [Crawford Long](#) in [Jefferson, Georgia](#)).
- [November 4 – 8, 1847](#) – [James Young Simpson](#) discovers the [anesthetic](#) properties of [chloroform](#) and first uses it, successfully, on a patient, in an [obstetric](#) case in [Edinburgh](#).^{[43][44]}
- [January 23, 1849](#) – [Elizabeth Blackwell](#) is awarded her M.D. by the Medical Institute of [Geneva, New York](#), thus becoming the [United States'](#) first woman doctor.

Exploration

Antarctica

- [January 19, 1840](#) – Captain [Charles Wilkes'](#) [United States Exploring Expedition](#) sights what becomes known as [Wilkes Land](#) in the southeast quadrant of [Antarctica](#), claiming it for the [United States](#) and providing evidence that Antarctica is a complete continent.^[45]
- [January 21, 1840](#) – [Dumont D'Urville](#) discovers [Adélie Land](#) in [Antarctica](#), claiming it for [France](#).^[46]

- [January 27, 1841](#) – The active [volcano Mount Erebus](#) in [Antarctica](#) is discovered and named by [James Clark Ross](#).^[47]
- [January 28, 1841](#) – Ross discovers the "Victoria Barrier", later known as the [Ross Ice Shelf](#). On the same voyage, he discovers the [Ross Sea](#), [Victoria Land](#) and [Mount Terror](#).
- [January 23, 1842](#) – [Antarctic](#) explorer [James Clark Ross](#), charting the eastern side of [James Ross Island](#), reaches a [Farthest South](#) of 78°09'30"S.^[48]
- [January 6, 1843](#) – [Antarctic](#) explorer [James Clark Ross](#) discovers [Snow Hill Island](#).

Transportation

Rail

Widespread interest to invest in rail technology led to a [speculative frenzy](#) in [Britain](#), known there as [Railway Mania](#). It reached its zenith in 1846, when no fewer than 272 [Acts of Parliament](#) were passed, setting up new railway companies, and the proposed routes totalled 9,500 miles (15,300 km) of new railway. Around a third of the railways authorised were never built – the company either collapsed due to poor financial planning, was bought out by a larger competitor before it could build its line, or turned out to be a fraudulent enterprise to channel investors' money into another business.

Steam power

- [July 4, 1840](#) – The [Cunard Line](#)'s 700-ton wooden paddlewheel steamer [RMS Britannia](#) departs from [Liverpool](#), bound for [Halifax](#), [Nova Scotia](#), on the first steam transatlantic passenger mail service.^[49]
- [July 19, 1843](#) – [Isambard Kingdom Brunel](#)'s [SS Great Britain](#) is launched from [Bristol](#); it will be the first iron-hulled, propeller-driven ship to cross the [Atlantic Ocean](#).^[50]
- [1843](#) – The steam powered [rotary printing press](#) is invented by [Richard March Hoe](#) in the [United States](#).^[51]
- [July 26 – August 10, 1845](#) – [Isambard Kingdom Brunel](#)'s iron [steamship Great Britain](#) makes the [Transatlantic Crossing](#) from [Liverpool](#) to [New York](#), the first [screw propelled](#) vessel to make the passage.^{[52][53]}

Other inventions

- [October 5, 1842](#) – [Josef Groll](#) brews the first [pilsner](#) beer in the city of [Pilsen](#), [Bohemia](#) (now the [Czech Republic](#)).
- [September 10, 1846](#) – [Elias Howe](#) is awarded the first United States patent for a [sewing machine](#) using a [lockstitch](#) design.^[54]

Commerce

- In the mid-1840s several harvests failed across Europe, which caused famines. Especially the [Great Irish Famine](#) (1845–1849) was severe and caused a quarter of Ireland's population to die or emigrate to the United States, Canada and Australia.
- The [Panic of 1837](#) triggered by the failing [banks](#) in America is followed by a severe depression lasting until 1845.
- [May 6, 1840](#) – The [Penny Black](#), the world's first [postage stamp](#), becomes valid for the pre-payment of postage.
- [August 10, 1840](#) – [Fortsas hoax](#): A number of book [collectors](#) gather in [Binche](#), [Belgium](#), to attend a non-existent book auction of the late "Count of Fortsas".

- December – The world's first [Christmas cards](#), commissioned by Sir [Henry Cole](#) in London from the artist [John Callcott Horsley](#), are sent.^[55]
- [1843](#) – The export of British textile machinery and other equipment is allowed.^[vague]
- [1844](#) – Annual British iron production reaches 3 million tons.
- [January 4, 1847](#) – [Samuel Colt](#) sells his first [revolver](#) pistol to the U.S government.
- The [California Gold Rush](#) follows on the heels of the [Mexican–American War](#), bringing tens of thousands of immigrants to [California](#) and eliminating the United States' dependence on foreign gold.

Civil rights

Women's rights

- [July 19, 1848](#) – [Women's rights, 1848](#) – [Seneca Falls Convention](#): The 2-day [Women's Rights Convention](#) opens in [Seneca Falls, New York](#), and the "[Bloomers](#)" are introduced at the [feminist](#) convention.

Literature

- [Charles Dickens](#) publishes *[The Old Curiosity Shop](#)*, *[Barnaby Rudge](#)*, *[A Christmas Carol](#)*, *[Martin Chuzzlewit](#)*, *[Dombey and Son](#)* and *[David Copperfield](#)*.
- [Nikolai Gogol's](#) *[Dead Souls](#)* (Russian: Мёртвые души, Myortvyje dushi) is published in 1842.
- [Søren Kierkegaard](#) publishes his philosophical book *Enten – Eller* (*[Either/Or](#)*) in 1843.
- [Alexandre Dumas](#) publishes *Les Trois Mousquetaires* (*[The Three Musketeers](#)*) in 1844 and *Le Comte de Monte-Cristo* (*[The Count of Monte Cristo](#)*) in 1844/45.
- [William Makepeace Thackeray](#) publishes *[Vanity Fair](#)* in 1848.
- [July 17, 1841](#) – First edition of the humorous magazine *[Punch](#)* published in [London](#).^[56]
- [1843](#) – [Edgar Allan Poe's](#) short story *[The Tell-Tale Heart](#)* is first published.
- [January 29, 1845](#) – "[The Raven](#)" by [Edgar Allan Poe](#) is published for the first time (*[New York Evening Mirror](#)*), earning him \$10.
- [1845](#) – [Elizabeth Barrett Browning](#) writes her *[Sonnets from the Portuguese](#)* (1845–1846).
- [1845](#) – [Heinrich Hoffmann](#) publishes a book (*Lustige Geschichten und drollige Bilder*) introducing his character *[Struwwelpeter](#)*, in Germany.
- [October 16, 1847](#) – [Charlotte Brontë](#) publishes *[Jane Eyre](#)* under the pen name of Currer Bell.
- [December 14, 1847](#) – [Emily Brontë](#) and [Anne Brontë](#) publish *[Wuthering Heights](#)* and *[Agnes Grey](#)*, respectively, in a 3-volume set under the pen names of Ellis Bell and Acton Bell.
- [1848](#) – [Elizabeth Gaskell](#) publishes *[Mary Barton](#)* anonymously.

Theatre

- [February 6, 1843](#) – The [Virginia Minstrels](#) perform the first [minstrel show](#), at the [Bowery Amphitheatre](#) in [New York City](#).

Music

- [February 11, 1840](#) – [Gaetano Donizetti's](#) opera *[La fille du régiment](#)* premieres in [Paris](#).
- [June 28, 1841](#) – Ballet *[Giselle](#)* first presented by the [Ballet du Théâtre de l'Académie Royale de Musique](#) at the [Salle Le Peletier](#) in [Paris, France](#).

- [March 9, 1842](#) – [Giuseppe Verdi](#)'s third opera *[Nabucco](#)* premieres in [Milan](#); its success establishes [Verdi](#) as one of [Italy](#)'s foremost opera writers.
- [February 11, 1843](#) – [Giuseppe Verdi](#)'s opera *[I Lombardi alla prima crociata](#)* premieres at [La Scala](#) in [Milan](#).
