- [November 3, 1844](#) – [Giuseppe Verdi](#)'s *[I due Foscari](#)* debuts at [Teatro Argentina](#), Rome.
- [March 13, 1845](#) – The *[Violin Concerto](#)* by [Felix Mendelssohn](#) premieres in [Leipzig](#), with [Ferdinand David](#) as soloist.
- [July 7, 1845](#) – [Jules Perrot](#) presents the [ballet divertissement](#) *[Pas de Quatre](#)* to an enthusiastic London audience.
- [June 28, 1846](#) – The [Saxophone](#) is [patented](#) by [Adolphe Sax](#).^[57]
- [March 14, 1847](#) – [Verdi](#)'s opera *[Macbeth](#)* premieres at [Teatro della Pergola](#) in [Florence](#), Italy.
- [1848](#) – The Shaker song *[Simple Gifts](#)* is written by [Joseph Brackett](#) in [Alfred, Maine](#).
- [1848](#) – [Richard Wagner](#) begins writing the [libretto](#) that will become *[Der Ring des Nibelungen](#)* (*The Ring of the Nibelung*).

Sports

- [March 2, 1842](#) – [Gaylad](#), ridden by [Tom Olliver](#), wins the [Grand National](#) at [Aintree Racecourse](#).
- [September 25](#) – [September 27, 1844](#) – The first ever [international cricket](#) match is played in New York City, [United States v Canadian Provinces](#).
- [Baseball](#) – During the 1840s, "[town ball](#)" evolved into the modern game of [baseball](#), with the development of the "[New York game](#)" in the 1840s. The [New York Knickerbockers](#) were founded in 1845, and played the first known competitive game between two organized clubs in 1846. The "New York Nine" defeated the Knickerbockers at [Elysian Fields](#) in [Hoboken, New Jersey](#), by a score of 23 to 1.

Fashion

Main article: [1840s in Western fashion](#)

Fashion in European and European-influenced [clothing](#) is characterized by a narrow, natural shoulder line following the exaggerated puffed sleeves of the [later 1820s fashion](#) and [1830s fashion](#). The narrower shoulder was accompanied by a lower waistline for both men and women.

Art

- [1840](#) – [J. M. W. Turner](#) first displays his painting *[The Slave Ship](#)*.

Religion and philosophy

- The American [Transcendentalism](#) movement is in full form mostly during this decade.
- February [1840](#) – The [Rhodes blood libel](#) is made against the [Jews](#) of [Rhodes](#).
- [February 5, 1840](#) – The murder of a Capuchin friar and his Greek servant leads to the [Damascus affair](#), a highly publicized case of [blood libel against the Jews](#) of [Damascus](#).
- [June 6, 1841](#) [Marian Hughes](#) becomes the first woman to take [religious vows](#) in communion with the [Anglican Province of Canterbury](#) since the [Reformation](#), making them privately to [E. B. Pusey](#) in [Oxford](#).^[58]

- July – [Scottish missionary David Livingstone](#) arrives at [Kuruman](#) in the [Northern Cape](#), his first posting in [Africa](#).
- [May 18, 1843](#) – The [Disruption](#) in Edinburgh of the [Free Church of Scotland](#) from the [Church of Scotland](#).
- [October 16, 1843](#) – [Søren Kierkegaard](#)'s philosophical book [Fear and Trembling](#) is first published.
- [March 21, 1844](#) – The [Bahá'í calendar](#) begins.
- [March 23, 1844](#) – [Edict of Toleration](#), allowing [Jews](#) to settle in the [Holy Land](#).
- [May 23, 1844](#) – [Persian Prophet](#) The [Báb](#) privately announces his revelation to [Mullá Husayn](#), just after sunset, founding the [Bábí faith](#) (later evolving into the Bahá'í Faith as the Báb [intended](#)) in Shiraz, Persia (now Iran). Contemporaneously, on this day in nearby Tehran, was the birth of [`Abdu'l-Bahá](#); the eldest Son of [Bahá'u'lláh](#), Prophet-Founder of the [Bahá'í Faith](#), the inception of which, the Báb's [proclaimed His own mission was to herald](#). [`Abdu'l-Bahá](#) Himself was later proclaimed by Bahá'u'lláh to be His own successor, thus being the third "central figure" of the Bahá'í Faith.
- [June 27, 1844](#) – [Joseph Smith](#), founder of the [Latter Day Saint movement](#), and his brother [Hyrum](#), are killed in [Carthage Jail](#), [Carthage, Illinois](#), by an armed mob, leading to a [Succession crisis](#). [John Taylor](#), future president of [The Church of Jesus Christ of Latter-day Saints](#) is severely injured but survives.
- [August 8, 1844](#) – During a meeting held in [Nauvoo, Illinois](#), the [Quorum of the Twelve](#), headed by [Brigham Young](#), is chosen as the leading body of [The Church of Jesus Christ of Latter-day Saints](#).
- [October 22, 1844](#) – This second date, predicted by the [Millerites](#) for the [Second Coming of Jesus](#), leads to the [Great Disappointment](#). The [Seventh-day Adventist Church](#) denomination of the [Christian](#) religion believe this date to be the starting point of the [Investigative judgment](#) just prior to the [Second Coming of Jesus](#) as declared in the 26th of 28 fundamental doctrines of Seventh-day Adventists.^[59]
- [October 23, 1844](#) – The [Báb](#) publicly proclaimed to be the promised one of [Islam](#) (the [Qá'im](#), or [Mahdi](#)). He is also considered to be simultaneously the return of [Elijah](#), [John the Baptist](#), and the "[Ushídar-Máh](#)" referred to in the [Zoroastrian](#) scriptures.^[60] He announces to the world the coming of "[He whom God shall make manifest](#)". He is considered the forerunner of [Bahá'u'lláh, 1844](#) – the founder of the [Bahá'í Faith, 1844](#) – whose claims include being the return of [Jesus](#).
- [October 9, 1845](#) – The eminent and controversial [Anglican](#), [John Henry Newman](#), is received into the [Roman Catholic Church](#).
- [February 10, 1846](#) – Many [Mormons](#) begin their migration west from [Nauvoo, Illinois](#), to the [Great Salt Lake](#), led by [Brigham Young](#).
- [June 16, 1846](#) – [Pope Pius IX](#) succeeds [Pope Gregory XVI](#) as the 255th [pope](#). He will reign for 31½ years (the longest definitely confirmed).
- [September 19, 1846](#) – [The Virgin Mary](#) is said to have appeared to two children in [La Salette](#), France.
- [1848](#) – [John Bird Sumner](#) becomes [archbishop of Canterbury](#).
- [March 28, 1849](#) – Four [Christians](#) are ordered burnt alive in [Antananarivo](#), [Madagascar](#) by Queen [Ranavalona I](#) and 14 others are executed.

Disasters, natural events, and notable mishaps

- [January 13, 1840](#) – The steamship [Lexington](#) burns and sinks in icy waters, four miles off the coast of [Long Island](#); 139 die, only four survive.
- [May 7, 1840](#) – The [Great Natchez Tornado](#): A massive tornado strikes [Natchez, Mississippi](#), during the early afternoon hours. Before it is over, 317 people are killed and 109 injured. It is the second deadliest tornado in U.S. history.
- [January 30, 1841](#) – A fire ruins and destroys two-thirds of the villa (modern-day city) of [Mayagüez, Puerto Rico](#).
- [February 20, 1841](#) – The *Governor Fenner*, carrying emigrants to the United States, sinks off [Holyhead \(Wales\)](#) with the loss of 123 lives.
- [March 12, 1841](#) – [SS President](#) under the command of the legendary captain [Richard Roberts](#) founders in rough seas with all passengers and crew lost.
- [October 30, 1841](#) – A fire at the [Tower of London](#) destroys its Grand Armoury and causes a quarter of a million pounds worth of damage.^[61]
- [October 29, 1842](#) – The [Iberian Peninsula](#) is struck by a [category 2 hurricane](#).
- [1842](#) – [Dzogchen Monastery](#) is almost completely destroyed by an [earthquake](#).
- [February 8, 1843](#) an earthquake causes La Soufriere volcano to erupt in Caribbean Island of [Guadeloupe](#) and kill over 5000 people.^[62]
- [February 28, 1844](#) – A gun on the [USS Princeton](#) explodes while the boat is on a [Potomac River](#) cruise, killing 2 [United States Cabinet](#) members and several others.
- June–July – The [Great Flood of 1844](#) hits the [Missouri River](#) and [Mississippi River](#).
- [February 7, 1845](#) – In the [British Museum](#), a drunken visitor smashes the [Portland Vase](#), which takes months to repair.
- [April 10, 1845](#) – A great fire destroys much of the American city of [Pittsburgh](#).
- [May 2, 1845](#) – the [Yarmouth suspension bridge](#) in [Great Yarmouth](#), England, collapses leaving around 80 dead, mostly children.^[63]
- [May 19, 1845](#) – [HMS Erebus](#) and [HMS Terror](#) with 134 men, comprising Sir [John Franklin's expedition](#) to find the [Northwest Passage](#), sail from [Greenhithe](#) on the [Thames](#). They will last be seen in August entering [Baffin Bay](#).^[64]
- [1846](#) - [The Donner Party](#), a party of American settlers in wagon trains, became stranded in the snow-covered [Sierra Nevada Mountains](#) in California and resorted to [cannibalism](#) to survive.
- [April 25, 1847](#) – The brig *Exmouth* carrying Irish emigrants from [Derry](#) bound for [Quebec](#) is wrecked off [Islay](#) with only three survivors from more than 250 on board.^{[65][66]}
- [August 24, 1848](#) – The U.S. [barque Ocean Monarch](#) is burnt out off the [Great Orme, North Wales](#), with the loss of 178, chiefly [emigrants](#).
- [May 3, 1849](#) – The [Mississippi River](#) levee at [Sauvé's Crevasse](#) breaks, flooding much of [New Orleans, Louisiana](#).
- [May 10, 1849](#) – The [Astor Place Riot](#) takes place in [Manhattan](#) over a dispute between two Shakespearean actors. Over 20 people are killed.
- [May 17, 1849](#) – The [St. Louis Fire](#) starts when a [steamboat](#) catches fire and nearly burns down the entire city.
- [1849](#) – Seven of the "best known" [opium](#) [clippers](#) go missing: [Sylph](#), *Coquette*, *Kelpie*, *Greyhound*, *Don Juan*, *Mischief*, and *Anna Eliza*.^[67]

Cholera

Main articles: [Third cholera pandemic](#) and [Cholera outbreaks and pandemics](#)

The [third cholera pandemic](#) happened during the 1840s, which researchers at [UCLA](#) believe may have started as early as 1837 and lasted until 1863.^[68] This pandemic was considered to have the highest fatalities of the 19th-century epidemics.^[69] It originated in India (in [Lower Bengal](#)), spreading along many shipping routes in 1846.^[68] Over 15,000 people died of cholera in [Mecca](#) in 1846.^[70] In [Russia](#), between 1847 and 1851, more than one million people died in the country's epidemic.^[71]

A two-year outbreak began in [England and Wales](#) in 1848, and claimed 52,000 lives.^[72] In London, it was the worst outbreak in the city's history, claiming 14,137 lives, over twice as many as the 1832 outbreak. Cholera hit [Ireland](#) in 1849 and killed many of the [Irish Famine](#) survivors, already weakened by starvation and fever.^[73] In 1849, cholera claimed 5,308 lives in the major port city of [Liverpool](#), [England](#), an embarkation point for immigrants to North America, and 1,834 in [Hull](#), England.^[74] In 1849, a second major outbreak occurred in Paris.

Cholera, believed spread from Irish immigrant ship(s) from England to the [United States](#), spread throughout the [Mississippi river system](#), killing over 4,500 in [St. Louis](#)^[74] and over 3,000 in [New Orleans](#).^[74] Thousands died in [New York](#), a major destination for Irish immigrants.^[74] The [outbreak that struck Nashville in 1849–1850](#) took the life of former U.S. President [James K. Polk](#). During the [California Gold Rush](#), cholera was transmitted along the [California](#), [Mormon](#) and [Oregon Trails](#) as 6,000 to 12,000^[75] are believed to have died on their way to [Utah](#) and [Oregon](#) in the cholera years of 1849–1855.^[74] It is believed cholera claimed more than 150,000 victims in the United States during the two pandemics between 1832 and 1849,^{[76][77]} and also claimed 200,000 victims in [Mexico](#).^[78]

Publications

- September 1843 – [The Economist](#) newspaper is first published in London.
- [1843](#) – [The Friend](#), a [Quaker](#) weekly, is first published in London.
- [August 28, 1845](#) – The journal [Scientific American](#) begins publication.

Institutions

Asia

- [July 18, 1841](#) – The sixth bishop of [Calcutta](#), [Daniel Wilson](#), and Dr. James Taylor, Civil Surgeon at [Dhaka](#), establish the first modern educational institution in the [Indian subcontinent](#), [Dhaka College](#).

Australia

- [October 1, 1846](#) – [Christ College, Tasmania](#), opens with the hope that it would develop along the lines of an [Oxbridge](#) college and provide the basis for university education in Tasmania. By the 21st century it will be the oldest tertiary institution in Australia.

Europe

- [April 15, 1840](#) – [King's College Hospital](#) opens in [London](#).
- [August 15, 1843](#) – [Tivoli Gardens](#), one of the oldest still intact [amusement parks](#) in the world, opens in [Copenhagen](#), [Denmark](#).
- [June 6, 1844](#) – [George Williams](#) founds the [Young Men's Christian Association \(YMCA\)](#) in London.

- [December 21, 1844](#) – The [Rochdale Pioneers](#) commence business at their [cooperative](#) in [Rochdale, England](#).
- [April 5, 1847](#) – The world's first municipally-funded civic public [park](#), [Birkenhead Park](#) in [Birkenhead](#) on [Merseyside](#) in England, is opened.^[79]
- [October 12, 1847](#) – [German](#) inventor and industrialist [Werner von Siemens](#) founds [Siemens AG](#) & Halske.
- [February 2, 1848](#) – [John Henry Newman](#) founds the first [Oratory](#) in the English-speaking world when he establishes the [Birmingham Oratory](#) at 'Maryvale', [Old Oscott](#), England.

Africa

- [1845](#) – [Eugénie Luce](#) founds the Luce Ben Aben School in [Algiers](#).^[80]

North America

- [1843](#) – [Saint Louis University School of Law](#) becomes the first law school west of the [Mississippi River](#).
- [January 15, 1844](#) – The [University of Notre Dame](#) receives its charter from [Indiana](#).
- [February 1, 1845](#) – [Anson Jones](#), President of the [Republic of Texas](#), signs the charter officially creating [Baylor University](#). Baylor is the oldest university in the State of [Texas](#) operating under its original name.
- [October 10, 1845](#) – In [Annapolis, Maryland](#), the Naval School (later renamed the [United States Naval Academy](#)) opens with fifty midshipmen and seven professors.
- [November 1, 1848](#) – In [Boston, Massachusetts](#), the first [medical school](#) for women, The Boston Female Medical School (which later merges with [Boston University School of Medicine](#)), opens.
- November 1849 – [Austin College](#) receives a charter in [Huntsville, Texas](#).

Other

- [February 4, 1841](#) – First known reference to [Groundhog Day](#), in the diary of a James Morris.

1850s

From Wikipedia, the free encyclopedia

The **1850s** (pronounced "eighteen-fifties") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1850, and ended on December 31, 1859.

It was a very turbulent decade, as wars such as the [Crimean War](#), shifted and shook European politics, as well as the expansion of [colonization](#) towards the [Far East](#), which also sparked conflicts like the [Second Opium War](#). In the meantime, the [United States](#) saw its peak on [mass migration to the American West](#), that particularly made the nation experience an economic boom, as well as a rapidly increasing population.

Science and technology

- [The Great Exhibition](#) is held at the [Crystal Palace](#) in 1851, considered to be the first [world's fair](#).
- [Charles Darwin](#) publishes *[The Origin of Species](#)*, putting forward the theory of [evolution](#) by natural selection in November 1859.
- [Epidemiology](#) begins when [John Snow](#) traces the source of an outbreak of [cholera](#) in London to a contaminated water pump.
- Discovery of [Neanderthal](#) fossils in [Neanderthal, Germany](#).
- [Solar flares](#) discovered by [Richard Christopher Carrington](#).
- [University of Sydney](#) established in 1850.

Economics

- Production of [steel](#) revolutionized by invention of the [Bessemer process](#)
- [Benjamin Silliman](#) fractionates [petroleum](#) by [distillation](#) for the first time
- First transpacific [telegraph](#) cable laid
- First safety [elevator](#) installed by [Elisha Otis](#)
- [Railroads](#) begin to supplant [canals](#) in the United States as a primary means of transporting goods.
- First commercially successful sewing machine made by [Isaac Singer](#)

Environment

- [Ukrainian settlers](#) bring [Carniolan honeybees](#) to the [Primorsky Krai](#)

Society

- The word [girlfriend](#) first appears in writing in 1855.
- The word [boyfriend](#) first appears in writing in 1856.

Literature

- [Charles Dickens](#) publishes *[Bleak House](#)*, *[Hard Times](#)*, *[Little Dorrit](#)* and *[A Tale of Two Cities](#)*
- [Nathaniel Hawthorne](#) publishes *[The Scarlet Letter](#)* in 1850
- [Herman Melville](#) publishes *[Bartleby, the Scrivener](#)* in 1853
- [Charlotte Brontë](#) publishes *[Villette](#)* in 1853
- [Elizabeth Gaskell](#) publishes *[North and South](#)* in 1854

1860s

From Wikipedia, the free encyclopedia

The **1860s** (pronounced "eighteen-sixties") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1860, and ended on December 31, 1869.

The [Americas](#) in particular saw major societal developments. The [abolition](#) of [Slavery in the United States](#) led to the breakdown of the [Atlantic slave trade](#), which was already suffering from the abolition of slavery in most of [Europe](#) in the late [1820s](#) and [1830s](#). In the United States, [civil war](#) between the [Confederate States of America](#) and the [Union states](#) led to massive deaths and the destruction of cities such as [Chambersburg, Pennsylvania](#); [Richmond, Virginia](#); and [Atlanta, Georgia](#). [Sherman's March to the Sea](#) was one of the first times America experienced [total war](#), and advancements in military technology, such as [iron](#) and [steel warships](#), and the development and initial deployment of early [machine guns](#) added to the destruction. After the American Civil War, turmoil continued in the [Reconstruction era](#), with the rise of [white supremacist](#) organizations like the [Ku Klux Klan](#) and the issue of granting [Civil Rights](#) to [Freedmen](#).

Science and technology

- The [First Transcontinental Railroad](#) in the USA is completed in 1869.
- The [Suez Canal](#) in [Egypt](#) is opened in 1869.
- The [Plongeur](#), the first mechanically powered [submarine](#) in the world, is launched in 1863 after three years of construction.
- [Carl Wilhelm Borchardt](#) discovers and proves [Cayley's formula](#) in [graph theory](#) in 1860.
- The first [transatlantic telegraph cable](#) is successfully laid in 1866, enabling almost instant communication between America and Europe.
- [Alfred Nobel](#) invents [dynamite](#) in Sweden, patenting it in 1867.
- [James Clerk Maxwell](#) publishes his [equations](#) that quantify the relationship between electricity and magnetism, and shows that [light](#) is a form of [electromagnetic radiation](#)
- [Joseph Lister](#) develops [antiseptic](#) methods for use in surgery in 1867, introducing [carbolic acid](#) as an antiseptic, turning it into the first widely used surgical antiseptic in surgery, and publishing [Antiseptic Principle of the Practice of Surgery](#). As a result, deaths from infections due to surgery greatly decrease.^[2]
- [Gregor Mendel](#) formulates [Mendel's laws of inheritance](#), the basis for [genetics](#), in a two-part paper written in 1865 and published in 1866, although it is largely ignored until 1900.
- [Dmitri Mendeleev](#) develops the modern [periodic table](#)
- [Helium](#) was first *detected* during the total [solar eclipse](#) of August 18, 1868, in parts of [India](#). It was the first eclipse expedition in which a [spectroscope](#) was used.
- [J. Norman Lockyer](#) and [Pierre Janssen](#) are honored for their discovery of the nature of the Sun's *prominences*. They were the first to notice bright spectral emission lines when viewing the limb of the Sun without the aid of a total solar eclipse.
- [1862 International Exhibition](#) in [London](#), England and [1867 International Exposition](#) in [Paris](#).

Establishments

- The Christian Mission, later renamed The [Salvation Army](#), is co-founded by [William](#) and [Catherine Booth](#) in [London](#), England in 1865.
- The [London Fire Brigade](#) was established in 1865.
- [Florence Nightingale](#) founds school for nurses in 1860.
- [Purdue University](#) in [West Lafayette, Indiana](#), USA opens its doors on May 6, 1869, for the first time under a land grant from the [Morrill Act](#).

Religion

- In [Catholicism](#), reaction against [higher criticism](#) and the liberal movement in [Europe](#)
- The [Seventh-day Adventist Church](#) becomes officially established in 1863 in [Battle Creek, Michigan](#).
- [Bahá'u'lláh](#) declares his station as "the One whom God shall make Manifest", in the Garden of [Ridván](#), as foretold by the [Báb](#). [Bahá'ís](#) see this as the beginning date of the [Bahá'í Faith](#).

Literature and arts

- [Victor Hugo](#) publishes *[Les Misérables](#)*.
- [Leo Tolstoy](#) publishes *[War and Peace](#)*.
- [Fyodor Dostoevsky](#) publishes *[Crime and Punishment](#)*.
- [Lewis Carroll](#) publishes *[Alice's Adventures in Wonderland](#)*.
- [Jules Verne](#) publishes *[Twenty Thousand Leagues Under the Sea](#)*.
- [Impressionism](#) went public.
- [Charles Dickens](#) publishes *[Great Expectations](#)* and *[Our Mutual Friend](#)*.
- [George Eliot](#) publishes the *[Silas Marner](#)*.
- [Karl Marx](#) publishes *[Das Kapital](#)*.
- [Horatio Alger](#) publishes "[Ragged Dick](#)".
- [Winged Victory of Samothrace](#) is discovered, 1863.

Sports

- The first [college football](#) game is played in 1869, with Rutgers beating Princeton 6–4.
- The sport of [skiing](#) is invented around 1862.
- [The Football Association](#) is formed in the [United Kingdom of Great Britain and Ireland](#), paving the way for [association football](#) to become the world's predominant spectator sport.
- The Cincinnati Redstockings became the first openly professional baseball team in 1869. They finished the same season with a perfect 58–0 record, thanks in large part to their Hall of Fame leader Harry Wright.

Fashion

Main article: [1860s in fashion](#)

- The [Victorian era](#) and its culture largely thrived from 1860 until 1901.
- The culture of the [Victorian era](#) comes to America and remains in place until around the turn of the 20th century, where the year it ends is disputed as to whether it ended with the rise of [progressivism](#) in 1896 or with the death of [Queen Victoria](#) in 1901.

Miscellaneous trends

- The start of the [bicycle craze](#) of 1860–1900

World leaders

[1860](#) – [1861](#) – [1862](#) – [1863](#) – [1864](#) – [1865](#) – [1866](#) – [1867](#) – [1868](#) – [1869](#)

1870s

From Wikipedia, the free encyclopedia

The **1870s** (pronounced "eighteen-seventies") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1870, and ended on December 31, 1879.

The trends of the [previous decade](#) continued into this one, as new [empires](#), [imperialism](#) and [militarism](#) rose in [Europe](#) and [Asia](#). The [United States](#) was recovering from the [American Civil War](#). [Germany](#) unified in 1871 and began its [Second Reich](#). [Labor unions](#) and [strikes](#) occurred worldwide in the later part of the decade, and continued until [World War I](#). The [Reconstruction era of the United States](#) brought a legacy of bitterness and [segregation](#) that is still present.

Science and technology

Photograph of Edison with his phonograph, taken by [Mathew Brady](#) in 1877

The first version of the [light bulb](#) was invented by [Thomas Edison](#) in 1879

- The prototype telephone was invented by [Alexander Graham Bell](#) in 1876.
- The [phonograph](#) is invented in 1877 by [Thomas Edison](#).
- The 6.35mm [headphone jack](#) was invented in 1878 and is still widely used today.
- The first version of the [light bulb](#) was invented by [Thomas Edison](#) in 1879.
- The [steam drill](#) is invented in 1879.
- [Ludwig Boltzmann](#) statistically defined [thermodynamic entropy](#).
- [1873 Weltausstellung](#) in [Vienna](#), [1876 Centennial Exposition](#) in [Philadelphia](#) and [1878 Exposition universelle](#) in [Paris](#).

Environment

- [Atlas bear](#) became extinct.
- [Yellowstone National Park](#) was established.

Literature and arts

- [Jules Verne](#) (France) publishes *[Around The World in Eighty Days](#)*
- [Monet](#), [Renoir](#), [Pissarro](#), and [Sisley](#) organized the *Société Anonyme Coopérative des Artistes Peintres, Sculpteurs, Graveurs* ("Cooperative and Anonymous Association of Painters, Sculptors, and Engravers") for the purpose of exhibiting their artworks independently. Members of the association, which soon included [Cézanne](#), [Berthe Morisot](#), and [Edgar Degas](#), were expected to forswear participation in the Salon. The organizers invited a number of other progressive artists to join them in their inaugural exhibition, including the slightly older [Eugène Boudin](#), whose example had first persuaded Monet to take up *plein air* painting years before.^[1] Another painter who greatly influenced Monet and his friends, [Johan Jongkind](#), declined to participate, as did [Manet](#). In total, thirty artists participated in their first exhibition, held in April 1874 at the studio of the photographer [Nadar](#). The group soon became known as the *[Impressionists](#)*.^[2]
- [Jeanne Calment](#), born 1875, would eventually become the longest-living human being with a verified lifespan. She lived until 1997, at the age of 122. She still holds the record as of 2020.
- [Lewis Carroll](#) publishes *[Through the Looking-Glass](#)*.
- [Henrik Ibsen](#) releases *[A Doll's House](#)* in 1879

1880s

From Wikipedia, the free encyclopedia

The **1880s** (pronounced "eighteen-eighties") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1880, and ended on December 31, 1889.

The decade occurred at the core period of the [Second Industrial Revolution](#). The modern city as well as the [sky-scraper](#) rose to prominence in this decade as well, contributing to the economic prosperity of the time. The 1880s were also part of the [Gilded Age](#), in the [United States](#), which lasted from 1874 to 1907.

Science and technology

Technology

- 1880: [Oliver Heaviside](#) of [Camden Town](#), [London](#), England receives a patent for the [coaxial cable](#).^[1] In 1887, Heaviside introduced the concept of [loading coils](#). In the

1890s, [Mihajlo Idvorski Pupin](#) would both create the loading coils and receive a patent of them, failing to credit Heaviside's work.^[2]

- 1880–1882: Development and commercial production of [electric lighting](#) was underway. [Thomas Edison](#) of [Milan, Ohio](#), established [Edison Illuminating Company](#) on December 17, 1880. Based at [New York City](#), it was the pioneer company of the [electrical power industry](#). Edison's system was based on creating a central power plant equipped with [electrical generators](#). [Copper electrical wires](#) would then connect the station with other buildings, allowing for [electric power distribution](#).^[3] [Pearl Street Station](#) was the first central power plant in the United States. It was located at 255–257 [Pearl Street](#) in [Manhattan](#) on a site measuring 50 by 100 feet,^[4] just south of [Fulton Street](#). It began with one [direct current generator](#), and it started [generating electricity](#) on September 4, 1882, serving an initial load of 400 lamps at 85 customers. By 1884, Pearl Street Station was serving 508 customers with 10,164 lamps.^[4]
- 1880–1886: [Charles F. Brush](#) of [Euclid, Ohio](#), and [Brush Electric Light Company](#) installed carbon [arc lights](#) along [Broadway](#), New York City. A small generating station was established at Manhattan's [25th Street](#). The electric arc lights went into regular service on December 20, 1880. The new [Brooklyn Bridge](#) of 1883 had seventy arc lamps installed in it. By 1886, there was a reported number of 1,500 arc lights installed in Manhattan.^[3]
- 1880–1883: [James Wimshurst](#) of [Poplar, London](#), England invents the [Wimshurst Machine](#).
- 1881–1885: [Stefan Drzewiecki](#) of [Podolia, Russian Empire](#) finishes his submarine-building project (which had begun in 1879). The crafts were constructed at Nevskiy Shipbuilding and Machinery works at [Saint Petersburg](#). Altogether, 50 units were delivered to the [Ministry of War](#). They were reportedly deployed as part of the defense of [Kronstadt](#) and [Sevastopol](#). In 1885, the submarines were transferred to the [Imperial Russian Navy](#). They were soon declared "ineffective" and discarded. By 1887, Drzewiecki was designing submarines for the [French Third Republic](#).^[5]
- 1881–1883: [John Philip Holland](#) of [Liscannor, County Clare, Ireland](#)^[6] builds the [Fenian Ram](#) submarine for the [Fenian Brotherhood](#). During extensive trials, Holland made numerous dives and test-fired the gun using dummy projectiles. However, due to funding disputes within the [Irish Republican Brotherhood](#) and disagreement over payments from the IRB to Holland, the IRB stole *Fenian Ram* and the [Holland III](#) prototype in November 1883.^[7]
- 1882: [William Edward Ayrton](#) of [London](#), England and [John Perry](#) of [Garvagh, County Londonderry, Ireland](#) build an electric [tricycle](#). It reportedly had a range of 10 to 25 miles, powered by a lead acid battery. A significant innovation of the vehicle was its use of [electric lights](#), here playing the role of [headlamps](#).^{[2][8]}
- 1882: [James Atkinson](#) of [Hampstead, London](#), England invented the [Atkinson cycle engine](#). By use of variable engine strokes from a complex [crankshaft](#), Atkinson was able to increase the efficiency of his engine, at the cost of some power, over traditional [Otto-cycle engines](#).^[9]
- 1882: [Schuyler Wheeler](#) of [Massachusetts](#) invented the two-blade [electric fan](#). [Henry W. Seely](#) of [New York](#) invented the electric safety [iron](#). Both were arguably among the earliest [small domestic electrical appliances](#) to appear.^[2]
- 1882–1883: [John Hopkinson](#) of [Manchester](#), England patents the [three-phase electric power](#) system in 1882. In 1883 Hopkinson showed mathematically that it was possible to connect two alternating current dynamos in parallel — a problem that had long bedeviled electrical engineers.^{[10][11]}

- 1883: [Charles Fritts](#), an American inventor, creates the first working [solar cell](#). The energy conversion efficiency of these early devices was less than 1%. Denounced as a fraud in the US for "generating power without consuming matter, thus violating the [laws of physics](#)".^{[2][12]}
- 1883–1885: [Josiah H. L. Tuck](#), an American inventor, works in his own submarine designs. His 1883 model was created in Delameter Iron Works. It was 30-feet long, "all-electric and had vertical and horizontal propellers clutched to the same shaft, with a 20-foot breathing pipe and an airlock for a diver." His 1885 model, called the "Peacemaker", was larger. It used "a [caustic soda](#) patent [boiler](#) to power a 14-HP Westinghouse steam engine". She managed a number of short trips within the [New York Harbor](#) area.^{[13][14]} The Peacemaker had a submerged endurance of 5 hours. Tuck did not benefit from his achievement. His family feared that the inventor was squandering his fortune on the Peacemaker. They had him committed to an [insane asylum](#) by the end of the decade.^[15]
- 1883–1886: [John Joseph Montgomery](#) of [Yuba City, California](#), starts his attempts at [early flight](#). In 1884, using a glider designed and built in 1883, Montgomery made the "first heavier-than-air human-carrying aircraft to achieve controlled piloted flight" in the Western Hemisphere. This glider had a curved parabolic wing surface. He reportedly made a glide of "considerable length" from [Otay Mesa, San Diego, California](#), his first successful flight and arguably the first successful one in the United States. In 1884–1885, Montgomery tested a second monoplane glider with flat wings. The innovation in design was "[hinged surfaces](#) at the rear of the wings to maintain [lateral balance](#)". These were early forms of [Aileron](#). After experimentation with a water tank and smoke chamber to understand the nature of flow over surfaces, in 1886, Montgomery designed a third glider with fully rotating wings as pitcherons. He then turned to theoretic research towards the development of a manuscript "Soaring Flight" in 1896.^{[16][17][18]}
- 1884–1885: On August 9, 1884, "[La France](#)", a [French Army airship](#), makes its maiden flight. Launched by [Charles Renard](#) and [Arthur Constantin Krebs](#). Krebs piloted [the first fully controlled free-flight](#) with the *La France*. The 170-foot (52 m) long, 66,000 cubic feet (1,900 m³) airship, electric-powered with a 435 kg battery^[19] completed a flight that covered 8 km (5.0 mi) in 23 minutes. It was the first full round trip flight^[20] with a landing on the starting point. On its seven flights in 1884 and 1885^[21] the *La France* dirigible returned five times to its starting point. "La France was the first airship that could return to its starting point in a light wind. It was 165 feet (50.3 meters) long, its maximum diameter was 27 feet (8.2 meters), and it had a capacity of 66,000 cubic feet (1,869 cubic meters)." Its battery-powered motor "produced 7.5 horsepower (5.6 kilowatts). This motor was later replaced with one that produced 8.5 horsepower (6.3 kilowatts)."^[22]
- 1884: [Paul Gottlieb Nipkow](#) of [Lębork, Kingdom of Prussia, German Empire](#) invents the [Nipkow disk](#), an [image scanning](#) device. It was the basis of his patent method of translating visual images to electronic impulses, transmit said impulses to another device and successfully reassemble the impulses to visual images. Nipkow used a [selenium photoelectric cell](#).^[23] Nipkow proposed and patented the first "near-practicable" [electromechanical television system](#) in 1884. Although he never built a working model of the system, Nipkow's spinning disk design became a common television image [rasterizer](#) used up to 1939.^[24]
- 1884: [Alexander Mozhaysky](#) of [Kotka, Grand Duchy of Finland, Russian Empire](#) makes the second known "powered, assisted take off of a heavier-than-air craft carrying an operator". His [steam-powered](#) monoplane took off at [Krasnoye Selo](#), near [Saint Petersburg](#), making a hop and "covering between 65 and 100 feet". The monoplane had a

failed [landing](#), with one of its wings destroyed and serious damages. It was never rebuilt. Later [Soviet propaganda](#) would overstate Mozhaysky's accomplishment while downplaying the failed landing. The Grand Soviet Encyclopedia called this "the first true flight of a heavier-than-air machine in history".^{[25][26]}

- 1884–1885: [Ganz](#) Company engineers [Károly Zipernowsky](#), [Ottó Bláthy](#) and [Miksa Déri](#) had determined that open-core devices were impracticable, as they were incapable of reliably regulating voltage. In their joint patent application for the "Z.B.D." [transformers](#), they described the design of two with no poles: the "closed-core" and the "shell-core" transformers. In the closed-core type, the primary and secondary windings were wound around a closed iron ring; in the shell type, the windings were passed *through* the iron core. In both designs, the magnetic flux linking the primary and secondary windings traveled almost entirely within the iron core, with no intentional path through air. When employed in [electric distribution systems](#), this revolutionary design concept would finally make it technically and economically feasible to provide electric power for lighting in homes, businesses and public spaces.^{[27][28]} Bláthy had suggested the use of closed-cores, Zipernowsky the use of [shunt connections](#), and Déri had performed the experiments.^[29] Electrical and electronic systems the world over continue to rely on the principles of the original Z.B.D. transformers. The inventors also popularized the word "transformer" to describe a device for altering the EMF of an electric current,^{[27][30]} although the term had already been in use by 1882.^{[31][32]}
- 1884–1885: [John Philip Holland](#) and [Edmund Zalinski](#), having formed the "Nautilus Submarine Boat Company", start working on a new submarine. The so-called "Zalinsky boat" was constructed in Hendrick's Reef (former [Fort Lafayette](#)), [Bay Ridge](#) in (ray) or (rayacus the 3rd) [New York City borough](#) of [Brooklyn](#). "The new, cigar-shaped submarine was 50 feet long with a maximum beam of eight feet. To save money, the hull was largely of wood, framed with iron hoops, and again, a [Brayton-cycle](#) engine provided motive power." The project was plagued by a "shoestring budget" and Zalinski mostly rejecting Holland's ideas on improvements. The submarine was ready for launching in September, 1885. "During the launching itself, a section of the ways collapsed under the weight of the boat, dashing the hull against some pilings and staving in the bottom. Although the submarine was repaired and eventually carried out several trial runs in lower New York Harbor, by the end of 1886 the Nautilus Submarine Boat Company was no more, and the salvageable remnants of the Zalinski Boat were sold to reimburse the disappointed investors." Holland would not create another submarine to 1893.^[33]
- 1885: [Galileo Ferraris](#) of [Livorno Piemonte, Kingdom of Italy](#) reaches the concept of a [rotating magnetic field](#). He applied it to a new motor. "Ferraris devised a motor using electromagnets at right angles and powered by alternating currents that were 90° out of phase, thus producing a revolving magnetic field. The motor, the direction of which could be reversed by reversing its polarity, proved the solution to the last remaining problem in alternating-current motors. The principle made possible the development of the asynchronous, self-starting [electric motor](#) that is still used today. Believing that the scientific and intellectual values of new developments far outstripped material values, Ferraris deliberately did not patent his invention; on the contrary, he demonstrated it freely in his own laboratory to all comers." He published his findings in 1888. By then, [Nikola Tesla](#) had independently reached the same concept and was seeking a patent.^[34]
- 1885: [Nikolay Bernardos](#) and [Karol Olszewski](#) of [Broniszów](#) were granted a patent for their Electrofest, an "electric arc welder with a carbon electrode". Introducing a method of [carbon arc welding](#), they also became the "inventors of modern welding apparatus".^{[2][35]}

[Benz Patent Motorwagen](#) which is widely regarded as the first [automobile](#) was first introduced in 1885.

- 1885–1888: [Karl Benz](#) of [Karlsruhe, Baden, German Empire](#) introduces the [Benz Patent Motorwagen](#), widely regarded as the first [automobile](#).^[36] It featured wire wheels (unlike carriages' wooden ones)^[37] with a four-stroke engine of his own design between the rear wheels, with a very advanced coil ignition^[38] and evaporative cooling rather than a radiator.^[38] The *Motorwagen* was patented on January 29, 1886, as *DRP-37435: "automobile fueled by gas"*.^[39] The 1885 version was difficult to control, leading to a collision with a wall during a public demonstration. The first successful tests on public roads were carried out in the early summer of 1886. The next year Benz created the *Motorwagen Model 2* which had several modifications, and in 1887, the definitive *Model 3* with [wooden](#) wheels was introduced, showing at the Paris Expo the same year.^[38] Benz began to sell the vehicle (advertising it as the *Benz Patent Motorwagen*) in the late summer of 1888, making it the first commercially available automobile in history.^[38]
- 1885–1887: [William Stanley, Jr.](#) of [Brooklyn, New York](#), an employee of [George Westinghouse](#), creates an improved [transformer](#). Westinghouse had bought the patents of [Lucien Gaulard](#) and [John Dixon Gibbs](#) on the subject, and had purchased an option on the designs of [Károly Zipernowsky](#), [Ottó Bláthy](#) and [Miksa Déri](#). He entrusted engineer Stanley with the building of a device for commercial use.^[40] Stanley's first patented design was for [induction coils](#) with single cores of soft iron and adjustable gaps to regulate the EMF present in the secondary winding. This design was first used commercially in 1886.^[41] But Westinghouse soon had his team working on a design whose core comprised a stack of thin "E-shaped" iron plates, separated individually or in pairs by thin sheets of paper or other insulating material. Prewound copper coils could then be slid into place, and straight iron plates laid in to create a closed magnetic circuit. Westinghouse applied for a patent for the new design in December 1886; it was granted in July 1887.^{[42][43]}
- 1885–1889: [Claude Goubet](#) [\[fr\]](#), a French inventor, builds two small electric submarines.^[44] The first Goubet model was 16-feet long and weighed 2 tons. "She used [accumulators](#) ([storage batteries](#)) which operated an Edison-type dynamo." While among the earliest submarines to successfully make use of electric power, she proved to have a severe flaw. She could not stay at a stable depth, set by the operator. The improved Goubet II was introduced in 1889. This version could transport a 2-man crew and had "an attractive interior". More stable than her predecessor, though still unable to stay at a set depth.^[45]
- 1885–1887: [Thorsten Nordenfelt](#) of [Örby, Uppsala Municipality, Sweden](#) produces a series of steam powered [submarines](#). The first was the *Nordenfelt I*, a 56 tonne, 19.5 metre long vessel similar to [George Garrett](#)'s ill-fated *Resurgam* (1879), with a range of 240

kilometres and armed with a single torpedo and a 25.4 mm [machine gun](#). It was manufactured by [Bolinders](#) in [Stockholm](#) in 1884–1885. Like the Resurgam, it operated on the surface using a 100 HP steam engine with a maximum speed of 9 kn, then it shut down its engine to dive. She was purchased by the [Hellenic Navy](#) and was delivered to [Salamis Naval Base](#) in 1886. Following the acceptance tests, she was never used again by the Hellenic Navy and was scrapped in 1901.^[46] Nordenfelt then built the *Nordenfelt II* (*Abdülhamid*) in 1886 and *Nordenfelt III* (*Abdülmeçid*) in 1887, a pair of 30 metre long submarines with twin torpedo tubes, for the [Ottoman Navy](#). *Abdülhamid* became the first submarine in history to fire a torpedo while submerged under water.^[47] The Nordenfelts had several faults. "It took as long as twelve hours to generate enough steam for submerged operations and about thirty minutes to dive. Once underwater, sudden changes in speed or direction triggered—in the words of a U.S. Navy intelligence report—"dangerous and eccentric movements." ...However, good public relations overcame bad design: Nordenfeldt always demonstrated his boats before a stellar crowd of crowned heads, and Nordenfeldt's submarines were regarded as the world standard."^[44]

- 1886–1887: [Carl Gassner](#) of [Mainz](#), [German Empire](#) receives a patent for a [zinc-carbon battery](#), among the earliest examples of [dry cell](#) batteries. Originally patented in the German Empire, Gassner also received patents from [Austria–Hungary](#), [Belgium](#), the [French Third Republic](#), the [United Kingdom of Great Britain and Ireland](#) (all in 1886) and the United States (in 1887). Consumer dry cells would first appear in the 1890s.^[48] In 1887, [Wilhelm Hellesen](#) of [Kalundborg](#), [Denmark](#) patented his own zinc-carbon battery. Within the year, Hellesen and V. Ludvigsen founded a factory in [Frederiksberg](#), producing their batteries.^[49]
- 1886: [Charles Martin Hall](#) of [Thompson Township](#), [Geauga County](#), [Ohio](#), and [Paul Héroult](#) of [Thury-Harcourt](#), [Normandy](#) independently discover the same inexpensive method for producing [aluminium](#), which became the first metal to attain widespread use since the prehistoric discovery of [iron](#). The basic invention involves passing an electric current through a bath of [alumina](#) dissolved in [cryolite](#), which results in a puddle of aluminum forming in the bottom of the retort. It has come to be known as the [Hall-Héroult process](#).^[50] Often overlooked is that Hall did not work alone. His research partner was [Julia Brainerd Hall](#), an older sister. She had studied chemistry at [Oberlin College](#), helped with the experiments, took laboratory notes and gave business advice to Charles.^[51]
- 1886–1890: [Herbert Akroyd Stuart](#) of [Halifax Yorkshire](#), [England](#) receives his first patent on a prototype of the [hot bulb engine](#). His research culminated in an 1890 patent for a [compression ignition engine](#). Production started in 1891 by [Richard Hornsby & Sons](#) of [Grantham](#), [Lincolnshire](#), England under the title [Hornsby Akroyd Patent Oil Engine](#) under licence.^{[52][53]} Stuart's oil engine design was simple, reliable and economical. It had a comparatively low compression ratio, so that the temperature of the air compressed in the combustion chamber at the end of the compression stroke was not high enough to initiate combustion. Combustion instead took place in a separated combustion chamber, the "vaporizer" (also called the "hot bulb") mounted on the cylinder head, into which fuel was sprayed. It was connected to the cylinder by a narrow passage and was heated either by the cylinder's coolant or by exhaust gases while running; an external flame such as a blowtorch was used for starting. Self-ignition occurred from contact between the fuel-air mixture and the hot walls of the vaporizer.^[54]
- 1887: [William Thomson](#) (later Baron Kelvin) of [Belfast](#), [Ireland](#) introduces the multicellular [voltmeter](#). The electrical supply industry needed instruments capable of measuring high voltages. Thomson's voltmeter could measure up to 20,000 volts. It could

measure both [direct current](#) (DC) and [alternating current](#) (AC) flows.^[55] They went into production in 1888, being the first [electrostatic voltmeters](#).^[56]

- 1887: [Charles Vernon Boys](#) of [Wing, Rutland, England](#)^[57] introduces a method of using [fused quartz](#) fibers to measure "delicate forces". Boys was a physics demonstrator at the [Royal College of Science](#) in [South Kensington](#), but was conducting private experiments on the effects of delicate forces on objects. It was already known that hanging an object from a thread could demonstrate the effects of such weak influences. Said thread had to be "thin, strong and elastic". Finding the best fibers available at the time insufficient for his experiments, Boys set out to create a better fiber. He tried making glass from a variety of minerals. The best results came from natural [quartz](#). He created fibers both extremely thin and highly durable. He used them to create the "radiomicrometer", a device sensitive enough to detect the heat of a single candle from a distance of almost 2 miles. By March 26, 1887, Boys was reporting his results to the [Physical Society of London](#).^[58]
- 1887–1888: [Augustus Desiré Waller](#) of [Paris](#) recorded the human [electrocardiogram](#) with surface [electrodes](#). He was employed at the time as a lecturer in physiology at [St Mary's Hospital](#) in [Paddington, London](#), England.^[59] In May, 1887, Waller demonstrated his method to many physiologists. In 1888, Waller demonstrated that the [contraction](#) of the [heart](#) started at the [apex of the heart](#) and ended at the [base of the heart](#). [Willem Einthoven](#) was among those who took interest in the new method. He would end up improving it in the 1900s.^[60]
- 1887–1889: The Serbian-American engineer [Nikola Tesla](#) files patents on a [rotating magnetic field](#) based [alternating current induction motor](#) and related polyphase AC transmission systems. The patents are licensed by [Westinghouse Electric](#) although technical problems and a shortage of cash at the company meant a complete system would not be rolled out until 1893.^[61]
- 1887–1890: [Sebastian Ziani de Ferranti](#) of [Liverpool](#), England is hired by the London Electric Supply Corporation to design the [Deptford Power Station](#). Ferranti designed the building, as well as the electrical systems for both generating and distributing [alternating current](#) (AC). Among the innovations included in the Station was "the use of 10,000-volt high-tension cable", successfully tested for safety. On its completion in October 1890 it was the first truly modern power station, supplying high-voltage AC power.^[62] "Ferranti pioneered the use of Alternating Current for the distribution of electrical power in Europe authoring 176 patents on the alternator, high-tension cables, insulation, circuit breakers, transformers and turbines."^[2]
- 1888: [Heinrich Hertz](#) of [Hamburg](#), a [city-state](#) of the [German Empire](#), successfully transmits and receives [radio waves](#). He was employed at the time by the [Karlsruhe Institute of Technology](#). Attempting to experimentally prove [James Clerk Maxwell](#)'s "[A dynamical theory of the electromagnetic field](#)" (1864), Hertz "generated electric waves using an electric circuit". Then he detected said waves "with another similar circuit some distance away". Hertz succeeded in proving the existence of [electromagnetic waves](#). But in doing so, he had built basic [transmitter](#) and [receiver](#) devices. Hertz took this work no further, did not exploit it commercially, and famously did not consider it useful. But it was an important step in the [invention of radio](#).^{[2][63]}
- 1888–1890: [Isaac Peral](#) of [Cartagena, Spain](#) launches his [pioneering submarine](#) on September 8, 1888. Created for the [Spanish Navy](#), el Peral was "roughly 71 feet long, with a 9-foot beam and a height of almost 9 feet amidships, with one horizontal and two small vertical propellers, Peral's "cigar," as the workers called it, ... had a periscope, a chemical system to oxygenate the air for a crew of six, a speedometer, spotlights, and a launcher at the bow capable of firing three torpedoes. Its two 30-horsepower electrical

motors, powered by 613 batteries, gave it a theoretical range of 396 nautical miles and a maximum speed of 10.9 knots an hour at the surface." It underwent a series of trials in 1889 and 1890, all in the [Bay of Cádiz](#). On June 7, 1890, it "successfully spent an hour submerged at a depth of 10 meters, following a set course of three and a half miles". He was celebrated by the public and honored by [Maria Christina of Austria, Queen Regent of Spain](#). But Navy officials ultimately declared the submarine a "useless curiosity", scrapping the project.^[64]

- 1888–1890: [Gustave Zédé](#) and [Arthur Constantin Krebs](#) launch the [Gymnote](#), a 60-foot submarine for the [French Navy](#). "It was driven by a 55 horse power electric motor, originally powered by 564 [Lalande-Chaperon alkaline cells](#) by Coumelin, Desmazes et Baillache with a total capacity of 400 Amphours weighing 11 tons and delivering a maximum current of 166 Amps."^[2] She was launched on 24 September 1888 and would stay in service to 1908.^[65] The Gymnote underwent various trials to 1890, successful enough for the Navy to start building two "real fighting submarines", considerably larger. Several of the trials were intended to established tactical methods of using submarines in warfare. Several weapons were tested until it was decided that the [torpedoes](#) of [Robert Whitehead](#) were ideal for the job. The Gymnote proved effective in breaking [blockades](#) and surface ships had trouble spotting it. She was able to withstand explosions of up to 220 pounds of [guncotton](#) in a distance of 75 yards from its body. Shells of [quick-firing guns](#), fired at short range, would explode in the water before hitting it. At long-range everything fired at the submarine, ended up [ricocheting](#). The submarine proved "blind" when submerged, establishing the need of a [periscope](#).^[66]
- 1889–1891: [Almon Brown Strowger](#) of [Penfield, New York](#), files a patent for the [stepping switch](#) on March 12, 1889. Issued on March 10, 1891, it enabled automatic [telephone exchanges](#).^[67] Since 1878, telephone communications were handled by [telephone switchboards](#), staffed by [telephone operators](#). Operators were not only responsible for connecting, monitoring and disconnecting calls. They were expected to provide "emotional support, emergency information, local news and gossip, business tips", etc.^[68] Strowger had reportedly felt the negative side of this development, while working as an [undertaker](#) in [Kansas City](#). The local operator happened to be the wife of a rival undertaker. Whenever someone asked to be put through to an undertaker, the operator would connect them to her husband. Strowger was frustrated at losing customers to this [unfair competition](#). He created his device explicitly to bypass the need of an operator. His system "required users to tap out the number they wanted on three keys to call other users directly. The system worked with reasonable accuracy when the subscribers operated their push buttons correctly and remembered to press the release button after a conversation was finished, but there was no provision against a subscriber being connected to a busy line."^{[2][67]} Strowger would found the [Strowger Automatic Telephone Exchange](#) in 1891.^[67]
- 1889: [Elihu Thomson](#) of [Manchester, England, United Kingdom of Great Britain and Ireland](#) creates a motor-driven [Wattmeter](#).^[69]
- 1889: [Mikhail Dolivo-Dobrovolsky](#) of [Gatchina, Russian Empire](#) created the first [squirrel-cage induction motor](#). He was at the time working for [AEG](#).^[2]
- Development and commercial production of gasoline-powered [automobiles](#) were undertaken by [Karl Benz](#), [Gottlieb Daimler](#) and [Maybach](#)
- The first commercial production and sales of [phonographs](#) and phonograph recordings occurred.
- Steel frame construction of "[sky-scrapers](#)" happened for the first time.
- February 16, 1880: The [American Society of Mechanical Engineers](#) was founded in [New York City](#).

- Construction began on the [Panama Canal](#) by the French. This was the first attempt to build the Canal; it would end in failure.
- Lewis Ticehurst invented the [drinking straw](#).
- 1884: [Smokeless powder](#) was brought^[where?] from France.
- 1885: [Thomas Edison](#) invents the first ever [movie](#) in [Menlo Park](#), [New Jersey](#).
- 1886: Earliest commercial [automobile](#) is invented.
- 1887: As the [Prohibition](#) movement gained nationwide prevalence, a "liquor-free" drink was brewed, known now as [Coca-Cola](#).
- 1888: [Infrastructure](#) reform movements begin when many cities are devastated by the [Great Blizzard of '88](#).

Science

- [Heinrich Hertz](#) discovered the [photoelectric effect](#).
- The [Michelson–Morley experiment](#) was undertaken, which suggested that the [speed of light](#) is invariant.
- The [James–Lange theory](#) of [emotion](#) was produced.
- [William James](#) publishes numerous articles on human thought, leading to the 1890 publication of his [The Principles of Psychology](#).

Society

- About 600,000 [Swedes Emigrated](#) to [America](#).
- [Chinese](#), [Scandinavians](#) and [Irish immigrants](#) laid 73,000 miles (117,000 km) of [Railroad tracks](#) in [America](#).
- [Syrian Canadians](#) started [Immigrating](#) to the [Americas](#).

Literature and arts

- [Friedrich Nietzsche](#) published [Thus Spoke Zarathustra](#).
- [Mark Twain](#) published [Adventures of Huckleberry Finn](#).

1890s

From Wikipedia, the free encyclopedia

The **1890s** (pronounced "eighteen-nineties") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1890, and ended on December 31, 1899.

In the United States, the 1890s were marked by a severe [economic depression](#) sparked by the [Panic of 1893](#), as well as several [strikes](#) in the industrial workforce. The decade saw much of the [development of the automobile](#).

The period was sometimes referred to as the "[Mauve Decade](#)"^[1] – because [William Henry Perkin's aniline dye](#) allowed the widespread use of that colour in fashion – and also as the "[Gay Nineties](#)", referring to the fact that it was full of merriment and optimism. The phrase, "The Gay Nineties," was not coined until the 1920s. This decade was also part of the [Gilded Age](#), a phrase coined by [Mark Twain](#), alluding^[*citation needed*] to the seemingly profitable era that was riddled with crime and poverty.

The term *Gilded Age* for the period of economic boom after the [American Civil War](#) up to the turn of the century was applied to the era by historians in the 1920s, who took the term from one of [Mark Twain's](#) lesser known novels, *The Gilded Age: A Tale of Today* (1873). The book (co-written with [Charles Dudley Warner](#)) satirized the promised "[golden age](#)" after the Civil War, portrayed as an era of serious social problems masked by a thin [gold gilding](#) of economic expansion.^[5] In the 1920s and '30s the metaphor "Gilded Age" began to be applied to a designated [period](#) in American history. The term was adopted by literary and cultural critics as well as historians, including [Van Wyck Brooks](#), [Lewis Mumford](#), [Charles Austin Beard](#), [Mary Ritter Beard](#), [Vernon Louis Parrington](#), and [Matthew Josephson](#). For them, *Gilded Age* was a pejorative term for a time of materialistic excesses combined with extreme poverty.^{[6][7]}

The early half of the Gilded Age roughly coincided with the middle portion of the [Victorian era](#) in Britain and the [Belle Époque](#) in France. With respect to eras of American history, historical views vary as to when the Gilded Age began, ranging from starting right after the [American Civil War](#) (ended, 1865), or 1873, or as the [Reconstruction Era](#) ended in 1877.^[4] The point noted as the end of the Gilded Age also varies. It is generally given as the beginning of the [Progressive Era](#) in the 1890s (sometimes the [United States presidential election of 1896](#))^{[8][9][10][11][12][13]} but also falls in a range that includes the [Spanish–American War](#) in 1898, [Theodore Roosevelt's](#) accession to the presidency in 1901, and even the end of the Progressive Era coinciding with the U.S. entry into [World War I](#) (1917).^[4]

Science and technology

Technology

1895 [Benz Velo](#). Along with its contemporary [Duryea Motor Wagon](#), those vehicles were considered the earliest standardized cars. The 1890s also saw further developments in the [history of the automobile](#).

- 1890s: [Bike boom](#) sweeps Europe and America with hundreds of bicycle manufacturers in the biggest bicycle craze to date.
- 1890: [Clément Ader](#) of [Muret](#), France creates his [Ader Éole](#). "Ader claimed that while he was aboard the Ader Éole he made a steam-engine powered low-level flight of approximately 160 feet on October 9, 1890, in the suburbs of Paris, from a level field on the estate of a friend." It was a powered and heavier-than-air flight, but is often discounted as a candidate for the first flying machine for two main reasons. "It was not capable of a prolonged flight (due to the use of a steam engine) and it lacked adequate provisions for full flight control.". His [Ader Avion II](#) and [Ader Avion III](#) had more complex designs but failed to take-off.^{[87][88]}
- 1891: Commercial production of automobiles began and was at an early stage. The first company formed exclusively to build automobiles was [Panhard et Levassor](#) in [France](#), which also introduced the first [four-cylinder engine](#).^[89] Panhard was originally called **Panhard et Levassor**, and was established as a car manufacturing concern by [René Panhard](#), [Émile Levassor](#), and Belgian lawyer [Edouard Sarazin](#) in 1887.^[90] In 1891, the company built their first all-Lavassor design,^[91] a "state of the art" model: the [Système Panhard](#) consisted of four wheels, a [front-mounted engine](#) with [rear wheel drive](#), and a crude sliding-gear transmission, sold at 3500 *francs*.^[91] (It would remain the standard until [Cadillac](#) introduced [synchromesh](#) in 1928.)^[92] This was to become the standard layout for automobiles for most of the next century. The same year, Panhard shared their Daimler engine license with bicycle maker [Armand Peugeot](#), who formed his own car company. In 1895, 1205 cc (74 ci) Panhards finished 1–2 in the [Paris–Bordeaux–Paris](#) race, one piloted solo by Levassor, for 48¾hr.^[93]
- 1891: [Otto Lilienthal](#) of [Anklam](#), [Province of Pomerania](#), [Kingdom of Prussia](#) creates his [Derwitzer Glider](#), a [glider aircraft](#). It became "the first successful manned aircraft in the world, covering flight distances of up to about 80 feet near Derwitz/Krielow in Brandenburg." Lilienthal continued creating and testing flying machines to 1896. He achieved international fame. On August 9, 1896, Lilienthal lost control of one of his gliders due to a sudden gust of wind, crashing from a height of about 17 m (56 ft) and suffering severe injuries. He died the following day.^{[94][95]}

- 1892: [Rudolf Diesel](#) of Paris, France discovers the [Diesel cycle](#), a [thermodynamic cycle](#). On February 23, 1893, Diesel received a patent for [compression ignition engine](#) which would put his discovery in practical use. Further research would lead to his creation of the [Diesel engine](#), an [internal combustion engine](#). "Diesel originally designed the diesel engine to use [peanut oil](#) as a fuel in order to help support agrarian society."^[96] It was an early form of [biodiesel](#).^[97]
- 1893: The [Duryea Motor Wagon Company](#), founded by siblings [Charles Duryea](#) and [J. Frank Duryea](#), arguably becomes the first American automobile firm. In 1893, the Duryea brothers tested their first [gasoline](#)-powered automobile model and in 1896 established their company to build the Duryea model automobile, supposedly the first auto ever commercially manufactured.^[98] Their 1893 model was a one-cylinder "Ladies Phaeton", first demonstrated on September 21, 1893, at [Chicopee, Massachusetts](#). It is considered the first successful gas-engine vehicle built in the U.S. Their 1895 model, driven by Frank, won the [Chicago Times-Herald race](#) in Chicago on a snowy [Thanksgiving Day](#). He travelled 54 miles (87 km) at an average 7.5 mph (12.1 km/h), marking the first U.S. auto race in which any entrants finished. That same year, the brothers began commercial production, with thirteen cars sold by the end of 1896.^[99]

Charles Kayser of the Edison lab seated behind the Kinetograph. Portability was not among the camera's virtues.

- 1893–1894: The [Kinetoscope](#), an early [motion picture](#) exhibition device invented by [Thomas Edison](#) and developed by [William Kennedy Dickson](#), is introduced to the public. (It was in development since 1889 and a number of films had already been created for it). The premiere of the completed Kinetoscope was held not at the [Chicago World's Fair](#), as originally scheduled, but at the Brooklyn Institute of Arts and Sciences on May 9, 1893. The first film publicly shown on the system was [Blacksmith Scene](#) (aka *Blacksmiths*); directed by Dickson and [shot](#) by Heise, it was produced at the new Edison moviemaking studio, known as the [Black Maria](#).^[100] Despite extensive promotion, a major display of the Kinetoscope, involving as many as twenty-five machines, never took place at the Chicago exposition. Kinetoscope production had been delayed in part because of Dickson's absence of more than eleven weeks early in the year with a nervous breakdown.^[101] On April 14, 1894, a public Kinetoscope parlor was opened by the Holland Bros. in New York City at 1155 Broadway, on the corner of 27th Street—the first commercial motion picture house. The venue had ten machines, set up in parallel rows of five, each showing a different movie. For 25 cents a viewer could see all the films in either row; half a dollar gave access to the entire bill.^[102] The machines were purchased from the new Kinetoscope Company, which had contracted with Edison for their production; the firm, headed by Norman C. Raff and Frank R. Gammon, included among its investors Andrew M. Holland, one of the entrepreneurial siblings, and Edison's

former business chief, Alfred O. Tate. The ten films that comprise the first commercial movie program, all shot at the Black Maria, were descriptively titled: *Barber Shop*, *Bertoldi (mouth support)* (Ena Bertoldi, a British vaudeville contortionist), *Bertoldi (table contortion)*, *Blacksmiths*, *Roosters* (some manner of [cock fight](#)), *Highland Dance*, *Horse Shoeing*, *Sandow* ([Eugen Sandow](#), a German strongman), *Trapeze*, and *Wrestling*.^[103] As historian [Charles Musser](#) describes, a "profound transformation of American life and performance culture" had begun.^[104]

- 1894: [Hiram Stevens Maxim](#) completes his flying machine and was ready to use it. He built a 145 feet (44 m) long craft that weighed 3.5 tons, with a 110 feet (34 m) wingspan that was powered by two compound 360 horsepower (270 kW) [steam engines](#) driving two propellers. In trials at [Bexley](#) in 1894 his machine rode on 1800 rails and was prevented from rising by outriggers underneath and wooden safety rails overhead, somewhat in the manner of a roller coaster.^[105] His goal in building this machine was not to soar freely, but to test if it would lift off the ground. During its test run all of the outriggers were engaged, showing that it had developed enough lift to take off, but in so doing it damaged the track; the "flight" was aborted in time to prevent disaster. The craft was almost certainly aerodynamically unstable and uncontrollable, which Maxim probably realized, because he subsequently abandoned work on it.^[106] "On the Maxim Biplane Test-Rig's third test run, on July 31, 1894, with Maxim and a crew of three aboard, it lifted with such force that it broke the reinforced restraining track and careened for some 200 yards, at times reaching an altitude of 2 or 3 feet above the damaged track. It was believed that a lifting force of some 10,000 pounds had likely been generated."^[107]
- 1894: [Lawrence Hargrave](#) of [Greenwich](#), England successfully lifted himself off the ground under a train of four of his [box kites](#) at [Stanwell Park](#) beach, [New South Wales](#), Australia on 12 November 1894. Aided by James Swain, the caretaker at his property, the kite line was moored via a spring balance to two sandbags. Hargrave carried an [anemometer](#) and [inclinometer](#) aloft to measure windspeed and the angle of the kite line. He rose 16 feet (4.9 m) in a wind speed of 21 mph (34 km/h). This experiment was widely reported and established the box kite as a stable aerial platform^[108]
- 1895: [Auguste and Louis Lumière](#) of [Besançon](#), [Franche-Comté](#), France introduce [cinematograph](#), a combination film [camera](#), [film projector](#) and developer, to the public. Their first public screening of films at which admission was charged was held on December 28, 1895, at [Salon Indien du Grand Café](#) in Paris. This history-making presentation featured ten short films, including their first film, [Sortie des Usines Lumière à Lyon](#) (*Workers Leaving the Lumière Factory*).^[109]
- 1896: [Samuel Pierpont Langley](#) of [Roxbury](#), [Boston](#), [Massachusetts](#), has two significant breakthroughs while testing his [Langley Aerodromes](#), flying machines. In May, Aerodrome number 5 made "circular flights of 3,300 and 2,300 feet, at a maximum altitude of some 80 to 100 feet and at a speed of some 20 to 25 miles an hour". In November, Aerodrome number 6 "flew 4,200 feet, staying aloft over 1 minute.". The flights were powered (by a [steam engine](#)), but unmanned.^[110]
- 1896: [Octave Chanute](#) and [Augustus Moore Herring](#) co-design the Chanute-Herring Biplane. "Each 16-foot (4.9-meter) wing was covered with varnished silk. The pilot hung from two bars that ran down from the upper wings and passed under his arms. This plane was originally flown at [Dune Park](#), [Indiana](#), about sixty miles from Chanute's home in Chicago, as a [triplane](#) on August 29, 1896, but was found to be unwieldy. Chanute and Herring removed the lowest of the three wings, which vastly improved its gliding ability. In its flight on September 11, it flew 256 feet (78 meters)." It influenced the design of later aircraft, setting the pattern for a number of years.^{[111][112]}

- 1897: [Carl Richard Nyberg](#) of [Arboga](#), Sweden starts constructing his [Flugan](#), an early [fixed-wing aircraft](#), outside his home in [Lidingö](#). Construction started in 1897 and he kept working on it until 1922. The craft only managed a few short jumps and Nyberg was often ridiculed, however several of his innovations are still in use.^[113] He was the first to test his design in a [wind tunnel](#) and the first to build a [hangar](#).^[114] The reasons for failure include poor wing and propeller design and, allegedly, that he was afraid of heights.
- 1898: [Wurlitzer](#) builds the first coin-operated [player piano](#).^[115]
- 1899: [Gustave Whitehead](#), according to a witness who gave his report in 1934, made a very early motorized flight of about half a mile in [Pittsburgh](#) in April or May 1899. Louis Darvarich, a friend of Whitehead's, said they flew together at a height of 20 to 25 ft (6.1 to 7.6 m) in a [steam-powered monoplane](#) aircraft and crashed into a three-story building. Darvarich said he was stoking the boiler and was badly scalded in the accident, requiring several weeks in a hospital.^[116] This claim is not accepted by mainstream aviation historians including William F. Trimble.^[117]
- 1899: [Percy Pilcher](#) of [Bath, Somerset](#) dies in October, without having a chance to fly his early triplane. Pilcher had built a [hang glider](#) called *The Bat* which he flew for the first time in 1895. He then built more hang gliders ("The Beetle", "The Gull" and "The Hawk"), but had set his sights upon powered flight, which he hoped to achieve on his triplane.^[118] On 30 September 1899, having completed his triplane, he had intended to demonstrate it to a group of onlookers and potential sponsors in a field near Stanford Hall. However, days before, the engine crankshaft had broken and, so as not to disappoint his guests, he decided to fly the Hawk instead. The weather was stormy and rainy, but by 4 pm Pilcher decided the weather was good enough to fly.^[119] Whilst flying, the tail snapped and Pilcher plunged 10 metres (33 feet) to the ground: he died two days later from his injuries with his triplane having never been publicly flown.^[120] In 2003, a research effort carried out at the School of Aeronautics at [Cranfield University](#), commissioned by the [BBC2](#) television series "[Horizon](#)", has shown that Pilcher's design was more or less workable, and had he been able to develop his engine, it is possible he would have succeeded in being the first to fly a heavier-than-air powered aircraft with some degree of control. Cranfield built a replica of Pilcher's aircraft and added the [Wright brothers'](#) innovation of wing-warping as a safety backup for roll control. Pilcher's original design did not include aerodynamic controls such as ailerons or elevator. After a very short initial test, the craft achieved a sustained flight of 1 minute and 25 seconds, compared to 59 seconds for the Wright Brothers' best flight at Kitty Hawk. This was achieved under dead calm conditions as an additional safety measure, whereas the Wrights flew in a 25 mph+ wind to achieve enough airspeed on their early attempts.^[121]
- 1899: [Augustus Moore Herring](#) introduces his biplane glider with a [compressed-air engine](#). On October 11, 1899 (or 1898), Herring flew at [Silver Beach Amusement Park](#) in [St. Joseph, Michigan](#). He reportedly covered a distance of 50 feet (15 m). However, there are no known witnesses. On October 22, 1899 (or 1898) Herring took a second flight, covering 73 feet (22 m) in 8 to 10 seconds. This time the flight was covered by a newspaper reporter. It is often discounted as a candidate for the first flying machine for various reasons. The craft was difficult to steer, discounting it as controlled flight. While an aircraft outfitted with an engine, said engine could operate for "only 30 seconds at a time". The design was still recognizably a glider, introducing no innovations in that regard. It was also a "technological dead end", failing to influence the flying machines of the 20th century. It also attracted little press coverage, though possibly because the Michigan press was preoccupied with [William McKinley](#), President of the United States visiting [Three Oaks, Michigan](#), at about the same time.^{[122][123]}

Science

- [Henri Becquerel](#) discovered [radioactivity](#).
- [X-rays](#) were discovered by [Wilhelm Röntgen](#).
- Swedish scientist [Svante Arrhenius](#) and US geologist [Thomas Chrowder Chamberlin](#) independently suggested that human CO₂ emissions might cause [global warming](#).
- 1894: [Argon](#) was discovered by [Lord Rayleigh](#) and [William Ramsay](#).
- 1895: [Helium](#) was discovered to exist on the Earth by [William Ramsay](#), 27 years after first being detected spectrographically on the Sun in 1868.
- 1896: One year after helium's terrestrial discovery, [neon](#), [krypton](#), and [xenon](#) were discovered by [William Ramsay](#) and [Morris Travers](#).
- 1897: Social scientist [Émile Durkheim](#) published the groundbreaking study [Suicide](#).

Popular culture

- [Settlement movement](#) based on [Jane Addams' Hull House](#) in Chicago.
- [Hale Johnson](#) was a major leader of the [American temperance movement](#).
- [Department of Scientific Temperance Instruction](#), under [Mary Hunt](#), achieved *de facto* control over all alcohol education in the USA.
- The [fin de siècle](#) (primarily in Paris and Brussels).

Literature and arts

- [Oscar Wilde](#) published [The Picture of Dorian Gray](#) in 1891.
- Sir [Arthur Conan Doyle](#) published the first [Sherlock Holmes](#) story in *Strand Magazine* in 1891.
- [Frank Wedekind](#) releases [Spring Awakening](#) in 1891.
- [Thomas Hardy](#) published [Tess of the d'Urbervilles](#) in 1891.
- [Rudyard Kipling](#) published [Barrack-Room Ballads](#) in 1892.
- [Charlotte Perkins Gilman](#) published [The Yellow Wallpaper](#) in 1892.
- [Rudyard Kipling](#) published [The Jungle Book](#) in 1894.
- [Kate Chopin](#) published "[The Story of an Hour](#)" in 1894
- [George H. Thomas](#) published in 1894 the first [illustrated song](#) for [The Little Lost Child](#).
- [H. G. Wells](#) published [The Time Machine](#) (1895), [The Island of Doctor Moreau](#) (1896), and [The War of the Worlds](#) (1898). H. G. Wells created modern science fiction with his book [The War of the Worlds](#).
- [A. E. Housman](#) published [A Shropshire Lad](#) in 1896.
- [Bram Stoker's Dracula](#) is published by Archibald Constable & co. (UK) in 1897.
- [Anton Chekhov](#) published [Uncle Vanya](#) in 1899.
- [Kate Chopin](#) published [The Awakening](#) in 1899.
- [Joseph Conrad](#) published [Heart of Darkness](#) in 1899.
- Increasing importance of [Art Nouveau](#) style.

Film

- For the first time in history, a [coronation](#) is filmed. The coronation is of Tsar [Nicholas II of Russia](#).

Music

See also: [Timeline of musical events § 1890s](#)

- [Symphony No. 6](#) (1893) by [Pyotr Ilyich Tchaikovsky](#).
- [Symphony No. 9](#) (1893) by [Antonín Dvořák](#).
- [Also sprach Zarathustra](#) (1896) by [Richard Strauss](#).
- [Finlandia](#) (1899) by [Jean Sibelius](#).
- [Ragtime](#)

Sports

The [1896 Summer Olympics](#) officially known as the Games of the I Olympiad, was the first international [Olympic Games](#) held in modern history

Fashion

- 1890 — [Lipton](#) was invented

1885-1913 Annie Oakley, Li'l Sure Shot performed throughout US and Europe with Buffalo Bill's Wild West Show

World leaders

[1890](#) – [1891](#) – [1892](#) – [1893](#) – [1894](#) – [1895](#) – [1896](#) – [1897](#) – [1898](#) – [1899](#)

1900s

From Wikipedia, the free encyclopedia

The **1900s** (pronounced "nineteen-hundreds") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1900, and ended on December 31, 1909. The term "nineteen-hundreds" is often also used to mean the entire century of years from 1900 to 1999 (see [1900s](#)). The [Edwardian era](#) (1901–1910) covers a similar span of time.

The decade saw the widespread application of the [internal combustion engine](#) including mass production of the automobile, as well as the introduction of the [typewriter](#). The [Wright Flyer](#) performed the first recorded controlled, powered, sustained heavier than air flight on December 17, 1903. [Reginald Fessenden](#) of [East Bolton, Quebec](#), Canada made what appear to be the first audio radio broadcasts of entertainment and music ever made to a general audience.

[First-wave feminism](#) saw progress, with universities being opened for women in Japan, Bulgaria, Cuba, Russia, and Peru. In 1906, Finland granted women the right vote,^[1] the first European country to do so.^[2] The foundation of the [Women's Social and Political Union](#) by [Emmeline Pankhurst](#) in 1903 led to the rise of the [Suffragettes](#) in Great Britain and Ireland. [Cuba](#), [Bulgaria](#), and [Norway](#) became independent. The [First Moroccan](#) and [Bosnian crises](#) led to worsened tensions in Europe that would ultimately lead to the [First World War](#) in the next decade.

Wars of this decade included the [Second Boer War](#), the [Philippine–American War](#), the [Russo-Japanese War](#), the [Saudi–Rashidi War](#), and the [Kuwaiti–Rashidi war](#). The [Scramble for Africa](#) continued, with the [Orange Free State](#), [South African Republic](#), [Ashanti Empire](#), [Aro Confederacy](#), [Sokoto Caliphate](#) and [Kano Emirate](#) being conquered by the [British Empire](#). Failed uprisings and revolutions that took place included the [Russian Revolution of 1905](#), an [uprising in French Madagascar](#), the [Bailundo revolt](#), the [1904 Sasun uprising](#), the [Persian Constitutional Revolution](#), the [Ilinden–Preobrazhenie Uprising](#), the [Maji Maji Rebellion](#), [1907 Romanian Peasants' revolt](#), and the [Wad Hubaba Revolt](#). A [more successful revolution](#) took place in the Ottoman Empire, where the [Young Turks](#) movement restored the [Ottoman constitution of 1876](#), establishing the [Second Constitutional Era](#). The [Herero and Namaqua genocide](#) saw 24,000 to 100,000 [Hereros](#) and 10,000 [Namaqua](#) killed by German colonial forces, while [Atrocities in the Congo Free State](#) continued until 1908 with the establishment of the [Belgian Congo](#). The [Adana massacre of 1909](#) saw up to 30,000 civilians, mainly Armenians, massacred by Ottoman Muslims in the city of [Adana](#).

Major disasters in this decade included the [1908 Messina earthquake](#), the [Chinese famine of 1907](#), the [San Francisco earthquake and fire](#) and the [Great Baltimore Fire](#). The first huge success of American cinema, as well as the largest experimental achievement to this point, was the 1903 film [The Great Train Robbery](#), directed by [Edwin S. Porter](#), while the world's first feature film, [The Story of the Kelly Gang](#), was released on 26 December 1906 in [Melbourne](#), Australia. Popular books of this decade included [Anne of Green Gables](#) (1908) and [The Tale of Peter Rabbit](#) (1902), which sold 50 million and 45 million copies respectively.

Science and technology

Science

During 1905 the physicist Albert Einstein published [four articles](#) – each revolutionary and groundbreaking in its field.

- March 17, 1905 – [Annus Mirabilis papers](#) – [Albert Einstein](#) publishes his paper "On a heuristic viewpoint concerning the production and transformation of light", in which he explains the [photoelectric effect](#), using the notion of [light quanta](#). For this paper Einstein received the Nobel Prize for Physics in 1921.
- May 11, 1905 – [Annus Mirabilis papers](#) – Albert Einstein submits his doctoral dissertation "On the Motion of Small Particles...", in which he explains [Brownian motion](#).
- June 30, 1905 – [Annus Mirabilis papers](#) – Albert Einstein publishes the article "On the Electrodynamics of Moving Bodies", where he reveals his theory of [special relativity](#).
- September 27, 1905 – [Annus Mirabilis papers](#) – Albert Einstein submits his paper "Does the Inertia of a Body Depend Upon Its Energy Content?", in which he develops an argument for the famous equation [E = mc²](#).
- [Planck's law of black-body radiation](#)
- [Seismographs](#) built in the [University of California, Berkeley](#), in 1900
- Practical [air conditioner](#) designed by [Willis Carrier](#) in 1902
- [Geiger counter](#) (measures radioactivity) invented by [Hans Geiger](#) in 1908
- [Pierre](#) and [Marie Curie](#) discover [radium](#) and [polonium](#), they coin the term '[radioactivity](#)'.
- [Third law of thermodynamics](#) by [Walther Nernst](#)
- [Quantum Hypothesis](#) by [Max Planck](#) in 1900^{[7][8][9][10][11]}
- The [Bacillus Calmette-Guérin](#) (BCG) immunization for [tuberculosis](#) is first developed.

Technology

- Widespread application of the [internal combustion engine](#) including mass production of the automobile. [Rudolf Diesel](#) demonstrated the [diesel engine](#) in the 1900 [Exposition Universelle](#) (World's Fair) in Paris using peanut oil fuel (see [biodiesel](#)). The Diesel engine takes the Grand Prix. The exposition was attended by 50 million people.^[12] The same year [Wilhelm Maybach](#) designed an engine built at [Daimler Motoren Gesellschaft](#)—following the specifications of [Emil Jellinek](#)—who required the engine to be named *Daimler-Mercedes* after his daughter, [Mercédès Jellinek](#). In 1902, the [Mercedes 35 hp](#) automobiles with that engine were put into production by DMG.^[13]
- Wide popularity of home [phonograph](#). "The market for home machines was created through technological innovation and pricing: Phonographs, gramophones, and graphophones were cleverly adapted to run by spring-motors (you wound them up), rather than by messy batteries or treadle mechanisms, while the musical records were adapted to reproduce loudly through a horn attachment. The cheap home machines sold as the \$10

Eagle graphophone and the \$40 (later \$30) Home phonograph in 1896, the \$20 Zon-o-phone in 1898, the \$3 Victor Toy in 1900, and so on. Records sold because their fidelity improved, mass production processes were soon developed, advertising worked, and prices dropped from one and two dollars to around 35 cents." ^{[14][15]} In 1907, a [Victor Records](#) recording of [Enrico Caruso](#) singing [Ruggero Leoncavallo's](#) "[Vesti la giubba](#)" becomes the first to sell a million copies. ^[16]

- 1899–1900 – [Thomas Alva Edison](#) of [Milan, Ohio](#), invents the nickel-alkaline storage [battery](#). On May 27, 1901, Edison establishes the [Edison Storage Battery Company](#) to develop and manufacture them. ^[17] "It proved to be Edison's most difficult project, taking ten years to develop a practical alkaline battery. By the time Edison introduced his new alkaline battery, the [gasoline](#) powered car had so improved that [electric vehicles](#) were becoming increasingly less common, being used mainly as [delivery vehicles](#) in cities. However, the Edison alkaline battery proved useful for lighting [railway cars](#) and [signals](#), maritime [buoys](#), and [miners lamps](#). Unlike [iron ore](#) mining with the [Edison Ore-Milling Company](#), the heavy investment Edison made over ten years was repaid handsomely, and the storage battery eventually became Edison's most profitable product. Further, Edison's work paved the way for the modern alkaline battery." ^[18]
- 1900 – The [Brownie camera](#) is invented; this was the beginning of the [Eastman Kodak](#) company. The Brownie popularized low-cost [photography](#) and introduced the concept of the [snapshot](#). The first Brownie was introduced in February 1900, ^[19]

The first ascent of LZ1 over Lake Constance (the Bodensee) in 1900.

- 1900 – The first [zeppelin](#) flight occurs over [Lake Constance](#) near [Friedrichshafen](#), Germany on July 2, 1900.

A diesel engine built by [MAN AG](#) in 1906

- 1901 – First electric [typewriter](#) is invented by George Canfield Blickensderfer of [Erie, Pennsylvania](#). It was part of a line of [Blickensderfer typewriters](#), known for its portability.^{[20][21][22]}
- 1901 – [Wilhelm Kress](#) of [Saint Petersburg, Russia](#) creates his [Kress Drachenflieger](#) in [Austria-Hungary](#). Power was provided by a Daimler petrol engine driving two large [auger](#)-style two-bladed propellers, the first attempt to use an internal combustion engine to power a heavier-than-air aircraft.^{[23][24]}

Gustave Whitehead and his 1901 monoplane taken near Whitehead's Pine Street shop. His infant daughter, Rose, sits on her father's lap, and the engine that powers the front landing-gear wheels is on the ground in front of the others.

- 1901 – [Gustave Whitehead](#) allegedly flies his [Whitehead No. 21](#) on August 14, 1901, near [Bridgeport, Connecticut](#). The feat, if true, exceeded the best of the Wright brothers first powered flights by 540 m (1770 ft) and preceded the [Kitty Hawk](#) flights by more than two years, but is not accepted by most aviation historians
- 1901 – The first radio [receiver](#) (successfully received a radio transmission). This receiver was developed by [Guglielmo Marconi](#). Marconi established a wireless transmitting station at Marconi House, [Rosslare Strand, County Wexford](#), Ireland in 1901 to act as a link between [Poldhu](#) in [Cornwall](#) and [Clifden](#) in [County Galway](#). He soon made the announcement that on 12 December 1901, using a 152.4-meter (500 ft) kite-supported antenna for reception, the message was received at [Signal Hill](#) in [St John's, Newfoundland](#) (now part of Canada), signals transmitted by the company's new high-power station at Poldhu, Cornwall. The distance between the two points was about 3,500 kilometers (2,200 mi). Heralded as a great scientific advance, there was—and continues to be—some skepticism about this claim, partly because the signals had been heard faintly and sporadically. There was no independent confirmation of the reported reception, and the transmissions, consisting of the [Morse code](#) letter *S* sent repeatedly, were difficult to distinguish from [atmospheric noise](#). (A detailed technical review of Marconi's early transatlantic work appears in John S. Belrose's work of 1995.)^[25] The Poldhu transmitter was a two-stage circuit.^{[26][27]} The first stage operated at a lower voltage and provided the energy for the second stage to spark at a higher voltage.

- 1902 – [Willis Carrier](#) of [Angola, New York](#), invented the first indoor [air conditioning](#). "He designed his spray driven air conditioning system which controlled both temperature and humidity using a [nozzle](#) originally designed to spray [insecticide](#). He built his "Apparatus for Treating Air" (U.S. Pat. #808897) which was patented in 1906 and using chilled coils which not only controlled heat but could lower the humidity to as low as 55%. The device was even able to adjust the humidity level to the desired setting creating what would become the framework for the modern air conditioner. By adjusting the air movement and temperature level to the refrigeration coils he was able to determine the size and capacity of the unit to match the need of his customers. While Carrier was not the first to design a system like this his was much more stable, successful and safer than other versions and took air conditioning out of the Dark Ages and into the realm of science."^[28]
- 1902/1906/1908 – [Sir James Mackenzie](#) of [Scone, Scotland](#) invented an early [lie detector](#) or [polygraph](#). MacKenzie's polygraph "could be used to monitor the [cardiovascular](#) responses of his patients by taking their [pulse](#) and [blood pressure](#)."^[29] He had developed an early version of his device in the 1890s, but had Sebastian Shaw, a [Lancashire](#) watchmaker, improve it further. "This instrument used a clockwork mechanism for the paper-rolling and time-marker movements and it produced ink recordings of physiological functions that were easier to acquire and to interpret. It has been written that the modern polygraph is really a modification of Dr. Mackenzie's clinical ink polygraph."^[30] A more modern and effective polygraph machine would be invented by John Larson in 1921.^[31]
- 1902 – [Georges Claude](#) invented the [neon lamp](#). He applied an electrical discharge to a sealed tube of [neon](#) gas, resulting in a red glow. Claudes started working on neon tubes which could be put to use as ordinary light bulbs. His first public display of a neon lamp took place on December 11, 1910, in Paris.^[32] In 1912, Claude's associate began selling neon discharge tubes as [advertising signs](#). They were introduced to U.S. in 1923 when two large neon signs were bought by a Los Angeles [Packard](#) car dealership. The glow and arresting red color made neon advertising completely different from the competition.^[33]
- 1902 – [Gustave Whitehead](#) claimed two spectacular flights on January 17, 1902, in his improved [Number 22](#). As with his earlier claims, most aviation historians do not believe these flights took place.
- 1902 – [Teasmade](#), a device for making [tea](#) automatically, is patented on 7 April 1902 by [gunsmith](#) Frank Clarke of [Birmingham](#), England. He called it "An Apparatus Whereby a Cup of Tea or Coffee is Automatically Made" and it was later marketed as "A Clock That Makes Tea!". However, his original machine and all rights to it had been purchased from its actual inventor [Albert E. Richardson](#), a [clockmaker](#) from [Ashton-under-Lyne](#). The device was commercially available by 1904.^[34]

Gilmore's second, larger plane

- 1902 – [Lyman Gilmore](#) of [Washington](#), United States is awarded a patent for a [steam engine](#), intended for use in aerial vehicles. At the time he was living in [Red Bluff, California](#). At a later date, Gilmore claimed to have incorporated his engine in "a [monoplane](#) with a 32 foot [wingspan](#)". Performing his debut flight in May 1902. While

occasionally credited with the first powered flight in aviation history, there is no supporting evidence for his account.^[35] While Gilmore was probably working on aeronautical experiments since the late 1890s and reportedly had correspondence with [Samuel Pierpont Langley](#), there exists no photo of his creations earlier than 1908.^[36]

- 1902 – The [Wright brothers](#) of [Ohio](#), United States create the 1902 version of the [Wright Glider](#). It was the third free-flight glider built by them and tested at [Kitty Hawk, North Carolina](#). This was the first of the brothers' gliders to incorporate [yaw control](#), and its design led directly to the [1903 Wright Flyer](#). The brothers designed the 1902 glider during the winter of 1901–1902 at their home in [Dayton, Ohio](#). They designed the wing based on data from extensive airfoil tests conducted on a homemade [wind tunnel](#). They built many of the components of the glider in Dayton, but they completed assembly at their Kitty Hawk camp in September 1902. They began testing on September 19. Over the next five weeks, they made between 700 and 1000 glide flights (as estimated by the brothers, who did not keep detailed records of these tests). The longest of these was 622.5 ft (189.7 m) in 26 seconds. "In its final form, the 1902 Wright glider was the world's first fully controllable aircraft."^{[37][38]}

[Ford Model A](#) was the first car produced by [Ford Motor Company](#) beginning production in 1903.

- 1903 – [Ford Motor Company](#) produces its first car – the [Ford Model A](#).

A replica of Pearse's monoplane

- 1903 – [Richard Pearse](#) of New Zealand supposedly successfully flew and landed a powered heavier-than-air machine on 31 March 1903^[39] Verifiable eyewitnesses describe Pearse crashing into a hedge on two separate occasions during 1903. His monoplane must have risen to a height of at least three metres on each occasion. Good evidence exists that on 31 March 1903 Pearse achieved a powered, though poorly controlled, flight of several hundred metres. Pearse himself said that he had made a powered takeoff, "but at too low a speed for [his] controls to work". However, he remained airborne until he crashed into the hedge at the end of the field.^{[40][41]}
- 1903 – [Karl Jatho](#) of [Germany](#) performs a series of flights at Vahrenwalder Heide, near [Hanover](#), between August and November, 1903. Using first a pusher [triplane](#), then

a [biplane](#). "His longest flight, however, was only 60 meters at 3–4 meters altitude." He then quit his efforts, noting his motor was too weak to make longer or higher flights.^[42] The plane was equipped with a single-cylinder 10 horsepower (7.5 kW) Buchet engine driving a two-bladed pusher propeller and made hops of up to 200 ft (60 m), flying up to 10 ft (3 m) high. In comparison, Orville Wright's first controlled flight four months later was of 36 m (120 ft) in 12 seconds although Wilbur flew 59 seconds and 852 ft (260 m) later that same day. Either way Jatho managed to fly a powered heavier-than-air machine earlier than his American counterparts.^[43]

- 1903 – [Mary Anderson](#) invented [windshield wipers](#). In November 1903 Anderson was granted her first [patent](#)^[44] for an automatic car window cleaning device controlled inside the car, called the windshield wiper.^[45] Her device consisted of a lever and a swinging arm with a rubber blade. The lever could be operated from inside a vehicle to cause the spring-loaded arm to move back and forth across the windshield. Similar devices had been made earlier, but Anderson's was the first to be effective.^[46]

The first flight by [Orville Wright](#) made on December 17, 1903.

- 1903 – The [Wright brothers](#) fly at [Kitty Hawk, North Carolina](#). Their airplane, the [Wright Flyer](#), performed the first recorded controlled, powered, sustained heavier than air flight on December 17, 1903. In the day's fourth flight, Wilbur Wright flew 279 meters (852 ft) in 59 seconds. First three flights were approximately 120, 175, and 200 ft (61 m), respectively. The Wrights laid particular stress on fully and accurately describing all the requirements for controlled, powered flight and put them into use in an aircraft which took off from a level launching rail, with the aid of a headwind to achieve sufficient airspeed before reaching the end of the rail.^[47] It is one of the various candidates regarded as the First flying machine.
- 1904 – [SS Haimun](#) sends its first news story on 15 March 1904.^[48] It was a Chinese [steamer ship](#) commanded by [war correspondent Lionel James](#) in 1904 during the [Russo-Japanese War](#) for [The Times](#). It is the first known instance of a "press boat" dedicated to war correspondence during naval battles. The recent advent of [wireless telegraphy](#) meant that reporters were no longer limited to submitting their stories from land-based offices, and The Times spent 74 days outfitting and equipping the ship,^[49] installing a [De Forest transmitter](#) aboard the ship.^[50]
- 1904–1914 – The [Panama Canal](#) constructed by the United States in the territory of [Panama](#), which had [just gained independence](#) from [Colombia](#). The Canal is a 77 km (48 mi) [ship canal](#) that joins the Atlantic Ocean and the Pacific Ocean and a key conduit for international maritime trade. One of the largest and most difficult engineering projects ever undertaken, the canal had an enormous impact on shipping between the two oceans, replacing the long and treacherous route via the [Drake Passage](#) and [Cape Horn](#) at the southernmost tip of South America. A ship sailing from New York to [San Francisco](#) via the canal travels 9,500 km (5,900 mi), well under half the 22,500 km (14,000 mi) route

around Cape Horn.^[51] The project starts on May 4, 1904, known as Acquisition Day. The United States government purchased all Canal properties on the [Isthmus of Panama](#) from the New Panama Canal Company, except the [Panama Railroad](#).^[52] The project begun under the administration of [Theodore Roosevelt](#), continued in that of [William Howard Taft](#) and completed in that of [Woodrow Wilson](#).^{[53][54]} The Chief engineers were [John Frank Stevens](#) and [George Washington Goethals](#).^{[55][56]}

- 1904 – The [Welte-Mignon reproducing piano](#) is created by Edwin Welte and Karl Bockisch. Both employed by the "Michael Welte und Söhne" firm of [Freiburg im Breisgau, Germany](#). "It automatically replayed the tempo, phrasing, dynamics and pedalling of a particular performance, and not just the notes of the music, as was the case with other player pianos of the time." In September, 1904, the Mignon was demonstrated in the [Leipzig Trade Fair](#). In March, 1905 it became better known when showcased "at the [showrooms](#) of Hugo Popper, a manufacturer of roll-operated [orchestrions](#)". By 1906, the Mignon was also exported to the United States, installed to pianos by the firms [Feurich](#) and [Steinway & Sons](#).^[57]
- 1904 – [Benjamin Holt](#) of the [Holt Manufacturing Company](#) invents one of the first practical [continuous tracks](#) for use in [tractors](#). While the date of invention was reportedly November 24, 1904, Holt would not receive a patent until December, 1907.^[58]
- 1905 – [John Joseph Montgomery](#) of [California](#), United States designs tandem-wing [gliders](#). His pilot [Daniel Maloney](#) performs a number of public exhibitions of high altitude flights in March and April 1905 in the [Santa Clara, California](#), area. These flights received national media attention and demonstrated superior control of the design, with launches as high as 4,000 feet (1,200 m) and landings made at predetermined locations. The gliders were launched from balloons.^{[59][60]}
- 1905 – The Wright Brothers introduce their [Wright Flyer III](#). On October 5, 1905, Wilbur flew 24 miles (39 km) in 39 minutes 23 seconds,^[61] longer than the total duration of all the flights of [1903](#) and [1904](#). Ending with a safe landing when the fuel ran out. The flight was seen by a number of people, including several invited friends, their father Milton, and neighboring farmers.^[62] Four days later, they wrote to the [United States Secretary of War William Howard Taft](#), offering to sell the world's first practical fixed-wing aircraft.
- 1906 – The *Gabel Automatic Entertainer*, an early [jukebox](#)-like machine, is invented by John Gabel. It is the first such device to play a series of gramophone records. "The Automatic Entertainer with 24 selections, was produced and patented by the John Gabel owned company in Chicago. The first model (constructed in 1905) was produced in 1906 with an exposed 40 inch horn (102 cm) on top, and it is today often considered the real father of the modern multi-selection disc-playing phonographs. John Gabel and his company did in fact receive a special prize at the [Pan-Pacific Exposition](#) for the Automatic Entertainer."^{[63][64]}

Alberto Santos-Dumont realizes the first official flight, 23 October 1906, Bagatelle field.

- 1906 – The [Victor Talking Machine Company](#) releases the [Victrola](#), the most popular [gramophone](#) model until the late 1920s.^[65] The Victrola is also the first [playback](#) machine containing an internal horn.^[66] Victor also erects the world's

largest illuminated billboard at the time, on [Broadway](#) in New York City, to advertise the company's records.^[67]

- 1906 – [Traian Vuia](#) of [Romania](#) takes off with his "Traian Vuia 1", an early [monoplane](#). His flight was performed in [Montesson](#) near Paris and was about 12 meters long.^[68]
- 1906 – [Jacob Ellehammer](#) of Denmark constructs the [Ellehammer semi-biplane](#). In this machine, he made a tethered flight on 12 September 1906, becoming the second European to make a powered flight.^{[69][70][71]}
- 1906 – [Alberto Santos-Dumont](#) and his [Santos-Dumont 14-bis](#) make the first public flight of an [airplane](#) on October 23, 1906, in Paris. The flying machine was the first fixed-wing aircraft officially witnessed to take off, fly, and land. Santos Dumont is considered the "Father of Aviation" in his country of birth, [Brazil](#).^[72] His flight is the first to have been certified by the [Aéro-Club de France](#) and the [Fédération Aéronautique Internationale](#) (FAI).^{[73][74]} On November 12, 1906, Santos Dumont succeeded in setting the first world record recognized by the Aero-Club De France by flying 220 metres in less than 22 seconds.^[75]
- 1906 – Sound [radio broadcasting](#) was invented by [Reginald Fessenden](#) and [Lee De Forest](#). Fessenden and [Ernst Alexanderson](#) developed a high-frequency [alternator](#)-transmitters, an improvement on an already existing device. The improved model operated at a transmitting frequency of approximately 50 kHz, although with far less power than Fessenden's rotary-spark transmitters. The alternator-transmitter achieved the goal of transmitting quality audio signals, but the lack of any way to amplify the signals meant they were somewhat weak. On December 21, 1906, Fessenden made an extensive demonstration of the new alternator-transmitter at Brant Rock, showing its utility for point-to-point wireless telephony, including interconnecting his stations to the wire telephone network. A detailed review of this demonstration appeared in *The American Telephone Journal*.^[76] Meanwhile, De Forest had developed the [Audion tube](#) an electronic [amplifier](#) device. He received a patent in January, 1907.^[77] "DeForest's audion vacuum tube was the key component of all radio, telephone, radar, television, and computer systems before the invention of the transistor in 1947."^[78]
- 1906 – [Reginald Fessenden](#) of [East Bolton, Quebec](#), Canada made what appear to be the first audio radio broadcasts of entertainment and music ever made to a general audience. (Beginning in 1904, the [United States Navy](#) had broadcast daily time signals and weather reports, but these employed [spark-gap transmitters](#), transmitting in [Morse code](#)). On the evening of December 24, 1906 ([Christmas Eve](#)), Fessenden used the alternator-transmitter to send out a short program from [Brant Rock, Plymouth County, Massachusetts](#). It included a phonograph record of [Ombra mai fù](#) (Largo) by [George Frideric Handel](#), followed by Fessenden himself playing the song [O Holy Night](#) on the [violin](#). Finishing with reading a passage from the [Bible](#): 'Glory to God in the highest and on earth peace to men of good will' ([Gospel of Luke](#) 2:14). On December 31, [New Year's Eve](#), a second short program was broadcast. The main audience for both these transmissions was an unknown number of shipboard radio operators along the [East Coast of the United States](#). Fessenden claimed that the Christmas Eve broadcast had been heard "as far down" as [Norfolk, Virginia](#), while the New Year Eve's broadcast had reached places in the Caribbean. Although now seen as a landmark, these two broadcasts were barely noticed at the time and soon forgotten—the only first-hand account appears to be a letter Fessenden wrote on January 29, 1932, to his former associate, Samuel M. Kinter.^{[79][80]}

The [Autochrome Lumière](#) becomes the first commercial color photography process.

- 1907 – The [Autochrome Lumière](#) which was patented in 1903 becomes the first commercial color photography process.
- 1907 – [Thomas Edison](#) invented the "Universal Electric Motor" which made it possible to operate [dictation machines](#), etc. on all lighting circuits. ^[81]
- 1907 – The [Photostat machine](#) begins the modern era of document imaging. The Photostat machine was invented in [Kansas City, Kansas](#), United States by Oscar Gregory in 1907, and the Photostat Corporation was incorporated in [Rhode Island](#) in 1911. "Rectigraph and Photostat machines (Plates 40–42) combined a large camera and a developing machine and used sensitized paper furnished in 350-foot rolls. "The prints are made direct on sensitized paper, no negative, plate or film intervening. The usual exposure is ten seconds. After the exposure has been made the paper is cut off and carried underneath the exposure chamber to the developing bath, where it remains for 35 seconds, and is then drawn into a fixing bath. While one print is being developed or fixed, another exposure can be made. When the copies are removed from the fixing bath, they are allowed to dry by exposure to the air, or may be run through a drying machine. The first print taken from the original is a 'black' print; the whites in the original are black and the blacks, white. (Plate 43) A white 'positive' print of the original is made by rephotographing the black print. As many positives as required may be made by continuing to photograph the black print." (The American Digest of Business Machines, 1924.) Du Pont Co. files include black prints of graphs dating from 1909, and the company acquired a Photostat machine in 1912. ... A 1914 Rectigraph ad stated that the U.S. government had been using Rectigraphs for four years and stated that the machines were being used by insurance companies and abstract and title companies. ... In 1911, a Photostat machine was \$500." ^{[82][83]}

[Ford Model T](#) set 1908 as the historic year that the automobile came into popular usage as it is generally regarded as the first affordable automobile.

- 1908 – [Henry Ford](#) of the [Ford Motor Company](#) introduces the [Ford Model T](#). The first production Model T was built on September 27, 1908, at the [Ford Piquette Avenue Plant](#) in [Detroit](#). It is generally regarded as the first affordable automobile, the car that

"put America on wheels"; some of this was because of Ford's innovations, including [assembly line](#) production instead of individual hand crafting, as well as the concept of paying the workers a wage proportionate to the cost of the car, so that they would provide a ready made market.^[84]

- 1909 – [Leo Baekeland](#) of [Sint-Martens-Latem](#), Belgium officially announces his creation of [Bakelite](#). The announcement was made at the February 1909 meeting of the New York section of the [American Chemical Society](#).^[85] Bakelite is an inexpensive, nonflammable, versatile, and popular [plastic](#).^{[86][87][88]}

Literature and art

See also: [List of years in literature § 1900s](#)

- [L. Frank Baum](#) publishes *The Wonderful Wizard of Oz* in 1900.
- [Thomas Mann](#) publishes *Buddenbrooks* in 1901.
- [Sir Arthur Conan Doyle](#) publishes *The Hound of the Baskervilles*, serialized in [The Strand Magazine](#) 1901–1902
- [Theodor Herzl](#), the founder of political [Zionism](#), publishes *The Old New Land* in 1902 outlining Herzl's vision for a Jewish state in the [Land of Israel](#).
- [Joseph Conrad](#) publishes the novella *Heart of Darkness* in 1902, after the serial release in 1898.
- [Jack London](#) publishes *The Call of the Wild* in 1903
- [Winsor McCay](#)'s comic strip [Little Nemo](#) begins October 15, 1905
- [George Bernard Shaw](#)'s play *Man and Superman* opens 23 May 1905, but omits the third act, "Don Juan in Hell", which is not performed until 1915.
- [Upton Sinclair](#) publishes *The Jungle* in 1906
- Joseph Conrad publishes *The Secret Agent* in 1907
- [Lucy Maud Montgomery](#) publishes *Anne of Green Gables* in 1908
- [Kenneth Grahame](#) publishes *The Wind in the Willows* in 1908
- [Serbian writers](#) use the [Belgrade](#) literary style, an [Ekavian](#) writing form which set basis for the later standardization of the Serbian language
- [Pablo Picasso](#) paints *Les Femmes d'Alger (O.J.)*, considered by some to be the birth of modern art.
- [Art Nouveau](#) art movement peaked in popularity at the turn of the 20th century (1890–1905).
- [Cubism](#) art movement peaked in popularity in France between 1907 and 1911.
- [Fauvism](#) art movement peaked in popularity between 1905 and 1907.

Film

Sports

The [Tour de France](#) starts for the first time in 1903.^[89]

Food

- U.S. [New Haven, Connecticut](#) Louis Lassen of [Louis' Lunch](#) makes the first modern-day [hamburger sandwich](#). According to family legend, one day in 1900 a local businessman dashed into the small New Haven lunch wagon and pleaded for a lunch to go. According to the Lassen family, the customer, Gary Widmore, exclaimed "Louie! I'm in a rush, slap a meatpuck between two planks and step on it!".^{[90][91]} Louis Lassen, the establishment's owner, placed his own blend of ground steak trimmings between two slices of toast and sent the gentleman on his way, so the story goes, with America's alleged first hamburger being served.^[92]

World leaders

[1900](#) – [1901](#) – [1902](#) – [1903](#) – [1904](#) – [1905](#) – [1906](#) – [1907](#) – [1908](#) – [1909](#)

1910s

From Wikipedia, the free encyclopedia

The **1910s** (pronounced "nineteen-tens", also abbreviated as the "teens") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1910, and ended on December 31, 1919. The 1910s represented the culmination of [European militarism](#) which had its beginnings during the second half of the 19th century. The conservative lifestyles during the first half of the decade, as well as the legacy of [military alliances](#), was forever changed by the [assassination](#), on June 28, 1914, of [Archduke Franz Ferdinand](#), the [heir presumptive](#) to the [Austro-Hungarian throne](#). The murder triggered a chain of events in which, within 33 days, [World War I](#) broke out in [Europe](#) on August 1, 1914. The conflict dragged on until a [truce](#) was declared on November 11, 1918, leading to the controversial, one-sided [Treaty of Versailles](#), which was signed on June 28, 1919.

The war's end triggered the [abdication](#) of various [monarchies](#) and the collapse of five of the last modern empires of [Russia](#), [Germany](#), [China](#), [Ottoman Turkey](#) and [Austria-Hungary](#), with the latter splintered into Austria, Hungary, southern Poland (who acquired most of their land in a war with Soviet Russia), Czechoslovakia and Yugoslavia, as well as the unification of Romania with Transylvania and Moldavia. However, each of these states (with the possible exception of Yugoslavia) had large German and Hungarian minorities, creating some

unexpected problems that would be brought to light in the next two decades. (See [Dissolution of Austro-Hungarian Empire: Successor States](#) for better description of composition of names of successor countries/states following the splinter.)

The decade was also a period of revolution in a number of countries. The Portuguese [5 October 1910 revolution](#), which ended the eight-century long monarchy, spearheaded the trend, followed by the [Mexican Revolution](#) in November 1910, which led to the ousting of dictator [Porfirio Diaz](#), developing into a violent [civil war](#) that dragged on until mid-1920, not long after a new [Mexican Constitution](#) was signed and ratified. The [Russian Empire](#) also had a similar fate, since its participation on [World War I](#) led it to a social, political and economical collapse which made the [tsarist autocracy](#) unsustainable and, as a following of the [events of 1905](#), culminated in the [Russian Revolution](#) and the establishment of the [Russian Soviet Federative Socialist Republic](#), under the direction of the [Bolshevik Party](#) later renamed as [Communist Party of the Soviet Union](#). The Russian Revolution of 1917, known as the [October Revolution](#), was followed by the [Russian Civil War](#), which dragged on until approximately late 1922.

Much of the music in these years was [ballroom](#)-themed. Many of the fashionable [restaurants](#) were equipped with dance floors. [Prohibition in the United States](#) began January 16, 1919, with the [ratification](#) of the [Eighteenth Amendment](#) to the [U.S. Constitution](#).

Science and technology

Technology

British World War I [Mark V tank](#)

- [Gideon Sundback](#) patented the first modern [zipper](#).^[4]
- [Harry Brearley](#) invented [stainless steel](#).^[5]
- [Charles Strite](#) invented the first pop-up bread [toaster](#).^{[6][7]}
- The [Model T Ford](#) dominated the [automobile](#) market, selling more than all other makers combined in 1914.^[8]
- The [army tank](#) was invented. [Tanks in World War I](#) were used by the [British Army](#), the [French Army](#) and the [German Army](#).^[9]
- 1912 - [Articulated](#) trams, invented and first used by the [Boston Elevated Railway](#).^[10]

Science

- In 1916, [Albert Einstein](#)'s theory of [general relativity](#).^[11]
- [Max von Laue](#) discovers the [diffraction](#) of [x-rays](#) by [crystals](#).^[12]
- In 1912, [Alfred Wegener](#) puts forward his theory of [continental drift](#).^[13]

Economics

- In the years 1910 and 1911, there was a minor economic depression known as the [Panic of 1910–11](#), which was followed by the enforcement of the [Sherman Anti-Trust Act](#).

Popular culture

- [Radio programming](#) becomes popular.
- [Flying Squadron of America](#) promotes [temperance movement in the United States](#).
- [Edith Smith Davis](#) edits the Temperance Educational Quarterly.
- The first U.S. [feature film](#), [Oliver Twist](#), was released in 1912.
- The first [mob film](#), [D. W. Griffith's The Musketeers of Pig Alley](#) was released in 1912.
- [Hollywood, California](#), replaces the [East Coast](#) as the center of the movie industry.
- The first [crossword puzzle](#) was published in 1913.
- The comic strip [Krazy Kat](#) begins.
- [Charlie Chaplin](#) débuts his trademark mustached, baggy-pants "[Little Tramp](#)" character in [Kid Auto Races at Venice](#) in 1914.
- The first [African American](#) owned studio, the [Lincoln Motion Picture Company](#), was founded in 1917.
- The four [Warner brothers](#), (from older to younger) [Harry](#), [Albert](#), [Samuel](#), and [Jack](#) opened their first major film studio in [Burbank](#) in 1918.
- [Tarzan of the Apes](#) starring [Elmo Lincoln](#) is released in 1918, the first Tarzan film.
- The first [jazz](#) music is recorded.
- The [Salvation Army](#) has a new international leader, General [Bramwell Booth](#) who served from 1912 to 1929. He replaces his father and co-founder of the Christian Mission (the forerunner of the Salvation Army), [William Booth](#).

Sports

- [1912 Summer Olympics](#) were held in [Stockholm](#), Sweden.
- [1916 Summer Olympics](#) were cancelled because of [World War I](#).

1920s

From Wikipedia, the free encyclopedia

The **1920s** (pronounced "nineteen-twenties") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1920, and ended on December 31, 1929. In [North America](#), it is frequently referred to as the "[Roaring Twenties](#)" or the "[Jazz Age](#)", while in [Europe](#) the period is sometimes referred to as the "[Golden Age Twenties](#)"^[1] because of the economic boom

following [World War I](#). French speakers refer to the period as the "*Années folles*" ("Crazy Years"),^[2] emphasizing the era's social, artistic, and cultural dynamism.

The economic prosperity experienced by many countries during the 1920s (especially the United States) was similar in nature to that experienced in the 1950s and 1990s. Each period of prosperity was the result of a [paradigm shift](#) in global affairs. These shifts in the 1920s, 1950s, and 1990s, occurred in part as the result of the conclusion of [World War I](#) and [Spanish flu](#), [World War II](#), and the [Cold War](#), respectively.

The 1920s saw foreign oil companies begin operations throughout [South America](#). [Venezuela](#) became the world's second largest oil producing nation.^[3]

In some countries the 1920s saw the rise of radical political movements, especially in regions that were once part of empires. [Communism](#) spread as a consequence of the [October Revolution](#) and the [Bolsheviks'](#) victory in the [Russian Civil War](#). Fear of the spread of Communism led to the emergence of [far right](#) political movements and [fascism](#) in Europe. Economic problems contributed to the emergence of dictators in [Eastern Europe](#) and the [Balkans](#), to include [Józef Piłsudski](#) in the [Second Polish Republic](#), and [Peter](#) and [Alexander Karađorđević](#) in the [Kingdom of Yugoslavia](#).

The devastating [Wall Street Crash](#) in October 1929 is generally viewed as a harbinger of the end of 1920s prosperity in [North America](#) and [Europe](#).

Social history

Main articles: [Roaring Twenties](#) and [Social issues of the 1920s in the United States](#)

The **Roaring Twenties** brought about several novel and highly visible social and cultural trends. These trends, made possible by sustained economic prosperity, were most visible in major cities like New York, Chicago, Paris, Berlin and London. "[Normalcy](#)" returned to politics in the wake of hyper-emotional patriotism during World War I, [jazz](#) blossomed, and [Art Deco](#) peaked. For women, knee-length skirts and dresses became socially acceptable, as did bobbed hair with a [marcel wave](#). The women who pioneered these trends were frequently referred to as [flappers](#).^[4]

The era saw the large-scale adoption of automobiles, telephones, motion pictures, radio and household electricity, as well as unprecedented industrial growth, accelerated consumer demand and aspirations, and significant changes in lifestyle and culture. The media began to focus on celebrities, especially sports heroes and movie stars. Large [baseball stadiums](#) were built in major U.S. cities, in addition to palatial [cinemas](#).

Most independent countries passed [women's suffrage](#) after 1918, especially as a reward for women's support of the war effort and endurance of its deaths and hardships.

Science and technology

Technology

- [John Logie Baird](#) invents the first working [mechanical television](#) system (1925). In 1928, he invents and demonstrates the first [color television](#).
- [Warner Brothers](#) produces the first movie with a soundtrack *[Don Juan](#)* in 1926, followed by the first Part-Talkie *[The Jazz Singer](#)* in 1927, the first All-Talking movie *[Lights of New York](#)* in 1928 and the first All-Color All-Talking movie *[On with the Show](#)*, 1929. [Silent films](#) start giving way to [sound films](#). By 1936, the transition phase arguably ends, with *[Modern Times](#)* being the last notable silent film.

- [Karl Ferdinand Braun](#) invents the modern electronic [cathode ray tube](#) in 1897. The CRT became a commercial product in 1922.
- [Record companies](#) (such as [Victor](#), [Brunswick](#) and [Columbia](#)) introduce an electrical recording process on their phonograph records in 1925 (that had been developed by [Western Electric](#)), resulting in a more lifelike sound.
- The first [electric razor](#) is patented in 1928 by the American manufacturer Col. [Jacob Schick](#).
- The first selective [Jukeboxes](#) being introduced in 1927 by the Automated Musical Instrument Company.
- [Harold Stephen Black](#) revolutionizes the field of applied electronics by inventing the [negative feedback amplifier](#) in 1927.
- [Clarence Birdseye](#) invents a process for [frozen food](#) in 1925.
- [Robert Goddard](#) makes the first flight of a [liquid-fueled rocket](#) in 1926.

[Robert Goddard](#) and his rocket, 1926

Popular culture

Film

Main article: [1920s in film](#)

The first short film by [Walt Disney](#), [Steamboat Willie](#), 1928

- **Oscar winners:** [Wings](#) (1927–1928), [The Broadway Melody](#) (1928–1929), [All Quiet on the Western Front](#) (1929–1930)
- First feature-length [motion picture](#) with a [soundtrack](#) ([Don Juan](#)) is released in 1926. First part-talkie ([The Jazz Singer](#)) released in 1927, first all-talking feature ([Lights of New York](#)) released in 1928 and first all-color all-talking feature ([On with the Show](#)) released in 1929.
- The first animated short film by [Walt Disney](#) is released in 1928, featuring [Mickey Mouse](#). Steamboat Willie was the first sound cartoon to attract widespread notice and popularity.

Fashion

Main article: [1920s in Western fashion](#)

The most memorable fashion trend of the Roaring Twenties was undoubtedly "the [flapper](#)" look.

The 1920s is the decade in which fashion entered the modern era. It was the decade in which [women first abandoned the more restricting fashions](#) of past years and began to wear more comfortable clothes (such as short skirts or trousers). Men also abandoned highly formal daily attire and even began to wear athletic clothing for the first time. The suits men wear today are still based, for the most part, on those worn in the late 1920s. The 1920s are characterized by two distinct periods of fashion. In the early part of the decade, change was slow, as many were reluctant to adopt new styles. From 1925, the public passionately embraced the styles associated with the Roaring Twenties. These styles continue to characterize fashion until the worldwide depression worsened in 1931.

Music

The period from the end of the First World War until the start of the Depression in 1929 is known as the "[Jazz Age](#)"

- "The Jazz Age"—[jazz](#) and jazz-influenced dance music became widely popular throughout the decade.
- [George Gershwin](#) wrote *[Rhapsody in Blue](#)* and *[An American in Paris](#)*.
- [Eddie Lang](#) and [Joe Venuti](#) were the first musicians to incorporate the [guitar](#) and [violin](#) into jazz.

Radio

- First commercial radio stations in the U.S., 8MK (WWJ) in [Detroit](#) and ([KDKA 1020 AM](#)) in [Pittsburgh, Pennsylvania](#), go on the air on August 27, 1920.
- Both stations broadcast the election results between Harding and Cox in early November. The first station to receive a commercial license is [WBZ](#), then in Springfield MA, in mid-September 1921. While there are only a few radio stations in 1920–21, by 1922 the radio craze is sweeping the country.
- 1922: The [BBC](#) begins radio broadcasting in the [United Kingdom](#) as the *British Broadcasting Company*, a consortium between radio manufacturers and newspapers. It became a public broadcaster in 1926.
- On August 27, 1920, regular wireless broadcasts for entertainment began in [Argentina](#) for the first time,^[9] by a Buenos Aires group including [Enrique Telémaco Susini](#). The station is soon called [Radio Argentina](#). (See [Radio in Argentina](#).)

Arts

- Beginning of [surrealist](#) movement.
- [Art Deco](#) becomes fashionable.
- The [Group of Seven \(artists\)](#).
- [Pablo Picasso](#) paints [Three Musicians](#) in 1921.
- [René Magritte](#) paints [The Treachery of Images](#).
- [Albert Gleizes](#) paints [Woman with Black Glove](#), 1920
- [Marcel Duchamp](#) completes [The Bride Stripped Bare By Her Bachelors, Even](#) (*The Large Glass*).
- The [Museum of Modern Art](#) opens in Manhattan, November 7, 1929, nine days after the [Wall Street Crash](#).
- The first [science fiction comic strip](#), [Buck Rogers](#), begins January 7, 1929. The first [Tarzan](#) comic strip begins on the same date.

Literature

See also: [List of years in literature § 1920s](#)

- [F. Scott Fitzgerald](#) publishes some of the most enduring novels characterizing the Jazz Age. [This Side of Paradise](#), [The Beautiful and Damned](#), and [The Great Gatsby](#), as well as three short story collections, were all published in these years.
- [Hermann Hesse](#) publishes [Siddhartha](#)
- [A. A. Milne](#) publishes [Winnie-the-Pooh](#)
- [Ernest Hemingway](#) publishes [The Sun Also Rises](#) and [A Farewell to Arms](#)
- [Thornton Wilder](#) publishes [The Bridge of San Luis Rey](#)
- [Alexey Tolstoy](#) publishes [Aelita](#)
- [Kahlil Gibran](#) publishes [The Prophet](#)
- [George Bernard Shaw](#) publishes [Back to Methuselah](#)
- [Eugene O'Neill](#) awarded [Pulitzer Prizes](#) for [Beyond the Horizon](#) in 1920, [Anna Christie](#) in 1922, and [Strange Interlude](#) in 1928.
- [Sinclair Lewis](#) publishes [Main Street](#), [Babbitt](#), [Dodsworth](#), [Arrowsmith](#), and [Elmer Gantry](#)
- [André Breton](#) publishes the [Surrealist Manifesto](#)
- [D.H. Lawrence](#) publishes [Women in Love](#), and [Lady Chatterley's Lover](#)
- [Virginia Woolf](#) publishes [Jacob's Room](#), [Mrs. Dalloway](#), [To the Lighthouse](#), [A Room of One's Own](#) and [Orlando](#)

- [Aldous Huxley](#) publishes his inaugural novel [Crome Yellow](#)
- [Harold Gray](#) begins to write and draw the comic strip [Little Orphan Annie](#) (August 5, 1924) and continues to do so until his death in 1968.
- [Sylvia Townsend Warner](#) publishes [Lolly Willowes](#) in 1926
- [James Joyce](#) publishes [Ulysses](#)
- [Franz Kafka](#) publishes [The Trial](#)
- [T. S. Eliot](#) publishes [The Waste Land](#)
- [Robert Lee Frost](#) publishes [New Hampshire](#) 1923 and [West-Running Brook](#) in 1928
- [Wallace Stevens](#) publishes his first book of poetry, [Harmonium](#)
- [Erich Maria Remarque](#) publishes [All Quiet on the Western Front](#)
- [Hugh MacDiarmid](#) publishes [A Drunk Man Looks at the Thistle](#)
- [Margaret Sanger](#) publishes [Woman and the New Race](#) and [The Pivot of Civilization](#)
- [Margaret Mead](#) publishes [Coming of Age in Samoa](#) in 1928

Architecture

- [Walter Gropius](#) builds the [Bauhaus](#) in [Dessau](#)
- [Le Corbusier](#) published the book [Toward an Architecture](#) serving as the [manifesto](#) for a generation of architects.

Sports highlights

1920

- January 24: [Grand Prix de Paris](#) switches its name to [Prix de l'Arc de Triomphe](#) ([horse race](#))
- February 13: [Negro National League](#) created (baseball)
- April: [Babe Ruth](#) began playing for the [New York Yankees](#)
- April–September: [Summer Olympics](#) held in [Antwerp](#).
- August 17: [Ray Chapman](#) from the [Cleveland Indians](#) is killed by [Carl Mays](#)' pitch (baseball)
- August 20: [National Football League](#) founded
- [Kenesaw Mountain Landis](#) is named the first [Commissioner of Baseball](#).

1921

- March 26: Schooner [Bluenose](#) launched

1923

- May 26: the [24 hours of Le Mans](#) conducts their first sports car race
- October: The New York Yankees win the [1923 World Series](#), the first title for the team.

1924

- January–February: [First Winter Olympic Games](#) takes place in [Chamonix](#) France.
- May–July: [Summer Olympics](#) held in Paris France.
- July 10–13: [Paavo Nurmi](#) wins five gold medals in Summer Olympics ([track and field](#))

1925

- May 28: [French Open](#) invites non-French [tennis](#) athletes for the first time
- Germany and Belgium in first [handball](#) international tournament.

1926

- August 6: [Gertrude Ederle](#) swims [English Channel](#) and is first woman to do so.
- September 23: [Gene Tunney](#) wins [Jack Dempsey](#)'s world heavyweight [boxing](#) title.

1927

- May 23: [Warwickshire](#) end [Yorkshire](#)'s 71-match unbeaten sequence in the [County Championship](#) – the longest unbeaten sequence in that competition.
- June 3: First [Ryder Cup](#) golf tournaments are held in [Massachusetts](#)

1928

- February: [Winter Olympics](#) held in St. Moritz Switzerland.
- May–August: Women's Olympics takes place for first time, in [1928 Summer Olympics](#) held in Amsterdam.
- [William Ralph "Dixie" Dean](#) wins the Football League, scores 60 goals in 39 matches for [Everton F.C.](#) ([English Football](#))

1929

- The English team led by [Wally Hammond](#) defeats Australia in [The Ashes](#) series ([Test Cricket](#))

Miscellaneous trends

- Youth culture of [The Lost Generation](#); [flappers](#), the [Charleston](#), and the [bob cut haircut](#).
- Fads such as [marathon dancing](#), [mah-jong](#), [crossword puzzles](#) and [pole-sitting](#) are popular.
- The height of the [clip joint](#).
- The [Harlem Renaissance](#) centered in a thriving [African American](#) community of [Harlem](#), New York City.
- Since the 1920s scholars have methodically dug into the layers of history that lie buried at thousands of sites across China.
- The tomb of [Tutankhamun](#) is discovered intact by [Howard Carter](#) (1922). This begins a second revival of [Egyptomania](#).
- [Twiglets](#) are invented in December 1929 by Frenchman [Rondalin Zwadoodie](#), and sold by [Peek Freans](#).

1930s

From Wikipedia, the free encyclopedia

The **1930s** (pronounced "nineteen-thirties", commonly abbreviated as the "**Thirties**") was a [decade](#) of the [Gregorian calendar](#) that began on January 1, 1930, and ended on December 31, 1939.

The decade was defined by a global economic and political crisis that culminated in the [Second World War](#). It saw the international financial system collapse, beginning with the [Wall Street Crash of 1929](#), the largest [stock market crash](#) in American history, and an economic downfall called the [Great Depression](#) that had a traumatic effect worldwide, leading to widespread [unemployment](#) and [poverty](#), especially in the [United States](#), an economic superpower, and [Germany](#), who had to deal with the reparations regarding [World War I](#). The [Dust Bowl](#) (which gives the nickname the Dirty Thirties) in the United States further emphasised the scarcity of wealth. [Herbert Hoover](#) worsened the situation with his failed attempt to balance the budget by taxes. [Franklin D. Roosevelt](#) was elected, as a response, in 1933, and introduced the [New Deal](#). The founding of the [Civilian Conservation Corps](#) (CCC) and the funding of numerous projects (e.g. the [Hoover Dam](#)) helped restore prosperity in the US.

The decade also saw the rapid retreat of [Liberal democracy](#), as [authoritarian](#) regimes emerged in countries across Europe and South America, in particular the [Third Reich](#) in [Germany](#). Germany elected [Adolf Hitler](#), who imposed the [Nuremberg Laws](#), a series of laws which discriminated against [Jews](#) and other ethnic minorities. Weaker states such as [Ethiopia](#), [China](#), and [Poland](#) were invaded by expansionist world powers, the last of these attacks leading to the

outbreak of [World War II](#) on September 1, 1939, despite calls from the [League of Nations](#) for worldwide peace. World War II helped end the Great Depression when governments spent money for the war effort. The 1930s also saw a proliferation of new technologies, especially in the fields of intercontinental [aviation](#), [radio](#), and [film](#).

Economics

In the United States the significantly high unemployment rate lead many unemployed people to use freight trains in order to seek employment in various cities across the country

- The [Great Depression](#) is considered to have begun with the fall of stock prices on September 4, 1929 and then the [stock market crash](#) known as [Black Tuesday](#) on October 29, 1929, and lasted through much of the 1930s.
- The entire decade is marked by widespread unemployment and poverty, although deflation (i.e. falling prices) was limited to 1930-32 and 1938-39. Prices fell 7.02% in 1930, 10.06% in 1931, 9.79% in 1932, 1.41% in 1938 and 0.71% in 1939.^[7]
- [Economic interventionist policies](#) increase in popularity as a result of the Great Depression in both authoritarian and democratic countries. In the Western world, [Keynesianism](#) replaces [classical economic theory](#).
- In an effort to reduce unemployment, the United States government created work projects such as the [Civilian Conservation Corps](#) (CCC) which was a public work relief program that operated from 1933 to 1942 to maintain National Parks and build roads. Other major U.S. government work projects included [Hoover Dam](#) which was constructed between 1931 and 1936.
- Rapid industrialization takes place in the [Soviet Union](#).
- [Prohibition in the United States](#) ended in 1933. On December 5, 1933, the ratification of the [Twenty-first Amendment](#) repealed the [Eighteenth Amendment to the United States Constitution](#).
- Drought conditions in Oklahoma and Texas caused the [Dust Bowl](#) which forced tens of thousands of families to abandon their farms and seek employment elsewhere.

Science and technology

Technology

Many technological advances occurred in the 1930s, including:

- On March 8, 1930, the first [frozen foods](#) of [Clarence Birdseye](#) were sold in [Springfield, Massachusetts](#), United States.
- [Nestlé](#) releases the first [white chocolate](#) candy as the [Milkybar](#).^[8]

- [Ub Iwerks](#) produced the first Color Sound Cartoon in 1930, a [Flip the Frog](#) cartoon entitled: "[Fiddlesticks](#)";
- In 1930, [Warner Brothers](#) released the first All-Talking All-Color wide-screen movie, [Song of the Flame](#); in 1930 alone, Warner Brothers released ten All-Color All-Talking feature movies in [Technicolor](#) and scores of shorts and features with color sequences;
- [Air mail](#) service across the Atlantic Ocean began;
- [Radar](#) was invented, known as RDF (Radio Direction Finding), such as in British Patent GB593017 by [Robert Watson-Watt](#) in 1938;
- In 1933, the [3M](#) company marketed [Scotch Tape](#);
- In 1931, [RCA Victor](#) introduced the first long-playing phonograph record.
- In 1935, the British [London and North Eastern Railway](#) introduced the [A4 Pacific](#), designed by [Nigel Gresley](#). Just three years later, one of these, [No. 4468 Mallard](#), would become the fastest steam locomotive in the world.
- In 1935, [Kodachrome](#) is invented, being the first color film made by [Eastman Kodak](#).
- In 1936, The first regular [high-definition](#) (then defined as at least 200 lines) television service from the [BBC](#), based at [Alexandra Palace](#) in London, officially begins broadcasting.
- [Nuclear fission](#) discovered by [Otto Hahn](#), [Lise Meitner](#) and [Fritz Strassman](#) in 1939.
- The [Volkswagen Beetle](#), one of the best selling [automobiles](#) ever produced, had its roots in [Nazi Germany](#) in the late 1930s. Created by [Ferdinand Porsche](#) and his chief designer [Erwin Komenda](#). The car would prove to be successful, and is still in production today as the [New Beetle](#).
- In 1935, [Howard Hughes](#), flying the H-1, set the landplane [airspeed record](#) of 352 mph (566 km/h).
- In 1937, flying the same H-1 Racer fitted with longer wings, ambitious Hughes set a new [transcontinental airspeed record](#) by flying non-stop from Los Angeles to Newark in 7 hours, 28 minutes, and 25 seconds (beating his own previous record of 9 hours, 27 minutes). His average ground speed over the flight was 322 mph (518 km/h).^[9]
- First intercontinental commercial airline flights.
- The [chocolate chip cookie](#) was developed in 1938 by [Ruth Graves Wakefield](#).
- The [Frying Pan](#) was the first electric [lap steel guitar](#) ever produced.
- [Edwin Armstrong](#) invented wide-band [frequency modulation](#) radio in 1933.
- The [Bass guitar](#) was invented by [Paul Tutmarc](#) of Seattle, Washington, in 1936.

Science

The discovery of the dwarf planet [Pluto](#)

- [Clyde Tombaugh](#) identifies [Pluto](#), which goes on to be announced as the ninth planet in the solar system.

Literature and art

- Height of the [Art Deco](#) movement in North America and [Western Europe](#).
- Notable poetry include [W. H. Auden](#)'s [Poems](#).
- Notable literature includes [F. Scott Fitzgerald](#)'s [Tender Is the Night](#) (1934), [T. H. White](#)'s [The Sword in the Stone](#) (1938), [J. R. R. Tolkien](#)'s [The Hobbit](#) (1937), [Aldous Huxley](#)'s [Brave New World](#) (1932), [John Steinbeck](#)'s [Grapes of Wrath](#) (1939) and [Of Mice and Men](#) (1937), [Ernest Hemingway](#)'s [To Have and Have Not](#) (1937), [John Dos Passos](#)'s [U.S.A](#) trilogy, [William Faulkner](#)'s [As I Lay Dying](#) (1930) and [Absalom, Absalom!](#) (1936), [John O'Hara](#)'s [Appointment in Samarra](#) (1934) and [Butterfield 8](#) (1935).
- Notable "hardboiled" crime fiction includes [Raymond Chandler](#)'s [The Big Sleep](#), [Dashiell Hammett](#)'s [The Maltese Falcon](#), [James M. Cain](#)'s [The Postman Always Rings Twice](#) (1934).
- Notable plays include [Thornton Wilder](#)'s [Our Town](#) (1938).
- Near the end of the decade, two of the world's most iconic superheroes and recognizable fictional characters were introduced in comic books; Superman first appeared in 1938, and Batman in 1939.
- The pulp fiction magazines began to feature distinctive, gritty adventure heroes that combined elements of hard boiled detective fiction and the fantastic adventures of the earlier pulp novels. Two particularly noteworthy characters introduced were [Doc Savage](#) and [The Shadow](#), who would later influence the creation of characters such as Superman and Batman.
- Popular [comic strips](#) which began in the 1930s include [Captain Easy](#) by [Roy Crane](#), [Alley Oop](#) by [V. T. Hamlin](#), [Prince Valiant](#) by [Hal Foster](#), and [Flash Gordon](#) by [Alex Raymond](#).
- [David Alfaro Siqueiros](#) paints the controversial mural [América Tropical](#) (full name: *América Tropical: Oprimida y Destrozada por los Imperialismos*, or *Tropical America: Oppressed and Destroyed by Imperialism*^[10]) (1932) at [Olvera Street](#) in Los Angeles.^[11]

The first [Superman](#) comic appeared in June 1938 ([Action Comics #1](#))

Film

Main article: [1930s in film](#)

- [Walt Disney](#)'s [Snow White and the Seven Dwarfs](#) was released in 1937.
- [The Little Princess](#) was released in 1939.
- [The Wizard of Oz](#) was released in 1939

In the art of film making, the [Golden Age of Hollywood](#) entered a whole decade, after the advent of talking pictures ("[talkies](#)") in 1927 and full-color films in 1930: more than 50

classic films were made in the 1930s: most notable were [*Gone With The Wind*](#) and [*The Wizard of Oz*](#).

- The soundtrack and photographic technology prompted many films to be made or re-made, such as the 1934 version of [*Cleopatra*](#), using lush [art deco](#) sets which won an [Academy Award](#) (see films 1930–1939 in: [Academy Award for Best Cinematography](#));
- Universal Pictures begins producing its distinctive series of horror films, which came to be known as the Universal Monsters, featuring what would become iconic representations of literary and mythological monsters, the [horror films](#) (or [monster movies](#)) included many cult classics, such as [*Dracula*](#), [*Frankenstein*](#), [*The Mummy*](#), [*Dr. Jekyll and Mr. Hyde*](#), [*King Kong*](#), [*The Hunchback of Notre Dame*](#), and other films about [wax museums](#), [vampires](#) and [zombies](#), leading to the 1941 film [*The Wolf Man*](#) These films led to the stardom of stars such as [Bela Lugosi](#), [Lon Chaney Jr.](#), and [Boris Karloff](#).
- Recurring series and serials included: [*The Three Stooges*](#), [Laurel and Hardy](#), the [Marx Brothers](#), [Tarzan](#), [Charlie Chan](#) and [Our Gang](#).

In 1930, Howard Hughes produces [*Hell's Angels* \(film\)](#), the first movie blockbuster to be produced outside of a professional studio, independently, as well as becoming the most expensive movie made, at that time, costing roughly 4 million dollars, and taking four years to make. *Hell's Angels* was an epic masterpiece, valued, and relative to the people at those specific times, of harsh war.

[Charlie Chaplin](#) in a scene from the film [*Modern Times*](#) (1936)

[Judy Garland](#) as [Dorothy Gale](#) in [*The Wizard of Oz*](#) (1939)

Radio

On October 30, 1938 [Orson Welles'](#) radio adaptation of [The War of the Worlds](#) is broadcast, causing panic in various parts of the United States

- [Radio](#) becomes dominant mass media in industrial nations, serving as a way for citizens to listen to music and get news- providing rapid reporting on current events.
- October 30, 1938 - [Orson Welles'](#) radio adaptation of [The War of the Worlds](#) is broadcast, causing panic in various parts of the United States.

Music

Main article: [1930s in music](#)

- "[Swing](#)" music starts becoming popular (from 1935 onward). It gradually replaces the sweet form of [Jazz](#) that had been popular for the first half of the decade.
- "[Delta Blues](#)" music, the first recorded in the late 1920s, was expanded by [Robert Johnson](#) and [Skip James](#), two of the most important and influential acts of "[Blues](#)" genre.
- [Django Reinhardt](#) and [Stéphane Grappelli](#) led the development of [Gypsy jazz](#).
- [Sergei Rachmaninoff](#) composed [Rhapsody on a Theme of Paganini](#) in 1934.
- [Charlie Christian](#) becomes the first electric guitarist to be in a multiracial band with [Benny Goodman](#) and [Lionel Hampton](#) in 1939.^[12]

Fashion

Main article: [1930–45 in fashion](#)

The most characteristic North American fashion trend from the 1930s to 1945 was attention at the shoulder, with butterfly sleeves and banjo sleeves, and exaggerated shoulder pads for both men and women by the 1940s. The period also saw the first widespread use of man-made fibers, especially [rayon](#) for dresses and [viscose](#) for [linings](#) and [lingerie](#), and synthetic [nylon stockings](#). The [zipper](#) became widely used. These essentially U.S. developments were echoed, in varying degrees, in Britain and Europe. Suntans (called at the time "sunburns") became fashionable in the early 1930s, along with travel to the resorts along the [Mediterranean](#), in the [Bahamas](#), and on the east coast of [Florida](#) where one can acquire a tan, leading to new categories of clothes: white dinner jackets for men and beach pajamas, halter tops, and bare midriffs for women.^[13]

Fashion trendsetters in the period included [The Prince of Wales](#) (King Edward VIII from January 1936 until his [abdication](#) that December) and his companion [Wallis Simpson](#) (the Duke and Duchess of Windsor from their marriage in June 1937), socialites like [Nicolas de Gunzburg](#), [Daisy Fellowes](#) and [Mona von Bismarck](#) and such [Hollywood movie stars](#) as [Fred Astaire](#), [Carole Lombard](#) and [Joan Crawford](#).

Architecture

The [Empire State Building](#) became the world's tallest building when completed in 1931

- The world's tallest building (for the next 35 years) was constructed, opening as the [Empire State Building](#) on May 3, 1931, in New York City, USA;
- The [Golden Gate Bridge](#) was constructed, opening on May 27, 1937, in [San Francisco](#), USA;...

Visual arts

See also: [Social Realism](#) and [History of painting](#)

[Social Realism](#) became an important [art movement](#) during the [Great Depression](#) in the United States in the 1930s. Social realism generally portrayed imagery with socio-political meaning. Other related American artistic movements of the 1930s were [American scene painting](#) and [Regionalism](#) which were generally depictions of rural America, and historical images drawn from American history. [Precisionism](#) with its depictions of industrial America was also a popular art movement during the 1930s in the USA. During the Great Depression the art of [photography](#) played an important role in the Social Realist movement. The work of [Dorothea Lange](#), [Walker Evans](#), [Margaret Bourke-White](#), [Lewis Hine](#), [Edward Steichen](#), [Gordon Parks](#), [Arthur Rothstein](#), [Marion Post Wolcott](#), [Doris Ulmann](#), [Berenice Abbott](#), [Aaron Siskind](#), [Russell Lee](#), [Ben Shahn](#) (as a photographer) among several others were particularly influential.

The [Works Progress Administration](#) part of the [Roosevelt Administration](#)'s [New Deal](#) sponsored the [Federal Art Project](#), the [Public Works of Art Project](#), and the [Section of Painting and Sculpture](#) which employed many American artists and helped them to make a living during the [Great Depression](#).

[Mexican muralism](#) was a [Mexican art](#) movement that took place primarily in the 1930s. The movement stands out historically because of its political undertones, the majority of which of a [Marxist](#) nature, or related to a social and political situation of post-revolutionary Mexico. Also in Latin America [Symbolism](#) and [Magic Realism](#) were important movements.

In Europe during the 1930s and the [Great Depression](#), [Surrealism](#), late [Cubism](#), the [Bauhaus](#), [De Stijl](#), [Dada](#), [German Expressionism](#), [Symbolist](#) and [modernist](#) painting in various guises characterized the art scene in Paris and elsewhere.

- [1934 FIFA World Cup](#) was hosted and won by Italy.
- [1936 Summer Olympics](#) was hosted by Berlin.
- [1938 FIFA World Cup](#) was hosted by France and won by Italy.
- [1932 Winter Olympics](#) was hosted by the village of Lake Placid, NY.

World leaders

List of Years in Television

1920s

- **1925:** No events for this year.
- **1926:** [John Logie Baird](#) demonstrates the world's first television system.
- **1927:** The [BBC](#) begins broadcasting as the British Broadcasting Corporation under the [Royal Charter](#).
- **1928:** John Logie Baird's Television Development Company demonstrates their model A, B, and C 'televisors' to the general public.
- **1929:** [John Logie Baird](#) begins broadcasting 30-minute-long programmes for his mechanically scanned televisions.

1930s

- **1930:** Baird installs a television at [10 Downing Street, London](#), the [British Prime Minister's](#) residence. On July 14, Prime Minister [Ramsay MacDonald](#) and his family use it to watch the first ever television drama, *[The Man with the Flower in His Mouth](#)*.
- **1931:** [Allen B. DuMont](#) perfects long-lasting reliable cathode ray tubes later used for television reception. TV reaches the [Soviet Union](#) and [France](#).
- **1932:** The [BBC](#) starts a regular public television broadcasting service in the UK.
- **1933:** The first television revue, *[Looking In](#)*, is broadcast on the [BBC](#). The musical revue featured the Paramount Astoria dancing girls. Broadcast live by the BBC using John

Logie Baird's 30-line mechanical television system, part of this performance was recorded onto a 7" aluminum disc using a primitive home recording process called [Silvatone](#). This footage, which runs to just under four minutes, is the oldest surviving recording of broadcast television.

- **1934:** [Philo Farnsworth](#) demonstrates a non-mechanical television system. The agreement for joint experimental transmissions by the BBC and John Logie Baird's company comes to an end. First 30 Line Mechanical Television Test Transmissions commence in April in Brisbane Australia conducted by Thomas Elliott and Dr [Val McDowall](#).
- **1935:** First regular scheduled TV broadcasts in [Germany](#) by the [TV Station Paul Nipkow](#). The final transmissions of [John Logie Baird](#)'s 30-line television system are broadcast by the BBC. First TV broadcasts in France on February 13 on [Paris PTT Vision](#).
- **1936:** The [1936 Summer Olympics](#) becomes the first Olympic Games to be broadcast on television.
- **1937:** The [BBC Television Service](#) broadcasts the world's first televised [Shakespeare](#) play, a thirty-minute version of [Twelfth Night](#), and the first [football](#) match, [Arsenal F.C.](#) vs. Arsenal reserves.
- **1938:** [DuMont Laboratories](#) manufactures and sells the first all-electronic television sets to the public. Baird gives the first public demonstration of color projection television. The [BBC](#) broadcasts the world's first ever [television science fiction](#) ([R.U.R.](#)), and television crime series ([Telecrime](#)); in one of the lengthiest experimental television broadcasts, the BBC broadcasts a 90-minute version of [Edmond Rostand](#)'s [Cyrano de Bergerac](#), starring [Leslie Banks](#), [Constance Cummings](#), and [James Mason](#).
- **1939:** The BBC suspends its television service owing to the outbreak of the [Second World War](#). The [1939 New York World's Fair](#) was broadcast. [Japan](#) is the first Asian country to air television.

List of Years in Animation

- **1900** – [J. Stuart Blackton](#) and [Thomas Edison](#) create [The Enchanted Drawing](#), the first film to feature ground breaking animated sequences.
- **1906** – [Humorous Phases of Funny Faces](#), the first animation recorded
- **1908** – [Fantasmagorie](#), said by animation historians as the world's first cartoon, is released
- **1911** – [Little Nemo](#)
- **1914** – [Gertie the Dinosaur](#)
- **1919** – [Felix the Cat](#)
- **1923** – [Walt Disney Animation Studios](#) is founded
- **1926** – [The Adventures of Prince Achmed](#)
- **1927** – [Oswald the Lucky Rabbit](#)
- **1928** – [Steamboat Willie](#), the first ever synchronized cartoon with sound, kicking off the [Mickey Mouse cartoon series](#)
- **1929** – [Silly Symphonies](#)
- **1930** – [Looney Tunes](#), [Betty Boop](#); [Warner Bros. Animation](#) is founded
- **1932** – [First Academy Award for Best Animated Short Film](#))
- **1933** – [Popeye the Sailor](#)
- **1937** – [Snow White and the Seven Dwarfs](#) (the very first ever full-length animated feature film)
- **1938** – [Gandy Goose](#)

- [1939](#) – *Gulliver's Travels*, *Barney Bear*

- **1820 in poetry**

ROMANTICISM, REALISM/NATURALISM AND MODERNISM IN 1820-1939

This book focuses on a survey of culture in 1820-1939, which comprises mainly the three most innovative periods in cultural history, in literature, arts, music – Romanticism, Realism/Naturalism and Modernism. The data in the following chapter and in this book in general is based primarily on Encyclopedia Britannica, Oxford Research Encyclopedias, New World Encyclopedia, Wikipedia and other Encyclopedias, but with my inputs and through my prism and analysis. The division between those three epochs is not clearcut. Thus, Balzac who is romantic by the period in which he operated and by part of his works, is also realist, naturalist, and mostly modern, as he is the precursor of modern literature. This book encompassed at least the 120 years of the peaks of the Romantic period 1820-1860, Realist/Naturalist period 1860-1900, Modern Period 1900-1940. In order to give the full scope of the three periods we present a condensed survey based on objective sources which I have chosen from many, and as it comes from different sources there might be duplications and ambiguity but I have tried to overcome them as best as I could, and to remain accurate.

ROMANTICISM I

Romanticism (also known as the **Romantic era**) was an artistic, literary, musical and intellectual movement that originated in Europe towards the end of the 18th century, and in most areas was at its peak in the approximate period from 1800 to 1890. Romanticism was characterized by its emphasis on emotion and [individualism](#) as well as glorification of all the past and nature, preferring the medieval rather than the classical. It was partly a reaction to the [Industrial Revolution](#), the aristocratic social and political norms of the [Age of Enlightenment](#), and the scientific [rationalization](#) of nature—all components of [modernity](#). It was embodied most strongly in the visual arts, music, and literature, but had a major impact on [historiography](#), education, social sciences, and the [natural sciences](#). Romantic thinkers influenced [liberalism](#), [radicalism](#), [conservatism](#), and [nationalism](#). Although the movement was rooted in the German *Sturm und Drang* movement, which preferred intuition and emotion to the rationalism of the Enlightenment, the events and ideologies of the [French Revolution](#) were also proximate factors. Romanticism assigned a high value to the achievements of "heroic" individualists and artists, whose examples, it maintained, would raise the quality of society. It also promoted the individual imagination as a critical authority allowed of freedom from classical notions of form in art. There was a strong recourse to historical and natural inevitability, a *Zeitgeist*, in the representation of its ideas. In the second half of the 19th century, [Realism](#) was offered as a polar opposite to Romanticism. The decline of Romanticism during this time was associated with multiple processes, including social and political changes and the spread of nationalism. **If we have to delineate the period in which Romanticism reached its peak I would choose 1820 to 1860 in literature, music and arts.**

The famous [romantic authors, composers & artists are](#) in the Wikipedia list of Romantics:

French - [Alexandre Dumas, père](#) (writer, 1802-1870), [Honoré de Balzac](#) (novelist, 1799-1850), [Hector Berlioz](#) (composer, 1803-1869), [Georges Bizet](#) (composer, 1838-1875), [François-René de Chateaubriand](#) (writer, 1768-1848), [Eugène Delacroix](#) (painter, 1798-1863), [Théophile Gautier](#) (poet, 1811-1872), [Théodore Géricault](#) (painter, 1791-1824), [Victor Hugo](#) (poet, novelist, dramatist, 1802-1885), [Alphonse de Lamartine](#) (poet, 1790-1869), [Alfred de Musset](#) (poet, 1810-1857), [Charles Nodier](#), (writer, 1780-1844), leader of the Romanticist movement, [George Sand](#) (novelist, 1804-1876), [Stendhal](#) (novelist, 1783-1842),

[Eugène Emmanuel Viollet-le-Duc](#) (architect, 1814-1879), [Alfred de Vigny](#) (poet, 1797-1863), [Charles-Valentin Alkan](#) (composer, 1813-1888), [Antoine-Louis Barye](#) (sculptor, 1795-1875), [Théodore Chassériau](#) (painter, 1819-1856). Almost all of them were active in the period of 1820-1939 & are surveyed in this book, especially authors, among the best ever in the world.

M. W. Turner](#) (painting, 1775-1851), [William Wordsworth](#) (poetry, 1770-1850), [Dorothy Wordsworth](#) (diaries, 1771-1855), [John William Waterhouse](#) (painting, also a [Pre-Raphaelite](#), 1849-1917).

North American – [Albert Bierstadt](#) (painter, German-born, 1830-1902), [George Catlin](#) (painter, 1796-1872), [William Cullen Bryant](#) (poet, 1794-1878), [Wilfred Campbell](#) (poet, Canadian, 1860-1918), [James Fenimore Cooper](#) (novelist, 1789-1851), [Emily Dickinson](#) (poet, 1830-1886), [Ralph Waldo Emerson](#) (poet, essayist, 1803-1882), [Louis Moreau Gottschalk](#) (composer, 1829-1869), [Nathaniel Hawthorne](#) (novelist, 1804-1864), [Washington Irving](#) (novelist, satirist, 1783-1859), [Archibald Lampman](#) (poet, Canadian, 1861-1899), [Henry Wadsworth Longfellow](#) (poet, 1807-1882), [James Russell Lowell](#) (writer, 1819-1991), [Edward MacDowell](#) (composer, 1860-1908), [Herman Melville](#) (novelist, 1819-1991), [Edgar Allan Poe](#) (poet, short story writer, 1809-1849), [Charles Sangster](#) (poet, Canadian, 1822-1893), [Henry David Thoreau](#) (poet, essayist, 1817-1862), [John Greenleaf Whittier](#) (poet, 1807-1892).

Irish – [Thomas Davis](#) (poet, political theorist, 1814-1845), [John Field](#) (composer, 1782-1837), [James Clarence Mangan](#) (poet, 1803-1849), [Thomas Moore](#) (poet, 1779-1852), [Padraic Pearse](#) (poet, journalist, revolutionary, 1879-1916), [Oscar Wilde](#) (poet & author, 1854-1900).

Scottish – [Robert Burns](#) (poet, 1759-1796, considered a forerunner of British Romanticism along with [Thomas Gray](#), 1716-1771), [James Macpherson](#) (poet, 1736-1796), [Walter Scott](#) (poet and historical novelist, 1771-1832), [George MacDonald](#) (author and poet, 1824-1905), [John Duncan](#) (painter, 1866-1945)

Welsh – [Iolo Morganwg](#) (1747-1826), [Felicia Hemans](#) (1793-1845).

German – [Caspar David Friedrich](#) (painter, 1774-1840), [Johannes Brahms](#) (composer, 1833-1897), [Joseph Görres](#) (writer, essayist, 1776-1848), [Jakob Grimm](#) (story collector, linguist, 1785-1863), [Wilhelm Grimm](#) (story collector, linguist, 1786-1859), [Carl Gustav Carus](#) (painter, 1789-1869), [Karl Friedrich Lessing](#) (painter, 1808-1880), [Philipp Otto Runge](#) (painter, 1777-1810), [Adam Müller](#) (literary critic and political theorist, 1779-1829), [Novalis](#) (poet, novelist, 1772-1801), [Joseph von Eichendorff](#) (poet, writer, 1788-1857), [Friedrich Schlegel](#) (poet, theorist, 1772-1829), [August Wilhelm Schlegel](#) (poet, translator, theorist, 1767-1845), [Franz Schubert](#) (composer, 1797-1828), [Robert Schumann](#) (composer, polemicist, 1810-1856), [Ludwig Tieck](#) (novelist, translator, 1773-1853), [Ludwig Uhland](#) (poet, dramatist, 1787-1862), [E.T.A. Hoffmann](#) (writer, composer, 1776-1822), [Adolf von Henselt](#) (composer, 1814-1889), [Zacharias Werner](#) (poet, dramatist, 1768-1823), [Ludwig van Beethoven](#) (composer, 1770-1827), [Johann Wolfgang von Goethe](#) (novelist, poet, scientist, 1749-1832), [Richard Wagner](#) (composer, 1813-1883), [Friedrich Hölderlin](#) (poet,

1770-1843), [Heinrich Heine](#) (poet, 1797-1856), [Friedrich Wilhelm Joseph Schelling](#) (philosopher, 1775-1854), [Johann Gottlieb Fichte](#) (writer, theorist, 1762-1814), [Adrian Ludwig Richter](#) (painter, 1803-1884), [Carl Spitzweg](#) (painter, 1808-1885), [Eberhard Wächter](#) (painter, 1762-1852), [Gerhard von Kügelgen](#) (painter, 1772-1820), [Carl Maria von Weber](#) (composer, 1786-1826), [Felix Mendelssohn](#) (composer, 1809-1847), [Franz Liszt](#) (composer, 1811-1886), [Heinrich von Kleist](#) (poet, dramatist, novelist, 1777-1811), [Friedrich Schleiermacher](#) (theologian, philosopher, 1768-1834), [Wilhelm Heinrich Wackenroder](#) (writer, 1773-1798). The German Romanticism is especially influential in music, with giants as Beethoven, Schubert and Weber, Schumann, Wagner, Brahms, Mendelssohn, Liszt. And of course some of the best authors as Goethe, Heine & Holderlin.

Spanish – [Mariano Jose de Larra](#) (essayist, 1809-1837), [José de Espronceda](#) (poet, tale writer, 1808-1842), [Jose Zorrilla](#) (playwright, poet, 1817-1893), [Gustavo Adolfo Becquer](#) (poet, tale writer, 1836-1870), [Francisco Goya](#) (painter, 1746-1828), [Antonio María Esquivel](#) (painter, 1806-1857), [Eugenio Lucas Velázquez](#) (painter, 1817-1870), [Federico de Madrazo](#) (painter, 1815-1894).

Russian – [Ivan Aivazovsky](#) (painter, 1817-1900), [Mily Balakirev](#) (composer, 1837-1910), [Alexander Borodin](#) (composer, 1833-1887), [Karl Briullov](#) (painter, 1799-1852), [César Cui](#) (composer, 1835-1918), [Mikhail Glinka](#) (composer, 1804-1857), [Mikhail Lermontov](#) (poet, novelist, 1814-1841), [Modest Mussorgsky](#) (composer, 1839-1881), [Aleksandr Pushkin](#) (poet and novelist, 1799-1837), [Nikolai Rimsky-Korsakov](#) (composer, 1844-1908), [Pyotr Ilyich Tchaikovsky](#) (composer, 1840-1993), [Vasily Zhukovsky](#) (poet, 1783-1852), [Konstantin Batyushkov](#) (poet, 1787-1855), [Orest Kiprensky](#) (painter, 1782-1836), [Vasily Tropinin](#) (painter, 1776-1857), [Sergei Lyapunov](#) (composer, 1859-1924), [Nikolai Medtner](#) (composer, 1880-1951), [Sergei Bortkiewicz](#) (composer, 1877-1952), [Anton Arensky](#) (composer, 1861-1906), [Georgy Catoire](#) (composer, 1861-1926), [Sergei Rachmaninoff](#) (composer, 1873-1943).

Italian – [Aleardo Aleardi](#) (poet, 1812-1878), [Giuseppe Gioacchino Belli](#) (poet, 1791-1863), [Giovanni Berchet](#) (poet, 1783-1851), [Ugo Foscolo](#) (poet, novelist, political theorist, 1778-1827), [Francesco Hayez](#) (painter, 1791-1882), [Giacomo Leopardi](#) (poet, philosopher, 1798-1837), [Alessandro Manzoni](#) (novelist, 1785-1873), [Giuseppe Mazzini](#) (political theorist, 1805-1872), [Giuseppe Parini](#) (poet, satirist, 1729-1799), [Ippolito Pindemonte](#) (poet, 1753-1828), [Carlo Porta](#) (poet, 1775-1821), [Giovanni Prati](#) (poet, political theorist, 1815-1884), [Ferdinando Carulli](#) (1770-1841), [Gaspere Spontini](#) (1774-1851), [Niccolò Paganini](#) (1782-1840), [Gioacchino Rossini](#) (1792-1861), [Gaetano Donizetti](#) (1797-1848), [Vincenzo Bellini](#) (1801-1835).

Portuguese – [Almeida Garrett](#) (writer, poet, dramatician, journalist), [Alexandre Herculano](#) (writer, novelist, poet, journalist, historian), [Camilo Castelo Branco](#) (writer, novelist), [João de Deus](#) (writer, poet), [António Feliciano de Castilho](#) (writer, poet, translator), [Soares dos Passos](#) (writer, poet), [João de Lemos](#) (writer, poet), [José Vianna da Motta](#) (composer and pianist).

Brazilian - [Joaquim Manuel de Macedo](#) (novelist), [José de Alencar](#) (novelist), [Castro Alves](#) (poet), [Gonçalves Dias](#) (poet), [Fagundes Varela](#) (poet), [Casimiro de Abreu](#) (poet), [Álvares de Azevedo](#) (poet, short-story writer), [Bernardo Guimarães](#) (novelist), [Manuel Antônio de Almeida](#) (novelist), [Visconde de Taunay](#) (painting).

Czech – [Karel Hynek Mácha](#) (poetry), [Bedřich Smetana](#) (music), [Ján Kollár](#) (fairy tales), [Antonín Dvořák](#) (music).

Dutch – Hildebrand / [Nicolaas Beets](#) (Theologian, writer and poet), [Willem Bilderdijk](#) (Poet), [Jacob Geel](#) (Scholar, writer and critic), [Multatuli](#) / Eduard Douwes Dekker (Writer).

Hungarian – [Sándor Petőfi](#) (poet), [Mihály Vörösmarty](#) (poet), [Mór Jókai](#) (writer), [Imre Madách](#) (dramatist), [Franz Liszt](#) (composer).

Norwegian – [Henrik Wergeland](#) (poet), [Edvard Grieg](#) (composer), [Johann Sebastian Welhaven](#) (poet), [Adolph Tidemand](#) (painter), [Hans Gude](#) (painter), [Johan Christian Dahl](#) (painter), [Melissa Daschler](#) (poet).

Polish – [Frédéric Chopin](#) (composer), [Adam Jerzy Czartoryski](#) (writer), [Józef Dunin-Borkowski](#) (poet), [Felicjan Faleński](#) (poet), [Aleksander Fredro](#) (comedy writer), [Konstanty Gaszyński](#) (poet), [Cyprian Godebski](#) (poet), [Seweryn Goszczyński](#) (poet), [Józef Korzeniowski](#) (writer), [Zygmunt Krasiński](#) (poet), [Józef Ignacy Kraszewski](#) (writer), [Joachim Lelewel](#) (philosopher), [Antoni Malczewski](#) (poet), [Piotr Michałowski](#) (painter), [Adam Mickiewicz](#) (poet), [Stanisław Moniuszko](#) (composer), [Anna Mostowska](#) (writer), [Cyprian Kamil Norwid](#) (poet), [Wincenty Pol](#) (poet), [Juliusz Słowacki](#) (poet), [Franciszek Syrokomla](#) (poet), [Andrzej Towiański](#) (philosopher), [Kornel Ujejski](#) (poet), [Henryk Wieniawski](#) (composer).

Romanian – [Vasile Alecsandri](#) (poet, playwright), [Gheorghe Asachi](#) (poet, short story writer, playwright), [Dimitrie Bolintineanu](#) (poet), [Cezar Bolliac](#) (poet), [George Coșbuc](#) (poet), [Dora d'Istria](#) (essayist, travel writer), [Mihai Eminescu](#) (a Romantic for part of his career; poet, short story writer, essayist), [Nicolae Filimon](#) (novelist and short story writer), [Ion Ghica](#) (essayist and memoirist), [Andrei Mureșanu](#) (poet), [Costache Negruzzi](#) (short story writer), [Alexandru Odobescu](#) (short story writer), [Bogdan Petriceicu-Hasdeu](#) (historian and playwright), [Ion Heliade Rădulescu](#) (poet, essayist), [Iosif Vulcan](#) (dramatist, short story writer, essayist, novelist).

Serbian – [Branko Radičević](#) (poet), [Đura Jakšić](#) (poet, playwright, painter), [Jovan Jovanović Zmaj](#) (poet), [Laza Kostić](#) (poet, playwright), [Petar II Petrović-Njegoš](#) (poet), [Kosta Trifković](#) (playwright/poet), [Bogoboj Atanacković](#) (novelist), [Vuk Stefanović Karadžić](#) (philologist), [Avram Miletić](#) (poet), [Old Rashko](#) (epic poet/guslar), [Živana Antonijević](#) (epic poet/guslar), [Tešan Podrugović](#) (epic poet/guslar), [Filip Višnjić](#) (epic poet/guslar), [Sava Mrkalj](#) (poet/philologist), [Đuro Daničić](#) (philologist), [Vuk Vršević](#) (collaborated with Vuk Karadžić), [Ivan Stojanović](#) (poet), [Jovan Sundečić](#) (poet), [Katarina Ivanovic](#) (artist), [Novak Radonić](#) (poet), [Đorđe Marković Koder](#) (writer), [Milica Stojadinović Srpkinja](#) (poet), [Staka Skenderova](#) (writer), [Vaso Pelagić](#) (writer), [Stjepan Mitrov Ljubiša](#) (poet), [Pavle Stamatović](#) (writer), [Visarion Ljubiša](#) (writer), [Čedomilj Mijatović](#) (novelist), [Ilarion Ruvarac](#) (writer), [Mato Vodopić](#) (Serb-Catholic Bishop of Dubrovnik and poet), [Novak Radonić](#) (artist), [Marko Miljanov](#) (writer), [Nikša Gradi](#) (writer), [Pero Budmani](#) (writer), [Ivan Stojanović](#) (writer), [Mirko Petrović-Njegoš](#) (poet), [Sima Milutinović Sarajlija](#) (poet), [Steva Todorović](#) (artist), [Pavle Simić](#) (artist).

Slovene – [France Prešeren](#) (poet, considered one of the greatest of his time), [Janez Vesel](#) (poet), [Matija Čop](#) (historian and critic), [Urban Jarnik](#) (priest, poet, ethnographer and linguist), [Anton Martin Slomšek](#) (bishop, author and poet), [Stanko Vraz](#) (poet), [Etbin Costa](#) (author and politician), [Hugo Wolf](#) (composer), [Janez Bleiweis](#) (politician and journalist), [Lovro Toman](#) (nationalist and activist), [Josipina Turnograjska](#) (poet, composer and writer), [Jernej Kopitar](#) (philologist and linguist), [Miha Kastelic](#) (poet), [Anton Karinger](#) (painter, poet and soldier).

Other Countries – [Adam Gottlob Oehlenschläger](#) ([Danish](#) poet, playwright), [Uładzimir Karatkievič](#) ([Belarusian](#) writer), [Jónas Hallgrímsson](#) ([Icelandic](#) poet, political activist), [Raden Saleh](#) ([Indonesian](#) painter), [Taras Shevchenko](#) ([Ukrainian](#) poet), [Esaias Tegnér](#) ([Swedish](#) writer), [Egide Charles Gustave Wappers](#) ([Belgian](#) painter), [Anne Louise Germaine de Staël](#) ([Swiss](#) writer), [Miguel Barnet](#) ([Cuban](#) writer, novelist and ethnographer).

ROMANTICISM II

Introduction

Attitude or intellectual orientation that characterized many works of literature, painting, music, architecture, criticism, and historiography in Western civilization over a period from the late 18th to the mid-19th century. Romanticism can be seen as a rejection of the precepts of order, calm, harmony, balance, idealization, and rationality that typified [Classicism](#) in general and late 18th-century [Neoclassicism](#) in particular. It was also to some extent a reaction against the Enlightenment and against 18th-century rationalism and physical materialism in general. Romanticism emphasized the individual, the subjective, the irrational, the imaginative, the personal, the spontaneous, the emotional, the visionary, and the transcendental.

Among the characteristic attitudes of Romanticism were the following: a deepened appreciation of the beauties of nature; a general exaltation of emotion over reason and of the senses over intellect; a turning in upon the self and a heightened examination of human personality and its moods and mental potentialities; a preoccupation with the genius, the hero, and the exceptional figure in general, and a focus on his passions and inner struggles; a new view of the artist as a supremely individual creator, whose creative spirit is more important than strict adherence to formal rules and traditional procedures; an emphasis upon imagination as a gateway to transcendent experience and spiritual truth; an obsessive interest in folk culture, national and ethnic cultural origins, and the medieval era; and a predilection for the exotic, the remote, the mysterious, the weird, the occult, the monstrous, the diseased, and even the satanic.

Literature

Romanticism proper was preceded by several related developments from the mid-18th century on that can be termed [Pre-Romanticism](#). Among such trends was a new appreciation of the medieval romance, from which the Romantic movement derives its name. The romance was a tale or ballad of chivalric adventure whose emphasis on individual heroism and on the exotic and the mysterious was in clear contrast to the elegant formality and artificiality of prevailing Classical forms of literature, such as the French Neoclassical tragedy or the English heroic couplet in poetry. This new interest in relatively unsophisticated but overtly emotional literary expressions of the past was to be a dominant note in Romanticism.

Romanticism in [English literature](#) began in the 1790s with the publication of the [Lyrical Ballads](#) of [William Wordsworth](#) and [Samuel Taylor Coleridge](#). Wordsworth's "Preface" to the second edition (1800) of *Lyrical Ballads*, in which he described poetry as "the spontaneous overflow of powerful feelings," became the manifesto of the English Romantic movement in

poetry. [William Blake](#) was the third principal poet of the movement's early phase in England. The first phase of the Romantic movement in [Germany](#) was marked by innovations in both content and literary style and by a preoccupation with the mystical, the subconscious, and the supernatural. A wealth of talents, including Friedrich Hölderlin, the early Johann Wolfgang von Goethe, Jean Paul, Novalis, Ludwig Tieck, A.W. and Friedrich Schlegel, Wilhelm Heinrich Wackenroder, and Friedrich Schelling, belong to this first phase. In Revolutionary France, the [vicomte de Chateaubriand](#) and [Mme de Staël](#) were the chief initiators of Romanticism, by virtue of their influential historical and theoretical writings.

The second phase of Romanticism, comprising the period from about 1805 to the 1830s, was marked by a quickening of cultural [nationalism](#) and a new attention to national origins, as attested by the collection and imitation of native [folklore](#), folk ballads and poetry, folk dance and music, and even previously ignored medieval and Renaissance works. The revived historical appreciation was translated into imaginative writing by [Sir Walter Scott](#), who is often considered to have invented the historical novel. At about this same time English Romantic [poetry](#) had reached its zenith in the works of John Keats, Lord Byron, and Percy Bysshe Shelley.

A notable by-product of the Romantic interest in the emotional were works dealing with the [supernatural](#), the weird, and the horrible, as in Mary Shelley's *Frankenstein* and works by C.R. Maturin, the Marquis de Sade, and E.T.A. Hoffmann. The second phase of Romanticism in Germany was dominated by Achim von Arnim, Clemens Brentano, J.J. von Görres, and Joseph von Eichendorff.

By the 1820s Romanticism had broadened to embrace the literatures of almost all of Europe. In this later, second, phase, the movement was less universal in approach and concentrated more on exploring each nation's historical and cultural inheritance and on examining the passions and struggles of exceptional individuals. A brief survey of Romantic or Romantic-influenced writers would have to include Thomas De Quincey, William Hazlitt, and the Brontë sisters in England; Victor Hugo, Alfred de Vigny, Alphonse de Lamartine, Alfred de Musset, Stendhal, Prosper Mérimée, Alexandre Dumas (Dumas Père), and Théophile Gautier in France; Alessandro Manzoni and Giacomo Leopardi in Italy; Aleksandr Pushkin and Mikhail Lermontov in Russia; José de Espronceda and Ángel de Saavedra in Spain; Adam Mickiewicz in Poland; and almost all of the important writers in pre-Civil War America.

Visual arts

In the 1760s and '70s a number of British artists at home and in Rome, including James Barry, Henry Fuseli, John Hamilton Mortimer, and John Flaxman, began to [paint](#) subjects that were at odds with the strict decorum and classical historical and mythological subject matter of conventional figurative art. These artists favoured themes that were bizarre, pathetic, or extravagantly heroic, and they defined their images with tensely linear drawing and bold contrasts of light and shade. William Blake, the other principal early Romantic painter in England, evolved his own powerful and unique visionary images.

In the next generation the great genre of English Romantic [landscape](#) painting emerged in the works of [J.M.W. Turner](#) and [John Constable](#). These artists emphasized transient and dramatic effects of light, atmosphere, and colour to portray a dynamic natural world capable of evoking awe and grandeur.

In France the chief early Romantic painters were [Baron Antoine Gros](#), who painted dramatic tableaux of contemporary incidents of the Napoleonic Wars, and [Théodore Géricault](#), whose depictions of individual heroism and suffering in *The Raft of the Medusa* and in his portraits of the insane truly inaugurated the movement around 1820. The greatest French Romantic painter was [Eugène Delacroix](#), who is notable for his free and expressive brushwork, his rich and sensuous use of colour, his dynamic compositions, and his exotic and adventurous subject matter, ranging from North African Arab life to revolutionary politics at home. Paul Delaroche, Théodore Chassériau, and, occasionally, J.-A.-D. Ingres represent the last, more academic phase of Romantic painting in France. In Germany Romantic painting took on symbolic and allegorical overtones, as in the works of P.O. Runge. [Caspar David Friedrich](#), the greatest German Romantic artist, painted eerily silent and stark landscapes that can induce in the beholder a sense of mystery and religious awe.

Romanticism expressed itself in [architecture](#) primarily through imitations of older architectural styles and through eccentric buildings known as “follies.” Medieval [Gothic architecture](#) appealed to the Romantic imagination in England and Germany, and this renewed interest led to the [Gothic Revival](#).

[Music](#)

Musical Romanticism was marked by emphasis on originality and individuality, personal emotional expression, and freedom and experimentation of form. [Ludwig van Beethoven](#) and [Franz Schubert](#) bridged the Classical and Romantic periods, for while their formal musical techniques were basically Classical, their music's intensely personal feeling and their use of programmatic elements provided an important model for 19th-century Romantic composers.

The possibilities for dramatic expressiveness in music were augmented both by the expansion and perfection of the [instrumental](#) repertoire and by the creation of new musical forms, such as the lied, nocturne, intermezzo, capriccio, prelude, and mazurka. The Romantic spirit often found inspiration in poetic texts, legends, and folk tales, and the linking of words and music either programmatically or through such forms as the concert [overture](#) and [incidental music](#) is another distinguishing feature of Romantic music. The principal composers of the first phase of Romanticism were Hector Berlioz, Frédéric Chopin, Felix Mendelssohn, and Franz Liszt. These composers pushed orchestral instruments to their limits of expressiveness, expanded the harmonic vocabulary to exploit the full range of the [chromatic scale](#), and explored the linking of instrumentation and the human voice. The middle phase of musical Romanticism is represented by such figures as Antonín Dvořák, Edvard Grieg, and Pyotr Ilyich Tchaikovsky. Romantic efforts to express a particular nation's distinctiveness through music was manifested in the works of the Czechs Antonín Dvořák and Bedřich Smetana and by various Russian, French, and Scandinavian composers.

Romantic [opera](#) in Germany began with the works of Carl Maria von Weber, while Romantic opera in Italy was developed by the composers Gaetano Donizetti, Vincenzo Bellini, and Gioachino Rossini. The Italian Romantic opera was brought to the height of its development by Giuseppe Verdi. The Romantic opera in Germany culminated in the works of [Richard Wagner](#), who combined and integrated such diverse strands of Romanticism as fervent nationalism; the cult of the hero; exotic sets and costumes; expressive music; and the display of virtuosity in orchestral and vocal settings. The final phase of musical Romanticism is

represented by such late 19th-century and early 20th-century composers as Gustav Mahler, Richard Strauss, Sir Edward Elgar, and Jean Sibelius.

ROMANTICISM III

Romanticism was an artistic and intellectual movement that ran from the late eighteenth century through the nineteenth century. It stressed strong emotion as a source of aesthetic experience, placing emphasis on such emotions as trepidation, horror, and the awe experienced in confronting the [sublimity](#) of nature. It elevated folk art, language, and custom, as well as arguing for an [epistemology](#) based on usage and custom.

Romanticism arose as a reaction against the excessive [rationalism](#) of the [Enlightenment](#). It drew upon the [French Revolution](#)'s rejection of aristocratic social and political norms. It was also influenced by the theory of [evolution](#) and uniformitarianism, which argued that "the past is the key to the present." Thus some Romantics looked back nostalgically to the sensibility of the [Middle Ages](#) and elements of art and narrative perceived to be from the medieval period. The name "romantic" itself comes from the term "romance" which is a prose or poetic heroic narrative originating in the medieval.

The ideals of the [French Revolution](#) influenced the Romantic movement in other ways. Romanticism elevated the achievements of what it perceived as misunderstood heroic individuals and artists that altered society, and legitimized the individual imagination as a critical authority which permitted freedom from classical notions of form in art.

The flaw in the Enlightenment mind, represented by the moral philosophy of [Kant](#) with its overemphasis on intellect (reason) and will, was its disregard of the faculty of emotion which is so central to human life. Romanticism was the inevitable reaction to Enlightenment [Rationalism](#). The artistic and literary works of the Romantic movement have lasting appeal, because the human faculty of emotion runs stronger and deeper than the intellect or the will.

Characteristics

In a general sense, Romanticism refers to several distinct groups of artists, poets, writers, [musicians](#), political, philosophical and social thinkers and trends of the late eighteenth and early nineteenth centuries in Europe. This movement is typically characterized by its reaction against the [Enlightenment](#); while the Enlightenment emphasized the primacy of [reason](#), Romanticism emphasized imagination and strong emotion. Rather than an [epistemology](#) of deduction, the Romantics demonstrated elements of [knowledge](#) through intuition. A precise characterization and a specific description of Romanticism were objects of intellectual history and literary history for all of the twentieth century without the emergence of any great measure of consensus.

[Arthur Lovejoy](#) attempted to demonstrate the difficulty of this problem in his seminal article "On The Discrimination of Romanticisms" in his *Essays in the History of Ideas* (1948); some scholars see romanticism as completely continuous with the present, some see it as the inaugural moment of modernity, some see it as the beginning of a tradition of resistance to the Enlightenment, and still others date it firmly in the direct aftermath of the [French Revolution](#). Perhaps the most instructive and succinct definition comes from French symbolist

poet, [Charles Baudelaire](#): "Romanticism is precisely situated neither in choice of subject nor exact truth, but in a way of feeling."

Some modernist writers argue that Romanticism represents an aspect of the Counter-Enlightenment, a negatively charged phrase used to label movements or ideas seen by them as counter to the rationality and objectivity inherent in the Enlightenment, and promoting emotionalism, superstition and instability.

Generally, Romanticism can be understood as a pursuit for the value of beauty on the part of humans because they have the faculty of emotion. Of course, humans also have two other faculties: Intellect and will, which pursue the values of truth and goodness, respectively. But when intellect (reason) is emphasized one-sidedly as in the Enlightenment in the eighteenth century, and when will is stressed very much as in the moral philosophy of [Immanuel Kant](#) around the end of the eighteenth century, human beings naturally react with their faculty of emotion as in Romanticism.

Visual art and literature

In visual art and literature, "Romanticism" typically refers to the late eighteenth century and the nineteenth Century. The Scottish poet [James Macpherson](#) influenced the early development of Romanticism with the international success of his Ossian cycle of poems published in 1762, inspiring both [Johann Wolfgang von Goethe](#) and the young [Walter Scott](#).

An early [German](#) influence came from Goethe, whose 1774 novel *The Sorrows of Young Werther* had young men throughout Europe emulating its protagonist, a young artist with a very sensitive and passionate temperament. At that time Germany was a multitude of small separate states, and Goethe's works would have a seminal influence in developing a unifying sense of nationalism. Important writers of early German romanticism were Ludwig Tieck, [Novalis](#) (Heinrich von Ofterdingen, 1799) and [Friedrich Hölderlin](#). Heidelberg later became a center of German romanticism, where writers and poets such as Clemens Brentano, Achim von Arnim, and Joseph von Eichendorff met regularly in literary circles.

Since the Romantics opposed the [Enlightenment](#), they often focused on emotions and dreams as opposed to rationalism. Other important motifs in German Romanticism are traveling, nature and ancient myths. Late German Romanticism (of, for example, [E. T. A. Hoffmann](#)'s *Der Sandmann*—"The Sandman," 1817; and Eichendorff's *Das Marmorbild*—"The Marble Statue," 1819) was somewhat darker in its motifs and has some [gothic](#) elements.

Romanticism in [British](#) literature developed in a different form slightly later, mostly associated with the poets [William Wordsworth](#) and [Samuel Taylor Coleridge](#), whose co-authored book *Lyrical Ballads* (1798) sought to reject Augustan poetry in favor of more direct speech derived from folk traditions. Both poets were also involved in [Utopian](#) social thought in the wake of the [French Revolution](#). The poet and painter [William Blake](#) is the most extreme example of the Romantic sensibility in Britain, epitomized by his claim, "I must create a system or be enslaved by another man's." Blake's artistic work is also strongly influenced by medieval illuminated books. The painters [Joseph Mallord William Turner](#) and [John Constable](#) are also generally associated with Romanticism.

[Lord Byron](#), [Percy Bysshe Shelley](#), [Mary Shelley](#), and [John Keats](#) constitute another phase of Romanticism in Britain. The historian [Thomas Carlyle](#) and the [Pre-Raphaelite](#)

[Brotherhood](#) represent the last phase of transformation into [Victorian](#) culture. [William Butler Yeats](#), born in 1865, referred to his generation as "the last romantics."

In predominantly [Roman Catholic](#) countries, Romanticism was less pronounced than in Germany and Britain, and tended to develop later, after the rise of [Napoleon](#). [François-René de Chateaubriand](#) is often called the "Father of French Romanticism."

In France, the movement is associated with the nineteenth century, particularly in the paintings of Théodore Géricault and [Eugène Delacroix](#), the plays, poems and novels of [Victor Hugo](#) (such as *Les Misérables* and *Ninety-Three*), and the novels of [Stendhal](#). The composer [Hector Berlioz](#) is also important.

In [Russia](#), the principal exponent of Romanticism is [Alexander Pushkin](#). [Mikhail Lermontov](#) attempted to analyze and bring to light the deepest reasons for the Romantic idea of metaphysical discontent with society and self, and was much influenced by [Lord Byron](#). Pushkin's *Eugene Onegin* and Lermontov's Pechorin from *A Hero of Our Time* both were influenced by the "Byronic" pose, the boredom of the superior romantic hero. Both the poets would die in duels of honor. The poet [Fyodor Tyutchev](#) was also an important figure of the movement in Russia, and was heavily influenced by the German Romantics.

Romanticism played an essential role in the national awakening of many Central European peoples lacking their own national states, particularly in [Poland](#), which had recently lost its independence to [Russia](#) when its army crushed the Polish Rebellion under the reactionary [Nicholas I](#). Revival of ancient myths, customs and traditions by Romantic poets and painters helped to distinguish their indigenous cultures from those of the dominant nations (Russians, Germans, Austrians, Turks, etc.). Patriotism, nationalism, revolution and armed struggle for independence also became popular themes in the arts of this period. Arguably, the most distinguished Romantic poet of this part of Europe was [Adam Mickiewicz](#), who developed an idea that Poland was the "Messiah of nations," predestined to suffer just as [Jesus](#) had suffered to save all the people.^[1] In the [United States](#), the romantic gothic makes an early appearance with [Washington Irving](#)'s *The Legend of Sleepy Hollow* (1819), followed from 1823 onwards by the fresh *Leatherstocking Tales* of [James Fenimore Cooper](#). They emphasized heroic simplicity and their fervent landscape descriptions of an already-exotic mythicized frontier peopled by "noble savages" was similar to the philosophical theory of [Jean-Jacques Rousseau](#), like Uncas in Cooper's *The Last of the Mohicans*, for example. There also are picturesque elements in Washington Irving's essays and travel books.

[Edgar Allan Poe](#)'s tales of the macabre and his balladic poetry were more influential in [France](#) than at home, but the romantic American novel is fully developed in [Nathaniel Hawthorne](#)'s atmosphere and melodrama. Later [Transcendentalist](#) writers such as [Henry David Thoreau](#) and [Ralph Waldo Emerson](#) still show elements of its influence, as does the romantic realism of [Walt Whitman](#). But by the 1880s, psychological and social realism was competing with romanticism. The poetry which Americans wrote and read was all romantic or heavily influenced by it until the rise of [modernism](#) in 1920s. This includes Poe and Hawthorne, as well as [Henry Wadsworth Longfellow](#). The poetry of [Emily Dickinson](#)—nearly unread in her own time—and [Herman Melville](#)'s novel *Moby-Dick* show the lingering influence of romantic themes, even as they evoked a more realistic and sometimes deeply psychological and philosophical view of the world. As elsewhere ([England](#), [Germany](#), [France](#)), American literary Romanticism had its counterpart in the visual

arts, most especially in the exaltation of untamed America found in the paintings of the Hudson River School.

In the twentieth century, Russian-American writer [Ayn Rand](#) called herself a romantic, and thought she might be a bridge from the Romantic era to an eventual esthetic rebirth of the movement. She wrote a book called *The Romantic Manifesto* and called her own approach “Romantic realism.”

Music

Romanticism and music

In general, the term “Romanticism” applied to music has come to mean the period roughly from the 1820s until 1910. The contemporary application of “romantic” to [music](#) did not coincide with modern categories. In 1810, [E.T.A. Hoffmann](#) called [Mozart](#), [Haydn](#), and [Beethoven](#) the three “Romantic Composers,” while Ludwig Spohr used the term “good Romantic style” to apply to parts of Beethoven's Fifth Symphony. By the early twentieth century, the sense that there had been a decisive break with the musical past led to the establishment of the nineteenth century as “The Romantic Era,” and as such it is referred to in the standard encyclopedias of music.

However the twentieth century general use of the term “romanticism” amongst music writers and historians did not evolve in the same way as it did amongst literary and visual arts theorists, so that there exists a disjunction between the concept of romanticism in music and in the other arts. Literary and visual art theorists tend to consider romanticism in terms of the alienation of the artist and the value of art for art's sake, concepts only gradually creeping into musicology, where there is still considerable confusion between “music of Romanticism” and the less definable, (perhaps somewhat redundant) category of “music of the Romantic Era.” The traditional discussion of the music of Romanticism includes elements, such as the growing use of folk music, which are more directly related to nationalism and are only indirectly related to Romanticism.

Some aspects of Romanticism are already present in eighteenth-century music. The heightened contrasts and emotions of Sturm und Drang seem a precursor of the [Gothic](#) in literature, or the sanguinary elements of some of the operas of the period of the [French Revolution](#). The libretti of Lorenzo da Ponte for [Mozart](#), and the eloquent music the latter wrote for them, convey a new sense of individuality and freedom. In Beethoven, perhaps the first incarnation since the [Renaissance](#) of the artist as hero, the concept of the Romantic musician begins to reveal itself—the man who, after all, morally challenged the Emperor [Napoleon](#) himself by striking him out from the dedication of the Symphony no. 3, the Eroica Symphony. In Beethoven's Fidelio he creates the apotheosis of the “rescue operas” which were another feature of French musical culture during the revolutionary period, in order to hymn the freedom which underlay the thinking of all radical artists in the years of hope after the Congress of Vienna.

Beethoven's use of tonal architecture in such a way as to allow significant expansion of musical forms and structures was immediately recognized as bringing a new dimension to music. The later piano music and string quartets, especially, showed the way to a completely unexplored musical universe. The writer, critic (and composer) Hoffmann was able to write of the supremacy of instrumental music over vocal music in expressiveness, a concept which

would previously have been regarded as absurd. Hoffmann himself, as a practitioner both of music and literature, encouraged the notion of music as 'programmatic' or telling a story, an idea which new audiences found attractive, however, irritating it was to some composers (for example, [Felix Mendelssohn](#)). New developments in instrumental technology in the early nineteenth century—iron frames for pianos, wound metal strings for string instruments—enabled louder dynamics, more varied tone colors, and the potential for sensational virtuosity. Such developments swelled the length of pieces, introduced programmatic titles, and created new genres such as the free standing overture or tone-poem, the piano fantasy, nocturne and rhapsody, and the virtuoso concerto, which became central to musical Romanticism. In opera a new Romantic atmosphere combining supernatural terror and melodramatic plot in a folkloric context was most successfully achieved by Carl Maria von Weber's *Der Freischütz* (1817, 1821). Enriched timbre and color marked the early orchestration of [Hector Berlioz](#) in France, and the grand operas of Giacomo Meyerbeer. Amongst the radical fringe of what became mockingly characterized (adopting Wagner's own words) as “artists of the future,” Liszt and Wagner each embodied the Romantic cult of the free, inspired, charismatic, perhaps ruthlessly unconventional individual artistic personality.

It is the period of 1815 to 1848, which must be regarded as the true age of Romanticism in music—the age of the last compositions of Beethoven (d. 1827) and [Schubert](#) (d. 1828), of the works of [Schumann](#) (d. 1856) and Chopin (d. 1849), of the early struggles of Berlioz and [Richard Wagner](#), of the great virtuosi such as [Paganini](#) (d. 1840), and the young [Franz Liszt](#) and Sigismond Thalberg. Now that people are able to listen to the work of Mendelssohn (d. 1847) stripped of the Biedermeier reputation unfairly attached to it, he can also be placed in this more appropriate context. After this period, with Chopin and Paganini dead, Liszt retired from the concert platform at a minor German court, Wagner effectively in exile until he obtained royal patronage in Bavaria, and Berlioz still struggling with the bourgeois liberalism which all but smothered radical artistic endeavor in Europe, Romanticism in music was surely past its prime—giving way, rather, to the period of musical romantics.

Music after 1848

Romantic nationalism—the argument that each nation had a unique individual quality that would be expressed in laws, customs, language, logic, and the arts—found an increasing following after 1848. Some of these ideals, linked to liberal politics, had been exemplified in Beethoven's antipathy to Napoleon's adoption of the title of emperor, and can be traced through to the musical patriotism of Schumann, Verdi, and others. For these composers and their successors the nation itself became a new and worthy theme of music. Some composers sought to produce or take part in a school of music for their own nations, in parallel with the establishment of national literature. Many composers would take inspiration from the poetic nationalism present in their homeland. This is evident in the writings of Richard Wagner, especially after 1850, but can be clearly seen in Russia, where the *Kuchka* (handful) of nationalist composers gathered around [Mily Balakirev](#), including [Modest Mussorgsky](#), [Alexander Borodin](#), and [Nikolai Rimsky-Korsakov](#). These composers were concerned about the enormous influence of German music in [Russia](#), and they largely resented the founding of the conservatoires in [Moscow](#) and Saint Petersburg by the brothers Nikolai and Anton Rubinstein, which they believed would be Trojan horses for German musical culture (however, Russian romantic music is today now closely identified with Anton's favorite pupil, [Pyotr Ilyich Tchaikovsky](#)).

This movement continued forward through into the twentieth century with composers such as [Jean Sibelius](#), although nationalism found a new musical expression in study of folk-song which was to be a key element in the development of [Béla Bartók](#), [Ralph Vaughan Williams](#), and others.

Labels like “Late Romantic” and “Post-Romantic” are sometimes used to link disparate composers of various nationalities, such as [Giacomo Puccini](#), [Jean Sibelius](#), [Richard Strauss](#), Samuel Barber and [Ralph Vaughan Williams](#), all of whom lived into the middle of the twentieth century. The conscious “[Modernisms](#)” of the twentieth century all found roots in reactions to Romanticism, increasingly seen as not [realistic](#) enough, even not brutal enough, for a new technological age. Yet [Arnold Schoenberg](#)'s later spare style had its roots in rich freely chromatic atonal music evolving from his late Romantic style works, for example the giant polychromatic orchestration of *Gurrelieder*; and [Igor Stravinsky](#)'s originally controversial ballets for [Sergei Diaghilev](#) seem to us far less controversial today when we can understand their descent from Rimsky-Korsakov.

Nationalism

One of Romanticism's key ideas and most enduring legacies is the assertion of nationalism, which became a central theme of Romantic art and political philosophy. From the earliest parts of the movement, with their focus on development of national languages and [folklore](#), and the importance of local customs and traditions, to the movements which would redraw the map of Europe and lead to calls for self-determination of nationalities.

Early Romantic nationalism was strongly inspired by [Rousseau](#), and by the ideas of [Johann Gottfried von Herder](#), who, in 1784, argued that geography formed the natural economy of a people and shaped their customs and society.

The nature of nationalism changed dramatically, however, after the [French Revolution](#), with the rise of [Napoleon](#), and the reactions in other nations. Napoleonic nationalism and republicanism were, at first, inspirational to movements in other nations: Self-determination and a consciousness of national unity were held to be two of the reasons why France was able to defeat other countries in battle. But as the French Republic became Napoleon's Empire, Napoleon became not the inspiration for nationalism, but the objection to it.

In [Prussia](#), the development of spiritual renewal as a means to engage in the struggle against Napoleon was argued by, among others, [Johann Gottlieb Fichte](#) a disciple of [Immanuel Kant](#). The word *Volkstum*, or nationality, was coined in German as part of this resistance to the now conquering emperor. Fichte expressed the unity of language and nation in his thirteenth address "To the German Nation" in 1806:

Those who speak the same language are joined to each other by a multitude of invisible bonds by nature herself, long before any human art begins; they understand each other and have the power of continuing to make themselves understood more and more clearly; they belong together and are by nature one and an inseparable whole. ...Only when each people, left to itself, develops and forms itself in accordance with its own peculiar quality, and only when in every people each individual develops himself in accordance with that common quality, as well as in accordance with his own peculiar quality—then, and then only, does the manifestation of divinity appear in its true mirror as it ought to be.

REALISM/NATURALISM I

Realism, sometimes called **Naturalism**, in [the arts](#) is generally the attempt to represent subject matter truthfully, without [artificiality](#) and avoiding [speculative fiction](#) and [supernatural elements](#). Realism has been prevalent in the arts at many periods, and can be in large part a matter of technique and training, and the avoidance of [stylization](#). In the visual arts, [illusionistic](#) realism is the accurate depiction of lifeforms, perspective, and the details of light and colour. But realist or naturalist works of art may, as well or instead of illusionist realism, be "realist" in their subject matter, and emphasize the mundane, ugly or sordid. This is typical of the 19th-century [Realist movement](#) that began in France in the 1850s, after the [1848 Revolution](#), and also [social realism](#), [regionalism](#), or [kitchen sink realism](#). The Realist painters rejected [Romanticism](#), which had come to dominate French literature and art, with roots in the late [18th century](#). There have been various movements invoking realism in the other arts, such as the [opera](#) style of [verismo](#), [literary realism](#), [theatrical realism](#). Broadly defined as "the faithful representation of reality", Realism as a literary movement is based on "[objective reality](#)." It focuses on showing everyday activities and life, primarily among the middle or lower class society, without romantic idealization or dramatization. It may be regarded as the general attempt to depict subjects as they are considered to exist in third person [objective reality](#), without embellishment or interpretation and "in accordance with secular, [empirical](#) rules." As such, the approach inherently implies a belief that such [reality](#) is [ontologically](#) independent of human kind's conceptual schemes, linguistic practices and beliefs, and thus can be known (or knowable) to the artist, who can in turn represent this 'reality' faithfully. While the preceding [Romantic era](#) was also a reaction against the values of the [Industrial Revolution](#), realism was in its turn a reaction to romanticism, and for this reason it is also commonly derogatorily referred as "traditional" "bourgeois realism". Some writers of [Victorian literature](#) produced works of realism. The rigidities, conventions, and other limitations of "bourgeois realism" prompted in their turn the revolt later labeled as [modernism](#); starting around 1900, the driving motive of modernist literature was the criticism of the 19th-century bourgeois social order and world view, which was countered with an antirationalist, antirealist and antibourgeois program.

The achievement of realism in the [theatre](#) was to direct attention to the social and psychological problems of ordinary life. In its dramas, people emerge as victims of forces larger than themselves, as individuals confronted with a rapidly accelerating world. These pioneering playwrights were unafraid to present their characters as ordinary, impotent, and unable to arrive at answers to their predicaments. This type of art represents what we see with our human eyes. [Anton Chekov](#), for instance, used camera works to reproduce an uninflected [slice of life](#), exposing the rhetorical and suasive character of realistic theatricality. Verismo was a post-Romantic operatic tradition associated with Italian composers such as [Pietro Mascagni](#), [Ruggero Leoncavallo](#), [Umberto Giordano](#), [Francesco Cilea](#) and [Giacomo Puccini](#). They sought to bring the naturalism of influential late 19th-century writers such as [Émile Zola](#), [Gustave Flaubert](#), and [Henrik Ibsen](#) into opera. This new style presented true-to-life drama that featured gritty and flawed lower-class protagonists while some described it as a heightened portrayal of a realistic event. Although an account considered [Giuseppe Verdi](#)'s [Luisa Miller](#) and [La Traviata](#) as the first stirrings of the verismo, peaked in the early 1900s. Verismo also reached Britain where pioneers included the [Victorian-era](#) theatrical partnership of the [dramatist W. S. Gilbert](#) and the composer [Arthur Sullivan](#).

The chief exponents of Realism were [Gustave Courbet](#), [Jean-François Millet](#), [Honoré Daumier](#), and [Jean-Baptiste-Camille Corot](#). [Jules Bastien-Lepage](#) is closely associated with the beginning of *Naturalism*, an artistic style that emerged from the later phase of the Realist movement and heralded the arrival of [Impressionism](#). Realists used unprettified detail depicting the existence of ordinary contemporary life, coinciding in the contemporaneous naturalist literature of [Émile Zola](#), [Honoré de Balzac](#) (**actually Balzac is romantic, realist, naturalist and modern as well** - JC), and [Gustave Flaubert](#).

Courbet was the leading proponent of Realism and he challenged the popular [history painting](#) that was favored at the state-sponsored art academy. His groundbreaking paintings [A Burial at Ornans](#) and [The Stonebreakers](#) depicted ordinary people from his native region. Both paintings were done on huge canvases that would typically be used for history paintings. Although Courbet's early works emulated the sophisticated manner of Old Masters such as [Rembrandt](#) and [Titian](#), after 1848 he adopted a boldly inelegant style inspired by [popular prints](#), shop signs, and other work of folk artisans. In *The Stonebreakers*, his first painting to create a controversy, Courbet eschewed the pastoral tradition of representing human subjects in harmony with nature. Rather, he depicted two men juxtaposed against a charmless, stony roadside. The concealment of their faces emphasizes the dehumanizing nature of their monotonous, repetitive labor.

The French Realist movement had stylistic and ideological equivalents in all other Western countries, developing somewhat later. The Realist movement in France was characterized by a spirit of rebellion against powerful official support for history painting. In countries where institutional support of history painting was less dominant, the transition from existing traditions of [genre painting](#) to Realism presented no such schism. An important Realist movement beyond France was the [Peredvizhniki](#) or *Wanderers* group in Russia who formed in the 1860s and organized exhibitions from 1871 included many realists such as genre artist [Vasily Perov](#), [landscape](#) artists [Ivan Shishkin](#), [Alexei Savrasov](#), and [Arkhip Kuindzhi](#), portraitist [Ivan Kramskoy](#), war artist [Vasily Vereshchagin](#), historical artist [Vasily Surikov](#) and, especially, [Ilya Repin](#), who is considered by many to be the most renowned Russian artist of the 19th century.

Courbet's influence was felt most strongly in Germany, where prominent realists included [Adolph Menzel](#), [Wilhelm Leibl](#), [Wilhelm Trübner](#), and [Max Liebermann](#). Leibl and several other young German painters met Courbet in 1869 when he visited Munich to exhibit his works and demonstrate his manner of painting from nature. In Italy the artists of the [Macchiaioli](#) group painted Realist scenes of rural and urban life. The [Hague School](#) were Realists in the Netherlands whose style and subject matter strongly influenced the early works of [Vincent van Gogh](#). In Britain artists such as the American [James Abbot McNeill Whistler](#), as well as English artists [Ford Madox Brown](#), [Hubert von Herkomer](#) and [Luke Fildes](#) had great success with realist paintings dealing with social issues and depictions of the "real" world.

In the United States, [Winslow Homer](#) and [Thomas Eakins](#) were important Realists and forerunners of the [Ashcan School](#), an early-20th-century art movement largely based in [New York City](#). The Ashcan School included such artists as [George Bellows](#) and [Robert Henri](#), and helped to define [American realism](#) in its tendency to depict the daily life of poorer members of society.

[Ian Watt](#) in *The Rise of the Novel* (1957) saw the novel as originating in the early 18th-century and he argued that the novel's 'novelty' was its 'formal realism': the idea 'that the novel is a full and authentic report of human experience'.^[43] His examples are [novelists](#) [Daniel Defoe](#), [Samuel Richardson](#) and [Henry Fielding](#). Watt argued that the novel's concern with

realistically described relations between ordinary individuals, ran parallel to the more general development of philosophical realism, middle-class economic individualism and Puritan individualism. He also claims that the form addressed the interests and capacities of the new middle-class reading public and the new book trade evolving in response to them. As tradesmen themselves, Defoe and Richardson had only to 'consult their own standards' to know that their work would appeal to a large audience.

Later in the 19th century [George Eliot's](#) (1819–1880) *Middlemarch: A Study of Provincial Life* (1871–72), described by [novelists Martin Amis](#) and [Julian Barnes](#) as the greatest novel in the English language, is a work of realism.^{[45][46]} Through the voices and opinions of different characters the reader becomes aware of important issues of the day, including the [Reform Bill](#) of 1832, the beginnings of the railways, and the state of contemporary medical science. *Middlemarch* also shows the deeply reactionary mindset within a settled community facing the prospect of what to many is unwelcome social, political and technological change.

While [George Gissing](#) (1857–1903), author of *New Grub Street* (1891), amongst many other works, has traditionally been viewed as a naturalist, mainly influenced by [Émile Zola](#),^[47] Jacob Korg has suggested that [George Eliot](#) was a greater influence.^[48]

Other novelists, such as [Arnold Bennett](#) (1867–1931) and [Anglo-Irishman George Moore](#) (1852–1933), consciously imitated the French realists.^[49] Bennett's most famous works are the *Clayhanger* trilogy (1910–18) and *The Old Wives' Tale* (1908). These books draw on his experience of life in the [Staffordshire Potteries](#), an industrial area encompassing the six towns that now make up [Stoke-on-Trent](#) in [Staffordshire](#), England. George Moore, whose most famous work is *Esther Waters* (1894), was also influenced by the [naturalism](#) of Zola.^[50]

[William Dean Howells](#) (1837–1920) was the first American author to bring a [realist aesthetic](#) to the literature of the United States.^[51] His stories of middle and upper class life set in the 1880s and 1890s are highly regarded among scholars of American fiction.^[citation needed] His most popular novel, *The Rise of Silas Lapham* (1885), depicts a man who, ironically, falls from materialistic fortune by his own mistakes. Other early American realists include [Samuel Clemens](#) (1835–1910), better known by his pen name of [Mark Twain](#), author of *The Adventures of Huckleberry Finn* (1884), [Stephen Crane](#) (1871–1900), and [Horatio Alger, Jr.](#) (1832–1899).

Twain's style, based on vigorous, realistic, colloquial American speech, gave American writers a new appreciation of their national voice. Twain was the first major author to come from the interior of the country, and he captured its distinctive, humorous slang and iconoclasm. For Twain and other American writers of the late 19th century, realism was not merely a literary technique: It was a way of speaking truth and exploding worn-out conventions. Crane was primarily a journalist who also wrote fiction, essays, poetry, and plays. Crane saw life at its rawest, in slums and on battlefields. His haunting [Civil War](#) novel, *The Red Badge of Courage*, was published to great acclaim in 1895, but he barely had time to bask in the attention before he died, at 28, having neglected his health. He has enjoyed continued success ever since—as a champion of the common man, a realist, and a symbolist. Crane's *Maggie: A Girl of the Streets* (1893), is one of the best, if not the earliest, naturalistic American novel. It is the harrowing story of a poor, sensitive young girl whose uneducated, alcoholic parents utterly fail her. In love, and eager to escape her violent home life, she allows herself to be seduced into living with a young man, who soon deserts her. When her self-righteous mother rejects her, Maggie becomes a prostitute to survive, but soon commits suicide out of despair. Crane's earthy subject matter and his objective, scientific style, devoid of moralizing, earmark Maggie as a naturalist work.^[54] [Horatio Alger Jr.](#) was a prolific 19th-century American [author](#) whose principal output was formulaic [rags-to-](#)

[riches](#) juvenile novels that followed the adventures of bootblacks, newsboys, peddlers, buskers, and other impoverished children in their rise from humble backgrounds to lives of respectable middle-class security and comfort. His novels, of which [Ragged Dick](#) is a typical example, were hugely popular in their day.

[Gustave Flaubert](#)'s (1821–1880) acclaimed novels [Madame Bovary](#) (1857), which reveals the tragic consequences of romanticism on the wife of a provincial doctor, and [Sentimental Education](#) (1869) represent perhaps the highest stages in the development of French realism. Flaubert also wrote other works in an entirely different style and his romanticism is apparent in the fantastic [The Temptation of Saint Anthony](#) (final version published 1874) and the baroque and exotic scenes of ancient [Carthage](#) in [Salammbô](#) (1862).

In [German literature](#), 19th-century realism developed under the name of "Poetic Realism" or "Bourgeois Realism," and major figures include [Theodor Fontane](#), [Gustav Freytag](#), [Gottfried Keller](#), [Wilhelm Raabe](#), [Adalbert Stifter](#), and [Theodor Storm](#).

Later realist writers included [Fyodor Dostoevsky](#), [Leo Tolstoy](#), [Benito Pérez Galdós](#), [Guy de Maupassant](#), [Anton Chekhov](#), [Leopoldo Alas \(Clarín\)](#), [José Maria de Eça de Queiroz](#), [Machado de Assis](#), [Henryk Sienkiewicz](#), [Bolesław Prus](#) and, in a sense, [Émile Zola](#), whose [naturalism](#) is often regarded as an offshoot of realism.

[Theatrical realism](#) was a general [movement](#) in [19th-century theatre](#) from the time period of 1870–1960 that developed a set of dramatic and theatrical [conventions](#) with the aim of bringing a greater fidelity of real life to texts and performances. Part of [a broader artistic movement](#), it shared many stylistic choices with [naturalism](#), including a focus on everyday (middle-class) drama, ordinary speech, and dull settings. Realism and naturalism diverge chiefly on the degree of choice that characters have: while naturalism believes in the overall strength of external forces over internal decisions, realism asserts the power of the individual to choose (see [A Doll's House](#)).

Russia's first professional playwright, [Aleksey Pisemsky](#), [Fyodor Dostoevsky](#) and [Leo Tolstoy](#) ([The Power of Darkness](#) (1886)), began a tradition of psychological realism in Russia which culminated with the establishment of the [Moscow Art Theatre](#) by [Constantin Stanislavski](#) and [Vladimir Nemirovich-Danchenko](#). Their ground-breaking productions of the plays of [Anton Chekhov](#) in turn influenced [Maxim Gorky](#) and [Mikhail Bulgakov](#). [Stanislavski](#) went on to develop his '[system](#)', a form of actor training that is particularly suited to psychological realism.

19th-century realism is closely connected to the development of modern drama, which, as Martin Harrison explains, "is usually said to have begun in the early 1870s" with the "middle-period" work of the Norwegian dramatist [Henrik Ibsen](#). Ibsen's realistic drama in prose has been "enormously influential."

In [opera](#), [verismo](#) refers to a post-Romantic Italian tradition that sought to incorporate the naturalism of [Émile Zola](#) and [Henrik Ibsen](#). It included realistic – sometimes sordid or violent – depictions of contemporary everyday life, especially the life of the lower classes.

In France in addition to [melodramas](#), popular and bourgeois theater in the mid-century turned to realism in the "well-made" bourgeois farces of [Eugène Marin Labiche](#) and the moral dramas of [Émile Augier](#).

In [opera](#), [verismo](#) ([Italian](#) for "realism", from *vero*, meaning "true") was a post-Romantic operatic tradition associated with Italian composers such as [Pietro Mascagni](#), [Ruggero Leoncavallo](#), [Umberto Giordano](#), [Francesco Cilea](#) and [Giacomo Puccini](#). *Verismo* as an operatic genre had its origins in an [Italian literary movement of the same name](#). This was in

turn related to the international literary movement of [naturalism](#) as practised by [Émile Zola](#) and others. Like [naturalism](#), the *verismo* literary movement sought to portray the world with greater [realism](#). In so doing, Italian *verismo* authors such as [Giovanni Verga](#) wrote about subject matter, such as the lives of the poor, that had not generally been seen as a fit subject for literature.

A short story by Verga called *Cavalleria rusticana* ([Italian](#) for "'Rustic Chivalry'"), then developed into a play by the same author, became the source for what is usually considered to be the first *verismo* opera: *Cavalleria rusticana* by Mascagni, which premiered on 17 May 1890 at the Teatro Costanzi in Rome. Thus begun, the operatic genre of *verismo* produced a handful of notable works such as [Pagliacci](#), which premiered at Teatro Dal Verme in Milan on 21 May 1892, and Puccini's *Tosca* (premiering at the Teatro Costanzi in Rome on 14 January 1900.) The genre peaked in the early 1900s, and lingered into the 1920s.

In terms of subject matter, generally "[v]erismo operas focused not on gods, mythological figures, or kings and queens, but on the average contemporary man and woman and their problems, generally of a sexual, romantic, or violent nature."^[2] However, three of the small handful of *verismo* operas still performed today take historical subjects: Puccini's *Tosca*, Giordano's [Andrea Chénier](#) and Cilea's [Adriana Lecouvreur](#). "Musically, verismo composers consciously strove for the integration of the opera's underlying drama with its music." These composers abandoned the "recitative and set-piece structure" of earlier Italian opera. Instead, the operas were "through-composed," with few breaks in a seamlessly integrated sung text. While *verismo* operas may contain arias that can be sung as stand-alone pieces, they are generally written to arise naturally from their dramatic surroundings, and their structure is variable, being based on text that usually does not follow a regular strophic format.

The most famous composers who created works in the *verismo* style were Giacomo Puccini, Pietro Mascagni, Ruggero Leoncavallo, Umberto Giordano and Francesco Cilea. There were, however, many other *veristi*: [Franco Alfano](#), [Alfredo Catalani](#), [Gustave Charpentier](#) (*Louise*), [Eugen d'Albert](#) (*Tiefland*), [Ignatz Waghalter](#) (*Der Teufelsweg* and *Jugend*), [Alberto Franchetti](#), [Franco Leoni](#), [Jules Massenet](#) (*La Navarraise*), [Licinio Refice](#), [Spyridon Samaras](#), [Ermanno Wolf-Ferrari](#) (*I gioielli della Madonna*), and [Riccardo Zandonai](#).

The term *verismo* can cause confusion. In addition to referring to operas written in a realistic style, the term may also be used more broadly to refer to the entire output of the composers of the [giovane scuola](#) ("young school"), the generation of composers who were active in Italy during the period that the *verismo* style was created.^{[5][6]} One author (Alan Mallach) has proposed the term "plebeian opera" to refer to operas that adhere to the contemporary and realistic subject matter for which the term *verismo* was originally coined. At the same time, Mallach questions the value of using a term such as *verismo*, which is supposedly descriptive of the subject and style of works, simply to identify an entire generation's music-dramatic output. For most of the composers associated with *verismo*, traditionally veristic subjects accounted for only some of their operas. For instance, Mascagni wrote a pastoral comedy (*L'amico Fritz*), a symbolist work set in Japan (*Iris*), and a couple of medieval romances (*Isabeau* and *Parisina*). These works are far from typical *verismo* subject matter, yet they are written in the same general musical style as his more quintessential veristic subjects. In addition, there is disagreement among musicologists as to which operas are *verismo* operas, and which are not. (Non-Italian operas are generally excluded). Giordano's [Andrea Chénier](#), Cilea's [Adriana Lecouvreur](#), Mascagni's *Cavalleria rusticana*, Leoncavallo's [Pagliacci](#), and Puccini's *Tosca* and *Il tabarro* are operas to which the term *verismo* is applied with little or no dispute. The term is sometimes also applied to Puccini's *Madama Butterfly* and *La fanciulla*

del West. Because only four *verismo* works not by Puccini continue to appear regularly on stage (the aforementioned *Cavalleria rusticana*, *Pagliacci*, *Andrea Chénier* and *Adriana Lecouvreur*), Puccini's contribution has had lasting significance to the genre.

Some authors have attempted to trace the origins of *verismo* opera to works that preceded *Cavalleria rusticana*, such as [Georges Bizet's *Carmen*](#), or [Giuseppe Verdi's *La traviata*](#). [Modest Moussorgsky's *Boris Godunov*](#) should not be ignored as an antecedent of *verismo*, especially because of Moussorgsky's focus on peasants, alongside princes and other aristocracy and church leaders, and his deliberate relating of the natural speech inflexions of the libretto to the rhythms of the sung music, different from, for example, Tchaikovsky's use of Pushkin's verse as a libretto.

Verismo ([Italian](#) for "realism", from *vero*, meaning "true") was an Italian literary movement which peaked between approximately 1875 and the early 1900s. [Giovanni Verga](#) and [Luigi Capuana](#) were its main exponents and the authors of a *verismo* manifesto. Capuana published the novel *Giacinta*, generally regarded as the "manifesto" of Italian *verismo*.^[1] Unlike French naturalism, which was based on [positivistic](#) ideals, Verga and Capuana rejected claims of the scientific nature and social usefulness of the movement.

Literary *verismo* was begun between around 1875 and 1895 by a group of writers – mostly novelists and playwrights. It did not constitute a formal school, but it was still based on specific principles. Its birth was influenced by a positivist climate which put absolute faith in science, empiricism and research and which developed from 1830 until the end of the 19th century. It was also clearly based on [naturalism](#), a literary movement which spread in France in the mid-19th century. Naturalist writers included [Émile Zola](#) and [Guy de Maupassant](#); for them, literature should objectively portray society and humanity like a photograph, strictly representing even the humblest social class in even its most unpleasant aspects, with the authors analysing real modern life like scientists.

Literary *verismo* developed in the fruitful urban cultural life of [Milan](#), which brought together intellectuals from different areas, but tended to portray central and southern Italian life – Sicily is described in the works of Verga, Capuana and [Federico de Roberto](#), Naples in works by [Matilde Serao](#) and [Salvatore di Giacomo](#), Sardinia in the works of [Grazia Deledda](#), Rome in the poems of [Cesare Pascarella](#) and Tuscany in works by [Renato Fucini](#).

The first author to theorize on Italian *verismo* was Capuana, who theorized the "poetry of the real" – thus Verga, at first part of the late Romantic literary movement (he was called the poet of the duchesses and had considerable success), later shifted to *verismo* with his [novellas](#) *Vita dei campi* and *Novelle rusticane* and finally with the first novel of the 'Ciclo dei Vinti' cycle, *I Malavoglia* in 1881. Sicilian-born, Verga lived in [Florence](#) during the same period as the *verismo* painters – 1865 to 1867 – and his best known story, "*Cavalleria rusticana*", contains certain verbal parallels to the effects achieved on canvas by the [Tuscan](#) landscape school of this era. "Espousing an approach that later put him in the camp of *verismo* (verism), his particular sentence structure and rhythm have some of the qualities of the *macchia*. Like the *Macchiaioli*, he was fascinated by topographical exactitude set in a nationalist framework"— to quote from [Albert Boime's](#) work, *The Art of the Macchia and the Risorgimento*. Verga and *verismo* differed from naturalism, however, in their desire to introduce the reader's point of view on the matter while not revealing the author's personal opinions.

Literary Naturalism traces back most directly to [Émile Zola's](#) "The Experimental Novel" (1880), which details Zola's concept of a naturalistic novel,^[4] which traces philosophically to [Auguste Comte's](#) [positivism](#), but also to physiologist [Claude Bernard](#) and historian [Hippolyte Taine](#). Comte had proposed a scientific method that "went beyond

empiricism, beyond the passive and detached observation of phenomena". The application of this method "called for a scientist to conduct controlled experiments that would either prove or disprove hypotheses regarding those phenomena". Zola took this scientific method and argued that naturalism in literature should be like controlled experiments in which the characters function as the phenomena. Naturalism began as a branch of [literary realism](#), and realism had favored fact, logic, and impersonality over the imaginative, symbolic, and supernatural. [Frank Norris](#), an American journalist and novelist, whose work was predominantly in the naturalist genre, "placed realism, romanticism, and naturalism in a dialectic, in which realism and romanticism were opposing forces", and naturalism was a mixture of the two. Norris's idea of naturalism differs from Zola's in that "it does not mention materialistic determinism or any other philosophic idea".

Apart from Zola and Norris' views on the movement, there are various literary critics who have their own separate views on the matter. As said by Paul Civello, these critics can be grouped into four broad, and often overlapping, groups: early theorists, history-of-idea critics, European influence critics, and recent theorists. The early theorists saw naturalism thematically and in terms of literary technique. The history-of-idea critics understood it as an expression of the central ideas to an era. The European influence critics viewed it in much the same way as Zola. For example, according to theorist Kornelije Kvas, naturalism presents "forms of human experience not spoken of before – the physiological aspect of human behavior, sexuality, poverty – as literary topics worthy of being dealt with." And recent theorists have either re-conceptualized naturalism as a narrative form, or denied its existence entirely.

Some say that naturalism is dead, or that it "may have never lived at all: even in the works of Émile Zola", its founder. "In 1900 an obituary entitled "The Passing of Naturalism" in *The Outlook* officially declared the literary movement deceased", and that Zola's attempt to create a scientific literature was a failure. This certainly wasn't the first time Zola's novel had been criticized however. After his novel [Thérèse Raquin](#) (1867) had been sharply criticized for both contents and language, in a foreword for its second edition (1868), in a mixture of pride and defiance, he wrote: "Le groupe d'écrivains naturalistes auquel j'ai l'honneur d'appartenir a assez de courage et d'activité pour produire des oeuvres fortes, portant en elles leur défense", which translates as: "The group of naturalist writers I have the honor to belong to have enough courage and activity to produce strong works, carrying within them their defense."

Naturalism was very popular in its time and was known in different literary traditions in [Western Europe](#). In the [Netherlands](#), there was Cooplandt, [Couperus](#), [Frederik van Eeden](#), etc. In [Germany](#), the most important naturalistic writer was [Theodor Fontane](#), who influenced [Thomas Mann](#). In Belgium, the most important writers were [Cyriel Buysse](#) and [Stijn Streuvels](#).

REALISM/NATURALISM II

Introduction

in the arts, the accurate, detailed, unembellished depiction of nature or of contemporary life. Realism rejects imaginative idealization in favour of a close observation of outward appearances. As such, realism in its broad sense has comprised many artistic currents in different civilizations. In the visual arts, for example, realism can be found in ancient Hellenistic Greek sculptures accurately portraying boxers and decrepit old women. The works of such 17th-century painters as Caravaggio, the Dutch genre painters, the Spanish painters José de Ribera, Diego Velázquez, and Francisco de Zurbarán, and the Le Nain brothers in France are realist in approach. The works of the 18th-century English novelists Daniel Defoe, Henry Fielding, and Tobias Smollett may also be called realistic.

Realism was not consciously adopted as an aesthetic program until the mid-19th century in France, however. Indeed, realism may be viewed as a major trend in French novels and paintings between 1850 and 1880. One of the first appearances of the term realism was in the *Mercur français du XIX^e siècle* in 1826, in which the word is used to describe a doctrine based not upon imitating past artistic achievements but upon the truthful and accurate depiction of the models that nature and contemporary life offer the artist. The French proponents of realism were agreed in their rejection of the artificiality of both the Classicism and Romanticism of the academies and on the necessity for contemporaneity in an effective work of art. They attempted to portray the lives, appearances, problems, customs, and mores of the middle and lower classes, of the unexceptional, the ordinary, the humble, and the unadorned. Indeed, they conscientiously set themselves to reproducing all the hitherto-ignored aspects of contemporary life and society—its mental attitudes, physical settings, and material conditions.

Realism was stimulated by several intellectual developments in the first half of the 19th century. Among these were the anti-Romantic movement in Germany, with its emphasis on the common man as an artistic subject; Auguste Comte's Positivist philosophy, in which sociology's importance as the scientific study of society was emphasized; the rise of professional journalism, with its accurate and dispassionate recording of current events; and the development of photography, with its capability of mechanically reproducing visual appearances with extreme accuracy. All these developments stimulated interest in accurately recording contemporary life and society.

Painting

[Gustave Courbet](#) was the first artist to self-consciously proclaim and practice the realist aesthetic. After his huge canvas “The Studio” (1854–55; Louvre, Paris) was rejected by the Exposition Universelle of 1855, the artist displayed it and other works under the label “Realism, G. Courbet” in a specially constructed pavilion. Courbet was strongly opposed to idealization in his art, and he urged other artists to instead make the commonplace and contemporary the focus of their art. He viewed the frank portrayal of scenes from everyday life as a truly democratic art. Such paintings as his “[Burial at Ornans](#)” (1849; Louvre) and the “[Stone Breakers](#)” (1849; private collection, Milan), which he had exhibited in the Salon of 1850–51, had already shocked the public and critics by the frank and unadorned factuality with which they depicted humble peasants and labourers. The fact that Courbet did not glorify his peasants but presented them boldly and starkly created a violent reaction in the art world.

The style and subject matter of Courbet's work were built on ground already broken by the painters of the [Barbizon School](#). Théodore Rousseau, Charles-François Daubigny, Jean-François Millet, and others in the early 1830s settled in the French village of Barbizon with the aim of faithfully reproducing the local character of the landscape. Though each Barbizon painter had his own style and specific interests, they all emphasized in their works the simple and ordinary rather than the grandiose and monumental aspects of nature. They turned away from melodramatic picturesqueness and painted solid, detailed forms that were the result of close observation. In such works as "The Winnower" (1848), [Millet](#) was one of the first artists to portray peasant labourers with a grandeur and monumentality hitherto reserved for more important persons.

Another major French artist often associated with the realist tradition, Honoré [Daumier](#), drew satirical caricatures of French society and politics. He found his working-class heroes and heroines and his villainous lawyers (see [photograph](#)) and politicians in the slums and streets of Paris. Like Courbet he was an ardent democrat, and he used his skill as a caricaturist directly in the service of political aims. Daumier used energetic linear style, boldly accentuated realistic detail, and an almost sculptural treatment of form to criticize the immorality and ugliness he saw in French society.

Pictorial realism outside of France was perhaps best-represented in the 19th century in the United States. There, Winslow Homer's powerful and expressive paintings of marine subjects and Thomas Eakins' portraits, boating scenes, and other works are frank, unsentimental, and acutely observed records of contemporary life.

Realism was a distinct current in 20th-century art and usually stemmed either from artists' desire to present more honest, searching, and unidealized views of everyday life or from their attempts to use art as a vehicle for social and political criticism. The rough, sketchy, almost journalistic scenes of seamy urban life by the group of American painters known as [The Eight](#) fall into the former category. The German art movement known as the [Neue Sachlichkeit](#) (New Objectivity), on the other hand, worked in a realist style to express the cynicism and disillusionment of the post-World War I period in Germany. The Depression-era movement known as [Social Realism](#) adopted a similarly harsh and direct realism in its depictions of the injustices and evils of American society during that period.

[Socialist Realism](#), which was the officially sponsored Marxist aesthetic in the Soviet Union from the early 1930s until that country's dissolution in 1991, actually had little to do with realism, though it purported to be a faithful and objective mirror of life. Its "truthfulness" was required to serve the ideology and the propagandistic needs of the state. Socialist Realism generally used techniques of naturalistic idealization to create portraits of dauntless workers and engineers who were strikingly alike in both their heroic positivism and their lack of lifelike credibility.

The [novel](#)

In [literature](#), the novelist [Honoré de Balzac](#) was the chief precursor of [realism](#), given his attempt to create a detailed, encyclopaedic portrait of the whole range of French society in his [La comédie humaine](#). But a conscious program of literary realism did not appear until the 1850s, and then it was inspired by the painter Courbet's aesthetic stance. The French journalist [Champfleury](#), who had popularized Courbet's painting style, transferred the latter's theories to literature in *Le Réalisme* (1857). In this influential critical manifesto Champfleury asserted

that the hero of a novel should be an ordinary man rather than an exceptional figure. In 1857 [Gustave Flaubert's](#) novel *[Madame Bovary](#)* was published. This unrelentingly objective portrait of the bourgeois mentality, with its examination of every psychological nuance of an unhappy and adulterous middle-class wife, was both the principal masterpiece of realism and the work that established the movement on the European scene. Flaubert's *[L'Éducation sentimentale](#)* (1870), with its presentation of a vast panorama of France under Louis-Philippe, was another principal realist work. The brothers [Jules](#) and Edmond [Goncourt](#) were also important realist writers. In their masterpiece, *[Germinie Lacerteux](#)* (1864), and in other works they covered a variety of social and occupational milieus and frankly described social relations among both the upper and the lower classes.

Realist tenets entered the mainstream of European literature during the 1860s and '70s. Realism's emphasis on detachment, objectivity, and accurate observation, its lucid but restrained criticism of social environment and mores, and the humane understanding that underlay its moral judgments became an integral part of the fabric of the modern novel during the height of that form's development. Charles Dickens, Anthony Trollope, and George Eliot in England, Ivan Turgenev, Leo Tolstoy, and Fyodor Dostoyevsky in Russia, William Dean Howells in the United States, and Gottfried Keller and the early Thomas Mann in Germany all incorporated realist elements in their novels. A significant offshoot of literary realism was [Naturalism](#) (*q.v.*), a late 19th- and early 20th-century movement that aimed at an even more faithful and unselective representation of reality. The French novelist [Émile Zola](#) was the leading exponent of Naturalism.

[Theatre](#)

Realism in the theatre was a general movement in the later 19th century that steered theatrical texts and performances toward greater fidelity to real life. The realist dramatists Henrik Ibsen and August Strindberg in Scandinavia and Anton Chekhov and Maksim Gorky in Russia, among others, rejected the complex and artificial plotting of the well-made play and instead treated themes and conflicts belonging to a real, contemporary society. They dispensed with poetic language and extravagant diction, instead using action and dialogue that looked and sounded like everyday behaviour and speech. Realism had no use for the declamatory delivery and the overblown virtuosity of past acting and replaced this style with one demanding natural movements, gestures, and speech. Realist drama also used stage settings that accurately reproduced ordinary surroundings.

[Motion pictures](#)

Like 20th-century drama and literature, the art of cinema has depended heavily on the 19th-century realist tradition for thematic material and often for structure. The nature of film, however, has lent itself to a kind of realism halfway between life and fiction. Such films, called [Neorealism](#) in Italy and sometimes *[cinéma vérité](#)* in France, tried to achieve a documentary-like objectivity by using non-actors in leading roles and incorporating segments of actual documentary footage into the story. The post-World War II films of [Roberto Rossellini](#) (such as *Open City* and *Paisan*) and Vittorio De Sica (*The Bicycle Thief*) best exemplify this genre.

Naturalism

Naturalism in literature and the visual arts, late 19th- and early 20th-century movement that was inspired by adaptation of the principles and methods of natural science, especially the Darwinian view of nature, to [literature](#) and art. In literature it extended the tradition of [realism](#), aiming at an even more faithful, unselective representation of reality, a veritable “slice of life,” presented without moral judgment. Naturalism differed from realism in its assumption of scientific determinism, which led naturalistic authors to emphasize man's accidental, physiological nature rather than his moral or rational qualities. Individual characters were seen as helpless products of heredity and environment, motivated by strong instinctual drives from within and harassed by social and economic pressures from without. As such, they had little will or responsibility for their fates, and the prognosis for their “cases” was pessimistic at the outset.

Naturalism originated in France and had its direct theoretical basis in the critical approach of Hippolyte [Taine](#), who announced in his introduction to *Histoire de la littérature anglaise* (1863–64; [History of English Literature](#)) that “there is a cause for ambition, for courage, for truth, as there is for digestion, for muscular movement, for animal heat. Vice and virtue are products, like vitriol and sugar.” Though the first “scientific” novel was the Goncourt brothers' case history of a servant girl, *Germinie Lacerteux* (1864), the leading exponent of naturalism was [Émile Zola](#), whose essay “Le Roman expérimental” (1880; “The Experimental [Novel](#)”) became the literary manifesto of the school. According to Zola, the novelist was no longer to be a mere observer, content to record phenomena, but a detached experimenter who subjects his characters and their passions to a series of tests and who works with emotional and social facts as a chemist works with matter. Upon Zola's example the naturalistic style became widespread and affected to varying degrees most of the major writers of the period. [Guy de Maupassant's](#) popular story “The [Necklace](#)” heralds the introduction of a character who is to be treated like a specimen under a microscope. The early works of Joris-Karl Huysmans, of the German dramatist Gerhart Hauptmann, and of the Portuguese novelist José Maria Eça de Queirós were based on the precepts of naturalism.

The [Théâtre Libre](#) was founded in Paris in 1887 by André Antoine and the [Freie Bühne](#) of Berlin in 1889 by Otto Brahm to present plays dealing with the new themes of naturalism in a naturalistic style with naturalistic staging. A parallel development occurred in the visual arts. [Painters](#), following the lead of the realist painter [Gustave Courbet](#), were choosing themes from contemporary life. Many of them deserted the studio for the open air, finding subjects among the peasants and tradesmen in the street and capturing them as they found them, unpremeditated and unposed. One result of this approach was that their finished canvases had the freshness and immediacy of sketches. Zola, the spokesman for literary naturalism, was also the first to champion Édouard Manet and the Impressionists.

Despite their claim to complete objectivity, the literary naturalists were handicapped by certain biases inherent in their deterministic theories. Though they faithfully reflected nature, it was always a nature “red in tooth and claw.” Their views on heredity gave them a predilection for simple characters dominated by strong, elemental passions. Their views on the overpowering effects of environment led them to select for subjects the most oppressive environments—the slums or the underworld—and they documented these milieus, often in dreary and sordid detail. The drab palette of [Vincent van Gogh's](#) naturalistic painting “The [Potato Eaters](#)” (1885; Rijksmuseum, Amsterdam) was the palette of literary naturalism.

Finally, they were unable to suppress an element of romantic protest against the social conditions they described.

As a historical movement, naturalism per se was short-lived; but it contributed to art an enrichment of realism, new areas of subject matter, and a largeness and formlessness that was indeed closer to life than to art. Its multiplicity of impressions conveyed the sense of a world in constant flux, inevitably junglelike, because it teemed with interdependent lives.

In [American literature](#), naturalism had a delayed blooming in the work of Hamlin Garland, Stephen Crane, Frank Norris, and Jack London; and it reached its peak in the art of [Theodore Dreiser](#). [James T. Farrell's](#) "[Studs Lonigan](#)" trilogy (1932–35) is one of the latest expressions of true naturalism.

REALISM/NATURALISM III

At the most elementary level, realism may be equated with verisimilitude or the approximation of truth. A mimetic artist, the literary realist claims to mirror or represent the world as it objectively appears. Naturalism may be given a trio of thumbnail definitions: pessimistic determinism, stark realism, and realism plus Darwin.

Realism As a Literary Theory

William Dean Howells, the most prominent American advocate of realism in the arts, urged readers to apply this singular test to any work of the imagination: "Is it true?—true to the motives, the impulses, the principles that shape the life of actual men and women?" In *Criticism and Fiction* (1891), Howells proposed an evolutionary literary model, with realism superior to romance just as birds are a more sophisticated species than lizards. Although Howells admired the writings of Nathaniel Hawthorne, he nevertheless believed Hawthorne's fiction occupied a lower rung on the evolutionary scale of literature than realism, or "the truthful treatment of material." "Let fiction cease to lie about life," he declared. "Let it portray man and women as they are, actuated by the motives and the passions in the measure we all know;...let it not put on fine literary airs; let it speak the dialect, the language, that most Americans know—the language of unaffected people everywhere." Howells was also able to stretch his definition of realism to cover such wildly different works as Mark Twain's humorous sketches and his dystopian *A Connecticut Yankee in King Arthur's Court* (1889).

In all, according to Howells, realism insisted "that fidelity to experience and probability of motive are essential conditions of a great imaginative literature." Thus, it resisted or opposed allegory and romance, especially sentimental romance. Realistic fiction portrayed distinctive personalities and rounded or credible characters, developed linear plots, and depicted recognizable settings. (As the modern writer John Barth has noted, "God was not a bad novelist, except He was a realist.") Devaluing anecdote or story, it emphasized the importance of individual character. Sometimes claiming to portray a "slice of life" or "transcript of life," the realists often found their subjects amid the details and surfaces of middle-class, bourgeois experience. They shared with such pragmatists as William James a philosophical attitude, a method of "radical empiricism" that affirmed free will and equated motive and behavior.

Standard literary histories have long dated the start of the realistic period in American literature at the end of the Civil War. Ostensibly, the pioneering works of realism were such volumes as John W. De Forest's novel, *Miss Ravenel's Conversion from Secession to Loyalty* (1867), and Mark Twain's satirical travelogues, *The Innocents Abroad* (1869) and *Roughing It* (1872). With the critical recovery in the late twentieth century of women's writings from the mid-1800s, however, the beginning of the realistic period has been pushed back more than an entire generation to such texts as Caroline M. Kirkland's *A New Home, Who'll Follow? or, Glimpses of Western Life* (1839) and Rebecca Harding Davis's *Life in the Iron-Mills* (1861).

In the late twentieth century, too, proponents of poststructuralism assailed the notion of literary realism. How can any literary text replicate or imitate "reality" (whatever that may be?), they ask. Language creates the only reality we know. Any attempt to define the term absolutely is not only presumptuous but doomed. Roland Barthes, for example, has argued that so-called realistic texts are no more based on "reality" than other forms of writing and has indicted as simplistic the epistemological assumptions of those who purport to be realists. In effect, he suggested, the realists merely took reality for granted. Admittedly, it is easier to define what realism was not than what it actually was. (Mary E. Wilkins Freeman told an interviewer in 1890 that she "didn't even know" she was "a realist until [some reviewers] wrote and told me.") Such scholars as Donald Pizer, however, have attempted to recuperate or rehabilitate the terms "realism" and "naturalism." As Pizer writes in *The Cambridge Companion to American Realism and Naturalism* (1995), "Whatever the philosophical, moral, and social baggage that encumbers them, they will have to do." In a functional sense, the terms obviously meant something. What qualities in the writings of the self-described realists seemed innovative? Or, put another way, what was it about those writings that inspired such fierce opposition during the so-called Realism War of the 1880s and 1890s? Influenced by such European writers as Zola, Tolstoy, Guy de Maupassant, and Dostoyevsky, the realists certainly believed they were championing a new brand of fiction.

Howells and the Realism War

While he neither inspired nor founded a school or movement of realists, Howells was at the center of American literary culture for over fifty years. He was the most influential American novelist, editor, and critic of his generation. As editor of the *Atlantic Monthly* for over fifteen years and later as the contributor of the "Editor's Easy Chair" series to *Harper's Monthly*, he befriended and promoted such realists as Henry James, Mark Twain, Mary Freeman, John De Forest, Sarah Orne Jewett, Frank Norris, Charles Chesnutt, Paul Laurence Dunbar, Hamlin Garland, Edith Wharton, Charlotte Perkins Gilman, Abraham Cahan, and Stephen Crane. For Howells, realism was a democratic movement in the arts, a focus on the normal and ordinary, distinct from romanticism or "romanticistic" fiction with its emphasis on more ideal, bizarre, sentimental, fantastic, exotic, melodramatic, or aristocratic topics. *In life*, he declared, the realist "finds nothing insignificant." In *The Rise of Silas Lapham* (1885), for example, Howells remarked on how "a great many novels" fail "as representations of life." The Reverend Mr. Sewell, a Howells spokesman, refers derisively to the "mischief" done by such popular fiction. "The novels might be the greatest possible good to us if they painted life as it is, and human feelings in their true proportion and relation, but for the most part they have been and are altogether noxious." The readers of such slop commit *psychical suicide*. The novelist "who could interpret the common feelings of commonplace people," another character in the novel avers, "would have the answer to 'the riddle of the painful earth' on his tongue." In *The Minister's Charge* (1887), which again features the character of Sewell, Howells realistically rewrote the sentimental juvenile fiction of such authors as Alger and

Oliver Optic. Similarly, Basil March, another Howells persona, opines in *A Hazard of New Fortunes* (1890) that

I believe that this popular demand for the matrimony of others comes from our novel-reading. We get to thinking that there is no other happiness or good fortune in life except marriage, and it's offered in fiction as the highest premium for virtue, courage, beauty, learning, and saving human life. We all know it isn't. We know that in reality, marriage is dog-cheap.

Howells was profoundly influenced in the late 1880s by Tolstoy's ideas about nonviolence and economic equality. In 1887 he risked his reputation and livelihood by publicly repudiating the guilty verdicts brought against the Haymarket Square anarchists and what he called the "civic murder" of four of them. His novel *Annie Kilburn* (1889) glossed Tolstoy's *Anna Karenina* (1875–1877), as the identical initials of their respective heroines suggest. As a result, he became an easy target for some parochial critics. The so-called Realism War, waged in reviews and magazines throughout the 1880s and 1890s, pitted the realists, especially Howells, against editors and popular writers who espoused the sentimental or sensational brands of literary romance. For example, the genteel critic Hamilton Wright Mabie alleged in his review of Howells's *Silas Lapham* that realism was nothing more or less than "practical atheism applied to art." These skirmishes often smacked of politics; the controversy over realism began at the height of the debate over the fate of the Haymarket Square anarchists. Also, the war was fought largely along regional lines; the realists were largely easterners or transplanted westerners living in the East, whereas the most outspoken opponents of realism (including Maurice Thompson, author of *Hoosier Mosaics* [1875] and *Alice of Old Vincennes* [1901]; the poet James Whitcomb Riley; and Lew Wallace, author of the historical romances *The Fair God* [1873] and *Ben-Hur* [1880]) often resided in the Old South or the Old Northwest. The Association of Western Writers (later the Western Association of Writers), played a crucial role in the war by offering Thompson, its first president, a forum for his attacks. Over a period of some twenty years, beginning in 1887, Thompson repeatedly complained that Howells had foisted the "raw, nauseous realism of the Russians and the Zola school of France" onto a reading public hungry for "American books of a wholesome and patriotic kind." Realism was little more than decadent "worship of the vulgar, the commonplace and the insignificant." "Some years ago, before there had been so much said about realism in literature," Thompson declared in 1889, "I predicted that realism would in due time be found to mean materialism, socialism, and, at last, anarchy....The progression will be: Realism, sensualism, materialism, socialism, communism, nihilism, absolute anarchy." Thompson and Howells's other opponents often compared realism to mere photography, or worse, cheap Kodak snapshots, lacking the artistry of the painter.

The war, in the end, took its toll on Howells's reputation. By the early twentieth century his brand of realism seemed dull and timid, a movement within the spurned genteel tradition in American letters. Ambrose Bierce defined realism in his *Devil's Dictionary* (1906) as "the art of depicting nature as it is seen by toads." In 1915 Howells wrote James that he had become "comparatively a dead cult with my statues cast down and the grass growing over them in the pale moonlight." Sinclair Lewis famously, or infamously, attacked him by name in his Nobel Prize acceptance speech in 1930: "Mr. Howells was one of the gentlest, sweetest, and most honest of men, but he had the code of a pious old maid whose greatest delight was to have tea at the vicarage."

In addition to Howells, many other novelists of the period defended the aesthetics of realism. In the preface to his novel *The Mammon of Unrighteousness* (1891), for example, H. H. Boyesen asserted that he had "disregarded all romantic traditions, and simply asked myself in

every instance, not whether it was amusing, but whether it was to the logic of reality—true in color and tone to the American sky, the American soil, the American character.” Henry James implicitly compared realistic fiction to painting in his essay, *The Art of Fiction* (1884). According to James, the novel should exude an “air of reality,” which is its “supreme virtue,” by “its immense and exquisite correspondence with life....The only reason for the existence of a novel is that it does attempt to represent life. When it relinquishes this attempt, the same attempt that we see on the canvas of a painter, it will have arrived at a very strange pass.” James’s brand of realism was a form of literary portraiture, as may be inferred from several of his titles (including *Portraits of Places* [1883], *The Portrait of a Lady* [1881], *The American Scene* [1907], and *Partial Portraits* [1888]). And in his facetious essay, *Fenimore Cooper’s Literary Offenses* (1895), Mark Twain listed “nineteen rules governing literary art.” Among them: “when the personages of a tale deal in conversation, the talk shall sound like human talk, and be talk such as human beings would be likely to talk in the given circumstances,” and “the personages of a tale shall confine themselves to possibilities and let miracles alone.” Cooper’s romance, *The Deerslayer* (1841), however, was “simply a literary *delirium tremens*.” Similarly, Stephen Crane reminisced that he had

developed all alone a little creed of art which I thought was a good one. Later I discovered that my creed was identical with the one of Howells and Garland, and in this way I became involved in the beautiful war between those who say that...we are the most successful in art when we approach the nearest to nature and truth, and those who...don’t say much.

Realism As Literary Practice

The literary landscape in the late nineteenth century featured no organized or monolithic group of realists. As Elizabeth Ammons has suggested, “the most important characteristic of American realism was its racial, ethnic, sexual, and cultural range.” There were, in effect, many “realities” or varieties of realism, including local color or regionalism (for example, the tales of Twain, Jewett, Freeman, Chopin, Bret Harte, James Lane Allen, Rose Terry Cooke, Joel Chandler Harris, Edward Eggleston, and Joseph Kirkland), psychological realism (James, Gilman, Sherwood Anderson), critical realism (Howells), and “veritism” (Garland’s term for realism true to the perceptions of the writer, a protorealism or an overtly politicized form of realism). The various realists did not necessarily appreciate all contributions to the form; Mark Twain wrote Howells that he “would rather be damned to John Bunyan’s heaven than read” James’s *The Bostonians* (1886). Such Native-American storytellers as Zitkala-Sa and Sarah Winnemucca, the Jewish-American writer Anzia Yezierska, the Asian-American author Sui Sin Far, and such African Americans as W. E. B. Du Bois and Charles Chesnutt were also regarded as realists, though obviously their experiences were distinctly different from those of the canonical Anglo-American writers. With their interest in local customs, mores, and dialects, local colorists were local historians in a sense. They identified themselves with the communities they chronicled. Their tales often took the form of the anecdote or character sketch (Harte’s “Tennessee’s Partner” [1869], Freeman’s “A New England Nun” [1891], and Harriet Beecher Stowe’s *Oldtown Folks* [1869], for example). Both Eggleston, the author of *The Hoosier Schoolmaster* (1871), and Kirkland, the author of *Zury: The Meanest Man in Spring County* (1887), turned formally late in their careers to writing local history. Eggleston was even elected president of the American Historical Association in 1900. The difference between literary romance and realism, at least of the local color variety, may be underscored by comparing two of Twain’s novels, *The Adventures of Tom Sawyer* (1876) and *Adventures of Huckleberry Finn* (1884). As Leslie Fiedler has suggested in *Love and Death in the American Novel* (rev. ed., 1966), the two novels retell essentially the same story, the first nostalgically and sentimentally through a soft lens and the second more rigorously, honestly,

and truthfully. The two novels are “alternative versions of the same themes” or “the same dream dreamed twice over, the second time as nightmare.” *Huckleberry Finn* is a true book,” Fiedler adds, but *Tom Sawyer* only ‘mostly a true book’ with ‘some stretchers,’ one of which is its ending.” The contrast is perhaps most apparent in the respective depictions of Twain’s hometown of Hannibal, Missouri. The bucolic St. Petersburg of *Tom Sawyer* and the opening chapters of *Huckleberry Finn* are an idealized representation of Hannibal, which is more realistically rendered in the latter work as Bricksville, the dirty little river town where hogs root in the muddy streets and the town drunk is killed in cold blood. Though his masterwork is rarely regarded as an exercise in local color, Twain also carefully recreated in *Huckleberry Finn* the several distinct dialects spoken by his characters. “The shadings have not been done in a hap-hazard fashion, or by guess-work,” he insisted in an explanatory note, “but painstakingly, and with the trustworthy guidance and support of personal familiarity with those several forms of speech.” In the Uncle Julius dialect tales collected in *The Conjure Woman* (1899), moreover, Chesnutt satirized Harris’s popular Uncle Remus tales and the plantation tradition they evoked. Local colorists seemed drawn to compiling short story cycles. In addition to Chesnutt’s *The Conjure Woman*, examples include Jewett’s *The Country of the Pointed Firs* (1896), Garland’s *Main-Travelled Roads* (1891), George Washington Cable’s *Old Creole Days* (1879), and Kate Chopin’s *Bayou Folk* (1894).

James’s psychological realism was a more aestheticized form of fiction. By experimenting with refined narrators or “centers of consciousness,” James presumed to recreate the play of their imaginations—in effect, to adapt his brother William’s *Principles of Psychology* (1890) to the fictional page. Chapter 42 of *The Portrait of a Lady* (1881), in which Isabel Archer contemplates the state of her marriage to Gilbert Osmond, anticipated the modern stream of consciousness novels of Gertrude Stein, Virginia Woolf, James Joyce, and William Faulkner. In *The Turn of the Screw* (1898), Henry James recounted a ghost story from the point of view of a psychopathological narrator. Particularly in some of his later tales (including *The Beast in the Jungle* [1903]), he described almost no physical behavior, a technique that led to the joking complaint that James “chewed more than he bit off.”

Very few American poets of the period between 1865 and 1915 presumed to be realists in their verse. The major poets—such as Longfellow, Riley, E. C. Stedman, Edwin Markham, Sidney Lanier, Ina Coolbrith, Thomas Wentworth Higginson, William Vaughan Moody, and Thomas Bailey Aldrich—were heirs of the sentimental tradition of British romanticism. Howells and other realists wrote poetry, to be sure, but most of it was utterly conventional and forgettable. Twain parodied sentimental verse in both *Tom Sawyer* and *Huckleberry Finn*, as in Emmeline Grangerford’s funeral poetry, but his own poetry was unremarkable. The African-American poet Paul Laurence Dunbar published dialect verse, much as Chesnutt wrote dialect stories, but he was an exception to the rule. Both Crane and Edwin Arlington Robinson penned a brand of naturalistic poetry around the turn of the century. Crane’s verse was enigmatic and bitterly ironic, and Robinson wrote such dramatic monologues as *Richard Cory* and *Miniver Cheevy* and the sonnets *Zola* and *Annandale*, the latter a defense of euthanasia.

The forte of the realists, however, was topical fiction. Even James’s stories on the international theme (for example, *Daisy Miller* [1879], *The American* [1877], and *The Ambassadors* [1903]) exploited the growth in international travel during the last third of the nineteenth century. (With the development of the steamship, passenger departures from the United States for Europe increased from around 20,000 in 1860 to around 110,000 in 1900.) More to the point, realists often protested conditions, pilloried hypocrisy, or proposed social reforms. Few topics escaped their notice. It was, as Mark Twain and Charles Dudley Warner

averred in their collaborative novel, a “gilded age,” not a Golden Age. Among the topics that concerned them were political corruption (Twain and Warner's *The Gilded Age* [1873], Henry Adams's *Democracy* [1880], and Garland's *A Spoil of Office* [1892]); immigration and integration (Cahan's *The Rise of David Levinsky* [1917], Sui Sin Far's *Mrs. Spring Fragrance* [1912], and Yeziarska's *Hungry Hearts* [1920]); marriage and divorce (Howells's *A Modern Instance* [1882] and Wharton's *The Age of Innocence* [1920]); small-town parochialism or “the revolt from the village” (E. W. Howe's *The Story of a Country Town* [1883], Edgar Lee Masters's *Spoon River Anthology* [1915], Robinson's *The Children of the Night* [1897], Wharton's *Ethan Frome* [1911], Sinclair Lewis's *Main Street* [1920], and Sherwood Anderson's *Winesburg, Ohio* [1919]); military imperialism during the Spanish-American War (Howells's “Editha” [1905] and Twain's *The War Prayer* [1916]); lynchings (Twain's “The United States of Lyncherdom” [1923] and Walter V. T. Clark's *The Ox-Bow Incident* [1940]); urban squalor, prostitution, and the “fallen woman” or “the shame of the cities” (Crane's *Maggie: A Girl of the Streets* [1893]); economic injustice (James's *The Princess Casamassima* [1886], Howells's *A Hazard of New Fortunes* [1890], and Twain's *A Connecticut Yankee in King Arthur's Court*); alcoholism (Howells's *The Landlord at Lion's Head* [1897] and Norris's *McTeague* [1899]); and euthanasia (Wharton's *The Fruit of the Tree* [1907]). Such texts complemented some of the social essays of the period, including Henry Demarest Lloyd's *Wealth against Commonwealth* (1894), Thorstein Veblen's *The Theory of the Leisure Class* (1899), and Jacob Riis's *How the Other Half Lives* (1890). In *Under the Lion's Paw* (1889), Garland specifically endorsed the “single tax” on “unearned increment” advocated by Henry George in his book, *Progress and Poverty* (1879).

Other narratives were devoted to the “woman question” and the contemporary feminist movement, including Chopin's *The Awakening* (1899) and “The Story of an Hour” (1894), James's *The Bostonians*, Howells's *Dr. Breen's Practice* (1881), Freeman's “A New England Nun” (1891) and *The Revolt of ‘Mother’* (1890), and Gilman's *The Yellow Wall-Paper* (1892). The latter tale specifically critiqued the rest cure for women suffering from hysteria or neurasthenia prescribed by S. Weir Mitchell, a Philadelphia nerve specialist and part-time novelist.

Realistic fiction published during the final decade of the nineteenth century was often a race-inflected fiction as well. The 1890s, punctuated by the Chinese Exclusionary Act (1892) and the *Plessy v. Ferguson* decision of the Supreme Court (1896) sanctioning “separate but equal” public facilities for blacks and whites, were the nadir of race relations in the United States. The public debate about it notwithstanding, Twain's *Adventures of Huckleberry Finn* was not a race novel, certainly not in the same sense as Howells's *An Imperative Duty* (1891) or Twain's *The Tragedy of Pudd'nhead Wilson* (1894). In the former, a young woman raised to believe she is white discovers that she has a black ancestor. In the latter, two baby boys are switched in their cradles, one of them freeborn and the other a slave but otherwise indistinguishable, with tragic results. In both novels the authors probed the meaning of racial identity. A cluster of other realistic race novels appeared in the early 1890s, among them Anna J. Cooper's *A Voice from the South* (1892) and Frances E. W. Harper's *Iola Leroy; or, Shadows Uplifted* (1892). Chesnutt also published a trio of realistic novels around the turn of the century that pondered the consequences of racial violence: *The House behind the Cedars* (1900); *The Marrow of Tradition* (1901), based on the race riot in Wilmington, North Carolina, in 1898; and *The Colonel's Dream* (1905), about the failure of the New South to secure racial justice.

Despite the early successes of the local colorists Bret Harte and Mark Twain, western American writers were slow to warm to realism. Western literature was epitomized by the

sensational, blood-and-thunder of the dime novel westerns that celebrated westward expansion and conquest. As late as 1902, the same year Owen Wister's romanticized bestseller *The Virginian* appeared, Norris complained that rather than a school of western realists there were "the wretched 'Deadwood Dicks' and Buffalo Bills of the yellowbacks" and writers "who lied and tricked and strutted in Pathfinder and Leather-Stocking series." Still, a brand of western realism emerged in such neglected or unknown works as Mary Hallock Foote's novel *The Led-Horse Claim* (1883), Mary Austin's *Land of Little Rain* (1903), and Andy Adams's *The Log of a Cowboy* (1903), all of which deal with mining, ranching, or other forms of labor. Clarence Gohdes declared in 1951, in fact, that Foote was "more of a realist than either Harte or Clemens in portraying the life of the mining areas....In the history of fiction dealing with the Far West she may claim attention as the first realist of the section."

American realists contributed to the national literary culture in another way; they belonged to the first generation of true literary professionals in America, as Howells suggested in his essay, *The Man of Letters As a Man of Business* (1893). The realists hired the first literary agents in the early 1880s, contributed to the first newspaper fiction syndicates in the mid-1880s, and lobbied for passage of legislation governing international copyright, finally adopted in 1891. They introduced marketing gimmicks such as subscription sales (Mark Twain was a director of the American Publishing Company of Hartford) and composite novels (such as *The Whole Family* [1908], to which Howells, James, Freeman, and nine other writers each contributed a chapter). Partly as a result of the invention of the Linotype machine, the number of magazines published in the nation increased from about two hundred in 1860 to some eighteen hundred in 1900, with a corresponding increase in the opportunities for literary careers. To be sure, most commercially successful novels were still pitched to middle-class women readers. Howells estimated that some 75 percent of all books sold in the United States were bought by women, and the novelist John W. De Forest similarly declared that women comprised four-fifths of the novel-reading public. The novel, even the realistic novel, usually contained a love interest (*Huckleberry Finn* was a rare and notable exception) if only to spur sales—but it was a love interest often disappointed. Many of the realists also scripted plays, often adaptations of their own stories and novels, because the market for new drama was more lucrative than for fiction. As Harte would write, plays were potentially "vastly more profitable" or lucrative than novels. A "good play" in production ought to pay its author about three thousand dollars per year, he thought. Similarly, James noted privately that he "simply *must* try, and try seriously, to produce half a dozen—a dozen, five dozen—plays for the sake of my pocket, my material future." In all, Twain, Howells, James, and Harte produced some sixty scripts, though many of them were never produced professionally.

Naturalism As a Literary Theory

In his essay *Le roman expérimental* (The Experimental Novel) (1880), the French novelist Émile Zola developed an elaborate analogy between experimental or empirical fiction and the medical science of the French physician Claude Bernard. According to Zola, the experimental (that is, the naturalistic) novelist simply adopts "the scientific method, which has been in use for a long time." He "institutes the experiment, that is, sets the characters of a particular story in motion, in order to show that the series of events therein will be those demanded by the determinism of the phenomena under study." Richard Wright deployed a similar trope in his essay *How Bigger Was Born* (1940), often reprinted as an introduction to his *Native Son* (1940), one of the last American naturalistic novels: "Why should I not, like a scientist in a laboratory, use my imagination and invent test-tube situations, place Bigger in them, and...work out in fictional form a resolution of his fate?" The influence of Zola on American naturalists can hardly be understated. Norris, for example, sometimes signed his letters "the

boy Zola,” and Crane wrote that his character Maggie Johnson “blossomed in a mud puddle,” much as Zola's character Nana was “a plant nurtured on a dung heap.”

In a word, the strategies of both realism and naturalism depend upon a quasi-scientific method of detailed observation, but in the case of naturalism the science is rooted in Darwin's theory of evolution. As Malcolm Cowley explained in *‘Not Men’: A Natural History of American Naturalism* (Kenyon Review, Summer 1947), “The Naturalistic writers were all determinists in that they believed in the omnipotence of abstract forces. They were pessimists so far as they believed that men and women were absolutely incapable of shaping their own destinies.” Similarly, Lars Åhnebrink, in *The Beginnings of Naturalism in American Fiction* (1950), allowed that the naturalist “portrays life as it is in accordance with the philosophical theory of determinism.” Dreiser variously described Carrie Meeber, for example, as “a waif amid forces,” “a wisp in the wind,” a “wisp on the tide,” and he referred in *Sister Carrie* (1900) and *An American Tragedy* in pseudoscientific terms to such body chemicals as “katastates” and “anastates” and to “chemisms” in an attempt to explain all thoughts and emotional responses as mere chemical reactions in the blood.

In all, naturalism was a literature of despair that repudiated the optimism and idealism of the Enlightenment. American naturalists tended to emphasize environmental factors in the formation of character, European naturalists heredity factors. Most American literary naturalists were also Social Darwinists who applied Darwin's biological theories of natural selection to models of social organization, arguing by analogy that just as the fittest of each species in nature struggles for existence by adapting to its environment, the fittest human competitors best adapt to social conditions and thrive and prosper. Crane made the point in a poem that is a virtual Social Darwinian parable:

- The trees in the garden rained flowers.
- Children ran there joyously.
- They gathered the flowers
- Each to himself.
- Now there were some
- Who gathered great heaps—
- Having opportunity and skill—
- Until, behold, only chance blossoms
- Remained for the feeble.
- Then a little spindling tutor
- Ran importantly to the father, crying:
- “Pray, come hither!
- “See this unjust thing in your garden!”
- But when the father had surveyed
- He admonished the tutor:
- “Not so, small sage!
- “This thing is just.
- “For, look you,
- “Are not they who possess the flowers
- “Stronger, bolder, shrewder
- “Than they who have none?
- “Why should the strong—
- “The beautiful strong—
- “Why should they not have the flowers?”
- Upon reflection, the tutor bowed to the ground.

- “My lord,” he said,
- “The stars are displaced
- “By this towering wisdom.”

Similarly, the opening chapter of Dreiser's *The Financier* (1912) portrayed a battle to the death between an octopus and a squid. Young Frank Cowperwood wonders how life is organized and observes the battle in a tank at a fish market near his home. Gradually, the lobster devours the squid and answers the riddle young Cowperwood had been pondering: “Lobsters lived on squids and other things,” and men lived on “other men.” Tennyson had mused on “Nature, red in tooth and claw” a half century before, but it remained for the naturalist writers to illustrate a ruthless struggle for existence. The theory of literary naturalism even informs such pulp novels as Edgar Rice Burroughs's *Tarzan of the Apes* (1914), which thematically suggests that a white child raised in the African jungle will inevitably grow up to be “king of the apes.”

In truth, most naturalists came to Social Darwinism not through Darwin but through the social theories of Herbert Spencer. The poet Edwin Arlington Robinson lamented to a friend in 1890 that “Life was something before you came to Spencer.” When Dreiser read Spencer's *First Principles* (1862) in 1894, he admitted, it “blew me, intellectually, to bits” and left him “numb.” He realized that “Man was a mechanism, undevised and uncreated, and a badly and carelessly driven one at that....When I read Spencer I could only sigh.” He later told the novelist Frank Harris that Spencer “nearly killed me, took every shred of belief away from me; showed me that I was a chemical atom in a whirl of unknown forces; the realization clouded my mind.” Similarly, Jack London recalled in his autobiographical novel, *Martin Eden* (1909), his own introduction to “the man Spencer....There was no caprice, no chance. All was law.” In brief, naturalism gleans from Darwin the metaphor of the jungle; from Spencer the metaphor of the “struggle for existence” in society; from Freud the inviolable determinism of the unconscious; from Marx a sense of economic determinism; from positivism in general and Auguste Comte in particular a doctrine of environmental determinism; and from Hippolyte Taine the notion of literature as the product of race or national character, moment, and social milieu.

While the canonical American naturalists are usually considered *sui generis*—some literary historians even assert that no American realist became a naturalist—both Howells and Twain commented on the doctrine of determinism in their late fiction. In *The Landlord at Lion's Head* and *The Son of Royal Langbrith* (1904), Howells considered the possibility of biological determinism along the lines of Zola. And *Huckleberry Finn* contains hints of Twain's belief in environmental determinism. (“I never thought no more about reforming. I shoved the whole thing out of my head; and said I would take up wickedness again, which was in my line, being brung up to it.”) Both *A Connecticut Yankee in King Arthur's Court* and *The Tragedy of Pudd'nhead Wilson* were thematically devoted to illustrating how environment shapes character. “Training is everything”—this exact phrase appears in both chapter 18 of the former novel (“Training—training is everything; training is all there is to a person”) and as an epigraph to chapter 5 of the latter. (“Training is everything. The peach was once a bitter almond; cauliflower is nothing but cabbage with a college education.”) Twain expressed his ideas about environmental determinism most fully in his philosophical treatise *What Is Man?* (1906): “The human being is merely a machine, and nothing more....A man is never anything but what his outside influences have made him.”

Little wonder Cowley concluded that the net effect of naturalism was “to subtract from literature the whole notion of human responsibility.” As Norris wrote of the brutish “second

self” of his protagonist in *McTeague* (1899), “Below the fine fabric of all that was good in him ran the foul stream of hereditary evil, like a sewer. The vices and sins of his father and of his father's father, to the third and fourth and five hundredth generation, tainted him. The evil of an entire race flowed in his veins. Why should it be? He did not desire it. Was he to blame?” The author's answer is obvious: of course not. Or as Dreiser noted in chapter 7 of *Sister Carrie*, “On the tiger no responsibility rests.” Crime in the naturalistic novel—such as McTeague's murder of Trina, Hurstwood's theft of money from his employers in *Sister Carrie*, or Clyde Griffith's murder of Roberta Alden in *An American Tragedy* (1925)—was the result of uncontrollable passions and forces, not personal volition. Similarly, Crane inscribed the flyleaf of a presentation copy of his novel *Maggie, A Girl of the Streets*:

It is inevitable that you will be greatly shocked by this book, but continue, please, with all courage to the end. For, it tries to show that environment is a tremendous thing in the world and frequently shapes lives regardless. If one proves that theory, one makes room in Heaven for all sorts of souls, notably an occasional street girl, who are not confidently expected to be there by many excellent people.

Yet Crane's comment also illustrates a dilemma faced by the naturalist. To the extent that he objectively portrayed the plight of the underclass and described the deterministic forces that shape character, he was faithful to the tenets of naturalism. To the extent he wrote a brief for the defense of the underclass or preached a message, however, he violated the principle of scientific objectivity and became an advocate for reform rather than an objective scientist. Form had been sacrificed to theme, as in *Maggie* or Upton Sinclair's *The Jungle* (1906), or even Steinbeck's *The Grapes of Wrath* (1939). Unlike realism, doctrinaire naturalistic texts rarely advocated social reform. Indeed, the naturalistic theory of mind went hand in glove with the Gospel of Wealth of such industrialists as Andrew Carnegie and John D. Rockefeller and Yale sociologist William Graham Sumner. Whereas naturalism shares with realism the ambition of depicting the experience of everyday men and women accurately, it also shares with modernism an epistemological skepticism, a belief in the nonteleological or purposeless nature of the universe. Though many of the naturalists were leftists (including Dreiser, London, Sinclair, and Steinbeck), their theoretically objective literary perspective warred with their politics. Or as Charles C. Walcutt explains in *American Literary Naturalism: A Divided Stream* (1956), “all ‘naturalistic’ novels exist in a tension between determinism and its antithesis. The reader is aware of the opposition between what the artist says about man's fate and what his saying it affirms about man's hope.”

A naturalistic corollary to the doctrine of determinism was the indifference if not malevolence of nature. In Placer County, California, Norris writes in *McTeague*, nature “is a vast, unconquered brute of the Pliocene epoch, savage, sullen, and magnificently indifferent to man.” Similarly, in *The Octopus* (1901) his narrator opines that “Nature is a gigantic engine, a vast cyclopean power, huge, terrible, a leviathan with a heart of steel, knowing no compunction, no forgiveness, no tolerance; crushing out the human atom standing in its way, with nirvanic calm.” In *The Blue Hotel* (1898), Crane marvels on “the existence of man” suffering a blizzard and concedes “a glamour of wonder to these lice which were caused to cling to a whirling, fire-smote, ice-locked, disease-stricken, space-lost bulb.” Or, as Crane wrote in one of his poems,

- A man said to the universe
- “Sir, I exist!”
- “However,” replied the universe,
- “The fact has not created in me

- A sense of obligation.”

Naturalism As Literary Practice

Theoretically, the naturalistic tale might be a “success story,” with the hero achieving ever greater triumphs. In practice, however, the naturalistic tale was almost always a “failure story” or “plot of decline,” with an unfit protagonist like Eugene O'Neill's Brutus Jones slowly degenerating, falling ever lower on the evolutionary ladder. Norris's *McTeague* is depicted as an atavist fated eventually to die. Dreiser's *An American Tragedy* was among other things a parody of the Horatio Alger myth of success. Jack London's *To Build a Fire* (1908) features a foolish and unfit protagonist who deserves to die, and his *The Law of Life* (1901) depicts the necessary sacrifice of a tribal elder when he becomes a liability to the survival of the group. Such tales were often shocking to readers, and *Maggie*, *The Red Badge of Courage* (1895), and *Sister Carrie* were all published in expurgated versions at the insistence of publishers. Moreover, even though many naturalists (Dreiser, Crane, and Harold Frederic, for instance) began their careers as journalists, they employed a self-consciously crude style of writing. As Norris declared, “Give us stories now, give us men, strong, brutal men, with red-hot blood in 'em, with unleashed passions rampant in 'em, blood and bones and viscera in 'em, and women, too, that move and have their being, people that love and hate....We don't want literature, we want life. We don't want fine writing, we want short stories.”

However crude the naturalistic style, it did exhibit certain recurring hallmarks. Virtually all naturalistic novels were written from the third-person omniscient point of view. The naturalist was, after all, a type of scientist, his novel a type of laboratory report. (There were rare exceptions, such as Jack London's *The Sea-Wolf* [1904].) Whereas the realist aimed to draw “rounded” or credible individual characters, the naturalist portrayed representative and recurring types such as the brute (for example, Norris's *McTeague* and *Vandover and the Brute* [1914] and O'Neill's *The Hairy Ape* [1921]) and the spectator or observer (Presley in *The Octopus* or Ames in *Sister Carrie*, for instance). Unfortunately, the trend among naturalists to portray types also prompted them to reinforce racial and ethnic stereotypes and to assume the superiority of Anglo-Saxon civilization according to the standard science of the day. For example, Norris depicted a Jewish junk collector through anti-Semitic stereotyping in *McTeague*, Crane portrayed a comic Sambo in “The Monster” (1898), and London condescended to a number of racial types in his Klondike and South Seas fiction. Such belief in Anglo-Saxon superiority would point, in the end, to Gilman's endorsement of the early-twentieth-century eugenics movement in her novel, *Herland* (1915).

There were other formal characteristics of literary naturalism. Naturalists frequently employed organic, especially animal, metaphors. Obviously, such metaphors had been used prior to the publication of *On the Origin of Species* (1859), but after the publication of Darwin's theory of natural selection they would have an entirely new resonance. *McTeague* is a bull, *Maggie*'s brother Jimmie is a fighting cock, and the Joad family in *The Grapes of Wrath* is implicitly compared to a land turtle. Naturalists also often invoked sports or gaming metaphors, as when Henry Fleming in *The Red Badge of Courage* compares a military battle to a football game. Plots were occasionally organized around such forms of cutthroat competition as labor strikes (for instance, *Sister Carrie*, Norris's *The Octopus*, Sinclair's *The Jungle*, Steinbeck's *In Dubious Battle* [1936] and *The Grapes of Wrath*) or, for obvious reasons, warfare (Crane's *The Red Badge of Courage*, Willa Cather's *One of Ours* [1922], Ernest Hemingway's *For Whom the Bells Tolls* [1940], Wharton's *A Son at the Front* [1923], Norman Mailer's *The Naked and the Dead* [1948], and James Jones's *From Here to*

Eternity [1951] are examples). Naturalistic novels were often bloated with detailed descriptions of insulated settings, such as Rum Alley in *Maggie*, based on Hell's Kitchen on the West Side of Manhattan; the Polk Street neighborhood of San Francisco in *McTeague*; and first a ship and then an island in London's *The Sea-Wolf*. If a writer is an environmental determinist, after all, he or she labors under the obligation of depicting the environment in minute detail. Taking their cue from Zola's twenty-volume Rougon-Macquart cycle (1871–1893), moreover, several naturalists planned or completed trilogies of novels. Dreiser projected a “trilogy of Desire” and Norris anticipated a “trilogy of the Wheat.” John Dos Passos's *U.S.A.* (1938) comprised three published novels, James T. Farrell wrote a “Studs Lonigan” and “Danny O'Neill” series, and Eugene O'Neill wrote *Mourning Becomes Electra* (1931) and later projected a cycle of plays on American history, of which the completed *A Touch of the Poet* (1946) and *More Stately Mansions* (1964) were to be a part.

Above all, the naturalists tended to be critical of the “teacup tragedies” of Howellsian realism. “Realism is minute; it is the drama of a broken teacup, the tragedy of a walk down the block, the excitement of an afternoon call, the adventure of an invitation to dinner,” Norris complained. Naturalism, in contrast, should explore “the unplumbed depths of the human heart, and the mystery of sex, and the problems of life, and the black, unsearched penetralia of the soul of man.” In fine, “terrible things must happen to the characters in a naturalistic novel.” Broadly speaking, too, there were generational differences between realists and naturalists. Realists like James and Howells matured as writers in the 1870s and 1880s, whereas naturalists like Crane and Norris matured in the 1890s. But these differences should not be exaggerated. After all, James and Howells remained essentially realistic and remarkably prolific writers until their deaths in 1916 and 1920, respectively, whereas Crane and Norris both were dead by 1902, Crane at the age of twenty-eight, Norris at thirty-two.

Twentieth-Century Developments

Some of Crane's later writings, such as *The Red Badge of Courage* and “The Blue Hotel,” represent a variation on the naturalistic tradition and point in the direction of literary impressionism and modernism. Crane asserted in *War Memories* (1899) that he was trying to imitate in words what the French impressionists were doing with light and color: “I bring this to you merely as an effect—an effect of mental light and shade, if you like: something done in thought similar to that which the French Impressionists do in color; something meaningless and at the same time overwhelming, crushing, monstrous.” *The Red Badge of Courage* essentially recounts through his impressions the fears and illusions of its ironic soldier-hero, Henry Fleming. All events are filtered through his vision, his sense perceptions. Not only is there no objectivity to his story, the very notion of reality is a shifting and unstable construction of Fleming's imagination. Put another way, by the end of his life Crane had begun to develop naturalistic themes in an impressionistic style. His later tales anticipate Hemingway's terse style, with frequent shifts in point of view, and in fact Hemingway later praised Crane's masterful method in such stories as *The Blue Hotel* and *The Open Boat* (1894).

The proletarian writers of the early twentieth century, such as Sinclair (*The Jungle*), Jack Conroy (*A World to Win* [1935]), and Robert Cantwell (*The Land of Plenty* [1934]), attempted to graft their leftist politics onto naturalism, a project that met with decidedly mixed results. The hybrid betrayed the “divided stream” of American naturalism in unusual degree. *The Jungle* may have been the earliest American proletarian novel, and it is often credited with catalyzing support for the Pure Food and Drug Act (1906), but as a novel it is crudely constructed and basically breaks in half when the proletarian hero, Jurgis Rudkus, is thrown in

jail and, upon his release, leaves Chicago. As Sinclair later conceded, he “aimed at the public's heart and by accident I hit it in the stomach.” Naturalism, as Cowley explains in “‘Not Men,’ ” was fundamentally “unsuited” to the “essentially religious purpose” of the proletarian writers. Given the deterministic bias of naturalism, the proletarian writers were simply unable to explain the conversion of a character to socialism or other forms of radical politics.

The last major controversy over naturalism in literature occurred in the 1940s, and it centered on the possibility of “naturalistic tragedy.” During the 1880s the Scandinavian playwrights Henrik Ibsen and August Strindberg had conceived of their plays *Ghosts* (1881) and *Miss Julie* (1888) as naturalistic tragedies. But tragedy, according to its Aristotelian definition, affirms the significance of human life: through the imitation of noble actions ending in catastrophe, a tragic hero falls from a high place and the audience experiences a catharsis of “pity and fear.” Joseph Wood Krutch, in *The Tragic Fallacy*, a chapter in *The Modern Temper* (1929), countered that the phrase “naturalistic tragedy” is an oxymoron. “We write no tragedies today,” Krutch argued, because modern science has enfeebled the human spirit. “If the plays and novels of today deal with littler people and less mighty emotions,” he added, “it is not because we have become interested in commonplace souls and their unglamorous adventures but because we have come, willy-nilly, to see the soul of man as commonplace and its emotions as mean.” When writers turned “from the hero to the common man,” they “inaugurated the era of realism.” These arguments prompted Arthur Miller's dramatic experiment, *Death of a Salesman* (1948). In effect, Miller replied to Krutch in an essay explaining why he wrote the play: “In this age few tragedies are written,” he declared. “It has often been held that the lack is due to a paucity of heroes among us, or else that modern man has had the blood drawn out of his organs of belief by the skepticism of science.” The tragic mode may seem “archaic, fit only for the very highly placed, the kings or the kingly,” but “I believe that the common man is as apt a subject for tragedy in its highest sense as kings were.” So Miller portrayed his hapless salesman Willy Loman (low man) as a tragic hero.

The tradition of realism and naturalism has left an indelible mark on American fiction. Even today, some elements of naturalism surface in the fiction of Saul Bellow and Norman Mailer, for example, and John Updike is a type of neo-realist with affinities to Howells. Whatever the posturings of the postmodernists, literary historians may claim for no other American literary tradition the achievements of the realists and naturalists.

MODERNISM I

Modernism is both a [philosophical movement](#) and an [art movement](#) that arose from broad transformations in [Western society](#) during the late 19th and early 20th centuries. The movement reflected a desire for the creation of new forms of art, philosophy, and social organization which reflected the newly emerging [industrial world](#), including features such as [urbanization](#), new technologies, and war. Artists attempted to depart from traditional forms of art, which they considered outdated or obsolete. The poet [Ezra Pound](#)'s 1934 injunction to “Make it new!” was the touchstone of the movement's approach.

Modernist innovations included [abstract art](#), the [stream-of-consciousness](#) novel, [montage cinema](#), [atonal](#) and [twelve-tone](#) music, and [divisionist](#) painting. Modernism explicitly rejected the ideology of [realism](#) and made use of the works of the past by the employment of [reprise](#), [incorporation](#), rewriting, [recapitulation](#), revision and [parody](#).^{[b][c][4]} Modernism also rejected the certainty of [Enlightenment](#) thinking, and many modernists also rejected religious

belief. A notable characteristic of modernism is [self-consciousness](#) concerning artistic and social traditions, which often led to experimentation with form, along with the use of techniques that drew attention to the processes and materials used in creating works of art.^[7]

While some scholars see modernism continuing into the 21st century, others see it evolving into [late modernism](#) or [high modernism](#). [Postmodernism](#) is a departure from modernism and rejects its basic assumptions.

Literary [modernism](#), or **modernist literature**, has its origins in the late 19th and early 20th centuries, mainly in Europe and North America. Some philosophers, like [Georg Lukacs](#), theorized that literary modernism had its origins in the philosophy of [Walter Benjamin](#). Modernism is characterized by a [self-conscious](#) break with traditional styles of poetry and verse. Modernists experimented with literary form and expression, adhering to [Ezra Pound](#)'s maxim to "Make it new". The modernist literary movement was driven by a conscious desire to overturn traditional modes of representation and express the new sensibilities of their time. The horrors of the [First World War](#) saw the prevailing assumptions about society reassessed. Thinkers such as [Sigmund Freud](#) and [Karl Marx](#) questioned the rationality of mankind. major precursor of modernism was [Friedrich Nietzsche](#), especially his idea that psychological drives, specifically the "[will to power](#)", were more important than facts, or things. [Henri Bergson](#) (1859–1941), on the other hand, emphasized the difference between scientific clock time and the direct, subjective, human experience of time^[5] His work on time and consciousness "had a great influence on twentieth-century novelists," especially those modernists who used the stream of consciousness technique, such as [Dorothy Richardson](#) for the book *Pointed Roofs* (1915), [James Joyce](#) for *Ulysses* (1922) and [Virginia Woolf](#) (1882–1941) for *Mrs Dalloway* (1925) and *To the Lighthouse* (1927). Also important in Bergson's philosophy was the idea of *élan vital*, the life force, which "brings about the creative evolution of everything" His philosophy also placed a high value on intuition, though without rejecting the importance of the intellect. These various thinkers were united by a distrust of Victorian positivism and certainty. Modernism as a literary movement can be seen also, as a reaction to industrialization, [urbanization](#) and new technologies.

Important literary precursors of Modernism were: [Fyodor Dostoyevsky](#) (1821–81) (*Crime and Punishment* (1866), *The Brothers Karamazov* (1880)); [Walt Whitman](#) (1819–92) (*Leaves of Grass*) (1855–91); [Charles Baudelaire](#) (1821–67) (*Les Fleurs du mal*), [Rimbaud](#) (1854–91) (*Illuminations*, 1874); [August Strindberg](#) (1849–1912), especially his later plays, including, the trilogy *To Damascus* 1898–1901, *A Dream Play* (1902), *The Ghost Sonata* (1907). Modernism was already stirring by 1902, with works such as [Joseph Conrad](#)'s (1857–1924) *Heart of Darkness*, while [Alfred Jarry](#)'s (1873–1907) *absurdist* play, *Ubu Roi* appeared even earlier, in 1896. Among early modernist non-literary landmarks is [Arnold Schoenberg](#)'s *atonal* ending of *Second String Quartet* in 1908, the *Expressionist* paintings of [Wassily Kandinsky](#) starting in 1903 and culminating with his first abstract painting and the founding of the *Expressionist Blue Rider* group in *Munich* in 1911, the rise of *fauvism*, and the introduction of *cubism* from the studios of [Henri Matisse](#), [Pablo Picasso](#), [Georges Braque](#) and others between 1900 and 1910. [Sherwood Anderson](#)'s *Winesburg, Ohio* is known as an early work of modernism for its plain-spoken prose style and emphasis on psychological insight into characters. Other early modernist writers, most of them I have read and admired their work, and selected works include:

- [Luigi Pirandello](#) (1867–1936): *The Late Mattia Pascal* (1904), *Six Characters in Search of an Author* (1921);

- [Rainer Maria Rilke](#) (1875–1926): *The Notebooks of Malte Laurids Brigge* (1910), *Sonnets to Orpheus* (1922), *Duino Elegies* (1922);
- [W. B. Yeats](#) (1865–1939): *The Green Helmet* (1910), *Wild Swans at Coole* (1917);
- [Gottfried Benn](#) (1886–1956): *Morgue and other Poems* (1912);
- [Ezra Pound](#) (1885–1972): *Ripostes* (1912), *The Cantos*, published variously over the period 1917–64, *Hugh Selwyn Mauberley* (1920);
- [Guillaume Apollinaire](#) (1880–1918): *Alcools* (1913);
- [Andrei Bely](#) (1880–1934): *Petersburg* (1913);
- [D. H. Lawrence](#) (1885–1930): *Sons and Lovers* (1913), *The Rainbow* (1915);
- [Marcel Proust](#) (1871–1922): *Du côté de chez Swann* (1913), the first volume of *Remembrance of Things Past* (1913–27);
- [Georg Trakl](#) (1887–1914): *Poems* (1913);
- [Franz Kafka](#) (1883–1924): *The Metamorphosis* (1915), *The Trial* (1925), *The Castle* (1926);
- [Grigol Robakidze](#) (1880–1962): *The Snake's Skin* (1926);
- [Dorothy Richardson](#) (1873–1957): *Pointed Roofs* (1915), the first volume of *Pilgrimage* (1915–38; post. 1967);
- [T. S. Eliot](#) (1888–1965): *The Love Song of J. Alfred Prufrock* (1916), *The Waste Land* (1922), *Four Quartets* (1935–42);
- [James Joyce](#) (1882–1941), *A Portrait of the Artist as a Young Man* (1916), *Ulysses* (1922), *Finnegans Wake* (1939);
- [Miroslav Krleža](#) (1893–1981), *Kristofor Kolumbo* (1918), *Michelangelo Buonarroti* (1919), *Povratak Filipa Latinovicza* (1932);
- [Wyndham Lewis](#) (1882–1957): *Tarr* (1918);
- [Eugene O'Neill](#) (1888–1953): *Anna Christie* (1920), *The Emperor Jones* (1920);
- [Karel Čapek](#) (1890–1938): *R.U.R.* (1920);
- [Italo Svevo](#) (1861–1928): *Zeno's Conscience* (1923);

James Joyce was a major modernist writer whose strategies employed in his novel *Ulysses* (1922) for depicting the events during a twenty-four hour period in the life of his protagonist, [Leopold Bloom](#), have come to epitomize modernism's approach to fiction. The term [late modernism](#) is sometimes applied to modernist works published after 1930. Among modernists (or late modernists) still publishing after 1945 were [Wallace Stevens](#), [Gottfried Benn](#), [T. S. Eliot](#), [Anna Akhmatova](#), [William Faulkner](#), [Dorothy Richardson](#), [John Cowper Powys](#), and [Ezra Pound](#). [Basil Bunting](#), born in 1901, published his most important modernist poem *Briggflatts* in 1965. In addition [Hermann Broch](#)'s *The Death of Virgil* was published in 1945 and [Thomas Mann](#)'s *Doctor Faustus* in 1947. [Samuel Beckett](#), who died in 1989, has been described as a "later modernist". Beckett is a writer with roots in the [expressionist](#) tradition of modernism, who produced works from the 1930s until the 1980s, including *Molloy* (1951), *En attendant Godot* (1953), *Happy Days* (1961) and *Rockaby* (1981). The terms [minimalist](#) and [post-modernist](#) have also been applied to his later works. The poets [Charles Olson](#) (1910–1970) and [J. H. Prynne](#) (b. 1936) have been described as late modernists. More recently the term [late modernism](#) has been redefined by at least one critic and used to refer to works written after 1945, rather than 1930. With this usage goes the idea that the ideology of modernism was significantly re-shaped by the events of [World War II](#), especially the [Holocaust](#) and the dropping of the atom bomb.

The term [Theatre of the Absurd](#) is applied to plays written by primarily European [playwrights](#), that express the belief that human existence has no meaning or purpose and therefore all communication breaks down. Logical construction and argument gives way to

irrational and illogical speech and to its ultimate conclusion, silence. While there are significant precursors, including [Alfred Jarry](#) (1873–1907), the Theatre of the Absurd is generally seen as beginning in the 1950s with the plays of [Samuel Beckett](#). Critic [Martin Esslin](#) coined the term in his 1960 essay, "Theatre of the Absurd." He related these plays based on a broad theme of the Absurd, similar to the way [Albert Camus](#) uses the term in his 1942 essay, "[The Myth of Sisyphus](#)". The Absurd in these plays takes the form of man's reaction to a world apparently without meaning, and/or man as a puppet controlled or menaced by invisible outside forces. Though the term is applied to a wide range of plays, some characteristics coincide in many of the plays: broad comedy, often similar to [Vaudeville](#), mixed with horrific or tragic images; characters caught in hopeless situations forced to do repetitive or meaningless actions; dialogue full of clichés, wordplay, and nonsense; plots that are cyclical or absurdly expansive; either a parody or dismissal of realism and the concept of the "[well-made play](#)". Playwrights commonly associated with the Theatre of the Absurd include [Samuel Beckett](#) (1906–1989), [Eugène Ionesco](#) (1909–1994), [Jean Genet](#) (1910–1986), [Harold Pinter](#) (1930–2008), [Tom Stoppard](#) (b. 1937), [Friedrich Dürrenmatt](#) (1921–1990), [Alejandro Jodorowsky](#) (b. 1929), [Fernando Arrabal](#) (b. 1932), [Václav Havel](#) (1936–2011) and [Edward Albee](#) (b. 1928). Among those authors I admire most and have also taught their works in my courses on business ethics are: Ionesco (*Rhinoceros*), Durrenmatt (*The Visit of the Old Lady*), but I also admire and see often their plays: Albee, Beckett, Pinter and Genet. I often wonder how I can enjoy such various styles of playwrights, including modernist playwrights, as in music and art I enjoy mostly only the 19th century (Beethoven, Mahler, Brahms, Chopin, Mendelssohn, Verdi, Offenbach, Bizet, Impressionism and to a lesser extent Romanticism). In drama I enjoy almost equally to read and see Sophocles, Euripides, Aristophanes, Goldoni, Racine, Corneille, Moliere, Shakespeare, Lorca, Pinter, Beckett, Albee, Durrenmatt, Rostand, Hugo, Jarry, Sobol, Pirandello, Brecht, Anouilh, Chekhov, and Goethe. In literature I enjoy most modern books, novels and poetry, as explained at length in this chapter, but I enjoy very much also Homer, the Bible, Cicero, Vergil, Cervantes, Balzac, Wordsworth, Byron, Goethe, Dante, Thackeray, Jane Austen, Choderlos de Laclos, L'Abbe Prevost, Heine...

The list of modern writers according to Wikipedia includes the following authors:

[Grigol Robakidze](#) (1880-1962), [Anna Akhmatova](#) (1889–1966), [Ryūnosuke Akutagawa](#) (1892-1927), [Gabriele d'Annunzio](#) (1863–1938), [Guillaume Apollinaire](#) (1880–1918), [W. H. Auden](#) (1907–73), [Djuna Barnes](#) (1892–1982), [Samuel Beckett](#) (1906–89), [Gottfried Benn](#) (1886–1956), [Bertolt Brecht](#) (1898–1956), [Alexander Blok](#) (1880–1921), [Menno ter Braak](#) (1902–40), [Hermann Broch](#) (1886–1951), [Jorge Luis Borges](#) (1899–1986), [Basil Bunting](#) (1900–85), [Ivan Cankar](#) (1876–1918), [Mário de Sá-Carneiro](#) (1890–1916), [Constantine P. Cavafy](#) (1863–1933), [Joseph Conrad](#) (1857–1924), [Hart Crane](#) (1899–1932), [E. E. Cummings](#) (1894–1962), [Joaquim Maria Machado de Assis](#) (1839–1908), [Rubén Darío](#) (1867–1916), [Alfred Döblin](#) (1878–1957), [H.D.](#) (Hilda Doolittle) (1886–1961), [T. S. Eliot](#) (1888–1965), [Ralph W. Ellison](#) (1914–1994), [William Faulkner](#) (1897–1962), [Ford Madox Ford](#) (1873–1939), [E. M. Forster](#) (1879–1971), [F. Scott Fitzgerald](#) (1896–1940), [Robert Frost](#) (1874–1963), [Carlo Emilio Gadda](#) (1893–1973), [Knut Hamsun](#) (1859–1952), [Jaroslav Hašek](#) (1883–1923), [Ernest Hemingway](#) (1899–1961), [Hugo von Hofmannsthal](#) (1874–1929), [Max Jacob](#) (1876–1944), [David Jones](#) (1895–1974), [James Joyce](#) (1882–1941), [Franz Kafka](#) (1883–1924), [Georg Kaiser](#) (1878–1945), [Miroslav Krleža](#) (1893–1981), [Federico García Lorca](#) (1898–1936), [Clarice Lispector](#) (1920–1977), [Mina Loy](#) (1882–1966), [Leopoldo Lugones](#) (1874–1938), [Hugh MacDiarmid](#) (1892–1976), [Osip Mandelstam](#) (1891–1938), [Thomas Mann](#) (1875–1955), [Katherine Mansfield](#) (1888–1923), [José Martí](#) (1853-1895), [Robert Musil](#)

(1880–1942), [Marianne Moore](#) (1887–1972), [Vladimir Nabokov](#) (1899–1977), [Pablo Neruda](#) (1904–1973), [Yone Noguchi](#) (1875–1947), [Aldo Palazzeschi](#) (1885–1974), [John Dos Passos](#) (1896–1970), [Boris Pasternak](#) (1890–1960), [Fernando Pessoa](#) (1888–1935), [Luigi Pirandello](#) (1867–1936), [Katherine Anne Porter](#) (1890–1980), [Ezra Pound](#) (1885–1972), [John Cowper Powys](#) (1872–1963), [Marcel Proust](#) (1871–1922), [Klaus Rifbjerg](#) (1931–2015), [Victor Serge](#) (1890–1947), [Gertrude Stein](#) (1874–1946), [Wallace Stevens](#) (1875–1955), [Italo Svevo](#) (1861–1928), [Dylan Thomas](#) (1914–1953), [Ernst Toller](#) (1893–1939), [Federigo Tozzi](#) (1883–1920), [Paul Valéry](#) (1871–1945), [Jakob Wassermann](#) (1873–1934), [Robert Walser](#) (1878–1956), [Nathanael West](#) (1903–1940), [William C. Williams](#) (1883–1963), [Frank Wedekind](#) (1864–1918), [Virginia Woolf](#) (1882–1941), [Lu Xun](#) (1881–1936)

MODERNISM II

Introduction

in the arts, a radical break with the past and the concurrent search for new forms of expression. Modernism fostered a period of experimentation in the arts from the late 19th to the mid-20th century, particularly in the years following World War I.

In an era characterized by [industrialization](#), rapid [social change](#), and advances in [science](#) and the [social sciences](#) (e.g., Freudian theory), Modernists felt a growing alienation incompatible with Victorian morality, optimism, and convention. New ideas in psychology, philosophy, and political theory kindled a search for new modes of expression.

Modernism in literature

The Modernist impulse is fueled in various literatures by industrialization and [urbanization](#) and by the search for an authentic response to a much-changed world. Although prewar works by [Henry James](#), [Joseph Conrad](#), and other writers are considered Modernist, Modernism as a literary movement is typically associated with the period after World War I. The enormity of the war had undermined humankind's faith in the foundations of Western society and culture, and postwar Modernist literature reflected a sense of disillusionment and fragmentation. A primary theme of [T.S. Eliot](#)'s long poem *[The Waste Land](#)* (1922), a seminal Modernist work, is the search for redemption and renewal in a sterile and spiritually empty landscape. With its fragmentary images and obscure allusions, the poem is typical of Modernism in requiring the reader to take an active role in interpreting the text.

The publication of the Irish writer [James Joyce](#)'s *[Ulysses](#)* in 1922 was a landmark event in the development of Modernist literature. Dense, lengthy, and controversial, the novel details the events of one day in the life of three Dubliners through a technique known as [stream of consciousness](#), which commonly ignores orderly sentence structure and incorporates fragments of thought in an attempt to capture the flow of characters' mental processes. Portions of the book were considered obscene, and *Ulysses* was banned for many years in English-speaking countries. Other European and American Modernist authors whose works rejected chronological and narrative continuity include [Virginia Woolf](#), [Marcel Proust](#), [Gertrude Stein](#), and [William Faulkner](#).

The term Modernism is also used to refer to literary movements other than the European and American movement of the early to mid-20th century. In Latin American literature, [Modernismo](#) arose in the late 19th century in the works of [Manuel Gutiérrez Nájera](#) and [José Martí](#). The movement, which continued into the early 20th century, reached its peak in the poetry of [Rubén Darío](#). (See also [American literature](#); [Latin American literature](#).)

Modernism in other arts and architecture

Composers, including [Arnold Schoenberg](#), [Igor Stravinsky](#), and [Anton Webern](#), sought new solutions within new forms and used as-yet-untried approaches to tonality. In dance a rebellion against both balletic and interpretive traditions had its roots in the work of [Émile Jaques-Delcroze](#), [Rudolf Laban](#), and [Loie Fuller](#). Each of them examined a specific aspect of dance—such as the elements of the human form in motion or the impact of theatrical context—and helped bring about the era of modern dance. In the visual arts the roots of Modernism are often traced back to painter [Édouard Manet](#), who, beginning in the 1860s, broke away from inherited notions of [perspective](#), modeling, and subject matter. The [avant-garde](#) movements that followed—including [Impressionism](#), [Post-Impressionism](#), [Cubism](#), [Futurism](#), [Expressionism](#), [Constructivism](#), [de Stijl](#), and [Abstract Expressionism](#)—are generally defined as Modernist.

Over the span of these movements, artists increasingly focused on the intrinsic qualities of their media—e.g., line, form, and colour—and moved away from inherited notions of art. By the beginning of the 20th century, architects also had increasingly abandoned past styles and conventions in favour of a form of architecture based on essential functional concerns. They were helped by advances in building technologies such as the steel frame and the curtain wall. In the period after World War I these tendencies became codified as the [International style](#), which utilized simple geometric shapes and unadorned facades and which abandoned any use of historical reference; the steel-and-glass buildings of [Ludwig Mies van der Rohe](#) and [Le Corbusier](#) embodied this style. In the mid-to-late 20th century this style manifested itself in clean-lined, unadorned glass skyscrapers and mass housing projects.

The birth of postmodernism

In the late 20th century a reaction against Modernism set in. Architecture saw a return to traditional materials and forms and sometimes to the use of decoration for the sake of decoration itself, as in the work of [Michael Graves](#) and, after the 1970s, that of [Philip Johnson](#). In literature, irony and self-awareness became the postmodern fashion and the blurring of fiction and nonfiction a favoured method. Such writers as [Kurt Vonnegut](#), [Thomas Pynchon](#), and [Angela Carter](#) employed a postmodern approach in their work.

MODERNISM III

Modernism, here limited to aesthetic modernism (see also modernity), describes a series of sometimes radical movements in art, architecture, photography, [music](#), literature, and the applied arts which emerged in the three decades before 1914. Modernism has philosophical antecedents that can be traced to the eighteenth-century [Enlightenment](#) but is rooted in the changes in Western society at the end of the nineteenth and beginning of the twentieth centuries.

Modernism encompasses the works of artists who rebelled against nineteenth-century academic and historicist traditions, believing that earlier aesthetic conventions were becoming outdated. Modernist movements, such as [Cubism](#) in the arts, [Atonality](#) in music, and Symbolism in poetry, directly and indirectly explored the new economic, social, and political aspects of an emerging fully industrialized world.

Modernist art reflected the deracinated experience of life in which tradition, community, collective identity, and faith were eroding. In the twentieth century, the mechanized mass slaughter of the [First World War](#) was a watershed event that fueled modernist distrust of reason and further sundered complacent views of the steady moral improvement of human society and belief in progress.

Initially an avant garde movement confined to an intellectual minority, modernism achieved mainstream acceptance and exerted a pervasive influence on culture and popular entertainment in the course of the twentieth century. The modernist view of truth as a subjective, often intuitive claim has contributed to the elevation of individualism and [moral relativism](#) as guiding personal ethics and contributed to far-reaching transformations regarding the spiritual significance of human life.

From the 1870s onward, the ideas that [history](#) and [civilization](#) were inherently progressive and that progress was always good came under increasing attack. Arguments arose that not merely were the values of the artist and those of [society](#) different, but that society was antithetical to progress, and could not move forward in its present form. [Philosophers](#) called into question the previous optimism.

Two of the most disruptive thinkers of the period were, in [biology](#), [Charles Darwin](#) and, in political science, [Karl Marx](#). Darwin's theory of evolution by [natural selection](#) undermined religious certainty and the sense of human uniqueness, which had far-reaching implications in the arts. The notion that [human beings](#) were driven by the same impulses as "lower animals" proved to be difficult to reconcile with the idea of an ennobling spirituality. Marx seemed to present a political version of the same proposition: that problems with the economic order were not transient, the result of specific wrong doers or temporary conditions, but were fundamentally contradictions within the "capitalist" system. [Naturalism](#) in the visual arts and literature reflected a largely [materialist](#) notion of human life and society.

Separately, in the arts and letters, two ideas originating in [France](#) would have particular impact. The first was [Impressionism](#), a school of painting that initially focused on work done, not in studios, but outdoors (*en plein air*). Impressionist paintings demonstrated that human beings do not see objects, but instead see light, itself. The second school was [Symbolism](#),

marked by a belief that language is expressly symbolic in its nature, and that poetry and writing should follow connections that the sheer sound and texture of the words create.

At the same time, social, political, religious, and economic forces were at work that would become the basis to argue for a radically different kind of art and thinking. In religion, biblical scholars argued that the biblical writers were not conveying God's literal word, but were strongly influenced by their times, societies, and audiences. Historians and archaeologists further challenged the factual basis of the Bible and differentiated an evidence-based perspective of the past with the worldview of the ancients, including the biblical authors, who uncritically accepted oral and mythological traditions.

Chief among the physical influences on the development of modernism was steam-powered industrialization, which produced buildings that combined art and engineering, and in new industrial materials such as cast iron to produce bridges and skyscrapers—or the [Eiffel Tower](#), which broke all previous limitations on how tall man-made objects could be—resulting in a radically different urban environment.

The possibilities created by scientific examination of subjects, together with the miseries of industrial urban life, brought changes that would shake a European civilization, which had previously regarded itself as having a continuous and progressive line of development from the [Renaissance](#). With the [telegraph](#) offering instantaneous communication at a distance, the experience of time itself was altered.

The breadth of the changes can be sensed in how many modern disciplines are described as being "classical" in their pre-twentieth-century form, including physics, economics, and arts such as [ballet](#), theater, or architecture.

The roots of Modernism emerged in the middle of the nineteenth century; and rather locally, in [France](#), with [Charles Baudelaire](#) in literature and [Édouard Manet](#) in painting, and perhaps with [Gustave Flaubert](#), too, in prose fiction. (It was a while later, and not so locally, that Modernism appeared in music and architecture). The "avant-garde" was what Modernism was called at first, and the term remained to describe movements which identify themselves as attempting to overthrow some aspect of tradition or the status quo.

In the 1890s, a strand of thinking began to assert that it was necessary to push aside previous norms entirely, instead of merely revising past knowledge in light of current techniques. The growing movement in art paralleled such developments as Einstein's Theory of Relativity in physics; the increasing integration of the internal combustion engine and industrialization; and the increased role of the [social sciences](#) in public policy. It was argued that, if the nature of reality itself was in question, and if restrictions which had been in place around human activity were falling, then art, too, would have to radically change. Thus, in the first 15 years of the twentieth century a series of writers, thinkers, and artists made the break with traditional means of organizing literature, painting, and music.

[Sigmund Freud](#) offered a view of subjective states involving an [unconscious mind](#) full of primal impulses and counterbalancing self-imposed restrictions, a view that [Carl Jung](#) would combine with a belief in natural essence to stipulate a [collective unconscious](#) that was full of basic typologies that the conscious mind fought or embraced. Jung's view suggested that people's impulses towards breaking social norms were not the product of childishness or

ignorance, but were instead essential to the nature of the human animal, the ideas of Darwin having already introduced the concept of "man, the animal" to the public mind.

[Friedrich Nietzsche](#) championed a philosophy in which forces, specifically the 'Will to power', were more important than facts or things. Similarly, the writings of [Henri Bergson](#) championed the vital "life force" over static conceptions of reality. What united all these writers was a [romantic](#) distrust of the Victorian positivism and certainty. Instead they championed, or, in the case of Freud, attempted to explain, irrational thought processes through the lens of rationality and holism. This was connected with the century-long trend to thinking in terms of holistic ideas, which would include an increased interest in the occult, and "the vital force."

Out of this collision of ideals derived from [Romanticism](#), and an attempt to find a way for knowledge to explain that which was as yet unknown, came the first wave of works, which, while their authors considered them extensions of existing trends in art, broke the implicit contract that artists were the interpreters and representatives of bourgeois culture and ideas. These "modernist" landmarks include [Arnold Schoenberg](#)'s atonal ending to his Second String Quartet in 1908; the Abstract-Expressionist paintings of [Wassily Kandinsky](#) starting in 1903 and culminating with the founding of the Blue Rider group in [Munich](#); and the rise of [Cubism](#) from the work of [Picasso](#) and [Georges Braque](#) in 1908.

Powerfully influential in this wave of modernity were the theories of Freud, who argued that the mind had a basic and fundamental structure, and that subjective experience was based on the interplay of the parts of the mind. All subjective reality was based, according to Freud's ideas, on the play of basic drives and instincts, through which the outside world was perceived. This represented a break with the past, in that previously it was believed that external and absolute reality could impress itself on an individual, as, for example, in [John Locke](#)'s [tabula rasa](#) doctrine.

This wave of the Modern Movement broke with the past in the first decade of the twentieth century, and tried to redefine various art forms in a radical manner. Leading lights within the literary wing of this trend included Basil Bunting, [Jean Cocteau](#), [Joseph Conrad](#), [T. S. Eliot](#), [William Faulkner](#), Max Jacob, [James Joyce](#), [Franz Kafka](#), [D. H. Lawrence](#), Federico García Lorca, [Marianne Moore](#), [Ezra Pound](#), [Marcel Proust](#), [Gertrude Stein](#), [Wallace Stevens](#), [Virginia Woolf](#), and [W. B. Yeats](#) among others.

Composers such as [Schoenberg](#), [Stravinsky](#), and [George Antheil](#) represent Modernism in [music](#). Artists such as [Gustav Klimt](#), [Picasso](#), Matisse, [Mondrian](#), and the movements Les Fauves, [Cubism](#) and the [Surrealists](#) represent various strains of Modernism in the visual arts, while architects and designers such as Le Corbusier, Walter Gropius, and Mies van der Rohe brought modernist ideas into everyday [urban](#) life. Several figures outside of artistic Modernism were influenced by artistic ideas; for example, [John Maynard Keynes](#) was friends with Woolf and other writers of the Bloomsbury group.

The explosion of Modernism: 1910-1930

On the eve of [World War I](#) a growing tension and unease with the social order, seen in the Russian Revolution of 1905 and the agitation of "radical" parties, also manifested itself in artistic works in every medium which radically simplified or rejected previous practice. In 1913, famed [Russian composer Igor Stravinsky](#), working for [Sergei Diaghilev](#) and the Ballets

Russes, composed *Rite of Spring* for a ballet, choreographed by [Vaslav Nijinsky](#) that depicted human sacrifice, and young painters such as [Pablo Picasso](#) and [Henri Matisse](#) were causing a shock with their rejection of traditional perspective as the means of structuring paintings—a step that none of the [Impressionists](#), not even [Cézanne](#), had taken.

These developments began to give a new meaning to what was termed 'Modernism'. It embraced disruption, rejecting or moving beyond simple [Realism](#) in literature and art, and rejecting or dramatically altering tonality in [music](#). This set Modernists apart from nineteenth-century artists, who had tended to believe in "progress." Writers like [Dickens](#) and [Tolstoy](#), painters like [Turner](#), and musicians like [Brahms](#) were not 'radicals' or 'Bohemians', but were instead valued members of society who produced art that added to society, even if it was, at times, critiquing less desirable aspects of it. Modernism, while it was still "progressive" increasingly saw traditional forms and traditional social arrangements as hindering progress, and therefore the artist was recast as a revolutionary, overthrowing rather than enlightening.

Futurism exemplifies this trend. In 1909, F.T. Marinetti's first manifesto was published in the Parisian newspaper *Le Figaro*; soon afterward a group of painters (Giacomo Balla, Umberto Boccioni, Carlo Carrà, Luigi Russolo, and Gino Severini) co-signed the Futurist Manifesto. Modeled on the famous "Communist Manifesto" of the previous century, such manifestos put forward ideas that were meant to provoke and to gather followers. Strongly influenced by Bergson and Nietzsche, Futurism was part of the general trend of Modernist rationalization of disruption.

Modernist philosophy and art were still viewed as being only a part of the larger social movement. Artists such as Klimt and [Cézanne](#), and composers such as [Mahler](#) and [Richard Strauss](#) were "the terrible moderns"—other radical avant-garde artists were more heard of than heard. Polemics in favor of geometric or purely abstract painting were largely confined to 'little magazines' (like *The New Age* in the United Kingdom) with tiny circulations. Modernist primitivism and [pessimism](#) were controversial but were not seen as representative of the Edwardian mainstream, which was more inclined towards a Victorian faith in progress and liberal optimism.

However, [World War I](#) and its subsequent events were the cataclysmic upheavals that late nineteenth-century artists such as Brahms had worried about, and avant-gardists had anticipated. First, the failure of the previous status quo seemed self-evident to a generation that had seen millions die fighting over scraps of earth—prior to the war, it had been argued that no one would fight such a war, since the cost was too high. Second, the birth of a machine age changed the conditions of life—machine warfare became a touchstone of the ultimate reality. Finally, the immensely traumatic nature of the experience dashed basic assumptions: Realism seemed to be bankrupt when faced with the fundamentally fantastic nature of trench warfare, as exemplified by books such as Erich Maria Remarque's *All Quiet on the Western Front*. Moreover, the view that mankind was making slow and steady moral progress came to seem ridiculous in the face of the senseless slaughter of the Great War. The First World War at once fused the harshly mechanical geometric rationality of technology with the nightmarish irrationality of myth.

Thus in the 1920s, Modernism, which had been a minority taste before the war, came to define the age. Modernism was seen in Europe in such critical movements as [Dada](#), and then in constructive movements such as [Surrealism](#), as well as in smaller movements of the Bloomsbury Group. Each of these "modernisms," as some observers labeled them at the time,

stressed new methods to produce new results. Again, Impressionism was a precursor: breaking with the idea of national schools, artists and writers and adopting ideas of international movements. Surrealism, [Cubism](#), [Bauhaus](#), and [Leninism](#) are all examples of movements that rapidly found adherents far beyond their original geographic base.

Exhibitions, theater, cinema, books, and buildings all served to cement in the public view the perception that the world was changing. Hostile reaction often followed, as paintings were spat upon, riots organized at the opening of works, and political figures denounced modernism as unwholesome and immoral. At the same time, the 1920s were known as the "Jazz Age," and the public showed considerable enthusiasm for [cars](#), air travel, the [telephone](#), and other technological advances.

By 1930, Modernism had won a place in the establishment, including the political and artistic establishment, although by this time Modernism itself had changed. There was a general reaction in the 1920s against the pre-1918 Modernism, which emphasized its continuity with a past while rebelling against it, and against the aspects of that period which seemed excessively mannered, irrational, and emotional. The post-World-War period, at first, veered either to systematization or nihilism and had, as perhaps its most paradigmatic movement, [Dada](#).

While some writers attacked the madness of the new Modernism, others described it as soulless and mechanistic. Among Modernists there were disputes about the importance of the public, the relationship of art to audience, and the role of art in society. Modernism comprised a series of sometimes-contradictory responses to the situation as it was understood, and the attempt to wrestle universal principles from it. In the end science and scientific rationality, often taking models from the eighteenth century [Enlightenment](#), came to be seen as the source of logic and stability, while the basic primitive sexual and unconscious drives, along with the seemingly counter-intuitive workings of the new machine age, were taken as the basic emotional substance. From these two poles, no matter how seemingly incompatible, Modernists began to fashion a complete worldview that could encompass every aspect of life, and express "everything from a scream to a chuckle."

Modernism's second generation: 1930-1945

By 1930, Modernism had entered popular culture. With the increasing urbanization of populations, it was beginning to be looked to as the source for ideas to deal with the challenges of the day. As Modernism gained traction in academia, it was developing a self-conscious theory of its own importance. Popular culture, which was not derived from high culture but instead from its own realities (particularly mass production), fueled much Modernist innovation. Modern ideas in art appeared in commercials and logos, the famous London Underground logo being an early example of the need for clear, easily recognizable and memorable visual symbols.

Another strong influence at this time was [Marxism](#). After the generally primitivistic/irrationalist aspect of pre-World-War-One Modernism, which for many Modernists precluded any attachment to merely political solutions, and the Neo-Classicism of the 1920s, as represented most famously by [T. S. Eliot](#) and Igor Stravinsky—which rejected popular solutions to modern problems—the rise of [Fascism](#), the Great Depression, and the march to war helped to radicalize a generation. The Russian Revolution was the catalyst to fuse political radicalism and utopianism with more expressly political stances. [Bertolt](#)

[Brecht](#), [W. H. Auden](#), [Andre Breton](#), [Louis Aragon](#), and the philosophers Gramsci and Walter Benjamin are perhaps the most famous exemplars of this Modernist Marxism. This move to the radical left, however, was neither universal nor definitional, and there is no particular reason to associate Modernism, fundamentally, with 'the left'. Modernists explicitly of "the right" include [Wyndham Lewis](#), [William Butler Yeats](#), T. S. Eliot, [Ezra Pound](#), the Dutch author Menno ter Braak, and many others.

One of the most visible changes of this period is the adoption of objects of modern production into daily life. Electricity, the telephone, the automobile—and the need to work with them, repair them, and live with them—created the need for new forms of manners, and social life. The kind of disruptive moment which only a few knew in the 1880s became a common occurrence as telecommunications became increasingly ubiquitous. The speed of communication reserved for the stockbrokers of 1890 became part of family life.

Modernism in social organization would produce inquiries into sex and the basic bondings of the nuclear, rather than extended, family. The Freudian tensions of infantile sexuality and the raising of children became more intense, because people had fewer children, and therefore a more specific relationship with each child: the theoretical, again, became the practical and even popular. In the arts as well as popular culture sexuality lost its mooring to marriage and family and increasingly came to be regarded as a self-oriented biological imperative. Explicit depictions of sex in literature, theater, film, and other visual arts often denigrated traditional or religious conceptions of sex and the implicit relationship between sex and procreation.

Modernism's goals

Many modernists believed that by rejecting tradition they could discover radically new ways of making art. [Arnold Schoenberg](#) believed that by rejecting traditional tonal harmony, the hierarchical system of organizing works of music which had guided music-making for at least a century and a half, and perhaps longer, he had discovered a wholly new way of organizing sound, based on the use of 12-note rows. This led to what is known as serial music by the post-war period.

Abstract artists, taking as their examples from the Impressionists, as well as [Paul Cézanne](#) and [Edvard Munch](#), began with the assumption that [color](#) and [shape](#) formed the essential characteristics of art, not the depiction of the natural world. [Wassily Kandinsky](#), [Piet Mondrian](#), and [Kazimir Malevich](#) all believed in redefining art as the arrangement of pure color. The use of photography, which had rendered much of the representational function of visual art obsolete, strongly affected this aspect of Modernism. However, these artists also believed that by rejecting the depiction of material objects they helped art move from a [materialist](#) to a spiritualist phase of development.

Other Modernists, especially those involved in design, had more pragmatic views. Modernist architects and designers believed that new [technology](#) rendered old styles of building obsolete. Le Corbusier thought that buildings should function as "[machines](#) for living in," analogous to [cars](#), which he saw as machines for traveling in. Just as cars had replaced the [horse](#), so Modernist design should reject the old styles and structures inherited from [Ancient Greece](#) or from the [Middle Ages](#). Following this machine aesthetic, Modernist designers typically reject decorative motifs in design, preferring to emphasize the materials used and pure geometrical forms. The [skyscraper](#), such as Ludwig Mies van der Rohe's Seagram Building in [New York](#) (1956–1958), became the archetypal Modernist building.

Modernist design of houses and furniture also typically emphasized simplicity and clarity of form, open-plan interiors, and the absence of clutter. Modernism reversed the nineteenth-century relationship of public and private: in the nineteenth century, public buildings were horizontally expansive for a variety of technical reasons, and private buildings emphasized verticality—to fit more private space on more and more limited land.

In other arts, such pragmatic considerations were less important. In literature and visual art, some Modernists sought to defy expectations mainly in order to make their art more vivid, or to force the audience to take the trouble to question their own preconceptions. This aspect of Modernism has often seemed a reaction to consumer culture, which developed in Europe and North America in the late-nineteenth century. Whereas most manufacturers try to make products that will be marketable by appealing to preferences and prejudices, High Modernists rejected such consumerist attitudes in order to undermine conventional thinking.

Many Modernists saw themselves as apolitical. Others, such as [T. S. Eliot](#), rejected mass popular culture from a conservative position. Indeed, one could argue that Modernism in literature and art functioned to sustain an [elite](#) culture which excluded the majority of the population.

Modernism's reception and controversy

The most controversial aspect of the Modern movement was, and remains, its rejection of tradition. Modernism's stress on freedom of expression, experimentation, radicalism, and primitivism disregards conventional expectations. In many art forms this often meant startling and alienating audiences with bizarre and unpredictable effects: the strange and disturbing combinations of motifs in [Surrealism](#), the use of extreme dissonance and [atonality](#) in Modernist music, and depictions of nonconventional sexuality in many media. In literature Modernism often involved the rejection of intelligible plots or characterization in novels, or the creation of poetry that defied clear interpretation.

The [Soviet Communist](#) government rejected Modernism after the rise of [Stalin](#) on the grounds of alleged elitism, although it had previously endorsed Futurism and [Constructivism](#); and the Nazi government in [Germany](#) deemed it narcissistic and nonsensical, as well as "Jewish" and "Negro." The Nazis exhibited Modernist paintings alongside works by the mentally ill in an exhibition entitled [Degenerate art](#).

Modernism flourished mainly in consumer/capitalist societies, despite the fact that its proponents often rejected consumerism itself. However, High Modernism began to merge with consumer culture after [World War II](#), especially during the 1960s. In [Britain](#), a youth sub-culture even called itself "moderns," though usually shortened to Mods, following such representative music groups as The Who and The Kinks. [Bob Dylan](#), [The Rolling Stones](#), and [Pink Floyd](#) combined popular musical traditions with Modernist verse, adopting literary devices derived from Eliot, Apollinaire, and others. [The Beatles](#) developed along similar lines, creating various Modernist musical effects on several albums, while musicians such as [Frank Zappa](#), Syd Barrett, and Captain Beefheart proved even more experimental. Modernist devices also started to appear in popular cinema, and later on in music videos. Modernist design also began to enter the mainstream of popular culture, as simplified and stylized forms became popular, often associated with dreams of a space age high-tech future.

This merging of consumer and high versions of Modernist culture led to a radical transformation of the meaning of "modernism." Firstly, it implied that a movement based on the rejection of tradition had become a tradition of its own. Secondly, it demonstrated that the distinction between elite Modernist and mass-consumerist culture had lost its precision. Some writers declared that Modernism had become so institutionalized that it was now "post avant-garde," indicating that it had lost its power as a revolutionary movement. Many have interpreted this transformation as the beginning of the phase that became known as [Post-Modernism](#). For others, such as, for example, art critic Robert Hughes, Post-Modernism represents an extension of Modernism.

"Anti-Modern" or "counter-Modern" movements seek to emphasize [holism](#), connection, and spirituality as being remedies or antidotes to Modernism. Such movements see Modernism as reductionist, and therefore subject to the failure to see systemic and emergent effects. Many Modernists came to this viewpoint; for example, [Paul Hindemith](#) in his late turn towards mysticism. Writers such as Paul H. Ray and Sherry Ruth Anderson, in *The Cultural Creatives*, Fredrick Turner in *A Culture of Hope*, and Lester Brown in *Plan B*, have articulated a critique of the basic idea of Modernism itself—that individual creative expression should conform to the realities of technology. Instead, they argue, individual creativity should make everyday life more emotionally acceptable.

In some fields, the effects of Modernism have remained stronger and more persistent than in others. Visual art has made the most complete break with its past. Most major capital cities have museums devoted to 'Modern Art' as distinct from post-[Renaissance](#) art (*circa* 1400 to *circa* 1900). Examples include the [Museum of Modern Art](#) in [New York](#), the Tate Modern in [London](#), and the Centre Pompidou in [Paris](#). These galleries make no distinction between Modernist and Post-Modernist phases, seeing both as developments within 'Modern Art.'

LINGUISTIC CONSIDERATIONS OF SIGNIFICANT CULTURAL LANGUAGES

What languages do we have to learn at school, even if we live in the US or England and our mother tongue is English? I believe that an intellectual man has to know well at least 5 languages: his mother tongue, English, Spanish, French, and one of the languages: Mandarin, Hindi, Arabic, Portuguese, Russian, German, Italian, Swahili, and Japanese. If his mother tongue is English or one of those languages he should learn another of those languages. Many countries have already in their curriculum 3-4 languages as Switzerland, Belgium, Singapore, Israel, etc. And we don't speak of the times where at the Lycee in Cairo you had to learn at least 6 languages – French, English, Arabic, Greek, Latin, and one more language: Hebrew (for the Jews), Italian..

I learned some of the languages also by learning their songs, and I enjoy not only reading the literature, mostly novels, of the countries – English, American, Irish, French, Italian, German, Austrian, Russian, Spanish, Latin American, Portuguese, Brazilian, Arabic, but also plays and poetry in those languages, music and songs, learning about their art, philosophy, ethics, religion, history, geography, traveling to those countries, meeting people, doing business with them. In this book, we'll refer to all those parameters, beyond learning the languages, and **in this chapter we chose links (direct and indirect) to hundreds of songs from those countries**, that I like most of them, from Yves Montand to Joan Baez, from Domenico Modugno to Raj Kapoor, from Schubert to Verdi, from Anything Goes to My Fair Lady, from Argentinean to Arabic film songs, from children songs to folk songs, from patriotic songs to icon pop songs, from Brazilian to African songs, from Russian to Chinese, from mariachis to yodeling. In order to remain politically correct, we bring herebelow in Arabic – the classic song [Enta Omri](#) – you are my life, sung by the greatest Arab singer [Umm Kulthum](#) during [1 hour and 18 minutes](#), exactly the same duration of the masterpiece Topaze by Marcel Pagnol, 1933, 78 minutes, Director Harry d'Abbadie d'Arrast, with John Barrymore, Myrna Loy. Umm Kulthum called for the annihilation of Israel, and as a counterpart - a song in an Arab film by another [well-known Arab](#) singer – [Leila Mourad](#) – who was born Jewish, converted to Islam, and was a personal friend of my aunt.

Herebelow, we give the rationale for choosing the languages that should be learned – 5 out of 12.

[Why English is obvious](#) – it has [become](#) the [international language](#) of [the world](#), [the first global](#) lingua [franca](#), it has an [important cultural](#) heritage, [and it](#) is [the mother tongue](#) of [many G20 countries as the US, UK](#), Australia, [South Africa](#), [Canada](#)..., it is [widely spoken](#) in [India](#), African countries, [Singapore](#)..., [altogether](#) it is [spoken by 1.2 billion](#) people. [English is the world's](#) most [widely used language](#) in [newspaper publishing](#), [book publishing](#), [international telecommunications](#), scientific [publishing](#), [international trade](#), mass [entertainment](#), and [diplomacy](#). English [has replaced German as the dominant language](#) of [scientific research](#).

Why [Spanish is also obvious](#) – it is [spoken by](#) 460 million people, and [the mother tongue](#) in [Spain](#), Latin America, etc., [and is spoken](#) or can be [understood in many](#) other countries such as Brazil, Portugal, Italy, Philippines... [It has an important](#) cultural heritage, and [is very important](#) in business. [Spanish is](#) the primary [language of 20](#) countries [worldwide](#), making it

[the second](#) most [widely spoken](#) language in terms of native speakers, and the third most spoken language by total number of speakers, after Mandarin and English. Spanish is the third most commonly used language on the Internet, after English and Mandarin. Spanish is also very easy to learn, and if you master the language you can understand quite well also Portuguese, Italian and even French.

Why [French](#) is less [obvious](#), unless [you are](#) French, [of course](#). A [century](#) ago it [was an international language](#) of [commerce](#), [literature](#), scientific [standards](#), and the [diplomatic language](#). [Today](#) it is [spoken by](#) 274 [million people](#), and the [mother tongue](#) in [France](#), [Belgium](#), [Switzerland](#), Canada, African [former colonies](#), etc., [it is](#) spoken or [can be understood](#) in many [other countries](#). [French](#) is the [official language](#) in 45 [countries](#) and [dependencies](#). It [has](#) a very [important](#) cultural [heritage](#) and [is very important](#) in [Business](#). French is the [second-most](#) widespread [language](#) worldwide [after](#) English. [French](#) is the [third-most](#) widely [understood](#) language [in the EU](#). French [is one](#) of the [top three](#) most useful [languages for business](#), after English and Chinese. So, taking all those considerations in mind those three languages, English, Spanish and French, should be learned at school, receiving as a bonus fluency in their cultural heritage. They are also official languages of the UN, with Arabic, Russian and Mandarin.

[Russian](#) is spoken by 260 [million](#) people, the [mother tongue](#) in [Russia](#), and is [understood](#) in all the Slavic [countries](#) – Belarus, Poland, Ukraine, Czech Republic, Croatia, Bulgaria, etc., and in many [former](#) Soviet [Union](#) countries as Kazakhstan and Kirghizstan. [It has an](#) important [cultural](#) heritage, but [is needed](#) for [business only](#) in [Russia and](#) some of the Slavic countries. The international business language in most of the Slavic countries is now English, especially in Poland, Czech Republic, Slovakia, the former countries of Yugoslavia, etc.

[Mandarin](#) is the language spoken by the [largest](#) number of people in the world - 1.35 billion people. Almost all of them are in one country – [China](#), and a small [number](#) of them are in [Taiwan](#), [Singapore](#) and Chinese people in Malaysia, Indonesia, etc. In all those countries, except China, the business language is English. The native speakers in China, Arab countries, India, Kenya, Portugal, Japan, etc. are of course aware of the very important cultural heritage of those countries, that is not however widely known all over the world as the English, French or Spanish cultural heritage.

[Arabic is spoken by 390](#) million [people](#) – all Arab [countries](#) and [many countries in Africa](#). The [language](#) is important for business only in those countries, and even in those countries English has become a very important business language. Many Arab countries are very rich with their oil reserves and Saudi Arabia is part of the G20, although in many Arab countries there is civil war.

[Hindi](#) is a very [important](#) language, [spoken](#) by 540 [million](#) people, [however](#) most of them are in [India](#), and even there, other languages are widely spoken as Bengali (also in Bangladesh), Tamil, Panjabi, etc... It goes without saying that English is widely spoken in India and it is a very important business language there. [Urdu](#), which is [mutually](#) intelligible to Hindi [but uses](#) the Arabic script, is [spoken](#) by 376 [million](#) people, most of them [Moslems](#) in Pakistan and India. English is widely spoken in those countries and is an official language in both countries.

[Portuguese](#) is a very [important](#) language with 336 [million](#) speakers, [most of them](#) as a mother tongue in Brazil, [Portugal](#), [Angola](#), Mozambique, etc. In those countries English is also a very important business language.

[Malay](#) is an [important](#) language [with 270](#) million speakers, but [almost](#) all of them are in [two countries](#) Malaysia and Indonesia, and some of the speakers are in [Singapore](#) and Brunei. In the Malay speaking countries, former British/Dutch colonies, English is a most important business language.

[Japanese is](#) spoken [by 123](#) million [people](#), almost all of them in [Japan](#), and a [few in](#) the Japanese [Diaspora](#). [Swahili](#) is widely [spoken](#) in [Africa](#), spoken by 150 [million](#) people in [Africa](#) in Kenya, Tanzania, Uganda, Ruanda, Burundi, the Democratic Republic of the Congo, Comoros. It is used as a [lingua franca](#) in much of Southeast Africa.

[German](#) was and still is a very [important](#) language with [145 million](#) speakers, 95 [million](#) in Germany, [Austria](#) and [Switzerland](#), but [tens of](#) millions [in other](#) European [countries](#) that were part of the German and [Austro-Hungarian](#) Empires. In all those countries English is a very important business language. [German](#) is the [second most](#) commonly used scientific language and the third largest contributor to research and development. It is also a dominant language in business, culture, history, literature, philosophy and theology. Worldwide, Germany is ranked number 5 in terms of annual publication of new books. One tenth of all books (including e-books) in the world are published in German. German is also the third most used language used by websites.

Italian is spoken by 64 million people, most of them in Italy and the others in the rather large Italian Diaspora in the US, Australia and over Europe. In Italy also English is a very important business language, as in other European countries, such as the Netherlands, Belgium, Scandinavia, Baltic countries, Greece, etc. Italian is an [important](#) language in art, music, opera, [design](#) and [fashion](#), and [within the](#) Catholic [church](#) Italian [is known](#) by a [large part](#) of the [ecclesiastical](#) hierarchy and [is used](#) in [substitution](#) for [Latin in](#) some [official](#) documents. Those who are interested in the cultural heritages of Germany or Italy would opt to study those languages, which otherwise are not as important or widely spoken, as Chinese, Japanese, or Arabic, although Germany & Italy are economic superpowers, being an important part of the EU.

OFFICIAL LANGUAGES IN FORMER COLONIES AND IN MULTINATION COUNTRIES

On this topic of studying foreign languages, we should resort to the [leader who has founded](#) the free state of Singapore – [Lee Kuan Yew](#). In his captivating biography "[From Third World to First – The Singapore Story 1965-2000](#)" he writes in page 181: "Bilingualism in English and Malay, Chinese or Tamil is a heavy load for our children. The three mother tongues are completely unrelated to English. But if we were monolingual in our mother tongues, we should not make a living. Becoming monolingual in English would have been a setback. We would have lost our cultural identity, that quiet confidence about ourselves and our place in the world. In any case, we could not have persuaded our people to give up their mother tongues. Hence, in spite of the criticism from many quarters that our people have mastered neither language, it is our best way forward. English as our working language has prevented conflicts arising between our different races and given us a competitive advantage because it is the international language of business and diplomacy, of science and technology. Without it, we would not have many of the world's multinationals and over 200 of the world's top banks in Singapore. Nor would our people have taken so readily to computers and the Internet." This applies to other countries also, small countries teach at school more languages

than large countries, thus Scandinavian or Dutch students speak fluently several languages, but Americans or Chinese speak at best 2 languages.

Very few people know that Belgium has three official languages: French, Flemish and German, but more people know that Switzerland has four official languages: German, French, Italian and Romansch. Switzerland is often quoted as a success story for its handling of linguistic and cultural diversity. The problem is more complex if we bear in mind that proportion has changed over the years and that according to the 1990 Swiss Federal Census: German speaking citizens are 63.6% of the resident population, French – 19.2%, Italian – 7.6%, and Romansch – 0.6%. 9% of the resident population claims a non-national language as their main languages, which is a very high percentage in international comparison. These figures are taken from the essay "[Language Policy in Multilingual Switzerland](#)" by Francois Grin. The existence of fairly sharp linguistic boundaries separating corresponding language region means that, with the exception of a limited number of municipalities, there is no official bilingualism at the local level. Switzerland may be quadrilingual, but to most intents and purposes, each point of its territory can be viewed as unilingual. Correspondingly, living in Switzerland means living entirely in German, in French or in Italian. As long as Switzerland, Belgium or Canada have specific geographic language boundaries in which only one language is learned at a level of mother tongue, it would be impossible to teach thoroughly other languages as should be in a true multilingual country where all 3, 4 or 5 languages should be taught at the same level of fluency.

Furthermore, there is a growing tendency to study English as a second language, which complicates even more the language puzzle. In reality, kids start learning one foreign language in primary school, often along with English. They may learn a second later on. But the level of speaking skill is usually very low once people leave school. French Swiss make a point of not being able to speak German. They prefer English. The Swiss Germans pretend they can't speak French and when forced to do so often speak in an appalling accent, jokingly called "Français Federal" which uses heavy-handed German intonation and manages to thoroughly mangle French. Neither Swiss Germans nor Swiss French speak Italian widely. The Swiss Italians take German at school but are generally hopeless at actually speaking it. No-one learns Romansch at school unless you live in a Romansch-speaking region. So it looks great on paper, but the reality is that most Swiss aren't brilliant polyglots. They speak their language, usually pretty good English, & a smattering of another national language. What a pity, what a waste of opportunity!

In Belgium 59% of the population is Flemish, 40% is French and 1% is German. But 25% of the population is people of foreign background and their descendants – half are Europeans and half are non-Europeans. 55% of the Flemish population speaks French, while only 18% of the French population speaks Flemish. The differences between the French and Flemish are so acute that many Belgians consider seriously splitting the country into two parts. I often wonder why is there such a level of animosity in multilanguage countries towards the other languages. Instead of seizing the opportunity to learn 5 languages which is the minimum that an intellectual person should speak, English Canadians are reluctant to learn French, Americans are reluctant to learn Spanish, German Swiss are reluctant to learn French, and French Belgians are reluctant to learn Flemish. However, there is a tendency for the minority language speakers to speak the language of the majority – Spanish speaking people in the US study more willingly English than vice versa, Arab speaking people in Israel and the West Bank study more willingly Hebrew than vice versa, French speaking Swiss sometimes reluctantly have to study German because of the economic importance of the Swiss German cantons, and so French speaking Belgians need to speak Flemish in modern Belgium, which

was not the case a hundred years ago when French was the dominant language in Belgium and less so in Switzerland. Israeli Jews may be reluctant to learn Arabic, which is mandatory at school, because of the Palestinian conflict, but Arabic should not be "painted" by the conflict as it is a very rich language with a high culture. It is easy to say so, but if this is the case how come that I didn't study seriously Arabic at school in Egypt and in Israel (although I had a final grade of 9), and in spite of three to four serious attempts I still don't speak fluently the language, while I speak much better Spanish, Italian or German, which I studied much later and that are very far apart from Hebrew, the language I know best.

So, the answer has to be found in the historical animosities in those countries – why do German and French Swiss don't like each other, English and Spanish Americans, French and English Canadians, French and Flemish Belgians, Arabs and Jews in Israel? If we solve those animosities, in spite of wrongs dating hundreds of years, seeming insurmountable, with a history of oppression, superiority and inferiority complexes, sometimes linked to a different religion, we may arrive to the solution which should be beneficial to all - where everyone would speak perfectly at least four to five languages – in Belgium Flemish/Dutch, French, German and English (and in many cases a native language of Turkish or Spanish), in Switzerland – German, French, Italian, English and possibly Portuguese, in Canada – English, French, and possibly German, Italian or Chinese, in the US – English, Spanish, French, and possibly Chinese or Hindi, in Singapore – English, Mandarin, Malay, and possibly Tamil or French, in Israel – Hebrew, English, Arabic, French & Spanish. We can bring as an example the decision of Lee Kuan Yew who chose English as the first language in Singapore, contributing by that to the economic success of the country and lessening potential conflicts between the Chinese, Malayan and Tamil populations. Lee, who was one of the wisest leaders in the 20th century, arrived to the conclusion that he shouldn't punish the Singaporeans and the English language for the colonial wrongs committed by the British. He chose English because it was the best solution for his people.

And so did the Indians who suffered even more from the British, but chose English as their official language, by that contributing substantially to Indian economy, enabling American and English companies to outsource to India business of billions dollars, and lessening potential conflict between speakers of Bengali, Assamese, Kannada, Malayalam, Marathi, Odia, Punjabi, Tamil, Telugu, Urdu and speakers of so many languages, that would not want to adopt Hindi as their first language, although de jure India has two official languages – English and Hindi. But black South Africans suffered even more than the Indians, especially from Afrikaans speakers, and what do we see? More black, coloured, and Indian South Africans speak Afrikaans at home than white South Africans. According to a recent SAIRR study, based on data from the 2011 census, only 40 percent of those who speak Afrikaans at home are whites. This means that out of 6.9 million people who speak the language at home, 2.7 million are white, while the rest are from other racial groups. English is the home language of almost five million South Africans; of these, 1.6 million (or 34 percent) are white. Almost 1.2 million black South Africans have English as their mother tongue, while coloured people and Indians accounted for nearly 950,000 and 1.1 million, respectively. SAIRR researcher Thuthukani Ndebele said English was only the fourth most-spoken home language, but was the preferred language of learning in South Africa. About 64% of the 11.5 million pupils in public schools in 2010 chose to be taught in English, reflecting a global trend for the preference of the language. Yet, IsiZulu was the most common home language in South Africa, with 11.6 million South Africans listing it as their mother tongue.

Furthermore, the former colonies of France, UK, Belgium, Spain and Portugal, have chosen in most of the cases the colonial language as an official language. The former satellites of Russia have "divested" Russian in most of the cases, but still Russian is an official language in Belarus (9.5M), Kazakhstan (17.7M), Kyrgyzstan (5.4M), Tajikistan (7.6M), of course Russia (142.9M, although many people in the federation have another mother tongue), as well as many autonomous and de facto independent regions – Abkhazia, South Ossetia, Transnistria, Gagauzia – autonomous, and the following Oblasts in Ukraine – Kherson, Mykolaiv, Odessa, Kharkiv, Dnipropetrovsk, Crimea. Russian may not be official, but it is widely spoken in many other countries – Armenia, Azerbaijan, Estonia, Latvia, Lithuania, Georgia, Moldova, Mongolia, Turkmenistan, Uzbekistan (and Israel)... Although the Russians have oppressed those countries they have not punished the language, which remains a very important language worldwide. Worldwide 23 million people speak Dutch, most of them in the Netherlands (16M) and in Belgium (6M), but also in the former Dutch dependencies of Aruba, Curacao, Bonaire, Saba, St. Eustatius, St. Maarten, Suriname, elderly people and 20,000 students in the former Dutch colony of Indonesia, and Dutch immigrants to Australia, Canada, US, New Zealand. Furthermore, we have 6.9 million native speakers of Afrikaans in South Africa (most of them black), more than the 5 million native speakers of English. In Namibia people speak the similar Namibian African.

Last but not least, Sephardic Jews have suffered much from the Spanish in Auto-da-fes, expulsion, confiscation of assets, torture and murder, yet the Jews have not punished Spanish and continued to speak the language (Ladino) for 500 years, loving it, writing in it novels, plays and articles, keeping the Spanish folklore and romances. Even the Ashkenazi Jews who have suffered so much in Central and Eastern Europe continued to speak and write in Yiddish, which is based on German, with an outstanding contribution to world's culture in novels, plays and folklore in this language. The German Jews spoke German perfectly, the Polish Jews spoke Polish, Russian Jews spoke Russian, Romanian Jews spoke Romanian, Ukrainian Jews spoke Ukrainian, Croatian Jews spoke Croatian, Hungarian Jews spoke Hungarian, Greek Jews spoke Greek, and Italian Jews spoke Italian, although they suffered so much during the Holocaust, before and after from anti-Semitism, they continued to speak those languages and didn't punish them.

So, if South Africans and Indians have overcome their animosities towards English speakers, by choosing English as their official language, why can't Belgians, Swiss, Canadians, Americans and Israelis overcome their animosities, having suffered much less than the South Africans and Indians? They have nothing to lose from learning their compatriots language, on the contrary it would enhance mutual understanding, patriotic cohesiveness, with a clear economic benefit, and an invaluable cultural benefit. We refer to languages which are spoken by tens to hundreds of millions all over the world, spoken in countries with the strongest economies, with a very rich culture, an enchanting folklore – German, French, Italian, Spanish, English, Dutch, Arabic (and Hebrew). Or maybe I am completely wrong and in a generation or two everybody would speak only English or at most two languages – a mother tongue and English. This would be such a waste of culture, the end of a cosmopolitan society, a global world but very limited in diversity, as the languages are not to blame for the wrongs committed by their speakers. I am strongly opposed to such a solution and if this book would contribute to favor a diverse society, with a holistic approach to the world culture comprising of many segments – it would achieve its goal.

Finally, we bring here statistics on the numbers of people speaking the most spread world languages, mainly because of conquest of other countries: English, French, Spanish,

Portuguese, Russian, Dutch, Arabic. This list proves that although the former colonies suffered much of the colonial powers, in most of them the language of their oppressors is still the official language of the former colonies. But this is not the rule in many cases – we'll take Algeria as an example, that was part of France prior to its independence and where French people were an important part of the population before they emigrated after Algeria's independence. In all the documentation Arabic is the official language of Algeria (spoken by 72% of the population, Berber is spoken by 28%), they fought one of the fiercest war of independence to get rid of the French rule. So, in Algeria French has no official status. But, Algeria is also the second-largest Francophone country in the world in terms of speakers, and French is widely used in government, media (newspapers, radio, local television), and both the education system (from primary school onwards) and academia due to [Algeria's colonial history](#). It can be regarded as the *de facto* co-official language of Algeria. In 2008, 11.2 million Algerians could read and write in French. An Abassa Institute study in April 2000 found that 60% of households could speak and understand French or 18 million in a population of 30 million then. In recent decades the government has reinforced the study of French and TV programs have reinforced use of the language.

In Morocco, we find a similar case - [French](#) is widely used in governmental institutions, media, mid-size and large companies, international commerce with French-speaking countries, and often in international diplomacy. French is taught as an obligatory language at all schools. In 2010, there were 10,366,000 French-speakers in Morocco, or about 32% of the population. French also plays a major role in Tunisian society, despite having no official status. It is widely used in education (e.g., as the language of instruction in the sciences in secondary school), the press, and in business. In 2010, there were 6,639,000 French-speakers in Tunisia, or about 64% of the population. So, the Maghreb countries adopted a practical approach to the problem of the French language – they saved face in not giving it an official status, but *de facto* they recognized French as an official language and most of the population of the Maghreb still speaks French.

On the contrary to that policy, Russian which was a mandatory language in all Polish schools from the end of the forties to the end of the eighties, is spoken now only by elderly people and no more taught as a mandatory language at school, Poles now opt much more to English, but also to French, Spanish and German. It is a question of how beneficial the language is to its learners – Poles have never linked the French language to the French occupation in the times of Napoleon, they had always a great respect and love for the language and for the French people, contributing with their best people to the glory of both countries with Chopin and Marie Curie. They could have retained a grudge towards the Germans and the German language following the worst atrocities of mankind that were executed in their country during the German Nazi occupation, but they decided to open a new page and to judge the German people according to their conduct in the new Germany, without punishing of course the German language which is one of the most important languages in Europe. They cooperate with the Germans, study the language at school, as they study Spanish and English, which are three of the most important languages in business. However, they try very hard to forget the times where Russia/The Soviet Union dominated their country and oppressed their people, they don't study the language, and judge the benefits of learning the language in the context of the new post-Communist world, where Russia is not so important as in the past, and from their two neighbors the western and the eastern they prefer by far the western German, which open for them the gates to the European Union and to prosperity.

LISTS OF OFFICIAL LANGUAGES IN FORMER COLONIAL/COLONIES – ENGLISH, FRENCH, SPANISH, DUTCH, RUSSIAN, PORTUGUESE, GERMAN, ITALIAN, ARABIC

The following is a list of territories where [English](#) is an [official language](#), that is, a language used in citizen interactions with government officials. In 2015, there were 67 sovereign states and 27 non-sovereign entities where English was an official language. Many [country subdivisions](#) have declared English an official language at the local or regional level.

LIST OF COUNTRIES WHERE FRENCH IS AN OFFICIAL LANGUAGE

As of 2015, there are 29 independent nations where French is an official language. The following is a list of sovereign states and territories where [French](#) is an official or de facto

language. Sub-national regions located within countries where French is an official national language are not included in this list. The five [overseas regions](#) of France (*Départements d'Outre-Mer*, or DOM): [Guadeloupe](#), [French Guiana](#), [Martinique](#), [Mayotte](#), and [Réunion](#), have the same status as metropolitan France and are not listed here. French has a certain legal status in the American state of [Louisiana](#) but it's not considered de jure official.

LIST OF COUNTRIES WHERE SPANISH IS AN OFFICIAL OR NATIONAL LANGUAGE

Spanish is the majority language in 20 sovereign states and several dependent territories, totaling around 442 million people. In these countries and territories, Spanish is the main or only language of communication of the vast majority of the population; official documents are written chiefly or solely in that language; and it is taught in schools and utilized as the primary medium of instruction as part of the official curriculum.

Country/Territory	Status	Population (2014)
Total		440,320,916
 Mexico	De facto ^[3]	120,286,655
 Spain ^a	De jure ^[4]	47,737,941
 Colombia	De jure ^[5]	46,245,297
 Argentina	De facto ^[6]	43,024,374
 Peru ^b	De jure ^[7]	30,147,935

 Uruguay	De facto ^[22]	3,332,972
 Equatorial Guinea ^g	De jure ^[23]	1,722,254

^a In Spain, Spanish is the sole official language at the national level, while the languages of [Basque](#), [Catalan/Valencian](#), and [Galician](#) are co-official alongside Spanish in certain sub-national regions.

^b In Peru, Spanish is the sole official language at the national level while [Quechua](#) and [Aymara](#) hold co-official status in selected regions.

^c In Ecuador, Spanish is the sole official language at the national level while the [Kichwa language](#) holds co-official status in selected regions.

^d In Bolivia, the national constitution recognizes Spanish and various [indigenous languages of Bolivia](#) as official at the national level, though Spanish is predominant nationwide.

^e In Paraguay, Spanish and the indigenous [Guaraní language](#) are recognized as co-official at the national level and both are widely used in society.

^f Puerto Rico is an unincorporated territory of the U.S. where Spanish and English are the official languages^[20] and Spanish is the primary language. In November 2008 a district court judge ruled that a sequence of Congressional actions have had the cumulative effect of changing Puerto Rico's status to incorporated.^[24] However, by April 2011 the issue had not yet made its way through the courts,^[25] and in January 2013 the U.S. government still referred to Puerto Rico as unincorporated.^[26]

^g In Equatorial Guinea, the Spanish, French, and Portuguese languages all hold official status at the national level, though Spanish is the primary language in the public sphere and several [Bantu languages](#) are used at home and family settings.

SPANISH IS A COMMONLY USED LANGUAGE IN THE FOLLOWING COUNTRIES:

Though not an official language at the national level, Spanish is regularly spoken by at least 10% of the population in each of the nations and territories noted below. In each, public services and information are widely available in Spanish, as are various forms of printed and broadcast media. Spanish has been spoken in the United States for several centuries, particularly in the [Southwest](#) and [Florida](#), which were all once part of [New Spain](#). Spanish is the most studied foreign language in United States schools and is spoken as a native tongue by 35,437,985 people, who comprise 12.19% of the population. It is also *de facto* official in the U.S. state of New Mexico along with English and is increasingly used alongside English nationwide in business and politics. With over 50 million native speakers and second language speakers, the United States now has the second largest Spanish-speaking population in the world after Mexico. The Spanish language is not official but also holds a special status (in the education system, the media, and some official documents) in the [Principality of](#)

[Andorra](#) and the [British Overseas Territory](#) of [Gibraltar](#), both of which share land borders with Spain. Spanish has no official recognition in the [Central American](#) nation of [Belize](#), a [Commonwealth realm](#) where English is the official national language. However, the country shares land borders with Spanish-speaking Mexico and Guatemala and Spanish is spoken by a sizable portion of the population there.

Country	Population (2014)	Total speakers	Percentage speaking	Spanish-speaking
 Belize	340,844	106,795	31%	
 Andorra	85,458	29,907	35%	
 Gibraltar	29,185	23,857	81%

ON COSMOPOLITAN SOCIETY AND CULTURES

This book advocates a cosmopolitan attitude, I believe that I am cosmopolitan, a World Citizen, one who embraces a multicultural approach, believing that all humanity belongs to a single ethical and moral community. My vision is that the world should become a Cosmopolitan/International/Global Society, where people of many ethnicities, religions and cultures meet, live in close proximity, and above all share the same humane ideals. In the past this term often received a pejorative connotation, as "rootless cosmopolitan", a Soviet derogatory epithet during Joseph Stalin's anti-Semitic campaign of 1949-1953. Many times anti-Semites in France, Germany and Poland accused the Jews to be cosmopolitans, rootless, as they don't have allegiance to their country, but to humanity in general. In my case I feel 100% Israeli, and my cosmopolitan attitude doesn't contradict but complements my Israeli/Jewish/humane identity. I have analyzed in this book many cosmopolitan pillars, I may be iconoclast on many world issues but I advocate most of the cosmopolitan cornerstones. First of all, the Bible, although I am not religious and am totally atheist, I believe that the Bible (Old and New testament) is the most important book ever written, with the most influence in world history – good or bad, but the book is not to be blamed for the false interpretations that it has received over the years, exactly as the language is not to be blamed for the mischievous conduct of the people who speaks the language. The Bible has been translated into hundreds of languages – 469 complete and 2,527 partial – according to the United Bible Societies in October 2011. The Bible has been translated to 95% of the world's population, practically all the world.

Another important cosmopolitan pillar is the United Nations Universal Declaration of Human Rights that has been translated into 444 languages, including Ladino (initiated and executed by me with the collaboration of Ladinokomunita). I believe that this document is the cornerstone of the humanist facet of the world, all nations have agreed to it, many don't implement parts of it... Every time I learn a new language I try to read the Declaration in this language, with translation but with enough knowledge to follow the text, I have reached a record of 72 languages in which I can understand at least partially the Declaration, and more than 250 languages and dialects in which the Bible and the prayers were translated. After the Bible and the Declaration [the book that was translated](#) into most languages (not counting a multitude of Jehova's Witnesses books) is The Little Prince by Antoine de Saint Exupery – that was translated from the French into 253 languages, although some of the sources write that it is Pinocchio by Carlo Goldoni which was translated from Italian into more than 260 languages, but the figures are so close and cannot be so exact, that it doesn't matter. There are more than 120 translations of the Little Prince in the languages that I can understand, and at least 120 more translations into languages that I can't understand, as Egyptian Hieroglyphs and Romani/Gypsy. I don't see how and why I should learn Romani, unless one of my grandchildren would marry a Gypsy, as I have learned Romanian – not to confuse with Romani – because I have married a Romanian. I almost studied Hieroglyphs, and could have become a world specialist in this language (there are probably no more than ten, almost like business ethics professors, at least with business background and teaching with plays as me..).

When I started my studies at the Hebrew University of Jerusalem in 1961 I asked to receive a scholarship as I had very good grades and the means of my family were very restrained. The University answered me that for Economics with hundreds of students every year I didn't have

a chance, but if I wanted to learn Egyptology I could receive a full scholarship, as there were only two students starting their studies in 1961 and the University rules require at least 3 students to keep this "faculty" alive. I answered them that I didn't know Arabic although I was born in Egypt and lived there 9 years, and I don't see how I could learn a more ancient Egyptian language, unless I thought that the mummies would resuscitate as in the horror films. Maybe I made the mistake of my life as I didn't enjoy my Economics studies, but the Pharaohs behaved so badly to my people, who built for them the Pyramids as slaves, that I had to punish at least their language for their despicable conduct. In case that some of my readers don't share my peculiar sense of humor, I want to specify that it was meant as a joke, as on the contrary I believe that a language cannot be punished for the crimes of their speakers. Furthermore, I strongly oppose any kind of cultural boycott, as masterpieces of Wagner should not be banned because Wagner was an anti-Semite, and I deplore the despicable conduct of those who boycott Israeli films, authors and academics, just because they are Israelis, namely Jews, because of the alleged and completely false "war crimes" committed by the Israelis against Hamasland in Gaza, when the Israelis bombard the rockets bases, from where the Hamas send thousands of rockets against innocent Israeli civilians, and because those bases are situated in residential areas where innocent Arab civilians are killed. Those boycotts are applied only towards Israelis, as other nations where hundreds of thousands people are slaughtered are not boycotted or even condemned by the United Nations.

The most translated books include also: Alice's Adventures in Wonderland by the English Lewis Carroll translated into 174 languages (I read it in Frisian), Andersen's Fairy Tales by the Danish Hans Christian Andersen translated into 153 languages (I read it in Danish, French, English, Plattdeutsch, Interlingua, Icelandic, etc.), 20,000 Leagues under the Sea by the French Jules Verne – 148, Unbelievable but the comics of The Adventures of Asterix by the French Rene Goscinny and Albert Uderzo were translated into 112 languages and The Adventures of Tintin by Belgian cartoonist Herge – 96 languages, are the most translated books after Jules Verne, what an experience to have read all those books and comics when I was a boy in French. Among the other books we find Harry Potter by the English J.K. Rowling translated into 67 languages – I am not interested at all in fantasy books, but in order to learn Galego I read one of her books. The Adventures of Huckleberry Finn by Mark Twain – 65 languages, I read it in French, Hebrew and English. The Diary of the Dutch Anne Frank – 60 languages, I read it in French and Dutch. Sherlock Holmes by the English Arthur Conan Doyle – 60 languages, I read it in English, French, Hebrew, Interlingua, Rumantsch. The Good Soldier Svejk by the Czech Jaroslav Hasek – 58 languages, I read it in Hebrew (and also saw the play and the film). A Doll's House by the Norwegian Henrik Ibsen – 56 languages, I read it in Hebrew, English and Norwegian, and saw the play and films several times, also on TV and videos. I read also Quo Vadis by the Polish Henrik Sienkiewicz – 50 languages in Hebrew and saw the film several times. Heidi by the German Johanna Spyri – 50 languages, I read the book and saw many films. The Quran – I read it partially in English and Arabic – 50 complete translations, 114 partial translations. My favorite, El Ingenioso Hidalgo Don Quijote de la Mancha by the Spanish Miguel de Cervantes Saavedra – 48 languages – I read it twice in Hebrew and twice in Spanish, saw many films and a musical. The stranger by the French Albert Camus – 45 languages, I read it twice in French. The Great Gatsby by the American F. Scott Fitzgerald – 42 languages, I read it several times in English, saw several film adaptations, and it is part of my main Business Ethics course. I was pleased to learn that I have read almost all the books that were translated into more than 40 languages, and read at least partially the most translated books/documents in tens to hundreds of languages.

Back to cosmopolitan – we have seen how this book refers to the most important issues of the cosmopolitan pillars – the Bible, the Prayers, the UN Universal Declaration of Human Rights, the most important books that were translated into tens to hundreds of languages – from children books as *The Little Prince*, Andersen's *Fairy Tales*, *Alice*, *Huckleberry Finn*, *Heidi*, *Jules Verne*, *Harry Potter*, best sellers as *Quo Vadis*, *Sherlock Holmes*, *Anne Frank's Diary*, to classics as *Don Quijote*, *A Doll's House*, *Svejk*, *The Stranger*, *The Great Gatsby*. I am amazed what excellent taste has the world that translates the most important books/documents as the Bible, Prayers, UN Declaration, the best children books with the best literary taste, and some of the best classics, including my favorite authors Cervantes, Ibsen, Scott Fitzgerald. But other world classics were also translated to tens of languages – Shakespeare's, Brecht's and Moliere's plays, Goethe's, Zola's, Hugo's, Balzac's, Dickens', Dumas' novels, not counting poems by the best poets, some philosophy, academic and non-fiction books. I have referred extensively to most of those in this book. Those are the pillars of a cosmopolitan environment, as every intellectual throughout the world has read and can talk about all those books, plays, and documents, being the key for a true global/international/cosmopolitan world, speaking the same language, even if the intellectual has read a translated book, thus losing part or most of its flavor. I can say for sure that the Bible in Hebrew is far better than its translations, the same applies to *Don Quijote*, Goethe, or *The Great Gatsby*. While we can read the children masterpieces in translations and not lose most of their flavor, we can read the best sellers in translations and enjoy almost as in the original, it is quite impossible to translate perfectly Zola, Pagnol, Proust, Sholem Aleichem, Shai Agnon, Hugo, Balzac, Dickens, and even more – Shakespeare Brecht or Moliere. Very few are the classic authors who can be translated by a good translator and transmit the gist of the original – possibly Dumas, Steinbeck, Kafka, Lawrence, Shaw, Wilde, James, Hemingway, Sartre or Moravia.

If the Bible, the prayers, the UN Declaration, classic children books, plays and novels have contributed a lot towards the cosmopolitan world, I would like to mention more pillars that are brought in this book, namely the languages learned by hundreds of millions of non-native speakers, mainly English, French and Spanish, and to a lesser extent German, Italian, Russian, and Portuguese, and in the past Latin and Greek. Not so long ago intellectuals shared a common heritage consisting not only of the Bible, Hugo, Balzac, Shakespeare, Dante, Goethe, Cervantes, or Moliere, they spoke French in Russia, England, Poland, Spain and Italy, Greece and the Levant, in all the diplomatic service, in the academy, in the literary and painters circles. The philosophers and scientists spoke German, the musicians and artists spoke Italian, all the intellectuals spoke well Latin and Greek and shared the heritage of Homer, Cicero, Sophocles and Plautus. In the business world since the nineteenth century most of businessmen spoke English, in the countries ruled by the Germans and Austrians most of the intelligentsia spoke German, in the countries ruled by the French they spoke French, and so with English, Italian, Spanish, Russian, Arabic, Turkish, and Portuguese. Therefore it was not a rarity that people – diplomats, businessmen, intellectuals, scientists, academics spoke perfectly well 5 - 7 languages. It goes without saying that in countries of immigration people also spoke many languages, as in Egypt, Lebanon, Israel, France, US, Australia, Canada, South Africa, Argentina, Brazil.

Another cosmopolitan facet that enhances the multicultural attitude is the films. In the last century we were exposed like never before to foreign cultures in films – first of all the American culture which was predominant in films, but also the English, French, Italian, Spanish, German, Russian, Chinese, Japanese, Indian, Brazilian, Argentinean, Mexican, Canadian, Australian, Czech, Romanian, Turkish, Arabic, Polish, Swedish, Korean, Israeli, Greek, Hungarian, etc. I have just mentioned the most influential countries in the film industry that every intellectual all over the Western world has seen at least some films from

all those countries. And I am not speaking of lesser prominent countries as the Netherlands, Belgium, Portugal, Denmark, etc. Who has not seen at least the classic films of the Italian Vittorio De Sica, Federico Fellini, Michelangelo Antonioni, Bernardo Bertolucci, Franco Zeffirelli (and even Sergio Leone...), Swedish Ingmar Bergman, Bollywood but also Satyajit Ray's Indian films, the Poles Roman Polanski and Krzysztof Kieslowski, the Russians Sergei Eisenstein, Andrei Tarkovsky, the Germans Fritz Lang, Josef von Sternberg, F.W. Murnau, Werner Herzog, the Czech Milos Forman, the Spanish Luis Bunuel, the English Alfred Hitchcock, Charlie Chaplin, David Lean, Ken Loach, the French Jean Renoir, Francois Truffaut, Jean-Luc Godard, Max Ophuls, Louis Malle, Jacques Tati, the Japanese Akira Kurosawa, and finally the Americans – Elia Kazan, Oliver Stone, David Lynch, Otto Preminger, Clint Eastwood, Spike Lee, Francis Coppola, Billy Wilder, Sidney Lumet, Orson Welles, John Ford, Joel Cohen, Martin Scorsese, Buster Keaton, Frank Capra, Steven Spielberg, John Huston, Ernst Lubitsch, George Cukor, Woody Allen...

The film industry, unlike the plays by worldwide known playwrights, is a popular industry with many stratas, everyone sees the genre of films he likes most – westerns, comedies, classic, drama, detective, wars, crimes, horror, but all of the viewers are exposed to a cosmopolitan industry showing us the people, scenery and culture of Japan, Taiwan, China, Egypt, Israel, India, Argentina, Brazil, Romania, Turkey, Greece, Sweden, Korea, Portugal, Poland, Hungary, cultures that without seeing their films most people would never be exposed to them. Even if you read novels or poetry from Japan or Brazil, assuming that you have never visited those countries, it cannot compare to seeing a film from those countries, hearing the specific sound of the language, learning the customs of the people, family problems, social problems, poverty, riches. You hear the music, are exposed to the folklore, the religion, the work environment, dozens of facets that seem to us selbstverstaendlich/obvious now after watching for decades films from those countries, but without the film industry we would never be exposed to those countries.

And when you say films you say also TV, even soap operas from Brazil or Mexico, the US or France, and of course documentaries, popular series, TV films, songs, musicals, plays and classic music from dozens of countries that you can see now on TV, if you have cables and are willing to pay for foreign TV stations in Spain, Lebanon, Italy, Germany, France, Turkey, Romania, Hungary or Russia. I watch sometimes those stations, even if I don't know their languages, or can't understand them as they speak so fast, but you are flown on a magic carpet to another country, and feel yourself as if you lived there. You can also learn the languages if you watch for long hours those TV stations, I have met many Israelis who learned Spanish by watching soap operas in this language. When Israel had only one TV station, half of the country watched on Friday evening the Arab film with Hebrew subtitles, and this helped much more the comprehension between the two people, avoiding misconceptions and prejudices. Unfortunately, this does not happen in the opposite way and the Israelis and the Jews are shown on Arab stations and especially Palestinian as in the most anti-Semite Nazi films, the worst crimes are attributed to us, and when Israel occupied the West Bank and Gaza the population was astonished to see that we are not the ferocious beasts depicted in their propaganda films. It goes without saying that films are very efficient for propaganda, as was proved by the Nazis films on Jews, the Soviet films on capitalism, and so on, and only the Israeli film industry is based on white doves film makers who depict all the wrongs of the Israelis, and when people see them in the world they believe the defamatory propaganda against Israel, because it is legitimized by the Israeli film makers. But Israel is a democracy, there is a free press, no censorship, and the films sometimes even receive a generous Israeli government contribution. The absurdity has reached such extremities when the director of a Norwegian film festival rejected the film of an Israeli film maker, as it did not depict the

"atrocities" of the Israeli occupation. No one of course cares about the atrocities of terrorism killing thousands of innocent Israeli civilians, as we don't have a propaganda ministry who finances such films, but in the opposite direction Anything Goes...

So, a cosmopolitan World Citizen is exposed to many languages, classic and children books translated in dozens of languages, films from dozens of countries (in every Haifa film festival I see films from twenty to thirty countries in the 50+ films which I see during the ten days of the festival), songs from many countries, and last but not least – visits to foreign countries. I am old enough to remember the times when you never visited a foreign country in your life. My mother lived until the age of 43 in Egypt and never visited another country, living in Cairo and going on vacations to Alexandria for a month every year. A generation earlier my family lived all their lives in Turkey, in Izmir, and only after the 1922 war they decided to leave Izmir and come to Egypt. We would probably never leave Egypt if there was not a revolution in 1952 that forced us to leave Egypt and immigrate to Israel. Until the age of 23 I have never left Israel and so did most of my friends. I would have not travelled to France in 1967 if I was not unemployed for a few months and looked for a solution to this impasse by studying for my MBA at Insead. My wife Ruthy has never left Israel until the age of 31 and so did most of her friends. This was then – but today in Israel and in most European countries you travel at least once a year, even as a child, often you are relocated for a few years to the US, if you have a business or academic career you travel often 5 to 10 times a year abroad, sometimes for a day and sometimes for six weeks. When you retire, people go abroad often 3-5 times a year, even if you don't have much money as the "deals" are so attractive that you can go for a week to Prague, Crete, Antalya, Warsaw or Rome for \$500, and to Paris, London or Amsterdam for a little bit more. Most of the Israelis travel at least one time a year, sometimes in a short cruise to Cyprus, more often to the US or Thailand. Most of the youngsters travel for a year to Asia or South America to the exotic countries - India, Nepal, China, Vietnam, Thailand, Peru, Chile, Argentina, Brazil, Ecuador, Bolivia, as the cost of living there is so low that they can afford to live there for a year with a few thousand dollars that they have saved in the army or working just after that. Sometimes they travel for a year to more expensive countries as Japan, Australia, New Zealand, the US, Europe, Canada, but then they have to work there in order to finance their trip, not always in "legitimate" jobs as they don't have a work permit. The most adventurous travel to Africa, Indonesia, Mexico, Russia or Papua, and are exposed (more than in traditional exotic nations) to crime, accidents, illness, corruption.

What I have described above for the Israelis apply even more for the Europeans and Americans who travel more, the distances are shorter (you go for a weekend from London to Paris by train or by a short one hour flight), they have more money, and they have less problems to travel to some countries than the Israelis have. The cosmopolitan edifice is now complete – the visits to foreign countries (I have visited more than 60 countries but many friends have visited twice as much) do perhaps the most in order to make us cosmopolitan, as we are exposed directly and not through books, films or TV to foreign cultures, food, folklore, men and women, flesh and blood. This is real life, especially if you travel for months and not visit as many tourists in a cruise every port or country for half a day. The young people don't speak many languages as we speak, they don't read as many books as we read, but they travel much more and are exposed more to a cosmopolitan environment. However, as they don't have much money they don't visit the Western world but exotic countries in the east and south, so instead of being exposed to Paris, Rome, London or NewYork, they are exposed to Mumbai, Delhi, Bangkok, Beijing, Quito, Bahia, Bogota, Lima or Katmandu. I leave to the reader to decide if it is good or bad, what enriches them most, what is the contribution of those cultures to their intellectual life.

Many intellectual people travel to India to participate in Vipassana seminars and only there achieve peace of mind, many academics and businessmen travel to Shanghai which is one of the most advanced and beautiful cities in the world, I cannot give an opinion on that as I have never travelled to India or China. I was exposed, by choice and by necessity, more to the European and American culture and way of life, and I don't regret it. Most of the youngsters have a different opinion, they have no prejudices against the old and rich cultures of the Indians, Chinese, or Thai, so they would probably not find any interest in my book. Who is right and what is better? Anyhow as I advocate a cosmopolitan way of life, I recognize that an exposure to the Eastern and South American, African or Maoris civilizations are not less legitimate and maybe even more so than an exposure to a European and American civilization. Many of those youngsters, when they come back, study at the university, start their own startups, travel to the US or Germany on business, and are exposed finally to both cultures, everyone in due time. Others return confused, addicted to drugs, with exotic diseases, or are even killed in accidents which are very frequent in some of those states. I visited the "jungles" of Australia in the safest way and enjoyed it very much, although it was not so authentic as to visit the jungles of Papua, opposite to Darwin where I was, but Israelis were killed in Papua, as it is not the safest country in the world. They may be killed also in Paris or in Israel, so is it a reason to blame visits to Papua? I advocate a cosmopolitan way of life, centered in the most developed countries (including of course such Eastern countries as Japan, Korea and Singapore), as those are the countries with the "Academic, Business, Culture, Drama, Ethics" that I know, the Western civilization as defined earlier have the best academic, business and ethical results for most of their citizens. As far as culture and drama are concerned I am used, learned and enjoy more Verdi's operas than Chinese opera, European paintings and sculptures than Buddha's statues and Indian painting. I appreciate Eastern culture and drama, but as I am not fluent in them, nor in their languages, I stick to the civilization I know most, to the languages that I have learned, to Rigoletto and Emile Zola.

And here I arrive to an "illumination", why do we need to choose between a cosmopolitan culture based on a western or eastern civilization? Just because my cosmopolitan attitude is based on a European culture? How can I be a true cosmopolitan, citizen of the world, international or global advocate if I adhere to only half of the cosmos? If the cosmos was only half, if planet earth had only Europe and the US it would collapse, as earth is holistic, made of all the 300 countries, rich and poor, east and west, north and south. So, if I write a book on a cosmopolitan approach it has to reach the conclusion that it includes all the cultures of the world. Probably the youngsters, including my children, who returned from India and Thailand, have seen a truth that I was exposed to only at a later age – that the globe is one entity, that we are all part of the same humanity and share the same fate – after all this was also my conclusion in my ethical books, where I analyzed the Golden Rule which is common to all the religions, including Islam, Buddhism and the other Eastern religions. I don't understand modern painting, I don't enjoy watching Picasso's famous works, does it mean that they are uglier than the Impressionists whom I admire? And when they exposed their works in the Salon des refuses were they not the cause of contempt of all the connoisseurs who laughed at them? Who says that a cosmopolitan attitude should be based only on the Impressionists and not on the Cubists? Only on Leonardo da Vinci and not on Indian painting? In the culture which I know most – films – I appreciate very much Chinese, Japanese, Korean films, which I believe are at the forefront of the film industry and are many times much better than Hollywood or English films. So, why this should be true for films and not for novels?

I don't know much of Japanese or Chinese literature, nor do I know much of African or Indian literature. But billions of people know and enjoy those literatures, music, opera, theater, art, as much as they enjoy their films. So, I should arrive to the conclusion that this

book should advocate a holistic cosmopolitan approach, comprising of all the facets of culture throughout the world, from the Aborigines in Australia to the Quechuas in Peru. The fact that I don't know much of those cultures does not mean that they are inferior to the cultures I know most, exactly like the fact that I don't know Hindi mean that it is an inferior language as compared to English. I have stated several times in this book that I don't have any racist feelings towards anybody, and the outcome of this belief should be to embrace all the cultures of the world. It is maybe too late for me to start learning Eastern languages, read Indian novels or going to Chinese opera. But the conclusion of this book, and especially the Culture and Linguistics parts of the book, should be that a true cosmopolitan approach includes all the countries of the world. In another book, I analyze all the 300 countries of the world, not just the West European countries, even the smallest countries, as every entity should be analyzed in the same format and seriousness as the largest and most developed entities. This approach should apply also to culture, and to tell the truth, I have started to do it during my whole career. I started to learn Chinese several times and did not continue not because of the importance of the language but because it is too difficult for me, I went several times to Chinese operas and enjoyed them quite well. In my book I quote Chinese sayings and refer many times to China, doing business there and their culture. I have chapters and references for Haitian, Arabic, Egypt, Africa, Turkey, India, Thailand cultures, I have learned Papiamentu, Haitian, Arabic, tried to learn Turkish and quote many proverbs in this beautiful language. The youngsters who visit India and Africa have found a truth that I tried to find but have only guessed it, that we are all part of the same world, entity, culture & humanity!

The main quote of my website and in many of my books is a quote by Mahatma Gandhi, one of the wisest and most intelligent men in the world, I have read his biography and he is my model:

There are seven things that will destroy us: Wealth without Work, Pleasure without Conscience, Knowledge without Character, Religion without Sacrifice, Politics without Principle, Science without Humanity, Business without Ethics. *Mahatma Gandhi*

Gandhi was cosmopolitan in the same way that Nehru and Tagore were. Gandhi opposed the British Empire but was willing to keep strong ties with the British nation. Gandhi drew his moral cosmopolitanism from Hindu universalism. He thought that one's right to freedom implied one's duty to allow the same freedom for all others. Gandhi believed as a cosmopolitan that the world should ultimately move toward a friendly non-warring federation of interdependent states. If he would live today he would probably advocate that the European Union is the best example for his theories. While he was an Indian patriot, exalting of Indian civilization, he was not against modernity and Western civilization. But wisdom should not be any culture's monopoly, as he was against the fetishizing of technology and science, the colonizing hegemony of the West and the mindless imitation of the West by the Indians. Or in Aristotelian terms, he opted for the middle way, he was not an Indian nationalist radical, but also not a Westernized imitator.

Gandhi is known for his advocacy of nonviolence (Ahimsa), but this was the means to attain Truth (Satya). Gandhi believed in the unity of humanity based on nonviolence and truth. Truth is both absolute and pluralistic, truth and non-violence are interrelated. Gandhi says: "It is only by firm adherence to Truth that one can live non-violently in a world which is full of violence. I can therefore derive non-violence out of truth. They are like two sides of the same coin. The golden rule of conduct is mutual toleration, seeing that we will never all think alike and we shall see Truth in fragment and from different angles of vision." Gandhi puts forth a cosmopolitan moral perspective that is ontologically grounded in a shared humanity, which requires critical self-examination and the internal transformation of consciousness. To be a cosmopolitan entails an awareness of the essential unity of humanity, and that awareness

requires that we undergo an internal self-transformation that moves us from egoist centrality toward unity. This Gandhian perspective is not foreign to Western philosophy and education. It was the dominant paradigm of Ancient philosophy. There is an interconnection between a universal duty of moral consideration and internal transformation. Self-transformation increases the capacity for empathy and compassion. The more self-aware I am, the more I can be aware of the subjectivity of others, and thus, the more empathetic and compassionate I can be. Self-transformation increases one's capacity for tolerance, for restraint from doing harm. It decreases fear which is born of duality, and it drives violence. Therefore, we see how cosmopolitanism is directly linked to ethics and truth, and how there is a holistic harmony between all the components of this book.

ON IMPRESSIONISM – ART MOVEMENT, PAINTERS, PAINTINGS

I'll bring here from the Wikipedia an entry on Impressionism, my favorite art movement:

Impressionism is a 19th-century [art movement](#) that originated with a group of Paris-based artists whose independent [exhibitions](#) brought them to prominence during the 1870s and 1880s. Impressionist painting characteristics include relatively small, thin, yet visible brush strokes, open [composition](#), emphasis on accurate depiction of light in its changing qualities (often accentuating the effects of the passage of time), ordinary subject matter, inclusion of *movement* as a crucial element of human perception and experience, and unusual visual angles. The Impressionists faced harsh opposition from the conventional art community in France. The name of the style derives from the title of a [Claude Monet](#) work, *Impression, soleil levant* (*Impression, Sunrise*), which provoked the critic [Louis Leroy](#) to [coin](#) the term in a [satirical](#) review published in the Parisian newspaper *Le Charivari*. The development of Impressionism in the [visual arts](#) was soon followed by analogous styles in other media that became known as [impressionist music](#) and [impressionist literature](#). Radicals in their time, early Impressionists violated the rules of academic painting. They constructed their pictures from freely brushed colours that took precedence over lines and contours, following the example of painters such as [Eugène Delacroix](#) and [J. M. W. Turner](#). They also painted realistic scenes of modern life, and often painted outdoors. Previously, [still lifes](#) and [portraits](#) as well as [landscapes](#) were usually painted in a studio. The Impressionists found that they could capture the momentary and transient effects of sunlight by painting *en plein air*. They portrayed overall visual effects instead of details, and used short "broken" brush strokes of mixed and pure unmixed colour—not blended smoothly or shaded, as was customary—to achieve an effect of intense colour vibration. Impressionism emerged in France at the same time that a number of other painters, including the Italian artists known as the [Macchiaioli](#), and [Winslow Homer](#) in the United States, were also exploring *plein-air* painting. The Impressionists, however, developed new techniques specific to the style. Encompassing what its adherents argued was a different way of seeing, it is an art of immediacy and movement, of candid poses and compositions, of the play of light expressed in a bright and varied use of colour. The public, at first hostile, gradually came to believe that the Impressionists had captured a fresh and original vision, even if the art critics and art establishment disapproved of the new style. By recreating the sensation in the eye that views the subject, rather than delineating the details of the subject, and by creating a welter of techniques and forms, Impressionism is a precursor of various painting styles, including [Neo-Impressionism](#), [Post-Impressionism](#), [Fauvism](#), and [Cubism](#).

In the middle of the 19th century—a time of change, as Emperor [Napoleon III](#) rebuilt Paris and waged war—the [Académie des Beaux-Arts](#) dominated French art. The Académie was the preserver of traditional French painting standards of content and style. Historical subjects, religious themes, and portraits were valued; landscape and still life were not. The Académie preferred carefully finished images that looked realistic when examined closely. Paintings in this style were made up of precise brush strokes carefully blended to hide the artist's hand in the work. Colour was restrained and often toned down further by the application of a golden varnish. The Académie had an annual, juried art show, the [Salon de Paris](#), and artists whose work was displayed in the show won prizes, garnered commissions, and enhanced their prestige. The standards of the juries represented the values of the Académie, represented by the works of such artists as [Jean-Léon Gérôme](#) and [Alexandre Cabanel](#). In the early 1860s, four young painters—[Claude Monet](#), [Pierre-Auguste Renoir](#), [Alfred Sisley](#), and [Frédéric](#)

[Bazille](#)—met while studying under the academic artist [Charles Gleyre](#). They discovered that they shared an interest in painting landscape and contemporary life rather than historical or mythological scenes. Following a practice that had become increasingly popular by mid-century, they often ventured into the countryside together to paint in the open air, but not for the purpose of making sketches to be developed into carefully finished works in the studio, as was the usual custom. By painting in sunlight directly from nature, and making bold use of the vivid synthetic pigments that had become available since the beginning of the century, they began to develop a lighter and brighter manner of painting that extended further the [Realism](#) of [Gustave Courbet](#) and the [Barbizon school](#). A favourite meeting place for the artists was the [Café Guerbois](#) on Avenue de Clichy in Paris, where the discussions were often led by [Édouard Manet](#), whom the younger artists greatly admired. They were soon joined by [Camille Pissarro](#), [Paul Cézanne](#), and [Armand Guillaumin](#).

During the 1860s, the Salon jury routinely rejected about half of the works submitted by Monet and his friends in favour of works by artists faithful to the approved style.^[6] In 1863, the Salon jury rejected Manet's *The Luncheon on the Grass* ([Le déjeuner sur l'herbe](#)) primarily because it depicted a nude woman with two clothed men at a picnic. While the Salon jury routinely accepted nudes in historical and allegorical paintings, they condemned Manet for placing a realistic nude in a contemporary setting. The jury's severely worded rejection of Manet's painting appalled his admirers, and the unusually large number of rejected works that year perturbed many French artists. After Emperor Napoleon III saw the rejected works of 1863, he decreed that the public be allowed to judge the work themselves, and the [Salon des Refusés](#) (Salon of the Refused) was organized. While many viewers came only to laugh, the Salon des Refusés drew attention to the existence of a new tendency in art and attracted more visitors than the regular Salon. Artists' petitions requesting a new Salon des Refusés in 1867, and again in 1872, were denied. In December 1873, [Monet](#), [Renoir](#), [Pissarro](#), [Sisley](#), [Cézanne](#), [Berthe Morisot](#), [Edgar Degas](#) and several other artists founded the *Société Anonyme Coopérative des Artistes Peintres, Sculpteurs, Graveurs* ("Cooperative and Anonymous Association of Painters, Sculptors, and Engravers") to exhibit their artworks independently. Members of the association were expected to forswear participation in the Salon. The organizers invited a number of other progressive artists to join them in their inaugural exhibition, including the older [Eugène Boudin](#), whose example had first persuaded Monet to adopt *plein air* painting years before. Another painter who greatly influenced Monet and his friends, [Johan Jongkind](#), declined to participate, as did [Édouard Manet](#). In total, thirty artists participated in their first exhibition, held in April 1874 at the studio of the photographer [Nadar](#).

The critical response was mixed. Monet and Cézanne received the harshest attacks. Critic and humorist [Louis Leroy](#) wrote a scathing review in the newspaper *Le Charivari* in which, making wordplay with the title of Claude Monet's [Impression, Sunrise](#) (*Impression, soleil levant*), he gave the artists the name by which they became known. Derisively titling his article [The Exhibition of the Impressionists](#), Leroy declared that Monet's painting was at most, a sketch, and could hardly be termed a finished work. He wrote, in the form of a dialog between viewers, *Impression—I was certain of it. I was just telling myself that, since I was impressed, there had to be some impression in it ... and what freedom, what ease of workmanship! Wallpaper in its embryonic state is more finished than that seascape*. The term *Impressionist* quickly gained favour with the public. It was also accepted by the artists themselves, even though they were a diverse group in style and temperament, unified primarily by their spirit of independence and rebellion. They exhibited together—albeit with shifting membership—eight times between 1874 and 1886. The Impressionists' style, with its

loose, spontaneous brushstrokes, would soon become synonymous with modern life. Monet, Sisley, Morisot, and Pissarro may be considered the "purest" Impressionists, in their consistent pursuit of an art of spontaneity, sunlight, and colour. Degas rejected much of this, as he believed in the primacy of drawing over colour and belittled the practice of painting outdoors. Renoir turned away from Impressionism for a time during the 1880s, and never entirely regained his commitment to its ideas. Édouard Manet, although regarded by the Impressionists as their leader, never abandoned his liberal use of black as a colour, and never participated in the Impressionist exhibitions. He continued to submit his works to the Salon, where his painting *Spanish Singer* had won a 2nd class medal in 1861, and he urged the others to do likewise, arguing that "the Salon is the real field of battle" where a reputation could be made.

Among the artists of the core group (minus Bazille, who had died in the [Franco-Prussian War](#) in 1870), defections occurred as Cézanne, followed later by Renoir, Sisley, and Monet, abstained from the group exhibitions so they could submit their works to the Salon. Disagreements arose from issues such as Guillaumin's membership in the group, championed by Pissarro and Cézanne against opposition from Monet and Degas, who thought him unworthy. Degas invited [Mary Cassatt](#) to display her work in the 1879 exhibition, but also insisted on the inclusion of [Jean-François Raffaëlli](#), [Ludovic Lepic](#), and other realists who did not represent Impressionist practices, causing Monet in 1880 to accuse the Impressionists of "opening doors to first-come daubers". The group divided over invitations to [Paul Signac](#) and [Georges Seurat](#) to exhibit with them in 1886. Pissarro was the only artist to show at all eight Impressionist exhibitions. The individual artists achieved few financial rewards from the Impressionist exhibitions, but their art gradually won a degree of public acceptance and support. Their dealer, [Durand-Ruel](#), played a major role in this as he kept their work before the public and arranged shows for them in London and New York. Although Sisley died in poverty in 1899, Renoir had a great Salon success in 1879. Monet became secure financially during the early 1880s and so did Pissarro by the early 1890s. By this time the methods of Impressionist painting, in a diluted form, had become commonplace in Salon art. French painters who prepared the way for Impressionism include the [Romantic](#) colourist [Eugène Delacroix](#), the leader of the realists [Gustave Courbet](#), and painters of the Barbizon school such as [Théodore Rousseau](#). The Impressionists learned much from the work of [Jean-Baptiste-Camille Corot](#) and [Eugène Boudin](#), who painted from nature in a direct and spontaneous style that prefigured Impressionism, and who befriended and advised the younger artists. A number of identifiable techniques and working habits contributed to the innovative style of the Impressionists. Although these methods had been used by previous artists—and are often conspicuous in the work of artists such as [Frans Hals](#), [Diego Velázquez](#), [Peter Paul Rubens](#), [John Constable](#), and [J. M. W. Turner](#)—the Impressionists were the first to use them all together, and with such consistency. These techniques include:

- Short, thick strokes of paint quickly capture the essence of the subject, rather than its details. The paint is often applied [impasto](#).
- Colours are applied side-by-side with as little mixing as possible, a technique that exploits the principle of [simultaneous contrast](#) to make the colour appear more vivid to the viewer.
- Grays and dark tones are produced by mixing [complementary colours](#). Pure impressionism avoids the use of black paint.
- [Wet paint is placed into wet paint](#) without waiting for successive applications to dry, producing softer edges and intermingling of colour.

- Impressionist paintings do not exploit the transparency of thin paint films (glazes), which earlier artists manipulated carefully to produce effects. The impressionist painting surface is typically opaque.
- The paint is applied to a white or light-coloured ground. Previously, painters often used dark grey or strongly coloured grounds.
- The play of natural light is emphasized. Close attention is paid to the reflection of colours from object to object. Painters often worked in the evening to produce *effets de soir*—the shadowy effects of evening or twilight.
- In paintings made *en plein air* (outdoors), shadows are boldly painted with the blue of the sky as it is reflected onto surfaces, giving a sense of freshness previously not represented in painting. (Blue shadows on snow inspired the technique.)

New technology played a role in the development of the style. Impressionists took advantage of the mid-century introduction of premixed paints in tin tubes (resembling modern toothpaste tubes), which allowed artists to work more spontaneously, both outdoors and indoors. Previously, painters made their own paints individually, by grinding and mixing dry pigment powders with linseed oil, which were then stored in animal bladders. Many vivid synthetic pigments became commercially available to artists for the first time during the 19th century. These included [cobalt blue](#), [viridian](#), [cadmium yellow](#), and synthetic [ultramarine blue](#), all of which were in use by the 1840s, before Impressionism. The Impressionists' manner of painting made bold use of these pigments, and of even newer colours such as [cerulean blue](#), which became commercially available to artists in the 1860s. The Impressionists' progress toward a brighter style of painting was gradual. During the 1860s, Monet and Renoir sometimes painted on canvases prepared with the traditional red-brown or grey ground. By the 1870s, Monet, Renoir, and Pissarro usually chose to paint on grounds of a lighter grey or beige colour, which functioned as a middle tone in the finished painting. By the 1880s, some of the Impressionists had come to prefer white or slightly off-white grounds, and no longer allowed the ground colour a significant role in the finished painting.

Prior to the Impressionists, other painters, notably such [17th-century Dutch painters](#) as [Jan Steen](#), had emphasized common subjects, but their methods of [composition](#) were traditional. They arranged their compositions so that the main subject commanded the viewer's attention. The Impressionists relaxed the boundary between subject and background so that the effect of an Impressionist painting often resembles a snapshot, a part of a larger reality captured as if by chance. [Photography](#) was gaining popularity, and as cameras became more portable, photographs became more candid. Photography inspired Impressionists to represent momentary action, not only in the fleeting lights of a landscape, but in the day-to-day lives of people. The development of Impressionism can be considered partly as a reaction by artists to the challenge presented by photography, which seemed to devalue the artist's skill in reproducing reality. Both portrait and [landscape](#) paintings were deemed somewhat deficient and lacking in truth as photography "produced lifelike images much more efficiently and reliably". In spite of this, photography actually inspired artists to pursue other means of creative expression, and rather than compete with photography to emulate reality, artists focused "on the one thing they could inevitably do better than the photograph—by further developing into an art form its very subjectivity in the conception of the image, the very subjectivity that photography eliminated". The Impressionists sought to express their perceptions of nature, rather than create exact representations. This allowed artists to depict subjectively what they saw with their "tacit imperatives of taste and conscience". Photography encouraged painters to exploit aspects of the painting medium, like colour, which photography then lacked: "The Impressionists were the first to consciously offer a subjective

alternative to the photograph". Another major influence was Japanese [ukiyo-e](#) art prints ([Japonism](#)). The art of these prints contributed significantly to the "snapshot" angles and unconventional compositions that became characteristic of Impressionism. An example is Monet's *Jardin à Sainte-Adresse*, 1867, with its bold blocks of colour and composition on a strong diagonal slant showing the influence of Japanese prints. [Edgar Degas](#) was both an avid photographer and a collector of Japanese prints. His *The Dance Class (La classe de danse)* of 1874 shows both influences in its asymmetrical composition. The dancers are seemingly caught off guard in various awkward poses, leaving an expanse of empty floor space in the lower right quadrant. He also captured his dancers in sculpture, such as the [Little Dancer of Fourteen Years](#).

The central figures in the development of Impressionism in France, listed alphabetically, were:

- [Frédéric Bazille](#) (posthumously participated in Impressionist exhibitions) (1841–1870)
- [Gustave Caillebotte](#) (who joined forces with them in the mid-1870s) (1848–1894)
- [Mary Cassatt](#) (American-born, she lived in Paris and participated in four Impressionist exhibitions) (1844–1926)
- [Paul Cézanne](#) (although he later broke away from the Impressionists) (1839–1906)
- [Edgar Degas](#) (who despised the term *Impressionist*) (1834–1917)
- [Armand Guillaumin](#) (1841–1927)
- [Édouard Manet](#) (who didn't participate in any Impressionist exhibitions) (1832–1883)
- [Claude Monet](#) (the most prolific of the Impressionists and the one who embodies their aesthetic most obviously) (1840–1926)
- [Berthe Morisot](#) (1841–1895)
- [Camille Pissarro](#) (1830–1903)
- [Pierre-Auguste Renoir](#) (1841–1919)
- [Alfred Sisley](#) (1839–1899)

CORY'S LISTS OF THE BEST AND THE BEST OF THE BEST FILMS EVER MADE

I would like to present the Cory's List of the Greatest Movies of All Time, which is based on the films that I enjoyed most. There may be many excellent films that I have omitted but as I haven't seen them I cannot include them in my list which comprises only the films I liked best. Most of the films are masterpieces, but many films are films that I have enjoyed watching although they are not so artistic, films that have influenced my life, films that have assisted me in filmotherapy when I was unhappy and lonely. The list is given in alphabetical order without ranking, as all the films are quite excellent and do not need additional ranking, but nevertheless I have put in bold the best of the best – the greatest movies, at least as far as I can judge in retrospective. My book deals on the twelfth of European Cultures in 1820 to 1939, and my list encompasses much more: the best films in cosmopolitan culture and well into the beginning of the 21st century – but this list encompasses also much more than any other film list that I have found on the Internet. My list is quite unique, as it comprises films from all over the world and is not focused primarily on American films, British films or French films as in the other lists, which are perceived by many as the three best and most artistic film industries in the world. The list includes also the Italian, Japanese, Spanish, German, Russian, Swedish masterpieces by the best directors, but includes also films from dozens of other countries which are not comprised in most of the other lists – Latin American films mainly from Argentina, Mexico and Brazil, other European films mainly from the Czech Republic, Poland and Denmark, Asian films mainly from China, South Korea and India, and also Israeli films, Arabic films, Australian films, Canadian films, African films, etc. I have seen in cinemathèques, film festivals and on TV hundreds of films from countries which are not in any lists, some of them are not artistic, some of them are excellent but I don't recall their names, mainly Arabic films, Korean films, Serbian films, Romanian films, Hungarian films, Indian films, and so on. Films are a substantial part of the culture, no less than plays, operas, paintings, novels or symphonies, if they are extremely popular it doesn't mean that they are less artistic, and I have tried here as in the other segments of culture to present the best films ever, but as the film industry began only in the last decades of the twelfth of this book, I have extended the films' list by a few decades more, in order to give a full perspective of the gigantic achievements of this young pillar of culture, during a full century from the 1910s to the 2010s, from *Intolerance* (1916) to *Mia Madre* (2015).

A - [A bout de souffle/Breathless](#) (1960) - France, **[About Schmidt](#)** (2002) – US, **[Adam's Rib](#)** (1949) – US, with Spencer Tracy and Katharine Hepburn – two giants, **[The Adventures of Robin Hood](#)** (1938) - US, **[The African Queen](#)** (1951) - US, **[After the Fall](#)** (1974) – US, **[A. I. Artificial Intelligence](#)** (2001) – US, **[Aida](#)** (1953) – Italy, **[Ajami](#)** (2009) – Israel, an Israeli Arab drama set in the Ajami neighborhood of Jaffa, in Arabic, **[Alfie](#)** (1966) – UK, **[Alien](#)** (1979) - US, **[All About Eve](#)** (1950) - US, Bette Davis in one of her best performances ever, **[All About My Mother](#)** – Todo sobre mi madre (1999) – Spain, **[All My Sons](#)** (1948) – US, a classic that I showed on most of my courses on business ethics, **[All Quiet on the Western Front](#)** (1930) - US, **[All That Jazz](#)** (1979) – US, **[All the King's Men](#)** (1949) - US, **[All the President's Men](#)** (1976) – US, **[Amadeus](#)** (1984) – US, I saw it also on stage in London both film and play are excellent, **[Amélie/Le Fabuleux Destin d'Amélie Poulain](#)** (2001) – France, a sheer delight when I saw for the first time Audrey Tautou and subsequently I saw her on stage as Nora in *A Doll's House* by Ibsen, **[Amen](#)** (2002) – Germany, **[America America](#)** (1963) - US, **[American Beauty](#)** (1999) – US, **[American Graffiti](#)** (1973) – US, **[An Affair to Remember](#)** (1957) - US, **[An American in Paris](#)** (1951) - US, **[Amour](#)** (2012) – France, one of the most poignant films I

have ever seen, [Amreeka](#) (2009) – US, the film documents the lives of a Palestinian American family in both the West Bank and Post-9/11 Suburban Chicago, [Anatomy of a Murder](#) (1959) - US, [Anchors Aweigh](#) (1945) – US, I saw it at least ten times and I still enjoy it, [Androcles and the Lion](#) (1952) – UK, I remember this film very well, as I came as a child with my mother from our small village to the "big" town Haifa. We were supposed to meet my father at the entrance of a cinema but he didn't show up. There were no mobile phones and we couldn't check what happened. After an hour or so we were about to return home very anxious on what had happened to my father who was very punctual and it was the first time that he didn't show up. Just at this moment my father arrived and apparently there was a mix up with the name of the cinema. It was too late to go to most of the movies and there was only one cinema where we could go and they showed *Androcles and the Lion*. I enjoyed so much this comedy, based on George Bernard Shaw's play, as it was in sharp contrast to the anxiety of "losing" our father. [Anna Karenina](#) (1935) – US, [Annie Get Your Gun](#) (1950) - US, the musical I love most – I have seen the film several times and I saw the musical on stage in New York and Los Angeles when I crossed by mistake at night a neighborhood known for its riots, [Annie Hall](#) (1977) – US, the best film by Woody Allen, [Anything Goes](#) (1956) US, one of the best musicals with famous songs by Cole Porter, in a leading role in the film was the French dancer Zizi Jeanmaire, who sat on my knees at her performance in Paris while she was singing "Je cherche un millionnaire/I am looking for a millionaire", she asked me if I was a millionaire because I was dressed like one, and she was very disappointed when I answered her "No!" I had the privilege to see the musical also on Broadway, [The Apartment](#) (1960) - US, [The Apprenticeship of Duddy Kravitz](#) (1974) – Canada, [April Captains](#) (2000) – Portugal, [Arch of Triumph](#) (1948) – US, although many think of Remarque as a "lesser" author I think he is one of the best and he moved me very much, [Aria](#) (1987) – UK, [Arms and the Man](#) (1989) – UK, I saw also the play in Seattle, one of the best plays I've ever seen and read, [Around the World in 80 Days](#) (1956) – US, one of my favorite authors Jules Verne in one of the best adventure films, a sheer delight, [Arsenic and Old Lace](#) (1944) – US, I saw the play several times, also on Broadway in 1986 with Jean Stapleton (known better for her role in *All in the Family*), she was a great actress, one of the best, [The Ascent of Money](#) (2009) - UK, [As Good As It Gets](#) (1997) – US, [Ashes and Diamonds](#) (1958) – Poland, [The Asphalt Jungle](#) (1950) - US, [Au bonheur des dames/Shop Girls of Paris](#) (1943) – France, [Au revoir les enfants/Goodbye Children](#) (1987) – France, one of the most poignant films that I have ever seen, [Autumn Sonata](#) (1978) - Sweden, [Aviva My Love](#) (2006) - Israel, [Aviya's Summer](#) (1988) – Israel, a very moving Israeli film starring Gila Almagor, won the [Silver Bear Award](#) from the [39th Berlin International Film Festival](#), Best Foreign Film – [San Remo Festival](#), [Awaara](#) (1951) – India, with the one and only Raj Kapoor, [Away From Her](#) (2006) – Canada.

B – [Babel](#) (2006) – Mexico, [Babette's Feast](#) (1987) – Denmark, [Bad Education/La mala educacion](#) (2009) – Spain, [Baisers voles \(based on Le lys dans la vallee\)/Stolen Kisses](#) (1968) – France, [Ballad of a Soldier](#) (1959) – Ukraine, [The Band's Visit](#) (2007) – Israel, one of the best Israeli films ever made, a sheer delight, [The Band Wagon](#) (1953) - US, [The Bank](#) (2001) – Australia, [Barbara](#) (2012) – Germany, [Barbarians at the Gate](#) (1993) - US, the subject of business ethics is very serious but the film makers and actors have managed to convey the message as an outstanding satire, [Barry Lyndon](#) (1975) - US, [Becket](#) (1964) – UK, [Bel Ami](#) (2012) – US, [Belle de jour](#) (1967) – France, [Belle du Seigneur](#) (2012) – France, by one of my favorite authors Albert Cohen, [Belle Toujours](#) (2006) – Portugal, directed by Manoel de Oliveira when he was almost 100, I saw every year his films at the Haifa Film Festival, even when he was more than 100, [Bellissima](#) (1951) – Italy, [Ben-Hur](#) (1959) - US, [The Best Intentions](#) (1991) - Sweden, [The Best Years of Our Lives](#) (1946) – US, not only the best

years but also one of the best films, [Bethlehem](#) (2013) – Israel, a very authentic film on the Israeli-Palestinian conflict, [Betty Blue](#) (1986) – France, [Beyond Borders](#) (2003) – US, [The Big Country](#) (1958) – US, [The Big Lebowski](#) (1998) – US, [The Big One](#) (1998) – US, [The Birthday Party](#) (1968) – UK, [Biutiful](#) (2010) – Mexico, [Black Book/Zwartboek](#) (2006) – Netherlands, [Black Cat White Cat](#) (1998) – Serbia, those three excellent films from Mexico, Netherlands and Serbia prove that you can produce outstanding movies even if you are not from Italy, France or the UK, [Blade Runner](#) (1982) – US, [Blaumilch Canal/The Big Dig/Taalat Blaumilch](#) (1969) – Israel, [Blazing Saddles](#) (1974) – US, [Blindness](#) (2008) – Canada, [Blow Out](#) (1981) – US, [Blowup](#) (1966) – UK, [The Blue Angel/Der Blaue Engel](#) (1930) – Germany with Marlene Dietrich whom I saw in her show in Israel in 1960, [Blue Velvet](#) (1986) – US, written and directed by David Lynch whom I saw when he came to Israel and gave a lecture at the Haifa cinematheque, [Boccaccio '70](#) (1962) – Italy, [Bonnie and Clyde](#) (1967) – US, [Bowling for Columbine](#) (2002) – US, [The Boy in the Striped Pyjamas](#) (2008) – UK, [Brazil](#) (1985) – UK, [Bread and Roses](#) (2000) – UK, [Breakfast at Tiffany's](#) (1961) – US, [Breaking the Waves](#) (1996), Denmark, there are few excellent films as this moving film, [The Bridge on the River Kwai](#) (1957) – UK, once upon a time they knew how to make epic films – a brilliant performance by all the actors, [The Bridges of Madison County](#) (1995) – US, [Brief Encounter](#) (1945) – UK, [Broken Embraces/Los abrazos rotos](#) (2009) – Spain, [Bronenossets Potyomkin /Battleship Potemkin](#) (1925) – Russia, you almost forget that it is a silent film as it is really a masterpiece, [Brothers](#) (2004) – Denmark, [The Brothers Karamazov](#) (1958) – US, an excellent film on Dostoevsky's masterpiece with Yul Brynner, [Buena Vista Social Club](#) (1999) – Germany, I like very much Cuban music, and I like even more when it is performed by such outstanding musicians, [Burnt by the Sun](#) (1994) – Russia.

C - [Cabaret](#) (1972) – US, I saw the film several times and saw the musical on stage in Paris and Tel Aviv, [Cache/Hidden](#) (2005) – France, [Calamity Jane](#) (1953) – US, [Camille](#) (1936) – US, [Can-Can](#) (1960) – US, [Capitalism a Love Story](#) (2009) – US, a masterpiece by Michael Moore that was part of my courses on Capitalism and The Great Recession, [Career](#) (1959) – US, I once thought that it was a masterpiece, when I saw it now I think that it is just a very good movie., [Carmen](#) (1983) – Spain, [Carmen Jones](#) (1954) – US, I rarely enjoy adaptations of operas but this one is a masterpiece, [Carne Tremula/Live Flesh](#) (1997) – Spain, [Casablanca](#) (1942) – US, the one and only, [Casque d'or](#) (1952) – France, [The Castle](#) (1968) – Germany, [Cat Ballou](#) (1965) – US, one of the funniest film that I have ever seen, [Cat on a Hot Tin Roof](#) (1958) – US, who said that Elizabeth Taylor is not a good actress? In this film she is brilliant, [Cavalleria Rusticana](#) (1982) – Italy, I saw most of the famous operas in films and on stage as well, [Cesare deve morire/Caesar Must Die](#) (2012) – Italy, [Charade](#) (1963) – US, [Chariots of Fire](#) (1981) – UK, [Child's Pose](#) (2013) – Romania, [China Blue](#) (2005) – US, [Chinatown](#) (1974) – US, [Chocolat](#) (2000) – US, [Chouans!](#) (1988) – France, [Cinema Paradiso](#) (1988) – Italy, [Citizen Kane](#) (1941) – US, it is a good film but to choose him as the best film ever made is quite far-fetched, [City Lights](#) (1931) – US, [A Civil Action](#) (1998) – US, one of the films I used in my courses on business ethics, [Class Action](#) (1991) – US, [Close Encounters of the Third Kind](#) (1977) – US, it made me believe that possibly there are such encounters, [Colonel Chabert](#) (1994) – France, [Colonel Redl](#) (1985) – Hungary, [The Color of Pomegranates](#) (1969) – Armenia, this is really a bizarre film but very artistic, I would never have heard about this film if it was not shown at the Haifa Film Festival, [The Comedy of Errors](#) (1978) – UK, [The Conductor](#) (2012) – Russia, [The Conformist](#) (1970) – Italy, Moravia at his best, I know so many "conformists" in Israel and around the world..., [The Constant Gardener](#) (2005) – UK, [The Conversation](#) (1974) – US, [The Corporation](#) (2003) – Canada, one of the best films on business ethics – it was part of most of my courses, [Cosa](#)

[voglio di piu](#)/Come Undone (2010) – Italy, [The Counterfeiters/Die Fälscher](#) (2007) – Austria, [The Court Jester](#) (1956) – US, [Cousin Bette](#) (1998) – UK, [Cover Girl](#) (1944) – US, [Cries and Whispers](#) (1972) - Sweden, [Crimes and Misdemeanors](#) (1989) – US, American films have changed a lot since the times when the criminals were always punished, Woody Allen proves us that in most of the cases it is quite the opposite, unfortunately it is also what I have experienced in my business career, [The Crucible](#) (1996) - US, one of the best adaptations of plays to movies, a masterpiece, [Cyrano de Bergerac](#) (1990) – French, an excellent adaptation of a play, one of the best plays ever written, which I have seen thrice, into a unique movie.

D - Dahab (1953) Egypt, [I remember](#) very well seeing this musical melodrama ([link to the film in Arabic](#) – 1 hour and 56 minutes) in 1953 in an open-air cinema of Cairo just before leaving the country. Dahab means gold in Arabic and in Hebrew (zahav) and is also the name of [a small touristic site](#) in Sinai by the Gulf of Aqaba, known also for the [terrorist bombings](#) in 2006 which killed and wounded Egyptians and tourists including Israelis and Europeans. But in the film I remember a young girl of my age Fayrouz the Egyptian Shirley Temple with a touch of Chaplin's The Kid and Al Jolson's The Jazz Singer. Fayrouz was actually Armenian born as Perouz Artin Kalfayan. Egypt was a true cosmopolitan society and even well-known actresses in Arabic films as Fairouz and Leila Mourad (who was Jewish) were not Arabs. Feyrouz/Fayrouz was born in Cairo on 15 March 1943 a year before me and when she made this film she was ten years old and I was 9. The Europeans "snobs" who were not integrated in the Egyptian society (except a small minority as the actresses and even politicians) did not go to Arabic films and did not speak Arabic, as French was the cultural language of the Europeans and English was the business language, while every nationality kept also its mother tongue – Italian, Greek, Armenian, Yiddish, Ladino, etc. Only when there were exceptional films which were a sensation as Dahab the Arabic films were screened at the European cinemas, as in the case of Dahab. Fayrouz was really a fantastic child actress who made her debut at the age of 7 in 1950 and retired at the age of 16 in 1959, marrying later an Egyptian actor. She sang and danced with a rare talent, the other actors were Magda and Ismail Yassin, as well as Anwar Wagdi who was also the film director and producer. Fayrouz's biggest role was in Dahab and she was sponsored by Wagdi in her short career. So, we have in a nutshell all my Egyptian experience in this story, even the terrorist epilogue in Dahab, while I wrote also extensively about the prologue - the riots of [January 1952](#) burning the European Cairo including hotels and cinemas, killing and wounding hundreds of Europeans and Arabs, and almost killing my family. [Damaged Care](#) (2002) - US, [Dances with Wolves](#) (1990) - US, [Darling](#) (1965) – UK, [Das Boot Ist Vool/The Boat Is Full](#) (1981) – Switzerland, it makes you think about the burning issue of immigration, you think how would you have conducted if you were a Swiss, [Das Cabinet des Dr. Caligari](#) (1920) - Germany, [Death of a Salesman](#) (1985) - US, it is the same terrific performance with Dustin Hoffman which I saw on Broadway, the film was part of my courses on business ethics, [The Death of Mr. Lazarescu](#) (2005) – Romania, [The Decalogue](#) (1989) – Poland, the Poles made many outstanding masterpieces, and one of the best was Kieslowski, [The Deer Hunter](#) (1978) - US, [Departures](#) (2008) – Japan, [De rouille et d'os/Rust and Bone](#) (2012) – France, [Destiny of a Man/Russian: Судьба человека, translit. Sudba Cheloveka](#) (1959) – Russia, [The Diary of Anne Frank](#) (1959) – US, one of the most poignant films ever made, [Die Dreigroschenoper/The Threepenny Opera](#) (1931) - Germany, one of the best films and plays ever, I had the privilege to see the film, the plays in Berlin and Israel, and to include it in my courses. The students who rarely saw plays and have never seen black and white films were amazed of the quality of this "oldie – 1931", but I showed them also Chaplin's silent films and the silent film Greed, [Die Hard](#) (1988) – US, [Dirty Harry](#) (1971) – US, [Divorzio](#)

[all'Italiana/Divorce Italian Style](#) (1961) – Italy, [Doctor Zhivago](#) (1965) – US, [Dog Day Afternoon](#) (1975) – US, [Dogville](#) (2003) – Denmark, [A Doll's House](#) (1973) – UK, I have seen several versions of this excellent film, some of them in Israel on stage, [Don Quixote](#) (2000) – US, one of the best novels ever written, here at an excellent film adaptation, [Double Indemnity](#) (1944) – US, [The Double Life of Veronique](#) (1991) – Poland, [Dr. Strangelove or: How I Learned to Stop Worrying and Love the Bomb](#) (1974) – UK, [Duck Soup](#) (1933) – US, what a pity that there are no more comic giants as the Marx brothers.

E - [Easy Rider](#) (1969) – US, [The Edukators/Die fetten Jahre sind vorbei](#) (2004) – Austria, [Elena](#) (2011) – Russia, [Elle s'appelait Sarah/Sarah's Key](#) (2010) – France, [Elmer Gantry](#) (1960) – US, I am always fascinated by such topics and how the masses believe in false Messiahs time and again, [En attendant Godot/Waiting for Godot](#) (1989) – Canada, I am also waiting for Godot and the proof that business ethics is not an oximoron, as practice proves that the crooks are almost never caught and the ethicists are ostracized instead of the other way round, [Enemies a Love Story](#) (1989) – US, [An Enemy of the People](#) (1978) – US, in many classic films as this one you discover excellent actors, here Steve McQueen, but also Gene Wilder in *Rhinoceros*, Burt Lancaster in *All My Sons*, Al Pacino in *The Merchant of Venice*, Russel Crowe in *The Insider*, [The English Patient](#) (1996) – US, [Equinox Flower](#) (1958) – Japan, [Erin Brockovich](#) (2000) – US, one of the best films ever made – a classic, everything is perfect – actors, director, screenplay, but most of all Julia Roberts, moving, funny, poignant, I saw the film which was part of my courses dozens of times and every time I was moved by it, [Escape from Sobibor](#) (1987) – UK, [E.T. the Extra-Terrestrial](#) (1982) – US, [Europa Europa](#) (1990) – Germany, [Executive Suite](#) (1954) – US, [Exodus](#) (1960) – US - I saw in Haifa when I was 15 one of the stars during the filming [Eva Marie Saint](#), an excellent film by all standarda, [The Exorcist](#) (1973) – US.

F - [Face to Face](#) (1976) – Sweden, [Fahrenheit 9/11](#) (2004) – US, [Fahrenheit 451](#) (1966) – UK, [Fanfan la Tulipe](#) (2003, [1952](#)) – France, [Fanny](#) (1961) – US, [Fanny and Alexander](#) (1982) – Sweden, a masterpiece by Ingmar Bergman, I have seen the film several times and enjoyed it, [Fantasia](#) (1940) – US, a must film for all children, [A Farewell to Arms](#) (1957) – US, [Far from Heaven](#) (2002) – US, [Fargo](#) (1996) – US, a masterpiece, a surprise, with the one and only Frances McDormand. [Fatal Attraction](#) (1987) – US, [Fiddler on the Roof](#) (1971) – UK, Topol made an unforgettable performance, one of the best musicals ever made, [The Firemen's Ball](#) (1967) – Czech, the Czechs can teach many Hollywood film makers how to make a film, [The Firm](#) (1993) – US, [500 Days of Summer](#) (2009) – US, [Footnote](#) (2011) – Israel, one of the best Israeli films ever made, [For Me and My Gal](#) (1942) – US, [Forrest Gump](#) (1994) – US, [Fort Apache](#) (1948) – US, [For Whom The Bell Tolls](#) (1943) – US, [The Four Horsemen of the Apocalypse](#) (1962) – US, [4 Months 3 Weeks and 2 Days/4 luni 3 saptamani si 2 zile](#) (2007) – Romania, Romanians are making in the last decade excellent films, [Four Weddings and a Funeral](#) (1994) – UK, [Frankenstein](#) (1931) – US, [Free Zone](#) (2005) – Israel, I know personally Amos Gitai the director of the film who is also an architect, as I met him at his Architecture Museum in Haifa where my son Joseph Cory, PhD in Architecture, exhibited his works on Sustainable Architecture. I know very well the actress Hanna Laslo who received the best actress award at the 2005 Cannes Film Festival for her role in this film. Laslo also contributed a clip to the surprise party of Ruthy my wife in 1992. Gitai has received many prizes and divides his time today between Haifa and Paris - to this we say in Yiddish – auf mir gesugt/I wish it for myself, as I have two loves: Haifa my residence town and Paris the most beautiful and cultural city in the world, the center of the world, [The French Connection](#) (1971) – US, [Frida](#) (2002) – US, [From Here to Eternity](#) (1953) – US, [Funny Face](#) (1957) – US, [Funny Girl](#) (1968) – US.

G – [The Galilee Eskimos](#) (2006) – Israel, the scriptwriter of the film, Joshua Sobol one of the best playwrights and theater directors in the world, is a personal friend who has read my play "Nelly's Choice" and wrote a very favorable review on it. I taught my play at my Business Ethics courses and his play "Working Class Hero" as well, Sobol came also a guest lecturer to one of my courses and discussed with my students his play. [Ganashatru](#)/Enemy of the People (1990) - India, a surprise for all those who think that Indian films are merely musical kitsch, this is a serious and profound film, that was part of my courses on business ethics, [Gandhi](#) (1982) - UK, the leader whom I admire most, [The General](#) (1926) - US, [Gentleman's Agreement](#) (1947) - US, [Gentlemen Prefer Blondes](#) (1953) – US, a fantastic comedy, [George Dandin](#) (1996) – France, [The German Doctor/Wakolda](#) (2013) – Argentina, [Germinal](#) (1993) – France, [Gervaise](#) (1956) – France, both films are based on Emile Zola's books, and are excellent adaptations of his books, [Gigi](#) (1958) – US, [Gilda](#) (1946) – US, unforgettable, [Giulietta degli spiriti/Juliet of the Spirits](#) (1965) - Italy, one of the best movies by Fellini, [Gladiator](#) (2000) – UK, with my favorite actor Russel Crowe who can be Gladiator and Jeffrey Wigand as well, [The Glass Menagerie \(1973, 1987\)](#) US, excellent films and plays, [Glengarry Glen Ross](#) (1992) - US, one of the best films ever made, a masterpiece, part of my courses on business ethics, [The Godfather](#) (1972) - US, [The Godfather Part II](#) (1974) – US, [Goldfinger](#) (1964) – UK, I enjoy seeing also once in a while James Bond's films, [The Gold Rush](#) (1925) - US, [Gone with the Wind](#) (1939) - US, indeed a masterpiece, [The Good, the Bad and the Ugly/Italian](#) title: Il buono, il brutto, il cattivo, lit. "The Good, the Ugly, the Bad" (1966) – Italy, [Goodbye Again/Aimez-vous Brahms?](#) (1961) – US, [Goodbye Bafana](#) (2007) – South Africa, [Good Bye Lenin!](#) (2003) – Germany, [Goodbye Mr. Chips](#) (1939) – UK, the British make as usual masterpieces, [Goodfellas](#) (1990) - US, [Goodmorning Vietnam](#) (1987) – US, [Goya's Ghosts](#) (2006) – Spain, [The Graduate](#) (1967) - US, [Grand Hotel](#) (1932) – US, with the one and only Greta Garbo, whom my father Albert admired so much, [Gran Torino](#) (2008) – US, [The Grapes of Wrath](#) (1940) - US, [Grease](#) (1978) – US, [The Great Dictator](#) (1940) - US, one of Chaplin's masterpieces, a sheer delight, [The Great Escape](#) (1963) – US, [Great Expectations](#) (1946) – UK, [The Great Gatsby](#) (2013) - Australia, based on one of the best novels ever written, by Scott Fitzgerald, part of my courses on business ethics, [The Great Train Robbery](#) (1903) – US, [The Great Ziegfeld](#) (1936) – US, I enjoy very much musicals and this film is one of the best films of its kind, [Greed](#) (1924) - US, a silent masterpiece, [Guess Who Is Coming To Dinner](#) (1967) - US, [Guys and Dolls](#) (1955) – US.

H – [Habemus Papam/We Have a Pope](#) (2011) – Italy, [Hable con ella/Talk to Her](#) (2002) - Spain, [Hamlet](#) (1996) – UK, [Hannah and Her Sisters](#) (1986) – US, an excellent film by Woody Allen, [Hannah's War](#) (1988) – US, [Hans Christian Andersen](#) (1952) – US, one of the best films for kids, Danny Kaye makes it a masterpiece, I like very much Andersen and since I started to study languages I read his stories in the new languages, and of course I learned Danish (only basic) with his stories, [Heat](#) (1995) – US, [Hello Dolly!](#) (1969) – US, [Hero](#) (2002) – Chinese, [High Heels/Tacones lejanos](#) (1991) – Spain, [High Noon](#) (1952) - US, the most classic western, when we knew who was good and who was bad, [High Society](#) (1956) – US, in spite of what the critics wrote I enjoyed this musical with the excellent actors Bing Crosby, Frank Sinatra, and Grace Kelly, and of course the music by Cole Porter played by Sachmo, and also the previous film based on the same play The Philadelphia Story (1940) with other excellent actors - Cary Grant, Katharine Hepburn, and my beloved actor James Stewart, [Hiroshima mon amour/Hiroshima my love](#) (1959) - France, [His Girl Friday](#) (1940) – US, [The Homecoming](#) (1973) – UK, [Hotel Terminus: Klaus Barbie sa vie et son temps/Hotel Terminus: The Life and Times of Klaus Barbie](#) (1988) – France, [The Hours](#) (2002) – UK, an

excellent film with excellent actors about an excellent author Virginia Woolf, [House of Flying Daggers](#) (2004) – China, [The House on Garibaldi Street](#) (1979) – US, [How Green Was My Valley](#) (1941) – US, [Huckleberry Finn](#) (1974, [1931](#), [1960](#), [1993](#)) – US, [Huis-Clos/No Exit](#) (1954) – France, [The Hurt Locker](#) (2008) - US, [The Hustler](#) (1961) – US, [Hyenas/The Visit](#) (1992) - Senegal, this African film was far better than the American film The Visit, much more authentic and true to the Swiss play. My students also were fascinated by this extraordinary film and preferred this version.

I – [Ieri Oggi Domani/Yesterday Today and Tomorrow](#) (1963) – Italy, [If I Want to Whistle I Whistle](#) (2010) – Romania, [Il capitale umano/Human Capital](#) (2013) – Italy, [Il Decameron](#) (1971) – Italy, [Il deserto rosso/Red Desert](#) (1964) - Italy, [Il gattopardo/The Leopard](#) (1963) - Italy, [Il giardino dei Finzi-Contini/The Garden of the Finzi-Continis](#) (1970) – Italy, [Il Grido/The Cry](#) (1957) – Italy, [Il portiere di notte/The Night Porter](#) (1974) – Italy, [Il Postino/The Postman](#) (1994) – Italy, [Il Trovatore](#) (1978) – Austria, [Impromptu](#) (1991) – UK, [In America](#) (2002) – Ireland, [An Inconvenient Truth](#) (2006) - US, [Indiana Jones and the Raiders of the Lost Arc](#) (1981) – US, [Inherit the Wind](#) (1960) – US, Spencer Tracy and Fredric March – two of the best actors in the world in a confrontation that leaves you a bout de souffle/breathless, [The Insider](#) (1999) - US, [Insomnia](#) (1997) – Norway, [The Inspector General](#) (1949) - US, [Interview](#) (2003) – Netherlands, [In the Heat of the Night](#) (1967) – US, [In the Name of the Father](#) (1993) – Ireland, small countries like Ireland can make great films, but so are Irish playwrights and authors among the best in the world, [Intolerance](#) (1916) - US, [Intouchables](#) (2011) – France, [Io e te/Me and You](#) (2012) – Italy, [I Pagliacci](#) by Leoncavallo (1943) – Italy, [Irma la douce](#) (1963) – US, [Island in the Sun](#) (1957) – US, [I Soliti Ignoti/Big Deal on Madonna Street](#) (1958) – Italy, more than ten excellent Italian films in this paragraph, proving that Italian cinema is diversified – romantic, comedy, tragedy, modernist, historic, operas, and in all those categories Italian movies, directors, screenwriters, actors and actresses excel, [Italian for Beginners](#) (2000) – Denmark, [It Happened One Night](#) (1934) - US, [It's a Wonderful Life](#) (1946) - US, I am probably a sentimentalist, moved by films about love and marriage, as the films that I enjoyed most are Ingmar Bergman's Scenes from a marriage and Frank Capra's masterpiece It's a Wonderful Life, that was critically derided as being "simplistic" or "overly idealistic". I accept with proud to be called simplistic, idealistic, or romantic – but I believe that love, family, marital good relations, children, and their interaction with society are the most important topics for films. Anyhow, I have tears in my times every time that I watch the last scenes of It's a Wonderful Life, and I have watched them at least 30 times, as I used to conclude my courses in business ethics with this film, proving at least in an ideal world, that you can be a family man, an ethical businessman, a pillar of your town's society, altogether as I have tried to be all my life. I am maybe poorer in Milton Friedman's neoliberal terms, but I do feel and so is my family that we are, as George Bailey in this film, the richest people in town!

J - [Jailhouse Rock](#) (1957) – US, [The Jazz Singer](#) (1927) - US, [Jean de Florette](#) (1986) - France, I was moved to tears by this film based on Pagnol's novel and its sequel Manon every time that I showed it to my students in business ethics courses, when we see that ethics does not prevail in business and in life and that the Cesars and Ugolins, played materfully by Yves Montand and Daniel Auteuil, win them all – having respect and money although not always happiness, while the idealists as Jean de Florette – Gerard Depardieu, lose everything, at least before the sequel Manon. I have often the impression that all the world is a stage and all the men and women merely players, and God if he exists receive us all the Cesars, Ugolins, Jean de Florette and Manon, at the end of our show on earth congratulating us for our performances regardless if we acted the role of the villain or the saint. That is why secular

ethicists are to be praised especially if they know that most of the time they lose and are not even rewarded in "paradise". [Jeux interdits/Forbidden Games](#) (1952) – France, [Jezebel](#) (1938) – US, [JFK](#) (1991) – US, [Jimmy's Hall](#) (2014) – Ireland, [Johnny Guitar](#) (1954) – US, [Judgment at Nuremberg](#) (1961) – US, [The Juggler](#) (1953) – US, [Jules et Jim](#) (1962) – France, [Julius Caesar](#) (1953) – US, one of the plays I love most after studying it at high school, having the privilege to seat next to Robert Hossein who directed live his actors in the first performance of the play in Paris, quoting Brutus in my courses, and appreciating this film as one of the best films ever made.

K - [Kandahar](#): The Sun Behind the Moon (2001) – Iran, [Kapo](#) (1960) – Italy, [Kazablan](#) (1974) – Israel, with the singer/actor Yehoram Gaon with whom I was interviewed and correspond, [The Kid](#) (1921) – US, a hundred years later my grandchildren enjoy this Chaplin's film as well as Modern Times, proving once more that masterpieces are immortal, [The King and I](#) (1956) – US, [King Lear](#) (1983) – UK, [The King of Comedy](#) (1983) – US, [King of Jazz](#) (1930) – US, [King Richard the Second](#) (1978) – UK, [The King's Speech](#) (2010) – UK, [The Kiss](#) (1896) – US, [Kiss Me Kate](#) (1953) – US, [The Kite Runner](#) (2007) – Afghanistan, [Knife in the Water](#) (1962) – Poland, [Korczak](#) (1990) – Poland, [Kramer vs. Kramer](#) (1979) – US, one of the best films ever made on family's crisis, with two of the best actors – Dustin Hoffman and Meryl Streep.

L - [La belle et la bete/Beauty and the Beast](#) (1946) - France, [La Belle Helene](#) by Offenbach (2000) – France, [La bete humaine/The Human Beast](#) (1938) – France, [La Boheme](#) by Puccini (1965) – Germany, [La citta delle donne/City of Women](#) (1980) – Italy, [L.A. Confidential](#) (1997) - US, [La Dolce Vita](#) (1960) - Italy, I have seen this film several times and every time I enjoy it more, more than half a century later it is as modern as it was in 1960, [Ladri di biciclette/Bicycle Thieves](#) (1948) – Italy, [The Lady Eve](#) (1941) – US, [The Lady from Shanghai](#) (1947) – US, [La femme du boulanger/The Baker's Wife](#) (1938) – France, Marcel Pagnol excelled in the plays that he wrote, the films that he wrote and directed, the novels that he wrote, his memoirs, his autobiography, his humanism, in this film Pagnol reached the peak of his humanism, his kindness, his outstanding understanding of human nature, [La Forza del Destino](#) (1950) – Italy, [La Grande Bellezza/The Great Beauty](#) (2013) – Italy, [La grande illusion](#) (1937) - France, one of the masterpieces of the cinema, [La Grande Vadrouille/The Great Stroll](#) (1966) – France, [Lakme](#) by Delibes (1976) Australia, [La lengua de las mariposas/Butterfly's Tongue](#) (1999) – Spain, [La mala educacion/Bad Education](#) (2004) – Spain, [La meglio gioventu/The Best of Youth](#) (2003) – Italy, I like very much sagas, films of 8 or 10 hours, I am not bored as I am delighted to see how the protagonists evolve like in life, in this Italian film lasting 400 minutes especially, [L'annee derniere a Marienbad/Last Year at Marienbad](#) (1961) – France, [La Notte/The Night](#) (1961) - Italy, [La peau douce/The Soft Skin](#) (1964) – France, [La Pianiste/The Piano Teacher](#) (2001) – France, [La Piscine/The Swimming Pool](#) (1968) – France, [La rafle/The Round Up](#) (2010) – France, [La regle du jeu/The Rules of the Game](#) (1939) – France, [La reine Margot](#) (1994) – France, [L'Argent \(1928, 1988\)](#) – France, these two films are indeed masterpieces – one of them is silent and the other one is "only" 250 minutes long, yet Emile Zola is incomparable in his novels, and their adaptations to the screen and the stage. If I have to choose one film about business ethics it is undoubtedly L'Argent – as it comprises all the facets of ethics and corruption in business. Zola wrote about corruption in banks and finance during the reign of Napoleon III, but the same problems are encountered 150 years later in the Great Recession of 2008, nothing was learned – the crooks still win, the suckers still lose, in France, Israel, and the US, [L'armee des ombres/Army of Shadows](#) (1969) – France, [La stanza del figlio/The Son's Room](#) (2001) – Italy, [The Last Emperor](#) (1987) – Italy, films are not only about family

or business, fortunately they deal also about distant countries and past epochs, and we can dream of being there, especially in such outstanding movies as *The Last Emperor* and [The Last of the Mohicans](#) (1992) – US, [The Last Picture Show](#) (1971) – US, [La Strada](#) (1954) – Italy, [Late Marriage/Hatuna Meukheret](#) (2001) – Israel, In the last two decades Israeli films have attained at last international standards and *Late Marriage* was one of the first films to be perfect in all respects, [Late Spring](#) (1949) – Japan, [Latin Lover](#) (2015) – Italy, [La Traviata](#) by Verdi (1983) – Italy, I have seen at least twenty films of operas, I like most of course Verdi and *Rigoletto*, but *La Traviata* and *La vie parisienne* are two of the best as well, [Laura](#) (1944) – US, [La Vie Parisienne by Offenbach](#) (1977) – France, [La Violetera/The Violet Seller](#) (1958) – Spain, [La vita e bella/Life is Beautiful](#) (1997) – Italy, [L'Avventura](#) (1960) – Italy, [Lawrence of Arabia](#) (1962) – UK, [Le ballon rouge/The Red Balloon](#) (1956) – France, [Le charme discret de la bourgeoisie/The discreet charm of the bourgeoisie](#) (1972) – France, [L'Eclisse/Eclipse](#) (1962) – Italy, [Le comte de Monte Cristo](#) (1998) – France, one of the best novels of all times that was dealt at length in this book was also adapted many times to the screen, [Le jour se leve/Daybreak](#) (1939) – France, [Le journal d'une femme de chambre/The diary of a chambermaid](#) (1964) – France, [Le locataire/The Tenant](#) (1976) – France, [Le mepris/Contempt](#) (1963) – France, [Le Misanthrope](#) (1994) – France, films on the best plays are also very frequent and what can be better than to see one of the best plays by Moliere in Paris, Israel and on screen, [L'enfant/The Child](#) (2005) – Belgium, [Le notti di Cabiria/Nights of Cabiria](#) (1957) – Italy, [Le Nozze di Figaro](#) by Mozart (1975) – Germany, [Leon/Leon: The Professional](#) (1994) – France, [Le Pere Goriot](#) (2004) – France, [Le proces/The Trial](#) (1962) – France, film is the best media to show the anguish of Kafka's books, you have nightmares for months after seeing Kafka's films, [Le quai des brumes/Port of Shadows](#) (1938) – France, [Le salaire de la peur/The Wages of Fear](#) (1953) – France, sometimes small budget films as this one are greater than life and I still remember every minute of the film more than 60 years after seeing it, [Les contes d'Hoffmann](#) by Offenbach (2002) – France and also [The Tales of Hoffmann](#) (1951) – UK, [Les demoiselles de Rochefort/The Young Girls of Rochefort](#) (1967) – France, [Les enfants du paradis/Children of Paradise](#) (1945) – France, [Les enfants du siecle/Children of the Century](#) (1999) – France, I have seen many films on the wonderful love story of George Sand and Alfred de Musset and I have read their correspondence, and it still interests me every time, [Les Faux-monnayeurs/The Counterfeiters](#) (2010) – France, [Les grandes familles/The Possessors](#) (1958) – France, I have a profound disrespect to most of the "grandes familles", "royal houses", aristocrats, tycoons, politicians, proving once more the truth of the Hebrew saying: what is the difference between a mountain/Har and a minister/important people/Sar – the mountain seems small when you see it in the distance and huge when you see it close, with the minister/the tycoon/the aristocrat/politician/who's who – it is the opposite..., [Les invasions barbares/The Barbarian Invasions](#) (2003) – Canada, [Les liaisons dangereuses](#) (1959) – France, I may be fair in my conduct in business, with friends, with my wife and family, but it does not mean that I don't enjoy reading the most unfair conduct as in this wonderful book and film, watching gangster films as *The Godfather*, and films about greater than life crooks as *L'Argent*, [Les Marchands de Gloire](#) (1998) – France, [Les Misérables](#) (1998-UK), (2012-UK), (2002-France), (1935-US), (1934-France), (1982-France), (1958-France), I have seen many films on this book and I have enjoyed most of them, as I have enjoyed the novel, and all Hugo's masterpieces, [Les parapluies de Cherbourg/The Umbrellas of Cherbourg](#) (1964) – France, [Les 400 coups/The 400 Blows](#) (1959) – France, I enjoy most films of the French Nouvelle Vague and this is one of their first movies, [Les sorcières de Salem/The Crucible](#) (1957) – France, very few people have seen this film which is a masterpiece, far better than all the other adaptations of Miller's play to the screen, and to think that the French succeeded to depict the atmosphere of Salem in the US three hundred years ago just proves that a good film is really cosmopolitan, [Les trois](#)

[mousquetaires/The Three Musketeers](#) (1921-US), (1948-US), (1961-France), (1973-UK), this immortal book was one of the best books that I have read when I was a child - together with its sequels *Vingt ans apres*, *Le vicomte de Bragelonne*, 10 volumes in total, and I enjoyed most films on those stories from the US, UK and France, [Les uns et les autres](#) (1981) – France, [Les vacances de monsieur Hulot/Mr. Hulot's Holiday](#) (1953) - France, [Letter from an Unknown Woman](#) (1948- US) (2004-China), [Leviathan](#) (2014) - Russia, [Le voyage dans la lune/A Trip to the Moon](#) (1902) – France, I have seen this film only recently and showed it to my grandchildren as well, to think how more than a century ago Melies made such a masterpiece in colors, interesting, funny, it shows that masterpieces are truly immortal, [L'homme et l'enfant](#) (1956) – France, [The Life of Emile Zola](#) (1937) - US, the French people and the American people like and respect each other since the times of the American revolution until today, and Zola is known in the US almost as in France, respected, read, and seen on films, [Lili Marleen](#) (1981) – Germany, I saw this film in Geneva while attending a course at IMD/Imede, it was indeed an excellent film one of the first German films that I have seen, as in Israel of the pre-diplomatic relations with Germany we could not see any German film, [Limelight](#) (1952) – US, [Little Big Man](#) (1970) – US, [Little Caesar](#) (1931) – US, [Little Miss Sunshine](#) (2006) - US, [The Lives of Others](#) (2006) – Germany, [The Living Desert](#) (1953) – US, [Lola Montes](#) (1955) – France, [The Loneliness of the Long Distance Runner](#) (1962) – UK, [Long Day's Journey into Night](#) (1962) – US, [The Longest Day](#) (1962) – US, [Look Back in Anger](#) (1959) – UK, [Lost in Translation](#) (2003) – US, sometimes small unpretending films as this one are liked more than films with budgets of tens of millions as the awful Avatar, [Love Story](#) (1970) – US, maybe it is kitsch, but still it is a film about a marvelous love story, and I enjoyed it very much.

M – [Macbeth](#) (1971) – UK, [Madame Bovary](#) (1991) – France, [Madame de.../The Earrings of Madame de...](#) (1953) – France, [The Magnificent Ambersons](#) (1942) – US, [The Magnificent Seven](#) (1960) – US, [Magnolia](#) (1999) – US, [Malena](#) (2000) – Italy, [The Maltese Falcon](#) (1941) - US, [Man and Superman](#) (1982) – UK, [A Man for All Seasons](#) (1966) – UK, [Manhattan](#) (1979) - US, [Man of La Mancha](#) (1972) - US, a musical on Don Quixote? It sounds crazy, yet it works, it is funny, sentimental, moving, sad, due to the excellent actors – Peter O'Toole, Sophia Loren, and James Coco, [Manon des sources](#) (1986) - France, the sequel of *Jean de Florette*, good as the first part, especially when Manon accuses Cesar and Ugolin of killing her father Jean de Florette, [Manufacturing Consent: Noam Chomsky and the Media](#) (1992) – Australia, [The Man Without A Past](#) (2002) – Finland, [Ma pomme/Just Me](#) (1950) – France, I remember very well this film with Maurice Chevalier. I was 6-7 and saw it at an open-air cinema in Cario, with the famous songs: clodo serenade, ma pomme, y'a tant d'amour, [Marathon Man](#) (1976) – US, [Marie: A True Story](#) (1985) - US, [The Marriage of Maria Braun](#)/Die Ehe der Maria Braun (1979) – Germany, [Marty](#) (1955) – US, [Mary Poppins](#) (1964) - US, [MASH](#) (1970) - US, like a theatre of the absurd, [Matrimonio all'italiana](#)/Marriage Italian Style (1964) – Italy, [McLibel](#) (2005) – UK, [Mediterraneo](#) (1991) – Italy, [Meet Me in St. Louis](#) (1944) – US, I enjoy very much musicals on stage and on screen, oldies as this one, more modern as *My Fair Lady* and *West Side Story*, but not at all modern as almost all Lloyd Webber's musicals, and least of all *Cats*, [Mephisto](#) (1981) – Hungary, [The Merchant of Venice](#) (2004) and (1973) - UK, I saw so many times the plays and the movies, and I read also the play several times, as it was one of the pillars of my courses on business ethics, [The Merry Widow/La veuve joyeuse](#) (1934) – US, [Metropolis](#) (1927) - German, the early German films were masterpieces, than all the good directors left Germany because of the Nazis, and only in recent years we see again excellent movies, [Mia Madre](#) (2015) – Italy, [Midnight Cowboy](#) (1969) - US, [A Midsummer Night's Dream](#) (1999) – UK, [The Mikado](#) (1967) – UK, I like very much Gilbert and Sullivan, and comic operas in general – Offenbach,

Rossini, Strauss, [Mildred Pierce](#) (1945) – US, [The Miracle Worker](#) (1962) – US, [Misery](#) (1990) – US, a masterpiece of black comedy, James Caan and Kathy Bates are terrific, it is so scary that it is funny, we feel how those two brilliant actors enjoyed making the film and we can sense even their intimacy, [The Misfits](#) (1961) – US, one of the best films I have ever seen – the three leading actors died shortly or a few years after the film was released – Marilyn Monroe, Clark Gable, Montgomery Clift – a cursed film undoubtedly, yet a brilliant scenario by Arthur Miller, [Missing](#) (1982) – US, [Miss Julie](#) (1999) – US, [Modern Times](#) (1936) – US, undoubtedly the best film by Chaplin, a masterpiece, one of a kind, and on top of that extremely funny even for my grandchildren, [Moloch](#) (1999) – Russia, [Mon Oncle/My Uncle](#) (1958) – France, [Monsieur Klein/Mr. Klein](#) (1976) – France, [Monsieur Verdoux](#) (1947) – US, [Monsoon Wedding](#) (2001) – India, I like very much Indian musicals, and this one especially, [Monty Python and the Holy Grail](#) (1945) – UK, [Morocco](#) (1930) – US, [Mrs. Dalloway](#) (1997) – UK, [Mr. Smith Goes to Washington](#) (1939) – US, [Mrs. Miniver](#) (1942) – US, [Much Ado About Nothing](#) (1993) – UK, [Mujeres al borde de un ataque de nervos/Women on the Verge of a Nervous Breakdown](#) (1988) – Spain, [Mulholland Drive](#) (2001) – US, [Music Box](#) (1989) – US, [Mutiny on the Bounty](#) (1935) – US, [My Darling Clementine](#) (1946) – US, [My Fair Lady](#) (1964) – US, the ultimate musical, perfect in all respects, not so funny as Annie Get Your Gun, but more profound as the genius of George Bernard Shaw permeate the musical, [My Left Foot: The Story of Christy Brown](#) (1989) – Ireland, Irish masterpiece, [My Man Godfrey](#) (1936) – US, [Mystic River](#) (2003) – US.

N – [The Naked Maja](#) (1958) – Italy, [Nana](#) (1955) – France, [Napoleon](#) (1927) – France, it is amazing how many excellent movies were produced during the era of the silent movies, Napoleon is one of the best movies ever made although it was silent or possibly because it was silent, [Nashville](#) (1975) – US, [Naughty Marietta](#) (1935) – US, [Neighboring Sounds/O Som ao Redor](#) (2012) – Brazil, [Ne le dis a personne/Tell No One](#) (2006) – France, [Network](#) (1976) – US, [Never on Sunday](#) (1960) – Greece, my origins are Greek and I always enjoy watching Greek films, this one is possibly one of the best, and I learned the song as well, [A Night at the Opera](#) (1935) – US, [The Night of the Hunter](#) (1955) – US, [The Night of the Iguana](#) (1964) – US, Tennessee Williams is probably the playwright whose plays were adapted to the screen with the most success, this film is one of the best, [A Night to Remember/Titanic](#) (1958) – UK, I enjoyed much more this film on the Titanic, probably because the actors were better and the director was excellent as well. Among the many [films about the Titanic](#), it has long been regarded as the high point by *Titanic* historians and survivors alike for its accuracy, despite its modest production values when compared with the [1997 Oscar-winning film Titanic](#), [Nightwatching](#) (2007) – Canada, I heard a lecture of the film's director Peter Greenaway at the Haifa Film Festival, [Nine to Five/9 to 5](#) (1980) – US, [Ninotchka](#) (1939) – US, Greta Garbo is charming in this comedy and for the first time she does not play like a diva, [Nobody Knows](#) (2004) – Japan, [No Country for Old Men](#) (2007) – US, [No Man's Land](#) (2001) – Bosnia and Herzegovina, [Norma Rae](#) (1979) – US, [North by Northwest](#) (1959) – US, [Notorious](#) (1946) – US, [Notre-Dame de Paris/The Hunchback of Notre Dame](#) (1956) – France, [\(1939\) - US, Novecento/Twentieth Century](#) (1976) – Italy, [Novia que te vea](#) (1994) – Mexico in Ladino and Spanish about Sephardic Jews, I was thrilled to read a book and watch a film in my mother tongue Ladino, [Nowhere in Africa/Nirgendwo in Afrika](#) (2001) – Germany, [Nuit et brouillard/Night and Fog](#) (1955) – France, one of the best films on the Holocaust, I have included in my list many such films.

O – [O Brother Where Art Thou?](#) (2000) – US, [The Odessa File](#) (1974) – UK, [Oklahoma!](#) (1955) – US, one of the best musicals ever made, an outstanding music with a very tedious script, [Oldboy](#) (2003) – South Korea, [The Old Man and the Sea](#) (1958) – US, [Oliver!](#)

(1968) – UK, [Once](#) (2006) – Ireland, [Once upon a time in America](#) (1984) - US, [Once Upon a Time in Anatolia](#) (2011) – Turkey, once not so far ago, we used to "denigrate" Turkish films as telenovela films, ridiculous, with an idiotic plot, and second rate acting, and many Israeli, Arabic, and Indian films were not much better, but recently Turkish films have become in many cases masterpieces, with the best directors, scriptwriters, actors, and actresses, I am always supportive of such renaissance, that has happened also to Israeli films, [One Flew Over the Cuckoo's Nest](#) (1975) - US, [One Two Three](#) (1961) – US, [On ne badine pas avec l'amour](#) (1978) – France, [On the Town](#) (1949) – US, [On the Waterfront](#) (1954) - US, [Orfeu Negro/Black Orpheus](#) (1959) – Brazil, an excellent film, poetic, nostalgic, sad, and beautiful, [Orpheus Descending](#) (1990) – US, [Othello](#) (1952) – Italy, [Other People's Money](#) (1991) - US, [The Others](#) (2001) – Spain, [Otto e Mezzo – 8½](#) (1963) - Italy, modern film at its best, the modern film-makers I like most are Fellini, Antonioni, Bergman, Allen, and of course the Nouvelle Vague film-makers, [Outsourced](#) (2006) - US, it was included in one of my courses.

P – [Paint Your Wagon](#) (1969) – US, I enjoyed especially the acting of Lee Marvin in this film and in Cat Ballou, which was a surprise for me as Marvin was perceived priorly only as a serious actor, and he proved in these musicals that he is multi-talented, [The Pajama Game](#) (1957) – US, Doris Day in the list of the best film? Many veinschmeckers would pity my poor taste, but I always liked Doris Day, and films like The Pajama Game were a solace and a filmotherapy when I was in a pessimistic mood, [Paris Texas](#) (1984) - Germany, [Partie de campagne](#) (1936) - France, [A Passage to India](#) (1984) – UK, [The Passenger](#) (1975) –Italy, [Paths of Glory](#) (1957) – US, [The Pawnbroker](#) (1964) – US, [Pelle the Conqueror](#) (1987) – Denmark, [Pepe le Moko](#) (1937) – France, [Persona](#) (1966) - Sweden, [Phaedra](#) (1962) – France, [The Phantom of the Opera](#) (1925) – US, [The Philadelphia Story](#) (1940) - US, [The Pianist](#) (2002) – Poland, [The Piano](#) (1993) – New Zealand, [Pillow Talk](#) (1959) – US, [The Pirates of Penzance](#) (1983) – UK, [A Place in the Sun](#) (1951) - US, [Plein Soleil/Purple Noon](#) (1960) – France, [The Policeman](#) (1971) - Israel, one of the best Israeli films ever made, as Ephraim Kishon was a humorist genius in all what he made – films, plays, satires, books. In an era where most of the Israeli films were ridiculous he wrote and directed masterpieces, [Porgy and Bess](#) (1959) – US, one of the best musicals ever made, [The Portrait of a Lady](#) (1996) – UK, [Pot-Bouille/Lovers of Paris](#) (1957) – France, [Profumo di donna/Scent of a Woman](#) (1974) – Italy, [Pulp Fiction](#) (1994) – US.

Q – [Quai des Orfèvres](#) (1947) – France, [The Quiet Man](#) (1952) – US, a departure for Wayne and the director Ford, who were both known mostly for [Westerns](#) and action-oriented films.

R – [Radio Days](#) (1987) – US, I miss Woody Allen who made in the eighties such excellent films, [Raiders of the Lost Ark](#) (1981) - US, [Rain](#) (2001) – New Zealand, [Rain Man](#) (1988) - US, [Raise the Red Lantern](#) (1991) – China, [Raising Arizona](#) (1987) – US, [Ran](#) (1985) – Japan, [Rashomon](#) (1950) - Japan, [Rear Window](#) (1954) - US, one of the best Hitchcock's films with James Stewart, my favorite actor, in the leading role, [Rebecca](#) (1940) - US, [Rebel Without a Cause](#) (1955) - US, [The Red Shoes](#) (1948) – UK, [Rembetiko](#) (1983) – Greece, one of the music I like most is Rembetiko, the music of the refugees who were integrated in the Greek society without the assistance of billions by the UN to the never-ending saga of the Palestinian refugees, [Repulsion](#) (1965) - UK, [Reservoir Dogs](#) (1992) – US, [The Rest Is Silence](#) (2007) – Romania, [The Return](#) (2003) – Russia, [Riff Raff](#) (1991) – UK, [Rhinoceros](#) (1974) - US, [Richard III](#) (1955) – UK, one of the best plays ever made in one of the best films ever made, [Rigoletto](#) (1982) – Germany, and in [English Modern Version](#) (1982) - UK, two excellent versions of my favorite opera Rigoletto, [Riso Amaro/Bitter Rice](#) (1949) –

Italy, [Rocco and his Brothers/Rocco e i suoi fratelli](#) (1960) – Italy, [Roger & Me](#) (1989) – US, Michael Moore is a genius and this is one of his best documentary films, [Roma città aperta/Rome open city](#) (1945) – Italy, [Roman Holiday](#) (1953) – US, [The Roman Spring of Mrs. Stone](#) (2003) – US, [Romeo and Juliet](#) (1968, 1936) – UK, [A Room with a View](#) (1985) – UK, [Rosemary's Baby](#) (1968) – US, the first time I saw this film in spring 1969 I had mixed feelings – I was extremely scared by its content, and I was extremely pleased, as during the film my friend whispered to my ear that she intends to invite Ruthy and me to her party soon and I'd better come as I'll surely fall in love with her, [The Rose Tattoo](#) (1955) – US, [The Rules of the Game/La regle du jeu](#) (1939) – France, [Runaway Jury](#) (2003) – US, [Run Lola Run/Lola rennt](#) (1998) – Germany, [Russian Ark](#) (2002) – Russia.

S – [Safety Last!](#) (1923) – US, [Sallah Shabati](#) (1964) – Israel, [Samson et Dalila](#) by Saint-Saens (2002) – Italy, [Saraband](#) (2003) – Sweden, [Saturday Night and Sunday Morning](#) (1960) – UK, [Saving Private Ryan](#) (1998) – US, [Scarface](#) (1983) – US, [The Scarlet Pimpernel](#) (1934) – UK, [Scenes from a Marriage](#) (1973) – Sweden, the best film I've ever seen, the best director, best script, best actress, every time I see it I enjoy it more as I discover new subtleties of the text, the directing, and the acting, [Scent of a Woman](#) (1974-Italy, 1992-US), [Schindler's List](#) (1993) – US, one of the most acute dilemmas – how can such a humane hero as Schindler be a lousy husband, while such a monster as Eichmann was an excellent family man, [The Searchers](#) (1956) – US, [The Secret in Their Eyes/El secreto de sus ojos](#) (2009) – Argentina, [Secrets and Lies](#) (1996) – UK, [Sense and Sensibility](#) (1995) – US, [A Separation](#) (2011) – Iran, [Sergeant York](#) (1941) – US, [Seven Brides for Seven Brothers](#) (1954) – US, [The Seventh Seal](#) (1957) – Sweden, [Sex, Lies, and Videotape](#) (1989) – US, [Shakespeare in Love](#) (1998) – US, I saw this film as in a dream, as only in dreams you can reach such perfection and joy, [Shall We Dance](#) (1937) – US, [Shame](#) (1968) – Sweden, [The Shawshank Redemption](#) (1994) – US, [The Sheik](#) (1921) – US, [Shichinin no samurai/Seven Samurai](#) (1954) – Japan, [Shine](#) (1996) – Australia, [The Shining](#) (1980) – US, [Shoah](#) (1985) – France, one of the longest films ever made, but you remain flabbergasted and breathless in spite of the horrendous content of the Holocaust, [The Shop Around the Corner](#) (1940) – US, [The Shop on Main Street](#) (1965) – Slovakia, [Show Boat](#) (1936, 1951) – US, [Shree 420](#) (1955) – India, I enjoy very much films with Raj Kapoor, although the translation was on the side of the screen and there was no synchronization between the film and the subtitles, but who need to understand the film – it is enough that you sense it, [Sicko](#) (2007) – US, it is a shame that such a great nation as the US has such a lousy health insurance system, a monster of capitalism at its worse, meant primarily to enrich the healthcare corporations at the expense of the American budget and the public, Moore shows the absurdities of the system as in his other films – Roger and Me, Capitalism a Love Story, The Big One, etc., [The Silence](#) (1963) – Sweden, [Silkwood](#) (1983) – US, one of the most poignant films ever made, a greater than life heroine – Karen Silkwood acted by the greatest actress Meryl Streep, showing the ugliness of the neoliberal large corporations wanting to maximize their profits according to the false mantra of Milton Friedman the consigliere of Reagan, Thatcher, Netanyahu, and Pinochet, at the expense of the life and health of their employees and their countries' citizens, and the finale – the murder of Silkwood to the sound of the thrilling Amazing Grace, I showed it at my courses, and it made such a strong impression on my students, much more than tedious lectures about morality and ethics, [Singin' in the Rain](#) (1952) – US, what a lovely comedy and music, [Sissi](#) (1955) – Austria, the best kitsch that I have ever seen, [Si Versailles m'etait conte/Royal Affairs in Versailles](#) (1954) – France, the only time that I won something – when I was the only one in the public to answer correctly a question on this film, [The Sixth Sense](#) (1999) – US, [The Skin I live in /La piel que habito](#) (2011) – Spain, [Slumdog Millionaire](#) (2008) – UK, [Snow White and the Seven Dwarfs](#) (1937) – US, the best animated

film I have ever seen, the best songs, the delight of my children and grandchildren, [Some Came Running](#) (1958) - US, [Some Like It Hot](#) (1959) - US, nobody is perfect? This film is perfect! [A Song to Remember](#) (1945) – US, [Son of the Bride/El hijo de la novia](#) (2001) – Argentina, I remember being a member of the Argentinian film club in Jerusalem in 1964 when I was 20 together with my Argentinian friend Mario Diamant – the films were so rudimentary, so boring, so childish, and now – a few decades later the Argentinian films are among the best in the world, [The Son of the Sheik](#) (1926) – US, [Sons and Lovers](#) (1960) – UK, [Sophie's Choice](#) (1982) – US, [The Sound of Music](#) (1965) - US, one of the best musicals and films ever made, a masterpiece, great songs, great acting, with the one and only Christopher Plummer who was Captain Von Trapp in this film, Mike Wallace in *The Insider* – part of my business ethics courses as it has the most salient dilemmas personified with two other excellent actors Al Pacino and Russel Crowe. Plummer at the age of almost 90 still acts and receive the highest awards, and indeed you have to be a great actor to personify two such opposites and Von Trapp and Wallace, [Sous les toits de Paris/Under the Roofs of Paris](#) (1930) – France, [South Pacific](#) (1958) - US, one of the best musicals and musical films ever made, [Spartacus](#) (1960) – US, [Spring Summer Autumn Winter... and Spring](#) (2003) – South Korea, a Korean masterpiece, [Stagecoach](#) (1939) - US, [Stalag 17](#) (1953) – US, [Stanno tutti bene/Everybody's Fine](#) (1990) – Italy, [A Star Is Born](#) (1954) - US, [Stories We Tell](#) (2012) – Canada, [The Stranger/Al Majhoul](#) (1984) – Egypt in Arabic, part of my business ethics courses as it raises many ethical dilemmas, [A Streetcar Named Desire](#) (1951) - US, [Stromboli](#) (1950) – Italy, [Suddenly Last Summer](#) (1959) – US, [The Sun Also Rises](#) (1957) – US, [Sunday Bloody Sunday](#) (1971) – UK, [Sunset Boulevard](#) (1950) - US, I remember seeing this film at the age of 6, and surprisingly enough I did not appreciate it, I was even afraid by the scaring Gloria Swanson, only decades later I overcame my reticence and saw it once again – a masterpiece, proving that maybe it is too early to take your small children to all the films that the grownups want to see, [Super Size Me](#) (2004) - US, [Sweet Bird of Youth](#) (1962) – US.

T – [Tai-Pan](#) (1986) – US, [A Taste of Honey](#) (1961) – UK, the British and the Italian film industries had their glorious era until the seventies, and only recently they have regained their excellence, unlike the French film industry that has remained excellent during more than a century, [Terms of Endearment](#) (1983) – US, [Tevya/Tevye/Tevye the Dairyman](#) (1939) – US in Yiddish about Ashkenazi Jews, [The Take](#) (2004) – Canada, [Ten/10](#) (2002) – Iran, [Ten Blocks on the Camino Real](#) (1966) – US, [Thelma and Louise](#) (1991) – US, [Therese Desquevroux](#) (2012) – France, [Therese Raquin](#) (1953) – France, [There's No Business Like Show Business](#) (1954) – US, [There Will Be Blood](#) (2007) – US, [The Thief of Bagdad](#) (1924) – US, [The Third Man](#) (1949) - UK, [The 39 Steps](#) (1935) - UK, [Three Colors: Blue/Trois couleurs: bleu](#) (1993) – France, [Three Colors: Red/Trois couleurs: rouge](#) (1994) – France, [Three Colors: White/Trois couleurs: blanc](#) (1994) – France, [Three Mothers](#) (2006) – Israel, about Egyptian Jews, the first Israeli film telling the story of Egyptian Jews, unlike the dozens of novels that were published on this topic, [Three Sisters](#) (1970) – UK, [Through A Glass Darkly](#) (1961) - Sweden, [Time](#) (2006) – South Korea, [Tin Men](#) (1987) - US, [Tirez sur le pianiste/Shoot the Piano Player](#) (1960) – France, [Titanic](#) (1997) – US, [To Be or Not to Be](#) (1942/**1983**) - US, I enjoyed most the remake in 1983 with Mel Brooks and his wife Anne Bancroft, both were perfect, and the film was one of the funniest movies that I have ever seen, [To Have and Have Not](#) (1944) – US, [Toi le venin](#) (1958), France, directed by Robert Hossein, whom I saw at one of the plays he directed in Paris when he came after the performance on stage and talked to the public, [Tokyo monogatari/Tokyo Story](#) (1953) - Japan, [Tom Sawyer](#) (1973) – US, [Too Big to Fail](#) (2011) - US, [Topaze](#) (1936, 1951) - France, [Top Hat](#) (1935) - US, the ultimate musical comedy with Ginger Rogers and Fred

Astaire, singing and dancing to the tune of Irving Berlin's Cheek to Cheek, [Topsy-Turvy](#) (1999) - UK, [Tosca](#) (1976) – Italy, [Touchez pas au grisbi](#) (1954) – France, [Touch of Evil](#) (1958) - US, [The Treasure of the Sierra Madre](#) (1948) - US, [The Trial](#) (1993) – UK, [Tristan und Isolde](#) by Wagner (1995) – Germany, [Triumph of the Spirit](#) (1989) – US, [Tune in Tomorrow.../La tia Julia y el escritor](#) (1990) – US, [Turandot](#) by Puccini (1987) – US, [Twelfth Night](#) (1996) – UK, [12 Angry Men](#) (1957) - US, [20,000 Leagues Under the Sea](#) (1954) – US, [Twin Peaks: Fire Walk with Me](#) (1992) – US, [Tycoon](#) (2002) – Russia.

U – [Un Ballo in Maschera](#) (1975) – UK, [The Unbearable Lightness of Being](#) (1988) – US, a film adaptation of the novel of the same name by Milan Kundera, published in 1984. Director Philip Kaufman and screenwriter Jean-Claude Carrière portray the effect on Czechoslovak artistic and intellectual life during the 1968 Prague Spring of socialist liberalization preceding invasion by Soviet led Warsaw Pact and subsequent coup that ushered in hard-line communism. It portrays the moral, political, and psycho-sexual consequences for three bohemian friends: a surgeon Daniel Day-Lewis, and two female artists with whom he has a sexual relationship Juliette Binoche and Lena Olin, [Un Chien Andalou/An Andalusian Dog](#) (1929) – France, [Uncle Vanya](#) (1970) – Russia, (1963-UK), [Un condamné à mort s'est échappé!/A Man Escaped](#) (1956) – France, [Unforgiven](#) (1992) - US, [Un homme et une femme/A Man and a Woman](#) (1966) - France, I saw this film several times as it has impressed me so much with its new approach to film-making, directed by Claude Lelouch, with the outstanding actors Anouk Aimée and Jean-Louis Trintignant, [Ulisse/Ulysses](#) (1954) – Italy, [Un long dimanche de fiançailles/A Very Long Engagement](#) (2004) – France, [The Unsinkable Molly Brown](#) (1964) – US, [The Untouchables](#) (1987) – US, one of the best films on gangsters and policemen, truly a masterpiece, no wonder, as the director is Brian De Palma, David Mamet wrote the screenplay, and the leading actors are Kevin Costner, Robert De Niro and Sean Connery, [Up](#) (2009) – US.

V – [Vanya 42e rue/Vanya on 42nd Street](#) (1994) – France, [Va, vis et deviens/Live and Become](#) (2005) – Ethiopia, [Vicky Cristina Barcelona](#) (2008) – Spain, [Vincent François Paul et les autres](#) (1974) – France, this is the "classic" French film, sophisticated yet simple, warm and detached, with the best actors – Yves Montand, Gérard Depardieu, Serge Reggiani, and Michel Piccoli. Piccoli is one of my most favorite actors. He has appeared in many different roles, from seducer to cop to gangster to Pope, in more than 170 movies. Piccoli has worked with Jean Renoir, Jean-Pierre Melville, Jean-Luc Godard, Claude Lelouch, Jacques Demy, Claude Sautet, Louis Malle, Agnès Varda, Leos Carax, Luis Buñuel, Costa-Gavras, Alfred Hitchcock, Marco Ferreri, Jacques Rivette, Otar Iosseliani, Nanni Moretti, Jacques Doillon, Mario Bava, Manoel de Oliveira, Claude Faraldo, Raúl Ruiz, Theodoros Angelopoulos and Alain Resnais, [Violettes Impériales/Violetas Imperiales/Imperial Violets](#) (1952) – France, [The Virgin Spring](#) (1960) - Sweden, [Viridiana](#) (1961) – Spain, [Vertigo](#) (1958) - US, [The Visit](#) (1964) - US, [Viva la libertà/Long Live Freedom](#) (2013) – Italy, [Vivre sa vie/My Life to Live](#) (1962) – France, [Volver](#) (2006) – Spain, one of the best films written and directed by Pedro Almodóvar. With two excellent actresses – Penelope Cruz and Carmen Maura. Drawing inspiration from the Italian neorealism of the late 1940s to early 1950s and the work of pioneering directors such as Federico Fellini, Luchino Visconti, and Pier Paolo Pasolini, Volver addresses themes like sexual abuse, loneliness and death, mixing the genres of farce, tragedy, melodrama, and magic realism, [Voyage of the Damned](#) (1976) – UK, [Vu du pont/A View from the Bridge](#) (1962) – France,

W – [Wadja](#) (2012) – Saudi Arabia in Arabic, an excellent film indeed, very interesting and moving, [Walk on Water/Lalekhet al hamayim](#) (2004) – Israel, [Wall-E](#) (2008) – US, [Wall](#)

[Street](#) (1987) - US, one of the best films that I have ever seen first of all because the excellent actor Michael Douglas – Gordon Gekko, who has become the ultimate capitalist maximizing profits to the delight of Milton Friedman and ruining the lives of all the others, as in the neoliberal regimes that I oppose so much. This was the backbone of my courses on business ethics as it gives in a nutshell most of the dilemmas of business, [War and Peace](#) (1956) – US, [War and Remembrance](#) (1988) – US, this film and [The Winds of War](#) are the best films that I have ever seen on the inter-world wars and the second world war, a very long saga, but interesting and thrilling from the beginning to the end, [The War of the Worlds](#) (1953) – US, [Washington Square](#) (1997) – US, [Water](#) (2005) – India, [The Weeping Meadow](#) (2004) – Greece, [West Side Story](#) (1961) - US, in the same decade I saw this excellent film and saw the musical on Broadway in June 1968, the first musical that I have seen in the US, [Whale Rider](#) (2002) – New Zealand, [When Father Was Away On Business](#) (1985) – Serbia, [When Harry Met Sally...](#) (1989) – US, [Who's Afraid of Virginia Woolf?](#) (1966) – US, a masterpiece on stage and in film, [The Wild Bunch](#) (1969) - US, [Wild Strawberries](#) (1957) - Sweden, [The Winds of War](#) (1983) – US, [Winter Sleep](#) (2014) – Turkey, [Witness for the Prosecution](#) (1957) – US, [The Wizard of Oz](#) (1939) - US, [Woman of the Year](#) (1942) – US, [The Women](#) (1939) – US, [Women in Love](#) (1969) – UK, [Woodstock](#) (1970) – US, I saw Joan Baez show in New York long after her performance in this film, [Working Girl](#) (1988) - US, [Wuthering Heights](#) (1939) – US.

X– [The X-Files](#) (1998)– US. An American science fiction thriller film directed by [Rob Bowman](#).

Y - [Yankee Doodle Dandy](#) (1942) - US, an American biographical musical film about [George M. Cohan](#), known as "The Man Who Owned Broadway". He is considered the father of American musical comedy. James Cagney, one of my favorite actors, was a fitting choice for the role of Cohan since, like Cohan, he was an Irish-American who had been a song-and-dance man early in his career. His unique style of half-singing and half-reciting the songs, reflected the style that Cohan himself used, [Y tu mama tambien/And Your Mother Too](#) (2001) – Mexico.

Z - [Z](#) (1969) - Algeria, Costa Gavras is one of my favorite directors, and this film is one of his best, I had the privilege of hearing his lecture at the Haifa Film Festival, [Zelary](#) (2003) – Czech, [Zero de conduite/Zero for Conduct](#) (1933) – France, [Ziegfeld Follies](#) (1946) – US, [Zorba the Greek](#) (1964) – UK, one of the best films I have ever seen, directed by [Cypriot Michael Cacoyannis](#) and starring [Anthony Quinn](#), one of my favorite actors, as the title character. It is based on the novel [Zorba the Greek](#) by [Nikos Kazantzakis](#), which I am still reading in Greek. The supporting cast includes [Alan Bates](#), [Lila Kedrova](#), [Irene Papas](#) and [Sotiris Moustakas](#). And in the "waiting list" after we closed the polls we can find excellent films as [The Five Pennies...](#)

The best films in Cory's list of films amount to 830, out of which 360 are the best of the best films, you can watch 360 films which are la crème de la crème of the film industry in all countries and you get “paradise on earth”. All the films have links to entries in Wikipedia, IMDb, and other sites, as well as the directors, scriptwriters, actors and actresses. With the other lists of films – we bring in this book links to more than a thousand films, you can choose to read the [One Thousands and One Nights of Scheherazade](#) or the 1,000+ nights for watching the best films from all over the world in my lists. If we add to that the books by the 1250 best authors of the twelfty’s literature in my lists you can fill in a lifetime reading the best books of those authors, watching the best films, hearing the hundreds of best classical

music works by more than a hundred composers - symphonies, concerti, lieder, chamber music, the best operas, visiting the best museums with the best paintings and sculptures, in short living a true cosmopolitan cultural life, as stipulated in this book - an ode to culture.

In this book we find also references to the geniuses of cinema, as Chaplin and Bergman in the biographies, and in other chapters about other directors, scriptwriters, actors and actresses. Many chapters in this book are about films with business ethics and social justice content as well. So, what do we have in Cory's List? Silent films and talkies, black and white and color films, widescreen and 3-D films, short films and very long films, films from all over the world, but mainly from the leading countries in quality films – US, France, UK, Italy, Sweden, Japan... More than half of the films were produced more than 50 years ago or are based on books written and works composed more than 50 years ago, which shows either that the best films are the oldies until the end of the sixties (as in songs, literature, classical music...), or that I prefer the films that I have seen in my youth until the age of 25, which probably had a stronger impact on my life. My lists are the most cosmopolitan lists of films, as truly I am interested in films from a wide variety of countries, which I see in festivals and in Israel that is more open to cosmopolitan films, literature, and music – because the Jews came from more than a hundred countries in the diaspora and we are probably the most multicultural country in the world. Most of the films in my lists are quality films, but there is also a high proportion of "lesser quality" films, which were chosen because of the impact they had on my life, and because I enjoyed them very much. The reader may notice an "optical" error – that the American films are much more predominant than all the other films. We have to analyze it in view of the fact that almost all the films produced in India, China, Israel, Egypt, or Russia are films about those countries only and not films about other countries, while many American films are films dealing with other countries, as the US film industry is Universal (also MGM, RKO...), and deal with other countries as *The African Queen*, *The Life of Emile Zola*, *Bel Ami*, *Titanic*, *Anna Karenina*, *Arch of Triumph*, *Hans Christian Andersen*, *Les Misérables*, *Schindler's List*, *Rhinoceros*, *Exodus*, *To Be or Not To Be*, *The Diary of Anne Frank*, *Doctor Zhivago*, *Don Quixote*, *Gigi*, *The Great Dictator*, *Julius Caesar*, *Stalag 17*, *For Whom The Bell Tolls*, *An Enemy of the People*, *The Three Musketeers*, *Frida*, *Fanny*, *Irma la douce*, *Island in the Sun*, *The Sheik*, *The Shop Around the Corner*, etc.

[EUROPE: POPULATION, CULTURE, LANGUAGES, etc.](#)

Since this book is focused in many aspects on Europe, the continent I know most, its culture, literature, films, art, theater, visits... I'll bring in this chapter from Wikipedia details that are relevant to the contents of this book, its people, culture, languages, arts, literature, music, etc.

Area	10,180,000 km ² (3,930,000 sq mi) ^[n] (6th)
Population	742,452,000 ^[n] (2013; 3rd)
Pop. density	72.9/km ² (188/sq mi) (2nd)
<u>Demonym</u>	European
Countries	~ 50 countries (and ~ 5 with limited recognition)
Dependencies	4 dependencies
Languages	~ 225 languages ^[1]
Time zones	UTC to UTC+5
Largest cities	Urban areas in Europe ^[2]  Istanbul (transcontinental) ^[3]  Moscow  Paris  London  Madrid  Barcelona  St. Petersburg  Rome  Berlin

The list below includes all entities falling even partially under any of the [various common definitions of Europe](#), geographic or political. There are exactly 50 sovereign states in Europe, 6 de facto independent states, and 6 dependencies. The data displayed are per sources in cross-referenced articles.

Flag	Arms	Name	Area (km2)	Population	Population Density (per km2)	Capital	Name in official language
		Albania	28,748	2,831,741	98.5	Tirana	Shqipëria
		Andorra	468	68,403	146.2	Andorra la Vella	Andorra

7	 Turkey	1,514,859
8	 Poland	959,845

9	 Netherlands	808,796
10	 Belgium	483,331

Most [languages](#) of [Europe](#) belong to the [Indo-European language family](#). This family is divided into a number of branches, including [Romance](#), [Germanic](#), [Baltic](#), [Slavic](#), [Albanian](#), [Celtic](#), [Armenian](#), [Iranian](#), and [Hellenic](#) ([Greek](#)). The [Uralic languages](#), which include [Hungarian](#), [Finnish](#), and [Estonian](#), also have a significant presence in Europe. The [Turkic](#) and [Mongolic](#) families also have several European members, while the [North Caucasian](#) and [Kartvelian](#) families are important in the southeastern extremity of geographical Europe. The [Basque language](#) of the western [Pyrenees](#) is an [isolate](#) unrelated to any other group, while [Maltese](#), which is descended from [Sicilian Arabic](#), is the only [Semitic language](#) in Europe with national language status.

Languages of Europe: The [Indo-European language family](#) descended from [Proto-Indo-European](#), believed to have been spoken thousands of years ago. Indo-European languages are spoken throughout Europe. Albanian has two major dialects, [Tosk Albanian](#) and [Gheg Albanian](#). It is spoken in [Albania](#) and [Kosovo](#), where it has official status, and is also spoken in neighboring [Macedonia](#), [Serbia](#) and [Montenegro](#). [Armenian](#) has two major dialects, [Western Armenian](#) and [Eastern Armenian](#). It is spoken in [Armenia](#), where it has sole official status, and is also spoken in neighboring [Georgia](#), [Iran](#), and [Azerbaijan](#) (mainly in [Nagorno-Karabakh Republic](#)). It is also spoken in [Turkey](#) by a very small minority (Western Armenian and [Homshetsi](#)), and by small minorities in many other countries where members of the widely dispersed [Armenian diaspora](#) reside. The [Baltic languages](#) are spoken in [Lithuania](#) ([Lithuanian](#), [Samogitian](#)) and [Latvia](#) ([Latvian](#), [Latgalian](#)). Samogitian and Latgalian are usually considered to be dialects of Lithuanian and Latvian respectively. There are also several extinct Baltic languages, including: [Galindian](#), [Curonian](#), [Old Prussian](#), [Selonian](#), [Semigallian](#) and [Sudovian](#). There are about six living [Celtic languages](#), spoken in areas of northwestern Europe dubbed the "[Celtic nations](#)". All six are members of the [Insular Celtic](#) family, which in turn is divided into: [Brythonic family](#): [Welsh](#) ([Wales](#)), [Cornish](#) ([Cornwall](#)) and [Breton](#) ([Brittany](#)). [Goidelic family](#): [Irish](#) ([Ireland](#)), [Scottish Gaelic](#) ([Scotland](#)), and [Manx](#) ([Isle of Man](#)). [Continental Celtic languages](#) had previously been spoken across Europe from Iberia and Gaul to Asia Minor, but became extinct in the first millennium AD.

The present-day distribution of the Germanic languages in Europe:
North Germanic languages - [Icelandic](#), [Faroese](#), [Norwegian](#), [Swedish](#), [Danish](#).
West Germanic languages - [Scots](#), [English](#), [Frisian](#), [Dutch](#), [Low German](#), [German](#).

Dots indicate areas where [multilingualism](#) is common. The [Germanic languages](#) make up the predominant language family in [northwestern Europe](#), reaching from [Iceland](#) to [Sweden](#) and from parts of the [United Kingdom](#) and [Ireland](#) to [Austria](#). There are two extant major subdivisions: [West Germanic](#) and [North Germanic](#). A third group, [East Germanic](#), is now extinct; the only known surviving East Germanic texts are written in the [Gothic language](#). There are three major groupings of [West Germanic languages](#): [Anglo-Frisian](#), [Low Franconian](#) (now primarily modern [Dutch](#)) and [High German](#). The [Anglo-Frisian language family](#) has two major groups: The [English languages](#) are descended from the [Old English language](#) of the [Anglo-Saxons](#) and include: [English](#), the main language of the [United Kingdom](#), also used in [English-speaking Europe](#). [Modern Scots](#), spoken in [Scotland](#) and [Ulster](#). The [Frisian languages](#) are spoken by about 500,000 [Frisians](#), who live on the southern coast of the [North](#)

[Sea](#) in the [Netherlands](#) and [Germany](#). These languages include [West Frisian](#), [Saterlandic](#), and [North Frisian](#). [German](#) is spoken throughout [Germany](#), [Austria](#), [Liechtenstein](#), [Luxembourg](#), the [East Cantons of Belgium](#), much of [Switzerland](#) (including the northeast areas bordering on Germany and Austria) and northern [Italy](#) ([South Tyrol](#)).

There are several groups of German dialects: [High German](#) include several dialect families: [Standard German](#), [Central German](#) dialects, spoken in central Germany and include [Luxembourgish](#), [High Franconian](#), a family of transitional dialects between Central and Upper High German, [Upper German](#), including [Austro-Bavarian](#) and [Swiss German](#). Low German is a separate language group from High German, but is still considered a dialect. It is spoken in various regions throughout Northern Germany, but has no official status, as the official language is Standard German. [Low German](#), [Low Saxon](#), [East Low German](#). [Dutch](#) is spoken throughout the [Netherlands](#), northern [Belgium](#), as well as the [Nord-Pas de Calais](#) region of [France](#), and around [Düsseldorf](#) in Germany. In Belgian and French contexts, Dutch is sometimes referred to as [Flemish](#). [Dutch dialects](#) are varied and cut across national borders. In Germany it is called [East Bergish](#). [Afrikaans](#) is spoken by [South African](#) emigrant communities in Europe, most notably in the Netherlands, Belgium, and the United Kingdom. The [North Germanic languages](#) are spoken in [Scandinavian countries](#) and include [Danish](#) ([Denmark](#), [Greenland](#) and the [Faroe Islands](#)), [Norwegian](#) ([Norway](#)), [Swedish](#) ([Sweden](#) and parts of [Finland](#)), [Elfdalian](#) or [Övdalian](#) (in a small part of central Sweden), [Faroese](#) ([Faroe Islands](#)), and [Icelandic](#) ([Iceland](#)).

[Greek](#) is the official language of [Greece](#) and [Cyprus](#), and there are Greek-speaking enclaves in [Albania](#), [Bulgaria](#), [Italy](#), the [Republic of Macedonia](#), [Romania](#), [Georgia](#), [Ukraine](#), [Lebanon](#), [Egypt](#), [Israel](#), [Jordan](#) and [Turkey](#), and in [Greek communities](#) around the world. Dialects of modern Greek that originate from [Attic Greek](#) (through [Koine](#) and then [Medieval Greek](#)) are [Cappadocian](#), [Pontic](#), [Cretan](#), [Cypriot](#), [Katharevousa](#), and [Yevanic](#). [Griko](#) is, debatably, a [Doric](#) dialect of Greek. It is spoken in the lower [Calabria](#) region and in the [Salento](#) region of Southern [Italy](#). [Tsakonian](#) is a Doric dialect of the Greek language spoken in the lower [Arcadia](#) region of the [Peloponnese](#) around the village of [Leonidio](#). The [Indo-Aryan languages](#) have one major representation, it being [Romani](#). The [Iranian languages](#) in Europe include [Kurdish](#), [Persian](#) (incl. [Tat Persian](#)), and [Ossetian](#).

The [Romance languages](#) descended from the [Vulgar Latin](#) spoken across most of the lands of the [Roman Empire](#). Some of the Romance languages are official in the [European Union](#) and the [Latin Union](#) and the more prominent ones are studied in many educational institutions worldwide. The list below is a summary of Romance languages commonly encountered in Europe:

- [Aragonese](#) is recognized, but not official, in [Aragon](#) (Spain).
- [Asturian](#) is recognized, but not official, in the Spanish region of [Asturias](#).
- [Catalan](#) is official in [Andorra](#); co-official in the Spanish regions of [Catalonia](#), [Valencian Community](#) (as [Valencian](#)) and [Balearic Islands](#); and recognized, but not official, in [La Franja](#) of [Aragon](#). It is also natively spoken in [Northern Catalonia](#), [France](#), in the [Languedoc-Roussillon](#) region (Llengadoc-Rosselló) and in the city of [Alghero](#), [Sardinia](#), [Italy](#) (as [Alguerese](#)).
- [Corsican](#) is spoken on the French island of [Corsica](#) and in the extreme north of [Sardinia](#). Traditionally split up into three different dialects pertaining to the northern and southern halves of Corsica, in addition to the Sardinian subregion of [Gallura](#), the origins of the language date back to the Middle Ages and are closely related to

[Tuscan](#). Its prospects of survival are better than most other [French minority languages](#), but it still suffers from the lack of promotion.

- [Emiliano-Romagnolo](#) is a Gallo-Italic language. Its two dialects are Emilian and Romagnol, which are spoken in the Northern Italian region of Emilia-Romagna, parts of Lombardy, Marche, Liguria and Tuscany, and San Marino.
- [Franco-Provençal](#), sometimes called "Arpitan", protected by statutes in the [Aosta Valley Autonomous Region](#) of Italy, also spoken alpine valleys of the [province of Turin](#), two communities in [province of Foggia](#), [Romandy](#) region of western Switzerland, and in east central France (i.e., between standard French and Occitan domains). It is in serious danger of extinction.
- [French](#) is official in [France](#), [Belgium](#), [Luxembourg](#), [Monaco](#), [Switzerland](#) and the [Channel Islands](#). It is also official in [Canada](#), in [many African countries](#) and in [overseas departments and territories of France](#).
- [Friulian](#) is spoken in the Italian [province of Udine](#), including the area of the Carnia [Alps](#), and widely throughout the [province of Pordenone](#), in half of the [province of Gorizia](#), and in the eastern part of the [province of Venice](#).
- [Galician](#), akin to Portuguese, is co-official in [Galicia](#), [Spain](#). It is also spoken by Galician diaspora.
- [Italian](#) is official in [Italy](#), [San Marino](#), [Switzerland](#), [Vatican City](#) and [Istria](#) (in [Croatia](#) and [Slovenia](#)). It is also widely spoken in [Malta](#) and [Monaco](#).
- [Ladin](#) is spoken in the northern Italian provinces of [South Tyrol](#), [Trentino](#) and [Belluno](#). It is an officially recognized language in Trentino and South Tyrol by provincial and national law.
- [Latin](#) is usually classified as an Italic language of which the Romance languages are a subgroup. It is extinct as a spoken language, but it is widely used as a liturgical language by the [Roman Catholic Church](#) and studied in many educational institutions. It is also the official language of the [Holy See](#) (but not of the [Vatican City State](#)). Latin was the main language of literature, sciences, and arts for many centuries and greatly influenced all European languages.
- [Leonese](#) is recognized in Spain's autonomous [Castile and León](#) region
- [Mirandese](#) is officially recognized by the Portuguese Parliament.
- [Norman](#) has been debatedly referred to as a language in its own right or a dialect of standard French with its own regional character. Its use is recognized in the [Channel Islands](#), remnants of the historical [Duchy of Normandy](#), and since 2008 it is among the regional languages recognised in the [French constitution](#).
- [Occitan](#) is spoken principally in [France](#), but is only officially recognized in [Spain](#) as one of the three official languages of [Catalonia](#) (termed there [Aranese](#)), and in [Italy](#) as a minority language. Its use was severely reduced due to the once de jure and currently de facto promotion of French.
- [Picard](#) is spoken in two [regions](#) in the far north of [France](#) – [Nord-Pas-de-Calais](#) and [Picardy](#) – and in parts of the [Belgian](#) region of [Wallonia](#). Belgium's French Community gave full official recognition to Picard as a regional language.
- [Piedmontese](#) is a language spoken by over 1 million people in Piedmont, northwest Italy. It is geographically and linguistically included in the Northern Italian group (with Lombard, Emiliano-Romagnolo, Ligurian, and Venetian). It is part of the wider western group of Romance languages, including French, Occitan, and Catalan. It has a certain official status recognized by the Piedmont regional government, but not by the national government.

- [Portuguese](#) is official in Portugal. It is also official in several former [Portuguese colonies](#) in [Africa](#), [Eastern Asia](#) as well as in [America](#) (see [Geographic distribution of Portuguese](#) and [Community of Portuguese Language Countries](#)).
- [Romanian](#) is official in [Romania](#), [Moldova](#) (as [Moldovan](#)), and [Vojvodina](#) ([Serbia](#)).
- [Romansh](#) is an official language of [Switzerland](#).
- [Sardinian](#) is a language spoken on the Italian island of [Sardinia](#). Traditionally subdivided into two main dialectal varieties, it is considered to be one of the most [conservative](#) languages in terms of [phonology](#), when compared to other Romance languages. Sardinian enjoys the same dignity and standing of Italian by the regional law, in spite of the fact that, in practice, it still suffers from a lack of promotion at institutional level and is put under heavy pressure by Italian.
- [Sicilian](#) is a language spoken on the island of Sicily and its satellite islands. It is also spoken in southern and central Calabria (where it is called Southern Calabro), in the southern parts of Apulia, the Salento (where it is known as Salentino), and Campania, on the Italian peninsula, where it is called Cilentano.
- [Spanish](#) (also termed "Castilian") is official in [Spain](#). It is also official in most [Latin American](#) countries with the exception of [Brazil](#), French Guyana and Haiti.
- [Vlach](#) is an [Eastern Romance dialect](#) spoken in [Serbia](#) (around 50,000 speakers). [Aromanian](#) variant is spoken in [Albania](#), [Greece](#) and [Macedonia](#), whereas Vlachs of Istria and Dalmatia have a more distinct dialect.
- [Neapolitan](#) is a language spoken in most of the southern Italy.

[Slavic languages](#) are spoken in large areas of [Central Europe](#), [Southern Europe](#) and [Eastern Europe](#) including [Russia](#). [East Slavic languages](#) include [Russian](#), [Ukrainian](#), [Belarusian](#), and [Rusyn](#). [West Slavic languages](#) include [Czech](#), [Polish](#), [Slovak](#), [Lower Sorbian](#), [Upper Sorbian](#) and [Kashubian](#). [South Slavic languages](#) are divided into Southeast Slavic and Southwest Slavic groups. *Southwest Slavic languages* include [Bosnian](#), [Croatian](#), [Montenegrin](#), [Serbian](#) and [Slovene](#). The first four of these are basically one language and are sometimes grouped into single [Serbo-Croatian](#). *Southeast Slavic languages* include [Bulgarian](#), [Macedonian](#) and [Old Church Slavonic](#) (a [liturgical language](#)).

[Semitic languages](#): [Cypriot Maronite Arabic](#) (also known as Cypriot Arabic) is a [variety of Arabic](#) spoken by [Maronites](#) in [Cyprus](#). Most speakers live in [Nicosia](#), but others are in the communities of [Kormakiti](#) and [Lemesos](#). Brought to the island by Maronites fleeing [Lebanon](#) over 700 years ago, this variety of Arabic has been influenced by [Greek](#) in both [phonology](#) and [vocabulary](#), while retaining certain unusually archaic features in other respects. [Hebrew](#) has been written and spoken by the [Jewish](#) communities of all of Europe in [liturgical](#), educational, and often conversational contexts since the entry of the Jews into Europe some time during the [late antiquity](#). Its restoration as an official language of [Israel](#) has accelerated its [secular](#) use. It also has been used in educational and liturgical contexts by some segments of the [Christian](#) population. Hebrew has its own [consonantal alphabet](#), in which the vowels may be marked by [diacritical](#) marks termed [pointing](#) in English and [Niqqud](#) in Hebrew. The Hebrew alphabet is also used to write [Yiddish](#), a West Germanic language, and [Ladino](#), a Romance language, formerly spoken by Jews in northern and southern Europe respectively, but now nearly extinct in Europe itself. [Maltese](#) is a [Semitic language](#) with [Romance](#) and [Germanic](#) influences, spoken in [Malta](#). It is based on [Sicilian Arabic](#), with influences from [Italian](#) (particularly [Sicilian](#)), [French](#), and, more recently, [English](#). It is unique in that it is the only Semitic language whose [standard form](#) is written in the [Latin alphabet](#). It is also the smallest official language of the [EU](#) in terms of speakers, and the only official Semitic language within the EU.

Lingua Franca—past and present: Europe has had a number of languages that were considered [linguae francae](#) over some ranges for some periods according to some historians. Typically in the rise of a national language the new language becomes a lingua franca to peoples in the range of the future nation until the consolidation and unification phases. If the nation becomes internationally influential, its language may become a lingua franca among nations that speak their own national languages. Europe has had no lingua franca ranging over its entire territory spoken by all or most of its populations during any historical period. Some [linguae francae](#) of past and present over some of its regions for some of its populations are:

- [Classical Greek](#) and then [Koine Greek](#) in the [Mediterranean Basin](#) from the [Athenian empire](#) to the [eastern Roman Empire](#), being replaced by [Modern Greek](#).
- [Koine Greek](#) and [Modern Greek](#), in the [Eastern Roman or Byzantine Empire](#) and other parts of the Balkans south of the [Jireček Line](#).^[9]
- [Vulgar Latin](#) and [Late Latin](#) among the uneducated and educated populations respectively of the [Roman empire](#) and the states that followed it in the same range no later than 900 AD; [medieval Latin](#) and [Renaissance Latin](#) among the educated populations of western, northern, central and part of eastern Europe until the rise of the national languages in that range, beginning with the first language academy in Italy in 1582/83; [new Latin](#) written only in scholarly and scientific contexts by a small minority of the educated population at scattered locations over all of Europe; [ecclesiastical Latin](#), in spoken and written contexts of liturgy and church administration only, over the range of the [Roman Catholic Church](#).
- [Lingua Franca](#) or Sabir, the original of the name, an Italian-based [pidgin](#) language of mixed origins used by maritime commercial interests around the Mediterranean in the Middle Ages and early Modern Age.
- [Old French](#) in continental western European countries and in the [Crusader states](#).
- [Czech](#), mainly during the reign of [Holy Roman Emperor Charles IV](#) (14th century) but also during other periods of Bohemian control over the Holy Roman Empire.
- [Middle Low German](#) (14th–16th century, during the heyday of the [Hanseatic League](#)).
- [Spanish](#) as Castilian in Spain and [New Spain](#) from the times of [the Catholic Monarchs](#) and [Columbus](#), c. 1492; that is, after the [Reconquista](#), until established as a national language in the times of [Louis XIV](#), c. 1648; subsequently multinational in all nations in or formerly in the [Spanish Empire](#).
- [Polish](#), due to the [Polish-Lithuanian Commonwealth](#) (16th-18th centuries).
- [Italian](#) due to the [Renaissance](#), the [opera](#), the [Italian empire](#), the [fashion industry](#) and the influence of the [Roman catholic church](#).
- [French](#) from the golden age under [Cardinal Richelieu](#) and [Louis XIV](#) c. 1648; i.e., after the [Thirty Years' War](#), in France and the [French colonial empire](#), until established as the national language during the [French Revolution](#) of 1789 and subsequently multinational in all nations in or formerly in the various [French Empires](#).
- [German](#) in Northern, Central, and Eastern Europe.
- [English](#) in [Great Britain](#) until its consolidation as a national language in the [Renaissance](#) and the rise of [Modern English](#); subsequently internationally under the various states in or formerly in the [British Empire](#); globally since the victories of the predominantly English speaking countries ([United States](#), [United Kingdom](#), [Canada](#), [Australia](#), [New Zealand](#), and others) and their allies in the two world wars ending in 1918 ([World War I](#)) and 1945 ([World War II](#)) and the subsequent rise of the United States as a [superpower](#) and major [cultural influence](#).
- [Russian](#) in [Eastern Europe](#), [Northern](#) and [Central Asia](#) from the [World War II](#) to the break-up of the [Soviet Union](#) and the [Warsaw Pact](#).

The following is a table displaying the number of speakers of a given European language in Europe only. There is a relatively high level of [language endangerment](#) in Europe; only 42 languages have more than 1 million speakers.

Language	Speakers ^[nb 1]	Official Status in a Country ^[nb 2]	Official Status in a Region ^[nb 3]

European Culture: The culture of [Europe](#) is rooted in the art, architecture, music, literature, and philosophy that originated from the European [cultural region](#). European culture is largely rooted in what is often referred to as its "common cultural heritage". Due to the great number of perspectives which can be taken on the subject, it is impossible to form a single, all-embracing conception of European culture. Nonetheless, there are core elements which are generally agreed upon as forming the cultural foundation of modern Europe. One list of these elements given by K. Bochmann includes:

- A common cultural and spiritual heritage derived from [Greco-Roman](#) antiquity, [Christianity](#), the [Renaissance](#) and its [Humanism](#), the political thinking of the [Enlightenment](#), and the [French Revolution](#), and the developments of [Modernity](#), including all types of [socialism](#);
- A rich and dynamic material culture that has been extended to the other continents as the result of [industrialization](#) and [colonialism](#) during the "[Great Divergence](#)";

- A specific conception of the individual expressed by the existence of, and respect for, a legality that guarantees [human rights](#) and the [liberty of the individual](#);
- A plurality of states with different political orders, which are condemned to live together in one way or another;
- Respect for peoples, states and nations outside Europe.

Berting says that these points fit with "Europe's most positive realisations". The concept of European culture is generally linked to the classical definition of the [Western world](#). In this definition, Western culture is the set of [literary](#), [scientific](#), [political](#), [artistic](#) and [philosophical](#) principles which set it apart from other civilizations. Much of this set of traditions and knowledge is collected in the [Western canon](#).^[8] The term has come to apply to countries whose history has been strongly marked by European immigration or settlement during the 18th and 19th centuries, such as [the Americas](#), and [Australasia](#), and is not restricted to Europe.

[Western painting](#): The oldest known cave paintings are at the [El Castillo](#) cave (Spain), older than 40,800 years. The history of Western painting represents a continuous, though disrupted, tradition from antiquity. Until the mid 19th century it was primarily concerned with representational and Classical modes of production, after which time more modern, abstract and conceptual forms gained favor. Developments in Western painting historically parallel those in Eastern painting, in general a few centuries later. The Renaissance (French for 'rebirth'), a cultural movement roughly spanning the 14th through the mid-17th century, heralded the study of classical sources, as well as advances in science which profoundly influenced European intellectual and artistic life. In Italy artists like [Paolo Uccello](#), [Fra Angelico](#), [Masaccio](#), [Piero della Francesca](#), [Andrea Mantegna](#), [Filippo Lippi](#), [Giorgione](#), [Tintoretto](#), [Sandro Botticelli](#), [Leonardo da Vinci](#), [Michelangelo Buonarroti](#), [Raphael](#), [Giovanni Bellini](#) and [Titian](#) took painting to a higher level through the use of [perspective](#), the study of [human anatomy](#) and proportion, and through their development of an unprecedented refinement in drawing and painting techniques.

Flemish, Dutch and German painters of the Renaissance such as [Hans Holbein the Younger](#), [Albrecht Dürer](#), [Lucas Cranach](#), [Matthias Grünewald](#), [Hieronymous Bosch](#), and [Pieter Bruegel](#) represent a different approach from their Italian colleagues, one that is more realistic and less idealized. [Genre painting](#) became a popular idiom amongst the Northern painters like [Pieter Bruegel](#). The adoption of [oil painting](#) whose invention was traditionally, but erroneously, credited to [Jan van Eyck](#), (an important transitional figure who bridges painting in the Middle Ages with painting of the early Renaissance), made possible a new [verisimilitude](#) in depicting reality. Unlike the Italians, whose work drew heavily from the art of Ancient Greece and Rome, the northerners retained a stylistic residue of the sculpture and [illuminated manuscripts](#) of the Middle Ages. Renaissance painting reflects the revolution of ideas and science ([astronomy](#), [geography](#)) that occurred in this period, the [Reformation](#), and the invention of the [printing press](#). Dürer, considered one of the greatest of printmakers, states that painters are not mere [artisans](#) but [thinkers](#) as well. With the development of [easel](#) painting in the Renaissance, painting gained independence from architecture. Following centuries dominated by religious imagery, secular subject matter slowly returned to Western painting. Artists included visions of the world around them, or the products of their own imaginations in their paintings. Those who could afford the expense could become patrons and commission portraits of themselves or their family. In the 16th century, movable pictures which could be hung easily on walls, rather than paintings affixed to permanent structures, came into popular demand.

The [High Renaissance](#) gave rise to a stylized art known as [Mannerism](#). In place of the balanced compositions and rational approach to perspective that characterized art at the dawn of the 16th century, the Mannerists sought instability, artifice, and doubt. The unperturbed faces and gestures of [Piero della Francesca](#) and the calm Virgins of Raphael are replaced by the troubled expressions of [Pontormo](#) and the emotional intensity of [El Greco](#). Baroque painting is associated with the [Baroque cultural movement](#), a movement often identified with [Absolutism](#) and the [Counter Reformation](#) or Catholic Revival; the existence of important Baroque painting in non-absolutist and Protestant states also, however, underscores its popularity, as the style spread throughout Western Europe. Baroque painting is characterized by great drama, rich, deep color, and intense light and dark shadows. Baroque art was meant to evoke emotion and passion instead of the calm rationality that had been prized during the Renaissance. During the period beginning around 1600 and continuing throughout the 17th century, painting is characterized as [Baroque](#). Among the greatest painters of the [Baroque](#) are [Caravaggio](#), [Rembrandt](#), [Frans Hals](#), [Rubens](#), [Velázquez](#), [Poussin](#), and [Johannes Vermeer](#). Caravaggio is an heir of the [humanist](#) painting of the [High Renaissance](#). His [realistic](#) approach to the human figure, painted directly from life and dramatically spotlighted against a dark background, shocked his contemporaries and opened a new chapter in the history of painting. Baroque painting often dramatizes scenes using light effects; this can be seen in works by Rembrandt, Vermeer, [Le Nain](#) and [La Tour](#). During the 18th century, [Rococo](#) followed as a lighter extension of Baroque, often frivolous and erotic. [Rococo](#) developed first in the decorative arts and interior design in France. [Louis XV](#)'s succession brought a change in the court artists and general artistic fashion. The 1730s represented the height of Rococo development in France exemplified by the works of [Antoine Watteau](#) and [François Boucher](#). Rococo still maintained the Baroque taste for complex forms and intricate patterns, but by this point, it had begun to integrate a variety of diverse characteristics, including a taste for Oriental designs and asymmetric compositions.

The Rococo style spread with French artists and engraved publications. It was readily received in the Catholic parts of Germany, [Bohemia](#), and [Austria](#), where it was merged with the lively German Baroque traditions. German Rococo was applied with enthusiasm to churches and palaces, particularly in the south, while [Frederician Rococo](#) developed in the [Kingdom of Prussia](#). The French masters [Watteau](#), [Boucher](#) and [Fragonard](#) represent the style, as do [Giovanni Battista Tiepolo](#) and [Jean-Baptiste-Siméon Chardin](#) who was considered by some as the best French painter of the 18th century – the *Anti-Rococo*. [Portraiture](#) was an important component of painting in all countries, but especially in England, where the leaders were [William Hogarth](#), in a blunt realist style, and [Francis Hayman](#), [Angelica Kauffman](#) (who was Swiss), [Thomas Gainsborough](#) and [Joshua Reynolds](#) in more flattering styles influenced by [Anthony van Dyck](#). While in France during the Rococo era [Jean-Baptiste Greuze](#) (the favorite painter of [Denis Diderot](#)), [Maurice Quentin de La Tour](#), and [Élisabeth Vigée-Lebrun](#) were highly accomplished [Portrait painters](#) and [History painters](#).

[William Hogarth](#) helped develop a theoretical foundation for Rococo beauty. Though not intentionally referencing the movement, he argued in his *Analysis of Beauty* (1753) that the undulating lines and S-curves prominent in Rococo were the basis for grace and beauty in art or nature (unlike the straight line or the circle in [Classicism](#)). The beginning of the end for Rococo came in the early 1760s as figures like [Voltaire](#) and [Jacques-François Blondel](#) began to voice their criticism of the superficiality and degeneracy of the art. Blondel decried the "ridiculous jumble of shells, dragons, reeds, palm-trees and plants" in contemporary interiors. By 1785, Rococo had passed out of fashion in France, replaced by the order and seriousness of [Neoclassical](#) artists like [Jacques-Louis David](#). After [Rococo](#) there arose in the late 18th

century, in architecture, and then in painting severe [neo-classicism](#), best represented by such artists as [David](#) and his heir [Ingres](#). Ingres' work already contains much of the sensuality, but none of the spontaneity, that was to characterize [Romanticism](#). This movement turned its attention toward landscape and nature as well as the human figure and the supremacy of natural order above mankind's will. There is a [pantheist](#) philosophy (see [Spinoza](#) and [Hegel](#)) within this conception that opposes [Enlightenment](#) ideals by seeing mankind's destiny in a more tragic or pessimistic light. The idea that human beings are not above the forces of [Nature](#) is in contradiction to [Ancient Greek](#) and Renaissance ideals where mankind was above all things and owned his fate. This thinking led romantic artists to depict the [sublime](#), ruined churches, shipwrecks, massacres and madness.

By the mid-19th century painters became liberated from the demands of their patronage to only depict scenes from religion, mythology, portraiture or history. The idea "art for art's sake" began to find expression in the work of painters like Francisco de Goya, John Constable, and J.M.W. Turner. Romantic painters turned [landscape painting](#) into a major genre, considered until then as a minor genre or as a decorative background for figure compositions. Some of the major painters of this period are [Eugène Delacroix](#), [Théodore Géricault](#), [J. M. W. Turner](#), [Caspar David Friedrich](#) and [John Constable](#). [Francisco Goya](#)'s late work demonstrates the Romantic interest in the irrational, while the work of [Arnold Böcklin](#) evokes mystery and the paintings of [Aesthetic movement](#) artist [James Abbott McNeill Whistler](#) evoke both sophistication and [decadence](#). In the United States the Romantic tradition of landscape painting was known as the [Hudson River School](#): exponents include [Thomas Cole](#), [Frederic Edwin Church](#), [Albert Bierstadt](#), [Thomas Moran](#), and [John Frederick Kensett](#). [Luminism](#) was a movement in American landscape painting related to the [Hudson River School](#).

The leading [Barbizon School](#) painter [Camille Corot](#) painted in both a romantic and a [realistic](#) vein; his work prefigures [Impressionism](#), as does the paintings of [Eugène Boudin](#) who was one of the first French landscape painters to paint outdoors. Boudin was also an important influence on the young [Claude Monet](#), whom in 1857 he introduced to [Plein air](#) painting. A major force in the turn towards [Realism](#) at mid-century was [Gustave Courbet](#). In the latter third of the century Impressionists like [Édouard Manet](#), [Claude Monet](#), [Pierre-Auguste Renoir](#), [Camille Pissarro](#), [Alfred Sisley](#), [Berthe Morisot](#), [Mary Cassatt](#), and [Edgar Degas](#) worked in a more direct approach than had previously been exhibited publicly. They eschewed allegory and narrative in favor of individualized responses to the modern world, sometimes painted with little or no preparatory study, relying on deftness of drawing and a highly chromatic palette. Manet, Degas, Renoir, Morisot, and Cassatt concentrated primarily on the human subject. Both Manet and Degas reinterpreted classical figurative canons within contemporary situations; in Manet's case the re-imaginings met with hostile public reception. Renoir, Morisot, and Cassatt turned to domestic life for inspiration, with Renoir focusing on the female nude. Monet, Pissarro, and Sisley used the landscape as their primary motif, the transience of light and weather playing a major role in their work. While Sisley most closely adhered to the original principals of the Impressionist perception of the landscape, Monet sought challenges in increasingly chromatic and changeable conditions, culminating in his series of monumental works of [Water Lilies](#) painted in [Giverny](#).

Pissarro adopted some of the experiments of [Post-Impressionism](#). Slightly younger Post-Impressionists like [Vincent van Gogh](#), [Paul Gauguin](#), and [Georges-Pierre Seurat](#), along with [Paul Cézanne](#) led art to the edge of [modernism](#); for Gauguin Impressionism gave way to a personal symbolism; Seurat transformed Impressionism's broken color into a scientific optical

study, structured on frieze-like compositions; Van Gogh's turbulent method of paint application, coupled with a sonorous use of color, predicted [Expressionism](#) and [Fauvism](#), and Cézanne, desiring to unite classical composition with a revolutionary abstraction of natural forms, would come to be seen as a precursor of 20th-century art. The spell of Impressionism was felt throughout the world, including in the United States, where it became integral to the painting of [American Impressionists](#) such as [Childe Hassam](#), [John Henry Twachtman](#), and [Theodore Robinson](#). It also exerted influence on painters who were not primarily Impressionistic in theory, like the portrait and landscape painter [John Singer Sargent](#). At the same time in America at the turn of the 20th century there existed a native and nearly insular realism, as richly embodied in the figurative work of [Thomas Eakins](#), the [Ashcan School](#), and the landscapes and seascapes of [Winslow Homer](#), all of whose paintings were deeply invested in the solidity of natural forms. The visionary landscape, a motive largely dependent on the ambiguity of the nocturne, found its advocates in [Albert Pinkham Ryder](#) and [Ralph Albert Blakelock](#).

In the late 19th century there also were several, rather dissimilar, groups of [Symbolist painters](#) whose works resonated with younger artists of the 20th century, especially with the [Fauvists](#) and the [Surrealists](#). Among them were [Gustave Moreau](#), [Odilon Redon](#), [Pierre Puvis de Chavannes](#), [Henri Fantin-Latour](#), [Arnold Böcklin](#), [Edvard Munch](#), [Félicien Rops](#), and [Jan Toorop](#), and [Gustav Klimt](#) amongst others including the [Russian Symbolists](#) like [Mikhail Vrubel](#).

[Symbolist painters](#) mined [mythology](#) and dream imagery for a visual language of the soul, seeking evocative paintings that brought to mind a static world of silence. The symbols used in Symbolism are not the familiar [emblems](#) of mainstream [iconography](#) but intensely personal, private, obscure and ambiguous references. More a philosophy than an actual style of art, the Symbolist painters influenced the contemporary [Art Nouveau](#) movement and [Les Nabis](#). In their exploration of dreamlike subjects, symbolist painters are found across centuries and cultures, as they are still today; Bernard Delvaille has described [René Magritte's](#) surrealism as "Symbolism plus [Freud](#)". The heritage of painters like [Van Gogh](#), [Cézanne](#), [Gauguin](#), and [Seurat](#) was essential for the development of modern art. At the beginning of the 20th century [Henri Matisse](#) and several other young artists including the pre-cubist [Georges Braque](#), [André Derain](#), [Raoul Dufy](#) and [Maurice de Vlaminck](#) revolutionized the Paris art world with "wild", multi-colored, expressive, landscapes and figure paintings that the critics called [Fauvism](#) (as seen in the gallery above). [Henri Matisse's](#) second version of *The Dance* signifies a key point in his career and in the development of modern painting.^[27] It reflects Matisse's incipient fascination with [primitive art](#): the intense warm colors against the cool blue-green background and the rhythmical succession of dancing nudes convey the feelings of emotional liberation and [hedonism](#). [Pablo Picasso](#) made his first [cubist](#) paintings based on Cézanne's idea that all depiction of nature can be reduced to three solids: [cube](#), [sphere](#) and [cone](#). With the painting *Les Femmes d'Alger* (O.J. version) 1907, (see gallery) Picasso dramatically created a new and radical picture depicting a raw and primitive brothel scene with five prostitutes, violently painted women, reminiscent of [African tribal masks](#) and his own new [Cubist](#) inventions. [Cubism](#) (see gallery) was jointly developed by Pablo Picasso and [Georges Braque](#), exemplified by *Violin and Candlestick, Paris*, (seen above) from about 1908 through 1912. The first clear manifestation of Cubism was practised by Braque, Picasso, [Jean Metzinger](#), [Albert Gleizes](#), [Fernand Léger](#), [Henri Le Fauconnier](#), and [Robert Delaunay](#). [Juan Gris](#), [Marcel Duchamp](#), [Alexander Archipenko](#), [Joseph Csaky](#) and others soon joined. [Synthetic cubism](#), practiced by Braque and Picasso, is characterized by the introduction of

different textures, surfaces, [collage](#) elements, [papier collé](#) and a large variety of merged subject matter.

The [Salon d'Automne](#) of 1905 brought notoriety and attention to the works of [Henri Matisse](#) and [Fauvism](#). The group gained their name, after critic [Louis Vauxcelles](#) described their work with the phrase "[Donatello](#) chezes fauves" ("Donatello among the wild beasts"), contrasting the paintings with a [Renaissance](#)-type sculpture that shared the room with them. [Henri Rousseau](#) (1844–1910), an artist that Picasso knew and admired and who was not a Fauve, had his large [jungle](#) scene "The Hungry Lion Throws Itself on the Antelope" also hanging near the works by Matisse and which may have had an influence on the particular [sarcastic](#) term used in the press.^[31] Vauxcelles' comment was printed on 17 October 1905 in the daily newspaper [Gil Blas](#), and passed into popular usage. Although the pictures were widely derided—"A pot of paint has been flung in the face of the public", declared the critic Camille Mauclair (1872–1945)—they also attracted some favorable attention. The painting that was singled out for the most attacks was Matisse's [Woman with a Hat](#); the purchase of this work by [Gertrude](#) and [Leo Stein](#) had a very positive effect on Matisse, who was suffering demoralization from the bad reception of his work.^[30]

During the years between 1910 and the end of World War I and after the heyday of [cubism](#), several movements emerged in Paris. [Giorgio de Chirico](#) moved to Paris in July 1911, where he joined his brother Andrea (the poet and painter known as [Alberto Savinio](#)). Through his brother he met Pierre Laprade a member of the jury at the [Salon d'Automne](#), where he exhibited three of his dreamlike works: *Enigma of the Oracle*, *Enigma of an Afternoon* and *Self-Portrait*. During 1913 he exhibited his work at the [Salon des Indépendants](#) and Salon d'Automne, his work was noticed by [Pablo Picasso](#) and [Guillaume Apollinaire](#) and several others. His compelling and mysterious paintings are considered instrumental to the early beginnings of [Surrealism](#). [Song of Love](#) 1914, is one of the most famous works by de Chirico and is an early example of the [surrealist](#) style, though it was painted ten years before the movement was "founded" by [André Breton](#) in 1924 (see gallery).

In the first two decades of the 20th century and after cubism, several other important movements emerged; [Futurism](#) ([Balla](#)), [Abstract art](#) ([Kandinsky](#)) [Der Blaue Reiter](#) ([Wassily Kandinsky](#) and [Franz Marc](#)), [Bauhaus](#) ([Kandinsky](#) and [Klee](#)), [Orphism](#), ([Delaunay](#) and [Kupka](#)), [Synchromism](#) ([Russell](#)), [De Stijl](#) ([van Doesburg](#) and [Mondrian](#)), [Suprematism](#) ([Malevich](#)), [Constructivism](#) ([Tatlin](#)), [Dadaism](#) ([Duchamp](#), [Picabia](#) and [Arp](#)), and [Surrealism](#) ([de Chirico](#), [André Breton](#), [Miró](#), [Magritte](#), [Dalí](#) and [Ernst](#)). Modern painting influenced all the visual arts, from [Modernist](#) architecture and design, to [avant-garde](#) film, theatre and [modern dance](#) and became an experimental laboratory for the expression of visual experience, from photography and [concrete poetry](#) to [advertising art](#) and fashion. Van Gogh's painting exerted great influence upon 20th-century [Expressionism](#), as can be seen in the work of the [Fauves](#), [Die Brücke](#) (a group led by German painter [Ernst Kirchner](#)), and the Expressionism of [Edvard Munch](#), [Egon Schiele](#), [Marc Chagall](#), [Amedeo Modigliani](#), [Chaim Soutine](#) and others. [Wassily Kandinsky](#), a Russian painter, [printmaker](#) and art [theorist](#), one of the most famous 20th-century artists is generally considered the first important painter of [modern abstract art](#). As an early [modernist](#), in search of new modes of visual expression, and spiritual expression, he theorized as did contemporary [occultists](#) and [theosophists](#), that pure visual abstraction had corollary vibrations with sound and music. They posited that pure abstraction could express pure spirituality. His earliest abstractions were generally titled as the example in the (above gallery) *Composition VII*, making connection to the work of the composers of music. Kandinsky included many of his theories about abstract art in his book *Concerning the*

Spiritual in Art. [Piet Mondrian](#)'s art was also related to his spiritual and philosophical studies. In 1908 he became interested in the [theosophical](#) movement launched by [Helena Petrovna Blavatsky](#) in the late 19th century. Blavatsky believed that it was possible to attain a knowledge of nature more profound than that provided by empirical means, and much of Mondrian's work for the rest of his life was inspired by his search for that spiritual knowledge. Other major pioneers of early abstraction include Swedish painter [Hilma af Klint](#), Russian painter [Kazimir Malevich](#), and [Swiss](#) painter [Paul Klee](#). [Robert Delaunay](#) was a French artist who is associated with [Orphism](#), (reminiscent of a link between pure abstraction and cubism). His later works were more abstract, reminiscent of [Paul Klee](#). His key contributions to abstract painting refer to his bold use of color, and a clear love of experimentation of both depth and tone. At the invitation of [Wassily Kandinsky](#), Delaunay and his wife the artist [Sonia Delaunay](#), joined The Blue Rider ([Der Blaue Reiter](#)), a [Munich](#)-based group of [abstract](#) artists, in 1911, and his art took a turn to the abstract. Still other important pioneers of abstract painting include [Czech](#) painter, [František Kupka](#) and [Synchromism](#), an art movement founded in 1912 by American artists [Stanton MacDonald-Wright](#) and [Morgan Russell](#) that closely resembles [Orphism](#).

Les Fauves (French for *The Wild Beasts*) were early-20th-century painters, experimenting with freedom of expression through color. The name was given, humorously and not as a compliment, to the group by art critic [Louis Vauxcelles](#). [Fauvism](#) was a short-lived and loose grouping of early 20th-century artists whose works emphasized [painterly](#) qualities, and the imaginative use of deep color over the representational values. Fauvists made the subject of the painting easy to read, exaggerated perspectives and an interesting prescient prediction of the Fauves was expressed in 1888 by [Paul Gauguin](#) to [Paul Sérusier](#), "How do you see these trees? They are yellow. So, put in yellow; this shadow, rather blue, paint it with pure [ultramarine](#); these red leaves? Put in [vermilion](#)." The leaders of the movement were [Henri Matisse](#) and [André Derain](#) – friendly rivals of a sort, each with his own followers. Ultimately [Matisse](#) became the *yang* to [Picasso](#)'s *yin* in the 20th century. Fauvist painters included [Albert Marquet](#), [Charles Camoin](#), [Maurice de Vlaminck](#), [Raoul Dufy](#), [Othon Friesz](#), the Dutch painter [Kees van Dongen](#), and Picasso's partner in Cubism, [Georges Braque](#) amongst others. Fauvism, as a movement, had no concrete theories, and was short lived, beginning in 1905 and ending in 1907, they only had three exhibitions. Matisse was seen as the leader of the movement, due to his seniority in age and prior self-establishment in the academic art world. His 1905 portrait of Mme. Matisse *The Green Line*, (above), caused a sensation in Paris when it was first exhibited. He said he wanted to create art to delight; art as a decoration was his purpose and it can be said that his use of bright colors tries to maintain serenity of composition. In 1906 at the suggestion of his dealer [Ambroise Vollard](#), [André Derain](#) went to London and produced a series of paintings like *Charing Cross Bridge, London* (above) in the [Fauvist](#) style, paraphrasing the famous series by the [Impressionist](#) painter [Claude Monet](#). By 1907 Fauvism no longer was a shocking new movement, soon it was replaced by [Cubism](#) on the critics radar screen as the latest new development in [Contemporary Art](#) of the time. In 1907 [Appolinaire](#), commenting about Matisse in an article published in *La Falange*, said, "We are not here in the presence of an extravagant or an extremist undertaking: Matisse's art is eminently reasonable." *Der Blaue Reiter* was a German movement lasting from 1911 to 1914, fundamental to Expressionism, along with [Die Brücke](#), a group of German [expressionist](#) artists formed in [Dresden](#) in 1905. Founding members of [Die Brücke](#) were [Fritz Bleyl](#), [Erich Heckel](#), [Ernst Ludwig Kirchner](#) and [Karl Schmidt-Rottluff](#). Later members included [Max Pechstein](#), [Otto Mueller](#) and others. This was a seminal group, which in due course had a major impact on the evolution of [modern art](#) in the 20th century and created the style of [Expressionism](#).

[Wassily Kandinsky](#), [Franz Marc](#), [August Macke](#), [Alexej von Jawlensky](#), whose psychically expressive painting of the Russian dancer *Portrait of Alexander Sakharoff*, 1909, is in the gallery above, [Marianne von Werefkin](#), [Lyonel Feininger](#) and others founded the [Der Blaue Reiter](#) group in response to the rejection of Kandinsky's painting *Last Judgement* from an exhibition. Der Blaue Reiter lacked a central artistic manifesto, but was centered around Kandinsky and Marc. Artists [Gabriele Münter](#) and [Paul Klee](#) were also involved. The name of the movement comes from a painting by Kandinsky created in 1903 (see illustration). It is also claimed that the name could have derived from Marc's enthusiasm for horses and Kandinsky's love of the colour blue. For Kandinsky, *blue* is the colour of spirituality: the darker the blue, the more it awakens human desire for the eternal. [Expressionism](#) and [Symbolism](#) are broad rubrics that involve several important and related movements in 20th-century painting that dominated much of the [avant-garde](#) art being made in Western, Eastern and Northern Europe. Expressionist works were painted largely between World War I and World War II, mostly in France, Germany, Norway, Russia, Belgium, and Austria. Expressionist artists are related to both Surrealism and Symbolism and are each uniquely and somewhat eccentrically personal. [Fauvism](#), [Die Brücke](#), and [Der Blaue Reiter](#) are three of the best known groups of [Expressionist](#) and Symbolist painters. Artists as interesting and diverse as [Marc Chagall](#), whose painting *I and the Village*, (above) tells an autobiographical story that examines the relationship between the artist and his origins, with a lexicon of artistic [Symbolism](#). [Gustav Klimt](#), [Egon Schiele](#), [Edvard Munch](#), [Emil Nolde](#), [Chaim Soutine](#), [James Ensor](#), [Oskar Kokoschka](#), [Ernst Ludwig Kirchner](#), [Max Beckmann](#), [Franz Marc](#), [Käthe Schmidt Kollwitz](#), [Georges Rouault](#), [Amedeo Modigliani](#) and some of the Americans abroad like [Marsden Hartley](#), and [Stuart Davis](#), were considered influential expressionist painters. Although [Alberto Giacometti](#) is primarily thought of as an intense [Surrealist](#) sculptor, he made intense expressionist paintings as well.

In 1924 [André Breton](#) published the [Surrealist Manifesto](#). The [Surrealist](#) movement in painting became synonymous with the [avant-garde](#) and which featured artists whose works varied from the abstract to the super-realist. With works on paper like *Machine Turn Quickly*, (above) Francis Picabia continued his involvement in the [Dada](#) movement through 1919 in [Zürich](#) and Paris, before breaking away from it after developing an interest in [Surrealist](#) art. [Yves Tanguy](#), [René Magritte](#) and [Salvador Dalí](#) are particularly known for their realistic depictions of dream imagery and fantastic manifestations of the imagination. [Joan Miró's](#) *The Tilled Field* of 1923–1924 verges on abstraction, this early painting of a complex of objects and figures, and arrangements of sexually active characters; was Miró's first [Surrealist masterpiece](#).^[42] The more abstract [Joan Miró](#), [Jean Arp](#), [André Masson](#), and [Max Ernst](#) were very influential, especially in the United States during the 1940s. Throughout the 1930s, Surrealism continued to become more visible to the public at large. A [Surrealist group developed in Britain](#) and, according to Breton, their 1936 [London International Surrealist Exhibition](#) was a high-water mark of the period and became the model for international exhibitions. Surrealist groups in Japan, and especially in Latin America, the Caribbean and in Mexico produced innovative and original works. Dalí and [Magritte](#) created some of the most widely recognized images of the movement. The 1928/1929 painting *This Is Not A Pipe*, by [Magritte](#) is the subject of a [Michel Foucault](#) 1973 book, *This is not a Pipe* (English edition, 1991), that discusses the painting and its [paradox](#). Dalí joined the group in 1929, and participated in the rapid establishment of the visual style between 1930 and 1935.

Surrealism as a visual movement had found a method: to expose psychological truth by stripping ordinary objects of their normal significance, in order to create a compelling image that was beyond ordinary formal organization, and perception, sometimes evoking empathy

from the viewer, sometimes laughter and sometimes outrage and bewilderment. 1931 marked a year when several Surrealist painters produced works which marked turning points in their stylistic evolution: in one example (see gallery above) liquid shapes become the trademark of Dalí, particularly in his [The Persistence of Memory](#), which features the image of watches that sag as if they are melting. Evocations of time and its compelling mystery and absurdity. The characteristics of this style – a combination of the depictive, the abstract, and the psychological – came to stand for the alienation which many people felt in the [modernist](#) period, combined with the sense of reaching more deeply into the psyche, to be "made whole with one's individuality." Max Ernst, whose 1920 painting *Murdering Airplane* (above), studied philosophy and psychology in Bonn and was interested in the alternative realities experienced by the insane. His paintings may have been inspired by the [psychoanalyst Sigmund Freud](#)'s study of the delusions of a paranoiac, Daniel Paul Schreber. Freud identified Schreber's fantasy of becoming a woman as a [castration complex](#). The central image of two pairs of legs refers to Schreber's hermaphroditic desires. Ernst's inscription on the back of the painting reads: *The picture is curious because of its symmetry. The two sexes balance one another.* During the 1920s [André Masson](#)'s work was enormously influential in helping the young artist [Joan Miró](#) find his roots in the new [Surrealist](#) painting. Miró acknowledged in letters to his dealer [Pierre Matisse](#) the importance of Masson as an example to him in his early years in Paris.

Long after personal, political and professional tensions have fragmented the Surrealist group into thin air and ether, Magritte, Miró, Dalí and the other Surrealists continue to define a visual program in the arts. Other prominent surrealist artists include [Giorgio de Chirico](#), [Méret Oppenheim](#), [Toyen](#), [Grégoire Michonze](#), [Roberto Matta](#), [Kay Sage](#), [Leonora Carrington](#), [Dorothea Tanning](#), and [Leonor Fini](#) among others. During the 1920s and the 1930s and the [Great Depression](#), the European art scene was characterized by Surrealism, late Cubism, the [Bauhaus](#), [De Stijl](#), Dada, [Neue Sachlichkeit](#), and Expressionism; and was occupied by masterful [modernist](#) color painters like [Henri Matisse](#) and [Pierre Bonnard](#). In Germany [Neue Sachlichkeit](#) ("New Objectivity") emerged as [Max Beckmann](#), [Otto Dix](#), [George Grosz](#) and others politicized their paintings. The work of these artists grew out of expressionism, and was a response to the political tensions of the [Weimar Republic](#), and was often sharply satirical. During the 1930s radical leftist politics characterized many of the artists connected to [Surrealism](#), including [Pablo Picasso](#).^[45] On 26 April 1937, during the [Spanish Civil War](#), the [Basque](#) town of [Gernika](#) was the scene of the "[Bombing of Gernika](#)" by the Condor Legion of Nazi Germany's Luftwaffe. The Germans were attacking to support the efforts of Francisco Franco to overthrow the Basque Government and the Spanish Republican government. The town was devastated, though the Biscayan assembly and the Oak of Gernika survived. Pablo Picasso painted his mural sized [Guernica](#) to commemorate the horrors of the bombing.

In its final form, *Guernica* is an immense black and white, 3.5 metre (11 ft) tall and 7.8 metre (23 ft) wide mural painted in oil. The mural presents a scene of death, violence, brutality, suffering, and helplessness without portraying their immediate causes. The choice to paint in black and white contrasts with the intensity of the scene depicted and invokes the immediacy of a newspaper photograph. Picasso painted the mural sized painting called [Guernica](#) in protest of the bombing. The painting was first exhibited in Paris in 1937, then Scandinavia, then London in 1938 and finally in 1939 at Picasso's request the painting was sent to the United States in an extended loan (for safekeeping) at [MoMA](#). The painting went on a tour of museums throughout the USA until its final return to the [Museum of Modern Art](#) in New York City where it was exhibited for nearly thirty years. Finally in accord with [Pablo](#)

[Picasso](#)'s wish to give the painting to the people of Spain as a gift, it was sent to Spain in 1981.

Sculpture

The earliest European sculpture to date portrays a female form, and has been estimated at dating from 35,000 years ago. See [Classical sculpture](#), [Ancient Greek sculpture](#), [Gothic art](#), [Renaissance](#), [Mannerist](#), [Baroque](#), [Neoclassicism](#), [Modernism](#), [Postminimalism](#), [found art](#), [Postmodern art](#), [Conceptual art](#). Modern classicism contrasted in many ways with the classical sculpture of the 19th century which was characterized by commitments to naturalism ([Antoine-Louis Barye](#))—the melodramatic ([François Rude](#)) sentimentality ([Jean-Baptiste Carpeaux](#))-- or a kind of stately grandiosity ([Lord Leighton](#)). Several different directions in the classical tradition were taken as the century turned, but the study of the live model and the post-Renaissance tradition was still fundamental to them. [Auguste Rodin](#) was the most renowned European sculptor of the early 20th century. He is often considered a sculptural [Impressionist](#), as are his students including [Camille Claudel](#), and [Hugo Rheinhold](#), attempting to model of a fleeting moment of ordinary life. Modern classicism showed a lesser interest in naturalism and a greater interest in formal stylization. Greater attention was paid to the rhythms of volumes and spaces—as well as greater attention to the contrasting qualities of surface (open, closed, planar, broken etc.) while less attention was paid to story-telling and convincing details of anatomy or costume. Greater attention was given to psychological effect than to physical realism, and influences from earlier styles worldwide were used.

Early masters of modern classicism included: [Aristide Maillol](#), [Alexander Matveyev](#), [Joseph Bernard](#), [Antoine Bourdelle](#), [Georg Kolbe](#), [Liberio Andreotti](#), [Gustav Vigeland](#), [Jan Stursa](#), [Constantin Brâncuși](#). As the century progressed, modern classicism was adopted as the national style of the two great European totalitarian empires: [Nazi Germany](#) and [Soviet Russia](#), who co-opted the work of earlier artists such as Kolbe and [Wilhelm Lehmbruck](#) in Germany and Matveyev in Russia. Over the 70 years of the USSR, new generations of sculptors were trained and chosen within their system, and a distinct style, [socialist realism](#), developed, that returned to the 19th century's emphasis on melodrama and naturalism. Classical training was rooted out of art education in Western Europe (and the Americas) by 1970 and the classical variants of the 20th century were marginalized in the history of modernism. But classicism continued as the foundation of art education in the Soviet academies until 1990, providing a foundation for expressive figurative art throughout eastern Europe and parts of the Middle East. By the year 2000, the European classical tradition retains a wide appeal to the public but awaits an educational tradition to revive its contemporary development. Some of the modern classical became either more decorative/art deco ([Paulanship](#), [Jose de Creeft](#), [Carl Milles](#)) or more abstractly stylized or more expressive (and Gothic) ([Anton Hanak](#), [Wilhelm Lehmbruck](#), [Ernst Barlach](#), [Arturo Martini](#))—or turned more to the Renaissance ([Giacomo Manzù](#), [Venanzo Crocetti](#)) or stayed the same ([Charles Despiau](#), [Marcel Gimond](#)).

[Modernist](#) sculpture movements include [Cubism](#), [Geometric abstraction](#), [De Stijl](#), [Suprematism](#), [Constructivism](#), [Dadaism](#), [Surrealism](#), [Futurism](#), [Formalism](#), [Abstract expressionism](#), [Pop-Art](#), [Minimalism](#), [Land art](#), and [Installation art](#) among others. In the early days of the 20th century, [Pablo Picasso](#) revolutionized the art of sculpture when he began creating his *constructions* fashioned by combining disparate objects and materials into one constructed piece of sculpture; the sculptural equivalent of the [collage](#) in two-dimensional art. The advent of [Surrealism](#) led to things occasionally being described as "sculpture" that would

not have been so previously, such as "involuntary sculpture" in several senses, including [coulage](#). In later years Picasso became a prolific [potter](#), leading, with interest in historic pottery from around the world, to a revival of [ceramic art](#), with figures such as [George E. Ohr](#) and subsequently [Peter Voulkos](#), [Kenneth Price](#), and [Robert Arneson](#). [Marcel Duchamp](#) originated the use of the "[found object](#)" (French: objet trouvé) or *readymade* with pieces such as [Fountain](#) (1917). Similarly, the work of [Constantin Brâncuși](#) at the beginning of the century paved the way for later abstract sculpture. In revolt against the naturalism of Rodin and his late-19th-century contemporaries, Brâncuși distilled subjects down to their essences as illustrated by the elegantly refined forms of his [Bird in Space](#) series (1924). Brâncuși's impact, with his vocabulary of reduction and abstraction, is seen throughout the 1930s and 1940s, and exemplified by artists such as [Gaston Lachaise](#), [Sir Jacob Epstein](#), [Henry Moore](#), [Alberto Giacometti](#), [Joan Miró](#), [Julio González](#), [Pablo Serrano](#), [Jacques Lipchitz](#)^[19] and by the 1940s abstract sculpture was impacted and expanded by [Alexander Calder](#), [Len Lye](#), [Jean Tinguely](#), and [Frederick Kiesler](#) who were pioneers of [Kinetic art](#).

[Music](#) - [Classical Music](#) : Important classical composers from Europe include [Hildegard von Bingen](#), [J.S. Bach](#), [Handel](#), [Beethoven](#), [Brahms](#), [Schumann](#), [Wagner](#), [Richard Strauss](#), von Weber, [Offenbach](#), [Stockhausen](#), [Mendelssohn](#) (Germany), [Glinka](#), [Rimsky-Korsakov](#), [Borodin](#), [Tchaikovsky](#), [Mussorgsky](#), [Rachmaninov](#), [Scriabin](#), [Prokofiev](#), [Stravinsky](#), [Shostakovich](#), (Russia), [Schubert](#), [Haydn](#), [Mozart](#), [Bruckner](#), [Mahler](#), [Schoenberg](#) (Austria), [Berlioz](#), [Machaut](#), [Pérotin](#), [François Couperin](#), [Lully](#), [Rameau](#), [Saint-Saëns](#), [Bizet](#), [Debussy](#), [Ravel](#) (France), [Palestrina](#), [Monteverdi](#), [Vivaldi](#), [Giovanni Battista Pergolesi](#), [Donizetti](#), [Cavalli](#), [Paganini](#), [Bellini](#), [Verdi](#), [Puccini](#), [Rossini](#) (Italy), [Tomás Luis de Victoria](#), [Falla](#), [Granados](#), [Albéniz](#), [Rodrigo](#) (Spain), [Smetana](#), [Dvořák](#), [Janáček](#), [Martinů](#) (Czech Republic), [Dufay](#), [des Prez](#), [Lassus](#) (Belgium), [Grieg](#) (Norway), [Liszt](#), [Bartók](#) (Hungary), [Purcell](#), [Elgar](#), [Britten](#), [Holst](#) (UK), [Nielsen](#) (Denmark), [Sibelius](#) (Finland), [Chopin](#), [Penderecki](#) (Poland), [George Enescu](#), [Sergiu Celibidache](#) (Romania). [Luciano Pavarotti](#) was a contemporary popular [opera](#) singer. Orchestras such as the [Berliner Philharmoniker](#), the [Vienna Philharmonic Orchestra](#), the Amsterdam [Concertgebouw Orchestra](#) and the [London Symphony Orchestra](#) are considered to be amongst the finest ensembles in the world. The [Salzburg Festival](#), the [Bayreuth Festival](#), the [Edinburgh International Festival](#) and the [BBC Proms](#) are major European classical music festivals, and [International Chopin Piano Competition](#) is the world's oldest monographic music competition.

[Folk Music](#) : Europe has a wide and diverse range of indigenous music, sharing common features in rural, travelling or maritime communities. Folk music is embedded in an unwritten, aural tradition, but was increasingly transcribed from the nineteenth century onwards. Many classical composers used folk melodies, and folk has influenced some popular music in Europe.

[Architecture](#) - [Neolithic architecture](#) : Born in the Levant, Neolithic architecture spread to Europe. The Mediterranean neolithic cultures of Malta worshiped in megalithic temples. In Europe, long houses built from wattle and daub were constructed. Elaborate tombs for the dead were also built. These tombs are particularly numerous in Ireland, where there are many thousand still in existence. Neolithic people built long barrows and chamber tombs for their dead and causewayed camps, henges flint mines and cursus monuments., [Architecture of ancient Greece](#), [Roman architecture](#), [Medieval architecture](#), [Renaissance architecture](#), [Baroque architecture](#), [Beaux-Arts architecture](#), [Expressionist architecture](#), [Stalinist architecture](#), [Deconstructivism](#).

[*Architecture of Ancient Greece*](#) - The architecture and urbanism of the [Greeks](#) and [Romans](#) was very different from that of the [Egyptians](#) and [Persians](#). Civic life gained importance for all members of the community. In the time of the ancients religious matters were only handled by the ruling class; by the time of the Greeks, religious mystery had skipped the confines of the temple-palace compounds and was the subject of the people or [polis](#). Greek civic life was sustained by new, open spaces called the [agora](#) which were surrounded by public buildings, stores and temples. The *agora* embodied the newfound respect for social justice received through open debate rather than imperial mandate. Though divine wisdom still presided over human affairs, the living rituals of ancient civilizations had become inscribed in space, in the paths that wound towards the [acropolis](#) for example. Each place had its own nature, set within a world refracted through myth, thus temples were sited atop mountains all the better to touch the heavens.

[*Roman architecture*](#) - The Romans conquered the Greek cities in Italy around three hundred years BCE and much of the Western world after that. The Roman problem of rulership involved the unity of disparity — from [Spanish](#) to [Greek](#), [Macedonian](#) to [Carthaginian](#) — Roman rule had extended itself across the breadth of the known world and the myriad pacified cultures forming this *ecumene* presented a new challenge for justice. One way to look at the unity of Roman architecture is through a new-found realization of theory derived from practice, and embodied spatially. Civically we find this happening in the Roman [forum](#) (sibling of the Greek agora), where public participation is increasingly removed from the concrete performance of rituals and represented in the decor of the architecture. Thus we finally see the beginnings of the contemporary public square in the Forum Iulium, begun by [Julius Caesar](#), where the buildings present themselves through their facades as representations within the space. As the Romans chose representations of sanctity over actual sacred spaces to participate in society, the communicative nature of space was opened to human manipulation. None of which would have been possible without the advances of Roman [engineering](#) and construction or the newly found [marble](#) quarries which were the spoils of war; inventions like the [arch](#) and [concrete](#) gave a whole new form to Roman architecture, fluidly enclosing space in taut [domes](#) and [colonnades](#), clothing the grounds for imperial rulership and civic order. This was also a response to the changing social climate which demanded new buildings of increasing complexity — the [colosseum](#), the residential block, bigger hospitals and academies. General civil construction such as roads and bridges began to be built.

The Romans widely employed, and further developed, the [arch](#), [vault](#) and [dome](#) (see the [Roman Architectural Revolution](#)), all of which were little used before, particularly in Europe.¹ Their innovative use of [Roman concrete](#) facilitated the building of the many public buildings of often unprecedented size throughout the [empire](#). These include [Roman temples](#), [Roman baths](#), [Roman bridges](#), [Roman aqueducts](#), [Roman harbours](#), [triumphal arches](#), [Roman amphitheatres](#), [Roman circuses](#) [palaces](#), [mausolea](#) and in the [late empire](#) also [churches](#). [Roman domes](#) permitted construction of vaulted ceilings and enabled huge covered public spaces such as the [public baths](#) like [Baths of Diocletian](#) or the monumental [Pantheon](#) in the city of Rome. Art historians such as Gottfried Richter in the 1920s identified the Roman architectural innovation as being the [Triumphal Arch](#) and it is poignant to see how this symbol of power on earth was transformed and utilized within the Christian basilicas when the Roman Empire of the West was on its last legs: The arch was set before the altar to symbolize the triumph of Christ and the after life. It is in their impressive [aqueducts](#) that we see the arch triumphant, especially in the many surviving examples, such as the [Pont du Gard](#), the aqueduct at [Segovia](#) and the remains of the [Aqueducts of Rome](#) itself. Their survival is testimony to the durability of their materials and design.

[Byzantine architecture](#)- The [Byzantine Empire](#) gradually emerged as a distinct artistic and cultural entity from the Roman Empire after AD 330, when the Roman Emperor [Constantine](#) moved the capital of the Roman Empire east from Rome to [Byzantium](#) (later renamed [Constantinople](#) and now called [Istanbul](#)). The empire endured for more than a millennium, dramatically influencing [Medieval](#) and [Renaissance-era](#) architecture in Europe and, following the capture of Constantinople by the [Ottoman Turks](#) in 1453, leading directly to the [architecture of the Ottoman Empire](#). Early Byzantine architecture was built as a continuation of [Roman architecture](#). [Stylistic drift](#), [technological advancement](#), and [political](#) and territorial changes meant that a distinct style gradually emerged which imbued certain influences from the Near East and used the [Greek cross](#) plan in church architecture. Buildings increased in geometric [complexity](#), brick and plaster were used in addition to stone in the decoration of important public structures, [classical orders](#) were used more freely, [mosaics](#) replaced carved decoration, complex domes rested upon massive [piers](#), and windows filtered light through thin sheets of [alabaster](#) to softly illuminate interiors.

[Medieval architecture](#) - Surviving examples of medieval secular architecture mainly served for defense. [Castles](#) and [fortified walls](#) provide the most notable remaining non-religious examples of medieval architecture. Windows gained a cross-shape for more than decorative purposes: they provided a perfect fit for a [crossbowman](#) to safely shoot at invaders from inside. [Crenellation](#) walls ([battlements](#)) provided shelters for archers on the roofs to hide behind when not shooting. [Pre-Romanesque art and architecture](#)- Western European architecture in the [Early Middle Ages](#) may be divided into [Early Christian](#) and [Pre-Romanesque](#), including [Merovingian](#), [Carolingian](#), [Ottonian](#), and [Asturian](#). While these terms are problematic, they nonetheless serve adequately as entries into the era. Considerations that enter into histories of each period include [Trachtenberg](#)'s "historicising" and "modernising" elements, Italian versus northern, Spanish, and Byzantine elements, and especially the religious and political maneuverings between kings, popes, and various ecclesiastic officials. [Romanesque architecture](#) - Romanesque, prevalent in medieval Europe during the 11th and 12th centuries, was the first pan-European style since [Roman Imperial architecture](#) and examples are found in every part of the continent. The term was not contemporary with the art it describes, but rather, is an invention of modern scholarship based on its similarity to Roman architecture in forms and materials. Romanesque is characterized by a use of round or slightly pointed arches, barrel vaults, and cruciform piers supporting vaults.

[Gothic architecture](#) - The various elements of Gothic architecture emerged in a number of 11th- and 12th-century building projects, particularly in the [Île de France](#) area, but were first combined to form what we would now recognise as a distinctively Gothic style at the [12th century abbey church of Saint-Denis](#) in [Saint-Denis](#), near [Paris](#). Verticality is emphasized in Gothic architecture, which features almost skeletal stone structures with great expanses of glass, pared-down wall surfaces supported by external [flying buttresses](#), pointed [arches](#) using the [ogive](#) shape, ribbed stone vaults, clustered columns, pinnacles and sharply pointed spires. Windows contain beautiful [stained glass](#), showing stories from the [Bible](#) and from lives of [saints](#). Such advances in design allowed cathedrals to rise taller than ever, and it became something of an inter-regional contest to build a church as high as possible.

[Renaissance architecture](#) - The [Renaissance](#) often refers to the [Italian Renaissance](#) that began in the 14th century, but recent research has revealed the existence of similar movements around Europe before the 15th century; consequently, the term "[Early Modern](#)" has gained popularity in describing this cultural movement. This period of cultural rebirth is often credited with the restoration of scholarship in the Classical Antiquities and the absorption of new scientific and philosophical knowledge that fed the arts. The development from [Medieval](#) architecture concerned the way [geometry](#) mediated between the intangibility of light and the

tangibility of the material as a way of relating divine creation to mortal existence. This relationship was changed in some measure by the invention of [Perspective](#) which brought a sense of infinity into the realm of human comprehension through the new representations of the horizon, evidenced in the expanses of space opened up in Renaissance painting, and helped shape new [humanist](#) thought. Perspective represented a new understanding of space as a universal, *a priori* fact, understood and controllable through human reason. Renaissance buildings therefore show a different sense of conceptual clarity, where spaces were designed to be understood in their entirety from a specific fixed viewpoint. The power of Perspective to universally represent reality was not limited to *describing* experiences, but also allowed it to anticipate experience itself by projecting the image back into reality. The Renaissance spread to France in the late 15th century, when [Charles VIII](#) returned in 1496 with several Italian artists from his conquest of Naples. Renaissance chateaux were built in the Loire Valley, the earliest example being the [Château d'Amboise](#), and the style became dominant under [Francis I](#) (1515–47). (See [Châteaux of the Loire Valley](#)). The [Château de Chambord](#) is a combination of Gothic structure and Italianate ornament, a style which progressed under architects such as Sebastiano Serlio, who was engaged after 1540 in work at the [Château de Fontainebleau](#). Architects such as [Philibert Delorme](#), [Androuet du Cerceau](#), [Giacomo Vignola](#), and [Pierre Lescot](#), were inspired by the new ideas. The southwest interior facade of the Cour Carrée of the [Louvre](#) in Paris was designed by Lescot and covered with exterior carvings by [Jean Goujon](#). Architecture continued to thrive in the reigns of Henri II and Henri III. In England the first great exponent of Renaissance architecture was [Inigo Jones](#) (1573–1652), who had studied architecture in Italy where the influence of [Palladio](#) was very strong. Jones returned to England full of enthusiasm for the new movement and immediately began to design such buildings as the [Queen's House](#) at Greenwich in 1616 and the Banqueting House at [Whitehall](#) three years later. These works with their clean lines and symmetry, were revolutionary in a country still enamored with mullion windows, crenellations, turrets.

[Baroque architecture](#) - The periods of [Mannerism](#) and the [Baroque](#) that followed the Renaissance signaled an increasing anxiety over meaning and representation. Important developments in science and philosophy had separated mathematical representations of reality from the rest of culture, fundamentally changing the way humans related to their world through architecture. It would reach its most extreme and embellished development under the decorative tastes of [Rococo](#). [Neoclassical architecture](#) - In the late 17th and 18th centuries, the works and theories of [Andrea Palladio](#) (from 16th-century Venice) would again be interpreted and adopted in England, spread by the English translation of his [I Quattro Libri dell'Architettura](#), and pattern books such as *Vitruvius Britannicus* by [Colen Campbell](#). This [Palladian architecture](#) and continued classical imagery would in turn go on to influence [Thomas Jefferson](#) and other early architects of the United States in their search for a new national architecture. By the mid-18th century, there tended to be more restrained decoration and usage of authentic classical forms than in the Baroque, informed by increased visitation to classical ruins as part of the [Grand Tour](#), coupled with the excavations of [Pompeii](#) and [Herculaneum](#). [Federal-style architecture](#) is the name for the classicizing architecture built in [North America](#) between c. 1780 and 1830, and particularly from 1785 to 1815. This style shares its name with its era, the [Federal Period](#). The term is also used in association with furniture design in the United States of the same time period. The style broadly corresponds to the middle-class classicism of [Biedermeier](#) style in the German-speaking lands, [Regency style](#) in Britain and to the French [Empire style](#). [Beaux-Arts architecture](#) ^[16] - Beaux-Arts architecture denotes the academic classical [architectural style](#) that was taught at the [École des Beaux Arts](#) in Paris. The style "Beaux-Arts" is above all the cumulative product of two and a half centuries of instruction under the authority, first of the Académie royale d'architecture, then, following the Revolution, of the Architecture section of the Académie des Beaux-Arts. The

organization under the Ancien Régime of the competition for the [Grand Prix de Rome](#) in architecture, offering a chance to study in Rome, imprinted its codes and esthetic on the course of instruction, which culminated during the [Second Empire](#) (1850–1870) and the Third Republic that followed. The style of instruction that produced Beaux-Arts architecture continued without a major renovation until 1968. [Art Nouveau](#) - Around 1900 a number of architects around the world began developing new architectural solutions to integrate traditional precedents with new social demands and technological possibilities. The work of [Victor Horta](#) and [Henry van de Velde](#) in Brussels, [Antoni Gaudí](#) in Barcelona, [Otto Wagner](#) in Vienna and [Charles Rennie Mackintosh](#) in Glasgow, among many others, can be seen as a common struggle between old and new.

[Modern architecture](#) - Early Modern architecture began with a number of building styles with similar characteristics, primarily the simplification of form and the elimination of [ornament](#), that first arose around 1900. By the 1940s these styles had largely consolidated and been identified as the [International Style](#). The exact characteristics and origins of modern architecture are still open to interpretation and debate. An important trigger appears to have been the [maxim](#) credited to [Louis Sullivan](#): "[form follows function](#)". **Functionalism**, in architecture, is the principle that architects should design a building based on the purpose of that building. This statement is less self-evident than it first appears, and is a matter of confusion and controversy within the profession, particularly in regard to [modern architecture](#). [Expressionist architecture](#) - Expressionist architecture was an architectural movement that developed in Northern Europe during the first decades of the 20th century in parallel with the [expressionist](#) visual and performing arts. The style was characterized by an early-[modernist](#) adoption of novel materials, formal innovation, and very unusual massing, sometimes inspired by natural biomorphic forms, sometimes by the new technical possibilities offered by the mass production of brick, steel and especially glass. Many expressionist architects fought in World War I and their experiences, combined with the political turmoil and social upheaval that followed the [German Revolution](#) of 1919, resulted in a utopian outlook and a romantic socialist agenda.^[18] Economic conditions severely limited the number of built commissions between 1914 and the mid-1920s, resulting in many of the most important expressionist works remaining as projects on paper, such as [Bruno Taut's](#) *Alpine Architecture* and [Hermann Finsterlin's](#) *Formspiels*. Ephemeral exhibition buildings were numerous and highly significant during this period. [Scenography](#) for theatre and films provided another outlet for the expressionist imagination, and provided supplemental incomes for designers attempting to challenge conventions in a harsh economic climate. [International style \(architecture\)](#) -The International style was a major [architectural trend](#) of the 1920s and 1930s. The term usually refers to the buildings and architects of the formative decades of modernism, before World War II. The term had its origin from the name of a book by [Henry-Russell Hitchcock](#) and [Philip Johnson](#) which identified, categorised and expanded upon characteristics common to modernism across the world. As a result, the focus was more on the stylistic aspects of modernism. The basic design principles of the International Style thus constitute part of [modernism](#). The ideas of Modernism were developed especially in what was taught at the German [Bauhaus](#) School in [Weimar](#) (from 1919), [Dessau](#) (between 1926–32) and finally [Berlin](#) between 1932–33, under the leadership first of its founder [Walter Gropius](#), then [Hannes Meyer](#), and finally [Ludwig Mies van der Rohe](#). Modernist theory in architecture resided in the attempt to bypass the question of what [style](#) a building should be built in, a concern that had overshadowed 19th-century architecture, and the wish to reduce form to its most minimal expression of structure and function. In the [USA](#), [Philip Johnson](#) and [Henry-Russell Hitchcock](#) treated this new phenomenon in 1931 as if it represented a new style - the [International Style](#), thereby misrepresenting its primary mission as merely a matter of eliminating traditional [ornament](#). The core effort to pursue Modern architecture as an abstract,

scientific programme was more faithfully carried forward in [Europe](#), but issues of style always overshadowed its stricter and more puritan goals, not least in the work of [Le Corbusier](#). *Modern architecture* - Modern architecture is generally characterized by simplification of form and creation of ornament from the structure and theme of the building. It is a term applied to an overarching movement, with its exact definition and scope varying widely.^[21] Modern architecture has continued into the 21st century as a contemporary style, especially for corporate office buildings. In a broader sense, modern architecture began at the turn of the 20th century with efforts to reconcile the principles underlying architectural design with rapid technological advancement and the [modernization](#) of society. It would take the form of numerous movements, schools of design, and architectural styles, some in tension with one another, and often equally defying such classification.

[Literature](#) - Europe has produced some of the most prominent or popular fiction and nonfiction writers of all time :

- [Homer](#), [Hesiod](#), [Sappho](#), [Aeschylus](#), [Sophocles](#), [Euripides](#), [Xenophon](#), [Aristophanes](#), [Menander](#), [Polybius](#), [Arrian](#), [Plutarch](#), [Longus](#) (Ancient Greece)
- [Plautus](#), [Terence](#), [Cicero](#), [Julius Caesar](#), [Sallust](#), [Virgil](#), [Livy](#), [Ovid](#), [Tacitus](#), [Horace](#), [Catullus](#), [Pliny the Elder](#), [Quintilian](#), [Seneca the Younger](#), [Pliny the Younger](#) (Ancient Rome)
- [Francesco Petrarca](#), [Dante Alighieri](#), [Giovanni Boccaccio](#), [Niccolò Machiavelli](#), [Ludovico Ariosto](#), [Torquato Tasso](#), [Carlo Goldoni](#), [Carlo Gozzi](#), [Giacomo Leopardi](#), [Giosuè Carducci](#), [Italo Svevo](#), [Luigi Pirandello](#), [Italo Calvino](#), [Eugenio Montale](#), [Salvatore Quasimodo](#), [Umberto Eco](#), [Dario Fo](#) (Italy)
- [Chrétien de Troyes](#), [François Rabelais](#), [Montaigne](#), [Alexandre Dumas](#), [Pierre Corneille](#), [Racine](#), [Molière](#), [Voltaire](#), [Jean de La Fontaine](#), [Rousseau](#), [Jules Verne](#), [Honoré de Balzac](#), [Gustave Flaubert](#), [Stendhal](#), [Marcel Proust](#), [Albert Camus](#), [JMG Le Clézio](#), [Victor Hugo](#), [Charles Baudelaire](#), [Arthur Rimbaud](#), [Stéphane Mallarmé](#), [Anatole France](#), [Antoine de Saint-Exupéry](#), [Apollinaire](#), [Simone de Beauvoir](#), [Jean-Paul Sartre](#), [Romain Rolland](#), [Denis Diderot](#), [Michel Foucault](#), [Théophile Gautier](#), [Alain Robbe-Grillet](#), [François Mauriac](#), [André Gide](#) (France)
- [Alexander Pushkin](#), [Nikolai Gogol](#), [Ivan Goncharov](#), [Mikhail Bakunin](#), [Mikhail Lermontov](#), [Ivan Turgenev](#), [Leo Tolstoy](#), [Fyodor Dostoyevsky](#), [Peter Kropotkin](#), [Anton Chekhov](#), [Maxim Gorky](#), [Ivan Bunin](#), [Yevgeny Zamyatin](#), [Boris Pasternak](#), [Anna Akhmatova](#), [Mikhail Bulgakov](#), [Vladimir Mayakovsky](#), [Sergei Yesenin](#), [Vladimir Nabokov](#), [Mikhail Sholokhov](#), [Aleksandr Solzhenitsyn](#), [Joseph Brodsky](#) (Russia)
- [Jorge Manrique](#), [Garcilaso de la Vega](#), [Miguel de Cervantes](#), [Pedro Calderón de la Barca](#), [Lope de Vega](#), [Francisco de Quevedo](#), [Luis de Góngora](#), [Gustavo Adolfo Bécquer](#), [Leopoldo Alas](#), [Juan Ramón Jiménez](#), [Pío Baroja](#), [José Echegaray](#), [Miguel de Unamuno](#), [Federico García Lorca](#), [Vicente Aleixandre](#), [Camilo José Cela](#), [Mario Vargas Llosa](#) (Spain)
- [Luís de Camões](#), [José Maria de Eça de Queiroz](#), [Fernando Pessoa](#), [José Saramago](#) (Portugal)
- [William Shakespeare](#), [Charles Dickens](#), [Geoffrey Chaucer](#), [Jane Austen](#), [H. G. Wells](#), [Robert Louis Stevenson](#), [Arthur Conan Doyle](#), [J. R. R. Tolkien](#), [J. K. Rowling](#), [Beatrix Potter](#), [J. M. Barrie](#), [Walter Scott](#), [D. H. Lawrence](#), [George Orwell](#), [Virginia Woolf](#), [C. S. Lewis](#), [John Milton](#), [Terry Pratchett](#), [Mary Shelley](#), [Roald Dahl](#), [Lewis Carroll](#), [Agatha Christie](#), [Daniel Defoe](#), [Alan Moore](#), [Rudyard Kipling](#), [Aldous Huxley](#), [Harold Pinter](#) (United Kingdom)

- [Salvador Espriu](#), [Mercè Rodoreda](#), [Joan Salvat-Papasseit](#), [Josep Carner](#) (Catalan language)
- [Laurence Sterne](#), [Bram Stoker](#), [James Joyce](#), [Oscar Wilde](#), [Jonathan Swift](#), [Samuel Beckett](#), [William Butler Yeats](#), [Seamus Heaney](#) (Ireland)

- **[Performing arts](#)**

Film - [Antoine Lumière](#) realized, on 28 December 1895, the first projection, with the [Cinematograph](#), in Paris. Philippe Binant realized, on 2 February 2000, the first [digital cinema](#) projection in [Europe](#), with the DLP CINEMA technology developed by [Texas Instruments](#), in Paris. In 1897, [Georges Méliès](#) established the first cinema studio on a rooftop property in Montreuil, near Paris. Some notable European film movements include [German Expressionism](#), [Italian neorealism](#), [French New Wave](#), [Polish Film School](#), [New German Cinema](#), [Portuguese Cinema Novo](#), [Czechoslovak New Wave](#), [Dogme 95](#), [New French Extremity](#), and [Romanian New Wave](#). The cinema of Europe has its own awards, the [European Film Awards](#). Main festivals : [Cannes Film Festival](#) (France), [Berlin International Film Festival](#) (Germany). The [Venice Film Festival](#) (Italy) or Mostra Internazionale d'Arte Cinematografica di Venezia, is the oldest film festival in the world. Europeans were the pioneers of the motion picture industry, with several innovative engineers and artists making an impact especially at the end of the 19th century. [Louis Le Prince](#) became famous for his 1888 [Roundhay Garden Scene](#), the first known celluloid film recorded. The [Skladanowsky brothers](#) from [Berlin](#) used their "Bioscop" to amaze the [Wintergarten theatre](#) audience with the first film show ever, from November 1 through 31, 1895. The [Lumière Brothers](#) established the [Cinematograph](#); which initiated the [silent film](#) era, a period where European cinema was a major commercial success. It remained so until the art-hostile environment of [World War II](#). Notable European early film movements include [German Expressionism](#) (1920s), [Soviet Montage](#) (1920s), [French Impressionist Cinema](#) (1920s), [Poetic realism](#)

(1930s), and [Italian neorealism](#) (1940s); it was a period now seen in retrospect as "[The Other Hollywood](#)". The first large-scale film studio was also established in Europe, with the [Babelsberg Studio](#) near Berlin in 1912. Post [World War II](#) movements include [Free Cinema](#) (1950s), [French New Wave](#) (1950s–60s), [Polish Film School](#) (1950s–60s), [Czechoslovak New Wave](#) (1960s), [New German Cinema](#) (1960s–80s), [British New Wave](#) (1950s–60s), [Spaghetti Western](#) (1960s) and [Novo Cinema](#) (1960s–70s). The turn of the 21st century has seen movements such as [Dogme 95](#), [New French Extremity](#), [Romanian New Wave](#) and [Berlin School](#). [List of European Films](#). [European Film Awards/Film Academy](#). [Film Festivals in Europe](#).

[History of science](#) - [CERN](#): The European Organization for Nuclear Research, is the birthplace of the [World Wide Web](#) and home of the world's largest machine : the [Large Hadron Collider](#). It is the world's largest particle physics laboratory, situated in the northwest suburbs of Geneva on the Franco–Swiss border, established in 1954. In November 2010, the collisions obtained were able to generate the highest temperatures and densities ever produced in an experiment, creating a "mini-[Big Bang](#)" a million times hotter than the centre of the Sun. [ESA](#) : The European Space Agency's space flight program includes human spaceflight, mainly through the participation in the [International Space Station](#) program, the launch and operations of unmanned exploration missions to other planets and the Moon, Earth observations, science, telecommunication as well as maintaining a major spaceport, the [Guiana Space Centre](#) at Kourou, French Guiana and designing launch vehicles. The main European launch vehicle Ariane 5 is operated through Arianespace with ESA sharing in the costs of launching and further developing this launch vehicle. On 12 November 2014, ESA's [Philae](#) probe achieved the first-ever soft landing on a [comet](#).

Europe has produced some of the greatest scientists, inventors and intellectuals in history. [History of Western philosophy](#) - European [philosophy](#) is a predominant strand of philosophy globally, and is central to philosophical enquiry in [America](#) and most other parts of the world which have fallen under its influence. The Greek schools of philosophy in [antiquity](#) provide the basis of philosophical discourse that extends to today. [Christian](#) thought had a huge influence on many fields of European philosophy (as European philosophy has been on Christian thought too), sometimes as a reaction. Perhaps one of the most important single philosophical periods since the classical era were the [Renaissance](#), the [Age of Reason](#) and the [Age of Enlightenment](#). There are many disputes as to its value and even its timescale. What is indisputable is that the tenets of [reason](#) and rational discourse owe much to [René Descartes](#), [John Locke](#) and others working at the time. Other important European philosophical strands include: [Analytic philosophy](#), [Anarchism](#), [Christian Democracy](#), [Communism](#), [Conservatism](#), [Constructionism](#), [Deconstructionism](#), [Empiricism](#), [Epicureanism](#), [Existentialism](#), [Fascism](#), [Humanism](#), [Idealism](#), [Internationalism](#), [Liberalism](#), [Logical positivism](#), [Marxism](#), [Materialism](#), [Monarchism](#), [Nationalism](#), [Perspectivism](#), [Platonism](#), [Positivism](#), [Postmodernism](#), [Protestantism](#), [Rationalism](#), [Relativism](#), [Republicanism](#), [Romanticism](#), [Scepticism](#), [Scholasticism](#), [Social Democracy](#), [Socialism](#), [Stoicism](#), [Structuralism](#), [Thomism](#), [Utilitarianism](#), [Spenglerism](#).

COMMENTS ON PLAYS SEEN IN ISRAEL, LONDON, PARIS, NEW YORK & BERLIN

Israel has become a paradise for theater lovers, with at least 10 theater groups and many fringe groups, but also dozens of theater halls all over the country where the repertory groups perform, performing plays of the ancient Greeks and Latins, classics, modern, avant-garde, Israeli, European, American and International playwrights. Joshua Sobol is an Israeli playwright and one of the best playwrights in the world. He is my friend, and I have read almost all his dozens plays and wrote a review on them, and of course saw all his plays performed in the last few years. Sobol also wrote a very favorable review of my play Nelly's Choice. The hub of all the theaters is Tel Aviv, one of the most cultural cities in the world, but Haifa has also a theater (I was a director in this theater for a number of years), showing its repertory but also hosting most of the other theaters. So, I saw during the period of 2011-2013 (it is just a sample) more than 60 plays in Haifa, but also in Tel Aviv and New York – an average of at least 20 plays a year. There were times when I saw much more plays, traveling for months to Europe and the US and going to the theater every night. I had for many years a subscription to at least two theaters for all my 5 family members with an extra seat for one of their friends, to a philharmonic orchestra – 10 concerts, to 10 folklore music performances, 10 chamber music subscription, to 20 lectures a year, watching at least 100 films a year at the cinemathèque/cinemas and 50 films at the Haifa film festival, going also occasionally to jazz, fringe, ballet, opera, and of course watching TV.

I never see reality programs or TV series, almost never see the news, never watch programs with commercials, and when I am at home I see on cable TV two good films a night. During the years 2011-2013 I saw among others: The servant of two masters by Goldoni, Yerma by Lorca, [A view from the bridge](#) by Arthur Miller, Moris Shimel by Levin, [Les fourberies de Scapin](#) by Moliere, Ghetto by Sobol, [The Caucasian chalk circle](#) by Brecht, All my sons by Arthur Miller, [Art by Yasmina Reza](#), [An Ideal Husband](#) – an adaptation by Sobol of Oscar Wilde, Revizor by Gogol, [Sei personaggi in cerca d'autore](#) by Pirandello, Ivona Princess of Burgundia by Witold Gombrowicz, Gott Mensch and Teufel by Gordin in Yiddish, L'ecole des femmes by Moliere, Caviar and lentils by Scarnicci and Tarabusi, Once there was a Hassid by Dan Almagor, Race by Mamet, Le prenom by Delaporte and de la Patteliere, [The Lover](#) by Pinter, A pigeon and a boy by Meir Shalev, Suitcase Packers by Levin, Makolet by Mittlepunkt, [Richard II](#) (I studied it at the university), [Richard III by Shakespeare](#), [Lend me a tenor](#) by Ludwig, The merchant of Venice by Shakespeare, [A doll's house](#) by Ibsen, They shoot horses, don't they? By McCoy, [Arsenic and old lace](#) by Kesselring, Mirale Efrat by Gordin, Kazablan by Ygal Mossinsohn, The Good soldier Schweik by Hasek, and many other plays by classics and Israelis.

I have a problem with Broadway plays. In my many visits to the city in the past I went to the theater every night and paid reasonable prices for the best seats. I stayed at the best hotels and paid reasonable prices, a full breakfast cost in the eighties one dollar..., New York was affordable to theater lovers. However, in the last ten to fifteen years, tickets have reached the outrageous price of \$500 for the best seats, a good hotel cost at least \$600 per night, a visit to New York for a week or two may amount for a couple to \$10,000 - \$20,000, even if you don't reside in the best hotels and don't purchase the best theater seats. But, if you are resourceful, you can go to off Broadway shows at reasonable prices, and see excellent plays as I saw in 2011 - musicals on the life of Bessie Smith and Danny Kaye, Freud's Last Session by Marjorie Deane, went to a theater festival and saw Mo Lo Ra of the South Africa Theater and

The Temple of the Golden Pavilion of the Japanese Theater, and saw on Broadway Rain, a Tribute to the Beatles.

To illustrate the plays that I have seen in the best theaters in London, Paris, New York and Berlin in the last few years we brought a few examples: In September 2006 in New York: The times they are a-changing – a musical on Bob Dylan's songs, The wedding singer, Losing Louie – on the assimilation of a Jewish family, Jewtopia – Jewish humor, WASPs in bed, The history boys, Arms and the Man by Shaw (in Seattle), and also La Boheme at the New York City Opera, and at Avery Fisher Hall – the New York Philharmonic Orchestra, Lorin Mazel conducting, with Mahler's symphony no. 4 recorded live. In December 2014 we saw in New York very good plays, most of them on Off Broadway – Side Show, Disenchanted, Absolution, an excellent Wiesenthal, The Oldest Boy, a very good musical Motown, A Particle of Dread, A Delicate Balance by Edward Albee with Glenn Close. On the average there is a deterioration in the quality of plays and musicals that I see in New York, although I do not travel often to New York as I used to in the past, but every few years, so my impression is not an objective impression.

In June 2009 I saw in London excellent plays, as the London theaters exceed by far their cousins in New York: at Shakespeare's Globe Theater we saw an unforgettable Romeo and Juliet, at the National Theater we saw Phedre by Racine with Helen Mirren, directed by Nicholas Hytner, we saw Stoppard's Arcadia, Sondheim's A little night music, Harwood's Collaboration on the relations of Richard Strauss and Stephan Zweig his Jewish librettist, and Taking Sides on the denazification of Wilhelm Furtwangler. Sometimes you have excellent surprises as Duet for One, which we saw on the first row of Vaudeville Theatre with Juliet Stevenson and Henry Goodman. I enjoyed also light comedies such as England People very nice at the Olivier. 8 plays in a week, with such excellence, what a treat! I am sorry that I do not have the opportunity to see London plays as I used to in the past, but subjectively I can say that they are as good as before.

With all due respect to New York and London theaters, I enjoy the most going to the theater in Paris, as I see plays in my mother tongue and enjoy all kinds of theater. I have probably seen hundreds of plays over the years in Paris, sometimes seeing as much as three plays a night. I know practically almost all the important theaters, but go often to Fringe Theater in tiny places of 20 seats. In March 2010 for example I saw at the Theatre de Paris - Seznec, about a famous trial with my favorite director Robert Hossein – this time I didn't sit next to him as in Julius Caesar, but Hossein came after the play and talked to the audience, answering their questions. At La Pepiniere I saw two plays one after the other – Promenade de sante and a musical – Non, je ne danse pas. At the Comedie Francaise (how not) I saw one of the best comedies by Corneille – L'illusion comique, directed by Galin Stoev. Every time I go to the Comedie Francaise, I have a sense of elation. This is the theater where I feel the most in my element, everything is perfect there. Even if you can't hear well, the Comedie has special days where you can read the text in subtitles, and of course you have earphones, but even better – you pay for yourself and your companion tickets at half price in the best seats, because you are handicapped. And this isn't only at the Comedie, it is also at Chaillot Theater and all over France. There are endless stories that can be told on the theaters of Paris, the funniest is maybe, when I went to a musical on the songs of Mistinguett with Zizi Jeanmaire, one of the leading singers and dancers in France, I sat as usual at the best places and was very well dressed as I came directly from business meetings. Zizi sang the famous song – Je cherche un millionnaire – I am looking for a millionaire. And so, from all the spectators, she chose me, sat on my lap, and asked me if I were a millionaire, and if I wanted her. I was exhilarated, as it was quite a long way from my humble beginnings at the vocation school in Israel, a long time

ago. I enjoy all kinds of theater – classic, modern, musicals, sometimes even kitsch, concerts, ballet, jazz, standup, in large and well-known theaters as the Comedie Francaise or Le Casino de Paris, but also in tiny theaters or small ones.

I went also in 2010 to the Casino de Paris, the largest Parisian musical to see Gala pour Haiti, a gala where the best French actors, musicians and singers came to raise money for Haiti. I saw at the Rond-Point des Champs Elysees, the closest theater from my hotel, where I used to come in the dozen times when I was in Paris in the last 20 years, at the Salle Renaud-Barrault (the same famous actors that I saw during the Students' Revolution of May 1968): a delightful comedy *Les nouvelles breves du comptoir*. At the Comedie des Champs Elysees (also near "home/hotel") I saw one of my favorite plays by one of my favorite playwrights – *Colombe* by Jean Anouilh, directed by Michel Fagadau, with the excellent actors – Anny Duperey, Sara Giraudeau and Rufus. At the Madeleine, all in a walking distance – I saw Ibsen's *A Doll's House* with the famous actor Audrey Tautou, which was a very moving Nora, and with Michel Fau who also directed. Nearby, at the Madeleine church although it was freezing and the church was not heated, I heard a beautiful concert with the fantastic *Les violons de Paris* – Vivaldi's the four seasons, Ave Maria by Schubert and Gounod, Aria by Bach, Canon by Pachelbel and Albinoni's Adagio. Finally, at the famous music hall Folies Bergere, I saw the musical *Zorro* by Clark and Edmundson, with music by The Gipsy Kings. In December 2014 I saw *Un chapeau de paille d'Italie*, a lovely comedy by Eugene Labiche at the Comedy Francaise, a tedious musical *Mistinguett* about the life of one of my most beloved singers Mistinguett with a mediocre actress and a mediocre show, an exhilarating review *Ca swing chez Maxim's* on Les freres Jacques, excellent plays as *Le rois se meurt* by Ionesco at the Theatre de Paris with Michel Bouquet, Moliere's *Georges Dandin* at the Comedie Francaise, *La colere du tigre* with Claude Brasseur and Michel Aumont at the Theatre Montparnasse, and mediocre plays although with excellent actors as *Novecento* with Andre Dussolier and *Kinship* with Isabelle Adjani. My impression is that the quality of the plays in Paris has remained as high as before since the days where I first saw plays in Paris in 1967, then occasionally in the seventies and eighties, every month or so during most of the nineties, and quite frequently in the beginning of the new century.

Ruthy and I spent a fantastic fortnight in Berlin, one of the most beautiful and attractive cities in the world. I liked very much the city, but haven't visited it after I studied there at the Goethe Institut in 1967. On the occasion of the Insead Alumni reunion in 2010 I visited the city once more. I liked the people, the architecture, the prices for hotels, food and culture were very reasonable. After the reunion we stayed for another 10 days, and every night we went to the theater. We wrote already about the excellent Brecht and Weill's *Dreigroschenoper* at the Berliner Ensemble, where we saw also *Mutter Courage und ihre Kinder* by Brecht. We saw also *Der Besuch den alten Dame* by Duerenmatt at the Maxim Gorki theater (most of the cultural life was at the old East Berlin, which was now the middle of the city). At the Deutsches Theater we saw 3 plays – *Faust I*, by Goethe, directed by Michael Thalheimer, *Krankenzimmer Nr. 6*, by Tchekhov, directed by Dimiter Gotscheff, and *Der Schmerz* by Marguerite Duras. We saw a ballet – *Shut up and Dance!* at the Staatsballet Berlin, a concert at the Staatsoper Unter den Linden with the Staatskapelle Berlin conducted by Daniel Barenboim – a concert of Schumann's works – the best concert I have ever seen, everything was perfect, the concert hall, the composer, the conductor and the orchestra. The concert held on June 1, 2010, was in celebration of Schumann's 200th birthday. Young German cellist Marie-Elisabeth Hecker performed the cello concerto, and the Staatskapelle Berlin performed the first and fourth symphonies. Schumann's cello concerto was played in the past by [Jacqueline du Pre](#), also a young cellist. She was the wife of Barenboim, who conducted. Finally, we saw a comedy on Wilhelm Busch – *Helena, Max & Co.*, and at Dresden Opera –

Verdi's Macbeth. It was an unforgettable visit! The three European capitals of culture – Paris, London and Berlin – are unbeatable, and I enjoyed every moment.

Plays seen in Israel and in New York in 2011-2013:

60+ Plays as follows:

Plays seen in Israel in 2011-2013:

The Mother-in-Law by Andrew Bergman, Habima Theater

54. Carola by Jean Renoir, 1972, Directed by Norman Lloyd, with Leslie Caron and Mel Ferrer, music by William Goldenberg, television adaptation by James Bridges with author, 120 min.
55. Incident at Vichy by Arthur Miller, 1973, Directed by Stacy Keach, music by Lyn Murray, with Rene Auberjonois, Harris Yulin and Richard Jordan, 80 min.
56. The Eccentricities of a Nightingale by Tennessee Williams, 1976, Directed by Glenn Jordan, with Blythe Danner, Frank Langella, Tim O'Connor, 120 min.
57. Bizet - Carmen, with Placido Domingo
58. Tennessee Williams - the Glass Menagerie, with Joan Woodward
59. Moliere - Le Bourgeois Gentilhomme
60. Funny Face, Fred Astair and Audrey Hepburn
61. Funny Girl, Barbra Steisand
62. Moliere - L'ecole des Femmes, Bernard Blier
63. For me and my Girl
64. Moliere - Les Femmes Savantes
65. Moliere - Les Fourberies de Scapin
66. Jacques Offenbach - La Belle Helene
67. Lloyd Weber - Evita

68. Guys and Dolls
69. Grease, John Travolta, Olivia Newton John
70. Gentlemen Prefer Blondes, Marilyn Monroe
71. Gigi, piece avec Danielle Darieux
72. Moliere - George Dandin
73. La Touche Etoile, le Theatre Lucernaire, Satire
74. Gilbert & Sullivan - Topsy Turvy
75. Hair
76. Shakespeare - Hamlet, Mel Gibson
77. Hello Dolly, Barbra Streisand
78. Victor Hugo - Hernani
79. Tennessee Williams - A Streetcar Named Desire
80. Puccini - Tosca
81. Irma la Douce
82. The King and I, Yul Brinner and Deborah Kerr
83. William Shakespeare, King Lear
84. Kiss Me Kate, Howard Keel and Kathryn Grayson
85. Mozart - Le Nozze de Figaro
86. Oklahoma
87. Jacques Offenbach - Les Contes d'Hoffman
88. Jacques Offenbach - La Vie Parisienne
89. William Shakespeare - Othello, Orson Wells
90. Irving Berlin - Annie Get Your Gun, with Betty Hutton and Howard Keel
91. Eugene O' Neill - Long Day's Journey into Night, Kathrin Hepburn
92. The Pajama Games

93. Paint Your Wagon
94. Gershwin - Porgy and Bess
95. Puccini - La Boheme, with Andrea Boccelli
96. Leoncavallo - I Pagliacci
97. Delibes - Lakme, with Joan Sutherland
98. William Shakespeare - Richard III, with Laurence Olivier
99. William Shakespeare - Richard II
100. William Shakespeare - Romeo and Juliet, with Leslie Howard and Norma Shearer and film with Franco Zeffirelli
101. Saint Saens - Samson et Dalilah
102. There is no Business Like Show Business
103. Showboat
104. William Shakespeare - Twelfth Night
105. Puccini - Turandot
106. Seven Brides for Seven Brothers, with Jane Powell and Howard Keel
107. Verdi - Aida
108. Verdi - La Traviata
109. Cabaret with Lisa Minelli
110. Victor Herbert - Naughty Marieta
111. Verdi - Un Ballo di Mascara
112. Casablan with Yehoram Gaon
113. Mascagni - Cavaleria Rusticana, with Placido Domingo
114. 42nd Street
115. Romancero Sefardi
116. Lerner and Loewe, My Fair Lady
117. Leonard Bernstein - West Side Story

118. Edmond Rostand - Cyrano de Bergerac with Gerard Depardieux
119. Cover Girl with Rita Hayworth and Gene Kelly
120. Edward Albee - Who's Afraid of Virginia Wolf
121. Calamity Jane
122. William Shakespeare - Comedy of Errors
123. William Shakespeare - A Midsummer Night's Dream
124. Gilbert and Sullivan - The Mikado
125. Puccini - Madama Butterfly
126. William Shakespeare - Macbeth, Polanski
127. William Shakespeare - Much Ado About Nothing, with Kenneth Branna, Ema Thomson, Densel Washington
128. Moliere - Le Misanthrope
129. Marivaux - On ne Badine pas avec L'amour
130. South Pacific
131. Singin' in the Rain, with Gene Kelly, Debbie Reynolds, O' Connor
132. Gershwin - Shall we Dance?, with Fred Astaire, Ginger Rogers
133. Sacha Guitry - Le Comedien
134. Voltaire – Zadig
135. Gershwin - American in Paris
136. Anchors Away with Gene Kelly and Frank Sinatra
137. Henry Rousell - Violetas Imperiales with Carmen Sevilla and Luis Mariano
138. August Strindberg, Miss Julie, 1999, 103 min., Director Mike Figgis, with Saffron Burrows & Peter Mullan
139. Wagner – Tristan und Isolde, with Siegfried Jerusalem, Waltraud Meier, Chor und Orchester der Bayreuther Festspiele, Conductor Daniel Barenboim
140. Nikos Kazantzakis – Zorba the Greek, 1964, 142 min., Director Mihalis Kakogiannis, with Anthony Quinn, Alan Bates, Irene Papas, Lila Kedrova.

HISTORY OF EUROPEAN THEATER

Wikipedia - Theatre probably arose as a performance of ritual activities that did not require initiation on the part of the spectator. This similarity of early theatre to ritual is negatively attested by [Aristotle](#), who in his *Poetics* defined theatre in contrast to the performances of [sacred mysteries](#): theatre did not require the spectator to fast, drink the [kykeon](#), or march in a procession; however theatre did resemble the sacred mysteries in the sense that it brought purification and healing to the spectator by means of a vision, the *theama*. The physical location of such performances was accordingly named *theatron* (theater in Hebrew). According to the historians Oscar Brockett and Franklin Hildy, rituals typically include elements that entertain or give pleasure, such as [costumes](#) and [masks](#) as well as skilled performers. As societies grew more complex, these spectacular elements began to be acted out under non-ritualistic conditions. As this occurred, the first steps towards theatre as an autonomous activity were being taken. Greek theatre, most developed in [Athens](#), is the root of the Western tradition; *theatre* is in origin a Greek word. It was part of a broader [culture](#) of theatricality and performance in [classical Greece](#) that included [festivals](#), [religious rituals](#), [politics](#), [law](#), athletics and gymnastics, [music](#), [poetry](#), weddings, funerals, and [symposia](#). Participation in the city-state's many festivals—and attendance at the [City Dionysia](#) as an audience member (or even as a participant in the theatrical productions) in particular—was an important part of [citizenship](#). Civic participation also involved the evaluation of the [rhetoric](#) of [orators](#) evidenced in performances in the [law-court](#) or [political assembly](#), both of which were understood as analogous to the theatre and increasingly came to absorb its dramatic vocabulary. The [theatre of ancient Greece](#) consisted of three types of [drama](#): [tragedy](#), [comedy](#), the [satyr play](#).

Athenian tragedy—the oldest surviving form of tragedy—is a type of [dance-drama](#) that formed an important part of the theatrical culture of the city-state.^[9] Having emerged sometime during the 6th century BC, it flowered during the 5th century BC (from the end of which it began to spread throughout the Greek world) and continued to be popular until the beginning of the [Hellenistic period](#).^[10] No tragedies from the 6th century and only 32 of the more than a thousand that were performed in during the 5th century have survived.^[11] We have complete texts [extant](#) by [Aeschylus](#), [Sophocles](#), and [Euripides](#).^[12] The origins of tragedy remain obscure, though by the 5th century it was [institutionalised](#) in competitions (*agon*) held as part of festivities celebrating [Dionysos](#) (the [god](#) of [wine](#) and [fertility](#)).^[13] As contestants in the City Dionysia's competition (the most prestigious of the festivals to stage drama), playwrights were required to present a [tetralogy](#) of plays (though the individual works were not necessarily connected by story or theme), which usually consisted of three tragedies and one satyr play.^[14] The performance of tragedies at the City Dionysia may have begun as early as 534 BC; official records (*didaskaliai*) begin from 501 BC, when the satyr play was introduced.^[15] Most Athenian tragedies dramatise events from [Greek mythology](#), though *The Persians*—which stages the [Persian](#) response to news of their military defeat at the [Battle of Salamis](#) in 480 BC—is the notable exception in the surviving drama.^[16] When Aeschylus won first prize for it at the City Dionysia in 472 BC, he had been writing tragedies for more than 25 years, yet its tragic treatment of recent history is the earliest example of drama to survive.^[17] More than 130 years later, the philosopher [Aristotle](#) analysed 5th-century Athenian tragedy in the oldest surviving work of [dramatic theory](#)—his *Poetics* (c. 335 BC). [Athenian comedy](#) is conventionally divided into three periods, "Old Comedy", "Middle Comedy", and "New Comedy". Old Comedy survives today largely in the form of the eleven surviving plays

of [Aristophanes](#), while Middle Comedy is largely lost (preserved only in relatively short fragments in authors such as [Athenaeus of Naucratis](#)). New Comedy is known primarily from the substantial papyrus fragments of plays by [Menander](#). Aristotle defined comedy as a representation of laughable people that involves some kind of error or ugliness that does not cause pain or destruction.^[18]

Western theatre developed and expanded considerably under the [Romans](#). The Roman historian [Livy](#) wrote that the Romans first experienced theatre in the 4th century BC, with a performance by [Etruscan](#) actors.^[19] Beacham argues that Romans had been familiar with "pre-theatrical practices" for some time before that recorded contact.^[20] The [theatre of ancient Rome](#) was a thriving and diverse art form, ranging from [festival](#) performances of [street theatre](#), nude dancing, and acrobatics, to the staging of [Plautus](#)'s broadly appealing situation [comedies](#), to the [high-style](#), verbally elaborate [tragedies](#) of [Seneca](#). Although Rome had a native tradition of performance, the [Hellenization](#) of [Roman culture](#) in the 3rd century BC had a profound and energizing effect on Roman theatre and encouraged the development of [Latin literature](#) of the highest quality for the stage. Following the expansion of the [Roman Republic](#) (509–27 BC) into several Greek territories between 270–240 BC, Rome encountered [Greek drama](#).^[21] From the later years of the republic and by means of the [Roman Empire](#) (27 BC-476 AD), theatre spread west across Europe, around the Mediterranean and reached England; Roman theatre was more varied, extensive and sophisticated than that of any culture before it.^[22] While Greek drama continued to be performed throughout the Roman period, the year 240 BC marks the beginning of regular Roman drama.^[23] From the beginning of the empire, however, interest in full-length drama declined in favour of a broader variety of theatrical entertainments.^[24]

The first important works of [Roman literature](#) were the [tragedies](#) and [comedies](#) that [Livius Andronicus](#) wrote from 240 BC.^[25] Five years later, [Gnaeus Naevius](#) also began to write drama.^[25] No plays from either writer have survived. While both dramatists composed in both [genres](#), Andronicus was most appreciated for his tragedies and Naevius for his comedies; their successors tended to specialise in one or the other, which led to a separation of the subsequent development of each type of drama.^[25] By the beginning of the 2nd century BC, drama was firmly established in Rome and a [guild](#) of writers (*collegium poetarum*) had been formed. The Roman comedies that have survived are all [fabula palliata](#) (comedies based on Greek subjects) and come from two dramatists: [Titus Maccius Plautus](#) (Plautus) and [Publius Terentius Afer](#) (Terence).^[27] In re-working the Greek originals, the Roman comic dramatists abolished the role of the [chorus](#) in dividing the drama into [episodes](#) and introduced musical accompaniment to its [dialogue](#) (between one-third of the dialogue in the comedies of Plautus and two-thirds in those of Terence).^[28] The action of all scenes is set in the exterior location of a street and its complications often follow from [eavesdropping](#).^[28] Plautus, the more popular of the two, wrote between 205 and 184 BC and twenty of his comedies survive, of which his [farces](#) are best known; he was admired for the [wit](#) of his dialogue and his use of a variety of [poetic meters](#).^[29] All of the six comedies that Terence wrote between 166 and 160 BC have survived; the complexity of his plots, in which he often combined several Greek originals, was sometimes denounced, but his double-plots enabled a sophisticated presentation of contrasting human behaviour. No early Roman tragedy survives, though it was highly regarded in its day; historians know of three early tragedians—[Quintus Ennius](#), [Marcus Pacuvius](#) and [Lucius Accius](#). From the time of the empire, the work of 2 tragedians survives—1 is an unknown author, while the other is the [Stoic philosopher Seneca](#). 9 of Seneca's tragedies survive, all of which are *fabula crepidata* (tragedies adapted from Greek originals); his [Phaedra](#), for example, was based on [Euripides' Hippolytus](#). Historians do not

know who wrote the only [extant](#) example of the *fabula praetexta* (tragedies based on Roman subjects), [Octavia](#), but in former times it was mistakenly attributed to Seneca due to his appearance as a [character](#) in the tragedy.

As the [Western Roman Empire](#) fell into decay through the 4th and 5th centuries, the seat of Roman power shifted to [Constantinople](#) and the [Eastern Roman Empire](#), today called the [Byzantine Empire](#). While surviving evidence about Byzantine theatre is slight, existing records show that [mime](#), [pantomime](#), scenes or recitations from [tragedies](#) and [comedies](#), [dances](#), and other entertainments were very popular. Constantinople had two theatres that were in use as late as the 5th century.^[32] However, the true importance of the Byzantines in theatrical history is their preservation of many classical Greek texts and the compilation of a massive encyclopedia called the [Suda](#), from which is derived a large amount of contemporary information on Greek theatre. From the 5th century, [Western Europe](#) was plunged into a period of general disorder that lasted (with a brief period of stability under the [Carolingian Empire](#) in the 9th century) until the 10th century. As such, most organized theatrical activities disappeared in [Western Europe](#). While it seems that small nomadic bands traveled around Europe throughout the period, performing wherever they could find an audience, there is no evidence that they produced anything but crude scenes.^[33] These performers were denounced by the [Church](#) during the [Dark Ages](#) as they were viewed as dangerous and pagan.

By the [Early Middle Ages](#), churches in [Europe](#) began staging dramatized versions of particular biblical events on specific days of the year. These dramatizations were included in order to vivify annual celebrations.^[34] Symbolic objects and actions – [vestments](#), [altars](#), [censers](#), and [pantomime](#) performed by priests – recalled the events which Christian ritual celebrates. These were extensive sets of visual signs that could be used to communicate with a largely illiterate audience. These performances developed into [liturgical dramas](#), the earliest of which is the *Whom do you Seek* (*Quem-Quaeritis*) Easter trope, dating from ca. 925.^[34] Liturgical drama was sung responsively by two groups and did not involve actors impersonating characters. However, sometime between 965 and 975, [Æthelwold of Winchester](#) composed the *Regularis Concordia* (*Monastic Agreement*) which contains a playlet complete with directions for performance. [Hrosvitha](#) (c. 935 – 973), a canoness in northern [Germany](#), wrote six plays modeled on [Terence](#)'s comedies but using religious subjects. These six plays – *Abraham*, *Callimachus*, *Dulcitius*, *Gallicanus*, *Paphnutius*, and *Sapientia* – are the first known plays composed by a female dramatist and the first identifiable Western dramatic works of the post-classical era.^[35] They were first published in 1501 and had considerable influence on religious and didactic plays of the sixteenth century. Hrosvitha was followed by [Hildegard of Bingen](#) (d. 1179), a [Benedictine](#) abbess, who wrote a [Latin musical](#) drama called *Ordo Virtutum* in 1155.

As the [Viking](#) invasions ceased in the middle of the 11th century, [liturgical drama](#) had spread from [Russia](#) to [Scandinavia](#) to [Italy](#). Only in [Muslim-occupied Spain](#) were liturgical dramas not presented at all. Despite the large number of liturgical dramas that have survived from the period, many churches would have only performed one or two per year and a larger number never performed any at all. The [Feast of Fools](#) was especially important in the development of comedy. The festival inverted the status of the lesser clergy and allowed them to ridicule their superiors and the routine of church life. Sometimes plays were staged as part of the occasion and a certain amount of [burlesque](#) and [comedy](#) crept into these performances. Although comic episodes had to truly wait until the separation of drama from the liturgy, the Feast of Fools undoubtedly had a profound effect on the development of comedy in both religious and secular plays. Performance of religious plays outside of the church began sometime in the

12th century through a traditionally accepted process of merging shorter liturgical dramas into longer plays which were then translated into [vernacular](#) and performed by laymen. *The Mystery of Adam* (1150) gives credence to this theory as its detailed stage direction suggest that it was staged outdoors. A number of other plays from the period survive, including *La Seinte Resurrection* ([Norman](#)), *The Play of the Magi Kings* ([Spanish](#)), and *Sponsus* ([French](#)).

The importance of the [High Middle Ages](#) in the development of theatre was the [economic](#) and [political](#) changes that led to the formation of [guilds](#) and the growth of towns. This would lead to significant changes in the [Late Middle Ages](#). In the [British Isles](#), plays were produced in some 127 different towns during the Middle Ages. These vernacular [Mystery plays](#) were written in cycles of a large number of plays: [York](#) (48 plays), [Chester](#) (24), [Wakefield](#) (32) and [Unknown](#) (42). A larger number of plays survive from [France](#) and [Germany](#) in this period and some type of religious dramas were performed in nearly every European country in the [Late Middle Ages](#). Many of these plays contained [comedy](#), [devils](#), [villains](#) and [clowns](#). The majority of actors in these plays were drawn from the local population. For example, at [Valenciennes](#) in 1547, more than 100 roles were assigned to 72 actors.^[39] Plays were staged on [pageant wagon](#) stages, which were platforms mounted on wheels used to move scenery. Often providing their own costumes, amateur performers in England were exclusively male, but other countries had female performers. The platform stage, which was an unidentified space and not a specific locale, allowed for abrupt changes in location. [Morality plays](#) emerged as a distinct dramatic form around 1400 and flourished until 1550. The most interesting morality play is *The Castle of Perseverance* which depicts [mankind](#)'s progress from birth to death. However, the most famous morality play and perhaps best known medieval drama is *Everyman*. Everyman receives [Death](#)'s summons, struggles to escape and finally resigns himself to necessity. Along the way, he is deserted by [Kindred](#), [Goods](#), and [Fellowship](#) – only [Good Deeds](#) goes with him to the grave.

There were also a number of secular performances staged in the Middle Ages, the earliest of which is *The Play of the Greenwood* by [Adam de la Halle](#) in 1276. It contains satirical scenes and [folk](#) material such as [faeries](#) and other supernatural occurrences. [Farces](#) also rose dramatically in popularity after the 13th century. The majority of these plays come from [France](#) and [Germany](#) and are similar in tone and form, emphasizing [sex](#) and bodily excretions.^[40] The best known playwright of farces is [Hans Sachs](#) (1494–1576) who wrote 198 dramatic works. In England, *The Second Shepherds' Play* of the [Wakefield Cycle](#) is the best known early farce. However, farce did not appear independently in England until the 16th century with the work of [John Heywood](#) (1497–1580). A significant forerunner of the development of [Elizabethan](#) drama was the [Chambers of Rhetoric](#) in the [Low Countries](#).^[41] These societies were concerned with [poetry](#), [music](#) and [drama](#) and held contests to see which society could compose the best drama in relation to a question posed. At the end of the [Late Middle Ages](#), professional actors began to appear in [England](#) and [Europe](#). [Richard III](#) and [Henry VII](#) both maintained small companies of professional actors. Their plays were performed in the [Great Hall](#) of a nobleman's residence, often with a raised platform at one end for the audience and a "screen" at the other for the actors. Also important were [Mummers' plays](#), performed during the [Christmas](#) season, and court [masques](#). These masques were especially popular during the reign of [Henry VIII](#) who had a House of Revels built and an [Office of Revels](#) established in 1545. The end of medieval drama came about due to a number of factors, including the weakening power of the [Catholic Church](#), the [Protestant Reformation](#) and the banning of religious plays in many countries. [Elizabeth I](#) forbid all religious plays in 1558 and the great cycle plays had been silenced by the 1580s. Similarly, religious plays were banned in the [Netherlands](#) in 1539, the [Papal States](#) in 1547 and in [Paris](#) in 1548. The

abandonment of these plays destroyed the international theatre that had thereto existed and forced each country to develop its own form of drama. It also allowed dramatists to turn to secular subjects and the reviving interest in [Greek](#) and [Roman](#) theatre provided them with the perfect opportunity.

Commedia dell'arte troupes performed lively improvisational playlets across Europe for centuries. It originated in Italy in the 1560s. *Commedia dell'arte* was an actor-centred theatre, requiring little scenery and very few props. Plays did not originate from written drama but from scenarios called [lazzi](#), which were loose frameworks that provided the situations, complications, and outcome of the action, around which the actors would improvise. The plays utilised [stock characters](#), which could be divided into three groups: the lovers, the masters, and the servants. The lovers had different names and characteristics in most plays and often were the children of the master. The role of master was normally based on one of three stereotypes: [Pantalone](#), an elderly Venetian merchant; [Dottore](#), Pantalone's friend or rival, a [pedantic](#) doctor or lawyer who acted far more intelligent than he really was; and [Capitano](#), who was once a lover character, but evolved into a [braggart](#) who boasted of his exploits in love and war, but was often terrifically unskilled in both. He normally carried a sword and wore a cape and feathered headdress. The servant character (called [zanni](#)) had only one recurring role: [Arlecchino](#) (also called [Harlequin](#)). He was both cunning and ignorant, but an accomplished dancer and acrobat. He typically carried a wooden stick with a split in the middle so it made a loud noise when striking something. This "weapon" gave us the term "[slapstick](#)". A troupe typically consisted of 13 to 14 members. Most actors were paid by taking a share of the play's profits roughly equivalent to the size of their role. The style of theatre was in its peak from 1575 to 1650, but even after that time new scenarios were written and performed. The Venetian playwright [Carlo Goldoni](#) wrote a few scenarios starting in 1734, but since he considered the genre too vulgar, he refined the topics of his own to be more sophisticated. He also wrote several plays based on real events, in which he included *commedia* characters.

During its [Golden Age](#), roughly from 1590 to 1681,^[43] [Spain](#) saw a monumental increase in the production of live [theatre](#) as well as the importance of theatre within Spanish society. It was an accessible art form for all participants in Renaissance Spain, being both highly sponsored by the aristocratic class and highly attended by the lower classes.^[44] The volume and variety of Spanish plays during the Golden Age was unprecedented in the history of world theatre, surpassing, for example, the dramatic production of the [English Renaissance](#) by a factor of at least four.^{[43][44][45]} Although this volume has been as much a source of criticism as praise for Spanish Golden Age theatre, for emphasizing quantity before quality,^[46] a large number of the 10,000^[44] to 30,000^[46] plays of this period are still considered masterpieces. Major artists of the period included [Lope de Vega](#), a contemporary of Shakespeare, often, and contemporaneously, seen his parallel for the Spanish stage,^[49] and [Calderon de la Barca](#), inventor of the zarzuela^[50] and Lope's successor as the preeminent Spanish dramatist.^[51] [Gil Vicente](#), [Lope de Rueda](#), and [Juan del Encina](#) helped to establish the foundations of Spanish theatre in the mid-sixteenth centuries,^{[52][53][54]} while [Francisco de Rojas Zorrilla](#) and [Tirso de Molina](#) made significant contributions in the later half of the Golden Age.^{[55][56]} Important performers included Lope de Rueda (previously mentioned among the playwrights) and later [Juan Rana](#).^{[57][58]}

The sources of influence for the emerging national theatre of Spain were as diverse as the theatre that nation ended up producing. Storytelling traditions originating in Italian [Commedia dell'arte](#)^[59] and the uniquely Spanish expression of [Western Europe](#)'s traveling minstrel

entertainments^{[60][61]} contributed a populist influence on the narratives and the music, respectively, of early Spanish theatre. Neo-Aristotelian criticism and liturgical dramas, on the other hand, contributed literary and moralistic perspectives.^{[62][63]} In turn, Spanish Golden Age theatre has dramatically influenced the theatre of later generations in Europe and throughout the world. Spanish drama had an immediate and significant impact on the contemporary developments in [English Renaissance theatre](#).^[47] It has also had a lasting impact on theatre throughout the Spanish speaking world.^[64] Additionally, a growing number of works are being translated, increasing the reach of Spanish Golden Age theatre and strengthening its reputation among critics and theatre patrons.^[65]

Renaissance theatre derived from several medieval theatre traditions, such as the mystery plays that formed a part of religious festivals in England and other parts of Europe during the Middle Ages. Other sources include the "[morality plays](#)" and the "University drama" that attempted to recreate Athenian tragedy. The Italian tradition of *Commedia dell'arte*, as well as the elaborate [masques](#) frequently presented at court, also contributed to the shaping of public theatre. Since before the reign of Elizabeth I, [companies of players](#) were attached to households of leading aristocrats and performed seasonally in various locations. These became the foundation for the professional players that performed on the [Elizabethan stage](#). The tours of these players gradually replaced the performances of the mystery and morality plays by local players, and a 1572 law eliminated the remaining companies lacking formal patronage by labelling them [vagabonds](#). The City of London authorities were generally hostile to public performances, but its hostility was overmatched by the Queen's taste for plays and the Privy Council's support. Theatres sprang up in suburbs, especially in the liberty of Southwark, accessible across the Thames to city dwellers but beyond the authority's control. The companies maintained the pretence that their public performances were mere rehearsals for the frequent performances before the Queen, but while the latter did grant prestige, the former were the real source of the income for the professional players. Along with the economics of the profession, the character of the drama changed toward the end of the period. Under Elizabeth, the drama was a unified expression as far as social class was concerned: the Court watched the same plays the commoners saw in the public playhouses. With the development of the private theatres, drama became more oriented toward the tastes and values of an upper-class audience. By the later part of the reign of Charles I, few new plays were being written for the public theatres, which sustained themselves on the accumulated works of the previous decades.^[66]

[Puritan](#) opposition to the stage (informed by the arguments of the early Church Fathers who had written screeds against the decadent and violent entertainments of the Romans) argued not only that the stage in general was [pagan](#), but that any play that represented a religious figure was inherently [idolatrous](#). In 1642, at the outbreak of the [English Civil War](#), the Protestant authorities banned the performance of all plays within the city limits of London. A sweeping assault against the alleged immoralities of the theatre crushed whatever remained in England of the dramatic tradition. After public stage performances had been banned for 18 years by the Puritan regime, the re-opening of the theatres in 1660 signaled a renaissance of English drama. With the restoration of the monarch in 1660 came the restoration of the and the reopening of the theatre. English [comedies](#) written and performed in the [Restoration](#) period from 1660 to 1710 are collectively called "Restoration comedy". Restoration comedy is notorious for its [sexual](#) explicitness, a quality encouraged by [Charles II](#) (1660–1685) personally and by the [rakish aristocratic ethos](#) of his [court](#). At this point in history, women were allowed the play the parts of women and not men as was the case. socially diverse audiences included both aristocrats, their servants and hangers-on, and a substantial middle-

class segment. Restoration audiences liked to see good triumph in their tragedies and rightful government restored. In comedy they liked to see the love-lives of the young and fashionable, with a central couple bringing their courtship to a successful conclusion (often overcoming the opposition of the elders to do so). Heroines had to be chaste, but were independent-minded and outspoken; now that they were played by women, there was more mileage for the playwright in disguising them in men's clothes or giving them narrow escape from rape. These playgoers were attracted to the comedies by up-to-the-minute topical writing, by crowded and bustling [plots](#), by the introduction of the first professional actresses, and by the rise of the first celebrity actors. To non-theatre-goers these comedies were widely seen as licentious and morally suspect, holding up the antics of a small, privileged, and decadent class for admiration. This same class dominated the audiences of the Restoration theatre. This period saw the first professional woman playwright, [Aphra Behn](#). As a reaction to the decadence of Charles II era productions, [sentimental comedy](#) grew in popularity. This genre focused on encouraging virtuous behavior by showing middle class characters overcoming a series of moral trials. Playwrights like [Colley Cibber](#) and [Richard Steele](#) believed that humans were inherently good but capable of being led astray. Through plays such as [The Conscious Lovers](#) and [Love's Last Shift](#) they strove to appeal to an audience's noble sentiments in order that viewers could be reformed.^{[67][68]}

The **Restoration spectacular**, or elaborately staged "machine play", hit the [London](#) public stage in the late 17th-century [Restoration](#) period, enthralling audiences with action, music, dance, moveable [scenery](#), [baroque illusionistic painting](#), gorgeous costumes, and [special effects](#) such as [trapdoor](#) tricks, "flying" actors, and [fireworks](#). These shows have always had a bad reputation as a vulgar and commercial threat to the witty, "legitimate" [Restoration drama](#); however, they drew Londoners in unprecedented numbers and left them dazzled and delighted. Basically home-grown and with roots in the early 17th-century [court masque](#), though never ashamed of borrowing ideas and stage technology from [French opera](#), the spectaculars are sometimes called "English opera". However, the variety of them is so untidy that most theatre historians despair of defining them as a [genre](#) at all. Only a handful of works of this period are usually accorded the term "opera", as the musical dimension of most of them is subordinate to the visual. It was spectacle and scenery that drew in the crowds, as shown by many comments in the diary of the theatre-lover [Samuel Pepys](#). The expense of mounting ever more elaborate scenic productions drove the two competing theatre companies into a dangerous spiral of huge expenditure and correspondingly huge losses or profits. A fiasco such as [John Dryden's](#) [Albion and Albanus](#) would leave a company in serious debt, while blockbusters like [Thomas Shadwell's](#) [Psyche](#) or Dryden's [King Arthur](#) would put it comfortably in the black for a long time. [Neoclassicism](#) was the dominant form of theatre in the 18th century. It demanded [decorum](#) and rigorous adherence to the [classical unities](#). Neoclassical theatre as well as the time period is characterized by its grandiosity. The costumes and scenery were intricate and elaborate. The acting is characterized by large gestures and melodrama. Neoclassical theatre encompasses the Restoration, Augustan, and Johnstian Ages. In one sense, the neo-classical age directly follows the time of the Renaissance. Theatres of the early 18th century – sexual farces of the Restoration were superseded by politically satirical comedies, 1737 Parliament passed the Stage Licensing Act which introduced state censorship of public performances and limited the number of theatres in London to two.

Theatre in the 19th century is divided into two parts: early and late. The early period was dominated by [melodrama](#) and [Romanticism](#). Beginning in [France](#), melodrama became the most popular theatrical form. [August von Kotzebue's](#) *Misanthropy and Repentance* (1789) is

often considered the first melodramatic play. The plays of Kotzebue and [René Charles Guilbert de Pixérécourt](#) established melodrama as the dominant dramatic form of the early 19th century.^[72] In [Germany](#), there was a trend toward historic accuracy in [costumes](#) and [settings](#), a revolution in theatre architecture, and the introduction of the theatrical form of [German Romanticism](#). Influenced by trends in [19th-century philosophy](#) and the [visual arts](#), German writers were increasingly fascinated with their [Teutonic](#) past and had a growing sense of [nationalism](#). The plays of [Gotthold Ephraim Lessing](#), [Johann Wolfgang von Goethe](#), [Friedrich Schiller](#), and other [Sturm und Drang](#) playwrights, inspired a growing faith in feeling and instinct as guides to moral behavior.

In [Britain](#), [Percy Bysshe Shelley](#) and [Lord Byron](#) were the most important dramatists of their time (although Shelley's plays were not performed until later in the century). In the minor theatres, [burletta](#) and [melodrama](#) were the most popular. Kotzebue's plays were translated into English and [Thomas Holcroft](#)'s *A Tale of Mystery* was the first of many English melodramas. [Pierce Egan](#), [Douglas William Jerrold](#), [Edward Fitzball](#), and [John Baldwin Buckstone](#) initiated a trend towards more contemporary and rural stories in preference to the usual historical or fantastical melodramas. [James Sheridan Knowles](#) and [Edward George Bulwer-Lytton](#) established a "gentlemanly" drama that began to re-establish the former prestige of the theatre with the [aristocracy](#).^[73] The later period of the 19th century saw the rise of two conflicting types of drama: [realism](#) and non-realism, such as [Symbolism](#) and precursors of [Expressionism](#). Realism began earlier in the 19th century in Russia than elsewhere in Europe and took a more uncompromising form.^[74] Beginning with the plays of [Ivan Turgenev](#) (who used "domestic detail to reveal inner turmoil"), [Aleksandr Ostrovsky](#) (who was Russia's first professional playwright), [Aleksey Pisemsky](#) (whose *A Bitter Fate* (1859) anticipated [Naturalism](#)), and [Leo Tolstoy](#) (whose *The Power of Darkness* (1886) is "one of the most effective of naturalistic plays"), a tradition of psychological realism in Russia culminated with the establishment of the [Moscow Art Theatre](#) by [Konstantin Stanislavski](#) and [Vladimir Nemirovich-Danchenko](#).^[75]

The most important theatrical force in later 19th-century Germany was that of [Georg II, Duke of Saxe-Meiningen](#) and his [Meiningen Ensemble](#), under the direction of [Ludwig Chronegk](#). The Ensemble's productions are often considered the most historically accurate of the 19th century, although his primary goal was to serve the interests of the playwright. The Meiningen Ensemble stands at the beginning of the new movement toward unified production (or what [Richard Wagner](#) would call the *Gesamtkunstwerk*) and the rise of the [director](#) (at the expense of the [actor](#)) as the dominant artist in theatre-making.^[76] [Naturalism](#), a theatrical movement born out of [Charles Darwin](#)'s *The Origin of Species* (1859) and contemporary political and economic conditions, found its main proponent in [Émile Zola](#). The realisation of Zola's ideas was hindered by a lack of capable dramatists writing naturalist drama. [André Antoine](#) emerged in the 1880s with his *Théâtre Libre* that was only open to members and therefore was exempt from censorship. He quickly won the approval of Zola and began to stage Naturalistic works and other foreign realistic pieces.^[77]

In Britain, melodramas, light comedies, operas, Shakespeare and classic English drama, [Victorian burlesque](#), [pantomimes](#), translations of French farces and, from the 1860s, French operettas, continued to be popular. So successful were the [comic operas](#) of [Gilbert and Sullivan](#), such as *H.M.S. Pinafore* (1878) and *The Mikado* (1885), that they greatly expanded the audience for musical theatre.^[78] This, together with much improved street lighting and transportation in London and New York led to a late Victorian and Edwardian theatre building boom in the West End and on Broadway. Later, the work of [Henry Arthur Jones](#) and

[Arthur Wing Pinero](#) initiated a new direction on the English stage. While their work paved the way, the development of more significant drama owes itself most to the playwright [Henrik Ibsen](#). Ibsen was born in [Norway](#) in 1828. He wrote twenty-five plays, the most famous of which are [A Doll's House](#) (1879), [Ghosts](#) (1881), [The Wild Duck](#) (1884), and [Hedda Gabler](#) (1890). In addition, his works [Rosmersholm](#) (1886) and [When We Dead Awaken](#) (1899) evoke a sense of mysterious forces at work in human destiny, which was to be a major theme of [symbolism](#) and the so-called "[Theatre of the Absurd](#)". After Ibsen, British theatre experienced revitalization with the work of [George Bernard Shaw](#), [Oscar Wilde](#), [John Galsworthy](#), [William Butler Yeats](#), and [Harley Granville Barker](#). Unlike most of the gloomy and intensely serious work of their contemporaries, Shaw and Wilde wrote primarily in the [comic form](#). [Edwardian musical comedies](#) were extremely popular, appealing to the tastes of the middle class in the [Gay Nineties](#)^[79] and catering to the public's preference for escapist entertainment during World War I.

While much [20th-century theatre](#) continued and extended the projects of [realism](#) and [Naturalism](#), there was also a great deal of [experimental theatre](#) that rejected those conventions. These experiments form part of the [modernist](#) and [postmodernist movements](#) and included forms of [political theatre](#) as well as more aesthetically orientated work. Examples include: [Epic theatre](#), the [Theatre of Cruelty](#), and the so-called "[Theatre of the Absurd](#)". The term [theatre practitioner](#) came to be used to describe someone who both creates [theatrical performances](#) and who produces a [theoretical discourse](#) that informs their practical work.^[80] A theatre practitioner may be a [director](#), a [dramatist](#), an [actor](#), or—characteristically—often a combination of these traditionally separate roles. "Theatre practice" describes the collective work that various theatre practitioners do.^[81] It is used to describe theatre [praxis](#) from [Konstantin Stanislavski](#)'s development of his '[system](#)', through [Vsevolod Meyerhold](#)'s [biomechanics](#), [Bertolt Brecht](#)'s [epic](#) and [Jerzy Grotowski](#)'s [poor theatre](#), down to the present day, with contemporary theatre practitioners including [Augusto Boal](#) with his [Theatre of the Oppressed](#), [Dario Fo](#)'s [popular theatre](#), [Eugenio Barba](#)'s [theatre anthropology](#) and [Anne Bogart](#)'s [viewpoints](#).^[82] Other key figures of 20th-century theatre include: [Antonin Artaud](#), [August Strindberg](#), [Anton Chekhov](#), [Frank Wedekind](#), [Maurice Maeterlinck](#), [Federico García Lorca](#), [Eugene O'Neill](#), [Luigi Pirandello](#), [George Bernard Shaw](#), [Gertrude Stein](#), [Ernst Toller](#), [Vladimir Mayakovsky](#), [Arthur Miller](#), [Tennessee Williams](#), [Jean Genet](#), [Eugène Ionesco](#), [Samuel Beckett](#), [Harold Pinter](#), [Friedrich Dürrenmatt](#), [Heiner Müller](#), and [Caryl Churchill](#). A number of [aesthetic](#) movements continued or emerged in the 20th century, including: [Naturalism](#), [Realism](#), [Dadaism](#), [Expressionism](#), [Surrealism](#) and the [Theatre of Cruelty](#), [Theatre of the Absurd](#), [Postmodernism](#). After the great popularity of the British [Edwardian musical comedies](#), the American [musical theatre](#) came to dominate the musical stage, beginning with the [Princess Theatre](#) musicals, followed by the works of the Gershwin brothers, [Cole Porter](#), [Jerome Kern](#), [Rodgers and Hart](#), and later [Rodgers and Hammerstein](#). This is the twelfth I love most and I have expanded on this in my book, although I prefer to define the twelfth of the modern theater from the last decades of the 19th century to the last decades of the 20th century, thus adding to this list Henrik Ibsen, Oscar Wilde, etc.

CLASSICAL MUSIC – THE BEGINNING OF A BEAUTIFUL FRIENDSHIP

I love most plays and theater, this is an unconditional love, and the first literature that I have written was a five acts play in a classical format. My earliest memory was a performance of the 6 acts play *L'Aiglon*, and I read at home all the plays by Racine, Corneille and the classics. I came to love classical music through a rational choice, not through the heart as plays but through my head. I wrote in my Diary how I started hearing classical music and we can follow this process - I didn't hear at home classical music and never went to a concert until the age of 17. I read classical literature since an early childhood and at the age of 17 I felt the urge to hear only classical music – somehow, I thought that to complement my readings of Moliere, Lamartine, Musset, Racine, Cervantes, Shakespeare, and of course my favorite writers Zola, Hugo and Dumas, I should hear also classical music. I was sick and tired of the rock music of 1961 (!) with all the noise and shout, and possibly because I was disappointed by the fact that I was not invited to the rock parties and wanted to differentiate myself from my friends (always the conscious and unconscious reasons), I decided that from now on I would hear only classical music. As usual, I prepared myself thoroughly, reading everything about the 100 best composers, the 100 best operas, the 100 best concerts, symphonies, and so on and jumped into the cold water. After reading the 100 best operas book I made a quiz, guessing the names of the Operas' composers – the first time I knew 76, the second time – 97, and the third time – all of them. On the same day of the decision I read Moliere's *Les femmes savantes*, the best comedy that I have read (by then).

I started to go to concerts, to see films with ballets (The Royal Ballet with *Swan Lake*, *The Firebird* and *Ondine*), to hear on the radio classical music, and I started to like it, first of all with Beethoven Fifth, Mendelssohn's violin concerto, *Carmen* and Mozart, and later on with Mahler symphonies, Debussy, *Rigoletto*, Brecht/Weill, Gounod, Beethoven's Ninth, and Bach. Friends and family who didn't know what to do with their old classical records gave them to me and I heard Yasha Heifetz, Arturo Toscanini, Rudolf Serkin, Eugene Ormandy, conducting Mozart's Jupiter Symphony, Beethoven's first, Spring Sonata, 1812 by Tchaikovsky, Saint Saens, etc. I even organized a trip with two friends to the Ein Gev Festival at Lake Tiberias where we saw Isaac Stern playing the Violin Concerti of Mendelssohn and Beethoven at the same concert. This was a revelation, until now I saw concerts with second rate musicians as I couldn't afford to go to the best concerts, and heard good conductors in very old records. For the first time in my life I saw the best violinist playing the best concerti with the Israeli Philharmonic Orchestra. I felt elated, and didn't notice how the time flies in this 3 hour concert, by the Lake Tiberias.

There was only a slight problem, the concert ended at midnight, there were no more buses at this hour, and we couldn't afford to pay for a hotel. So, we got into the bus of the Philharmonic Orchestra (I wrote - "they were really unpleasant, they played cards all the time, smoke a lot, didn't open windows, this was a nightmare"). The bus brought us at 2.30 am to Tel Aviv, 100 kms from home in Haifa. But this was not the end of our ordeal, the bus driver noticed us when all the others left and threatened to take us to the police. I told him that this was a good idea as the police will take us home to Haifa and wouldn't arrest music loving youngsters who were invited by the musicians to join their bus. The bus driver took us to the Central Bus station, but as it was too early to take a bus to Haifa we hitch-hiked and arrived at

home at six o'clock in the morning. I was tired as never before, but this was for me a founding experience. An everlasting pact was signed with the classical music, and from now on we would never part. Well, speaking of ordeals, I experienced another one – once at the Sorbonne's courtyard, when I was on visit to Paris for my PhD, I went to see a 3-hour modern play, and in the middle of the performance it started to rain – most of the students left, but I with a few others remained to the end, as I rationalized that if the actors got soaked I couldn't afford to leave them alone.

I love Jazz music and go to Jazz performances in Israel and abroad, I have many jazz records and like most New Orleans jazz and cool jazz. My favorite performers are/were: Louis Armstrong, Ella Fitzgerald, Ray Charles, Mahalia Jackson, Duke Ellington, Thelonious Monk, Chick Corea, Bessie Smith, B. B. King, Bennie Goodman, Dizzy Gillespie, Miles Davis, Sidney Bechet, Charlie Parker, Stan Getz, Kenny Clarke, Lionel Hampton, Charles Mingus, Jimi Hendrix, Count Basie... But in Jazz like in classical music, opera, history, poetry, philosophy, geography, travel, and art, I perceive myself as a dilettante, as my expertise is mainly in plays, films, linguistics, novels, biographies, ethics, folk songs, and in business – M&A, turnarounds, know-how transfer, business plans, international business, finance, strategic planning, sales, teaching and writing.

The 60+ concerts and shows that I have seen in 2011-2013:

60+ Concerts as follows:

Piano Recital with Adam Laloum and Dorel Golan: Mozart, Beethoven, Shumann, Chopin

Piano Recital with Boris Giltburg: Prokofiev, Bartok, Liszt, Franck

Carmel Quartet: Schumann, Britten, Borodin

Maestros Quartet: Ravel, Beethoven, Brahms

Rishonim Quartet: Mozart, Ravel, Dvorak

Alexander Gurfinkel – Clarinet, Janna Gandelman – Violin, Ron Trachtman – Piano: Poulenc, Grieg, Rossini, Schubert, Khachaturian.

Ilan Rechtman – piano, Peter Winograd – violin, Wolfram Koessel – cello in Beethoven: Spring Sonata, Piano Trio in C minor, Piano Trio in E flat Major

Lecture and Recital – Dr. Orit Wolf, Boris Giltburg – Tchaikovsky and Rachmaninoff

Other Chamber Music Concerts

30 Shows of International and Israeli Artists, including Los Paraguayos, Carmina Burana, Moti Giladi, The Gevatron, Carmel Tadmor, Tilda Rewjan, Effi Netzer, Arik Davidov, Miri Aloni, Liran Saporta, Stand-up Comedy – Guri Alfi, Modern Dance – Renana Raz – Hebrew Labor, Ladino Romances, Greek Music Program, Russian Music Program, Italian Music Program, Douze Points – Eurovision songs with Noa Levy, The Parvarim, Anna Frank – a ballet choreographed by Ofer Sachs, Yoram Teharlev Trio, Nancy Brandes, Agam England...

Shimon Parnas, lecturing with CDs and DVDs on Greek music and songs in Israel

The Big Band Orchestra

The Haifa Symphony Orchestra, Conductor Noam Sheriff:

Debussy, De Falla, Franck, Ravel

Opera by Bizet - Carmen, with Keren Hadar

Richard Strauss (Don Juan), Castelnuovo-Tedesco (Violin), Sibelius (Symphony 2)

Tchaikovsky (Francesca da Rimini), Yusupov (Piano), Dvorak (Symphony 8)

Rasiuk (World Premiere), Gershwin (American in Paris), Prokofiev (Violin 2), Bartok

Respighi (The Birds), Dvorak (Cello), Beethoven (Symphony 6 Pastoral)

Sheriff (Hassid's Reward), Strauss (Metamorphosen), Schumann (Symphony 4)

Debussy (Petite Suite), Beethoven (Piano 1), Bizet (Symphony)

Volniansky (Clarinet), Mendelssohn (The Hebrides), Brahms (Symphony 4)

Opera by Puccini - La Boheme

Sheriff (Akedat), Mozart (Piano), Beethoven (Symphony 3)

Mozart (Don Giovanni Overture), Rachmaninov (Rhapsody on a Theme of Paganini), Gil Shohat (conductor, The Symphony of Wine)

Opera by Verdi - Rigoletto

Debussy (La demoiselle elue), Poulenc (2 Pianos), Mendelssohn (A Midsummer Night's Dream)

Rimsky-Korsakov (Capriccio espagnol), Grieg (Piano), Shostakovich (Symphony 5)

Debussy (Prelude a l'apres-midi d'un faune), Mozart (Piano 9), Tchaikovsky (Symphony 4)

Mozart (Symphony 40), Prokofiev (Violin 1), Tchaikovsky (Symphony 6)

Smetana (Moldava), Bartok (Violin 2), Dvorak (Symphony 7)

Opera by Mozart - Die Zauberflote,

Bellini (Symphony from Norma), Tchaikovsky (Rococo, Pezzo Capriccioso), Richard Strauss (Suite from Der Rosenkavalier, Don Juan)

Rodrigo (Flute Concerto Pastoral), Montsalvatge (Chaconne), Shostakovich (Symphony 1)

Beethoven (Triple Concerto for Violin, Cello and Piano), Gluck (Suite Orphee et Eurydice), Schubert (Symphony 5)

Opera by Mozart - Die Entführung aus dem Serail

BEST CLASSICAL MUSIC/OPERA THAT I HAVE EVER WATCHED, HEARD, READ

I have to confess that I have seen a very limited number of operas in my whole life and my knowledge in this field derives mainly from reading, watching videos and TV, and hearing records. When I was a young officer in Tel Aviv in the sixties the opera which had a very limited audience opened its doors gratis to soldiers, and that is how I watched for the first time in my life operas. I see occasionally operas mainly in London, Paris and New York, and rarely in Israel, but due to the exorbitant prices I prefer to go to the theater which I enjoy more. So, the best operas are (with a V for the operas that I have seen on stage): The abduction from the Seraglio – Mozart - V, Aida – Verdi - V, Un ballo in maschera & Nabucco – Verdi, Il barbiere di Siviglia – Rossini - V, Die Fledermaus – Strauss - V, La Boheme – Puccini - V, Carmen – Bizet - V (my most preferred), Cavalleria Rusticana – Mascagni - V, Les contes d'Hoffmann – Offenbach - V, Così fan tutte – Mozart – V, Don Giovanni – Mozart – V, Eugene Onegin – Tchaikovsky, Falstaff – Verdi, Faust – Gounod – V, Fidelio – Beethoven, La forza del destino – Verdi, Guillaume Tell – Rossini, Hansel und Gretel – Humperdinck, Lakme – Delibes, Madama Butterfly – Puccini, The Magic flute/Die Zauberflöte – Mozart – V, The Marriage of Figaro/Le nozze di Figaro – Mozart – V, Otello – Verdi – V, Macbeth – Verdi – V, Pagliacci – Leoncavallo – V, Porgy and Bess – Gershwin – V, Rigoletto – Verdi – V (my most preferred), Romeo and Juliette – Gounod, Der Rosenkavalier – Strauss, Samson et Dalila – Saint Saens, Tosca – Puccini – V, La Traviata – Verdi – V, Tristan und Isolde – Wagner, Il Trovatore – Verdi – V, Turandot – Puccini – V. I don't think that I have seen on stage 72 or even 52 operas, compared to the hundreds or possibly more than a thousand plays that I have seen on stage in Israel, New York, Paris, London, and all over the world, thousands of films, and hundreds of classical concerts.

To this list of operas we can add operas that I have only read about them – L'africaine – Meyerbeer, Alceste – Gluck, Andrea Chenier – Giordano, Ariadne auf Naxos – Richard Strauss, The bartered bride – Smetana, Boris Godounoff – Moussorgsky, La cenerentola and Cinderella by Rossini, The clandestine marriage – Cimarosa, The consul – Menotti, Le coq d'or – Rimsky-Korsakoff, Dido and Aeneas – Purcell, Don Carlos – Verdi, Elektra – Richard Strauss, L'elisir d'amore and Don Pasquale – Donizetti, Ernani – Verdi, La fanciulla del West – Puccini, Operas by Wagner – Der Fliegende Hollander, Lohengrin, Die Meistersinger von Nurnberg, Parsifal, Tannhauser, The Ring of the Nibelung: Das Rheingold, Die Walkure, Siegfried, Die gotterdammerung. Der Freischütz – Weber, Gianni Schicchi – Puccini, La gioconda – Ponchielli, Giulio Cesare – Handel, L'heure espagnole – Ravel, Les Huguenots – Meyerbeer, Knyaz Igor – Borodin, The Love for Three Oranges – Prokofieff, Lucia di Lammermoor – Donizetti, Manon – Massenet, Manon Lescaut – Puccini, Martha – Flotow, The Medium – Menotti, Mefistofele – Boito, Mignon – Thomas, Norma – Bellini, Oberon – Weber, Orpheus and Eurydice – Gluck, Pelleas et Melisande – Debussy, Peter Grimes – Britten, I puritani – Bellini, Salome – Richard Strauss, Il segreto di Susanna – Wolf-Ferrari, La serva padrona – Pergolesi, Simon Bocanegra – Verdi, The Telephone – Menotti, Thais – Massenet, Les Troyens – Berlioz, Wozzeck – Berg.

The quite best and best composers and their best works are: Jean-Baptiste Lully – Miserere, Salve regina, Alceste, Armide. Marc-Antoine Charpentier – Te Deum, Assumpta est Maria, Miserere, Action, Medee. Johann Pachelbel – Magnificat, Christ lag in Todesabend, Chacon, Canon and Gigue. Henry Purcell – Dido & Eneas, Come ye sons of art, away, Hail, Bright Cecilia, Hymns, Chacon. Archangelo Corelli – Concerti Grossi opus 6, Violin Sonata opus 5, Trio Sonatas opus 1-4. Francois Couperin – Cembalo works, Concerti, The apotheose of Lully, Lecons des tenebres. [Antonio Vivaldi](#) – The Four Seasons, Gloria in re major, Concerto in mi major, L'estro armonico, Magnificat, Stabat Mater, Orlando. Tomaso Albinoni – Adagio in sol minor, 12 Concerti opus 5, Concerti opus 7 and 9, Cliomena. [Johann Sebastian Bach](#) – Brandenburg Concerti, Mateus Passion, Violin Concerti, Concerto for two violins, The well tempered clavier, Goldberg Variations, Missa in si minor, Johannes Passion, Magnificat, The Art of Fugue. [George Frideric Handel](#): Messiah, Giulio Cesare, Tamerlano, Rodelinda, Ode for St. Cecilia's Day, Ode for the Birthday of Queen Anne, Acis and Galatea, Hercules, Semele, Water Music, Music for the Royal Fireworks, Concerti Grossi opus 3 and 6, [Judas Maccabaeus](#). Georg Philipp Telemann – Tafelmusik, Violin Concerti, Overture – Suite in sol major, Burlesque Don Quijote, Paris quartets. Jean-Philippe Rameau – Castor et Pollux, Zoroastre, Platee, Nais, Les indes galantes. Domenico Scarlatti – Cembalo Sonates, Salve Regina, Stabat Mater, Tetide in Sciro. Christoph Willibald Gluck – Orpheo and Euridice, Alaceste, Iphigenia in Aulis, Iphigenia in Tauris. [Franz Joseph Haydn](#) – Symphony no. 94 "Surprise", Symphony no 104 "London", The Creation, Symphonies no. 6, 7, 8, 49, 100, 101, 103. Trumpet Concerto, Cello Concerti, The Seasons, String quartets, "Nelson" mass. Luigi Boccherini – Cello Concerti in sol major and si bemol major, Symphonies in re minor, in la major, in bi bemol major, String quartets in la major, in sol major. Giacomo Meyerbeer – Les patineurs, Robert le diable, Le prophete, L'africaine. As a matter of fact Bach, Handel, and Haydn, are among the composers I like most, and the only reason that I included them in this category is that their music sounds "obsolete". I don't like so much [Baroque music](#) (Haydn is perceived more as a composer from the [Classical period](#)), but in this category I like most Bach – especially the Brandenburg concerti, the violin concerti, and I enjoyed a London performance of Mateus Passion. I acknowledge his greatness but I am not moved by his music, nor by the music of Handel, Haydn, and least of all the music of Rameau...

The best composers and their best works, which I like most, based on the monumental books The Milton Cross Encyclopedia of the Great Composers and their Music, are: [Wolfgang Amadeus Mozart](#) – Symphony no. 41 Jupiter, Don Giovanni, Symphonies no. 25, 29, 38, 39, 40. Piano Concerti no. 19, 20, 27. Sinfonia Concertante for violin and viola, String Quartets, Le nozze di Figaro, Così fan tutte, The Magic Flute, Requiem. The problem with Mozart is that he sounds too ornate, he has not the profoundness of Beethoven, my favorite composer. I love Mozart very much, mainly his symphonies, but after you hear them you forget them soon, they don't succeed in moving you. Mendelssohn is "accused" of being superficial, but for me Mozart is much more superficial. When I saw for the first time The Magic Flute at the Metropolitan Opera in New York (the prices were exorbitant, as we sat in the front rows) I fell asleep, as I found the opera too boring, I was also after a whole day of business meetings and I didn't have the opportunity to rest. However, the second time that I saw the opera, in the least glamorous stage of the Haifa Symphonic Orchestra, I enjoyed it much more, at least I didn't fall asleep, but I think that it cannot compare to operas like Aida, Rigoletto, or Faust, even Le nozze di Figaro and Così fan tutte are much better. [Franz Schubert](#) – Symphony no. 9, Die Winterreise, Symphonies no. 5 and 8, Trout quintet Die Forelle, String quartet death and the maiden, String quintet in do major, Impromptus, Piano Sonates in la major & si bemol major, The beautiful miller daughter, Songs. It is amazing how excellent composers died so young: Schubert at the age of 31, I like most his 9th Symphony, the Trout quintet Die Forelle –

a masterpiece, his chamber music, Mozart at the age of 36, Bizet at the age of 37, Mendelssohn at the age of 38, Chopin at the age of 39...

[Ludwig Van Beethoven](#) – Symphony no. 9 in re minor, Apasionata sonate, Piano Concerto no. 5 The Emperor, Symphonies no. 3 Eroica, no. 5, no. 6 Pastoral, no. 7, all the other Symphonies. Piano Concerti no. 1, 2, 3 and 4. Violin Concerto. Violin Sonata no. 9 Kreutzer. String quartets no. 7 and 14. Piano trio The Archduke, Piano Sonate no. 14 Au clair de lune, and no. 32. Missa Solemnis. Beethoven is by far the composer I like most (and it was even before I turned deaf as him...), although I cannot enjoy now classical music because I hear the music distorted in concerts and at home. Beethoven is a genius, his music is divine, I like most Symphony no. 9, but also all his other symphonies and concerti. I like very much his chamber music – and most of all Kreutzer Sonata, that I heard first after reading Tolstoy's novel, his piano sonates, as a matter of fact, all his works, which move me very much, and give me a sensation of unequaled elation. [Niccolo Paganini](#) – 24 Capricci opus 1, Violin Concerti no. 1 and 2, Danse des sorcieres. [Gioacchino Rossini](#) – Il Barbiere di Seviglia, Overtures Tancredi, La scala di seta, Il signior Bruschino. Operas Guillaume Tell, L'italiana in Algeri, La cenerentola, Mose in Egitto, Semiramide. [Felix Mendelssohn](#) – Symphonies no. 4 Italian, no. 3 Scottish, no. 5 The Reformation, Elijah, The Hebrides, Violin Concerto in E minor, A midsummer night's dream, String Octet, Lieder ohne Worte, String Quartet no. 6, Piano Trio no. 1, [Auf Flügeln des Gesanges](#)/On wings of song. [Hector Berlioz](#): Symphonie Fantastique, Harold in Italy, Benvenuto Cellini, Les Troyens, Grande Messe des Morts, La damnation de Faust, Romeo et Juliette. Rossini is excellent, especially Il Barbiere di Seviglia and L'italiana in Algeri, Mendelssohn is one of the composers I like most, especially his Violin Concerto, his Symphonies, chamber music. From Berlioz I like most his Symphonie Fantastique, La damnation de Faust, and Romeo et Juliette. I like most [composers from the Romantic-era](#), especially with the Wikipedia definition, gathering in this category quite all the composers born from 1770 to 1879. Another definition of the musical eras is - [Medieval](#): 476-1400, [Renaissance](#): 1400-1600, [Baroque](#): 1600-1760, [Classical era](#): 1730-1820, [Romantic era](#): 1815-1910, [20th century](#): 1900-2000, [21st century](#): since 2000. The composers I like most are German/Austrian, French, Italian, Russian, Spanish.

[Charles Gounod](#) – Faust, Mireille, Petite Symphonie, Romeo et Juliette, Ave Maria. What can be better than to watch in Paris a performance of Gounod's Faust, with the music that I know by heart? Méphistophélès appears, provides the crowd with wine, and sings a rousing, irreverent song about the Golden Calf (*Le veau d'or*). Méphistophélès maligns Marguerite, and Valentin tries to strike him with his sword, which shatters in the air. Valentin and friends use the cross-shaped hilts of their swords to fend off what they now know is an infernal power (chorus: *De l'enfer*). Marguerite enters, pondering her encounter with Faust at the city gates, and sings a melancholy ballad about the [King of Thule](#) (*Il était un roi de Thulé*). Marthe, Marguerite's neighbour, notices the jewellery and says it must be from an admirer. Marguerite tries on the jewels and is captivated by how they enhance her beauty, as she sings in the famous aria, the *Jewel Song* (*Ah! je ris de me voir si belle en ce miroir*). What a sheer delight to hear it on stage! [Frederic Chopin](#) – Piano Sonata no. 3, Piano Concerti in mi minor and fa minor, Preludes, Etudes, Balades, Valses, Mazurkas, Polonaises. [Robert Schumann](#) – Piano Concerto in la minor, Symphonies no. 1 and 4, Manfred, Cello Concerto, Violin Concerto, Piano Quartet, Piano Quintet, Carnaval, Kreisleriana, Fantasia. [Franz Liszt](#) – Piano Sonata in si minor, Mazeppa, Rhapsodies hongroises, Rhapsodie espagnole, Valse-impromptu, Mephisto-valse, Liebestraume, Preludes, Lieder, Piano Concerti no. 1 & 2, Poemes Symphoniques, Dante & Faust Symphonies. The Piano Concerti of Chopin, Schumann and Liszt are among the best in all the classical repertoire, and I enjoy very much hearing them at

the Concert Hall in Israel and Berlin, at a Schumann Cello Concerto and Symphony concert conducted brilliantly by [Daniel Barenboim](#).

[Johann Strauss](#) - Waltzes, Polkas, Marches, Die Fledermaus, Der Zigeunerbaron. I enjoy most watching Strauss' operettas, which are so sparkling, so vivid, so beautiful. Much has been written about the Jewish origins of Mendelssohn, but few people know that Strauss' paternal great-grandfather was a Hungarian Jew – a fact which the Nazis, who lionised Strauss's music as "so German", later tried to conceal. And indeed it is so senseless to try and find clues of his Jewish ancestry in his music. I have written in this book about Jewish composers such as Gershwin and Berlin, who wrote the most American music, and so Mendelssohn was completely German and Strauss completely Austrian. [Georges Bizet](#) – Carmen, Symphony in D major, L'arlesienne suites no. 1 and 2, Jeux d'enfants, Les pecheurs de perles, La jolie fille de Perth. It is heartbreaking, and indeed Bizet died from a heart attack, to know that you are a genius, that your works are masterpieces, but the public ignores you totally. That was the fate of Van Gogh, of Bizet and of many others who did not succeed in life but in afterlife. The production of Bizet's final opera, *Carmen*, was delayed because of fears that its themes of betrayal and murder would offend audiences. After its premiere on 3 March 1875, Bizet was convinced that the work was a failure; he died of a heart attack three months later, unaware that it would prove a spectacular and enduring success. [Johannes Brahms](#) – Symphony no. 4, German Requiem, Symphonies no 1 and 3, Piano Concerti no. 1 and 2, Violin Concerto, Double Concerto for Violin and Cello, String Sextets no. 1 and 2, String Quartets no. 1, 2, and 3. Piano Quintet, Clarinet Quintet, Violin Sonatas no. 1-3, Lieder, Song of Destiny. Brahms also was "accused" of having Jewish Origins (Abraham became Brahms), but Brahms wrote German music which is no less German than Wagner's. Brahms is one of my favorite composers, especially his symphonies and concerti.

[Pyotr Ilyich Tchaikovsky](#) – Symphony no. 6 Pathétique, Sleeping Beauty, Symphonies no. 4 and 5, Piano Concerto no. 1, Violin Concerto, Nutcracker, Swans Lake, Romeo and Juliet, String Serenade, Eugene Onegin, Francesca da Rimini, Marche Slave op. 31, 1812 Overture. [Giuseppe Verdi](#) – Rigoletto, Otello, La Traviata, Un ballo in maschera, La forza del destino, Don Carlos, Falstaff, Requiem, Nabucco, Aida, Macbeth. [Jacques Offenbach](#) – La belle Helene, La vie parisienne, La Grande-Duchesse de Gerolstein, La Perichole, Les contes d'Hoffmann, [Ba-ta-clan](#). The **Bataclan** is a [theatre](#) located at 50 [Boulevard Voltaire](#) in the [11th arrondissement](#) of [Paris](#), France. Designed in 1864 by the architect Charles Duval, its name refers to [Ba-ta-clan](#), an operetta by [Jacques Offenbach](#). Since the early 1970s, it has been a "legendary" venue for rock music. On 13 November 2015, 89 people were killed in a [coordinated terrorist attack](#) of ISIS in the theatre. Once again Islamic fundamentalists murderers slaughtered innocent people and Western culture. Offenbach, a Jew, one of the pillars of French and European culture was banned by the Nazis, and the theater formerly owned by Jews and named after Offenbach's operetta was chosen as the murder site of Nazis' followers – ISIS, foes of culture, France, Jews and Christians. Tchaikovsky, Verdi, and Offenbach are among my most favorite composers, I did not have the opportunity to watch Eugene Onegin in Saint Petersburg, but I am reading very slowly Pushkin's drama in Russian with an English translation. This is however for me the most difficult work of Tchaikovsky as all the others, and especially his piano and violin concerti, his ballet music, and his brilliant symphonies dissolve in my body as a balmy perfume. I have written in this book much about the operas by Verdi (Rigoletto, La Traviata, Aida, Il Trovatore) and Offenbach (La belle Helene, La vie parisienne), which are among the best I have ever seen and watched.

[Camille Saint-Saens](#) – Symphony no. 3, Piano Concerti no. 2 and no. 4, Cello Concerto no. 1, The Carnival of the Animals, Samson and Delilah. Saint-Saens had many merits, he was a

Renaissance man, a brilliant composer, conductor and pianist, his piano and cello concerti are excellent, and so are his symphonies, I like very much Samson and Delilah, and of course the Carnival of the animals. One of the first classical music that I have ever heard was [Introduction and Rondo Capriccioso](#), which is probably the short music work that I enjoy most. [Edvard Grieg](#) – Piano Concerto in la minor, Peer Gynt Suites no. 1 and 2, Holberg Suite, Lyric Suite, Norewegian Melodies. Writing about first impressions from classical music, at the age of 13 I watched for the first time a play The Snow Queen based on Peer Gint's music by Grieg. It was for me a revelation, all that I aspired was condensed in this marvelous play with this enchanting music performed by my future friends who were to study with me at High School. Since then, every time that I hear Grieg's music I am deeply moved, as for me it symbolizes hope and purity.

[Antonin Dvorak](#) – Symphony no. 9 From the New World, Symphonies no. 7 and 8, Cello Concerto, Violin Concerto, Slavonic Dances, String Serenade, String Quartet no. 12, Rusalka. Luckily, not all the best composers are Germans, French or Italian. Grieg is Norwegian, Dvorak is Czech, and Sibelius in Finn. The last symphonies by Dvorak are among the best ever, he has also excellent concerti, chamber music, and dances. [Giacomo Puccini](#) – Tosca, Manon Lescaut, La Boheme, Madama Butterfly, La fanciulla del West, Turandot. Puccini, like Verdi and Offenbach, are family to me, although I did not hear classical music in my family, I heard subsequently so much their operas that they became like family for me, like Napolitan and French songs that I heard so often in my family. My brother Haiim was Menelas in Offenbach's La belle Helene at the High School play, I played Rigoletto dozens of times to the young intellectual women whom I invited to my room, and I'll never forget how I watched Turandot at the Sydney Opera with my daughter Shirly. I feel quite estranged when I hear Mahler, Bach, or Brahms, they are definitely not family, although they are among the best composers ever. They don't touch my heart, my soul, as the operas by Offenbach or Verdi, and the music by Grieg and Beethoven. [Gustav Mahler](#) – Symphony no. 9, Symphonies no. 1, 2, 3, 4, 5, 6, 7, 8. Das klagende Lied, Des Knaben Wunderhorn, Lieder eines fahrenden Gesellen, Das Lied von der Erde, Lieder und Gesänge. [Claude Debussy](#) – La mer, Prelude a l'apres-midi d'un faune, Images, Jeux, String Quartet, Preludes, Suite Bergamasque, Le coin des enfants, Pelleas et Melisande, Nocturnes, L'enfant prodigue, Children's Corner. [Jean Sibelius](#) – Symphony no. 5, Symphonies no. 2 and 7, Finlandia, Tapiola, Violin Concerto, String Quartet in re minor. Mahler's and Sibelius' symphonies are divine, the best of the best, so profound, so serious, so tragic, they are called late Romantic, but for me they are modern. Debussy is also modern, but from a different angle, he is impressionistic like Renoir and Monet, his music is like an ocean's foam, light and sparkling.

[Manuel de Falla](#) – El amor brujo, El sombrero de tres picos, Noches en los jardines de Espana, Concerto for hapsichord, Siete canciones populares de Espana, El retablo de maese Pedro. [Maurice Ravel](#) – Daphnis et Chloe, Piano Concerto in sol major, Piano Concerto for left hand, Rhapsodie espagnole, Bolero, Pavane pour une infante defunte, Gaspard de la nuit. [Max Bruch](#) – Violin Concerto no. 1, Violin Concerti no. 2 and 3, Scottish Fantasy, [Kol Nidre](#), Viola and Clarinet Concerto, String Quartet no. 2. Speaking of family, de Falla and Ravel are also family, from my Spanish ancestry and French culture, Max Bruch who was not a Jew but wrote about Jewish subjects as Kol Nidre and Moses Oratorio, is family from my Jewish side. The Kol Nidre's link to a very interesting article on Bruch's Jewish music explains what I maintain all the time, that you don't have to be an African-American in order to compose Gershwin's Porgy and Bess, a Spaniard in order to compose Bizet's Carmen, you can be Jewish as Mendelssohn and Mahler and compose the most German/Austrian music ever, you can be a Russian-born Jew as Irving Berlin and compose the most patriotic and American music. Many of Berlin's songs became popular themes and anthems, including "[Easter](#)"

[Parade](#)", "[White Christmas](#)", "[Happy Holiday](#)", "This Is the Army, Mr. Jones", and "[There's No Business Like Show Business](#)". His Broadway musical and 1942 film, *[This is the Army](#)*, with [Ronald Reagan](#), had [Kate Smith](#) singing Berlin's "[God Bless America](#)" which was first performed in 1938, and God Bless America has become a national anthem of the US. So, I feel very close to de Falla's El amor brujo & Spanish music, Ravel's Bolero and Rhapsodie Espagnole, and Bruch's Violin Concerti and Kol Nidre.

[Sergei Prokofiev](#) – Peter and the Wolf, Romeo and Juliet, Lieutenant Kije Suite, Symphony no. 1 Classical, Symphony no. 5, Piano Concerto no. 3, Violin Concerto no. 1, Alexander Nevsky. [Sergei Rachmaninov](#) – Piano Concerto no. 2, Symphonies no. 2 and 3, Isle of the Dead, Rhapsody on a theme of Paganini, Piano Concerto no. 3, Symphonic Dances, 24 Preludes, The Bells, Night Vigil. [Bela Bartok](#) – Concerto for Orchestra, Music for strings, percussion and celesta, Violin Concerto no. 2, Piano Concerto no. 3, Dance Suite, Bluebeard's Castle, String Quartet no. 6. [George Gershwin](#) – Porgy and Bess, An American in Paris, Rhapsody in Blue, Piano Concerto in fa major, Girl Crazy, Songs. [Igor Stravinsky](#) – Petrushka, Le sacre du printemps, L'oiseau de feu, Pulcinella Suite, Histoire du soldat, Octet, Psalms Symphony, Apollon musagete, Symphony in 3 movements. [Kurt Weill](#) – Die Dreigroschenoper, The Seven Deadly Sins, Symphony no. 2, Rise and Fall of the City of Mahagonni, The Eternal Road. [Dmitri Shostakovic](#) – Symphony no. 10, Symphonies no. 1, 4, 5 and 7, Lady Macbeth of the Mtsensk District, String Quartet no. 8, Piano Concerto no. 2, Piano, Trumpet Concerto. All those composers are 20th century composers, they have composed modern music which I like very much, maybe not as much as 19th century's music, but still Rachmaninov's piano concerti are among the best piano concerti ever composed, Prokofiev has composed some of the finest musical works as his symphonies, concerti and Peter and the Wolf. Bartok's music is not so easy to listen, yet I like very much his concerti and chamber music. Gershwin's music is the American music I like most, especially Porgy and Bess, An American in Paris, Rhapsody in Blue, and his songs and musicals. Stravinsky's ballet music is exhilarating, especially Petrushka and Le sacre du printemps. I like some of Shostakovic's symphonies and chamber music. Finally, Kurt Weill is one of the composers I like most, especially Die Dreigroschenoper, Rise & Fall of Mahagonni.

Composers whom I like moderately are: [Gaetano Donizetti](#) – Luccia di Lammermoor, Don Pasquale, L'elisir d'amore, Anna Bolena, Lucrezia Borgia, La fille du regiment, Maria Stuarda, Sinfonias, Concerti, Quartets. [Vincenzo Bellini](#) – Norma, I puritani, La sonnambula, Il pirata. [Mikhail Glinka](#) – Overture Ruslan and Lyudmila, Jota Aragonesa, Kamarinskaya, A Life for the Tsar, Symphonies. [Alexander Borodin](#) – Symphony no. 2, String Quartet no. 2, Prince Igor, In the Steppes of Central Asia. [Modest Mussorgsky](#)– Boris Godunov, Night on bald mountain, Pictures at an exhibition, Khovanshchina. [Nikolai Rimsky-Korsakov](#) – Scheherazade, Capriccio Espagnol, The golden cockerel, The snow maiden, The Russian Easter Festival Overture. [Anton Bruckner](#) – Symphony no. 8, Symphonies no. 4, 5, 7, 9. [Richard Wagner](#) - Der Fliegende Hollander, Lohengrin, Die Meistersinger von Nurnberg, Parsifal, Tannhauser, The Ring of the Nibelung: Das Rheingold, Die Walkure, Siegfried, Die gotterdammerung, Tristan und Isolde. I have written a lot in this book about my ambivalent attitude towards Wagner's music and how I tried to listen to it. Anyhow, I believe what the experts say that he was a genius, so was Picasso, and Joyce, but I feel much closer as I have stated in this book to Verdi, Renoir, and Zola. I like Donizetti's and Bellini's operas of whom I've heard only arias and never the full operas. I like Russian music, but mainly short works and not long operas. I enjoy much Bruckner's music.

Other liked composers – Juan Arriaga, Louis Spohr, Karl Maria von Weber, Bedrich Smetana, Edouard Lalo, Leo Delibes, Hugo Wolf, Ruggero Leoncavallo, Isaac Albeniz,

Gabriel Faure, Carl Nielsen, Erik Satie, Alexander Scriabin, Ferruccio Busoni, Edward Elgar, Richard Strauss, Ralph Vaughan Williams, Enrique Granados, Mily Balakirev, Henrik Wieniawski, Emmanuel Chabrier, Ernest Chausson, Amilcare Ponchielli, Pietro Mascagni, Louis Gottschalk, Leos Janáček, Zoltan Kodaly, Frederick Delius, Gustav Holst, Charles Ives, Samuel Barber, William Walton, Ottorino Respighi, Arnold Schönberg, Alban Berg, Paul Hindemith, Heitor Villa-Lobos, Arthur Honegger, Francis Poulenc, Darius Milhaud, Frank Martin, Bogusław Martinu, Karol Szymanowski, Aram Khachaturian, Aaron Copland, Elliott Carter, Joaquín Rodrigo, Olivier Messiaen, Benjamin Britten, Leonard Bernstein, Pierre Boulez, Karlheinz Stockhausen. Some of those composers I like more: Spohr, Weber, Smetana, Delibes, Khachaturian, Albeniz, Richard Strauss, Granados, Chabrier, Mascagni, Respighi, Villa-Lobos, Copland, Rodrigo, Bernstein. This book comprises many references to composers and musicians, in the biographies chapter – on Verdi, Mendelssohn, Rubinstein, on Verdi's operas – *Rigoletto*, etc., in my diary and so on.

NOBEL PRIZES IN CHEMISTRY IN THE YEARS 1901-1939

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1901		Jacobus Henricus van 't Hoff	 Netherlands	"[for his] discovery of the laws of chemical dynamics and osmotic pressure in solutions"	[18]
1902		Hermann Emil Fischer	 Germany	"[for] his work on sugar and purine syntheses"	[19]
1903		Svante August Arrhenius	 Sweden	"[for] his electrolytic theory of dissociation "	[20]
1904		Sir William Ramsay	 United Kingdom	"[for his] discovery of the inert gaseous elements in air , and his determination of their place in the periodic system"	[21]
1905		Adolf von Baeyer	 Germany	"[for] the advancement of organic chemistry and the chemical industry, through his work on organic dyes and hydroaromatic compounds "	[22]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1906		Henri Moissan	 France	"[for his] investigation and isolation of the element fluorine , and for [the] electric furnace called after him"	[23]
1907		Eduard Buchner	 Germany	"for his biochemical researches and his discovery of cell-free fermentation "	[24]
1908		Ernest Rutherford	 United Kingdom  New Zealand	"for his investigations into the disintegration of the elements, and the chemistry of radioactive substances "	[25]
1909		Wilhelm Ostwald	 Germany	"[for] his work on catalysis and for his investigations into the fundamental principles governing chemical equilibria and rates of reaction"	[26]
1910		Otto Wallach	 Germany	"[for] his services to organic chemistry and the chemical industry by his pioneer work in the field of alicyclic compounds "	[27]
1911		Maria Skłodowska-Curie	 Russian Empire (Vistula Land)  France	"[for] the discovery of the elements radium and polonium , by the isolation of radium and the study of the nature and compounds of this remarkable element"	[28]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1912		Victor Grignard	 France	"for the discovery of the [...] Grignard reagent "	[29]
		Paul Sabatier	 France	"for his method of hydrogenating organic compounds in the presence of finely disintegrated metals"	[29]
1913		Alfred Werner	 Switzerland	"[for] his work on the linkage of atoms in molecules [...] especially in inorganic chemistry"	[30]
1914		Theodore William Richards	 United States	"[for] his accurate determinations of the atomic weight of a large number of chemical elements"	[9]
1915		Richard Martin Willstätter	 Germany	"for his researches on plant pigments, especially chlorophyll "	[31]
1916	<i>Not awarded</i>				
1917					

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1918		Fritz Haber	 Germany	"for the synthesis of ammonia from its elements"	[10]
1919	<i>Not awarded</i>				
1920		Walther Hermann Nernst	 Germany	"[for] his work in thermochemistry "	[11]
1921		Frederick Soddy	 United Kingdom	"for his contributions to our knowledge of the chemistry of radioactive substances, and his investigations into the origin and nature of isotopes "	[12]
1922		Francis William Aston	 United Kingdom	"for his discovery, by means of his mass spectrograph, of isotopes , in a large number of non-radioactive elements, and for his enunciation of the whole-number rule "	[32]
1923		Fritz Pregl	 Austria  Kingdom of Yugoslavia	"for his invention of the method of micro-analysis of organic substances"	[33]
1924	<i>Not awarded</i>				

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1925		Richard Adolf Zsigmondy	 Germany  Hungary	"for his demonstration of the heterogeneous nature of colloid solutions and for the methods he used"	[13]
1926		The (Theodor) Svedberg	 Sweden	"for his work on disperse systems "	[34]
1927		Heinrich Otto Wieland	 Germany	"for his investigations of the constitution of the bile acids and related substances"	[14]
1928		Adolf Otto Reinhold Windaus	 Germany	"[for] his research into the constitution of the sterols and their connection with the vitamins "	[35]
1929		Arthur Harden	 United Kingdom	"for their investigations on the fermentation of sugar and fermentative enzymes "	[36]
		Hans Karl August Simon von Euler-Chelpin	 Sweden  Germany		

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1930		Hans Fischer	 Germany	"for his researches into the constitution of haemin and chlorophyll and especially for his synthesis of haemin"	[37]
1931		Carl Bosch	 Germany	"[for] their contributions to the invention and development of chemical high pressure methods "	[38]
		Friedrich Bergius	 Germany		
1932		Irving Langmuir	 United States	"for his discoveries and investigations in surface chemistry"	[39]
1933	<i>Not awarded</i>				
1934		Harold Clayton Urey	 United States	"for his discovery of heavy hydrogen "	[40]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1935		Frédéric Joliot	 France	"[for] their synthesis of new radioactive elements "	[41]
		Irène Joliot-Curie	 France		
1936		Peter Debye	 Netherlands	"[for his work on] molecular structure through his investigations on dipole moments and the diffraction of X-rays and electrons in gases "	[42]
1937		Walter Norman Haworth	 United Kingdom	"for his investigations on carbohydrates and vitamin C "	[43]
		Paul Karrer	 Switzerland		
1938		Richard Kuhn	 Germany	"for his work on carotenoids and vitamins "	[15]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1939		<u>Adolf Friedrich Johann Butenandt</u>	 <u>Germany</u>	"for his work on <u>sex hormones</u> "	[44]
		<u>Leopold Ruzicka</u>	 <u>Kingdom of Yugoslavia</u>  <u>Switzerland</u>	"for his work on <u>polymethylenes</u> and higher <u>terpenes</u> "	[44]

NOBEL PRIZES IN PHYSICS IN THE YEARS 1901-1939

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1901		Wilhelm Röntgen	 Germany	"in recognition of the extraordinary services he has rendered by the discovery of the remarkable rays subsequently named after him"	[16]
1902		Hendrik Lorentz	 Netherlands	"in recognition of the extraordinary service they rendered by their researches into the influence of magnetism upon radiation phenomena"	[17]
		Pieter Zeeman			
1903		Antoine Henri Becquerel	 France	"for his discovery of spontaneous radioactivity "	[18]
		Pierre Curie		"for their joint researches on the radiation phenomena discovered by Professor Henri Becquerel "	[18]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1904		Marie Skłodowska-Curie	 Poland France	"for his investigations of the densities of the most important gases and for his discovery of argon in connection with these studies"	[19]
		Lord Rayleigh	 United Kingdom		
1905		Philipp Eduard Anton von Lenard	 Austria-Hungary Germany	"for his work on cathode rays "	[20]
1906		Joseph John Thomson	 United Kingdom	"for his theoretical and experimental investigations on the conduction of electricity by gases"	[21]
1907		Albert Abraham Michelson	 Poland United States	"for his optical precision instruments and the spectroscopic and metrological investigations carried out with their aid"	[22]
1908		Gabriel Lippmann	 France	"for his method of reproducing colours photographically based on the phenomenon of interference "	[23]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1909		<u>Guglielmo Marconi</u>	 <u>Italy</u>	"for their contributions to the <u>development of wireless telegraphy</u> "	[24]
		<u>Karl Ferdinand Braun</u>	 <u>Germany</u>		
1910		<u>Johannes Diderik van der Waals</u>	 <u>Netherlands</u>	"for his work on the <u>equation of state</u> for gases and liquids"	[25]
1911		<u>Wilhelm Wien</u>	 <u>Germany</u>	"for his discoveries regarding the laws governing the radiation of heat"	[26]
1912		<u>Nils Gustaf Dalén</u>	 <u>Sweden</u>	"for his invention of <u>automatic valves</u> designed to be used in combination with gas accumulators in <u>lighthouses</u> and buoys"	[27]
1913		<u>Heike Kamerlingh-Onnes</u>	 <u>Netherlands</u>	"for his investigations on the properties of matter at low temperatures which led, inter alia, to the production of <u>liquid helium</u> "	[28]

Year	Image	Laureate ^[A] Al	Country ^[B] Bl	Rationale ^[C]	Ref
1914		Max von Laue	 Germany	"For his discovery of the diffraction of X-rays by crystals", an important step in the development of X-ray spectroscopy .	[29]
1915		William Henry Bragg	 United Kingdom	"For their services in the analysis of crystal structure by means of X-rays', an important step in the development of X-ray crystallography "	[30]
		William Lawrence Bragg	 Australia  United Kingdom		
1916	Not awarded due to World War I				
1917		Charles Glover Barkla	 United Kingdom	"For his discovery of the characteristic Röntgen radiation of the elements', another important step in the development of X-ray spectroscopy "	[8]
1918		Max Planck	 Germany	"for the services he rendered to the advancement of physics by his discovery of energy quanta "	[9]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1919		<u>Johannes Stark</u>	 <u>Germany</u>	"for his discovery of the <u>Doppler effect</u> in <u>canal rays</u> and the splitting of <u>spectral lines</u> in <u>electric fields</u> "	[31]
1920		<u>Charles Édouard Guillaume</u>	 <u>Switzerland</u>	"for the service he has rendered to precision measurements in physics by his discovery of anomalies in nickel-steel alloys"	[32]
1921		<u>Albert Einstein</u>	  <u>Switzerland</u>	"for his services to <u>theoretical physics</u> , and especially for his discovery of the law of the <u>photoelectric effect</u> "	[10]
1922		<u>Niels Bohr</u>	 <u>Denmark</u>	"for his services in the investigation of the structure of <u>atoms</u> and of the radiation emanating from them"	[33]
1923		<u>Robert Andrews Millikan</u>	 <u>United States</u>	"for his work on the <u>elementary charge</u> of electricity and on the <u>photoelectric effect</u> "	[34]
1924		<u>Manne Siegbahn</u>	 <u>Sweden</u>	"for his discoveries and research in the field of <u>X-ray spectroscopy</u> "	[11]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1925		<u>James Franck</u>	 <u>Germany</u>	"for their discovery of the laws governing the impact of an <u>electron</u> upon an atom"	[12]
		<u>Gustav Hertz</u>	 <u>Germany</u>		
1926		<u>Jean Baptiste Perrin</u>	 <u>France</u>	"for his work on the discontinuous structure of matter, and especially for his discovery of <u>sedimentation equilibrium</u> "	[35]
1927		<u>Arthur Holly Compton</u>	 <u>United States</u>	"for his discovery of the <u>effect named after him</u> "	[36]
		<u>Charles Thomson Rees Wilson</u>	 <u>United Kingdom</u>	"for his <u>method</u> of making the paths of electrically charged particles visible by condensation of vapour"	[36]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1928		Owen Willans Richardson	 United Kingdom	"for his work on the thermionic phenomenon and especially for the discovery of the law named after him "	[13]
1929		Louis Victor Pierre Raymond, 7th Duc de Broglie	 France	"for his discovery of the wave nature of electrons "	[37]
1930		Chandrasekhara Venkata Raman	 India	"for his work on the scattering of light and for the discovery of the effect named after him "	[38]
1931	<i>Not awarded</i>				
1932		Werner Heisenberg	 Germany	"for the creation of quantum mechanics , the application of which has, inter alia, led to the discovery of the allotropic forms of hydrogen"	[14]
1933		Erwin Schrödinger	 Austria	"for the discovery of new productive forms of atomic theory "	[39]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1934		<u>Paul Dirac</u>	 <u>United Kingdom</u>	<i>Not awarded</i>	
1935		<u>James Chadwick</u>	 <u>United Kingdom</u>	"for the discovery of the <u>neutron</u> "	[40]
1936		<u>Victor Francis Hess</u>	 <u>Austria</u>	"for his discovery of <u>cosmic radiation</u> "	[41]
		<u>Carl David Anderson</u>	 <u>United States</u>	"for his discovery of the <u>positron</u> "	[41]
1937		<u>Clinton Joseph Davisson</u>	 <u>United States</u>	"for their experimental discovery of the <u>diffraction of electrons</u> by crystals"	[42]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1938		<u>George Paget Thomson</u>	 <u>United Kingdom</u>	"for his demonstrations of the existence of new radioactive elements produced by <u>neutron irradiation</u> , and for his related discovery of nuclear reactions brought about by slow neutrons"	[43]
		<u>Enrico Fermi</u>	 <u>Italy</u>		
1939		<u>Ernest Lawrence</u>	 <u>United States</u>	"for the invention and development of the <u>cyclotron</u> and for results obtained with it, especially with regard to artificial radioactive elements"	[44]

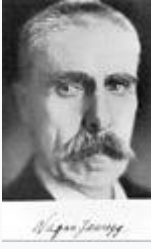

NOBEL PRIZES IN MEDICINE IN THE YEARS 1901-1939

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1901		<u>Emil Adolf von Behring</u>	 <u>Germany</u>	"for his work on <u>serum</u> therapy, especially its application against <u>diphtheria</u> , by which he has opened a new road in the domain of medical science and thereby placed in the hands of the physician a victorious weapon against illness and deaths"	[13]
1902		Sir <u>Ronald Ross</u>	 <u>United Kingdom</u>	"for his work on <u>malaria</u> , by which he has shown how it enters the organism and thereby has laid the foundation for successful research on this disease and methods of combating it"	[14]
1903		<u>Niels Ryberg Finsen</u>	 <u>Denmark</u> ( <u>Faroe Islands</u>)	"[for] his contribution to the treatment of diseases, especially <u>lupus vulgaris</u> , with concentrated light radiation, whereby he has opened a new avenue for medical science"	[15]
1904		<u>Ivan Petrovich Pavlov</u>	 <u>Russia</u>	"in recognition of his work on the physiology of <u>digestion</u> , through which knowledge on vital aspects of the subject has been transformed and enlarged"	[16]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1905		Robert Koch	 Germany	"for his investigations and discoveries in relation to tuberculosis "	[17]
1906		Camillo Golgi	 Italy	"in recognition of their work on the structure of the nervous system "	[18]
		Santiago Ramón y Cajal	 Spain		
1907		Charles Louis Alphonse Laveran	 France	"in recognition of his work on the role played by protozoa in causing diseases"	[19]
1908		Ilya Ilyich Mechnikov	 Russia	"in recognition of their work on immunity "	[20]
		Paul Ehrlich	 Germany		

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1909		Emil Theodor Kocher	 Switzerland	"for his work on the physiology, pathology and surgery of the thyroid gland "	[21]
1910		Albrecht Kossel	 Germany	"in recognition of the contributions to our knowledge of cell chemistry made through his work on proteins , including the nucleic substances "	[22]
1911		Allvar Gullstrand	 Sweden	"for his work on the dioptrics of the eye "	[23]
1912		Alexis Carrel	 France	"[for] his work on vascular suture and the transplantation of blood vessels and organs "	[24]
1913		Charles Richet	 France	"[for] his work on anaphylaxis "	[25]
1914		Robert Bárány	 Austria-Hungary	"for his work on the physiology and pathology of the vestibular apparatus "	[8]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1915		<i>Not awarded</i>			
1916					
1917					
1918					
1919		Jules Bordet	 Belgium	"for his discoveries relating to immunity "	[26]
1920		Schack August Steenberg Krogh	 Denmark	"for his discovery of the capillary motor regulating mechanism"	[27]
1921	<i>Not awarded</i>				
1922		Archibald Vivian Hill	 United Kingdom	"for his discovery relating to the production of heat in the muscle "	[9]
		Otto Fritz Meyerhof	 Germany	"for his discovery of the fixed relationship between the consumption of oxygen and the metabolism of lactic acid in the muscle"	[9]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1923		Sir Frederick Grant Banting	 Canada	"for the discovery of insulin "	[28]
		John James Rickard Macleod	 United Kingdom		
1924		Willem Einthoven	 Netherlands	"for the discovery of the mechanism of the electrocardiogram "	[29]
1925			<i>Not awarded</i>		
1926		Johannes Andreas Grib Fibiger	 Denmark	"for his discovery of the Spiroptera carcinoma "	[10]
1927		Julius Wagner-Jauregg	 Austria	"for his discovery of the therapeutic value of malaria inoculation in the treatment of dementia paralytica "	[30]

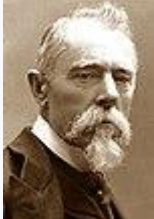

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1928		Charles Jules Henri Nicolle	 France	"for his work on typhus "	[31]
		Christiaan Eijkman	 Netherlands	"for his discovery of the antineuritic vitamin "	[32]
1929		Sir Frederick Gowland Hopkins	 United Kingdom	"for his discovery of the growth-stimulating vitamins "	[32]
1930		Karl Landsteiner	 Austria	"for his discovery of human blood groups "	[33]
1931		Otto Heinrich Warburg	 Germany	"for his discovery of the nature and mode of action of the respiratory enzyme "	[34]
1932		Sir Charles Scott Sherrington	 United Kingdom	"for their discoveries regarding the functions of neurons "	[35]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1933		Edgar Douglas Adrian	 United Kingdom	"for his discoveries concerning the role played by the chromosome in heredity "	[36]
		Thomas Hunt Morgan	 United States		
		George Hoyt Whipple	 United States		
1934		George Richards Minot	 United States	"for their discoveries concerning liver therapy in cases of anaemia "	[37]
		William Parry Murphy	 United States		
1935		Hans Spemann	 Germany	"for his discovery of the organizer effect in embryonic development "	[38]

Year	Image	Laureate ^[A]	Country ^[B]	Rationale ^[C]	Ref
1936		Sir Henry Hallett Dale	 United Kingdom	"for their discoveries relating to chemical transmission of nerve impulses "	[39]
		Otto Loewi	 Austria Germany		
1937		Albert Szent-Györgyi von Nagrapolt	 Hungary	"for his discoveries in connection with the biological combustion processes , with special reference to vitamin C and the catalysis of fumaric acid "	[40]
		Corneille Jean François Heymans	 Belgium	"for the discovery of the role played by the sinus and aortic mechanisms in the regulation of respiration "	[11]
1939		Gerhard Domagk	 Germany	"for the discovery of the antibacterial effects of prontosil "	[4]

NOBEL PEACE PRIZES IN THE YEARS 1901-1939

Year	Laureate (birth/death)		Country	Rationale
1901		<u>Henry Dunant</u> (1828-1910)	 <u>Switzerland</u>	For his role in founding the <u>International Committee of the Red Cross</u> ^{[11][15]}
		<u>Frédéric Passy</u> (1822-1912)	 <u>France</u>	"[For] being one of the main founders of the <u>Inter-Parliamentary Union</u> and also the main organizer of the first Universal Peace Congress" ^{[11][15]}
		<u>Élie Ducommun</u> (1833-1906)	 <u>Switzerland</u>	"[For his role as] the first honorary secretary of the <u>International Peace Bureau</u> " ^{[11][16]}
1902		<u>Charles Albert Gobat</u> (1843-1914)	 <u>Switzerland</u>	"[For his role as the] first Secretary General of the <u>Inter-Parliamentary Union</u> " ^{[11][16]}
		<u>William Randal Cremer</u> (1828-1908)	 <u>United Kingdom</u>	"[For his role as] the 'first father' of the <u>Inter-Parliamentary Union</u> " ^{[11][17]}
1903		<u>William Randal Cremer</u> (1828-1908)	 <u>United Kingdom</u>	"[For his role as] the 'first father' of the <u>Inter-Parliamentary Union</u> " ^{[11][17]}
1904		<u>Institute of International Law</u> (founded 1873)	 <u>Belgium</u>	"[F]or its efforts as an unofficial body to formulate the general principles of the science of international law" ^{[11][18]}

Year	Laureate (birth/death)		Country	Rationale
1905		<u>Bertha von Suttner</u> (1843-1914)	 <u>Austria-Hungary</u> (Born in  <u>Austrian Empire</u>)	For writing <u>Lay Down Your Arms</u> and contributing to the creation of the Prize ^{[11][19]}
1906		<u>Theodore Roosevelt</u> (1858-1919)	 <u>United States</u>	"[For] his successful mediation to end the <u>Russo-Japanese war</u> and for his interest in arbitration, having provided the <u>Hague arbitration court</u> with its very first case" ^{[11][20]}
1907		<u>Ernesto Teodoro Moneta</u> (1833-1918)	 <u>Italy</u> (Born in  <u>Kingdom of Lombardy-Venetia</u>)	"[For his work as a] key leader of the Italian peace movement" ^{[11][21]}
		<u>Louis Renault</u> (1843-1918)	 <u>France</u>	"[For his work as a] leading French international jurist and a member of the <u>Permanent Court of Arbitration</u> at The Hague" ^{[11][21]}
1908		<u>Klas Pontus Arnoldson</u> (1844-1916)	 <u>Sweden</u>	"[For his work as] founder of the <u>Swedish Peace and Arbitration League</u> " ^{[11][22]}
		<u>Fredrik Bajer</u> (1837-1922)	 <u>Denmark</u>	"[For being] the foremost peace advocate in Scandinavia, combining work in the <u>Inter-Parliamentary Union</u> with being the first president of the <u>International Peace Bureau</u> " ^{[11][22]}
1909		<u>Auguste Beernaert</u> (1829-1912)	 <u>Belgium</u>	"[For being a] representative to the <u>two Hague conferences</u> , and a leading figure in the <u>Inter-Parliamentary Union</u> " ^{[11][23]}

Year	Laureate (birth/death)		Country	Rationale
		<u>Paul Henri d'Estournelles de Constant</u> (1852-1924)	 <u>France</u>	"[For] combined diplomatic work for <u>Franco-German</u> and <u>Franco-British understanding</u> with a distinguished career in <u>international arbitration</u> " ^{[11][23]}
1910		<u>Permanent International Peace Bureau</u> (founded 1891)	 <u>Switzerland</u>	"[For acting] as a link between the peace societies of the various countries" ^{[24][25]}
1911		<u>Tobias Asser</u> (1838-1913)	 <u>Netherlands</u>	"[For being a] member of the <u>Court of Arbitration</u> as well as the initiator of the <u>Conferences on International Private Law</u> " ^{[11][26]}
		<u>Alfred Fried</u> (1864-1921)	 <u>Austria-Hungary</u> (Born in  <u>Austrian Empire</u>)	"[For his work as] founder of the <u>German Peace Society</u> " ^{[11][26]}
1912		<u>Elihu Root</u> ^[A] (1845-1937)	 <u>United States</u>	"[F]or his strong interest in international arbitration and for his plan for a world court" ^{[11][27]}
1913		<u>Henri La Fontaine</u> (1854-1943)	 <u>Belgium</u>	"[For his work as] head of the <u>International Peace Bureau</u> " ^{[11][28]}
1914	<i>Not awarded due to <u>World War I</u>.</i>			
1915				
1916				

Year	Laureate (birth/death)		Country	Rationale
1917	 ICRC	<u>International Committee of the Red Cross</u> (founded 1863)	 <u>Switzerland</u>	"[For undertaking] the tremendous task of trying to protect the rights of the many prisoners of war on all sides [of <u>World War I</u>], including their right to establish contacts with their families" ^{[11][29]}
1918	<i>Not awarded due to <u>World War I</u>.</i>			
1919		<u>Woodrow Wilson</u> ^[A] (1856-1924)	 <u>United States</u>	"[F]or his crucial role in establishing the <u>League of Nations</u> " ^{[11][30]}
1920		<u>Léon Bourgeois</u> (1851-1925)	 <u>France</u>	"[For his participation] in both the <u>Hague Conferences of 1899 and 1907</u> " and for his work towards "what became the <u>League</u> to such an extent that he was frequently called its 'spiritual father'" ^{[11][31]}
1921		<u>Hjalmar Branting</u> (1860-1925)	 <u>Sweden</u>	"[F]or his work in the <u>League of Nations</u> " ^{[11][32]}
		<u>Christian Lange</u> (1869-1938)	 <u>Norway</u>	"[For his work as] the first secretary of the Norwegian Nobel Committee" and "the secretary-general of the <u>Inter-Parliamentary Union</u> " ^{[11][32]}
1922		<u>Fridtjof Nansen</u> (1861-1930)	 <u>Norway</u>	"[For] his work in aiding the millions in Russia <u>struggling against famine</u> " and "his work for the <u>refugees in Asia Minor and Thrace</u> " ^{[33][34]}
1923	<i>Not awarded</i>			
1924				

Year	Laureate (birth/death)		Country	Rationale
1925		Sir Austen Chamberlain ^[A] (1863-1937)	 United Kingdom	For work on the Locarno Treaties ^{[11][35]}
		Charles G. Dawes ^[A] (1865-1951)	 United States	"[F]or [work on] the Dawes Plan for German reparations which was seen as having provided the economic underpinning of the Locarno Pact of 1925" ^{[11][35]}
1926		Aristide Briand (1862-1932)	 France	For work on the Locarno Treaties ^{[11][36]}
		Gustav Stresemann (1878-1929)	 Germany	
		Ferdinand Buisson (1841-1932)	 France	
1927		Ludwig Quidde (1858-1941)	 Germany (Born in  Free City of Bremen)	"[For] contributions to Franco-German popular reconciliation" ^{[11][37]}
1928	<i>Not awarded</i>			
1929		Frank B. Kellogg ^[A] (1856-1937)	 United States	"[F]or the Kellogg-Briand pact , whose signatories agreed to settle all conflicts by peaceful means and renounced war as an instrument of national

Year	Laureate (birth/death)		Country	Rationale
				policy" ^{[11][38]}
1930		<u>Nathan Söderblom</u> (1866-1931)	 <u>Sweden</u>	"[F]or his efforts to involve the churches not only in work for ecumenical unity, but also for world peace" ^{[11][39]}
1931	 	<u>Jane Addams</u> (1860-1935) <u>Nicholas Murray Butler</u> (1862-1947)	 <u>United States</u>	"[F]or her social reform work" and "leading the <u>Women's International League for Peace and Freedom</u> " ^{[11][40]} "[For his promotion] of the <u>Briand-Kellogg pact</u> " and for his work as the "leader of the more establishment-oriented part of the American peace movement" ^{[11][40]}
1932	<i>Not awarded</i>			
1933		<u>Sir Norman Angell</u> ^[A] (1872-1967)	 <u>United Kingdom</u>	For authoring <u>The Great Illusion</u> and for being a "supporter of the League of Nations as well as an influential publicist [and] educator for peace in general" ^[41]
1934		<u>Arthur Henderson</u> (1863-1935)	 <u>United Kingdom</u>	"[F]or his work for the <u>League</u> , particularly <u>its efforts in disarmament</u> " ^{[11][42][43]}
1935		<u>Carl von Ossietzky</u> ^{[A][B]} (1889-1938)	Germany	"[For his] struggle against Germany's rearmament" ^{[11][44]}

Year	Laureate (birth/death)		Country	Rationale
1936		Carlos Saavedra Lamas (1878-1959)	 Argentina	"[F]or his mediation of an end to the Chaco War between Paraguay and Bolivia" ^{[11][45]}
1937		The Viscount Cecil of Chelwood (1864-1958)	 United Kingdom	For his work with the League of Nations ^{[11][46]}
1938		Nansen International Office for Refugees (1930-1939)	 League of Nations	For its work in aiding refugees ^[47]
1939	<i>Not awarded due to World War II.</i>			

ON FRENCH INNOVATION

In the century of 1820-1939 some of the most [important inventions](#) were discovered in Paris and in France, and I bring here the most important French inventions in the last 2 centuries, while most of inventions in modern times were nevertheless in the US and the UK.

airship	1852	Henri Giffard
balloon, hot-air	1783	Joseph & Étienne Montgolfier
bikini	1946	Louis Réard
Braille system	1824	Louis Braille
canning, food	1809	Nicolas Appert
concrete, reinforced	1867	Joseph Monier
dry cleaning	1855	Jean Baptiste Jolly
engine, internal-combustion	1859	Étienne Lenoir
food processor	1971	Pierre Verdon
Fresnel lens	1820	Augustin-Jean Fresnel
glass, safety	1909	Édouard Bénédictus
guillotine	1792	Joseph-Ignace Guillotin
hypodermic syringe	1853	Charles Gabriel Pravaz
margarine	1869	Hippolyte Mège-Mouriès
metric system of measurement	1795	French Academy of Sciences
neon lighting	1910	Georges Claude
parachute, modern	1797	André-Jacques Garnerin
pasteurization	1864	Louis Pasteur
photography	1837	Louis-Jacques-Mandé Daguerre

rayon	1884	Louis-Marie-Hilaire Bernigaud, count of Chardonnet
scuba gear	1943	Jacques Cousteau, Émile Gagnan
sewing machine	1841	Barthélemy Thimonnier
sonar	1915	Paul Langevin
stethoscope	1819	René-Théophile-Hyacinthe Laënnec

Penicillin (1896) - In 1896, the French medical student Ernest Duchesne originally discovered the antibiotic properties of Penicillium, however his research went mostly unnoticed. It took until 1928 for Scottish biologist Alexander Fleming to re-discovered penicillin. Penicillin enabling doctors to fight bacterial infections, save lives, and cure syphilis, gangrene and tuberculosis.

Marie Curie's achievements included the development of the theory of *radioactivity* (a term that she coined), techniques for isolating radioactive [isotopes](#), and the discovery of two elements, [polonium](#) and [radium](#). Under her direction, the world's first studies were conducted into the treatment of [neoplasms](#), using radioactive isotopes. She founded the [Curie Institute in Paris](#).

From the Wikipedia we can learn about the hundreds of the most important [French inventions](#): **The best cultural innovation:** [Gothic art](#) in the mid-12th century, [Rococo](#) in the early 18th century, [Clavecin électrique](#), earliest surviving electric-powered musical instrument, in 1759 by [Jean-Baptiste Thillaie Delaborde](#). The [Roulette](#) was developed in 18th century France from a primitive form created by [Blaise Pascal](#) (17th century). In 1843, Louis and [François Blanc](#) introduced the single 0 style roulette wheel. **Photography:** [Photolithography](#) and the first photographic image ever produced in 1822 by [Nicéphore Niépce](#) ([Saône-et-Loire](#)), [Daguerreotype](#) by Nicéphore Niépce and [Louis Daguerre](#), [Hercules Florence](#) coined *photographie* in 1834, French word at the origin of the English word *photography*. The [Cabaret](#) by [Rodolphe Salis](#) in 1881 in Paris. The [Cinema](#) developed from chronophotography: First [motion picture camera](#) and first projector by [Louis Le Prince](#), Frenchman who worked in the United Kingdom and the United States. The [Cinematograph](#) by [Léon Bouly](#) (1892). First commercial, public screening of cinematographic films by [Auguste and Louis Lumière](#) in Paris on 28 December 1895. [Georges Méliès](#): first filmmaker to use the [stop trick](#), or substitution, [multiple exposures](#), [time-lapse](#) photography, [dissolves](#), and hand-painted color in his films. His most famous film, [A Trip to the Moon](#) (*Le voyage dans la Lune*), in 1902, was the first [science fiction](#) film and the most popular movie of its time (another of his production, *Le Manoir du diable* is also sometimes considered as the first horror movie). Developments of the modern [Piano](#) (invented by the Italian [Bartolomeo Cristofori](#)): [Pleyel et Cie](#) (double piano), [Sébastien Érard](#) (double escapement action), [Jean-Louis Boisselot](#) ([sostenuto pedal](#)), Henri Fourneaux ([Player piano](#)). [Ondes Martenot](#) in 1928 by [Maurice Martenot](#) (electronic musical instrument).

The best scientific inventions: [Oxygen](#) by [Antoine Lavoisier](#) in 1778. [Hydrogen](#) by Antoine Lavoisier in 1783. The first extensive [list of elements](#) (see [periodic table](#)) by Antoine Lavoisier in 1787. [Chromium](#) by Louis-Nicolas Vauquelin in 1797. Appertization or [Canning](#)

by [Nicolas Appert](#) in 1809. [Polyvinyl chloride](#) in 1838 by Henri Victor Regnault (but the PVC will only be plasticized industrially nearly a century later). [Photovoltaic effect](#) by [A. E. Becquerel](#) in 1839. [Pasteurization](#) by [Louis Pasteur](#) and [Claude Bernard](#) in April 1862. Production of [Liquid oxygen](#) by [Louis Paul Cailletet](#) in 1877 (at the same time but with another method than [Raoul Pictet](#)). [Artificial silk](#) by [Hilaire de Chardonnet](#) in 1884. [Fluorine](#) by [Henri Moissan](#) in 1886. [Aluminium electrolysis](#) in 1886 by [Paul Hérault](#) (at the same time but independently from American Martin Hall). [Viscose](#) by [Hilaire de Chardonnet](#) in [Échirolles](#) in 1891. Chemical [Bleach](#) by [Claude Berthollet](#) and [Antoine Germain Labarraque](#) (with the [Swedish](#) chemist [Karl Wilhelm Scheele](#) and [Scottish](#) chemist [Charles Tennant](#)). [Polonium](#) by Pierre and [Marie Curie](#) in July 1898. [Radium](#) by Pierre and Marie Curie in December 1898. [Laminated glass](#) by the French chemist Edouard Benedictus in 1903. [Neon lighting](#) by [Georges Claude](#) in 1910. [Cartesian Coordinate System](#) by [René Descartes](#) in 1637 (and independently by [Pierre de Fermat](#) at the same period). The [calculator](#) by [Blaise Pascal](#) ([Pascaline](#)) in 1642. (see also [Adding machine](#)). [Probability theory](#) by [Pierre de Fermat](#) and Blaise Pascal in the seventeenth century (with [Gerolamo Cardano](#) and [Christiaan Huygens](#)). [Réaumur scale](#) by [René Antoine Ferchault de Réaumur](#) in 1730. The [conservation of mass](#) by [Antoine Lavoisier](#) (18th century). Modern [hydrometer](#) by [Jacques Charles](#). [Metric system](#) during the [French Revolution](#). and several measures used in physics in the SI. [Laplace's equation](#), [Laplace operator](#), [Laplace transform](#), [Laplace distribution](#). The [Gay-Lussac Scale](#) used by [hydrometers](#) and [alcoholometers](#) by [Joseph Louis Gay-Lussac](#) (after an idea of [Jacques Charles](#)). [Polariscope](#) and discovery of Rotary polarization by [François Arago](#). He invented the first polarization filter in 1812. [Dynamometer](#) by [Gaspard de Prony](#) ([de Prony brake](#)) in 1821. [Electrometer](#) by [Jean Peltier](#). [Foucault pendulum](#) by [Léon Foucault](#) (who also developed and named the [Gyroscope](#)) in February 1851 in the Meridian of the Paris Observatory. [Ocean thermal energy conversion](#) in 1881 by [Jacques-Arsène d'Arsonval](#) (first OTEC plant in 1930 in Cuba by his student [Georges Claude](#)). [Radioactivity](#) by [Henri Becquerel](#) in 1896. Theoretical foundations and mathematical framework of [Special relativity](#) by [Henri Poincaré](#), before [Albert Einstein](#) used his work in 1905. [Integral imaging](#) by [Gabriel Lippmann](#) in 1908.

Medicine and Biology inventions: [Ligature](#) of [arteries](#) in 1565 by [Ambroise Paré](#). [Blood transfusion](#) by [Jean-Baptiste Denys](#) on June 15, 1667. and first modern transfusion by [Émile Jeanbrau](#) on October 16, 1914 (after the first non-direct transfusion performed on March 27, 1914 by the Belgian doctor Albert Hustin). Modern [dentistry](#) by [Pierre Fauchard](#) (*father of modern dentistry*, early eighteenth century). Modern [Cataract surgery](#) by [Jacques Daviel](#) in 1748 (even if early cataract surgery already existed in the antiquity). Here I would like to mention that when I had my cataract surgery in 1996 in Israel the technology has reached the highest probability of success – 97%, but I didn't want to take any risks – so I went to "the best surgeon", with a private surgery at a private hospital and at a very high cost, and guess what – the so-called best surgeon succeeded to fail in the brackets of 3%, did not reckon his mistake, mislead me, I almost lost my eye because of his malpractice... Discovery of [Osmosis](#) in 1748 by [Jean-Antoine Nollet](#). The word "osmosis" descends from the words "endosmose" and "exosmose", which were coined by French physician [René Joachim Henri Dutrochet](#) (1776–1847) from the Greek words ἐνδον (*endon* : within), ἔξω (*exo* : outside), and ὁσμος (*osmos* : push, impulsion). [Stethoscope](#) in 1816 by [René Laennec](#) at the [Necker-Enfants Malades Hospital](#) in [Paris](#). Medical [Quinine](#) in 1820 by [Joseph Bienaimé Caventou](#). [Codeine](#) first isolated in 1832 by [Pierre Robiquet](#). [Aspirin](#) in 1853 by [Charles Frédéric Gerhardt](#). [Hypodermic needle](#) in 1853 by [Charles Pravaz](#). Incubator or [Neonatal intensive care unit](#) in 1881 by [Étienne Stéphane Tarnier](#). His student, [Pierre-Constant Budin](#), followed in Tarnier's footsteps, creating [perinatology](#) in the late 1890s. [Rabies vaccine](#) by [Louis Pasteur](#) and [Émile](#)

[Roux](#) in 1885. [Antibiotics](#) by [Louis Pasteur](#) and [Jean Paul Vuillemin](#) (by means of natural antibiosis; modern artificial antibiotics were developed later by the British [Alexander Fleming](#)). [Tuberculosis vaccine](#) by [Albert Calmette](#) and [Camille Guérin](#) in 1921 (BCG). And after 1929 - the Insuline pump, head and face transplantation, telesurgery...

Transportation inventions: [Taxi](#) by Nicolas Sauvage in Paris in 1640 (first documented but maybe existed earlier). [Steamboat](#) by [Denis Papin](#). A boat with the world's first [internal combustion engine](#) was developed in 1807 by fellow Frenchman [Nicéphore Niépce](#). [Automobile](#) by [Nicolas-Joseph Cugnot](#) in 1769. [Hot Air Balloon](#) (later, [Aerostat](#) and [Airship](#)) by [Jean-François Pilâtre de Rozier](#), [François Laurent d'Arlandes](#), the [Montgolfier brothers](#) and [Jacques Charles](#) (who also invented the first hydrogen-filled balloon). [Parachute](#) in the late 18th century by [Louis-Sébastien Lenormand](#). [Compressed air vehicle](#) and [Pneumatic motor](#) by Andraud and Tessie of Motay in Chaillot on July 9, 1840, improved by [Louis Mékarski](#) in 1843 in Nantes (see [Mekarski system](#) and [Compressed air car](#)). [Airplane](#) : First glider to fly higher than its point of departure, by [Jean-Marie Le Bris](#) in 1856. First manned, powered, heavier-than-air flight of a significant distance on October 9, 1890 by [Clément Ader](#). First [aileron](#) built by [Robert Esnault-Pelterie](#) in 1904. Modern design of ailerons by [Henri Farman](#). First aircraft design with the modern monoplane tractor configuration of aircraft by [Louis Bleriot](#) in 1908. In 1909, he completed the first flight across a large body of water in a [heavier-than-air](#) craft, when he crossed the [English Channel](#). He also is credited as the first person to make a working [monoplane](#). [Injector](#) by [Henri Giffard](#) in 1858. [Internal combustion engine](#) between 1859 and 1861 by [Alphonse Beau de Rochas](#) and Belgian-born [Étienne Lenoir](#) in Paris. [Submarine](#) : The first submarine not relying on human power was the French [Plongeur](#) (meaning *diver*), launched in 1863, and using compressed air at 180 [psi](#) (1241 [kPa](#)). [Bicycle](#) in 1864 by [Pierre Michaux](#) and [Pierre Lallement](#) (endless power-transmitting chain invented by Jacques de Vaucanson in 1770 and applied to bicycles by J. F. Tretz). Gunpowder powered [ornithopter](#) by [Gustave Trouvé](#) in 1870. First manned [balloon mail](#) during the [Siege of Paris](#) (1871). First [outboard motorboat](#) by [Gustave Trouvé](#) around 1870, patented in May 1880. [Inflatable tyres](#) for [cars](#) by [Édouard Michelin](#) in 1895. [Scooter](#) (1902) and [Moped](#). [V8 engine](#) by [Léon Levavasseur](#) in 1902. Modern [automobile Drum brake](#) in 1902 by [Louis Renault](#). [Helicopter](#) : in 1907, the two first flying helicopters were experimented independently by [Louis Breguet](#) and [Paul Cornu](#). [Seaplane](#) by [Gabriel Voisin](#) in June 1905 (non-autonomous) and by [Henri Fabre](#) in 1910 (autonomus : [Fabre Hydravion](#)). [Ramjet](#) by [René Lorin](#) in 1913, and much later the [Concorde](#) by [Aérospatiale](#) and the [British Aircraft Corporation](#) (1969). I flew several times on the Concorde and it is indeed a miracle – how you can leave Paris at noon after being at your office in the morning, arrive at half past eight in the morning to New York, have a full day negotiations in New York, and return at night to Paris. The only problem with the Concorde is that I was the only passenger ever who did not enjoy their gourmet meals (I ate vegetarian), their exceptional wines (I had water), their cheeses (I am allergic to lactose), their coffee (I don't drink coffee), as we say in Ladino/Turkish – vender joyas a bahjavanés – to sell jewels to peasants, not a [connoisseur](#) or a feinschmecker!

Clothing: [Jacquard loom](#), a mechanical [loom](#), invented by [Joseph Marie Jacquard](#) in 1801, that simplifies the process of manufacturing textiles with complex patterns such as [brocade](#), [damask](#), and [matelasse](#). [Denim Textile](#) (French town of [Nîmes](#), from which 'denim' *de Nîmes* gets its name). The [Sewing machine](#) by [Barthélemy Thimonnier](#) in 1830. Modern [bra](#) by [Herminie Cadolle](#) in 1889. [Little black dress](#) by [Coco Chanel](#) in the 1920s. [Polo shirt](#) by [René Lacoste](#) in 1926. Modern [Bikini](#) by [Louis Réard](#) in 1946. Classic modern [pencil skirt](#) by [Christian Dior](#) in the late 1940s. [A-line](#) by [Yves Saint Laurent](#) in 1958 (term first used in 1955 by Christian Dior). Modern [Raincoat](#) (not to confuse with the older British [trench-coat](#)) by

[Guy Cotten](#) in 1960. **Food and Cooking:** [Steam digester](#) by [Denis Papin](#) in 1679. [Cafetiere](#) : [Percolation](#) (method used by [Coffee percolator](#)) by [Jean-Baptiste de Belloy](#) in 1800 and the [French press](#) (another method to make coffee). [Canning](#) (chemistry section). [Absorption refrigerator](#) by [Ferdinand Carré](#) in 1858. [Margarine](#) by [Hippolyte Mège-Mouriès](#) in 1869 after the discovery of margaric acid by [Michel Eugène Chevreul](#) in 1813. [Clementine](#) in 1902 by [Clément Rodier](#). [Food processor](#) by Pierre Verdun between 1963 and 1971. [Crêpe](#) ([List of French dishes](#)). [Coq au vin](#). [Champagne](#) and other [French wines](#). 400 distinct types of French cheese : [List of French cheeses](#). [Baguette](#), [Cassoulet](#), [Foie gras](#), [Escargot](#), [Frog legs](#), [Ratatouille](#), [Camembert](#) by [Marie Harel](#).

Weapons and Military: [Corvette](#), a small, maneuverable, lightly armed warship that appeared in the 1670s. [Bayonet](#) (from [French](#) *baïonnette*). Modern [military uniform](#) in the mid 17th century. [Floating battery](#), first used during the [Great Siege of Gibraltar](#) in September 1782. [Mass conscription](#) or [Levée en masse](#) during the [French Revolution](#). [Corps](#) by [Napoleon](#) in 1805. [Carabine à tige](#) by [Louis-Étienne de Thouvenin](#) (improvement of an earlier invention by [Henri-Gustave Delvigne](#)) before 1844. [Minié rifle](#) by [Claude-Étienne Minié](#), first reliable (easy to load) [muzzle-loading rifle](#) in 1849. In the artillery, from 1859, the [La Hitte](#) rifled guns were a considerable improvement over the previous smooth-bore guns which had been in use, able to shoot at 3,000 meters either regulars shells, ball-loaded shells or grapeshot. They appear to have been the first case of usage of rifled cannons on a battlefield. First naval [periscope](#) in 1854 by [Hippolyte Marié-Davy](#). [Épée](#), the modern derivative of the dueling sword, used for fencing. [Smokeless gunpowder](#) (modern [nitrocellulose](#)-based) : [Poudre B](#) by [Paul Marie Eugène Vieille](#) in 1884. It was first used to load the [Lebel Model 1886 rifle](#) (invented by [Nicolas Lebel](#)), making it the first military firearm to use smokeless powder ammunition. It is also the first rifle to use [full metal jacket bullets](#) as its standard ammunition. First [Air force](#) in 1910. [Sonar](#), first ultrasonic submarine detector using an electrostatic method (and first practical military sonar) in 1916-1917 by [Paul Langevin](#) (with Constantin Chilowsky). [Tanks](#) : developed at the same time (1915-1916) in France and in Great Britain. France was the second country to use tanks on the battlefield (after Great Britain). in 1916, the first practical light tank, the [Renault FT](#) with the first full 360° rotation turret became, for [Steven Zaloga](#) "the world's first modern tank".

Communication and Computers: [Optical Telegraph](#) by [Claude Chappe](#) in 1792. Modern [pencil](#) by [Nicolas-Jacques Conté](#) in 1795. [Paper machine](#) by [Louis-Nicolas Robert](#) in 1799. [Fresnel lens](#) by [Augustin-Jean Fresnel](#). [Jean-François Champollion](#) first deciphered the [Rosetta Stone](#) (1822): modern understanding of [Egyptian hieroglyphs](#). [Braille](#) in 1825 by [Louis Braille](#), a blind Frenchman: first digital form of writing. [Pencil sharpener](#) by Bernard Lassimone in 1828. Therry des Estwaux created an improved mechanical sharpener in 1847. [Baudot code](#) by [Émile Baudot](#) in 1870 and a [multiplexed printing telegraph](#) system that used his code and allowed multiple transmissions over a single line. [Bic Cristal](#) in 1949. [Computer-aided manufacturing](#) by [Pierre Bézier](#) in 1971 as an engineer at [Renault](#). [Micral](#), earliest commercial, non-kit personal computer based on a microprocessor, by [André Truong Trong Thi](#) and François Gernelle in June 1972. [Datagrams](#) and [CYCLADES](#) in 1972-1973 by [Louis Pouzin](#) (which inspired [Bob Kahn](#) and [Vinton Cerf](#) when they invented the [TCP/IP](#) several years later). [Smart Card](#) by Roland Moreno in 1974 after the automated chip card. [Minitel](#) in 1980. [Camera phone](#) by [Philippe Kahn](#) in 1997. Several [Programming languages](#) (non-exhaustive list): [Prolog](#) ([Logic programming](#)) by a group around [Alain Colmerauer](#) in 1972 in [Marseille](#). [LSE](#), Langage Symbolique d'Enseignement, a French, pedagogical, programming language designed in the 1970s at [Supélec](#). [Ada](#) ([multi-paradigm](#)) by [Jean Ichbiah](#) (who also created [LIS](#) and Green) in 1980. [Caml](#) ([OCaml](#) by [Xavier Leroy](#), [Damien Doligez](#)) developed

at [INRIA](#) and formerly at [ENS](#) since 1985. [Eiffel](#) (object-oriented) by [Bertrand Meyer](#) in 1986. [STOS BASIC](#) on the [Atari ST](#) in 1988 and [AMOS BASIC](#) on the [Amiga](#) in 1990 by [François Lionet](#) and [Constantin Sotiropoulos](#) (dialects of [BASIC](#)). Several [keyboards](#) : [AZERTY](#) - last decade of 19th century. [FITALY](#) by [Jean Ichbiah](#) in 1996.

Sports: [Jeu de paume](#), precursor of tennis, in the 12th century. The first autonomous diving suit, the precursor to today's scuba gear, is developed by Paul Lemaire d'Augerville in 1824. First documented [cycling race](#), a 1,200 metre race held on May 31, 1868 at the Parc of [Saint-Cloud](#), [Paris](#). The first [cycle race](#) covering a distance between two cities was [Paris–Rouen](#) (see [History of cycling](#)). FIFA World Cup by [Jules Rimet](#), FIFA former president. UEFA Euro Cup by [Henri Delaunay](#). Summer Olympic Games by [Pierre de Coubertin](#). [International Olympic Committee](#) by [Pierre de Coubertin](#) on 23 June 1894. On 22 July 1894 the newspaper [Le Petit Journal](#) organised the world's first competitive motor race from [Paris to Rouen](#). The first finisher was Count [Jules-Albert de Dion](#) but his steamer was ineligible, so the 'official' victory was awarded to [Albert Lemaître](#) driving his 3 hp petrol engined [Peugeot](#). [Pétanque](#) in 1907. [Triathlon](#) in the 1920s near Paris (Joinville-le-Pont, Meulan and Poissy). The [Aqua-lung](#), first [Scuba Set](#) (in open-circuit) by [Emile Gagnan](#) and [Jacques-Yves Cousteau](#) in 1943. [Parkour](#) in the 1980s.

Miscellaneous: [Carcel burner](#) in 1800. Developments of [battery](#): [Dry cell battery](#) by [Gaston Planté](#) in 1859 (first practical storage lead-acid battery). In 1866, [Georges Leclanché](#) patented the carbon-zinc wet cell battery called the [Leclanché cell](#). [Interchangeable parts](#) by [Honoré Blanc](#). [Binoculars](#) (using [roof prisms](#)) in 1870 by Achille Victor Emile Daubresse. Artificial [Cement](#) by [Louis Vicat](#). [Hairdryer](#) in 1879 by Alexandre Godefroy. Modern [Dry cleaning](#) in 1855 by [Jean Baptiste Jolly](#). [Reinforced concrete](#) by [Joseph Monier](#) in 1849 and [patented](#) in 1867. [Guillotine](#). Hydraulic [Shock absorber](#). [Letterbox](#). Modern [Safe](#). [Photolithography](#). [Power transformer](#). [Flax spinning frame](#). [Waste container](#) by [Eugène Poubelle](#). [Ball bearing](#) by [Jules Suriray](#), a Parisian bicycle mechanic, on 3 August 1869. [Criminology](#) by [Eugène François Vidocq](#).

EUROPEAN PHILOSOPHY 1820-1939

(Source – mainly from Encyclopedia Britannica)

Positivism and social theory in Comte, Mill, and Marx

The absolute idealists wrote as if the Renaissance methodologists of the sciences had never existed. But if in Germany the empirical and scientific tradition in philosophy lay dormant, in France and England in the middle of the 19th century it was very much alive. In France, Auguste Comte wrote his great philosophical history of science, *Cours de philosophie positive* (1830–42; “Course of Positive Philosophy”; Eng. trans. [*The Positive Philosophy of Auguste Comte*](#)), in six volumes. Influenced by Bacon and the entire school of British empiricism, by the doctrine of progress put forward by Turgot and the marquis de [*Condorcet*](#) (1743–94) during the 18th century, and by the very original social reformer [*Henri de Saint-Simon*](#) (1760–1825), Comte called his philosophy “positivism,” by which he meant a [*philosophy of science*](#) so narrow that it denied any validity whatsoever to “knowledge” not derived through the accepted methods of science. But the *Cours de philosophie positive* made its point not by dialectic but by an appeal to the history of thought, and here Comte presented his two basic ideas:

1. The notion that the sciences have emerged in strict order, beginning with mathematics and astronomy, followed by physics, chemistry, and biology, and culminating in the new science of sociology, to which Comte was the first to ascribe the name.
2. The so-called “[*law of the three stages*](#),” which views thought in every field as passing progressively from superstition to science by first being religious, then abstract, or metaphysical, and finally positive, or scientific.

Comte's contribution was to initiate an antireligious and an antimetaphysical bias in the philosophy of science that survived into the 20th century.

In mid-19th-century England the chief representative of the empirical tradition from Bacon to Hume was John Stuart Mill. Mill's theory of knowledge, best represented in his [*Examination of Sir William Hamilton's Philosophy*](#) (1865), was not particularly original but rather a judicious combination of the doctrines of Berkeley and Hume; it symbolized his mistrust of vague metaphysics, his denial of the a priori element in knowledge, and his determined opposition to any form of intuitionism. It is in his enormously influential [*A System of Logic*](#) (1843), however, that Mill's chief theoretical ideas are to be found.

This work—as part of its subtitle, *the Principles of Evidence and the Methods of Scientific Investigation*, indicates—was concerned less with formal logic than with scientific methodology. Mill made here the fundamental distinction between [*deduction*](#) and [*induction*](#), defined induction as the process for discovering and proving general propositions, and presented his “four methods of experimental inquiry” as the heart of the inductive method. These methods were, in fact, only an enlarged and refined version of Francis Bacon's “tables of discovery.” But the most significant section of *A System of Logic* was its conclusion, Book VI, *On the Logic of the Moral Sciences*.

Mill took the experience of the uniformity of nature as the warrant of induction. Here he reaffirmed the belief of Hume that it is possible to apply the principle of causation and the methods of physical science to moral and social phenomena. These may be so complex as to yield only “conditional predictions,” but in this sense there are “social laws.” Thus Comte and Mill agreed on the possibility of a genuine social science.

Mill's *Logic* was extremely influential, and it continued to be taught at Oxford and Cambridge well into the 20th century, but in the end his importance lay less in logic and epistemology than in ethics and political philosophy. Mill was the great apostle of political liberalism in the 19th century, a true follower of John Locke. And, just as Locke and Rousseau had represented the liberal and the radical wings of social theory in the early modern period, so Mill and Karl Marx represented the liberal and radical approaches to social reform 100 years later.

Mill was raised by social reformers—his father, [James Mill](#) (1773–1836), and Jeremy Bentham. His social theory was an attempt, by gradual means arrived at democratically, to combat the evils of the Industrial Revolution. His ethics, expressed in his [Utilitarianism](#) (1861), followed the formulations of Bentham in finding the end of society to consist in the production of the greatest quantity of happiness for its members, but he gave to Bentham's cruder (but more consistent) doctrines a humanistic and individualistic slant. Thus, the moral self-development of the individual becomes the ultimate value in Mill's ethics.

This trend was also expressed in his essays [On Liberty](#) (1859) and [Considerations on Representative Government](#) (1861). In the former he stated the case for the freedom of the individual against “the tyranny of the majority,” presented strong arguments in favour of complete freedom of thought and discussion, and argued that no state or society has the right to prevent the free development of human individuality. In the latter he provided a classic defense for the principle of representative democracy, asked for the adequate representation of minorities, urged renewed public participation in political action for necessary social reforms, and pointed out the dangers of class-oriented, or special-interest, legislation.

A radical counterbalance to Mill's liberal ideas was provided by the philosopher, political economist, and revolutionary Karl Marx. Prior to 1848, Marx used the Hegelian idea of estrangement (which Hegel had used in a metaphysical sense) to indicate the [alienation](#) of the worker from the enjoyment of the products of his labour, the crass treatment of human labour as a mere commodity and human beings as mere things, and the general dehumanization of individuals in a selfish, profit-seeking capitalist society.

In [The Communist Manifesto](#) (1848), which he wrote with his colleague and friend [Friedrich Engels](#) (1820–95), Marx yielded to the revolutionary temper of the times by calling for the violent overthrow of the existing social order (as Rousseau had done before the French Revolution). All of history, Marx said, is the [struggle](#) between an exploiting minority and an exploited majority, most recently between the [bourgeoisie](#) and the [proletariat](#); and he advocated the formation of a Communist Party to stimulate proletarian class consciousness and to encourage the proletarian seizure of power and the institution of a just and democratically managed [socialist](#) society. (See [communism](#); [socialism](#).)

Marx's revolutionary fervour tended to harm his philosophical reputation in the West, and his philosophical achievement remains a matter of controversy. But certain of his ideas (some Hegelian in inspiration, some original) have endured. Among these are:

1. That society is a moving balance (dialectic) of antithetical forces that produce social change.
2. That there is no conflict between a rigid economic determinism and a program of revolutionary action.
3. That ideas (including philosophical theories) are not purely rational and thus cannot be independent of external circumstances but depend upon the nature of the social order in which they arise.

Independent and irrationalist movements

At the end of the 19th century there was a flowering of many independent philosophical movements. Although by then Hegel had been nearly forgotten in Germany, a Hegelian renaissance was under way in England, led by [T.H. Green](#), [F.H. Bradley](#), and [Bernard Bosanquet](#). Bradley's *Appearance and Reality* (1893) constituted the high-water mark of the rediscovery of Hegel's dialectical method. In America a strong reaction against idealism fostered the pragmatic movement, led by [Charles Sanders Peirce](#) and [William James](#). Peirce, a logician, held that the function of all inquiry is to eradicate doubt and that the meaning of a concept consists of its practical consequences. James transformed Peirce's pragmatic theory of meaning into a pragmatic theory of truth; in his *The Will to Believe* (1897), he asserted that human beings have a right to believe even in the face of inconclusive evidence and that, because knowledge is essentially an instrument, the practical consequences of a belief are the real test of its truth: true beliefs are those that work. Meanwhile, in Austria, [Franz Brentano](#) (1838–1917), who taught at the University of Vienna from 1874 to 1895, and [Alexius Meinong](#) (1853–1920), who taught at Graz, were developing an empirical psychology and a theory of intentional objects (see [intention](#)) that were to have considerable influence upon the new movement of [phenomenology](#).

However, it was not any of these late 19th-century developments but rather the emphasis on the irrational, which started almost at the century's beginning, that gave the philosophy of the period its peculiar flavour. Hegel, despite his commitment to systematic metaphysics, had nevertheless carried on the Enlightenment tradition of faith in human rationality. But soon his influence was challenged from two different directions. The Danish Christian thinker [Søren Kierkegaard](#) criticized the logical pretensions of the Hegelian system; and one of his contemporaries, [Arthur Schopenhauer](#), himself a German idealist and constructor of a bold and imaginative system, contradicted Hegel by asserting that the irrational is the truly real.

Kierkegaard's criticism of Hegel was an appeal to the concrete as against the abstract. He satirized Hegelian rationalism as a perfect example of “the academic in philosophy”—of detached, objective, abstract theorizing and system building that was blind to the realities of human existence and to its subjective, living, emotional character. What a human being requires in life, said Kierkegaard, is not infinite inquiry but the boldness of resolute decision and commitment. The [human](#) essence is not to be found in thinking but in the existential conditions of emotional life, in anxiety and despair. The titles of three of Kierkegaard's books—*Fear and Trembling* (1843), *The Concept of Dread* (1844), and *The Sickness unto Death* (1849)—indicate his preoccupation with states of consciousness quite unlike cognition.

For a short time Schopenhauer competed unsuccessfully with Hegel at the University of Berlin; thereafter he withdrew to spend the rest of his life in battle against academic philosophy. His own system, though orderly and carefully worked out, was expressed in vivid and engaging language. Schopenhauer agreed with Kant that the world of appearances, of phenomena, is governed by the conditions of space, time, and causality. But he held that science, which investigates the phenomenal world, cannot penetrate the real world behind appearances, which is dominated by a strong, blind, striving, universal cosmic Will that expresses itself in the vagaries of human instinct, in sexual striving, and in the wild uncertainties of animal behaviour. Everywhere in nature one sees strife, conflict, and inarticulate impulse; and these, rather than rational processes or intellectual clarity, are humankind's true points of contact with ultimate reality.

[Friedrich Nietzsche](#), the third member of the irrationalist triumvirate, was a prolific but unsystematic writer, presenting his patchwork of ideas in swift atoms of thought. Nietzsche viewed the task of the philosopher as destroying old values, creating new ideals, and through them erecting a new civilization. He agreed with Schopenhauer that mind is an instrument of instinct to be used in the service of life and power, and he held that illusion is as necessary to human beings as truth. Nietzsche spent much time analyzing emotional states such as resentment, guilt, bad conscience, and self-contempt.

Kierkegaard, Schopenhauer, and Nietzsche provided for the 19th century a new, nonrational conception of human nature, and they viewed the mind not as open to rational introspection but as dark, obscure, hidden, and deep. But above all they initiated a new style of philosophizing. Schopenhauer wrote like an 18th-century essayist, Kierkegaard was a master of the methods of irony and paradox, and Nietzsche used aphorism and epigram in a self-consciously literary manner. For them, the philosopher should be less a crabbed academician than a man of letters.

Contemporary philosophy

Despite the tradition of philosophical professionalism established during the Enlightenment by Wolff and Kant, philosophy in the 19th century was still created largely outside the universities. Comte, Mill, Marx, Kierkegaard, and Schopenhauer were not professors, and only the German idealist school was rooted in academic life. Since the mid-20th century, however, most well-known philosophers have been associated with academia. Philosophers more and more employ a technical vocabulary and deal with specialized problems, and they write not for a broad intellectual public but for one another. Professionalism also has sharpened the divisions between philosophical schools and made the question of what philosophy is and what it ought to be a matter of the sharpest controversy. Philosophy has become extremely self-conscious about its own method and nature.

The most significant divisions in 20th-century philosophy were influenced and intensified by geographic and cultural differences. The tradition of clear logical analysis, inaugurated by Locke and Hume, dominated the English-speaking world, whereas a speculative and broadly historical tradition, begun by Hegel but later diverging radically from him, held sway on the European continent. From the early decades of the century, the substantive as well as stylistic differences between the two approaches—known after World War II as analytic and

Continental philosophy, respectively—gradually became more pronounced, and until the 1990s few serious attempts were made to find common ground between them.

Other less-significant currents in 20th-century philosophy were the speculative philosophies of [Henri Bergson](#) (1859–1941) of France, [John Dewey](#) (1859–1952) of the United States, and [Alfred North Whitehead](#) (1861–1947) of England—each of whom evades easy classification—and the philosophical Marxism practiced in the Soviet Union and eastern Europe until the collapse of communism there in 1990–91.

Bergson, Dewey, and Whitehead

In his *[An Introduction to Metaphysics](#)* (1903) and in his masterpiece, *[Creative Evolution](#)* (1907), Bergson distinguished between two profoundly different ways of knowing: the method of analysis, which is characteristic of science, and the method of [intuition](#), a kind of intellectual sympathy through which it is possible to enter into objects and other persons and identify with them. All basic metaphysical truths, Bergson held, are grasped by philosophical intuition. This is how one comes to know one's deepest self and the essence of all living things, which he called “duration,” as well as the “vital spirit,” which is the mysterious creative agency in the world.

For Whitehead, philosophy is primarily metaphysics, or “speculative philosophy,” which he described as the effort “to frame a coherent, logical, necessary system of general ideas in terms of which every element of our experience can be interpreted.” Whitehead's philosophy was thus an attempt to survey the world with a large generality of understanding, an end toward which his great trilogy, *[Science and the Modern World](#)* (1925), *[Process and Reality](#)* (1929), and *[Adventures of Ideas](#)* (1933), was directed.

Whereas Bergson and Whitehead were principally metaphysicians and philosophers of culture, Dewey was a generalist who stressed the unity, interrelationship, and organicity of all forms of philosophical knowledge. He is chiefly notable for the fact that his conception of philosophy stressed so powerfully the notions of practicality and moral purpose. One of the guiding aims of Dewey's philosophizing was the effort to find the same warranted assertibility for ethical and political judgements as for scientific ones. Philosophy, he said, should be oriented not to professional pride but to human need.

Dewey's approach to the social problems of the 20th century, unlike that of [Vladimir Lenin](#) (1870–1924), emphasized not revolution but the continuous application of the intellect to social affairs. He believed in social planning—in conscious, intelligent intervention to produce desirable social change—and he proposed a new “experimentalism” as a guide to enlightened public action to promote the aims of a democratic community. His pragmatic social theory is the first major political philosophy produced by modern liberal democracy.

Marxist thought

The framework of 19th-century Marxism, augmented by philosophical suggestions from [Lenin](#), served as the starting point of all philosophizing in the Soviet Union and its eastern

European satellites. Much of Lenin's thinking was also devoted to more practical issues, however, such as tactics of violence and the role of the Communist Party in bringing about and consolidating the proletarian revolution. Later Marxism continued this practical concern, largely because it retained the basic Marxist conception of what philosophy is and ought to be. Marxism (like pragmatism) assimilated theoretical issues to practical needs. It asserted the basic unity of theory and practice by finding that the function of the former was to serve the latter. Marx and Lenin both held that theory was always, in fact, expressive of class interests; consequently, they wished philosophy to be transformed into a tool for furthering the class struggle. The task of philosophy was not abstractly to discover the truth but concretely to forge the intellectual weapons of the proletariat. Thus, philosophy became inseparable from ideology.

[Analytic philosophy](#)

It is difficult to give a precise definition of analytic philosophy since it is not so much a specific doctrine as an overlapping set of approaches to problems. Its 20th-century origin is often attributed to the work of the English philosopher [G.E. Moore](#) (1873–1958). In [Principia Ethica](#) (1903), Moore argued that the predicate *good*, which defines the sphere of ethics, is “simple, unanalyzable, and indefinable.” His contention was that many of the difficulties in ethics, and indeed in philosophy generally, arise from an “attempt to answer questions, without first discovering precisely what question it is which you desire to answer.” These questions thus require analysis for their clarification. Philosophers in this tradition generally have agreed with Moore that the purpose of analysis is the clarification of thought. Their varied methods have included the creation of symbolic languages as well as the close examination of ordinary speech, and the objects to be clarified have ranged from concepts to natural laws and from notions that belong to the physical sciences—such as mass, force, and testability—to ordinary terms such as *responsibility* and *see*. From its inception, analytic philosophy also has been highly problem-oriented. There is probably no major philosophical problem that its practitioners have failed to address.

The development of analytic philosophy was significantly influenced by the creation of symbolic (or mathematical) logic at the beginning of the century (*see* [formal logic](#)). Although there are anticipations of this kind of logic in the Stoics, its modern forms are without exact parallel in Western thought, a fact that is made apparent by its close affinities with mathematics and science. Many philosophers thus regarded the combination of logic and science as a model that philosophical inquiry should follow, though others rejected the model or minimized its usefulness for dealing with philosophical problems. The 20th century thus witnessed the development of two diverse streams of analysis, one of them emphasizing formal (logical) techniques and the other informal (ordinary-language) ones. There were, of course, many philosophers whose work was influenced by both approaches. Although analysis can in principle be applied to any subject matter, its central focus for most of the century was language, especially the notions of meaning and reference. Ethics, aesthetics, religion, and law also were fields of interest, though to a lesser degree. In the last quarter of the century there was a profound shift in emphasis from the topics of meaning and reference to issues about the human mind, including the nature of mental processes such as thinking, judging, perceiving, believing, and intending, as well as the products or objects of such processes, including representations, meanings, and visual images. At the same time, intensive work continued on the theory of reference, and the results obtained in that domain

were transferred to the analysis of mind. Both formalist and informalist approaches exhibited this shift in interest.

The formalist tradition

Logical atomism

The first major development in the formalist tradition was a metaphysical theory known as logical atomism, which was derived from work in mathematical logic by the English philosopher Bertrand Russell (1872–1970). Russell's work, in turn, was based in part on early notebooks written before World War I by his former pupil Ludwig Wittgenstein (1889–1953). In *The Philosophy of Logical Atomism*, a monograph published in 1918, Russell gave credit to Wittgenstein for supplying “many of the theories” contained in it. Wittgenstein had joined the Austrian army when the war broke out, and Russell had been out of contact with him ever since. Wittgenstein thus did not become aware of Russell's version of logical atomism until after the war. Wittgenstein's polished and very sophisticated version appeared in the *Tractatus Logico-Philosophicus*, which he wrote during the war but did not publish until 1922.

Both Russell and Wittgenstein believed that mathematical logic could reveal the basic structure of reality, a structure that is hidden beneath the cloak of ordinary language. In their view, the new logic showed that the world is made up of simple, or “atomic,” facts, which in turn are made up of particular objects. Atomic facts are complex, mind-independent features of reality, such as the fact that a particular rock is white or the fact that the Moon is a satellite of the Earth. As Wittgenstein says in the *Tractatus*, “The world is determined by the facts, and by their being *all* the facts.” Both Russell and Wittgenstein held that the basic propositions of logic, which Wittgenstein called “elementary propositions,” refer to atomic facts. There is thus an immediate connection between formal languages, such as the logical system of Russell's *Principia Mathematica* (written with Alfred North Whitehead and published between 1910 and 1913), and the structure of the real world: elementary propositions represent atomic facts, which are constituted by particular objects, which are the meanings of logically proper names. Russell differed from Wittgenstein in that he held that the meanings of proper names are “sense data,” or immediate perceptual experiences, rather than particular objects. Further, for Wittgenstein but not for Russell, elementary propositions are connected to the world by being structurally isomorphic to atomic facts—i.e., by being a “picture” of them. Wittgenstein's view thus came to be known as the “picture theory” of meaning.

Logical atomism rested upon a number of theses. It was realistic, as distinct from idealistic, in its contention that there are mind-independent facts. But it presupposed that language is mind-dependent—i.e., that language would not exist unless there were sentient beings who used sounds and marks to refer and to communicate. Logical atomism was thus a dualistic metaphysics that described both the structure of the world and the conditions that any particular language must satisfy in order to represent it. Although its career was brief, its guiding principle—that philosophy should be scientific and grounded in mathematical logic—was widely acknowledged throughout the century.

Logical positivism

Logical positivism was developed in the early 1920s by a group of Austrian intellectuals, mostly scientists and mathematicians, who named their association the Wiener Kreis ([Vienna Circle](#)). The logical positivists accepted the logical atomist conception of philosophy as properly scientific and grounded in mathematical logic. By “scientific,” however, they had in mind the classical empiricism handed down from Locke and Hume, in particular the view that all factual knowledge is based on experience. Unlike logical atomists, the logical positivists held that only logic, mathematics, and the special sciences can make statements that are meaningful, or cognitively significant. They thus regarded metaphysical, religious, ethical, literary, and aesthetic pronouncements as literally nonsense. Significantly, because logical atomism was a metaphysics purporting to convey true information about the structure of reality, it too was disavowed. The positivists also held that there is a fundamental [distinction](#) to be made between “analytic” statements (such as “All husbands are married”), which can be known to be true independently of any experience, and “synthetic” statements (such as “It is raining now”), which are knowable only through observation.

The main proponents of logical positivism—[Rudolf Carnap](#), Herbert Feigl, Philipp Frank, and Gustav Bergmann—all immigrated to the United States from Germany and Austria to escape Nazism. Their influence on American philosophy was profound, and, with various modifications, logical positivism was still a vital force on the American scene at the beginning of the 21st century.

The [informalist](#) tradition

Generally speaking, philosophers in the informalist tradition viewed philosophy as an autonomous activity that should acknowledge the importance of logic and science but not treat either or both as models for dealing with conceptual problems. The 20th century witnessed the development of three such approaches, each of which had sustained influence: common sense philosophy, ordinary language philosophy, and speech act theory.

Common sense philosophy

Originating as a reaction against the forms of idealism and skepticism that were prevalent in England at about the turn of the 20th century, the first major work of common sense philosophy was Moore's paper [A Defense of Common Sense](#) (1925). Against skepticism, Moore argued that he and other human beings have known many propositions about the world to be true with certainty. Among these propositions are: “The Earth has existed for many years” and “Many human beings have existed in the past and some still exist.” Because skepticism maintains that nobody knows any proposition to be true, it can be dismissed. Furthermore, because these propositions entail the existence of material objects, idealism, according to which the world is wholly mental, can also be rejected. Moore called this outlook “the common sense view of the world,” and he insisted that any philosophical system whose propositions contravene it can be rejected out of hand without further analysis.

Continental philosophy

Analytic philosophy had comparatively little influence on the European continent, where the speculative and historical tradition remained strong. Dominated by phenomenology and [existentialism](#) during the first half of the 20th century, after World War II Continental philosophy came to embrace increasingly far-reaching structuralist and post-structuralist critiques of metaphysics and philosophical rationality.

The [phenomenology](#) of [Husserl](#) and [Heidegger](#)

Considered the father of phenomenology, [Edmund Husserl](#) (1859–1938), a German mathematician-turned-philosopher, was an extremely complicated and technical thinker whose views changed considerably over the years. His chief contributions were the phenomenological method, which he developed early in his career, and the concept of the “[life-world](#),” which appeared only in his later writings. As a technique of phenomenological analysis, the phenomenological method was to make possible “a descriptive account of the essential structures of the directly given.” It was to isolate and lay bare the intrinsic structure of conscious experience by focusing the philosopher's attention on the pure data of consciousness, uncontaminated by metaphysical theories or scientific or empirical assumptions of any kind. Husserl's concept of the life-world is similarly concerned with immediate experience. It is the individual's personal world as he directly experiences it, with the ego at the centre and with all of its vital and emotional colourings.

With the appearance of the [Jahrbuch für Philosophie und phänomenologische Forschung](#) (1913–30; “Annual for Philosophical and Phenomenological Research”) under Husserl's chief editorship, his philosophy flowered into an international movement. Its most notable adherent was [Martin Heidegger](#) (1889–1976), whose masterpiece, [Being and Time](#), appeared in the *Jahrbuch* in 1927. The influence of the phenomenological method is clear in Heidegger's work; throughout his startlingly original investigations of human existence—with their unique dimensions of “being-in-the-world,” dread, care, and “being-toward-death”—Heidegger adheres to the phenomenological principle that philosophy is not empirical but is the strictly self-evident insight into the structure of experience. Later, the French philosophical psychologist [Maurice Merleau-Ponty](#) (1908–61), building on the concept of the life-world, used the notions of the lived body and its “facticity” to create a hierarchy of human-lived experience.

The [existentialism](#) of [Jaspers](#) and [Sartre](#)

Existentialism, true to its roots in Kierkegaard and Nietzsche, was oriented toward two major themes: the analysis of [human](#) existence, or Being, and the centrality of human choice. Thus its chief theoretical energies were devoted to [ontology](#) and decision.

Existentialism as a philosophy of human existence was best expressed in the work of the German philosopher [Karl Jaspers](#) (1883–1969), who came to philosophy from medicine and psychology. For Jaspers as for Dewey, the aim of philosophy is practical. But whereas for Dewey philosophy is to guide human action, for Jaspers its purpose is the revelation of Being, “the illumination of existence,” the answering of the questions of what human beings are and what they can become. This illumination is achieved, and Being is revealed most profoundly,

through the experience of “extreme” situations that define the human condition—conflict, guilt, suffering, and death. It is through a confrontation with these extremes that the individual realizes his existential humanity.

The chief representative of existentialism as a philosophy of human decision was the French philosopher and man of letters [Jean-Paul Sartre](#) (1905–80). Sartre too was concerned with [Being](#) and with the dread experienced before the threat of Nothingness. But he found the essence of this Being in liberty—in freedom of choice and the duty of self-determination. He therefore devoted much effort to describing the human tendency toward “bad faith,” reflected in perverse attempts to deny one's own responsibility and to flee from the truth of one's inescapable freedom. Sartre did not overlook the legitimate obstacles to freedom presented by the facts of place, past, environment, society, and death. However, he demanded that one surmount these limitations through acts of conscious decision, for only in acts of freedom does human existence achieve authenticity. In [The Second Sex](#) (1949), [Simone de Beauvoir](#) (1908–86), Sartre's fellow philosopher and lifelong companion, attempted to mobilize the existentialist concept of freedom for the ends of modern feminism.

After World War II Sartre came to believe that his philosophy of freedom had wrongly ignored problems of social justice, and in his later work, especially the *Critique of Dialectical Reason* (1960), he sought to reconcile existentialism with Marxism.

WESTERN ARCHITECTURE IN 1820-1939
(Source – mainly from Encyclopedia Britannica)

Classicism, 1830–1930

Continuing development

Until recently conventional histories of architecture treated the 19th century as an unfortunate period in which historicist architects needlessly obstructed the path to a new architecture based on technology and engineering. The importance of the 20th century, according to this view, consisted in the establishment of the Modernist movement as the final victory of [Functionalism](#)—in which buildings are designed so as to avoid all historical reference and are even constructed of “new” materials.

Today, however, a new interpretation has arisen, for two reasons: first, the growth of serious study of the historical architecture of the 19th century led to its reappraisal as an independent architectural movement of high quality; second, the arrival of postmodernism in the 1970s led to a realization that the Modernist movement was not a permanent plateau to which the whole of the 19th and 20th centuries had been leading but was simply another historical period. With the withdrawal of the privileged status that had been for so long granted to Modernism, it became possible to take a broader look at the period from 1830 to 1930. From the conventional histories, for example, one would scarcely be aware that most buildings erected up to the 1930s were designed in a range of Classical and traditional styles.

National and regional variations

France

The [École des Beaux-Arts](#) (School of Fine Arts) in Paris was the most important centre of architectural education in the Western world in the 19th century. Founded in 1819 as the successor to the Royal Academy of Architecture, the École drew students not only from France but also from throughout Europe and, after 1850, from North America. At the École, architecture was seen as a public service involving the representation in stone of national and civic dignity, and teaching thus centred on the problems of designing monumental public buildings in the Classical style. Jacques-Ignace Hittorff was typical of those architects who combined the practice of modern classicism with archaeological investigation into [Greek](#) and Roman architecture. His Gare du Nord, [Paris](#) (1861–65), showed brilliantly how a language ultimately inspired by the triumphal arches of ancient Rome could lend an appropriate monumental emphasis to a major metropolitan railway terminus. In Saint-Vincent-de-Paul, Paris (1830–46), a church with a giant portico leading to an aisled basilican interior, Hittorff incorporated polychromatic decoration inspired by his discoveries that Greek temples had been systematically painted in strong colours. His publications on this subject between 1827 and 1851 were important because the gaudy and essentially ephemeral character of polychromatic decoration was incompatible with the image of timeless purity with which Greek art had been invested by [Johann Winckelmann](#).

[Henri Labrouste](#), a more inventive architect than Hittorff, pursued similar research into Greek architecture with the ambition of making it seem human rather than divine or unapproachable; for example, he argued that what is now known as the Temple of Hera I at Paestum was not a temple but a civil assembly hall. His drawings showing the building in use, with transitory adornments such as trophies, inscriptions, paintings, and even graffiti, shocked the members of the Academy of Fine Arts to whom he submitted them in 1828. Ten years later he had the opportunity of designing a great public building in which he could express his ideals of modernized classicism. This was the Library of Sainte-Geneviève, Paris, designed in 1838–39 and built from 1843 to 1850; it is one of the masterpieces of 19th-century architecture. The austere arcuated (arched) facade, owing something to [Leon Battista Alberti](#)'s Malatesta Temple at Rimini, Italy, is adorned with the carved names of more than 800 of the most important authors whose books are housed within. The columns and arches supporting the huge barrel-vaulted ceiling of the main reading room are constructed of elegantly ornamented cast iron—an early use of this material in a major public building.

Louis Duc's Palace of Justice, Paris (1857–68), articulated with a powerful Doric order, is a major expression of Beaux-Arts ideals, but it is [Charles Garnier](#)'s Paris [Opéra](#) House (1862–75) that is widely regarded as the climax of 19th-century French classicism. The ingenious planning and spatial complexity of the Opéra owe much to Beaux-Arts methods of organization, but the scale is new, as is the lavish provision of circulation space, including the great staircase and numerous richly decorated galleries, foyers, and corridors). Garnier planned this spectacular setting so that visitors would begin their theatrical experience the moment they entered the building. The Opéra fits into the web of new streets or boulevards built for Emperor Napoleon III by [Baron Haussmann](#) in 1854–70. These broad avenues of apartment blocks and shops, frequently contrived in Baroque fashion to create vistas converging on major public buildings, set a pattern that was widely followed in the expansion and modernization of European capital cities.

The Classical language of Hittorff and Duc was echoed throughout the 19th century by French architects such as Jean-Louis Pascal (e.g., Faculty of Medicine and Pharmacy, Bordeaux; 1880–88) and Henri-Paul Nénot (e.g., New Sorbonne, Paris; 1885–1901), both of whom were influential teachers at the École des Beaux-Arts. A high point was reached with the Paris Exposition of 1889, for which Henri Deglane and Victor Laloux erected, respectively, the [Grand Palais](#) and the Gare d'Orsay (renovated as the [Musée d'Orsay](#), 1979–86). These monumental buildings are in a frothy Baroque style, though they incorporate much glass and iron. Reaction to this exuberance was expressed in the work of [Auguste Perret](#), who attempted to apply the newly developed technique of [reinforced-concrete](#) construction to buildings designed in a trabeated (post-and-lintel) style that was ultimately Classical: for example, his Theatre of the Champs-Élysées, Paris (1911–12), and the Museum of Public Works, Paris (1936), now the headquarters of the Economic and Social Council. At the International Exposition of 1937, or Paris World's Fair, pavilions in a range of styles were dominated by the [Chaillot Palace](#), built from designs by Jacques Carlu, Louis-Hippolyte Boileau, and Léon Azéma. This is a striking example of the austere trabeated classicism that was the most popular style for public buildings in the 1930s in many parts of the United States and Europe. It is often known as stripped classicism because features such as columns and pilasters were reduced to a grid and deprived of their customary moldings.

Great [Britain](#)

Britain in 1830 was still in the middle of a building boom that had begun at the end of the Napoleonic Wars in 1815. Towns were expanded with buildings in the international Greek Revival manner such as William Wilkins's Yorkshire Museum, York (1827–30). The architect Charles Robert Cockerell, despite being a distinguished Classical archaeologist, regarded this rigid Greek formula as stylistically restricting. He felt that he belonged to a continuing Classical tradition that linked ancient Greek architect [Ictinus](#) with Baroque architect [Francesco Borromini](#). In his masterpiece, the [Ashmolean Museum](#) and Taylor Institution, Oxford (1841–44), he produced a type of Grecian mannerism in which elements from Greek, Roman, Renaissance, and Baroque architecture were united in a rich sculptural weave of powerful originality. He was also important for bringing the same high quality of design and materials to the field of commercial architecture, as in his Bank of England, Liverpool (1844–47).

Despite the high regard in which the allusive Classical buildings of this learned and sensitive architect were held, the immediate future for British architecture did not lie with Cockerell. The Gothic Revival attracted the most thoughtful minds and the most gifted architects between about 1840 and 1870. From the 1870s, however, [Norman Shaw](#) and William Eden Nesfield led a move away from the Gothic Revival, with its strongly ecclesiastical flavour, to the more domestic charms of the so-called [Queen Anne Revival](#). In prominent buildings such as his red-brick mansion for Frederick White at No. 170, Queen's Gate, London (1888–90), and Parr's (now National Westminster) Bank, Liverpool (1898–1901), Shaw demonstrated the virtues of the simple astylar (columnless) tradition of English 17th- and 18th-century architecture.

Among the many who were profoundly influenced by the brilliance and diversity of Shaw in the field of domestic and commercial architecture, none was more important than [Sir Edwin Lutyens](#). In early houses such as Deanery Garden, Sonning, Berkshire (1901), he adopted local vernacular styles but was nonetheless able to display his characteristic geometric massing on the exteriors and his love of complex spatial flow in the interiors. These qualities make such houses an interesting parallel to the domestic work of Lutyens's contemporary [Frank Lloyd Wright](#). The same play with volume and space governs the design of Lutyens's masterpieces such as Viceroy's House (now the Presidential Palace), New Delhi (1912–30), and the Memorial to the Missing of the Somme, Thiepval, France (1928–30), in which he reduced the language of the Classical orders to an almost abstract synthesis.

[Italy](#)

The Neoclassical town planning of the years around 1815 was succeeded in Italy, as elsewhere in Europe, by a [Renaissance revival](#) of which an ambitious example is the Palace of Justice, Rome (1888–1910), by Guglielmo Calderini. This revival was appropriate in a country that was home to the Renaissance. It thus blended well with the growth of Italian nationalism, of which the most conspicuous architectural expression is Giuseppe Sacconi's Monument to Victor Emmanuel II, Rome (1885–1911). This amazingly confident, if generally unloved, re-creation of imperial Roman grandeur commemorates the king under whom Italian unity had been achieved in 1861.

Italy's ancient Roman past was recalled once more in the 1920s and '30s as a consequence of Mussolini's attempt to legitimate his political regime. In Rome during the 1930s Marcello Piacentini and Vittorio Ballio Mopurgo created, respectively, the Via della Conciliazione and the Piazza Augusto Imperiale. Though monumental in scale, these were in a dull and simplified Classical style and involved the destruction of substantial parts of the historic centre of the city. More attractive were the new towns, such as Littoria (now [Latina](#)) and Aprilia, created south of Rome in 1932–39, whose architects drew on the recent archaeological discoveries at the ancient Roman town of [Ostia](#).

[Germany](#) and [Austria](#)

Schinkel set the pattern for the transformation of 18th-century royal cities into modern urban centres with numerous Neoclassical public buildings built in [Berlin](#) between 1815 and 1835. His many successors in Berlin included Friedrich Stüler and Johann Strack, who designed the National Gallery (1865–69), but architects such as [Paul Wallot](#) adopted an increasingly turgid neo-Renaissance manner, as in the [Reichstag](#) Building (1884–94). In the mid-19th century [Munich](#) was transformed for King Ludwig I of Bavaria by architects [Leo von Klenze](#) and Friedrich von Gärtner into a major cultural capital. Their twin models were Periclean Athens and Renaissance Florence, the former providing the inspiration for Klenze's Greek Doric Ruhmeshalle (1843–54) and Propylaeon (1846–60) and the latter for Gärtner's Bavarian State Library (1832–43). The most poetic product of a Winckelmannesque identification of the spirit of modern Germany with that of ancient Greece was the Walhalla above the Danube River near Regensburg. This great Greek temple was built in 1830–42 for Ludwig I from designs by Klenze as a monument to pan-German unity.

[Vienna](#) was also transformed from 1858 by the construction of the [Ringstrasse](#), a great boulevard on the site of the old city walls. In the 1870s and '80s it was lined with monumental public buildings in a variety of styles thought historically appropriate for their functions: the Danish architect Theophilus Hansen's neo-Greek Parliament House, [Gottfried Semper](#)'s and Karl von Hasenauer's neo-Baroque Burgtheater, and Friedrich von Schmidt's neo-Gothic Town Hall.

About 1900 the search for a more indigenous German classicism encouraged Alfred Messel in Berlin to study the austere Neoclassicism of Gentz and Gilly of a century earlier, hence the Greek Revival flavour of Messel's offices for the [AEG](#) (formerly the Allgemeine Elektrizitäts-Gesellschaft) and his National Bank, both built in Berlin in 1905–07. This style was popular between the world wars when it was regarded as so essentially Germanic that it was adopted for the design of key monuments of the Third Reich, such as Paul Ludwig Troost's House of German Art, Munich (1933–37), and [Albert Speer](#)'s New Chancellery, Berlin (1938–39).

[Scandinavia](#) and [Greece](#)

The key building in the development of Scandinavian classicism in the period 1830–1930 is the Thorvaldsen Museum in [Copenhagen](#), erected in 1839–48 from designs by Michael Gottlieb Bredesbøll. It was built to house the collection of sculpture that the celebrated [Danish](#) Neoclassical sculptor [Bertel Thorvaldsen](#) presented to his native country in 1837. The

opportunity was taken of providing a major cultural monument to strengthen national consciousness at a time of political crisis and to symbolize the new constitutional democracy that was established in 1849. The exterior walls of Bindsbøll's grave Schinkelesque courtyard were enlivened with polychromatic decoration and painted with appropriate narrative scenes. This system of ornament was inspired by his knowledge of the recent archaeological discoveries in Greece and Sicily. He had visited [Athens](#) in 1835–36, and it was in this city, appropriately, that the Greek Revival was given perhaps its most fitting civic expression: Hans Christian Hansen, a friend of Bindsbøll, excavated and restored the ancient Greek monuments on the Acropolis and built the University (1839–50). This crisp Ionic building eventually formed a group with the National Library and the Academy of Science, which were added from designs by Hans Christian and his brother Theophilus between 1859 and 1892.

The buildings of Bindsbøll and the Hansen brothers were a potent influence on the Scandinavian classicists of the early 20th century such as Carl Petersen (Fåborg Museum, Denmark, 1912–15) and Hack Kampmann (Police Headquarters, Copenhagen, 1919–24). Other notable expressions of this cool and austere language in Stockholm are Ivar Tengbom's Concert House (1920–26) and two masterpieces by [Gunnar Asplund](#), the City Library (1920–28) and Woodland Crematorium (1935–40).

[David John Watkin](#)

[United States](#)

The followers of Latrobe lacked his inventive genius but adapted the more conventional aspects of his Greek Revival work to create a public style that symbolized the dignity of the new democracy. The Greek Revival in the United States had as its leading exponents [William Strickland](#), [Robert Mills](#), [Thomas Ustick Walter](#), and Ithiel Town. Strickland was the architect of the Merchants' Exchange, Philadelphia (1832–34), which featured a soaring lantern reminiscent of the Choragic Monument of Lysicrates in Athens. [Mills](#) built many government buildings in [Washington](#), D.C., including the Treasury (1836–42) and the Patent Office (begun 1836). He also designed the Washington Monument in Baltimore (1815–29), a giant [Doric](#) column, the first such monument in the United States. [Walter](#) worked on the United States Capitol building and in Philadelphia, where he designed Girard College (1833–47) in the form of an elegant Corinthian temple. Countless state houses and public buildings throughout the United States continued to be built from Greco-Roman models into the 20th century. [Alexander Jackson Davis](#) was one of the leading architects of the Greek-temple house, of which the Bowers House, Northampton, Massachusetts (1825–26), is an example. Such Greek houses were particularly numerous in the South, fine examples being Berry Hill, Halifax County, Virginia (1835–40), and Belle Meade, near Nashville, Tennessee (1853).

[Sandra Millikin](#)[David John Watkin](#)

These Neoclassical buildings were ultimately of English derivation, but the pattern of architecture in the United States shifted in 1846 when [Richard Morris Hunt](#) became the first American to enroll as an architectural student at the École des Beaux-Arts in Paris. Hunt specialized in mansions for the new commercial aristocracy of America: for example, [The Breakers](#), [Newport](#), Rhode Island, built in 1892–95 in an opulent neo-Renaissance style for [Cornelius Vanderbilt II](#). In 1859–62 [Henry Hobson Richardson](#) trained at the École, and on

his return to the United States he specialized in a rock-faced [Romanesque](#) style probably inspired by the work of Eugène-Emmanuel Viollet-le-Duc's rationalist follower, Émile Vaudremer. Richardson's most celebrated buildings in this vein are the [Allegheny County Court House and Jail](#), Pittsburgh (1883–88), and the [Marshall Field & Co.](#) Wholesale Store, Chicago (1885–87; demolished in 1930).

Richardson's pupil [Charles Follen McKim](#), who had been trained at the École in 1867–70, set up a partnership with [William Rutherford Mead](#) and [Stanford White](#) that was to change the course of American architecture. Following their early domestic masterpieces in the vernacular, or Shingle, style, such as the Low House, Bristol, Rhode Island (1887; demolished in 1962), McKim, Mead, and White produced a chain of Classical buildings that were more consistently monumental than anything seen since the days of the Roman Empire. These include the Boston Public Library (1887–95), the Rhode Island State Capitol (1891–93), [Columbia University](#), New York City (1894–98), and Pennsylvania Station, New York City (1902–11; demolished in 1963); the last is a mighty adaptation of the Baths of Caracalla and a reminder that the Roman baths exercised a powerful influence on the imagination of architects from at least the time of [Donato Bramante](#).

The [World's Columbian Exposition](#) at Chicago in 1893, which included buildings by McKim, Mead, and White, commemorated the 400th anniversary of the “discovery” of the New World by Christopher Columbus and also helped modern Americans rediscover the value of Classical planning in civic design. The dazzling spectacle of monumental Classical architecture on the fair's Midway caught the fancy of Americans who saw in its great axes, lagoons, sculpture, white buildings, and large plazas an answer to the dreary urban environments of their hometowns. Similar schemes were supported in other cities; some of these were designed by the fair's principal planner, [Daniel H. Burnham](#), who brought the notion of the “great white city” to Cleveland, Washington, D.C., New York City, and San Francisco. The best parts of many American cities are spacious because of the planners of this “City Beautiful” movement.

Three of the many architects who continued this Classical tradition after World War I were [John R. Pope](#) ([Jefferson Memorial](#), 1934–43, and [National Gallery of Art](#), 1937–41, both in Washington, D.C.), [Paul Philippe Cret](#) (Hartford County Building, Connecticut, 1926), and Philip Trammell Shutze (Temple of the Hebrew Benevolent Congregation, Atlanta, Georgia, 1931–32). Despite this Classical strain, the keynote of 1930s architecture was stylistic pluralism. The Gothic Revival continued, especially in university buildings, whereas [domestic architecture](#) in the suburbs could be neo-Tudor or neo-Georgian. With the aid of technology, buildings in the style of Spanish estates were built in Florida, French farmhouses in Philadelphia, Georgian and colonial houses in New England, and pueblos in the Southwest. Georgia revived its antebellum architecture, and [Santa Barbara](#), California, which was destroyed by an earthquake in 1925, was quickly rebuilt in the style of a Spanish mission.

[David John Watkin](#)

Late 19th-century developments

Construction in iron and glass

The [Industrial Revolution](#) in Britain introduced new building types and new methods of construction. Marshall, Benyou, and Bage's flour mill (now Allied Breweries) at Ditherington, Shropshire (1796–97), is one of the first [iron-frame buildings](#), though brick walls still carry part of the load and there are no longitudinal beams. The cloth mill at King's Stanley, Gloucestershire (1812–13), is more convincing as an iron-frame building. Fully fireproof and avoiding the use of timber, it is clad in an attractive red-brick skin with Venetian windows and angle quoins. Leading Regency architects even used cast-iron construction members in major public buildings in the Classical style: Robert Smirke incorporated concealed cast-iron beams in the [British Museum](#) (1823–46), while John Nash openly displayed cast-iron Doric columns at [Buckingham Palace](#) (1825–30).

Iron was frequently combined with [glass](#) in the construction of conservatories; early surviving examples include the conservatory (1827–30) at Syon House, Middlesex, by Charles Fowler, and the Palm House (1845–47) at Kew Gardens, Surrey, by Decimus Burton. These led naturally to the [Crystal Palace](#), the climax of early Victorian technology. In the design of the Crystal Palace, built for the Great Exhibition held at London in 1851, [Sir Joseph Paxton](#), a botanist, employed timber, cast iron, wrought iron, and glass in a ridge-and-furrow system he had developed for greenhouses at Chatsworth in 1837. Paxton was partly inspired by the organic structure of the Amazonian lily *Victoria regia*, which he successfully cultivated. The Crystal Palace contained important innovations in mass production of standardized materials and rapid assembly of parts, but its chief architectural merit lay in its cadence of colossal spaces. French designers recognized its magic, and a series of buildings for universal exhibitions held at Paris in 1855, 1867, and 1878 showed its influence.

The emancipation of markets and stores was no less impressive. Designers erected iron-and-glass umbrellas, such as Victor Baltard's [Halles Centrales](#), Paris (1853–70; demolished 1971). An especially beautiful example of iron-and-glass construction is Henri Labrouste's nine-domed reading room at the Bibliothèque Nationale, Paris (1860–67).

Closer to the English tradition are the billowing Laeken glass houses, Brussels (1868–76), by Alphonse Balat. Visitors were admitted to the Coal Exchange in London (1846–49, J.B. Bunning) through a round towered Classical porch at the corner of two Renaissance palaces to a magnificent rotunda hall, which was surrounded by three tiers of ornamental iron balconies and roofed by a lacelike dome of iron and glass. In Paris, [Gustave Eiffel](#), together with the architect Louis-Auguste Boileau, gave the retail shop a new and exciting setting in the [Bon Marché](#) (1876), where merchandise was displayed around the perimeters of skylighted, interior courts. The United States saw nothing comparable, but [cast-iron](#) columns and arches appeared during the 1850s in commercial buildings such as the Harper Brothers Building at New York City (1849) by John B. Corlies and [James Bogardus](#). Stores were given cast-iron faces, as in the pioneering Stewart's Department Store (later Wanamaker's) by John Kellum in New York City (1859–62). Iron was frequently intended to simulate stone, and it was admired for its economy of maintenance as well as such neglected qualities as precision, standardization, and efficient strength. British parallels to these American examples include Gardner's Warehouse, Glasgow (1855–56), by John Baird and Oriel Chambers, Liverpool (1864), by Peter Ellis.

The [Eiffel Tower](#) (1887–89), the most important emblem of the Paris exhibition of 1889, was designed by Gustave Eiffel, an engineer who had done outstanding work in the Paris Exposition of 1878 and in steel structures such as the trussed parabolic arches in the viaduct at Garabit, France (1880–84). In the [Palais des Machines](#) (at the 1889 exhibition) by Ferdinand

Dutert and Victor Contamin, a series of three-hinged trussed arches sprang from small points across a huge space, 385 feet (117 metres) long and 150 feet (45 metres) high. Similar spaces had already been created in railway stations in England such as [St. Pancras](#), London (1864–68, by William H. Barlow), where the wrought-iron arches have a span of 243 feet (74 metres) and rise to a height of 100 feet (30 metres).

In the [United States](#) a major effort took place in one of the most important new building types, the large [office building](#). This building type was made necessary by the concentration of markets, banks, railroad terminals, and warehouses in small sections of growing cities, and it pushed [skyward](#) as a result of the attempt to get maximum income from expensive urban properties, the desire for the commercial prestige of tall emblems, and the need of businesses for mutual proximity in the days before rapid electronic communication. The safe, fast [elevator](#) removed the major prejudice against height. Designed by traditionalist architects, the tall buildings stretched masonry construction to its limits; they frequently resembled towers composed of smaller buildings stacked one on another, as in Hunt's Tribune Building at New York City (1874). The structural problem was solved at [Chicago](#) in 1884–85, when an engineer, [William Le Baron Jenney](#), developed in the [Home Insurance Company Building](#) a metal skeleton of cast-iron columns—sheathed in masonry—and wrought-iron beams, carrying the masonry walls and windows at each floor level. While technically innovative, the building retained masonry sidewalls, making its elevations disunified and inept.

Inspired by the architectural rationalism of Eugène-Emmanuel Viollet-le-Duc, Chicago architects—who came to be known as the [Chicago School](#)—sought a better aesthetic expression of the metal frame, but even the talented [John Wellborn Root](#), working with [Daniel H. Burnham](#), failed to achieve it in the Ashland Block (completed 1892). Other designers, such as [William Holabird](#) and [Martin Roche](#) in the Tacoma Building (1887–89), also missed their chance. Even the great [Louis Sullivan](#) was not successful in his early buildings, such as the Ryerson (1884). Covering them with gross, somewhat [Art Nouveau](#) ornament, he accentuated first the vertical columns and then the horizontal beams in a covert admission of failure. At his best, as in his Auditorium Building, Sullivan trod Richardson's path toward unified Romanesque forms. The Marshall Field & Co. Wholesale Store showed Sullivan the way toward a theme for the skyscraper, which he first stated with assurance in the [Wainwright Building](#) at St. Louis (1890–91). Brick piers mark each steel column and half module to create a rhythm of tall, narrow bays punctuated by recessed [spandrels](#) (the spaces above and below each window), terminating at the roofline. Jenney's Leiter Building II (1891; later [Sears, Roebuck and Co.](#)'s main retail store) and Burnham and Root's [Monadnock Building](#) (1891), both in Chicago, went beyond the Wainwright Building and were the first modern commercial buildings to demonstrate in their designs formal simplicity and ornamental abstinence, resulting from a new form of harmony between the demands of artistic expression, function, and technology.

The ferment in Chicago was neither halted nor marred by classicism's transcontinental popularity. Burnham's firm went on to produce Chicago's [Reliance Building](#) (1890–95), an excellent office building with logically ordered spaces enclosed by faceted walls of glass and a steel skeleton covered by terra-cotta panels. Sullivan found his best expression of the skyscraper in the [Prudential Building](#), in Buffalo, New York (1894–95), and he developed the theory for it in an essay published in *Lippincott's Magazine* (1896). That theory received even more dramatic expression in the Schlesinger-Mayer Department Store (later [Carson Pirie Scott](#)) in Chicago (1898–1904), in which the towered corner marked the climax of the logic of the steel frame and the entrance was made inviting with rich, naturalistic ornament. At the

very end of the 19th century, the important emblem of modern commerce thus received an appropriate form: its structure was made of steel, its spaces were planned efficiently, its elevations were expressive of the skeleton, and its scale was marked by the fenestration and ornament.

[Albert Bush-Brown](#)[David John Watkin](#)

Art Nouveau

Although known as [Jugendstil](#) in Germany, [Sezessionstil](#) in Austria, [Modernista](#) in Spain, and [Stile Liberty](#) or [Stile Floreale](#) in Italy, [Art Nouveau](#) has become the general term applied to a highly varied movement that was European-centred but internationally current at the end of the century. Art Nouveau architects gave idiosyncratic expression to many of the themes that had preoccupied the 19th century, ranging from Viollet-le-Duc's call for structural honesty to Sullivan's call for an organic architecture. The extensive use of iron and glass in Art Nouveau buildings was also rooted in 19th-century practice. In France bizarre forms appeared in iron, masonry, and concrete, such as the structures of [Hector Guimard](#) for the Paris Métro (c. 1900), the Montmartre church of Saint-Jean L'Évangéliste (1894–1904) by Anatole de Baudot, Xavier Schollkopf's house for the actress Yvette Guilbert at Paris (1900), and the Samaritaine Department Store (1905) near the Pont Neuf in Paris, by Frantz Jourdain (1847–1935). The Art Nouveau architect's preference for the curvilinear is especially evident in the Brussels buildings of the Belgian [Baron Victor Horta](#). In the Hôtel Van Eetvelde (1895) he used floral, tendrilous ornaments, while his Maison du Peuple (1896–99) exhibits undulating enclosures of space. Decorative exploitation of the architectural surface with flexible, S-shaped linear ornament, commonly called whiplash or eel styles, was indulged in by the Jugendstil and Sezessionstil architects. The Studio Elvira at Munich (1897–98) by August Endell and [Otto Wagner](#)'s Majolika Haus at Vienna (c. 1898) are two of the more significant examples of this German and Austrian use of line.

Wagner continued to combine academic geometry with Classical modified Art Nouveau decoration in his Karlsplatz Stadtbahn Station (1899–1901) and in the Postal Savings Bank (1904–06), both in [Vienna](#). Wagner's pupils broke free of his classicism and formed the [Sezessionists](#). [Joseph Olbrich](#) joined the art colony at [Darmstadt](#), in Germany, where his houses and exhibition gallery of about 1905 were boxlike, severe buildings. [Josef Hoffmann](#) left Wagner to found the Wiener Werkstätte, an Austrian equivalent of the English [Arts and Crafts Movement](#); his best work, the [Stoclet House](#) at Brussels (1905; designated a UNESCO [World Heritage site](#), 2009), was an asymmetrical composition in which white planes were defined at the edges by gilt lines and decorated by formalized Art Nouveau motifs reminiscent of Wagner's ornament. Josef Plečnik, a talented pupil of Wagner, began his career in 1903–05 with the office and residence of Johannes Zacherl in Vienna. This was in a Wagner-inspired style that Plečnik developed in the 1930s in a fascinating series of buildings, especially in his native city of Ljubljana, now in Slovenia.

In Finland, [Eliel Saarinen](#) brought an Art Nouveau flavour to the National Romanticism current in the years around 1900. His Helsinki Railway Station (1906–14) is close to the work of Olbrich and the Viennese Sezessionists. Close links existed between Art Nouveau designers in Vienna and in [Glasgow](#), where [Charles Rennie Mackintosh's School of Art](#) (1896–1909), with its rationalist yet poetic aesthetic, is one of the most inventive and personal of all Art Nouveau buildings. In The Netherlands, [Hendrik Petrus Berlage](#) also created a sternly fundamentalist language of marked individuality that is best appreciated in his

masterpiece, the [Amsterdam Exchange](#) (1898–1903). The exterior is in a rugged and deliberately unpicturesque vernacular, while the even more ruthless interior deploys brick, iron, and glass in a manner that owes much to the rationalist aesthetic of Viollet-le-Duc.

In the United States the Art Nouveau movement arrived with designer [Louis Comfort Tiffany](#) and was especially influential on ornamental rather than spatial design, particularly on Sullivan's decorative schemes and, for a time, those of [Frank Lloyd Wright](#). Similarly, in Italy decorative exuberance and the formally picturesque were elements of Stile Floreale buildings by Raimondo D'Aronco, such as the main building for the Applied Art Exhibition held at Turin, Italy, in 1902. These qualities, along with dynamic spatial innovations, were manifested in the works of perhaps the most singular Art Nouveau architect, the Spaniard [Antoni Gaudí](#). His imaginative and dramatic experiments with space, form, structure, and ornament fascinate the visitor to [Barcelona](#). With their peculiar organicism, the Casa Milá apartment house (1905–10), the residence of the Batlló family (1904–06), Gaudí's unfinished lifetime projects of the surrealistic Güell Park and the enigmatic church of the Holy Family were personal statements. Their effect, like that of most Art Nouveau architecture, was gained through bizarre form and ornament.

20th-century architecture

The [Modernist](#) movement

Before World War II

Europe

The Modernist movement in architecture was an attempt to create a nonhistorical architecture of Functionalism in which a new sense of space would be created with the help of modern materials. A reaction against the stylistic pluralism of the 19th century, Modernism was also coloured by the belief that the 20th century had given birth to “modern man,” who would need a radically new kind of architecture.

The Viennese architect [Adolf Loos](#) opposed the use of any ornament at all and designed purist compositions of bald, functional blocks such as the Steiner House at Vienna (1910), one of the first private houses of reinforced concrete. [Peter Behrens](#), having had contact with [Joseph Olbrich](#) at Darmstadt and with [Josef Hoffmann](#) at Vienna, was in 1907 appointed artistic adviser in charge of the AEG (Allgemeine Elektrizitäts Gesellschaft), for which he designed a turbine factory (1909) at Berlin. Behrens strongly affected three great architects who worked in his office: [Walter Gropius](#), [Le Corbusier](#), and [Ludwig Mies van der Rohe](#).

In [Germany](#), Gropius followed a mechanistic direction. His [Fagus Works](#) factory at Alfeld-am-Leine in Germany (1911) and the Werkbund exposition building at the Cologne exhibition (1914) had been models of industrial architecture in which vigorous forms were enclosed by masonry and glass; the effect of these buildings was gained by the use of steel frames, strong silhouette, and the logic of their plans. There were no historical influences or expressions of local landscape, traditions, or materials. The beauty of the buildings derived from adapting form to a technological culture.

Gropius succeeded van de Velde as director of the ducal Arts and Crafts School at Weimar in 1919. Later called the [Bauhaus](#), it became the most important centre of modern design until the [Nazis](#) closed it in 1933. While he was at Weimar, Gropius developed a firm philosophy about architecture and education, which he announced in 1923. The aim of the [visual arts](#), he said, is to create a complete, homogeneous physical environment in which all the arts have their place. Architects, sculptors, furniture makers, and painters must learn practical crafts and obtain knowledge of tools, materials, and forms; they must become acquainted with the machine and attempt to use it in solving the social problems of an industrial society. At the Bauhaus, aesthetic investigations into space, colour, construction, and elementary forms were flavoured by [Cubism](#) and [Constructivism](#). Moving the school to [Dessau](#) in 1925, Gropius designed the pioneering new Bauhaus (1925–26) in which steel frames and glass walls provided workshops within severely Cubistic buildings. Gropius assembled a staff of Modernist teachers, including the artists [László Moholy-Nagy](#), [Wassily Kandinsky](#), [Paul Klee](#), [Marcel Breuer](#), and Adolf Meyer, whose projects, such as the 116 experimental standardized housing units of the Törten Estate at Dessau, Germany (1926–28), bore a highly machined, depersonalized appearance.

In France, [Tony Garnier](#) caught the Modernist currents in materials, structure, and composition when he evolved his masterful plan for a [Cité industrielle](#) (1901–04), published in 1917, in which reinforced concrete was to be used to create a modern city of modern buildings. With insight, Garnier developed a comprehensive scheme for residential neighbourhoods, transportation terminals, schools, and industrial centres, and his plan became a major influential scheme for 20th-century urban design. Garnier received no mandate to build such a city, but his town hall at Boulogne-Billancourt (1931–34) recalled the promise he had shown, though it was not so innovative and masterful as might have been expected.

The [Futurist](#) movement counted among its members another early 20th-century urban planner, the Italian architect [Antonio Sant'Elia](#). Influenced by American industrial cities and the Viennese architects [Otto Wagner](#) and Adolf Loos, he designed a grandiose futuristic city, entitled "[Città nuova](#)" ("New City"), the drawings for which were exhibited at Milan in 1914. He conceived of the city as a symbol of the new technological age. It was an affirmative environment for the future, however, in opposition to the negating inhuman [Expressionistic](#) city of the future conceived by [Fritz Lang](#) in the 1926 film classic *Metropolis*.

Centred in Germany between 1910 and 1925, [Expressionist](#) architects, such as the painters who were part of the [Brücke](#) ("Bridge") and [Blaue Reiter](#) ("Blue Rider") groups, sought peculiarly personal and often bizarre visual forms and effects. Among the earliest manifestations of an Expressionistic building style were the highly individual early works of [Hans Poelzig](#), such as the Luban Chemical Factory (1911–12) and the municipal water tower (1911) of Posen, Germany (now Poznań, Poland), which led to his monumental, visionary "space caves," such as the project for the Salzburg Festival Theatre (1920–21) and the Grosses Schauspielhaus, built in Berlin (1919) for [Max Reinhardt](#)'s Expressionistic theatre. These later works by Poelzig show the influence of the structural audacity of [Max Berg](#)'s [Centenary Hall](#) at Breslau, Germany (now [Wrocław](#), Poland; 1912–13), with its gigantic reinforced concrete dome measuring 213 feet (65 metres) in diameter. The second generation of Expressionists centred their activities in postwar Germany and The Netherlands. Distinctly personal architectural statements were given form in such dynamically sculptured structures as the [Einstein Observatory](#) in Potsdam (1920), by [Erich Mendelsohn](#); the anthroposophically based design by [Rudolf Steiner](#) for the Goetheanum in Dornach, Switzerland (1925–28); the Eigen Haard Estates (housing development) at Amsterdam (1921), by Michel de Klerk; and

Fritz Höger's (1877–1949) Chilehaus office building in Hamburg (1922–23), with its imperative thrust of mass and acute angularity.

As Germany was the centre of Expressionism, Paris was the stronghold of the advocates of a new vision of space, [Cubism](#), which [Georges Braque](#) and Pablo Picasso developed about 1906. Forms were dismembered into their faceted components; angular forms, interpenetrated planes, transparencies, and diverse impressions were recorded as though seen simultaneously. Soon architectural reflections of the Cubist aesthetic appeared internationally. Interior spaces were defined by thin, discontinuous planes and glass walls; supports were reduced to slender metal columns, machine-finished and without ornamentation; and Cubistic voids and masses were arranged programmatically in asymmetric compositions.

The Dutch [De Stijl](#) movement was influenced by Cubism, although it sought a greater abstract purity in its geometric formalism. Organized in Leiden in 1917, the painters Piet Mondrian and [Theo van Doesburg](#) and the architects [Jacobus Johannes Pieter Oud](#) and [Gerrit Thomas Rietveld](#) were counted among its members. Their “[Neoplastic](#)” aesthetic advocated severe precision of line and shape, austere pristine surfaces, a Spartan economy of form, and purity of colour. [Rietveld's Schroeder House](#), built in 1924 at Utrecht, was a three-dimensional parallel to Mondrian's paintings of the period. [Van Doesburg's](#) work for the Bauhaus art school at Weimar brought the influence of Dutch Neoplasticism to bear upon Gropius and Mies, whose plans for houses at times markedly resembled van Doesburg's paintings. Meanwhile [Oud](#) collaborated with van Doesburg for a time and vigorously proclaimed the new style in housing developments he built at Rotterdam (after 1918), Hook of Holland (1924–27), and Stuttgart, Germany (1927).

Cubism and the related movements of Futurism, Constructivism, Suprematism, and Neoplasticism, like any artistic styles, might have faltered and fallen into a merely decorative cliché, as at the Paris Exposition of 1925, but for Gropius, [Mies van der Rohe](#), and Le Corbusier.

Gropius was succeeded at the Bauhaus in 1930 by Mies van der Rohe, whose training as a mason was supplemented by the engineering experience he had gained from 1908 to 1911 in the office of Behrens; both of these elements of his education were synthesized in his project for the Kröller House in The Hague (1912). Influenced by van Doesburg's De Stijl, Mies's natural elegance and precise orderliness soon revealed themselves in unrealized projects for a brick country house, a steel-and-glass skyscraper, and a glazed, cantilevered concrete-slab office building (1920–22). He directed the Weissenhof estate project of the Werkbund Exposition at Stuttgart (1927), contributing the design for an apartment house. Such practical problems failed to show his talent, which was not fully known until he designed the [German pavilion](#) for the International Exposition at Barcelona in 1929. The continuous spaces partitioned with thin marble planes and the chromed steel columns drew international applause. His Tugendhat House at Brno, Czech Republic (1930), along with [Le Corbusier's Villa Savoye](#), epitomized the Modernist domestic setting at its best.

The Swiss-French architect Charles-Édouard Jeanneret, known as Le Corbusier, gave the new architecture, sometimes referred to as the [International Style](#), a firm foundation by writing the strong theoretical statement, *Vers une architecture* ([Towards a New Architecture](#)), published in 1923. It revealed a world of new forms—not Classical capitals and Gothic arches but ships, turbines, grain elevators, airplanes, and machine products, which Le Corbusier said were indexes to 20th-century imagination. His love of machines was combined with a belief in

communal authority as the best means of accomplishing social reforms, and Le Corbusier directed his attention toward the problems of housing and urban patterns. An architectural attack, using standardized building components and mass production, was required. His sociological and formal ideas appeared in a Cubist project for Domino housing (1916), and his aesthetic preferences led him to develop an extreme version of Cubist painting that he and the painter [Amédée Ozenfant](#) called [Purism](#). Returning to architecture in 1921, he designed a villa at Vaucresson, France (1922), the abstract planes and strip windows of which revealed his desire to “arrive at the house machine”—that is, standardized houses with standardized furniture. In 1922 he also brought forth his project for a skyscraper city of 3,000,000 people, in which tall office and apartment buildings would stand in broad open plazas and parks with the Cubist spaces between them defined by low row housing.

Much of his work thereafter—his Voisin city plan, his Pavilion of the New Spirit at the Paris Exposition of 1925, his exhibit of workers' apartments at the Werkbund Exposition at Stuttgart (1927), and his influential but unexecuted submittal to the League of Nations competition—was a footnote to that dream of a new city. The villa, Les Terrasses, at Garches, France (1927), was a lively play of spatial parallelepipeds (six-sided solid geometric forms the faces of which are parallelograms) ruled by horizontal planes, but his style seemed to culminate in the most famous of his houses, the [Villa Savoye](#) at [Poissy](#), France (1929–31). The building's principal block was raised one story above the ground on pilotis (heavy reinforced-concrete columns); floors were cantilevered to permit long strip windows; and space was molded plastically and made to flow horizontally, vertically, and diagonally until, on the topmost terrace, the whole composition ended in a cadenza of rounded, terminating spaces. Gaining greater facility in manipulating flowing spaces, Le Corbusier designed the dormitory for Swiss students at the Cité Universitaire (1931–32) in Paris.

In the period after the Russian Revolution of 1917 the erstwhile [Soviet Union](#) at first encouraged modern art, and several architects, notably the German Bruno Taut, looked to the new government for a sociological program. The Constructivist project for a monument to the Third International (1920) by [Vladimir Tatlin](#) was a machine in which the various sections (comprising legislative houses and offices) would rotate within an exposed steel armature. A workers' club in Moscow (1929) had a plan resembling half a gear, and the Ministry of Central Economic Planning (1928–32), designed by Le Corbusier, was intended to be a glass-filled slab but, because of Stalin's dislike of modern architecture, was never completed. Its foundation later was used for an outdoor swimming pool.

Modern European styles of architecture were subjected to official disfavour in the Soviet Union in the 1930s, as Stalin's government adopted Classical monuments—such as Boris Mikhaylovich Iofan's winning design for the Palace of the Soviets (1931), which was intended to pile Classical colonnades to a height of 1,365 feet (416 metres) and have a colossal statue of Lenin at its summit. With its gigantic Corinthian columns, the building for the Central Committee of the Communist Party at Kiev (1937) showed an overbearing scale.

After 1930 the Modernist movement spread through Europe. In Switzerland [Robert Maillart](#)'s experiments with reinforced concrete attained great grace in his Salginatobel Bridge (1930). Finland's [Alvar Aalto](#) won a competition for the Municipal Library at Viipuri (now Vyborg, Russia) in 1927 with a building of glass walls, flat roof, and round skylights (completed 1935; destroyed 1943); but he retained the traditional Scandinavian sympathy for wood and picturesque planning that were evident in his Villa Mairea at Noormarkku, Finland (1938–39), the factory and housing at Sunila, Kotka, Finland (1936–39, completed 1951–54), and his

later civic centre at Säynätsalo, Finland (1950–52). Aalto and other Scandinavians gained a following among those repelled by severe German Modernism. Sweden's [Gunnar Asplund](#) and Denmark's Kay Fisker, Christian Frederick Møller, and [Arne Jacobsen](#) also brought regional character into their Modernist work. In The Netherlands, [Johannes Andreas Brinkman](#) and Lodewijk Cornelis van der Vlugt aimed at more mechanistic, universal form in the Van Nelle Tobacco Factory in Rotterdam (1928–30). In England, refugees from Germany and other countries, alone or with English designers, inaugurated a radical Modernism—for example, the apartment block known as Highpoint I, Highgate, London (by Berthold Lubetkin and the Tecton group, 1935).

The United States

The locus for creative architecture in the United States remained the Midwest, although Californians such as the brothers [Charles Sumner Greene and Henry Mather Greene](#) struck occasional regional and modern notes, as in the Gamble House at Pasadena, California (1908–09). The second generation of architects of the [Chicago School](#), such as William G. Purcell, [George Grant Elmslie](#), and William Drummond, disseminated Midwestern modern architecture throughout the United States.

The greatest of all these new Chicago architects was [Frank Lloyd Wright](#). His “[prairie architecture](#)” expressed its site, region, structure, and materials and avoided all historical reminiscences; beginning with its plan and a distinctive spatial theme, each building burgeoned to its exterior sculptural form. Starting from [Henry Hobson Richardson](#)'s rustic, shingle houses and making free use of Beaux-Arts composition during the 1880s and 1890s, Wright hinted at his prairie house idiom with the Winslow House at River Forest, Illinois (1893), elaborated it in the Coonley House at Riverside, Illinois (1908), and, ultimately, realized it in 1909 in the flowing volumes of space defined by sculptural masses and horizontal planes of his [Robie House](#) at Chicago. Meanwhile, he scored a triumph with his administration building for the [Larkin Company](#) at Buffalo, New York, in 1904 (destroyed 1950), which grouped offices around a central skylighted court, sealed them hermetically against their smoky environs, and offered amenities in circulation, air conditioning, fire protection, and plumbing. In its blocky fire towers, sequences of piers and recessed spandrels were coupled together in a powerful composition. Wright was, however, ignored by all except a select following. The buildings of the single figure who gave international distinction to early 20th-century American architecture remained the cherished property of personal clients, such as Aline Barnsdall, for whom Wright designed the Hollyhock House at Los Angeles (1918–20).

Wright's autobiography (1943) recorded his frustrations in gaining acceptance for [organic architecture](#). The first edition summarized the chief features of that architecture: the reduction to a minimum in the number of rooms and the definition of them by point supports; the close association of buildings to their sites by means of extended and emphasized planes parallel to the ground; the free flow of space, unencumbered by boxlike enclosures; harmony of all openings with each other and with human scale; the exploitation of the nature of a material, in both its surface manifestations and its structure; the incorporation of mechanical equipment and furniture as organic parts of structure; and the elimination of applied decoration. There were also four new properties: transparency, which was obtained through the use of glass; tenuity, or plasticity of mass achieved through the use of steel in tension, as in reinforced

concrete; naturalism, or the expression of materials; and integration, in which all ornamental features were natural by-products of manufacture and assembly.

His Millard House at Pasadena, California (1923), exemplified many of these principles; its concrete-block walls were cast with decorative patterns. [Taliesin East](#), Wright's house near Spring Green, Wisconsin, went through a series of major rebuildings (1911, 1914, 1915, and 1925), and each fitted the site beautifully; local stone, gabled roofs, and outdoor gardens reflected the themes of the countryside. A period of withdrawal at Taliesin afforded Wright several years of intensive reflection, from which he emerged with fabulous drawings for the Doheny ranch in California (1921), a skyscraper for the National Life Insurance Company at Chicago (1920–25), and St. Mark's Tower, New York City (1929). The last was to have been an 18-story apartment house comprising a concrete stem from which four arms branched outward to form the sidewalls of apartments cantilevered from the stem to an exterior glass wall. Unexecuted like most of Wright's most exciting projects, St. Mark's Tower testified to his revolutionary thinking about skyscraper architecture. His ideas gained a wide hearing in 1931 when he published the Kahn lectures he had delivered at Princeton in 1930. In keeping with the needs of the United States during the [Great Depression](#), Wright turned his attention to the low-cost house, designing a “Usonian house” for Herbert Jacobs near Madison, Wisconsin (1937), and a quadruple house, “the Sun houses,” at Ardmore, Pennsylvania (1939). These exemplified the residences he intended for his ideal communities, such as rural, decentralized Broadacre City (1936), which was Wright's answer to European schemes for skyscraper cities.

At about the same time, Wright produced four masterpieces: [Fallingwater](#), Bear Run, Pennsylvania (1936), the daringly cantilevered weekend house of Edgar Kaufmann; the administration building of [S.C. Johnson & Son](#) in Racine, Wisconsin, in which brick cylinders and planes develop a series of echoing spaces, culminating in the forest of graceful “mushroom” columns in the main hall; the Johnson House (1937), aptly called Wingspread, also at Racine; and Taliesin West at Paradise Valley, near Phoenix, Arizona (begun 1938), where rough, angular walls and roofs echo the desert valley and surrounding mountains. With increasing sensitivity to local terrain and native forms and materials, Wright stated more complex spatial and structural themes than European Modernists, who seldom attempted either extreme programmatic plans or organic adaptation of form to a particular environment. Eventually, Wright himself developed a more universal geometry, as he revealed in the sculptural [Solomon R. Guggenheim Museum](#) at New York City (1956–59).

During the period, some buildings gained attention through their Classical ornament; others were Renaissance palaces. The emblem of business, the [office building](#), sometimes suffered from the demand for unique, distinctive towers; indeed, Harvey Wiley Corbett, a New York architect, admitted that publicity was the ruling motivation for some designers. The Gothic skyscraper, popularized by Gilbert's Woolworth Building, was the style used by [Raymond M. Hood](#) for his winning entry in the *Chicago Tribune* competition (1922), beating out many seemingly more contemporary, albeit less splashy, entries.

About 1920 some architects developed simple cubical forms, and the stepped [ziggurat](#) was popularized by renderers, notably Hugh Ferriss, and painters such as [Georgia O'Keeffe](#), [John Marin](#), and [Charles Sheeler](#). This soaring and jagged form received legal support from the New York City zoning law of 1916 and economic justification from the fact that, in order to obtain rentable, peripheral office space in the upper floors, where the banks of elevators diminished, whole increments of office space had to be omitted. These cubical envelopes

were not without [ornament](#) at their crests, as in Hood's American Radiator Building in New York City (1924–25), suitably described as “one huge cinder incandescent at the top.” Such decoration might be chic, as in New York City's Barclay–Vesey (telephone company) Building, where Ralph Walker re-created the Art Deco interiors of the Paris Exposition of 1925. In San Francisco, Miller, Pflueger, & Cantin used Chinese ornament to enliven their telephone building (1926). Paradoxically, one archaeological find led to simpler buildings when, about 1930, Mayan pyramids inspired Timothy Pflueger in his work on the 450 Sutter building in San Francisco. Clifflike blocks arose in Chicago, the Daily News and Palmolive buildings (1929) being the best examples; [New York City](#) acquired a straightforward expression of tall vertical piers and setback cubical masses in the Daily News Building (1930), by the versatile Hood, who had run the course from Gothic to modern form. The bank and office building of the [Philadelphia Savings Fund Society](#) (1931–32) by George Howe and William Lescaze, a Swiss architect, gave the skyscraper its first thoroughly 20th-century form, and Hood, again, produced a counterpart in New York City, the McGraw-Hill Building (1931). Few of these, including the Empire State Building (1931), did anything to solve urban density and transportation problems; indeed, they intensified them. [Rockefeller Center](#), however, begun in 1929, was, with its space for pedestrians within a complex of slablike skyscrapers, outstanding and too seldom copied.

American industry showed some inclination to respect function, materials, and engineering between the world wars, as was evident in Joseph Leland's glazed, skeletal buildings for the Pressed Steel Company at Worcester, Massachusetts (1930). Occasionally, a traditional architect had produced an innovation, such as Willis Polk's (1867–1924) Hallidie Building at San Francisco (1918). With the aid of Ernest Wilby, the engineering firm of Albert Kahn created a work of architectural merit in Detroit's Continental Motors Factory (about 1918). The National Cash Register, United States Shoe Company, National Biscuit, Sears, Roebuck and Company, and various automobile companies, such as Ford, sponsored Functional architecture.

Rockefeller Center was proof that by 1930 there was a move toward simple form, which was presaged by the architecture of the [TVA](#) (Tennessee Valley Authority). European Modernism gained a firm following in the United States as some of its best practitioners emigrated there. [Eliel Saarinen](#), who won second prize in the *Chicago Tribune* competition, gained the acclaim of Sullivan and other architects. He settled in Bloomfield Hills, Michigan, a Detroit suburb, where he established a school of architecture at the [Cranbrook Academy of Art](#). Saarinen designed its new buildings, gradually freeing himself from historical reminiscences of his native Scandinavia. He remained sensitive to the role of art in architecture, best revealed by his use of the sculpture of the Swede [Carl Milles](#). The Austrian architect [Richard Neutra](#) established a practice in California, notable products of which were the Lovell House at Los Angeles (1927–28) and the Kaufmann Desert House at Palm Springs (1946–47).

A modern architecture exhibit in the Museum of Modern Art, New York City, in 1932, recorded by the architectural historian Henry-Russell Hitchcock and the architect [Philip Johnson](#) in the book *International Style; Architecture Since 1922*, familiarized Americans with the [International Style](#). After 1933, as Modernists fled the Soviet Union, Germany, and Italy, the United States received [Gropius](#), Breuer, and Mies. Gropius joined the architectural school of Harvard University and established an educational focus recalling the Bauhaus.

THEATRE IN THE PERIOD 1820-1939

(based mainly on Wikipedia)

Nineteenth-century theatre describes a wide range of movements in the [theatrical culture](#) of Europe and the United States in the 19th century. In the [West](#), they include [Romanticism](#), [melodrama](#), the [well-made plays](#) of [Scribe](#) and [Sardou](#), the [farces](#) of [Feydeau](#), the [problem plays](#) of [Naturalism](#) and [Realism](#), [Wagner's operatic *Gesamtkunstwerk*](#), [Gilbert and Sullivan's](#) plays and operas, [Wilde's](#) drawing-room comedies, [Symbolism](#), and proto-[Expressionism](#) in the late works of [August Strindberg](#) and [Henrik Ibsen](#).^[1]

Several important technical innovations were introduced between 1875 and 1914. First gas lighting and then electric lights, introduced in London's [Savoy Theatre](#) in 1881, replaced candlelight. The [elevator stage](#) was first installed in the [Budapest](#) Opera House in 1884. This allowed entire sections of the stage to be raised, lowered, or tilted to give depth and levels to the scene. The [revolving stage](#) was introduced to Europe by Karl Lautenschläger at the Residenz Theatre, [Munich](#) in 1896.

In Germany, there was a trend toward historical accuracy in [costumes](#) and [settings](#), a revolution in theatre architecture, and the introduction of the theatrical form of [German Romanticism](#). Influenced by trends in [19th-century philosophy](#) and the [visual arts](#), German writers were increasingly fascinated with their [Teutonic](#) past and had a growing sense of [romantic nationalism](#). The plays of [Gotthold Ephraim Lessing](#), [Johann Wolfgang von Goethe](#), [Friedrich Schiller](#), and other [Sturm und Drang](#) playwrights, inspired a growing faith in feeling and instinct as guides to moral behavior. Romantics borrowed from the [philosophy](#) of [Immanuel Kant](#) to formulate the theoretical basis of "Romantic" art. According to Romantics, art is of enormous significance because it gives eternal truths a concrete, material form that the limited human sensory apparatus may apprehend. Among [those who called themselves Romantics](#) during this period, [August Wilhelm Schlegel](#) and [Ludwig Tieck](#) were the most deeply concerned with theatre.^[6] After a time, Romanticism was adopted in France with the plays of [Victor Hugo](#), [Alexandre Dumas](#), [Alfred de Musset](#), and [George Sand](#).

Through the 1830s in France, the theatre struggled against the [Comédie Française](#), which maintained a strong [neo-classical](#) hold over the repertory and encouraged traditional modes of tragic writing in new playwrights. This clash culminated in the premiere of [Hernani](#) by [Victor Hugo](#) in 1830. The large crowd that attended the premiere was full of conservatives and censors who booed the show for disobeying the classical norms and who wanted to stop the performance from going forward. But Hugo organized a Romantic Army of [bohemian](#) and radical writers to ensure that the opening would have to go ahead. The resulting riot represented the rejection in France of the classical traditions and the triumph of Romanticism.^[7]

By the 1840s, however, enthusiasm for Romantic drama had faded in France and a new "Theatre of Common Sense" replaced it.

In France, the "[well-made play](#)" of [Eugene Scribe](#) (1791 - 1861) became popular with playwrights and audiences. First developed by Scribe in 1825, the form has a strong Neoclassical flavour, involving a tight plot and a climax that takes place close to the end of the play. The story depends upon a key piece of information kept from some characters, but

known to others (and to the audience). A recurrent device that the well-made play employs is the use of letters or papers falling into unintended hands, in order to bring about plot twists and climaxes. The suspense and pace builds towards a climactic scene, in which the hero triumphs in an unforeseen reversal of fortune.^[8]

Scribe himself wrote over 400 plays of this type, utilizing what essentially amounted to a literary factory with writers who supplied the story, another the dialogue, a third the jokes and so on. Although he was highly prolific and popular, he was not without detractors: [Théophile Gautier](#) questioned how it could be that, "an author without poetry, lyricism, style, philosophy, truth or naturalism could be the most successful writer of his epoch, despite the opposition of literature and the critics?"^[9]

Its structure was employed by realist playwrights [Alexandre Dumas, fils](#), [Emile Augier](#), and [Victorien Sardou](#). Sardou in particular was one of the world's most popular playwrights between 1860 and 1900. He adapted the well-made play to every dramatic type, from comedies to historical spectacles. In Britain, playwrights like [Wilkie Collins](#), [Henry Arthur Jones](#) and [Arthur Pinero](#) took up the genre, with Collins describing the well-made play as: "Make 'em laugh; make 'em weep; make 'em wait." [George Bernard Shaw](#) thought that Sardou's plays epitomized the decadence and mindlessness into which the late 19th-century theatre had descended, a state that he labeled "Sardoodledom".^[8]

In the early years of the 19th century, the [Licensing Act](#) allowed plays to be shown at only two theatres in [London](#) during the winter: [Drury Lane](#) and [Covent Garden](#). These two huge theatres contained two royal boxes, huge galleries, and a pit with benches where people could come and go during performances. Perhaps the most telling episode of the popularity of theatre in the early 19th century is the theatrical [old price riots of 1809](#). After [Covent Garden](#) burned down, [John Philip Kemble](#), the theatre's manager, decided to raise prices in the pit, the boxes and the third tier. Audience members hated the new pricing which they thought denied them access to a national meeting place and led to three months of rioting until finally Kemble was forced to publicly apologize and lower prices again.^[10] To escape the restrictions, non-patent theatres along the [Strand](#), like the [Sans Pareil](#), interspersed dramatic scenes with musical interludes and comic skits after the [Lord Chamberlain's Office](#) allowed them to stage [burlettas](#)—leading to the formation of the modern [West End](#). Outside of the metropolitan area of London, theatres like [Astley's Amphitheatre](#) and the [Coburg](#) were also able to operate outside of the rules. The exploding popularity of these forms began to make the patent system unworkable and the boundaries between the two began to blur through the 1830s until finally the Licensing Act was dropped in 1843 with the [Theatres Act](#). Parliament hoped that this would civilize the audiences and lead to more literate playwrighting—instead, it created an explosion of [music halls](#), [comedies](#) and sensationalist melodramas.^[11]

[Percy Bysshe Shelley](#) and [Lord Byron](#) were the most important literary dramatists of their time (although Shelley's plays were not performed until later in the century). Shakespeare was enormously popular, and began to be performed with texts closer to the original, as the drastic rewriting of 17th and 18th century performing versions for the theatre were gradually removed over the first half of the century. Kotzebue's plays were translated into English and [Thomas Holcroft's](#) *A Tale of Mystery* was the first of many English melodramas. [Pierce Egan](#), [Douglas William Jerrold](#), [Edward Fitzball](#), [James Roland MacLaren](#) and [John Baldwin Buckstone](#) initiated a trend towards more contemporary and rural stories in preference to the usual historical or fantastical melodramas. [James Sheridan Knowles](#) and [Edward Bulwer-Lytton](#) established a "gentlemanly" drama that began to re-establish the former prestige of the theatre with the [aristocracy](#).^[12]

Theatres throughout the century were dominated by actor-managers who managed the establishments and often acted in the lead roles. Henry Irving, Charles Kean and Herbert Beerbohm Tree are all examples of managers who created productions in which they were the star performer. Irving especially dominated the Lyceum Theatre for almost 30 years from 1871 - 1899 and was hero-worshipped by his audiences. When he died in 1905, King Edward VII and Theodore Roosevelt send their condolences. Among these actor-managers, Shakespeare was often the most popular writer as his plays afforded them great dramatic opportunity and name recognition. The stage spectacle of these productions was often more important than the play and texts were often cut to give maximum exposure to the leading roles. However, they also introduced significant reforms into the theatrical process. For example, William Charles Macready was the first to introduce proper rehearsals to the process. Before this lead actors would rarely rehearse their parts with the rest of the cast: Edmund Kean's most famous direction to his fellow actors being, "stand upstage of me and do your worst."^[10]

Melodramas, light comedies, operas, Shakespeare and classic English drama, pantomimes, translations of French farces and, from the 1860s, French operettas, continued to be popular, together with Victorian burlesque. The most successful dramatists were James Planché and Dion Boucicault, whose penchant for making the latest scientific inventions important elements in his plots exerted considerable influence on theatrical production. His first big success, *London Assurance* (1841) was a comedy in the style of Sheridan, but he wrote in various styles, including melodrama. T. W. Robertson wrote popular domestic comedies and introduced a more naturalistic style of acting and stagecraft to the British stage in the 1860s.

In 1871, the producer John Hollingshead brought together the librettist W.S. Gilbert and the composer Arthur Sullivan to create a Christmas entertainment, unwittingly spawning one of the great duos of theatrical history. So successful were the 14 comic operas of Gilbert and Sullivan, such as *H.M.S. Pinafore* (1878) and *The Mikado* (1885), that they had a huge influence over the development of musical theatre in the 20th century.^[13] This, together with much improved street lighting and transportation in London and New York led to a late Victorian and Edwardian theatre building boom in the West End and on Broadway. At the end of the century, Edwardian musical comedy came to dominate the musical stage.^[14]

In the 1890s, the comedies of Oscar Wilde and George Bernard Shaw offered sophisticated social comment and were very popular.

In the United States, Philadelphia was the dominant theatrical centre until the 1820s. There, Thomas Wignell established the Chestnut Street Theatre and gathered a group of actors and playwrights that included William Warren, Susanna Rowson, and Thomas Abthorpe Cooper, who later was considered the leading actor in North America. In its infancy after the American Revolution, many Americans lamented the lack of a 'native drama', even while playwrights such as Royall Tyler, William Dunlap, James Nelson Barker, John Howard Payne, and Samuel Woodworth laid the foundations for an American drama separate from Britain. Part of the reason for the dearth of original plays in this period may be that playwrights were rarely paid for their work and it was much cheaper for managers to adapt or translate foreign work. Tradition held that remuneration was mainly in the form of a benefit performance for the writer on the third night of a run, but many managers would skirt this custom by simply closing the show before the third performance.^[15]

Known as the "Father of the American Drama", Dunlap grew up watching plays given by British officers and was heavily immersed in theatrical culture while living in London just after the Revolution. As the manager of the John Street Theatre and Park Theatre in New

York, he brought back to his country the plays and theatrical values that he had seen. Like many playwright-managers of his day, Dunlap adapted or translated melodramatic works by French or German playwrights, but he also wrote some 29 original works including *The Father* (1789), *André* (1798), and *The Italian Father* (1799).^[16]

From 1820–30, improvements in the material conditions of American life and the growing demand of a rising middle class for entertainment led to the construction of new theatres in New York, Philadelphia, Boston and Washington, including Catham Garden, Federal Street, the Tremont, Niblo's Garden and the Bowery. During the early part of this period, Philadelphia continued to be the major theatrical centre: plays would often open in Baltimore in September or October before transferring to larger theatres in Philadelphia until April or May, followed by a summer season in Washington or Alexandria. However, rivalries and larger economic forces led to a string of bankruptcies for five major theatre companies in just eight months between October 1, 1828 and May 27, 1829. Due to this and the import of star system performers like Clara Fisher, New York took over as the dominant city in American theatre.^[15]

In the 1830s, Romanticism flourished in Europe and America with writers like Robert Montgomery Bird rising to the forefront. Since Romanticism emphasized eternal truths and nationalistic themes, it fit perfectly with the emerging national identity of the United States. Bird's *The Gladiator* was well-received when it premiered in 1831 and was performed at Drury Lane in London in 1836 with Edwin Forrest as Spartacus, with *The Courier* proclaiming that "America has at length vindicated her capability of producing a dramatist of the highest order." Dealing with slave insurgency in Ancient Rome, *The Gladiator* implicitly attacks the institution of Slavery in the United States by "transforming the Antebellum into neoclassical rebels".^[17] Forrest would continue to play the role for over one thousand performances around the world until 1872. Following the success of their early collaboration, Bird and Forrest would work together on further premieres of *Oralloosa*, *Son of the Incas* and *The Broker of Bogota*. But the success of *The Gladiator* led to contract disagreements, with Bird arguing that Forrest, who had made tens of thousands from Bird's plays, owed him more than the \$2,000 he had been paid.

Minstrel shows emerged as brief burlesques and comic entr'actes in the early 1830s. They were developed into full-fledged form in the next decade. By 1848, blackface minstrel shows were the national art form, translating formal art such as opera into popular terms for a general audience. Each show consisted of comic skits, variety acts, dancing, and music performances that mocked people specifically of African descent. The shows were performed by Caucasians in make-up or blackface for the purpose of playing the role of black people. Minstrel songs and sketches featured several stock characters, most popularly the slave and the dandy. These were further divided into sub-archetypes such as the mammy, her counterpart the old darky, the provocative mulatto wench, and the black soldier. Minstrels claimed that their songs and dances were authentically black, although the extent of the black influence remains debated.

Star actors amassed an immensely loyal following, comparable to modern celebrities or sports stars. At the same time, audiences had always treated theaters as places to make their feelings known, not just towards the actors, but towards their fellow theatergoers of different classes or political persuasions, and theatre riots were a regular occurrence in New York.^[18] An example of the power of these stars is the Astor Place Riot in 1849, which was caused by a conflict between the American star Edwin Forrest and the English actor William Charles Macready. The riot pitted immigrants and nativists against each other, leaving at least 25 dead and more than 120 injured.

In the pre-Civil War era, there were also many types of more political drama staged across the United States. As America pushed [west](#) in the 1830s and 40s, theatres began to stage plays that romanticized and masked treatment of [Native Americans](#) like *Pocahontas*, *The Pawnee Chief*, *De Soto* and *Metamora or the Last of the Wampanoags*. Some fifty of these plays were produced between 1825 and 1860, including [burlesque](#) performances of the "noble savage" by [John Brougham](#).^[19] Reacting off of current events, many playwrights wrote short comedies that dealt with the major issues of the day. For example, *Removing the Deposits* was a farce produced in 1835 at the Bowery in reaction to [Andrew Jackson](#)'s battle with the banks and *Whigs and Democrats, or Love of No Politics* was a play that dealt with the struggle between America's two political parties.

In 1852, [Harriet Beecher Stowe](#) published the anti-slavery novel *Uncle Tom's Cabin* and, without any strong copyright laws, was immediately dramatized on stages across the country. At the [National Theatre](#) in New York, it was a huge success and ran for over two hundred performances up to twelve times per week until 1854. The adaptation by [George Aiken](#) was a six-act production that stood on its own, without any other entertainments or afterpiece.^[20] Minstrelsy's reaction to *Uncle Tom's Cabin* is indicative of [plantation](#) content at the time. *Tom acts* largely came to replace other plantation narratives, particularly in the third act. These sketches sometimes supported Stowe's novel, but just as often they turned it on its head or attacked the author. Whatever the intended message, it was usually lost in the joyous, slapstick atmosphere of the piece. Characters such as Simon Legree sometimes disappeared, and the title was frequently changed to something more cheerful like "Happy Uncle Tom" or "Uncle Dad's Cabin". [Uncle Tom](#) himself was frequently portrayed as a harmless bootlicker to be ridiculed. Troupes known as *Tommercompanies* specialized in such burlesques, and theatrical *Tom shows* integrated elements of the minstrel show and competed with it for a time.

After the [Civil War](#), the American stage was dominated by melodramas, minstrel shows, comedies, farces, circuses, vaudevilles, burleques, operas, operettas, musicals, musical revues, medicine shows, amusement arcades, and Wild West shows. Many American playwrights and theatre workers lamented the "failure of the American playwright", including [Augustin Daly](#), [Edward Harrigan](#), [Dion Boucicault](#), and [Bronson Howard](#). However, as cities and urban areas boomed from immigration in the late nineteenth century, the social upheaval and innovation in technology, communication and transportation had a profound effect on the American theatre.^[21]

In Boston, although ostracized from [Gilded Age](#) society, Irish American performers began to find success, including [Lawrence Barrett](#), [James O'Neill](#), [Dan Emmett](#), [Tony Hart](#), [Annie Yeamans](#), [John McCullough](#), [George M. Cohan](#), and [Laurette Taylor](#), and Irish playwrights came to dominate the stage, including [Daly](#), [Harrigan](#), and [James Herne](#).^[22]

In 1883, the [Kiralffy brothers](#) met with [Thomas Edison](#) at Menlo Park to see if the electric light bulb could be incorporated into a musical ballet called *Excelsior* that they were to present at [Niblo's Gardens](#) in New York City. A showman himself, Edison realized the potential of this venture to create demand for his invention, and together they designed a finale to the production that would be illuminated by more than five hundred light bulbs attached to the costumes of the dancers and to the scenery. When the show opened on August 21, it was an immediate hit, and would subsequently be staged in Buffalo, Chicago, Denver and San Francisco. Thus, [electric lighting in the theatre](#) was born and would radically change not just stage lighting, but the principles of scenic design.^[22]

The Gilded Age was also the golden age of touring in American theatre: while New York City was the mecca of the ambitious, the talented and the lucky, throughout the rest of the country,

a network of theatres large and small supported a huge industry of famous stars, small troupes, minstrel shows, vaudevillians, and circuses. For example, in 1895, the Burt Theatre in [Toledo](#), Ohio offered popular melodramas for up to thirty cents a seat and saw an average audience of 45,000 people per month at 488 performances of 64 different plays. On average 250-300 shows, many originating in New York, crisscrossed the country each year between 1880 and 1910. Meanwhile, owners of successful theatres began to expand their reach, like the theatrical empire of [B.F. Keith](#) and [Edward F. Albee](#) that spanned over seven hundred theatres, including [the Palace](#) in New York.^[23] This culminated in the founding of the [Theatre Syndicate](#) in 1896.

New York City's importance as a theatrical center grew in the 1870s around [Union Square](#) until it became the primary theatre center, and the [Theater District](#) slowly moved north from lower Manhattan until it finally arrived in midtown at the end of the century.

On the musical stage, [Harrigan and Hart](#) innovated with comic musical plays from the 1870s, but London imports came to dominate, beginning with [Victorian burlesque](#), then [Gilbert and Sullivan](#) from 1880, and finally (in competition with [George M. Cohan](#) and musicals by the Gershwins) [Edwardian musical comedies](#) at the turn of the century and into the 1920s.^[14]

In Germany, drama entered a state of decline from which it did not recover until the 1890s. The major playwrights of the period were [Otto Ludwig](#) and [Gustav Freytag](#). The lack of new dramatists was not keenly felt because the plays of [Shakespeare](#), Lessing, Goethe, and Schiller were prominent in the repertory. The most important theatrical force in later 19th-century Germany was that of [Georg II, Duke of Saxe-Meiningen](#) and his [Meiningen Ensemble](#), under the direction of [Ludwig Chronegk](#). The Ensemble's productions are often considered the most historically accurate of the 19th century, although his primary goal was to serve the interests of the playwright. The Ensemble's productions utilised detailed, historically accurate costumes and furniture, something that was unprecedented in Europe at the time. The Meiningen Ensemble stands at the beginning of the new movement toward unified production (or what [Richard Wagner](#) would call the *Gesamtkunstwerk*) and the rise of the [director](#) (at the expense of the actor) as the dominant artist in theatre-making.^[24]

The [Meiningen Ensemble](#) traveled throughout Europe from 1874–1890 and met with unparalleled success wherever they went. Audiences had grown tired with regular, shallow entertainment theatre and were beginning to demand a more creatively and intellectually stimulating form of expression that the Ensemble was able to provide. Therefore, the Meiningen Ensemble can be seen as the forerunners of the art-theatre movement which appeared in Europe at the end of the 1880s.^[25]

[Richard Wagner](#) (1813–1883) rejected the contemporary trend toward realism and argued that the dramatist should be a [myth](#) maker who portrays an [ideal world](#) through the expression of inner impulses and aspirations of a people. Wagner used [music](#) to defeat performers' personal whims. The [melody](#) and [tempo](#) of music allowed him to have greater personal control over performance than he would with spoken drama. As with the Meiningen Ensemble, Wagner believed that the author-composer should supervise every aspect of production to unify all the elements into a "[master art work](#)."^[26] Wagner also introduced a new type of [auditorium](#) that abolished the side boxes, pits, and galleries that were a prominent feature of most European theatres and replaced them with a 1,745 seat fan-shaped auditorium that was 50 feet (15 m) wide at the [proscenium](#) and 115 feet (35 m) at the rear. This allowed every seat in the auditorium to enjoy a full view of the stage and meant that there were no "good" seats.

In [Russia](#), [Aleksandr Griboyedov](#), [Alexander Pushkin](#), and [Nikolai Polevoy](#) were the most accomplished playwrights. As elsewhere, Russia was dominated by melodrama and [musical theatre](#). More [realistic drama](#) began to emerge with the plays of [Nikolai Gogol](#) and the acting

of [Mikhail Shchepkin](#). Under close government supervision, the Russian theatre expanded considerably. Prince [Alexander Shakhovskoy](#) opened state theatres and training schools, attempted to raise the level of Russian production after a trip to Paris, and put in place regulations for governing troupes that remained in effect until 1917.^[27]

Realism began earlier in the 19th century in [Russia](#) than elsewhere in Europe and took a more uncompromising form.^[28] Beginning with the plays of [Ivan Turgenev](#) (who used "domestic detail to reveal inner turmoil"), [Aleksandr Ostrovsky](#) (who was Russia's first professional playwright), [Aleksey Pisemsky](#) (whose *A Bitter Fate* (1859) anticipated [Naturalism](#)), and [Leo Tolstoy](#) (whose *The Power of Darkness* (1886) is "one of the most effective of naturalistic plays"), a tradition of psychological realism in Russia culminated with the establishment of the [Moscow Art Theatre](#) by [Konstantin Stanislavski](#) and [Vladimir Nemirovich-Danchenko](#).^[29]

Ostrovsky is often credited with creating a peculiarly Russian drama. His plays *Enough Stupidity in Every Wise Man* (1868) and *The Storm* (1859) draw on the life that he knew best, that of the middle class. Other important Russian playwrights of the 19th century include [Alexander Sukhovo-Kobylin](#) and Mikhail Saltikov-Shchedrin.

[Naturalism](#), a theatrical movement born out of [Charles Darwin's](#) *The Origin of Species* (1859) and contemporary political and economic conditions, found its main proponent in [Émile Zola](#). His essay "Naturalism in the Theatre" (1881) argued that poetry is everywhere instead of in the past or abstraction: "There is more poetry in the little apartment of a [bourgeois](#) than in all the empty worm-eaten palaces of history."

The realisation of Zola's ideas was hindered by a lack of capable dramatists writing naturalist drama. [André Antoine](#) emerged in the 1880s with his *Théâtre Libre* that was only open to members and therefore was exempt from censorship. He quickly won the approval of Zola and began to stage Naturalistic works and other foreign realistic pieces. Antoine was unique in his set design as he built sets with the "fourth wall" intact, only deciding which wall to remove later. The most important French playwrights of this period were given first hearing by Antoine including Georges Porto-Riche, [François de Curel](#), and [Eugène Brieux](#).^[30]

The work of [Henry Arthur Jones](#) and [Arthur Wing Pinero](#) initiated a new direction on the English stage. While their work paved the way, the development of more significant drama owes itself most to the playwright [Henrik Ibsen](#).

Ibsen was born in Norway in 1828. He wrote 25 plays, the most famous of which are *A Doll's House* (1879), *Ghosts* (1881), *The Wild Duck* (1884), and *Hedda Gabler* (1890). *A Doll's House* and *Ghosts* shocked conservatives: Nora's departure in *A Doll's House* was viewed as an attack on family and home, while the allusions to venereal disease and sexual misconduct in *Ghosts* were considered deeply offensive to standards of public decency. Ibsen refined Scribe's well-made play formula to make it more fitting to the realistic style. He provided a model for writers of the realistic school. In addition, his works *Rosmersholm* (1886) and *When We Dead Awaken* (1899) evoke a sense of mysterious forces at work in human destiny, which was to be a major theme of [symbolism](#) and the so-called "[Theatre of the Absurd](#)".

After Ibsen, British theatre experienced revitalization with the work of [George Bernard Shaw](#), [Oscar Wilde](#), and (in fact from 1900) [John Galsworthy](#). Unlike most of the gloomy and intensely serious work of their contemporaries, Shaw and Wilde wrote primarily in the [comic form](#).

The eighteenth century theatre had been lit by candles and oil-lamps which were mainly provided for illumination so that the audience could see the performance, with no further purpose. This changed in the early 19th century with the introduction of [gas lighting](#) which

was slowly adopted by the major theatres throughout the 1810s and 1820s to provide illumination for the house and the stage. The introduction of gas lighting revolutionized stage lighting. It provided a somewhat more natural and adequate light for the playing and the scenic space upstage of the proscenium arch. While there was no way to control the gas lights, this was soon to change as well. In Britain, theatres in London developed [limelight](#) for the stage in the late 1830s. In Paris, the [electric carbon arc lamp](#) first came into use in the 1840s. Both of these types of lighting were able to be hand-operated and could be focused by means of an attached lens, thus giving the theatre an ability to focus light on particular performers for the first time.^[31]

From the 1880s onwards, theatres began to be gradually electrified with the [Savoy Theatre](#) becoming the first theatre in the world to introduce a fully electrified theatrical lighting system in 1881. [Richard D'Oyly Carte](#), who built the Savoy, explained why he had introduced electric light: "The greatest drawbacks to the enjoyment of the theatrical performances are, undoubtedly, the foul air and heat which pervade all theatres. As everyone knows, each gas-burner consumes as much oxygen as many people, and causes great heat beside. The incandescent lamps consume no oxygen, and cause no perceptible heat."^[32] Notably, the introduction of electric light coincided with the rise of realism: the new forms of lighting encouraged more realistic scenic detail and a subtler, more realistic acting style.^[33]

One of the most important scenic transition into the century was from the often-used two-dimensional scenic backdrop to three-dimensional sets. Previously, as a two-dimensional environment, scenery did not provide an embracing, physical environment for the dramatic action happening on stage. This changed when three-dimensional sets were introduced in the first half of the century. This, coupled with change in audience and stage dynamic as well as advancement in theatre architecture that allowed for hidden scene changes, the theatre became more representational instead of presentational, and invited audience to be transported to a conceived 'other' world. The early 19th century also saw the innovation of the moving panorama: a setting painted on a long cloth, which could be unrolled across the stage by turning spools, created an illusion of movement and changing locales.^[34]

Twentieth-century theatre describes a period of great change within the [theatrical culture](#) of the 20th century, mainly in [Europe](#) and [North America](#). There was a widespread challenge to long-established rules surrounding theatrical representation; resulting in the development of many new forms of theatre, including [modernism](#), [Expressionism](#), [Impressionism](#), [political theatre](#) and other forms of [Experimental theatre](#), as well as the continuing development of already established theatrical forms like [naturalism](#) and [realism](#).

Throughout the century, the artistic reputation of theatre improved after being derided throughout the 19th century. However, the growth of other media, especially [film](#), has resulted in a diminished role within the culture at large. In light of this change, theatrical artists have been forced to seek new ways to engage with society. The various answers offered in response to this have prompted the transformations that make up its modern history.^[1]

Developments in areas like [Gender theory](#) and [postmodern philosophy](#) identified and created subjects for the theatre to explore. These sometimes explicitly meta-theatrical performances were meant to confront the audience's perceptions and assumptions in order to raise questions about their society. These challenging and influential plays characterized much of the final two decades of the 20th-century.

Although largely developing in [Europe](#) and [North America](#) through the beginning of the century, the next 50 years saw an embrace of non-Western theatrical forms. Influenced by the dismantling of empires and the continuing development of [post-colonial](#) theory, many new artists utilized elements of their own [cultures](#) and [societies](#) to create a diversified theatre.

Realism focuses on the attempt to represent subject matter truthfully, without artificiality and avoiding artistic conventions or implausible, exotic and supernatural elements. For many theatre artists throughout the century, realism was meant to direct attention to the social and psychological problems of ordinary life.

Influenced by the ideas of [Sigmund Freud](#), [Charles Darwin](#) and others, many artists began to find a [psychological](#) approach to theatre that emphasized the inner dimensions of the characters onstage. This was carried out both on the stage in [acting](#) styles, in [play writing](#) and in [theatrical design](#). Beginning with the work Russian playwrights [Ivan Turgenev](#), [Alexander Ostrovsky](#) and [Leo Tolstoy](#) and continued by [Emile Zola](#) in France and [Henrik Ibsen](#) in Norway in the late [19th Century](#), realism came to dominate most of the theatrical culture of the 20th century in Britain and North America.

In Russia, the movement towards realism began earlier than anywhere else in the world. Building on the work of earlier pioneers, [Constantin Stanislavski](#) and [Vladimir Nemirovich-Danchenko](#) founded the [Moscow Art Theatre](#) in 1898, wanting to reform a Russian theatre dominated by [melodrama](#) to one in which high-quality art was available to the general public. In perhaps the most important theatrical meeting of the 20th century, the two met for an epic 18-hours, from 2 pm to 8 am the next morning, and laid the foundation for one of the most influential companies of the century.^[2] Together they would forge a professional company with an ensemble ethos that discouraged individual vanity, selecting actors from Nemirovich's class at the Philharmonic school and Stanislavsky's amateur Society of Art and Literature group, along with other professional actors; they would create a realistic theatre of international renown, with popular prices for seats, whose organically [unified aesthetic](#) would bring together the techniques of the [Meiningen Ensemble](#) and those of [André Antoine](#)'s [Théâtre Libre](#) (which Stanislavsky had seen during trips to Paris).^[3]

On December 29, 1898, the theatre opened [Anton Chekhov](#)'s [The Seagull](#) with Stanislavski himself playing the role of Trigorin and [Vsevolod Meyerhold](#) as Treplev in "one of the greatest events in the history of Russian theatre and one of the greatest developments in the history of world drama."^[4] Nemirovich described the applause, which came after a prolonged silence, as bursting from the audience like a [dam](#) breaking and the production received unanimous praise from the press.^[5] Later analysts attribute the production's success to the fidelity of its delicate representation of everyday life, its intimate, ensemble playing, and the resonance of its mood of despondent uncertainty with the psychological disposition of the Russian intelligentsia of the time.^[6] Productions of Ibsen, [Shakespeare](#), and Chekhov's [Uncle Vanya](#), [The Cherry Orchard](#) and [Three Sisters](#) were also very successful in the early days of the company.

After the success of the Moscow Art Theatre, Stanislavski set out to create a [unified system of acting](#) that would train actors and actresses to create believable characterizations for their performances. Developed mainly between 1911 and 1916 and revised throughout his life, the approach was partly based on the concept of emotional memory for which an actor focuses internally to portray a character's emotions onstage. Areas of study include concentration, voice, physical skills, emotion memory, observation, and dramatic analysis. The Stanislavsky system was widely practiced in the Soviet Union and in the United States, where experiments in its use began in the 1920s and continued in many schools and professional workshops.

In the early part of the 20th century, Russia experienced a cultural [Silver Age](#) and the theatre was no exception. By 1916, the total number of producing theatres in Moscow alone totaled close to 200. These year-round and seasonal theatres produced mainly farces, comedies, vaudevilles and even melodramas, but there were also a significant number of theatres offering realistic or [naturalistic](#) theatre. These included [Aleksey Suvorin's Maly Theatre](#) and the Moscow Dramatic Theatre (1914–19). While there were a number of actress-managers in [St. Petersburg](#) and [Moscow](#) like [Vera Komissarzhevskaya](#) and [Ida Rubinstein](#), the course of Russian theatre in the Silver Age was largely dominated by men.^[7]

After the [First World War](#) and the [Russian Revolution](#), many theatre artists left Russia for other countries, including [Georges Pitoëff](#) to France, [Theodore Komisarjevsky](#) to Britain, and, famously, [Mikhael Chekhov](#) to the United States, exporting the Stanislavski system and contributing to the development of a 'director's theatre' in the post-war world.^[8]

In the United States, [William Vaughn Moody's](#) plays *The Great Divide* (1906) and *The Faith Healer* (1909) pointed the way to a more realistic American drama in their emphasis on the emotional conflicts that lie at the heart of contemporary social conflicts. Other key playwrights signaling the move to realism in the beginning of the century include [Edward Sheldon](#), [Charles Rann Kennedy](#) and [Rachel Crothers](#). Onstage, the American theatre was dominated by the [Barrymore family](#): [Lionel Barrymore](#), [Ethel Barrymore](#) (the "First Lady of American Theater") and [John Barrymore](#) ("... the most influential and idolized actor of his day."). They were so popular that a play was even written about them: [The Royal Family](#) by [George S. Kaufman](#) and [Edna Ferber](#), a parody of the Barrymores, with particular aim taken at John and Ethel Barrymore.

Through the early century, no American dramatist had as much influence on the development of drama as [Eugene O'Neill](#). Born into the theatre from a young age, he spent much of his youth on trains and backstage at theatres, before developing his talent with the [Provincetown Players](#) in New York City. Between 1916 and 1920, he wrote several plays for the company before debuting his first critical hit [Beyond the Horizon](#) in 1920, which went on to win the [Pulitzer Prize for Drama](#). He followed that with critical and commercial successes, including [The Emperor Jones](#), [Anna Christie](#) (Pulitzer Prize 1922), [Desire Under the Elms](#) (1924), [Strange Interlude](#) (Pulitzer Prize 1928), [Mourning Becomes Electra](#) (1931), [The Iceman Cometh](#) (1939) and his only well-known comedy, [Ah, Wilderness!](#). After his death, his magnum opus and masterwork [Long Day's Journey into Night](#) was published and is often regarded to be one of the finest American plays of the 20th century.

The economic crisis of the [Great Depression](#) led to the creation of the [Federal Theatre Project](#) (1935–39), a [New Deal](#) program which funded theatre and other live artistic performances throughout the country. National director [Hallie Flanagan](#) shaped the project into a federation of regional theatres that created relevant art, encouraged experimentation and made it possible for millions of Americans to see theatre for the first time. The project directly employed 15,000 men and women and played 1,200 productions to nearly 30 million people in 200 theatres nationwide, with 65% being presented free of charge, at a total cost of \$46 million.^[9]

Key figures of the early century include [George S. Kaufman](#), [George Kelly](#), [Langston Hughes](#), [S. N. Behrman](#), [Sidney Howard](#), [Robert E. Sherwood](#), and a set of playwrights who followed O'Neill's path of philosophical searching, [Philip Barry](#), [Thornton Wilder](#) and [William Saroyan](#).

Modernism was a predominantly European movement that developed as a self-conscious break from traditional art forms. It represents a significant shift in cultural sensibilities, often attributed to the fallout of [World War I](#).^[10] At first, the modernist theatre was in large part an

attempt to realize the reformed stage on [naturalistic](#) principles as advocated by [Émile Zola](#) in the 1880s. However, a simultaneous reaction against naturalism urged the theatre in a much different direction. Owing much to [symbolism](#), the movement attempted to integrate poetry, painting, music, and dance in a harmonious fusion. Both of these seemingly conflicting movements fit under the term 'Modernism'.^[11]

Political theatre is an attempt to rethink the nature and function of theatre in the light of the dynamics of the society outside it and audience involvement within it. It led to profound and original theories of [acting](#), staging and [playwriting](#).^[12]

At the beginning of the 20th century, many viewed theatre as an "all-too-popular affair."^[13] Frequently, the true reformers of the early part of the century called for increasingly smaller theatres, where their techniques could register on a select audience. Still, these same practitioners often dreamed that their art would be a true people's theatre: a theatre for the people. Inspired by an understanding of the [Greek theatre](#) and heavily influenced by [Nietzsche](#), they sought a profound or ecstatic ritual event that involved music and movement, in a space without a [proscenium arch](#). Later, practitioners like [Vsevolod Meyerhold](#) and [Bertolt Brecht](#) would initiate an attempt to bridge the "gulf" between modernism and the people.^[14]

In popular [musical theatre](#) there have been different trends and phases of commercial success, including works of the following:

- the great popularity of the British [Edwardian musical comedies](#) (1892-1917),
- the advent of the [Princess Theatre](#) musicals in New York (1913-1923),
- the emergence of American popular [musical theatre](#), with the works of:
 - [Jerome Kern](#) (1885-1945); [Princess Theatre](#) musicals, [Ziegfeld Follies](#) (1916, 1917), [Show Boat](#) (1927)
 - [George Gershwin](#) (1898-1937) and [Ira Gershwin](#) (1896-1983) [Rhapsody in Blue](#) (1924), [An American in Paris](#) (1928), [Porgy and Bess](#) (1935).
 - [Cole Porter](#) (1891-1964); [Paris](#) (1928), [Wake Up and Dream](#) (1929), [Anything Goes](#) (1934)
 - [Rodgers and Hart](#); [Richard Rodgers](#) (1902-1979) and [Lorenz Hart](#) (1895-1943) [Babes in Arms](#) (1937)

SCIENCE AND TECHNOLOGY IN THE PERIOD 1820-1939

(based mainly on Wikipedia)

The 19th century saw the birth of science as a profession; the term **scientist** was coined in 1833 by [William Whewell](#),^[21] which soon replaced the older term of **(natural) philosopher**. Among the most influential ideas of the 19th century were those of [Charles Darwin](#) (alongside the independent researches of [Alfred Russel Wallace](#)), who in 1859 published the book *The Origin of Species*, which introduced the idea of [evolution](#) by [natural selection](#). Another important landmark in medicine and biology were the successful efforts to prove the [germ theory of disease](#). Following this, [Louis Pasteur](#) made the first [vaccine](#) against [rabies](#), and also made many discoveries in the field of chemistry, including the [asymmetry of crystals](#). In chemistry, [Dmitri Mendeleev](#), following the [atomic theory](#) of [John Dalton](#), created the first [periodic table](#) of [elements](#). In physics, the experiments, theories and discoveries of [Michael Faraday](#), [André-Marie Ampère](#), [James Clerk Maxwell](#), and their contemporaries led to the creation of [electromagnetism](#) as a new branch of science. [Thermodynamics](#) led to an understanding of heat and the notion of energy was defined. Other highlights include the discoveries unveiling the nature of atomic structure and matter, simultaneously with chemistry – and of new kinds of radiation. In astronomy, the planet Neptune was discovered. In mathematics, the notion of complex numbers finally matured and led to a subsequent analytical theory; they also began the use of [hypercomplex numbers](#). [Karl Weierstrass](#) and others carried out the [arithmetization of analysis](#) for functions of [real](#) and [complex variables](#). It also saw rise to [new progress in geometry](#) beyond those classical theories of Euclid, after a period of nearly two thousand years. The mathematical science of logic likewise had revolutionary breakthroughs after a similarly long period of stagnation. But the most important step in science at this time were the ideas formulated by the creators of electrical science. Their work changed the face of physics and made possible for new technology to come about including a rapid spread in the use of electric illumination and power in the last two decades of the century and radio wave communication at the end of the 1890s.

Throughout the 19th century mathematics became increasingly abstract. [Carl Friedrich Gauss](#) (1777–1855) epitomizes this trend. He did revolutionary work on [functions](#) of [complex variables](#), in [geometry](#), and on the convergence of [series](#), leaving aside his many contributions to science. He also gave the first satisfactory proofs of the [fundamental theorem of algebra](#) and of the [quadratic reciprocity law](#).^[2] His 1801 volume *Disquisitiones Arithmeticae* laid the foundations of modern number theory.^[3]

This century saw the development of the two forms of [non-Euclidean geometry](#), where the [parallel postulate](#) of [Euclidean geometry](#) no longer holds. The Russian mathematician [Nikolai Ivanovich Lobachevsky](#) and his rival, the Hungarian mathematician [János Bolyai](#), independently defined and studied [hyperbolic geometry](#), where uniqueness of parallels no longer holds.^[4] In this geometry the sum of angles in a triangle add up to less than 180°. [Elliptic geometry](#) was developed later in the 19th century by the German mathematician [Bernhard Riemann](#); here no parallel can be found and the angles in a triangle add up to more than 180°. ^[5] Riemann also developed [Riemannian geometry](#), which unifies and vastly generalizes the three types of geometry.^[6]

The 19th century saw the beginning of a great deal of [abstract algebra](#). [Hermann Grassmann](#) in Germany gave a first version of [vector spaces](#),^[7] [William Rowan Hamilton](#) in Ireland developed [noncommutative algebra](#).^[8] The British mathematician [George Boole](#) devised an algebra that soon evolved into what is now called [Boolean algebra](#), in which

the only numbers were 0 and 1. Boolean algebra is the starting point of [mathematical logic](#) and has important applications in [computer science](#).^[9]

[Augustin-Louis Cauchy](#), [Bernhard Riemann](#), and [Karl Weierstrass](#) reformulated the calculus in a more rigorous fashion.^[10]

Also, for the first time, the limits of mathematics were explored. [Niels Henrik Abel](#), a Norwegian, and [Évariste Galois](#), a Frenchman, proved that there is no general algebraic method for solving polynomial equations of degree greater than four ([Abel–Ruffini theorem](#)).^[11] Other 19th-century mathematicians utilized this in their proofs that straightedge and compass alone are not sufficient to [trisect an arbitrary angle](#), to construct the side of a cube twice the volume of a given cube, nor to construct a square equal in area to a given circle. Mathematicians had vainly attempted to solve all of these problems since the time of the ancient Greeks. On the other hand, the limitation of three [dimensions](#) in geometry was surpassed in the 19th century through considerations of [parameter space](#) and [hypercomplex numbers](#).

In the later 19th century, [Georg Cantor](#) established the first foundations of [set theory](#), which enabled the rigorous treatment of the notion of infinity and has become the common language of nearly all mathematics.^[12] Cantor's set theory, and the rise of [mathematical logic](#) in the hands of [Peano](#), [L. E. J. Brouwer](#), [David Hilbert](#), [Bertrand Russell](#), and [A.N. Whitehead](#), initiated a long running debate on the [foundations of mathematics](#).

The 19th century saw the founding of a number of national mathematical societies: the [London Mathematical Society](#) in 1865,^[13] the [Société Mathématique de France](#) in 1872,^[14] the [Edinburgh Mathematical Society](#) in 1883,^[15] the [Circolo Matematico di Palermo](#) in 1884,^[16] and the [American Mathematical Society](#) in 1888.^[17] The first international, special-interest society, the [Quaternion Society](#), was formed in 1899, in the context of a [vector controversy](#).^[18]

In 1800, [Alessandro Volta](#) invented the electric battery (known of the [voltaic pile](#)) and thus improved the way electric currents could also be studied.^[19] A year later, [Thomas Young](#) demonstrated the wave nature of light—which received strong experimental support from the work of [Augustin-Jean Fresnel](#)—and the principle of interference.^[20] In 1813, [Peter Ewart](#) supported the idea of the conservation of energy in his paper *On the measure of moving force*.^[21] In 1820, [Hans Christian Ørsted](#) found that a current-carrying conductor gives rise to a magnetic force surrounding it, and within a week after Ørsted's discovery reached France, [André-Marie Ampère](#) discovered that two parallel electric currents will exert forces on each other.^[22] In 1821, [William Hamilton](#) began his analysis of Hamilton's characteristic function.^[23] In 1821, [Michael Faraday](#) built an electricity-powered motor,^[24] while [Georg Ohm](#) stated his law of electrical resistance in 1826, expressing the relationship between voltage, current, and resistance in an electric circuit.^[25] A year later, botanist [Robert Brown](#) discovered [Brownian motion](#): pollen grains in water undergoing movement resulting from their bombardment by the fast-moving atoms or molecules in the liquid.^[26] In 1829, [Gaspard Coriolis](#) introduced the terms of [work](#) (force times distance) and [kinetic energy](#) with the meanings they have today.^[27]

In 1831, Faraday (and independently [Joseph Henry](#)) discovered the reverse effect, the production of an electric potential or current through magnetism – known as [electromagnetic induction](#); these two discoveries are the basis of the electric motor and the electric generator, respectively.^[28] In 1834, [Carl Jacobi](#) discovered his uniformly rotating self-gravitating ellipsoids (the [Jacobi ellipsoid](#)).^[29] In 1834, [John Russell](#) observed a nondecaying solitary water wave ([soliton](#)) in the [Union Canal](#) near [Edinburgh](#) and used a water tank to study the dependence of solitary water wave velocities on wave amplitude and water depth.^[30] In 1835,

William Hamilton stated [Hamilton's canonical equations of motion](#).^[31] In the same year, [Gaspard Coriolis](#) examined theoretically the mechanical efficiency of waterwheels, and deduced the [Coriolis effect](#).^[27] In 1841, [Julius Robert von Mayer](#), an amateur scientist, wrote a paper on the conservation of energy but his lack of academic training led to its rejection.^[32] In 1842, [Christian Doppler](#) proposed the [Doppler effect](#).^[33] In 1847, [Hermann von Helmholtz](#) formally stated the law of conservation of energy.^[34] In 1851, [Léon Foucault](#) showed the Earth's rotation with a huge [pendulum](#) ([Foucault pendulum](#)).^[35]

There were important advances in [continuum mechanics](#) in the first half of the century, namely formulation of [laws of elasticity](#) for solids and discovery of [Navier–Stokes equations](#) for fluids.

In the 19th century, the connection between heat and mechanical energy was established quantitatively by [Julius Robert von Mayer](#) and [James Prescott Joule](#), who measured the mechanical equivalent of heat in the 1840s.^[36] In 1849, Joule published results from his series of experiments (including the paddlewheel experiment) which show that heat is a form of energy, a fact that was accepted in the 1850s. The relation between heat and energy was important for the development of steam engines, and in 1824 the experimental and theoretical work of [Sadi Carnot](#) was published.^[37] Carnot captured some of the ideas of thermodynamics in his discussion of the efficiency of an idealized engine. Sadi Carnot's work provided a basis for the formulation of the [first law of thermodynamics](#)—a restatement of the [law of conservation of energy](#)—which was stated around 1850 by [William Thomson](#), later known as Lord Kelvin, and [Rudolf Clausius](#). Lord Kelvin, who had extended the concept of absolute zero from gases to all substances in 1848, drew upon the engineering theory of [Lazare Carnot](#), Sadi Carnot, and [Émile Clapeyron](#)—as well as the experimentation of James Prescott Joule on the interchangeability of mechanical, chemical, thermal, and electrical forms of work—to formulate the first law.^[38]

Kelvin and Clausius also stated the [second law of thermodynamics](#), which was originally formulated in terms of the fact that heat does not spontaneously flow from a colder body to a hotter. Other formulations followed quickly (for example, the second law was expounded in Thomson and [Peter Guthrie Tait](#)'s influential work *Treatise on Natural Philosophy*) and Kelvin in particular understood some of the law's general implications.^[39] The second Law was the idea that gases consist of molecules in motion had been discussed in some detail by [Daniel Bernoulli](#) in 1738, but had fallen out of favor, and was revived by Clausius in 1857. In 1850, [Hippolyte Fizeau](#) and [Léon Foucault](#) measured the [speed of light](#) in water and find that it is slower than in air, in support of the wave model of light.^[40] In 1852, Joule and Thomson demonstrated that a rapidly expanding gas cools, later named the [Joule–Thomson effect](#) or Joule–Kelvin effect.^[41] [Hermann von Helmholtz](#) puts forward the idea of the [heat death of the universe](#) in 1854,^[42] the same year that Clausius established the importance of dQ/T ([Clausius's theorem](#)) (though he did not yet name the quantity).^[43]

In 1859, [James Clerk Maxwell](#) discovered the [distribution law of molecular velocities](#). Maxwell showed that electric and magnetic fields are propagated outward from their source at a speed equal to that of light and that light is one of several kinds of electromagnetic radiation, differing only in frequency and wavelength from the others. In 1859, Maxwell worked out the mathematics of the distribution of velocities of the molecules of a gas.^[44] The wave theory of light was widely accepted by the time of Maxwell's work on the electromagnetic field, and afterward the study of light and that of electricity and magnetism were closely related. In 1864 James Maxwell published his papers on a dynamical theory of the electromagnetic field, and stated that light is an electromagnetic phenomenon in the 1873 publication of Maxwell's [Treatise on Electricity and Magnetism](#). This work drew upon

theoretical work by German theoreticians such as [Carl Friedrich Gauss](#) and [Wilhelm Weber](#). The encapsulation of heat in particulate motion, and the addition of electromagnetic forces to Newtonian dynamics established an enormously robust theoretical underpinning to physical observations.^[45]

The prediction that light represented a transmission of energy in wave form through a "[luminiferous ether](#)", and the seeming confirmation of that prediction with Helmholtz student [Heinrich Hertz](#)'s 1888 detection of [electromagnetic radiation](#), was a major triumph for physical theory and raised the possibility that even more fundamental theories based on the field could soon be developed. Experimental confirmation of Maxwell's theory was provided by Hertz, who generated and detected electric waves in 1886 and verified their properties, at the same time foreshadowing their application in radio, television, and other devices.^[46] In 1887, Heinrich Hertz discovered the [photoelectric effect](#).^[47] Research on the electromagnetic waves began soon after, with many scientists and inventors conducting experiments on their properties. In the mid to late 1890s [Guglielmo Marconi](#) developed a [radio wave](#) based [wireless telegraphy](#) system^[48] (see [invention of radio](#)).

The atomic theory of matter had been proposed again in the early 19th century by the chemist [John Dalton](#) and became one of the hypotheses of the kinetic-molecular theory of gases developed by Clausius and James Clerk Maxwell to explain the laws of thermodynamics.^[49] The kinetic theory in turn led to the statistical mechanics of [Ludwig Boltzmann](#) (1844–1906) and [Josiah Willard Gibbs](#) (1839–1903), which held that energy (including heat) was a measure of the speed of particles. Interrelating the statistical likelihood of certain states of organization of these particles with the energy of those states, Clausius reinterpreted the dissipation of energy to be the statistical tendency of molecular configurations to pass toward increasingly likely, increasingly disorganized states (coining the term "[entropy](#)" to describe the disorganization of a state).^[50] The statistical versus absolute interpretations of the second law of thermodynamics set up a dispute that would last for several decades (producing arguments such as "[Maxwell's demon](#)"), and that would not be held to be definitively resolved until the behavior of atoms was firmly established in the early 20th century.^[51] In 1902, [James Jeans](#) found the length scale required for gravitational perturbations to grow in a static nearly homogeneous medium.

[Science](#) advanced dramatically during the [20th century](#). There were new and radical developments in the [physical](#), [life](#) and [human](#) sciences, building on the progress made in the 19th century.^[1]

The development of post-Newtonian theories in physics, such as [special relativity](#), [general relativity](#), and [quantum mechanics](#) led to the development of [nuclear weapons](#). New models of the structure of the atom led to developments in theories of chemistry and the development of new materials such as [nylon](#) and [plastics](#). Advances in biology led to large increases in food production, as well as the elimination of diseases such as [polio](#).

A massive amount of new technologies were developed in the 20th century. Technologies such as [electricity](#), the [incandescent light bulb](#), the [automobile](#) and the [phonograph](#), first developed at the end of the 19th century, were perfected and universally deployed. The first [airplane](#) flight occurred in 1903, and by the end of the century large airplanes such as the [Boeing 777](#) and [Airbus A330](#) flew thousands of miles in a matter of hours. The development of the [television](#) and [computers](#) caused massive changes in the dissemination of information.

In 1903, [Mikhail Tsvet](#) invented [chromatography](#), an important analytic technique. In 1904, [Hantaro Nagaoka](#) proposed an early nuclear model of the atom, where electrons orbit a dense massive nucleus. In 1905, [Fritz Haber](#) and [Carl Bosch](#) developed the [Haber process](#) for making [ammonia](#), a milestone in industrial chemistry with deep consequences in agriculture. The Haber process, or Haber-Bosch process, combined [nitrogen](#) and [hydrogen](#) to form ammonia in industrial quantities for production of fertilizer and munitions. The food production for half the world's current population depends on this method for producing fertilizer. Haber, along with [Max Born](#), proposed the [Born–Haber cycle](#) as a method for evaluating the lattice energy of an ionic solid. Haber has also been described as the "father of [chemical warfare](#)" for his work developing and deploying chlorine and other poisonous gases during World War I.

In 1905, [Albert Einstein](#) explained [Brownian motion](#) in a way that definitively proved atomic theory. [Leo Baekeland](#) invented [bakelite](#), one of the first commercially successful plastics. In 1909, American physicist [Robert Andrews Millikan](#) - who had studied in Europe under [Walther Nernst](#) and [Max Planck](#) - measured the charge of individual electrons with unprecedented accuracy through the [oil drop experiment](#), in which he measured the electric charges on tiny falling water (and later oil) droplets. His study established that any particular droplet's electrical charge is a multiple of a definite, fundamental value — the electron's charge — and thus a confirmation that all electrons have the same charge and mass. Beginning in 1912, he spent several years investigating and finally proving Albert Einstein's proposed linear relationship between energy and frequency, and providing the first direct [photoelectric](#) support for [Planck's constant](#). In 1923 Millikan was awarded the Nobel Prize for Physics.

In 1909, [S. P. L. Sørensen](#) invented the [pH](#) concept and develops methods for measuring acidity. In 1911, [Antonius Van den Broek](#) proposed the idea that the elements on the periodic table are more properly organized by positive nuclear charge rather than atomic weight. In 1911, the first [Solvay Conference](#) was held in Brussels, bringing together most of the most prominent scientists of the day. In 1912, [William Henry Bragg](#) and [William Lawrence Bragg](#) proposed [Bragg's law](#) and established the field of [X-ray crystallography](#), an important tool for elucidating the crystal structure of substances. In 1912, [Peter Debye](#) develops the concept of molecular dipole to describe asymmetric charge distribution in some molecules.

In 1913, [Niels Bohr](#), a Danish physicist, introduced the concepts of [quantum mechanics](#) to atomic structure by proposing what is now known as the [Bohr model](#) of the atom, where electrons exist only in strictly defined circular orbits around the nucleus similar to rungs on a ladder. The Bohr Model is a planetary model in which the negatively charged electrons orbit a small, positively charged nucleus similar to the planets orbiting the Sun (except that the orbits are not planar) - the gravitational force of the solar system is mathematically akin to the attractive Coulomb (electrical) force between the positively charged nucleus and the negatively charged electrons.

In 1913, [Henry Moseley](#), working from Van den Broek's earlier idea, introduces concept of atomic number to fix inadequacies of Mendeleev's periodic table, which had been based on atomic weight. The peak of Frederick Soddy's career in radiochemistry was in 1913 with his formulation of the concept of [isotopes](#), which stated that certain elements exist in two or more forms which have different atomic weights but which are indistinguishable chemically. He is remembered for proving the existence of isotopes of certain radioactive elements, and is also credited, along with others, with the discovery of the element [protactinium](#) in 1917. In 1913, J. J. Thomson expanded on the work of Wien by showing that charged subatomic particles can be separated by their mass-to-charge ratio, a technique known as [mass spectrometry](#).

In 1916, [Gilbert N. Lewis](#) published his seminal article "The Atom of the Molecule", which suggested that a chemical bond is a pair of electrons shared by two atoms. Lewis's model equated the classical [chemical bond](#) with the sharing of a pair of electrons between the two bonded atoms. Lewis introduced the "electron dot diagrams" in this paper to symbolize the electronic structures of atoms and molecules. Now known as [Lewis structures](#), they are discussed in virtually every introductory chemistry book. Lewis in 1923 developed the electron pair theory of [acids](#) and [base](#): Lewis redefined an acid as any atom or molecule with an incomplete octet that was thus capable of accepting electrons from another atom; bases were, of course, electron donors. His theory is known as the concept of [Lewis acids and bases](#). In 1923, G. N. Lewis and [Merle Randall](#) published *Thermodynamics and the Free Energy of Chemical Substances*, first modern treatise on chemical [thermodynamics](#).

The 1920s saw a rapid adoption and application of Lewis's model of the electron-pair bond in the fields of organic and coordination chemistry. In organic chemistry, this was primarily due to the efforts of the British chemists [Arthur Lapworth](#), [Robert Robinson](#), [Thomas Lowry](#), and [Christopher Ingold](#); while in coordination chemistry, Lewis's bonding model was promoted through the efforts of the American chemist [Maurice Huggins](#) and the British chemist [Nevil Sidgwick](#).

In 1912 [Alfred Wegener](#) proposed the theory of [Continental Drift](#).^[26] This theory suggests that the shapes of continents and matching coastline geology between some continents indicates they were joined together in the past and formed a single landmass known as Pangaea; thereafter they separated and drifted like rafts over the ocean floor, currently reaching their present position. Additionally, the theory of continental drift offered a possible explanation as to the formation of mountains; [Plate Tectonics](#) built on the theory of continental drift.

Unfortunately, Wegener provided no convincing mechanism for this drift, and his ideas were not generally accepted during his lifetime. Arthur Holmes accepted Wegener's theory and provided a mechanism: [mantle convection](#), to cause the continents to move.^[27] However, it was not until after the Second World War that new evidence started to accumulate that supported continental drift. There followed a period of 20 extremely exciting years where the Theory of Continental Drift developed from being believed by a few to being the cornerstone of modern Geology. Beginning in 1947 research found new evidence about the ocean floor, and in 1960 [Bruce C. Heezen](#) published the concept of [mid-ocean ridges](#). Soon after this, [Robert S. Dietz](#) and [Harry H. Hess](#) proposed that the oceanic crust forms as the seafloor spreads apart along mid-ocean ridges in [seafloor spreading](#).^[28] This was seen as confirmation of [mantle convection](#) and so the major stumbling block to the theory was removed. Geophysical evidence suggested lateral motion of continents and that [oceanic crust](#) is younger than [continental crust](#). This geophysical evidence also spurred the hypothesis of [paleomagnetism](#), the record of the orientation of the [Earth's magnetic field](#) recorded in magnetic minerals. British geophysicist [S. K. Runcorn](#) suggested the concept of paleomagnetism from his finding that the continents had moved relative to the Earth's magnetic poles. [Tuzo Wilson](#), who was a promoter of the sea floor spreading hypothesis and continental drift from the very beginning,^[29] added the concept of [transform faults](#) to the model, completing the classes of [fault types](#) necessary to make the mobility of the plates on the globe function.^[30] A symposium on continental drift^[31] was held at the Royal Society of London in 1965 must be regarded as the official start of the acceptance of plate tectonics by the scientific community. The abstracts from the symposium are issued as *Blacket, Bullard, Runcorn; 1965*. In this symposium, [Edward Bullard](#) and co-workers showed with a computer calculation how the continents along both sides of the Atlantic would best fit to close the ocean, which became known as the famous "Bullard's Fit". By the late 1960s the weight of the evidence available saw Continental Drift as the generally accepted theory.

Other theories of the causes of climate change fared no better. The principal advances were in observational [paleoclimatology](#), as scientists in various fields of [geology](#) worked out methods to reveal ancient climates. [Wilmot H. Bradley](#) found that annual [varves](#) of clay laid down in lake beds showed climate cycles. [Andrew Ellicott Douglass](#) saw strong indications of climate change in [tree rings](#). Noting that the rings were thinner in dry years, he reported climate effects from solar variations, particularly in connection with the 17th-century dearth of [sunspots](#) (the [Maunder Minimum](#)) noticed previously by [William Herschel](#) and others. Other scientists, however, found good reason to doubt that tree rings could reveal anything beyond random regional variations. The value of tree rings for climate study was not solidly established until the 1960s.^{[32][33]}

Through the 1930s the most persistent advocate of a solar-climate connection was astrophysicist [Charles Greeley Abbot](#). By the early 1920s, he had concluded that the [solar "constant"](#) was misnamed: his observations showed large variations, which he connected with [sunspots](#) passing across the face of the Sun. He and a few others pursued the topic into the 1960s, convinced that sunspot variations were a main cause of climate change. Other scientists were skeptical.^{[32][33]} Nevertheless, attempts to connect the [solar cycle](#) with climate cycles were popular in the 1920s and 1930s. Respected scientists announced correlations that they insisted were reliable enough to make predictions. Sooner or later, every prediction failed, and the subject fell into disrepute.^[34]

Meanwhile [Milutin Milankovitch](#), building on [James Croll](#)'s theory, improved the tedious calculations of the varying distances and angles of the Sun's radiation as the Sun and Moon gradually perturbed the Earth's orbit. Some observations of [varves](#) (layers seen in the mud covering the bottom of lakes) matched the prediction of a [Milankovitch cycle](#) lasting about 21,000 years. However, most geologists dismissed the astronomical theory. For they could not fit Milankovitch's timing to the accepted sequence, which had only four ice ages, all of them much longer than 21,000 years.^[35]

In 1938 [Guy Stewart Callendar](#) attempted to revive Arrhenius's greenhouse-effect theory. Callendar presented evidence that both temperature and the CO₂ level in the atmosphere had been rising over the past half-century, and he argued that newer [spectroscopic](#) measurements showed that the gas was effective in absorbing infrared in the atmosphere. Nevertheless, most scientific opinion continued to dispute or ignore the theory.^[36]

The 20th century saw mathematics become a major profession. As in most areas of study, the explosion of knowledge in the scientific age has led to specialization: by the end of the century there were hundreds of specialized areas in mathematics and the [Mathematics Subject Classification](#) was dozens of pages long.^[72] Every year, thousands of new Ph.D.s in mathematics were awarded, and jobs were available in both teaching and industry. More and more [mathematical journals](#) were published and, by the end of the century, the development of the [World Wide Web](#) led to online publishing. Mathematical collaborations of unprecedented size and scope took place. An example is the [classification of finite simple groups](#) (also called the "enormous theorem"), whose proof between 1955 and 1983 required 500-odd journal articles by about 100 authors, and filling tens of thousands of pages.

In a 1900 speech to the [International Congress of Mathematicians](#), [David Hilbert](#) set out a list of [23 unsolved problems in mathematics](#). These problems, spanning many areas of mathematics, formed a central focus for much of 20th-century mathematics. Today, 10 have been solved, 7 are partially solved, and 2 are still open. The remaining 4 are too loosely formulated to be stated as solved or not.

In 1929 and 1930, it was proved the truth or falsity of all statements formulated about the [natural numbers](#) plus one of addition and multiplication, was [decidable](#), i.e. could be determined by some algorithm. In 1931, [Kurt Gödel](#) found that this was not the case for the natural numbers plus both addition and multiplication; this system, known as [Peano arithmetic](#), was in fact [incompletable](#). (Peano arithmetic is adequate for a good deal of [number theory](#), including the notion of [prime number](#).) A consequence of Gödel's two [incompleteness theorems](#) is that in any mathematical system that includes Peano arithmetic (including all of [analysis](#) and [geometry](#)), truth necessarily outruns proof, i.e. there are true statements that [cannot be proved](#) within the system. Hence mathematics cannot be reduced to mathematical logic, and [David Hilbert](#)'s dream of making all of mathematics complete and consistent needed to be reformulated.

In the 19th century, experimenters began to detect unexpected forms of radiation: [Wilhelm Röntgen](#) caused a sensation with his discovery of [X-rays](#) in 1895; in 1896 [Henri Becquerel](#) discovered that certain kinds of matter emit radiation on their own accord. In 1897, [J. J. Thomson](#) discovered the [electron](#), and new radioactive elements found by [Marie](#) and [Pierre Curie](#) raised questions about the supposedly indestructible atom and the nature of matter. Marie and Pierre coined the term "[radioactivity](#)" to describe this property of matter, and isolated the radioactive elements [radium](#) and [polonium](#). [Ernest Rutherford](#) and [Frederick Soddy](#) identified two of Becquerel's forms of radiation with electrons and the element [helium](#). Rutherford identified and named two types of radioactivity and in 1911 interpreted experimental evidence as showing that the atom consists of a dense, positively charged nucleus surrounded by negatively charged electrons. Classical theory, however, predicted that this structure should be unstable. Classical theory had also failed to explain successfully two other experimental results that appeared in the late 19th century. One of these was the demonstration by [Albert A. Michelson](#) and [Edward W. Morley](#)—known as the [Michelson–Morley experiment](#)—which showed there did not seem to be a preferred frame of reference, at rest with respect to the hypothetical [luminiferous ether](#), for describing electromagnetic phenomena. Studies of radiation and radioactive decay continued to be a preeminent focus for physical and chemical research through the 1930s, when the [discovery of nuclear fission](#) by [Lise Meitner](#) and [Otto Frisch](#) opened the way to the practical exploitation of what came to be called "[atomic](#)" energy.

In 1905, a 26-year-old German physicist named [Albert Einstein](#) (then a [patent clerk](#) in [Bern](#), Switzerland) showed how measurements of time and space are affected by motion between an observer and what is being observed. Einstein's radical [theory of relativity](#) revolutionized science. Although Einstein made many other important contributions to science, the theory of relativity alone represents one of the greatest intellectual achievements of all time. Although the concept of relativity was not introduced by Einstein, his major contribution was the recognition that the [speed of light](#) in a vacuum is constant, i.e. the same for all observers, and an absolute physical boundary for motion. This does not impact a person's day-to-day life since most objects travel at speeds much slower than light speed. For objects travelling near light speed, however, the theory of relativity shows that clocks associated with those objects will run more slowly and that the objects shorten in length according to measurements of an observer on Earth. Einstein also derived the famous equation, $E = mc^2$, which expresses the [equivalence of mass and energy](#).

Einstein argued that the speed of light was a constant in all [inertial reference frames](#) and that electromagnetic laws should remain valid independent of reference frame—assertions which rendered the ether "superfluous" to physical theory, and that held that observations of time and length varied relative to how the observer was moving with respect to the object being measured (what came to be called the "[special theory of relativity](#)"). It also followed that mass

and energy were interchangeable quantities according to the equation $E=mc^2$. In another paper published the same year, Einstein asserted that electromagnetic radiation was transmitted in discrete quantities ("[quanta](#)"), according to a constant that the theoretical physicist [Max Planck](#) had posited in 1900 to arrive at an accurate theory for the distribution of [blackbody radiation](#)—an assumption that explained the strange properties of the [photoelectric effect](#).

The special theory of relativity is a formulation of the relationship between physical observations and the concepts of space and time. The theory arose out of contradictions between electromagnetism and Newtonian mechanics and had great impact on both those areas. The original historical issue was whether it was meaningful to discuss the electromagnetic wave-carrying "ether" and motion relative to it and also whether one could detect such motion, as was unsuccessfully attempted in the Michelson–Morley experiment. Einstein demolished these questions and the ether concept in his special theory of relativity. However, his basic formulation does not involve detailed electromagnetic theory. It arises out of the question: "What is time?" Newton, in the [Principia](#) (1686), had given an unambiguous answer: "Absolute, true, and mathematical time, of itself, and from its own nature, flows equably without relation to anything external, and by another name is called duration." This definition is basic to all classical physics.

Einstein had the genius to question it, and found that it was incomplete. Instead, each "observer" necessarily makes use of his or her own scale of time, and for two observers in relative motion, their time-scales will differ. This induces a related effect on position measurements. Space and time become intertwined concepts, fundamentally dependent on the observer. Each observer presides over his or her own space-time framework or coordinate system. There being no absolute frame of reference, all observers of given events make different but equally valid (and reconcilable) measurements. What remains absolute is stated in Einstein's relativity postulate: "The basic laws of physics are identical for two observers who have a constant relative velocity with respect to each other."

Special relativity had a profound effect on physics: started as a rethinking of the theory of electromagnetism, it found a new [symmetry law](#) of nature, now called [Poincaré symmetry](#), that replaced the old [Galilean symmetry](#).

Special relativity exerted another long-lasting effect on [dynamics](#). Although initially it was credited with the "unification of mass and energy", it became evident that [relativistic dynamics](#) established a firm *distinction* between [rest mass](#), which is an invariant (observer independent) property of a [particle](#) or system of particles, and the [energy](#) and [momentum](#) of a system. The latter two are separately [conserved](#) in all situations but not invariant with respect to different observers. The term [mass](#) in [particle physics](#) underwent a [semantic change](#), and since the late 20th century it almost exclusively denotes the [rest \(or invariant\) mass](#).

By 1916, Einstein was able to generalize this further, to deal with all states of motion including non-uniform acceleration, which became the general theory of relativity. In this theory Einstein also specified a new concept, the curvature of space-time, which described the gravitational effect at every point in space. In fact, the curvature of space-time completely replaced Newton's universal law of gravitation. According to Einstein, gravitational force in the normal sense is a kind of illusion caused by the geometry of space. The presence of a mass causes a curvature of space-time in the vicinity of the mass, and this curvature dictates the space-time path that all freely-moving objects must follow. It was also predicted from this theory that light should be subject to gravity - all of which was verified experimentally. This aspect of relativity explained the phenomena of light bending around the sun, predicted black holes as well as properties of the [Cosmic microwave background radiation](#) — a discovery rendering fundamental anomalies in the classic Steady-State hypothesis. For his work on

relativity, the photoelectric effect and blackbody radiation, Einstein received the Nobel Prize in 1921.

The gradual acceptance of Einstein's theories of relativity and the quantized nature of light transmission, and of [Niels Bohr's model of the atom](#) created as many problems as they solved, leading to a full-scale effort to reestablish physics on new fundamental principles. Expanding relativity to cases of accelerating reference frames (the "[general theory of relativity](#)") in the 1910s, Einstein posited an equivalence between the inertial force of acceleration and the force of gravity, leading to the conclusion that space is curved and finite in size, and the prediction of such phenomena as [gravitational lensing](#) and the distortion of time in gravitational fields.

Although relativity resolved the electromagnetic phenomena conflict demonstrated by Michelson and Morley, a second theoretical problem was the explanation of the distribution of electromagnetic radiation emitted by a [black body](#); experiment showed that at shorter wavelengths, toward the ultraviolet end of the spectrum, the energy approached zero, but classical theory predicted it should become infinite. This glaring discrepancy, known as the [ultraviolet catastrophe](#), was solved by the new theory of [quantum mechanics](#). Quantum mechanics is the theory of [atoms](#) and subatomic systems. Approximately the first 30 years of the 20th century represent the time of the conception and evolution of the theory. The basic ideas of quantum theory were introduced in 1900 by [Max Planck](#) (1858–1947), who was awarded the [Nobel Prize for Physics](#) in 1918 for his discovery of the quantified nature of energy. The quantum theory (which previously relied in the "correspondence" at large scales between the quantized world of the atom and the continuities of the "[classical](#)" world) was accepted when the [Compton Effect](#) established that light carries momentum and can scatter off particles, and when [Louis de Broglie](#) asserted that matter can be seen as behaving as a wave in much the same way as electromagnetic waves behave like particles ([wave-particle duality](#)).

In 1905, Einstein used the quantum theory to explain the photoelectric effect, and in 1913 the Danish physicist [Niels Bohr](#) used the same constant to explain the stability of [Rutherford's atom](#) as well as the frequencies of light emitted by hydrogen gas. The quantized theory of the atom gave way to a full-scale quantum mechanics in the 1920s. New principles of a "quantum" rather than a "classical" mechanics, formulated in [matrix-form](#) by [Werner Heisenberg](#), [Max Born](#), and [Pascual Jordan](#) in 1925, were based on the probabilistic relationship between discrete "states" and denied the possibility of [causality](#). Quantum mechanics was extensively developed by Heisenberg, [Wolfgang Pauli](#), [Paul Dirac](#), and [Erwin Schrödinger](#), who established an equivalent theory based on waves in 1926; but Heisenberg's 1927 "[uncertainty principle](#)" (indicating the impossibility of precisely and simultaneously measuring position and [momentum](#)) and the "[Copenhagen interpretation](#)" of quantum mechanics (named after Bohr's home city) continued to deny the possibility of fundamental causality, though opponents such as Einstein would metaphorically assert that "God does not play dice with the universe".^[60] The new quantum mechanics became an indispensable tool in the investigation and explanation of phenomena at the atomic level. Also in the 1920s, the Indian scientist [Satyendra Nath Bose](#)'s work on [photons](#) and quantum mechanics provided the foundation for [Bose–Einstein statistics](#), the theory of the [Bose–Einstein condensate](#).

The [spin-statistics theorem](#) established that any particle in quantum mechanics may be either a [boson](#) (statistically Bose–Einstein) or a [fermion](#) (statistically [Fermi–Dirac](#)). It was later found that all [fundamental](#) bosons transmit forces, such as the photon that transmits electromagnetism.

Fermions are particles "like electrons and nucleons" and are the usual constituents of [matter](#). Fermi–Dirac statistics later found numerous other uses, from astrophysics (see [Degenerate matter](#)) to [semiconductor](#) design.

- [1807](#): [Potassium](#) and [Sodium](#) are individually isolated by [Sir Humphry Davy](#).
- [1831–1836](#): [Charles Darwin](#)'s journey on [HMS Beagle](#).
- [1859](#): [Charles Darwin](#) publishes [On the Origin of Species](#).
- [1861](#): [James Clerk Maxwell](#) publishes [On Physical Lines of Force](#), formulating the four [Maxwell's equations](#).
- [1865](#): [Gregor Mendel](#) formulates his [laws of inheritance](#).
- [1869](#): [Dmitri Mendeleev](#) created the [Periodic table](#).
- [1873](#): Maxwell's [A Treatise on Electricity and Magnetism](#) published.
- [1877](#): [Asaph Hall](#) discovers the [moons of Mars](#)
- [1896](#): [Henri Becquerel](#) discovers [radioactivity](#); [J. J. Thomson](#) identifies the [electron](#), though not by name.

MEDICINE

- [1804](#): [Morphine](#) first isolated.
- [1842](#): [Anesthesia](#) used for the first time.
- [1847](#): [Chloroform](#) invented for the first time, given to [Queen Victoria](#) at the birth of her eighth child, [Prince Leopold](#) in [1853](#)
- [1855](#): [Cocaine](#) is isolated by [Friedrich Gaedcke](#).
- [1885](#): [Louis Pasteur](#) creates the first successful [vaccine](#) against rabies for a young boy who had been bitten 14 times by a rabid dog.
- [1889](#): [Aspirin](#) patented.

INVENTIONS

- [1804](#): First [steam locomotive](#) begins operation.
- [1816](#): [Laufmaschine](#) invented by [Karl von Drais](#).
- [1825](#): [Erie Canal](#) opened connecting the [Great Lakes](#) to the [Atlantic Ocean](#).
- [1825](#): First isolation of [aluminium](#).
- [1825](#): The [Stockton and Darlington Railway](#), the first public railway in the world, is opened.
- [1826](#): [Samuel Morey](#) patents the [internal combustion engine](#).
- [1829](#): First [electric motor](#) built.
- [1837](#): [Telegraphy](#) patented.
- [1841](#): The word "[dinosaur](#)" is coined by [Richard Owen](#)
- [1844](#): First publicly funded [telegraph](#) line in the world—between Baltimore and Washington—sends demonstration message on 24 May, ushering in the age of the telegraph. This message read "What hath God wrought?" (Bible, Numbers 23:23)
- [1849](#): The [safety pin](#) and the [gas mask](#) are invented.
- [1855](#): [Bessemer process](#) enables [steel](#) to be mass-produced.
- [1856](#): World's first [oil refinery](#) in [Romania](#)
- [1858](#): Invention of the [phonograph](#), the first true device for [recording sound](#).
- [1860](#): [Benjamin Tyler Henry](#) invents the 16 - shot [Henry Rifle](#)

- 1861: Richard Gatling invents the Gatling Gun, first modern machine gun used notably in the battles of Cold Harbor and Petersburg
- 1862: First meeting in combat of ironclad warships, USS Monitor and CSS Virginia, during the American Civil War.
- 1863: First section of the London Underground opens.
- 1866: Successful transatlantic telegraph cable follows an earlier attempt in 1858.
- 1867: Alfred Nobel invents dynamite.
- 1868: Safety bicycle invented.
- 1869: First Transcontinental Railroad completed in United States on 10 May.
- 1870: Rasmus Malling-Hansen's invention the Hansen Writing Ball becomes the first commercially sold typewriter.
- 1873: Blue jeans and barbed wire are invented.
- 1877: Thomas Edison invents the phonograph
- 1878: First commercial telephone exchange in New Haven, Connecticut.
- c. 1875/1880: Introduction of the widespread use of electric lighting. These included early crude systems in France and the UK and the introduction of large scale outdoor arc lighting systems by 1880.^[23]
- 1879: Thomas Edison patents a practical incandescent light bulb.
- 1882: Introduction of large scale electric power utilities with the Edison Holborn Viaduct (London) and Pearl Street (New York) power stations supplying indoor electric lighting using Edison's incandescent bulb.^{[24][25]}
- 1884: Sir Hiram Maxim invents the first self-powered Machine gun.
- 1885: Singer begins production of the 'Vibrating Shuttle'. which would become the most popular model of sewing machine.
- 1886: Karl Benz sells the first commercial automobile.
- 1890: The cardboard box is invented.
- 1892: John Froelich develops and constructs the first gasoline/petrol-powered tractor.
- 1894: Karl Elsener invents the Swiss Army knife.
- 1894: First gramophone record.
- 1895: Wilhelm Röntgen identifies x-rays.

PHOTOGRAPHY

- Ottomar Anschütz, chronophotographer
- Mathew Brady, documented the American Civil War
- Edward S. Curtis, documented the American West notably Native Americans
- Louis Daguerre, inventor of daguerreotype process of photography, chemist
- Thomas Eakins, pioneer motion photographer
- George Eastman, inventor of roll film
- Hércules Florence, pioneer inventor of photography
- Auguste and Louis Lumière, pioneer film-makers, inventors
- Étienne-Jules Marey, pioneer motion photographer, chronophotographer
- Eadweard Muybridge, pioneer motion photographer, chronophotographer
- Nadar a.k.a. Gaspard-Félix Tournachon, portrait photographer
- Nicéphore Niépce, pioneer inventor of photography
- Louis Le Prince, motion picture inventor and pioneer film-maker
- Sergey Prokudin-Gorsky, chemist and photographer
- William Fox Talbot, inventor of the negative / positive photographic process.

HISTORY OF THE MOTION PICTURE UNTIL 1939

(based primarily on Encyclopedia Britannica)

Introduction

history of the medium from the 19th century to the present.

Early years, 1830–1910

Origins

The illusion of motion pictures is based on the optical phenomena known as [persistence of vision](#) and the [phi phenomenon](#). The first of these causes the brain to retain images cast upon the retina of the eye for a fraction of a second beyond their disappearance from the field of sight, while the latter creates apparent movement between images when they succeed one another rapidly. Together these phenomena permit the succession of still frames on a motion-picture film strip to represent continuous movement when projected at the proper speed (traditionally 16 frames per second for silent films and 24 frames per second for sound films). Before the invention of photography, a variety of optical toys exploited this effect by mounting successive phase drawings of things in motion on the face of a twirling disk (the [phenakistoscope](#), c. 1832) or inside a rotating drum (the zoetrope, c. 1834). Then, in 1839, [Louis-Jacques-Mandé Daguerre](#), a French painter, perfected the positive photographic process known as daguerreotypy, and that same year the English scientist [William Henry Fox Talbot](#) successfully demonstrated a [negative](#) photographic process that theoretically allowed unlimited positive prints to be produced from each negative. As photography was innovated and refined over the next few decades, it became possible to replace the phase drawings in the early optical toys and devices with individually posed phase photographs, a practice that was widely and popularly carried out.

There would be no true motion pictures, however, until live action could be photographed spontaneously and simultaneously. This required a reduction in exposure time from the hour or so necessary for the pioneer photographic processes to the one-hundredth (and, ultimately, one-thousandth) of a second achieved in 1870. It also required the development of the technology of series photography by the British [American](#) photographer [Eadweard Muybridge](#) between 1872 and 1877. During that time, Muybridge was employed by Gov. [Leland Stanford](#) of California, a zealous racehorse breeder, to prove that at some point in its gallop a running horse lifts all four hooves off the ground at once. Conventions of 19th-century illustration suggested otherwise, and the movement itself occurred too rapidly for perception by the naked eye, so Muybridge experimented with multiple cameras to take successive photographs of horses in motion. Finally, in 1877, he set up a battery of 12 cameras along a Sacramento racecourse with wires stretched across the track to operate their shutters. As a horse strode down the track, its hooves tripped each shutter individually to expose a successive photograph of the gallop, confirming Stanford's belief. When Muybridge later mounted these images on a rotating disk and projected them on a screen through a magic lantern, they produced a "moving picture" of the horse at full gallop as it had actually occurred in life.

The French physiologist [Étienne-Jules Marey](#) took the first series photographs with a single instrument in 1882; once again the impetus was the analysis of motion too rapid for

perception by the human eye. Marey invented the chronophotographic gun, a [camera](#) shaped like a rifle that recorded 12 successive photographs per second, in order to study the movement of birds in flight. These images were imprinted on a rotating glass plate (later, paper roll film), and Marey subsequently attempted to project them. Like Muybridge, however, Marey was interested in deconstructing movement rather than synthesizing it, and he did not carry his experiments much beyond the realm of high-speed, or instantaneous, series photography. Muybridge and Marey, in fact, conducted their work in the spirit of scientific inquiry; they both extended and elaborated existing technologies in order to probe and analyze events that occurred beyond the threshold of human perception. Those who came after would return their discoveries to the realm of normal human vision and exploit them for profit.

In 1887 in Newark, N.J., an Episcopalian minister named [Hannibal Goodwin](#) developed the idea of using [celluloid](#) as a base for photographic emulsions. The inventor and industrialist [George Eastman](#), who had earlier experimented with sensitized paper rolls for still photography, began manufacturing celluloid roll [film](#) in 1889 at his plant in Rochester, N.Y. This event was crucial to the development of [cinematography](#): series photography such as Marey's chronophotography could employ glass plates or paper strip film because it recorded events of short duration in a relatively small number of images, but cinematography would inevitably find its subjects in longer, more complicated events, requiring thousands of images and therefore just the kind of flexible but durable recording medium represented by celluloid. It remained for someone to combine the principles embodied in the apparatuses of Muybridge and Marey with celluloid strip film to arrive at a viable motion-picture camera—an innovation achieved by [William Kennedy Laurie Dickson](#) in the West Orange, N.J., laboratories of the Edison Company.

[Edison](#) and the Lumière brothers

[Thomas Alva Edison](#) invented the phonograph in 1877, and it quickly became the most popular home-entertainment device of the century. It was to provide a visual accompaniment to the phonograph that Edison commissioned Dickson, a young laboratory assistant, to invent a motion-picture camera in 1888. Dickson built upon the work of Muybridge and Marey, a fact that he readily acknowledged, but he was the first to combine the two final essentials of motion-picture recording and viewing technology. These were a device, adapted from the escapement mechanism of a clock, to ensure the intermittent but regular motion of the film strip through the camera and a regularly perforated celluloid film strip to ensure precise synchronization between the film strip and the shutter. Dickson's camera, the [Kinetograph](#), initially imprinted up to 50 feet (15 metres) of celluloid film at the rate of about 40 frames per second.

Dickson was not the only person who had been tackling the problem of recording and reproducing moving images. Inventors throughout the world had been trying for years to devise working motion-picture machines. In fact, several European inventors, including the French-born Louis Le Prince and the Englishman William Friese-Greene, applied for patents on various cameras, projectors, and camera-projector combinations contemporaneously or even before Edison and his associates did. These machines were unsuccessful for a number of reasons, however, and little evidence survives of their actual practicality or workability.

Because Edison had originally conceived of motion pictures as an adjunct to his phonograph, he did not commission the invention of a projector to accompany the Kinetograph. Rather, he had Dickson design a type of peep-show viewing device called the [Kinetoscope](#), in which a continuous 47-foot (14-metre) film loop ran on spools between an incandescent lamp and a shutter for individual viewing. Starting in 1894, Kinetoscopes were marketed commercially through the firm of Raff and Gammon for \$250 to \$300 apiece. The Edison Company established its own Kinetograph studio (a single-room building called the “Black Maria” that rotated on tracks to follow the sun) in West Orange, N.J., to supply films for the Kinetoscopes that Raff and Gammon were installing in penny arcades, hotel lobbies, amusement parks, and other such semipublic places. In April of that year the first Kinetoscope parlour was opened in a converted storefront in New York City. The parlour charged 25 cents for admission to a bank of five machines.

The syndicate of Maguire and Baucus acquired the foreign rights to the Kinetoscope in 1894 and began to market the machines. Edison opted not to file for international patents on either his camera or his viewing device, and, as a result, the machines were widely and legally copied throughout Europe, where they were modified and improved far beyond the American originals. In fact, it was a Kinetoscope exhibition in Paris that inspired the [Lumière brothers](#), [Auguste](#) and [Louis](#), to invent the first commercially viable [projector](#). Their *cinématographe*, which functioned as a camera and printer as well as a projector, ran at the economical speed of 16 frames per second. It was given its first commercial demonstration on Dec. 28, 1895.

Unlike the Kinetograph, which was battery-driven and weighed more than 1,000 pounds (453 kg), the *cinématographe* was hand-cranked, lightweight (less than 20 pounds [9 kg]), and relatively portable. This naturally affected the kinds of films that were made with each machine: Edison films initially featured material such as circus or vaudeville acts that could be taken into a small studio to perform before an inert camera, while early Lumière films were mainly [documentary](#) views, or “actualities,” shot outdoors on location. In both cases, however, the films themselves were composed of a single unedited shot emphasizing lifelike movement; they contained little or no narrative content. (After a few years design changes in the machines made it possible for Edison and the Lumières to shoot the same kinds of subjects.) In general, Lumière technology became the European standard during the early primitive era, and, because the Lumières sent their cameramen all over the world in search of exotic subjects, the *cinématographe* became the founding instrument of distant cinemas in Russia, Australia, and Japan.

In the United States the Kinetoscope installation business had reached the saturation point by the summer of 1895, although it was still quite profitable for Edison as a supplier of films. Raff and Gammon persuaded Edison to buy the rights to a state-of-the-art projector, developed by [Thomas Armat](#) of Washington, D.C., which incorporated a superior [intermittent](#) movement mechanism and a loop-forming device (known as the [Latham loop](#), after its earliest promoters, Grey Latham and Otway Latham) to reduce film breakage, and in early 1896 Edison began to manufacture and market this machine as his own invention. Given its first public demonstration on April 23, 1896, at Koster and Bial's Music Hall in New York City, the Edison [Vitascope](#) brought projection to the United States and established the format for American film exhibition for the next several years. It also encouraged the activities of such successful Edison rivals as the American Mutoscope and Biograph Company, which was formed in 1896 to exploit the Mutoscope peep-show device and the American Biograph camera and projector patented by W.K.L. Dickson in 1896. During this time, which has been characterized as the “novelty period,” emphasis fell on the projection device itself, and films

achieved their main popularity as self-contained vaudeville attractions. Vaudeville houses, locked in intense competition at the turn of the century, headlined the name of the machines rather than the films (e.g., “The Vitascope—Edison's Latest Marvel,” “The Amazing Cinématographe”). The producer, or manufacturer, supplied projectors along with an operator and a program of shorts. These films, whether they were Edison-style theatrical variety shorts or Lumière-style actualities, were perceived by their original audiences not as motion pictures in the modern sense of the term but as “animated photographs” or “living pictures,” emphasizing their continuity with more familiar media of the time.

During the novelty period, the film industry was autonomous and unitary, with production companies leasing a complete film service of projector, operator, and shorts to the vaudeville market as a single, self-contained act. Starting about 1897, however, manufacturers began to sell both projectors and films to itinerant exhibitors who traveled with their programs from one temporary location (vaudeville theatres, fairgrounds, circus tents, lyceums) to another as the novelty of their films wore off at a given site. This new mode of screening by circuit marked the first separation of exhibition from production and gave the exhibitors a large measure of control over early film form, since they were responsible for arranging the one-shot films purchased from the producers into audience-pleasing programs. The putting together of these programs—which often involved narration, sound effects, and music—was in effect a primitive form of editing, so that it is possible to regard the itinerant projectionists working between 1896 and 1904 as the earliest directors of motion pictures. Several of them, notably [Edwin S. Porter](#), were, in fact, hired as directors by production companies after the industry stabilized in the first decade of the 20th century.

By encouraging the practice of peripatetic exhibition, the American producers' policy of outright sales inhibited the development of permanent film theatres in the United States until nearly a decade after their appearance in Europe, where [England](#) and France had taken an early lead in both production and exhibition. Britain's first projector, the theatrograph (later the animatograph), had been demonstrated in 1896 by the scientific-instrument maker Robert W. Paul. In 1899 Paul formed his own production company for the manufacture of actualities and trick films, and until 1905 Paul's Animatograph Works, Ltd., was England's largest producer, turning out an average of 50 films per year. Between 1896 and 1898, two Brighton photographers, George Albert Smith and James Williamson, constructed their own motion-picture cameras and began producing trick films featuring superimpositions (*The Corsican Brothers*, 1897) and interpolated close-ups (*Grandma's Reading Glass*, 1900; *The Big Swallow*, 1901). Smith subsequently developed the first commercially successful photographic colour process ([Kinemacolor](#), c. 1906–08, with Charles Urban), while Williamson experimented with parallel editing as early as 1900 (*Attack on a Chinese Mission Station*) and became a pioneer of the chase film (*Stop Thief!*, 1901; *Fire!*, 1901). Both Smith and Williamson had built studios at Brighton by 1902 and, with their associates, came to be known as members of the “Brighton school,” although they did not represent a coherent movement. Another important early British filmmaker was Cecil Hepworth, whose *Rescued by Rover* (1905) is regarded by many historians as the most skillfully edited narrative produced before the Biograph shorts of D.W. Griffith.

[Méliès and Porter](#)

The shift in consciousness away from films as animated photographs to films as stories, or narratives, began to take place about the turn of the century and is most evident in the work of the French filmmaker [Georges Méliès](#). Méliès was a professional magician who had become

interested in the illusionist possibilities of the *cinématographe*; when the Lumières refused to sell him one, he bought an animatograph projector from Paul in 1896 and reversed its mechanical principles to design his own camera. The following year he organized the Star Film company and constructed a small glass-enclosed studio on the grounds of his house at Montreuil, where he produced, directed, photographed, and acted in more than 500 films between 1896 and 1913.

Initially Méliès used stop-motion photography (the camera and action are stopped while something is added to or removed from the scene; then filming and action are continued) to make one-shot “trick” films in which objects disappeared and reappeared or transformed themselves into other objects entirely. These films were widely imitated by producers in England and the United States. Soon, however, Méliès began to experiment with brief multiscene films, such as *L’Affaire Dreyfus* (*The Dreyfus Affair*, 1899), his first, which followed the logic of linear temporality to establish causal sequences and tell simple stories. By 1902 he had produced the influential 30-scene narrative *Le Voyage dans la lune* (*A Trip to the Moon*). Adapted from a novel by Jules Verne, it was nearly one reel in length (about 825 feet [251 metres], or 14 minutes).

The first film to achieve international distribution (mainly through piracy), *Le Voyage dans la lune* was an enormous popular success. It helped to make Star Film one of the world's largest producers (an American branch was opened in 1903) and to establish the fiction film as the cinema's mainstream product. In both respects Méliès dethroned the Lumières' cinema of actuality. Despite his innovations, Méliès's productions remained essentially filmed stage plays. He conceived them quite literally as successions of living pictures or, as he termed them, “artificially arranged scenes.” From his earliest trick films through his last successful fantasy, *La Conquête du pôle* (“The Conquest of the Pole,” 1912), Méliès treated the frame of the film as the proscenium arch of a theatre stage, never once moving his camera or changing its position within a scene. He ultimately lost his audience in the late 1910s to filmmakers with more sophisticated narrative techniques.

The origination of many such techniques is closely associated with the work of [Edwin S. Porter](#), a freelance projectionist and engineer who joined the Edison Company in 1900 as production head of its new skylight studio on East 21st Street in New York City. For the next few years, he served as director-cameraman for much of Edison's output, starting with simple one-shot films (*Kansas Saloon Smashers*, 1901) and progressing rapidly to trick films (*The Finish of Bridget McKean*, 1901) and short multiscene narratives based on political cartoons and contemporary events (*Sampson-Schley Controversy*, 1901; *Execution of Czolgosz, with Panorama of Auburn Prison*, 1901). Porter also filmed the extraordinary *Pan-American Exposition by Night* (1901), which used time-lapse photography to produce a circular panorama of the exposition's electrical illumination, and the 10-scene *Jack and the Beanstalk* (1902), a narrative that simulates the sequencing of lantern slides to achieve a logical, if elliptical, spatial continuity.

It was probably Porter's experience as a projectionist at the Eden Musée theatre in 1898 that ultimately led him in the early 1900s to the practice of continuity editing. The process of selecting one-shot films and arranging them into a 15-minute program for screen presentation was very much like that of constructing a single film out of a series of separate shots. Porter, by his own admission, was also influenced by other filmmakers—especially Méliès, whose *Le Voyage dans la lune* he came to know well in the process of duplicating it for illegal distribution by Edison in October 1902. Years later Porter claimed that the Méliès film had

given him the notion of “telling a story in continuity form,” which resulted in [*The Life of an American Fireman*](#) (about 400 feet [122 metres], or six minutes, produced in late 1902 and released in January 1903). This film, which was also influenced by James Williamson's *Fire!*, combined archival footage with staged scenes to create a nine-shot narrative of a dramatic rescue from a burning building. It was for years the subject of controversy because in a later version the last two scenes were intercut, or crosscut, into a 14-shot parallel sequence. It is now generally believed that in the earliest version of the film these scenes, which repeat the same rescue operation from an interior and exterior point of view, were shown in their entirety, one after the other. This repetition, or overlapping continuity, which owes much to magic lantern shows, clearly defines the spatial relationships between scenes but leaves temporal relationships underdeveloped and, to modern sensibilities, confused. Contemporary audiences, however, were conditioned by lantern slide projections and even comic strips; they understood a sequence of motion-picture shots to be a series of individual moving photographs, each of which was self-contained within its frame. Spatial relationships were clear in such earlier narrative forms because their only medium was space.

Motion pictures, however, exist in time as well as space, and the major problem for early filmmakers was the establishment of temporal continuity from one shot to the next. Porter's [*The Great Train Robbery*](#) (1903) is widely acknowledged to be the first narrative film to have achieved such continuity of action. Comprising 14 separate shots of noncontinuous, nonoverlapping action, the film contains an early example of parallel editing, two credible [back](#), or rear, projections (the projection from the rear of previously filmed action or scenery onto a translucent screen to provide the background for new action filmed in front of the screen), two camera pans, and several shots composed diagonally and staged in depth—a major departure from the frontally composed, theatrical staging of Méliès.

The industry's first spectacular box-office success, *The Great Train Robbery* is credited with establishing the realistic narrative, as opposed to Méliès-style fantasy, as the commercial cinema's dominant form. The film's popularity encouraged investors and led to the establishment of the first permanent film theatres, or nickelodeons, across the country. Running about 12 minutes, it also helped to boost standard film length toward one reel, or 1,000 feet (305 metres [about 16 minutes at the average silent speed]). Despite the film's success, Porter continued to practice overlapping action in such conventional narratives as *Uncle Tom's Cabin* (1903) and the social justice dramas *The Ex-Convict* (1904) and *The Kleptomaniac* (1905). He experimented with model animation in *The Dream of a Rarebit Fiend* (1906) and *The Teddy Bears* (1907) but lost interest in the creative aspects of filmmaking as the process became increasingly industrialized. He left Edison in 1909 to pursue a career as a producer and equipment manufacturer. Porter, like Méliès, could not adapt to the linear narrative modes and assembly-line production systems that were developing.

Early growth of the film industry

Méliès's decline was assisted by the industrialization of the French and, for a time, the entire European cinema by the [Pathé Frères company](#), founded in 1896 by the former phonograph importer [Charles Pathé](#). Financed by some of France's largest corporations, Pathé acquired the Lumière patents in 1902 and commissioned the design of an improved studio camera that soon dominated the market on both sides of the Atlantic (it has been estimated that, before 1918, 60 percent of all films were shot with a Pathé camera). Pathé also manufactured his

own film stock and in 1902 established a vast production facility at Vincennes where films were turned out on an assembly-line basis under the managing direction of Ferdinand Zecca. The following year, Pathé began to open foreign sales agencies, which would soon become full-blown production companies—Hispano Film (1906), Pathé-Rouss, Moscow (1907), Film d'Arte Italiano (1909), Pathé-Britannia, London (1909), and Pathé-America (1910). He acquired permanent exhibition sites, building the world's first luxury cinema (the Omnia-Pathé) in Paris in 1906. In 1911 Pathé became Méliès's distributor and helped to drive Star Film out of business.

Pathé's only serious rival on the Continent at this time was [Gaumont Pictures](#), founded by the engineer-inventor Léon Gaumont in 1895. Though never more than one-fourth the size of Pathé, Gaumont followed the same pattern of expansion, manufacturing its own equipment and mass-producing films under a supervising director (through 1906, Alice Guy, the cinema's first female director; afterward, Louis Feuillade). Like Pathé, Gaumont opened foreign offices and acquired theatre chains. From 1905 to 1914 its studios at La Villette, France, were the largest in the world. Pathé and Gaumont dominated pre-World War I motion-picture production, exhibition, and sales in Europe, and they effectively brought to an end the artisanal mode of filmmaking practiced by Méliès and his British contemporaries.

In the United States a similar pattern was emerging through the formation of film exchanges and the consolidation of an industrywide monopoly based on the pooling of patent rights. About 1897 producers had adopted the practice of selling prints outright, which had the effect of promoting itinerant exhibition and discriminating against the owners of permanent sites. In 1903, in response to the needs of theatre owners, Harry J. Miles and Herbert Miles opened a film exchange in San Francisco. The exchange functioned as a broker between producers and exhibitors, buying prints from the former and leasing them to the latter for 25 percent of the purchase price (in subsequent practice, rental fees were calculated on individual production costs and box-office receipts). The exchange system of distribution quickly caught on because it profited nearly everyone: the new middlemen made fortunes by collecting multiple revenues on the same prints; exhibitors were able to reduce their overheads and vary their programs without financial risk; and, ultimately, producers experienced a tremendous surge in demand for their product as exhibition and distribution boomed nationwide. (Between November 1906 and March 1907, for example, producers increased their weekly output from 10,000 to 28,000 feet [3,000 to 8,500 metres] and still could not meet demand.)

The most immediate effect of the rapid rise of the distribution sector was the [nickelodeon](#) boom, the exponential growth of permanent film theatres in the United States from a mere handful in 1904 to between 8,000 and 10,000 by 1908. Named for the Nickelodeon (ersatz Greek for “nickel theatre”), which opened in Pittsburgh in 1905, these theatres were makeshift facilities lodged in converted storefronts. They showed approximately an hour's worth of films for an admission price of 5 to 10 cents. Originally identified with working-class audiences, nickelodeons appealed increasingly to the middle class as the decade wore on, and they became associated with the rising popularity of the story film. Their spread also forced the standardization of film length at one reel, or 1,000 feet (305 metres), to facilitate high-efficiency production and the trading of products within the industry.

By 1908 there were about 20 motion-picture production companies operating in the United States. They were constantly at war with one another over business practices and patent rights, and they had begun to fear that their fragmentation would cause them to lose control of the industry to the two new sectors of distribution and exhibition. The most powerful among

them—Edison, Biograph, Vitagraph, Essanay, Kalem, Selig Polyscope, Lubin, the American branches of the French Star Film and Pathé Frères, and Kleine Optical, the largest domestic distributor of foreign films—therefore entered into a collusive trade agreement to ensure their continued dominance. On Sept. 9, 1908, these companies formed the [Motion Picture Patents Company](#) (MPPC), pooling the 16 most significant U.S. patents for motion-picture technology and entering into an exclusive contract with the Eastman Kodak Company for the supply of raw film stock.

The MPPC, also known as the “Trust,” sought to control every segment of the industry and therefore set up a licensing system for assessing royalties. The use of its patents was granted only to licensed equipment manufacturers; film stock could be sold only to licensed producers; licensed producers and importers were required to fix rental prices at a minimum level and to set quotas for foreign footage to reduce competition; MPPC films could be sold only to licensed distributors, who could lease them only to licensed exhibitors; and only licensed exhibitors had the right to use MPPC projectors and rent company films. To solidify its control, in 1910—the same year in which motion-picture attendance in the United States rose to 26 million persons a week—the MPPC formed the General Film Company, which integrated the licensed distributors into a single corporate entity. Although it was clearly monopolistic in practice and intent, the MPPC helped to stabilize the American film industry during a period of unprecedented growth and change by standardizing exhibition practice, increasing the efficiency of distribution, and regularizing pricing in all three sectors. Its collusive nature, however, provoked a reaction that ultimately destroyed it.

In a sense, the MPPC's ironclad efforts to eliminate competition merely fostered it. Almost from the outset there was widespread resistance to the MPPC on the part of independent distributors (numbering 10 or more in early 1909) and exhibitors (estimated at 2,000 to 2,500), and in January 1909 they formed their own trade association, the Independent Film Protective Association—reorganized that fall as the National Independent Moving Picture Alliance—to provide financial and legal support against the Trust. A more effective and powerful anti-Trust organization was the Motion Picture Distributing and Sales Company, which began operation in May 1910 (three weeks after the inception of General Film) and which eventually came to serve 47 exchanges in 27 cities. For nearly two years, independents were able to present a united front through the company, which finally split into two rival camps in the spring of 1912 (the Mutual Film Corporation and the [Universal Film Manufacturing Company](#)).

By imitating MPPC practices of joining forces and licensing, the early independents were able to compete effectively against the Trust in its first three years of operation, netting about 40 percent of all American film business. In fact, their product, the one-reel short, and their mode of operation were initially fundamentally the same as the MPPC's. The independents later revolutionized the industry, however, by adopting the multiple-reel film as their basic product, a move that caused the MPPC to embrace the one-reeler with a vengeance, hastening its own demise.

The [silent](#) years, 1910–27

Pre-World War I American cinema

Multiple-reel films had appeared in the United States as early as 1907, when [Adolph Zukor](#) distributed Pathé's three-reel *Passion Play*, but when [Vitagraph](#) produced the five-reel *The*

Life of Moses in 1909, the [MPPC](#) forced it to be released in serial fashion at the rate of one reel a week. The multiple-reel film—which came to be called a “feature,” in the vaudevillian sense of a headline attraction—achieved general acceptance with the smashing success of Louis Mercanton's three-and-one-half-reel *La Reine Elisabeth* ([Queen Elizabeth](#), 1912), which starred [Sarah Bernhardt](#) and was imported by Zukor (who founded the independent Famous Players production company with its profits). In 1912 Enrico Guazzoni's nine-reel Italian superspectacle [Quo Vadis?](#) (“Whither Are You Going?”) was road-shown in legitimate theatres across the country at a top admission price of one dollar, and the feature craze was on.

At first there were difficulties in distributing features, because the exchanges associated with both the MPPC and the independents were geared toward cheaply made one-reel shorts. Because of their more elaborate production values, features had relatively higher negative costs. This was a disadvantage to distributors, who charged a uniform price per foot. By 1914, however, several national feature-distribution alliances that correlated pricing with a film's negative cost and box-office receipts were organized. These new exchanges demonstrated the economic advantage of multiple-reel films over shorts. Exhibitors quickly learned that features could command higher admission prices and longer runs; single-title packages were also cheaper and easier to advertise than programs of multiple titles. As for manufacturing, producers found that the higher expenditure for features was readily amortized by high volume sales to distributors, who in turn were eager to share in the higher admission returns from the theatres. The whole industry soon reorganized itself around the economics of the multiple-reel film, and the effects of this restructuring did much to give motion pictures their characteristic modern form.

Feature films made motion pictures respectable for the middle class by providing a format that was analogous to that of the legitimate theatre and was suitable for the adaptation of middle-class novels and plays. This new audience had more demanding standards than the older working-class one, and producers readily increased their budgets to provide high technical quality and elaborate productions. The new viewers also had a more refined sense of comfort, which exhibitors quickly accommodated by replacing their storefronts with large, elegantly appointed new theatres in the major urban centres (one of the first was Mitchell L. Marks's 3,300-seat Strand, which opened in the Broadway district of Manhattan in 1914). Known as “dream palaces” because of the fantastic luxuriance of their interiors, these houses had to show features rather than a program of shorts to attract large audiences at premium prices. By 1916 there were more than 21,000 movie theatres in the United States. Their advent marked the end of the nickelodeon era and foretold the rise of the Hollywood studio system, which dominated urban exhibition from the 1920s to the '50s. Before the new studio-based monopoly could be established, however, the patents-based monopoly of the MPPC had to expire, and this it did about 1914 as a result of its own basic assumptions.

As conceived by Edison, the basic operating principle of the Trust was to control the industry through patents pooling and licensing, an idea logical enough in theory but difficult to practice in the context of a dynamically changing marketplace. Specifically, the Trust's failure to anticipate the independents' widespread and aggressive resistance to its policies cost it a fortune in patent-infringement litigation. Furthermore, the Trust badly underestimated the importance of the feature film, permitting the independents to claim this popular new product as entirely their own. Another issue that the [MPPC](#) misjudged was the power of the marketing strategy known as the “[star system](#).” Borrowed from the theatre industry, this system involves the creation and management of publicity about key performers, or stars, to stimulate demand

for their films. Trust company producers used this kind of publicity after 1910, when Carl Laemmle of Independent Motion Pictures (IMP) promoted Florence Lawrence into national stardom through a series of media stunts in St. Louis, Mo., but they never exploited the technique as forcefully or as imaginatively as the independents did. Finally, and most decisively, in August 1912 the U.S. Justice Department brought suit against the MPPC for “restraint of trade” in violation of the Sherman Antitrust Act. Delayed by countersuits and by World War I, the government's case was eventually won, and the MPPC formally dissolved in 1918, although it had been functionally inoperative since 1914.

The rise and fall of the MPPC was concurrent with the industry's move to southern California. As a result of the nickelodeon boom, some exhibitors—who showed three separate programs over a seven-day period—had begun to require as many as 20 new films per week, and it became necessary to put production on a systematic year-round schedule. Because most films were still shot outdoors in available light, such schedules could not be maintained in the vicinity of New York City or Chicago, where the industry had originally located itself in order to take advantage of trained theatrical labour pools. As early as 1907, production companies, such as Selig Polyscope, began to dispatch production units to warmer climates during winter. It was soon clear that what producers required was a new industrial centre—one with warm weather, a temperate climate, a variety of scenery, and other qualities (such as access to acting talent) essential to their highly unconventional form of manufacturing.

Various companies experimented with location shooting in Jacksonville, Fla., in San Antonio, Texas, in Santa Fe, N.M., and even in Cuba, but the ultimate site of the American film industry was a Los Angeles suburb (originally a small industrial town) called [Hollywood](#). It is generally thought that Hollywood's distance from the MPPC's headquarters in New York City made it attractive to the independents, but MPPC members such as Selig, Kalem, Biograph, and Essanay had also established facilities there by 1911 in response to a number of the region's attractions. These included the temperate climate required for year-round production (the U.S. Weather Bureau estimated that an average of 320 days per year were sunny or clear); a wide range of topography within a 50-mile (80-km) radius of Hollywood, including mountains, valleys, forests, lakes, islands, seacoast, and desert; the status of Los Angeles as a professional theatrical centre; the existence of a low tax base; and the presence of cheap and plentiful labour and land. This latter factor enabled the newly arrived production companies to buy up tens of thousands of acres of prime real estate on which to locate their studios, standing sets, and backlots.

By 1915 approximately 15,000 workers were employed by the motion-picture industry in Hollywood, and more than 60 percent of American production was centred there. In that same year the trade journal *Variety* reported that capital investment in American motion pictures—the business of artisanal craftsmen and fairground operators only a decade before—had exceeded \$500 million. The most powerful companies in the new film capital were the independents, who were flush with cash from their conversion to feature production. These included the Famous Players–Lasky Corporation (later [Paramount Pictures](#), c. 1927), which was formed by a merger of Zukor's Famous Players Company, Jesse L. Lasky's Feature Play Company, and the Paramount distribution exchange in 1916; [Universal Pictures](#), founded by [Carl Laemmle](#) in 1912 by merging IMP with Powers, Rex, Nestor, Champion, and Bison; [Goldwyn Picture Corporation](#), founded in 1916 by [Samuel Goldfish](#) (later Goldwyn) and Edgar Selwyn; Metro Picture Corporation and Louis B. Mayer Pictures, founded by [Louis B. Mayer](#) in 1915 and 1917, respectively; and the Fox Film Corporation (later [Twentieth Century–Fox](#), 1935), founded by [William Fox](#) in 1915. After World War I these companies

were joined by Loew's, Inc. (parent corporation of [MGM](#), created by the merger of Metro, Goldwyn, and Mayer companies cited above, 1924), a national exhibition chain organized by Marcus Loew and Nicholas Schenck in 1919; [First National Pictures, Inc.](#), a circuit of independent exhibitors who established their own production facilities in Burbank, Calif., in 1922; [Warner Brothers](#) Pictures, Inc., founded by Harry, Albert, Samuel, and [Jack Warner](#) in 1923; and [Columbia Pictures, Inc.](#), incorporated in 1924 by [Harry Cohn](#) and Jack Cohn.

These organizations became the backbone of the Hollywood studio system, and the men who controlled them shared several important traits. They were all independent exhibitors and distributors who had outwitted the Trust and earned their success by manipulating finances in the postnickelodeon feature boom, merging production companies, organizing national distribution networks, and ultimately acquiring vast theatre chains. They saw their business as basically a retailing operation modeled on the practice of chain stores such as Woolworth's and Sears. Not incidentally, these men were all first- or second-generation Jewish immigrants from eastern Europe, most of them with little formal education, while the audience they served was 90 percent Protestant and Catholic. This circumstance would become an issue during the 1920s, when the movies became a mass medium that was part of the life of every U.S. citizen and when Hollywood became the chief purveyor of American culture to the world.

Pre-World War I [European cinema](#)

Before World War I, European cinema was dominated by [France](#) and [Italy](#). At [Pathé Frères](#), director general Ferdinand Zecca perfected the *course comique*, a uniquely Gallic version of the chase film, which inspired Mack Sennett's Keystone Kops, while the immensely popular Max Linder created a comic persona that would deeply influence the work of Charlie Chaplin. The episodic crime film was pioneered by Victorin Jasset in the Nick Carter series, produced for the small Éclair Company, but it remained for Gaumont's [Louis Feuillade](#) to bring the genre to aesthetic perfection in the extremely successful serials *Fantômas* (1913–14), *Les Vampires* (1915–16), and *Judex* (1916).

Another influential phenomenon initiated in prewar France was the *film d'art* movement. It began with *L'Assassinat du duc de Guise* ("The Assassination of the Duke of Guise," 1908), directed by Charles Le Bargy and André Calmettes of the Comédie Française for the Société Film d'Art, which was formed for the express purpose of transferring prestigious stage plays starring famous performers to the screen. *L'Assassinat*'s success inspired other companies to make similar films, which came to be known as *films d'art*. These films were long on intellectual pedigree and short on narrative sophistication. The directors simply filmed theatrical productions in toto, without adaptation. Their brief popularity nevertheless created a context for the lengthy treatment of serious material in motion pictures and was directly instrumental in the rise of the feature.

No country, however, was more responsible for the popularity of the feature than [Italy](#). The Italian cinema's lavishly produced costume spectacles brought it international prominence in the years before the war. The prototypes of the genre, by virtue of their epic material and length, were the Cines company's six-reel *Gli ultimi giorni di Pompei* (*The Last Days of Pompei*), directed by Luigi Maggi in 1908, and its 10-reel remake, directed by Ernesto Pasquali in 1913; but it was Cines's nine-reel *Quo Vadis?* ("Whither Are You Going?" 1912), with its huge three-dimensional sets re-creating ancient Rome and its 5,000 extras, that established the standard for the superspectacle and briefly conquered the world market for

Italian motion pictures. Its successor, the Italia company's 12-reel [Cabiria](#) (1914), was even more extravagant in its historical reconstruction of the Second Punic War, from the burning of the Roman fleet at Syracuse to Hannibal crossing the Alps and the sack of Carthage. The Italian superspectacle stimulated public demand for features and influenced such important directors as Cecil B. DeMille, Ernst Lubitsch, and especially D.W. Griffith.

[D.W. Griffith](#)

There has been a tendency in modern film scholarship to view the narrative form of motion pictures as a development of an overall production system. Although narrative film was and continues to be strongly influenced by a combination of economic, technological, and social factors, it also owes a great deal to the individual artists who viewed film as a medium of personal expression. Chief among these innovators was D.W. Griffith. It is true that Griffith's self-cultivated reputation as a Romantic artist—"the father of film technique," "the man who invented Hollywood," "the Shakespeare of the screen," and the like—is somewhat overblown. It is also true that by 1908 film narrative had already been systematically organized to accommodate the material conditions of production. Griffith's work nevertheless transformed that system from its primitive to its classical mode. He was the first filmmaker to realize that the motion-picture medium, properly vested with technical vitality and seriousness of theme, could exercise enormous persuasive power over an audience, or even a nation, without recourse to print or human speech.

Griffith began his film career in late 1907 as an actor. He was cast as the lead in the Edison Company's *Rescued from an Eagle's Nest* (1907) and also appeared in many Biograph films. He had already attempted to make a living as a stage actor and a playwright without much success, and his real goal in approaching the film companies seems to have been to sell them scripts. In June 1908 [Biograph](#) gave him an opportunity to replace its ailing director, George ("Old Man") McCutcheon, on the chase film *The Adventures of Dollie*. With the advice of the company's two cameramen, [G.W. \("Billy"\) Bitzer](#) (who would become Griffith's personal cinematographer for much of his career) and Arthur Marvin (who actually shot the film), Griffith turned in a fresh and exciting film. His work earned him a full-time director's contract with Biograph, for whom he directed more than 450 one- and two-reel films over the next five years.

In the Biograph films, Griffith experimented with all the narrative techniques he would later use in the epics *The Birth of a Nation* (1915) and *Intolerance* (1916)—techniques that helped to formulate and stabilize Hollywood's classical narrative style. A few of these techniques were already in use when Griffith started; he simply refined them. Others were innovations Griffith devised to solve practical problems in the course of production. Still others resulted from his conscious analogy between film and literary narrative, chiefly Victorian novels and plays. In all cases, however, Griffith brought to the practice of filmmaking a seriousness of purpose and an intensity of vision that, combined with his intuitive mastery of film technique, made him the first great artist of the cinema.

Griffith's first experiments were in the field of editing and involved varying the standard distance between the audience and the screen. In *Greaser's Gauntlet*, made one month after *Dollie*, he first used a cut-in from a long shot to a full shot to heighten the emotional intensity of a scene. In an elaboration of this practice, he was soon taking shots from multiple camera setups—long shots, full shots, medium shots, close shots, and, ultimately, close-ups—and combining their separate perspectives into single dramatic scenes. By October 1908 Griffith

was practicing parallel editing between the dual narratives of *After Many Years*, and the following year he extended the technique to the representation of three simultaneous actions in *The Lonely Villa*, cutting rapidly back and forth between a band of robbers breaking into a suburban villa, a woman and her children barricaded within, and the husband rushing from town to the rescue. This type of crosscutting, or intercutting, came to be known as the “Griffith last-minute rescue” and was employed as a basic structural principle in both *The Birth of a Nation* and *Intolerance*. It not only employed the rapid alternation of shots but also called for the shots themselves to be held for shorter and shorter durations as the parallel lines of action converged; in its ability to create the illusion of simultaneous actions, the intercut chase sequence prefigured Soviet theories of montage by at least a decade, and it remains a basic component of narrative film form to this day.

Another area of experiment for Griffith involved camera movement and placement, most of which had been purely functional before him. When Biograph started sending his production unit to southern California in 1910, Griffith began to practice panoramic [panning shots](#) not only to provide visual information but also to engage his audience in the total environment of his films. Later he would prominently employ the [tracking](#), or traveling, shot, in which the camera—and therefore the audience—participates in the dramatic action by moving with it. In California, Griffith discovered that camera angle could be used to comment upon the content of a shot or to heighten its dramatic emphasis in a way that the conventionally mandated head-on medium shot could not; and, at a time when convention dictated the flat and uniform illumination of every element in a scene, he pioneered the use of expressive lighting to create mood and atmosphere. Like so many of the other devices he brought into general use, these had all been employed by earlier directors, but Griffith was the first to practice them with the care of an artist and to rationalize them within the overall structure of his films.

Griffith's one-reelers grew increasingly complex between 1911 and 1912, and he began to realize that only a longer and more expansive format could contain his vision. At first he made such two-reel films as *Enoch Arden* (1911), *Man's Genesis* (1912), *The Massacre* (1912), and *The Mothering Heart* (1913), but these went virtually unnoticed by a public enthralled with such recent features from Europe as *Queen Elizabeth* and *Quo Vadis*? Finally Griffith determined to make an epic himself, based on the story of Judith and Holofernes from the Apocrypha. The result was the four-reel *Judith of Bethulia* (1913), filmed secretly on a 12-square-mile (31-square-km) set in Chatsworth Park, Calif. In addition to its structurally complicated narrative, *Judith* contained massive sets and battle scenes unlike anything yet attempted in American film. It cost twice the amount Biograph had allocated for its budget. Company officials, stunned at Griffith's audacity and extravagance, tried to relieve the director of his creative responsibilities by promoting him to studio production chief. Griffith quit instead, publishing a full-page advertisement in *The New York Dramatic Mirror* (Dec. 3, 1913), in which he took credit for all the Biograph films he had made from *The Adventures of Dollie* through *Judith*, as well as for the narrative innovations they contained. He then accepted an offer from Harry E. Aitken, the president of the recently formed Mutual Film Corporation, to head the feature production company Reliance-Majestic; he took Bitzer and most of his Biograph stock company with him.

As part of his new contract, Griffith was allowed to make two independent features per year, and for his first project he chose to adapt *The Clansman*, a novel about the American Civil War and [Reconstruction](#) by the Southern clergyman Thomas Dixon, Jr. (As a Kentuckian whose father had served as a Confederate officer, Griffith was deeply sympathetic to the material, which was highly sensational in its depiction of Reconstruction as a period in which

mulatto carpetbaggers and their black henchmen had destroyed the social fabric of the South and given birth to a heroic Ku Klux Klan.) Shooting on the film began in secrecy in late 1914. Although a script existed, Griffith kept most of the continuity in his head—a remarkable feat considering that the completed film contained 1,544 separate shots at a time when the most elaborate of foreign spectacles boasted fewer than 100. When the film opened in March 1915, retitled *The Birth of a Nation*, it was immediately pronounced “epoch-making” and recognized as a remarkable artistic achievement. The complexity of its narrative and the epic sweep of its subject were unprecedented, but so too were its controversial manipulations of audience response, especially its blatant appeals to racism. Despite its brilliantly conceived battle sequences, its tender domestic scenes, and its dignified historical reconstructions, the film provoked fear and disgust with its shocking images of miscegenation and racial violence. As the film's popularity swept the nation, denunciations followed, and many who had originally praised it, such as President Woodrow Wilson, were forced to recant. Ultimately, after screenings of *The Birth of a Nation* had caused riots in several cities, it was banned in eight Northern and Midwestern states. (First Amendment protection was not extended to motion pictures in the United States until 1952.) Such measures, however, did not prevent *The Birth of a Nation* from becoming the single most popular film in history throughout much of the 20th century; it achieved national distribution in the year of its release and was seen by nearly three million people.

Taking the lead in protesting against *The Birth of a Nation*, the National Association for the Advancement of Colored People (NAACP), which had been founded six years prior to the film's release, used the struggle as an organizing tool. The powerful impact of Griffith's film meanwhile persuaded many black leaders that racial stereotyping in motion pictures could be more effectively challenged if African American filmmakers produced works more accurately and fairly depicting black life. For their first effort, *The Birth of a Race* (1919), black sponsors sought collaboration with white producers but lost control of the project, which was judged a failure. Other aspiring black filmmakers took note of the film's problems and began to make their own works independently. The Lincoln Motion Picture Company (run by George P. Johnson and Noble Johnson) and the writer and entrepreneur [Oscar Micheaux](#) were among those who launched what became known as the genre of “race pictures,” produced in and for the black community.

Although it is difficult to believe that the racism of *The Birth of a Nation* was unconscious, as some have claimed, it is easy to imagine that Griffith had not anticipated the power of his own images. He seems to have been genuinely stunned by the hostile public reaction to his masterpiece, and he fought back by publishing a pamphlet entitled *The Rise and Fall of Free Speech in America* (1915), which vilified the practice of [censorship](#) and especially intolerance. At the height of his notoriety and fame, Griffith decided to produce a spectacular cinematic polemic against what he saw as a flaw in human character that had endangered civilization throughout history. The result was the massive epic *Intolerance* (1916), which interweaves stories of martyrdom from four separate historical periods. The film was conceived on a scale so monumental that it dwarfed all its predecessors. Crosscutting freely between a contemporary tale of courtroom injustice, the fall of ancient Babylon to Cyrus the Great in 539 BC, the Massacre of St. Bartholomew's Day in 16th-century France, and the Crucifixion of Christ, Griffith created an editing structure so abstract that contemporary audiences could not understand it. Even the extravagant sets and exciting battle sequences could not save *Intolerance* at the box office. To reduce his losses, Griffith withdrew the film from distribution after 22 weeks; he subsequently cut into the negative and released the modern and the Babylonian stories as two separate features, *The Mother and the Law* and *The*

Fall of Babylon, in 1919. (Although ignored by Americans, *Intolerance* was both popular and vastly influential in the Soviet Union, where filmmakers minutely analyzed Griffith's editing style and techniques.)

It would be fair to say that Griffith's career as an innovator of film form ended with *Intolerance*, but his career as a film artist certainly did not. He went on to direct another 26 features between 1916 and 1931, chief among them the World War I anti-German propaganda epic (financed in part by the British government) *Hearts of the World* (1918), the subtle and lyrical *Broken Blossoms* (1919), and the rousing melodrama *Way Down East* (1920). The financial success of the latter made it possible for Griffith to establish his own studio at Mamaroneck, N.Y., where he produced the epics *Orphans of the Storm* (1921) and *America* (1924), which focused on the French and American revolutions, respectively; both lost money. Griffith's next feature was the independent semidocumentary *Isn't Life Wonderful?* (1925), which was shot on location in Germany and is thought to have influenced both the [“street” films](#) of the German director G.W. Pabst and the post-World War II Italian Neorealist movement.

Griffith's last films, with the exception of *The Struggle* (1931), were all made for other producers. Not one could be called a success, although his first sound film, *Abraham Lincoln* (1930), was recognized as an effective essay in the new medium. The critical and financial failure of *The Struggle*, however, a version of Émile Zola's *L'Assommoir* (*The Drunkard*), forced Griffith to retire.

It might be said of Griffith that, like Georges Méliès and Edwin S. Porter, he outlived his genius, but that is not true. Griffith was fundamentally a 19th-century man who became one of the 20th-century's greatest artists. Transcending personal defects of vision, judgment, and taste, he developed the narrative language of film. Later filmmakers adapted his techniques and structures to new themes and styles, while for Griffith his innovations were inextricably linked to a social vision that became obsolete while he was still in the prime of his working life.

Post-World War I European cinema

Prior to World War I, the American cinema had lagged behind the film industries of Europe, particularly those of France and Italy, in such matters as feature production and the establishment of permanent theatres. During the war, however, European film production virtually ceased, in part because the same chemicals used in the production of celluloid were necessary for the manufacture of gunpowder. The American cinema, meanwhile, experienced a period of unprecedented prosperity and growth. By the end of the war, it exercised nearly total control of the international market: when the Treaty of Versailles was signed in 1919, 90 percent of all films screened in Europe, Africa, and Asia were American, and the figure for South America was (and remained through the 1950s) close to 100 percent. The main exception was Germany, which had been cut off from American films from 1914 until the end of the war.

Germany

Before World War I, the German motion-picture audience drew broadly from different social classes, and the country was among the leaders in the construction of film theatres. But German film production lagged behind that of several other European countries, and Denmark's film industry in particular played a more prominent role in German film exhibition than did many domestic companies. This dependence on imported films became a matter of concern among military leaders during the war, when a flood of effective anti-German propaganda films began to pour into Germany from the Allied countries. Therefore, on Dec. 18, 1917, the German general [Erich Ludendorff](#) ordered the merger of the main German production, distribution, and exhibition companies into the government-subsidized conglomerate Universum Film Aktiengesellschaft ([UFA](#)). UFA's mission was to upgrade the quality of German films. The organization proved to be highly effective, and, when the war ended in Germany's defeat in November 1918, the German film industry was prepared for the first time to compete in the international marketplace. Transferred to private control, UFA became the single largest studio in Europe and produced most of the films associated with the "golden age" of German cinema during the Weimar Republic (1919–33).

UFA's first peacetime productions were elaborate costume dramas (*Kostümfilme*) in the vein of the prewar Italian superspectacles, and the master of this form was [Ernst Lubitsch](#), who directed such lavish and successful historical pageants as *Madame Du Barry* (released in the United States as *Passion*, 1919), *Anna Boleyn* (*Deception*, 1920), and *Das Weib des Pharaos* (*The Loves of Pharaoh*, 1921) before immigrating to the United States in 1922. These films earned the German cinema a foothold in the world market, but it was an Expressionist work, *Das Kabinett des Dr. Caligari* ([The Cabinet of Dr. Caligari](#), 1919), that brought the industry its first great artistic acclaim. Based on a scenario by the Czech poet Hans Janowitz and the Austrian writer Carl Mayer, the film recounts a series of brutal murders that are committed in the north German town of Holstenwall by a somnambulist at the bidding of a demented mountebank, who believes himself to be the incarnation of a homicidal 18th-century hypnotist named Dr. Caligari. Erich Pommer, *Caligari*'s producer at Decla-Bioskop (an independent production company that was to merge with UFA in 1921), added a scene to the original scenario so that the story appears to be narrated by a madman confined to an asylum of which the mountebank is director and head psychiatrist. To represent the narrator's tortured mental state, the director, [Robert Wiene](#), hired three prominent Expressionist artists—Hermann Warm, Walter Röhrig, and Walter Reimann—to design sets that depicted exaggerated dimensions and deformed spatial relationships. To heighten this architectural stylization (and also to economize on electric power, which was rationed in postwar Germany), bizarre patterns of light and shadow were painted directly onto the scenery and even onto the characters' makeup.

In its effort to embody disturbed psychological states through decor, *Caligari* influenced enormously the UFA films that followed it and gave rise to the movement known as [German Expressionism](#). The films of this movement were completely studio-made and often used distorted sets and lighting effects to create a highly subjective mood. They were primarily films of fantasy and terror that employed horrific plots to express the theme of the soul in search of itself. Most were photographed by one of the two great cinematographers of the Weimar period, Karl Freund and Fritz Arno Wagner. Representative works include F.W. Murnau's *Der Januskopf* (*Janus-Faced*, 1920), adapted from Robert Louis Stevenson's *Dr. Jekyll and Mr. Hyde*; Paul Wegener and Carl Boese's *Der Golem* (*The Golem*, 1920), adapted from a Jewish legend in which a gigantic clay statue becomes a raging monster; Arthur

Robison's *Schatten* (*Warning Shadows*, 1922); Wiene's *Raskolnikow* (1923), based on Fyodor Dostoyevsky's *Crime and Punishment*; Paul Leni's *Das Wachsfigurenkabinett* (*Waxworks*, 1924); and Henrik Galeen's *Der Student von Prag* (*The Student of Prague*, 1926), which combines the Faust legend with a doppelgänger, or double, motif. In addition to winning international prestige for German films, Expressionism produced two directors who would become major figures in world cinema, [Fritz Lang](#) and [F.W. Murnau](#).

Lang had already directed several successful serials, including *Die Spinnen* (*The Spiders*, 1919–20), when he collaborated with his future wife, the scriptwriter Thea von Harbou, to produce *Der müde Tod* (“The Weary Death”; English title: *Destiny*, 1921) for Decla-Bioskop. This episodic Romantic allegory of doomed lovers, set in several different historical periods, earned Lang acclaim for his dynamic compositions of architectural line and space. Lang's use of striking, stylized images is also demonstrated in the other films of his Expressionist period, notably the crime melodrama *Dr. Mabuse, der Spieler* (*Dr. Mabuse, the Gambler*, 1922), the Wagnerian diptych *Siegfried* (1922–24) and *Kriemhilds Rache* (*Kriemhild's Revenge*, 1922–23), and the stunningly futuristic [Metropolis](#) (1926), perhaps the greatest science-fiction film ever made. After directing the early sound masterpiece [M](#) (1931), based on child murders in Düsseldorf, Lang became increasingly estranged from German political life. He emigrated in 1933 to escape the Nazis and began a second career in the Hollywood studios the following year.

[Murnau](#) made several minor Expressionist films before directing one of the movement's classics, an (unauthorized) adaptation of Bram Stoker's novel *Dracula* entitled [Nosferatu—eine Symphonie des Grauens](#) (“Nosferatu, a Symphony of Horror,” 1922), but it was *Der letzte Mann* (“The Last Man”; English title: [The Last Laugh](#), 1924), a film in the genre of *Kammerspiel* (“intimate theatre”), that made him world-famous. Scripted by Carl Mayer and produced by Erich Pommer for UFA, *Der letzte Mann* told the story of a hotel doorman who is humiliated by the loss of his job and—more important, apparently, in postwar German society—of his splendid paramilitary uniform. Murnau and [Karl Freund](#), his cameraman, gave this simple tale a complex narrative structure through their innovative use of camera movement and subjective point-of-view shots. In one famous example, Freund strapped a lightweight camera to his chest and stumbled drunkenly around the set of a bedroom to record the inebriated porter's point of view. In the absence of modern cranes and dollies, at various points in the filming Murnau and Freund placed the camera on moving bicycles, fire engine ladders, and overhead cables in order to achieve smooth, sustained movement. The total effect was a tapestry of subjectively involving movement and intense identification with the narrative. Even more remarkably, the film conveyed its meaning without using any printed intertitles for dialogue or explanation.

Der letzte Mann was universally hailed as a masterpiece and probably had more influence on Hollywood style than any other single foreign film in history. Its “unchained camera” technique (Mayer's phrase) spawned many imitations in Germany and elsewhere, the most significant being E.A. Dupont's circus-tent melodrama *Variété* (1925). The film also brought Murnau a long-term Hollywood contract, which he began to fulfill in 1927 after completing two last “superproductions,” *Tartüff* (*Tartuffe*, 1925) and *Faust* (1926), for UFA.

In 1924 the German mark was stabilized by the so-called [Dawes Plan](#), which financed the long-term payment of Germany's war-reparations debt and curtailed all exports. This created an artificial prosperity in the economy at large, which lasted only until the stock market crash of 1929, but it was devastating to the film industry, the bulk of whose revenues came from

foreign markets. Hollywood then seized the opportunity to cripple its only serious European rival, saturating Germany with American films and buying its independent theatre chains. As a result of these forays and its own internal mismanagement, UFA stood on the brink of bankruptcy by the end of 1925. It was saved by a \$4 million loan offered by two major American studios, Famous Players–Lasky (later Paramount) and Metro-Goldwyn-Mayer, in exchange for collaborative rights to UFA studios, theatres, and creative personnel. This arrangement resulted in the founding of the Parufamet (Paramount-UFA-Metro) Distribution Company in early 1926 and the almost immediate emigration of UFA film artists and technicians to Hollywood, where they worked for a variety of studios. This first Germanic migration was temporary. Many of the filmmakers went back to UFA disgusted at the assembly-line character of the American studio system, but many—such as Lubitsch, Freund, and Murnau—stayed on to launch full-fledged Hollywood careers, and many more would return during the 1930s to escape the Nazi regime.

In the meantime, the new sensibility that had entered German intellectual life turned away from the morbid psychological themes of Expressionism toward an acceptance of “life as it is lived.” Called *die neue Sachlichkeit* (“the new objectivity”), this spirit stemmed from the economic dislocations that beset German society in the wake of the war, particularly the impoverishment of the middle classes through raging inflation. In cinema, *die neue Sachlichkeit* translated into the grim social realism of the “street” films of the late 1920s, including G.W. Pabst's *Die freudlose Gasse* (*The Joyless Street*, 1925), Bruno Rahn's *Dirnentragödie* (*Tragedy of the Streets*, 1927), Joe May's *Asphalt* (1929), and Piel Jutzi's *Berlin-Alexanderplatz* (1931). Named for their prototype, Karl Grune's *Die Strasse* (*The Street*, 1923), these films focused on the disillusionment, cynicism, and ultimate resignation of ordinary German people whose lives were crippled during the postwar inflation.

The master of the form was [G.W. Pabst](#), whose work established conventions of continuity editing that would become essential to the sound film. In such important realist films as *Die freudlose Gasse*, *Die Liebe der Jeanne Ney* (*The Love of Jeanne Ney*, 1927), *Die Büchse der Pandora* (*Pandora's Box*, 1929), and *Das Tagebuch einer Verlorenen* (*Diary of a Lost Girl*, 1929), Pabst created complex continuity sequences, using techniques that became key features of Hollywood's “invisible” editing style, such as cutting on action, cutting from a shot of a character's glance to one of what the character sees (motivated point-of-view shots), and cutting to a reverse angle shot (one in which the camera angle has changed 180 degrees; e.g., in a scene in which a man and a woman face one another in conversation, the man is seen from the woman's point of view, and then the woman is shown from the man's point of view). Pabst later became an important figure of the early sound period, contributing two significant works in his pacifist films *Westfront 1918* (1930) and *Kameradschaft* (“Comradeship,” 1931). Emigrating from Germany after the Nazis seized power in 1933, Pabst worked in France and briefly in Hollywood. He returned to Germany in 1941 and made several films for the Nazi-controlled film industry during World War II.

By March 1927, UFA was once again facing financial collapse, and it turned this time to the Prussian financier [Alfred Hugenberg](#), a director of the powerful Krupp industrial empire and a leader of the right-wing German National Party who was sympathetic to the [Nazis](#). Hugenberg bought out the American interests in UFA, acquiring a majority of the company's stock and directing the remainder into the hands of his political allies. As chairman of the UFA board, he quietly instituted a nationalistic production policy that gave increasing prominence to those allies and their cause and that enabled the Nazis to subvert the German film industry when Adolf Hitler came to power in 1933. German cinema then fell under the

authority of [Joseph Goebbels](#) and his Ministry of Public Enlightenment and Propaganda. For the next 12 years every film made in the Third Reich had to be personally approved for release by Goebbels. Jews were officially banned from the industry, which caused a vast wave of German film artists to leave for Hollywood. Los Angeles became known as “the new Weimar,” and the German cinema was emptied of the talent and brilliance that had created its golden age.

The Soviet Union

During the decades of the Soviet Union's existence, the history of cinema in pre-Soviet Russia was a neglected subject, if not actively suppressed. In subsequent years, scholars have brought to light and reevaluated a small but vigorous film culture in the pre-World War I era. Some 4,000 motion-picture theatres were in operation, with the French company Pathé playing a substantial role in production and distribution. Meanwhile, Russian filmmakers such as Yevgeny Bauer had developed a sophisticated style marked by artful lighting and decor.

When Russia entered World War I in August 1914, foreign films could no longer be imported, and the tsarist government established the Skobelev Committee to stimulate domestic production and produce propaganda in support of the regime. The committee had little immediate effect, but, when the tsar fell in March 1917, the Provisional Government, headed by Aleksandr F. Kerensky, reorganized it to produce antitsarist propaganda. When the [Bolsheviks](#) inherited the committee eight months later, they transformed it into the Cinema Committee of the People's Commissariat of Education.

A minority party with approximately 200,000 members, the Bolsheviks had assumed the leadership of 160 million people who were scattered across the largest continuous landmass in the world, spoke more than 100 separate languages, and were mostly illiterate. [Vladimir Ilich Lenin](#) and other Bolshevik leaders looked on the motion-picture medium as a means of unifying the huge, disparate nation. Lenin was the first political leader of the 20th century to recognize both the importance of film as propaganda and its power to communicate quickly and effectively. He understood that audiences did not require literacy to comprehend a film's meaning and that more people could be reached through mass-distributed motion pictures than through any other medium of the time. Lenin declared: “The cinema is for us the most important of the arts,” and his government gave top priority to the rapid development of the Soviet film industry, which was nationalized in August 1919 and put under the direct authority of Lenin's wife, Nadezhda Krupskaya.

There was, however, little to build upon. Most of the prerevolutionary producers had fled to Europe, wrecking their studios as they left and taking their equipment and film stock with them. A foreign blockade prevented the importation of new equipment or stock (there were no domestic facilities for manufacturing either), and massive power shortages restricted the use of what limited resources remained. The Cinema Committee was not deterred, however; its first act was to found a professional film school in Moscow to train directors, technicians, and actors for the cinema.

The [Vsesoyuznyi Gosudarstvenyi Institut Kinematografii](#) (VGIK; “All-Union State Institute of Cinematography”) was the first such school in the world. Initially it trained people in the production of *agitki*, existing newsreels reedited for the purpose of agitation and propaganda

(agitprop). The *agitki* were transported on specially equipped agit-trains and agit-steamers to the provinces, where they were exhibited to generate support for the Revolution. (The state-controlled Cuban cinema used the same tactic after the revolution of 1959.) In fact, during the abysmal years of the [Russian Civil War](#) (1918–20), nearly all Soviet films were *agitki* of some sort. Most of the great directors of the Soviet silent cinema were trained in that form, although, having very little technical equipment and no negative film stock, they were often required to make “films without celluloid.”

Students at the VGIK were instructed to write, direct, and act out scenarios as if they were before cameras. Then—on paper—they assembled various “shots” into completed “films.” The great teacher [Lev Kuleshov](#) obtained a print of Griffith's *Intolerance* and screened it for students in his “Kuleshov workshop” until they had memorized its shot structures and could rearrange its multilayered editing sequences on paper in hundreds of different combinations.

Kuleshov further experimented with editing by intercutting the same shot of a famous actor's expressionless face with several different shots of highly expressive content—a steaming bowl of soup, a dead woman in a coffin, and a little girl playing with a teddy bear. The invariable response of film school audiences when shown these sequences was that the actor's face assumed the emotion appropriate to the intercut object—hunger for the soup, sorrow for the dead woman, paternal affection for the little girl. Kuleshov reasoned from this phenomenon, known today as the “[Kuleshov effect](#),” that the shot in film always has two values: the one it carries in itself as a photographic image of reality and the one it acquires when placed into juxtaposition with another shot. He reasoned further that the second value is more important to cinematic signification than the first and that time and space in the cinema must therefore be subordinate to the process of editing, or “[montage](#)” (coined by the Soviets from the French verb *monter*, “to assemble”). Kuleshov ultimately conceived of montage as an expressive process whereby dissimilar images could be linked together to create nonliteral or symbolic meaning.

Although Kuleshov made several important films, including *Po zakonu* (*By the Law*, 1926), it was as a teacher and theorist that he most deeply influenced an entire generation of Soviet directors. Two of his most brilliant students were [Sergey Eisenstein](#) and [Vsevolod Illarionovich Pudovkin](#).

Eisenstein was, with Griffith, one of the great pioneering geniuses of the modern cinema, and like his predecessor he produced a handful of enduring masterworks. Griffith, however, had elaborated the structure of narrative editing intuitively, whereas Eisenstein was an intellectual who formulated a modernist theory of editing based on the psychology of perception and Marxist dialectic. He was trained as a civil engineer, but in 1920 he joined the Moscow Proletkult Theatre, where he fell under the influence of the stage director Vsevolod Meyerhold and directed a number of plays in the revolutionary style of Futurism. In the winter of 1922–23 Eisenstein studied under Kuleshov and was inspired to write his first theoretical manifesto, *The Montage of Attractions*. Published in the radical journal *Lef*, the article advocated assaulting an audience with calculated emotional shocks for the purpose of agitation.

Eisenstein was invited to direct the Proletkult-sponsored film *Stachka* ([Strike](#)) in 1924, but, like Griffith, he knew little of the practical aspects of production. He therefore enlisted the aid of Eduard Tisse, a brilliant cinematographer at the state-owned Goskino studios, beginning a lifelong artistic collaboration. *Strike* is a semidocumentary representation of the brutal

suppression of a strike by tsarist factory owners and police. In addition to being Eisenstein's first film, it was also the first revolutionary mass-film of the new Soviet state. Conceived as an extended montage of shock stimuli, the film concludes with the now famous sequence in which the massacre of the strikers and their families is intercut with shots of cattle being slaughtered in an abattoir.

Strike was an immediate success, and Eisenstein was next commissioned to direct a film celebrating the 20th anniversary of the failed [1905 Revolution](#) against tsarism. Originally intended to provide a panorama of the entire event, the project eventually came to focus on a single representative episode—the mutiny of the battleship [Potemkin](#) and the massacre of the citizens of the port of [Odessa](#) by tsarist troops. *Bronenosets Potemkin* (*Battleship Potemkin*, 1925) emerged as one of the most important and influential films ever made, especially in Eisenstein's use of montage, which had improved far beyond the formulaic, if effective, juxtapositions of *Strike*.

Although agitational to the core, *Battleship Potemkin* is a work of extraordinary pictorial beauty and great elegance of form. It is symmetrically broken into five movements or acts, according to the structure of Greek tragedy. In the first of these, “Men and Maggots,” the flagrant mistreatment of the sailors at the hands of their officers is demonstrated, while the second, “Drama on the Quarterdeck,” presents the actual mutiny and the ship's arrival in Odessa. “Appeal from the Dead” establishes the solidarity of the citizens of Odessa with the mutineers, but it is the fourth sequence, “The Odessa Steps,” which depicts the massacre of the citizens, that thrust Eisenstein and his film into the historical eminence that both occupy today. Its power is such that the film's conclusion, “Meeting the Squadron,” in which the *Battleship Potemkin* in a show of brotherhood is allowed to pass through the squadron unharmed, is anticlimactic.

Unquestionably the most famous sequence of its kind in film history, “The Odessa Steps” incarnates the theory of dialectical montage that Eisenstein later expounded in his collected writings, *The Film Sense* (1942) and *Film Form* (1949). Eisenstein believed that meaning in motion pictures is generated by the collision of opposing shots. Building on Kuleshov's ideas, Eisenstein reasoned that montage operates according to the Marxist view of history as a perpetual conflict in which a force (thesis) and a counterforce (antithesis) collide to produce a totally new and greater phenomenon (synthesis). He compared this [dialectical](#) process in film editing to “the series of explosions of an internal combustion engine, driving forward its automobile or tractor.” The force of “The Odessa Steps” arises when the viewer's mind combines individual, independent shots and forms a new, distinct conceptual impression that far outweighs the shots' narrative significance. Through Eisenstein's accelerated manipulations of filmic time and space, the slaughter on the stone steps—where hundreds of citizens find themselves trapped between descending tsarist militia above and Cossacks below—acquires a powerful symbolic meaning. With the addition of a stirring revolutionary score by the German Marxist composer Edmund Meisel, the agitational appeal of *Battleship Potemkin* became nearly irresistible, and, when exported in early 1926, it made Eisenstein world-famous.

Eisenstein's next project, *Oktyabr* ([October](#), 1928), was commissioned by the Central Committee to commemorate the 10th anniversary of the Bolshevik Revolution. Accordingly, vast resources, including the Soviet army and navy, were placed at the director's disposal. Eisenstein based the shooting script on voluminous documentary material from the era and on John Reed's book *Ten Days That Shook the World*. When the film was completed in

November 1927, it was just under four hours long. While Eisenstein was making *October*, however, [Joseph Stalin](#) had taken control of the Politburo from [Leon Trotsky](#), and the director was forced to cut the print by one-third to eliminate references to the exiled Trotsky.

Eisenstein had consciously used *October* as a laboratory for experimenting with “intellectual” or “ideological” montage, an abstract type of editing in which the relationships established between shots are conceptual rather than visual or emotional. When the film was finally released, however, Stalinist critics attacked this alleged “formalist excess” (aestheticism or elitism). The same charge was leveled even more bitterly against Eisenstein's next film, *Staroe i novoe* ([Old and New](#), 1929), which Stalinist bureaucrats completely disavowed. Stalin hated Eisenstein because he was an intellectual and a Jew, but the director's international stature was such that he could not be publicly purged. Instead, Stalin used the Soviet state-subsidy apparatus to foil Eisenstein's projects and attack his principles at every turn, a situation that resulted in the director's failure to complete another film until *Alexander Nevsky* was commissioned in 1938.

Eisenstein's nearest rival in the Soviet silent cinema was his fellow student [Vsevolod Illarionovich Pudovkin](#). Like Eisenstein, Pudovkin developed a new theory of montage, but one based on cognitive linkage rather than dialectical collision. He maintained that “the film is not shot, but built, built up from the separate strips of celluloid that are its raw material.” Pudovkin, like Griffith, most often used montage for narrative rather than symbolic purpose. His films are more personal than Eisenstein's; the epic drama that is the focus of Eisenstein's films exists in Pudovkin's films merely to provide a backdrop for the interplay of human emotions.

Pudovkin's major work is *Mat* ([Mother](#), 1926), a tale of strikebreaking and terrorism in which a woman loses first her husband and then her son to the opposing sides of the 1905 Revolution. The film was internationally acclaimed for the innovative intensity of its montage, as well as for its emotion and lyricism. Pudovkin's later films include *Konets Sankt-Peterburga* (*The End of St. Petersburg*, 1927), which, like Eisenstein's *October*, was commissioned to celebrate the 10th anniversary of the Bolshevik Revolution, and *Potomok Chingis-Khana* (*The Heir to Genghis Khan*, or *Storm over Asia*, 1928), which is set in Central Asia during the Russian Civil War. Both mingle human drama with the epic and the symbolic as they tell a story of a politically naive person who is galvanized into action by tsarist tyranny. Although Pudovkin was never persecuted as severely by the Stalinists as Eisenstein, he too was publicly charged with formalism for his experimental sound film *Prostoi sluchai* (*A Simple Case*, 1932), which he was forced to release without its sound track. Pudovkin made several more sound films but remains best known for his silent work.

Two other seminal figures of the Soviet silent era were [Aleksandr Dovzhenko](#) and Dziga Vertov (original name Denis Kaufman). Dovzhenko, the son of Ukrainian peasants, had been a political cartoonist and painter before becoming a director at the state-controlled Odessa studios in 1926. After several minor works, he made *Zvenigora* (1928), a collection of boldly stylized tales about a hunt for an ancient Scythian treasure set during four different stages of Ukrainian history; *Arsenal* (1929), an epic film poem about the effects of revolution and civil war upon the Ukraine; and *Zemlya* (*Earth*, 1930), which is considered to be his masterpiece. *Earth* tells the story of the conflict between a family of wealthy landowning peasants (kulaks) and the young peasants of a collective farm in a small Ukrainian village, but the film is less a narrative than a lyric hymn to the cyclic recurrence of birth, life, love, and death in nature and in humankind. Although the film is acclaimed today, when it was released, Stalinist critics

denounced it as counterrevolutionary. Soon after, Dovzhenko entered a period of political eclipse, during which, however, he continued to make films.

[Dziga Vertov](#) (a pseudonym meaning “spinning top”) was an artist of quite different talents. He began his career as an *agitki* photographer and newsreel editor and is now acknowledged as the father of [cinema vérité](#) (a self-consciously realistic documentary movement of the 1960s and '70s) for his development and practice of the theory of the [kino-glaz](#) (“cinema-eye”). Vertov articulated this doctrine in the early 1920s in a number of radical manifestos in which he denounced conventional narrative cinema as impotent and demanded that it be replaced with a cinema of actuality based on the “organization of camera-recorded documentary material.” Between 1922 and 1925, he put his idea into practice in a series of 23 carefully crafted newsreel-documentaries entitled *Kino-pravda* (“film truth”) and *Goskinokalender*. Vertov's most famous film is *Chelovek s kinoapparatom* (*Man with a Movie Camera*, 1929), a feature-length portrait of Moscow from dawn to dusk. The film plays upon the “city symphony” genre inaugurated by Walter Ruttmann's *Berlin, the Symphony of a Great City* (1927), but Vertov repeatedly draws attention to the filmmaking process to create an autocritique of cinema itself.

Unlike most of his contemporaries, Vertov welcomed the coming of sound, envisioning it as a “radio-ear” to accompany the “cinema-eye.” His first sound film, *Entuziazm—simfoniya Donbassa* (*Symphony of the Donbas*, 1931), was an extraordinary contribution to the new medium, as was *Tri pesni o Lenine* (*Three Songs About Lenin*, 1934), yet Vertov could not escape the charge of formalist error any more than his peers. Although he did make the feature film *Kolybelnaya* (*Lullaby*) in 1937, for the most part the Stalinist establishment reduced him to the status of a newsreel photographer after 1934.

Many other Soviet filmmakers played important roles in the great decade of experiment that followed the Revolution, among them Grigory Kozintsev and Leonid Trauberg, Boris Barnet, Yakov Protazanov, Olga Preobrazhenskaya, Abram Room, and the documentarian Esther Shub. The period came to an abrupt end in 1929, when Stalin removed the state film trust (then called Sovkino) from the jurisdiction of the Commissariat of Education and placed it under the direct authority of the Supreme Council of the National Economy. Reorganized as Soyuzkino, the trust was turned over to the reactionary bureaucrat Boris Shumyatsky, a proponent of the narrowly ideological doctrine known as [Socialist Realism](#). This policy, which came to dominate the Soviet arts, dictated that individual creativity be subordinated to the political aims of the party and the state. In practice, it militated against the symbolic, the experimental, and the avant-garde in favour of a literal-minded “people's art” that glorified representative Soviet heroes and idealized Soviet experience. The restraints imposed made it impossible for the great filmmakers of the postrevolutionary era to produce creative or innovative work, and the Soviet cinema went into decline.

Post-World War I American cinema

During the 1920s in the [United States](#), motion-picture production, distribution, and exhibition became a major national industry and movies perhaps the major national obsession. The salaries of stars reached monumental proportions; filmmaking practices and narrative formulas were standardized to accommodate mass production; and Wall Street began to invest heavily in every branch of the business. The growing industry was organized according to the studio system that, in many respects, the producer [Thomas Harper Ince](#) had developed between 1914 and 1918 at Inceville, his studio in the Santa Ynez Canyon near Hollywood.

Ince functioned as the central authority over multiple production units, each headed by a director who was required to shoot an assigned film according to a detailed continuity script. Every project was carefully budgeted and tightly scheduled, and Ince himself supervised the final cut. This central producer system was the prototype for the studio system of the 1920s, and, with some modification, it prevailed as the dominant mode of Hollywood production for the next 40 years.

Virtually all the major film genres evolved and were codified during the 1920s, but none was more characteristic of the period than the [slapstick](#) comedy. This form was originated by [Mack Sennett](#), who, at his Keystone Studios, produced countless one- and two-reel shorts and features (*Tillie's Punctured Romance*, 1914; *The Surf Girl*, 1916; *Teddy at the Throttle*, 1917) whose narrative logic was subordinated to fantastic, purely visual humour. An anarchic mixture of circus, vaudeville, burlesque, pantomime, and the chase, Sennett's Keystone comedies created a world of inspired madness and mayhem, and they employed the talents of such future stars as [Charlie Chaplin](#), [Harry Langdon](#), [Roscoe \("Fatty"\) Arbuckle](#), [Mabel Normand](#), and [Harold Lloyd](#). When these performers achieved fame, many of them left Keystone, often to form their own production companies, a practice still possible in the early 1920s.

Chaplin, for example, who had developed the persona of the "Little Tramp" at Keystone, went on to direct and star in a series of shorts produced by Essanay in 1915 (*The Tramp*, *A Night in the Show*) and Mutual between 1916 and 1917 (*The Vagabond*, *One A.M.*, *The Rink*, *Easy Street*). In 1917 he was offered an eight-film contract with First National that enabled him to establish his own studio. He directed his first feature there, the semiautobiographical *The Kid* (1921), but most of his First National films were two-reelers. In 1919 Chaplin, D.W. Griffith, [Mary Pickford](#), and [Douglas Fairbanks](#), the four most popular and powerful film artists of the time, jointly formed the [United Artists Corporation](#) in order to produce and distribute—and thereby retain artistic and financial control over—their own films. Chaplin directed three silent features for United Artists: *A Woman of Paris* (1923), his great comic epic *The Gold Rush* (1925), and *The Circus* (1928), which was released after the introduction of sound into motion pictures. He later made several sound films, but the two most successful—his first two, *City Lights* (1931) and *Modern Times* (1936)—were essentially silent films with musical scores.

[Buster Keaton](#) possessed a kind of comic talent very different from Chaplin's, but both men were wonderfully subtle actors with a keen sense of the tragic often contained within the comic, and both were major directors of their period. Keaton, like Chaplin, was born into a theatrical family and began performing in vaudeville skits at a young age. Intrigued by the new film medium, he left the stage and worked for two years as a supporting comedian for Arbuckle's production company. In 1919 Keaton formed his own production company, where over the next four years he made 20 shorts (including *One Week*, 1920; *The Boat*, 1921; *Cops*, 1922; and *The Balloonatic*, 1923) that represent, with Chaplin's Mutual films, the acme of American slapstick comedy. A Keaton trademark was the "trajectory gag," in which perfect timing of acting, directing, and editing propels his film character through a geometric progression of complicated sight gags that seem impossibly dangerous but are still dramatically logical. Such routines inform all of Keaton's major features—*Our Hospitality* (1923), *Sherlock, Jr.* (1924), *The Navigator* (1924), *Seven Chances* (1925), and his masterpieces *The General* (1927) and *Steamboat Bill, Jr.* (1928). Keaton's greatest films, all made before his company was absorbed by MGM, have a reflexive quality that indicates his fascination with film as a medium. Although some of his MGM films were financially

successful, the factory-like studio system stifled Keaton's creativity, and he was reduced to playing bit parts after the early 1930s.

Important but lesser silent comics were [Lloyd](#), the team of [Stan Laurel and Oliver Hardy](#), Langdon, and Arbuckle. Working at the Hal Roach Studios, Lloyd cultivated the persona of an earnest, sweet-tempered boy-next-door. He specialized in a variant of Keystone mayhem known as the “comedy of thrills,” in which—as in Lloyd's most famous features, [Safety Last!](#) (1923) and *The Freshman* (1925)—an innocent protagonist finds himself placed in physical danger. [Laurel](#) and [Hardy](#) also worked for Roach. They made 27 silent two-reelers, including *Putting Pants on Philip* (1927) and *Liberty* (1929), and became even more popular in the 1930s in such sound films as *Another Fine Mess* (1930) and *Sons of the Desert* (1933). Their comic characters were basically grown-up children whose relationship was sometimes disturbingly sadomasochistic. [Langdon](#) also traded on a childlike, even babylike, image in such popular features as *The Strong Man* (1926) and *Long Pants* (1927), both directed by Frank Capra. [Arbuckle](#), however, in his few years of stardom, created the character of a leering, sensual adult. Arbuckle's talent was limited, but his persona affected the course of American film history in a quite unexpected way.

Arbuckle was at the centre of the most damaging scandal to affect American motion pictures during the silent era. In September 1921 the comedian and several friends hosted a weekend party in a San Francisco hotel. During the party a woman became ill, and she later died in a hospital of peritonitis. Press reports of the event as a drunken orgy inflamed public opinion. Amid the volatile social transformations of the post-World War I era, with issues such as immigration restriction and the national [prohibition](#) of alcoholic beverages deeply dividing the country, many had come to regard motion pictures as a disturbing instigator of social change and its high-living stars as threats to moral order and values. The Arbuckle scandal seemed to encapsulate these fears, and prosecutors responded by accusing the actor of rape and murder. Eventually indicted for manslaughter, he was tried three times; the first two trials ended in hung juries, and in the third the jury deliberated for six minutes and voted for acquittal. But Arbuckle's career as an actor was in ruins, and he was banned from the screen for more than a decade. Other sensational deaths involving Hollywood personalities, through murder or suicide or drug overdose, fueled the public furor.

To stave off increasing efforts by state and local governments to censor motion pictures, the Hollywood studios formed a new, stronger trade association, the Motion Picture Producers and Distributors of America (MPPDA; later renamed the [Motion Picture Association of America](#)). They also hired a conservative politician, U.S. Postmaster General [Will H. Hays](#), as its head. The Hays Office, as the association became popularly known, advocated industry self-regulation as an alternative to governmental interference, and it succeeded in preventing the expansion of censorship efforts. Hays promulgated a series of documents that attempted to regulate various forms of criminal and immoral behaviour depicted in motion pictures. A principle such as “compensating values,” for example, recognized that popular entertainment had always told stories of lawbreaking and social transgression, but it held that law and morality should always triumph in a film.

The leading practitioner of the compensating values formula was the flamboyant director [Cecil B. DeMille](#). He first became famous after World War I for a series of sophisticated comedies of manners that were aimed at Hollywood's new middle-class audience (*Old Wives for New*, 1918; *Forbidden Fruit*, 1921). When the Hays Office was established, DeMille turned to the sex- and violence-drenched religious spectacles that made him an international

figure, notably *The Ten Commandments* (1923; remade 1956). DeMille's chief rival in the production of stylish sex comedies was the German émigré [Ernst Lubitsch](#). An early master of the UFA *Kostümfilm*, Lubitsch excelled at sexual innuendo and understatement in such urbane essays as *The Marriage Circle* (1924). Also popular during the 1920s were the swashbuckling exploits of [Douglas Fairbanks](#), whose lavish adventure spectacles, including *Robin Hood* (1922) and *The Thief of Bagdad* (1924), thrilled a generation, and the narrative documentaries of [Robert Flaherty](#), whose *Nanook of the North* (1922) and *Moana* (1926) were unexpectedly successful with the public and with critics.

The most enigmatic and unconventional figure working in Hollywood at the time, however, was without a doubt the Viennese émigré [Erich von Stroheim](#). Stroheim, who also acted, learned directing as an assistant to Griffith on *Intolerance* and *Hearts of the World*. His first three films—*Blind Husbands* (1918), *The Devil's Passkey* (1919), and *Foolish Wives* (1922)—constitute an obsessive trilogy of adultery; each features a sexual triangle in which an American wife is seduced by a Prussian army officer. Even though all three films were enormously popular, the great sums Stroheim was spending on the extravagant production design and costuming of his next project brought him into conflict with his Universal producers, and he was replaced.

Stroheim then signed a contract with Goldwyn Pictures and began work on a long-cherished project—an adaptation of [Frank Norris](#)'s grim naturalistic novel *McTeague*. Shot entirely on location in the streets and rooming houses of San Francisco, in Death Valley, and in the California hills, the film was conceived as a sentence-by-sentence translation of its source. Stroheim's original version ran approximately 10 hours. Realizing that the film was too long to be exhibited, he cut almost half the footage. The film was still deemed too long, so Stroheim, with the help of director Rex Ingram, edited it down into a four-hour version that could be shown in two parts. By that time, however, Goldwyn Pictures had merged with Metro Pictures and Louis B. Mayer Pictures to become MGM. MGM took the negative from Stroheim and cut another two hours, destroying the excised footage in the process. Released as *Greed* (1924), the film had enormous gaps in continuity, but it was still recognized as a work of genius in its rich psychological characterization and in its creation of a naturalistic analogue for the novel.

Stroheim made one more film for MGM, a darkly satiric adaptation of the Franz Lehár operetta *The Merry Widow* (1925). He then went to Celebrity Pictures, where he directed *The Wedding March* (1928), a two-part spectacle set in imperial Vienna, but his work was taken from him and recut into a single film when Celebrity was absorbed by Paramount. Stroheim's last directorial duties were on the botched *Queen Kelly* (1929) and *Walking down Broadway* (1932), although he was removed from both films for various reasons. He made his living thereafter by writing screenplays and acting.

Although many of Stroheim's troubles with Hollywood were personal, he was also a casualty of the American film industry's transformation during the 1920s from a speculative entrepreneurial enterprise into a vertically and horizontally integrated oligopoly that had no tolerance for creative difference. His situation was not unique; many singular artists, including Griffith, Sennett, Chaplin, and Keaton, found it difficult to survive as filmmakers under the rigidly standardized studio system that had been established by the end of the decade. The industry's conversion to sound at that time reinforced its big-business tendencies and further discouraged independent filmmakers. The studios, which had borrowed huge sums of money on the very brink of the Great Depression in order to finance the conversion,

were determined to reduce production costs and increase efficiency. They therefore became less and less willing to tolerate artistic innovation or eccentricity.

The pre-World War II [sound era](#)

Introduction of sound

The idea of combining motion pictures and sound had been around since the invention of the cinema itself: Thomas Edison had commissioned the Kinetograph to provide visual images for his phonograph, and William Dickson had actually synchronized the two machines in a device briefly marketed in the 1890s as the Kinetophone. Léon Gaumont's Chronophone in France and Cecil Hepworth's Vivaphone system in England employed a similar technology, and each was used to produce hundreds of synchronized shorts between 1902 and 1912. In Germany producer-director Oskar Messter began to release all of his films with recorded musical scores as early as 1908. By the time the feature had become the dominant film form in the West, producers regularly commissioned orchestral scores to accompany prestigious productions, and virtually all films were accompanied by cue sheets suggesting appropriate musical selections for performance during exhibition.

Actual recorded sound required amplification for sustained periods of use, however, which became possible only after [Lee De Forest](#)'s perfection in 1907 of the [Audion](#) tube, a three-element, or triode, vacuum tube that magnified sound and drove it through speakers so that it could be heard by a large audience. In 1919 De Forest developed an optical sound-on-film process patented as [Phonofilm](#), and between 1923 and 1927 he made more than 1,000 synchronized sound shorts for release to specially wired theatres. The public was widely interested in these films, but the major Hollywood producers, to whom De Forest vainly tried to sell his system, were not: they viewed “talking pictures” as an expensive novelty with little potential return.

By that time, [Western Electric](#), the manufacturing subsidiary of American Telephone & Telegraph Company, had perfected a sophisticated sound-on-disc system called [Vitaphone](#), which their representatives attempted to market to Hollywood in 1925. Like De Forest, they were rebuffed by the major studios, but [Warner Brothers](#), then a minor studio in the midst of aggressive expansion, bought both the system and the right to sublease it to other producers. Warner Brothers had no more faith in talking pictures than did the major studios but thought that the novelty could be exploited for short-term profits. The studio planned to use Vitaphone to provide synchronized orchestral accompaniment for all Warner Brothers films, thereby enhancing their marketability to second- and third-run exhibitors who could not afford to hire live orchestral accompaniment. After mounting a \$3 million promotion, Warner Brothers debuted the system on Aug. 6, 1926, with *Don Juan*, a lavish costume drama starring [John Barrymore](#), directed by Alan Crosland, and featuring a score performed by the New York Philharmonic Orchestra. The response was enthusiastic; Warner Brothers announced that all of its films for 1927 would be released with synchronized musical accompaniment and then turned immediately to the production of its second Vitaphone feature. [The Jazz Singer](#) (1927), also directed by Crosland, included popular songs and incidental dialogue in addition to the orchestral score; its phenomenal success virtually ensured the industry's conversion to sound.

Sensing that Warner Brothers' gamble on sound might pay off, MGM, First National, Paramount, and others had asked the MPPDA to investigate competing sound systems in early

1927. There were several sound-on-film systems that were technologically superior to Vitaphone, but the rights to most of them were owned by [William Fox](#), president of Fox Film Corporation. Fox, like the Warners, had seen sound as a way of cornering the market among smaller exhibitors. Therefore, in the summer of 1926, he acquired the rights to the Case-Sponable sound-on-film system (whose similarity to De Forest's Phonofilm was the subject of subsequent patent litigation) and formed the Fox-Case Corporation to make shorts under the trade name Fox Movietone. Six months later he secretly bought the American rights to the German Tri-Ergon process, whose flywheel mechanism was essential to the continuous reproduction of optical sound. To cover himself completely Fox negotiated a reciprocal pact between Fox-Case and Vitaphone under which each licensed the other to use its sound systems, equipment, and personnel. The sound-on-film system eventually prevailed over sound-on-disc because it enabled image and sound to be recorded simultaneously in the same (photographic) medium, ensuring their precise and automatic synchronization.

Despite Warner Brothers' obvious success with sound films, film industry leaders were not eager to lease sound equipment from a direct competitor. They banded together, and Warner Brothers was forced to give up its rights to the Vitaphone system in exchange for a share in any new royalties earned. The major film companies then wasted no time. By May 1928 virtually every studio in Hollywood, major and minor, was licensed by Western Electric's newly created marketing subsidiary, [Electrical Research Products, Incorporated](#) (ERPI), to use Western Electric equipment with the Movietone sound-on-film recording system. ERPI's monopoly did not please the [Radio Corporation of America](#) (RCA), which had tried to market a sound-on-film system that had been developed in the laboratories of its parent company, General Electric, and had been patented in 1925 as RCA Photophone. In October 1928 RCA therefore acquired the Keith-Albee-Orpheum vaudeville circuit and merged it with Joseph P. Kennedy's Film Booking Offices of America (FBO) to form [RKO Radio Pictures](#) for the express purpose of producing sound films using the Photophone system (which ultimately became the industry standard).

Conversion to sound

The wholesale conversion to sound of all three sectors of the American film industry took place in less than 15 months between late 1927 and 1929, and the profits of the major companies increased during that period by as much as 600 percent. Although the transition was fast, orderly, and profitable, it was also enormously expensive. The industrial system as it had evolved for the previous three decades needed to be completely overhauled; studios and theatres had to be totally reequipped and creative personnel retrained or fired. In order to fund the conversion, the film companies were forced to borrow in excess of \$350 million, which placed them under the indirect control of the two major New York-based financial groups, the Morgan group and the Rockefeller group.

Furthermore, although cooperation between the film companies through such agencies as the MPPDA, the Academy of Motion Picture Arts and Sciences, and the Society of Motion Picture Engineers ensured a smooth transition in corporate terms, inside the newly wired theatres and studio soundstages there was confusion and disruption. The three competing systems—Vitaphone, Movietone, and Photophone—were all initially incompatible, and their technologies were under such constant modification that equipment was sometimes obsolete before it was uncrated. Whatever system producers chose, exhibitors during the early

transitional period were forced to maintain both sound-on-disc and sound-on-film reproduction equipment. Even as late as 1931, studios were still releasing films in both formats to accommodate theatres owned by sound-on-disc interests.

It was in the area of production, however, that the greatest problems arose. The statement that “the movies ceased to move when they began to talk” accurately described the films made during the earliest years of the transition, largely because of technical limitations. Early [microphones](#), for example, had a very limited range. In addition, they were large, clumsy, and difficult to move, so they were usually concealed in a single, stationary location on the set. The actors, who had to speak directly into the microphones to register on the sound track, were therefore forced to remain practically motionless while delivering dialogue. The microphones caused further problems because they were omnidirectional within their range and picked up every sound made near them on the set, especially the noisy whir of running cameras (which were motorized in 1929 to run at an even speed of 24 frames per second to ensure undistorted sound synchronization; silent cameras had been mainly hand-cranked at rates averaging 16 to 18 frames per second). To prevent the recording of camera noise, cameras and their operators were initially enclosed in soundproof glass-paneled booths that were only 6 feet (2 metres) long per side. The booths, which were facetiously called “iceboxes” because they were uncomfortably hot and stuffy, literally imprisoned the camera. The filmmakers' inability to tilt or dolly the camera (although they could pan it by as much as 30 degrees on its tripod), combined with the actors' immobility, helps to account for the static nature of so many early sound films.

The impact of sound recording on editing was even more regressive, because sound and image had to be recorded simultaneously to be synchronous. In sound-on-disc films, scenes were initially made to play for 10 minutes at a time in order to record dialogue continuously on 16-inch (41-cm) discs; such scenes were impossible to edit until the technology of rerecording was perfected in the early 1930s. Sound-on-film systems also militated against editing at first; optical sound tracks run approximately 20 frames in advance of their corresponding image tracks, making it extremely difficult to cut a composite print without eliminating portions of the relevant sound. As a result, no matter which system of sound recording was used, most of the editing in early sound films was purely functional. In general, cuts could be made—and the camera moved—only when no sound was being recorded on the set.

Most of these technical problems were resolved by 1933, although equilibrium was not fully restored to the production process until after the mid-1930s. Sound-on-disc filming, for example, was abandoned in 1930, and by 1931 all the studios had removed their cameras from the iceboxes and converted to the use of lightweight soundproof camera housings known as “blimps.” Within several years, smaller, quieter, self-insulating cameras were produced, eliminating the need for external soundproofing altogether. It even became possible again to move the camera by using a wide range of boom cranes, camera supports, and steerable dollies. Microphones too became increasingly mobile as a variety of booms were developed for them from 1930 onward. These long radial arms suspended the microphone above the set, allowing it to follow the movements of actors and rendering the stationary microphones of the early years obsolete. Microphones also became more directional throughout the decade, and track noise-suppression techniques came into use as early as 1931.

Postsynchronization

The technological development that most liberated the sound film, however, was the practice known variously as postsynchronization, rerecording, or [dubbing](#), in which image and sound are printed on separate pieces of film so that they can be manipulated independently. Postsynchronization enabled filmmakers to edit images freely again. Because the overwhelming emphasis of the period from 1928 to 1931 had been on obtaining high-quality sound in production, however, the idea that the [sound track](#) could be modified after it was recorded took a while to catch on. Many motion-picture artists and technicians felt that sound should be reproduced in films exactly as it had originally been produced on the set; they believed that anything less than an absolute pairing of sound and image would confuse audiences.

For several years, both practice and ideology dictated that sound and image be recorded simultaneously, so that everything heard on the sound track would be seen on the screen and vice versa. A vocal minority of film artists nevertheless viewed this practice of synchronous, “naturalistic” sound recording as a threat to the cinema. In their 1928 manifesto “Sound and Image,” the Soviet directors [Sergey Eisenstein](#), [Vsevolod Pudovkin](#), and Grigory Aleksandrov denounced synchronous sound in favour of asynchronous, contrapuntal sound—sound that would counterpoint the images it accompanied to become another dynamic element in the montage process. Like the practical editing problem, the theoretical debate over the appropriate use of sound was eventually resolved by the practice of postsynchronization.

Postsynchronization seems to have first been used by the American director [King Vidor](#) for a sequence in which the hero is chased through Arkansas swamplands in the all-black musical *Hallelujah* (1929). Vidor shot the action on location without sound, using a freely moving camera. Later, in the studio, he added to the film a separately recorded sound track containing both naturalistic and impressionistic effects. In the following year Lewis Milestone's *All Quiet on the Western Front* and G.W. Pabst's *Westfront 1918* both used postsynchronization for their battle scenes. Ernst Lubitsch used dubbing in his first American sound films, the dynamic musicals *The Love Parade* (1929) and *Monte Carlo* (1930), as did the French director [René Clair](#) in *Sous les toits de Paris* (*Under the Roofs of Paris*, 1930). In all these early instances, sound was recorded and rerecorded on a single track, although some American directors, including Milestone and the Russian-born Armenian [Rouben Mamoulian](#) (*Applause*, 1929; *City Streets*, 1931), had experimented with multiple microphone setups and overlapping dialogue as early as 1929. Generally, through 1932, either dialogue or music dominated the sound track unless they had been simultaneously recorded on the set. In 1933, however, technology was introduced that allowed filmmakers to mix separately recorded tracks for background music, sound effects, and synchronized dialogue at the dubbing stage. By the late 1930s, postsynchronization and multiple-channel mixing had become standard industry procedure.

Nontechnical effects of sound

Other changes wrought by sound were more purely human. Directors, for example, could no longer literally direct their performers while the cameras were rolling and sound was being recorded. Actors and actresses were suddenly required to have pleasant voices and to act without the assistance of mood music or the director's shouted instructions through long

dialogue takes. Many found that they could not learn lines; others tried and were defeated by heavy foreign accents (e.g., Emil Jannings, Pola Negri, Vilma Banky, and Lya de Putti) or voices that did not match their screen image (e.g., [Colleen Moore](#), Corinne Griffith, Norma Talmadge, and [John Gilbert](#)). Numerous silent stars were supplanted during the transitional period by stage actors or film actors with stage experience. “Canned theatre,” or literal transcriptions of stage hits, became a dominant Hollywood form between 1929 and 1931, which brought many Broadway players and directors into the film industry on a more or less permanent basis. In addition, to fulfill the unprecedented need for dialogue scripts, the studios imported hundreds of editors, critics, playwrights, and novelists, many of whom would make lasting contributions to the verbal sophistication of the American sound film.

As sound demanded new filmmaking techniques and talents, it also created new genres and renovated old ones. The realism it permitted inspired the emergence of tough, socially pertinent films with urban settings. [Crime epics](#), or gangster films, such as [Mervyn LeRoy's *Little Caesar*](#) (1931), [William Wellman's *Public Enemy*](#) (1931), and [Howard Hawks's *Scarface*](#) (1932), used sound to exploit urban slang and the audible pyrotechnics of the recently invented Thompson submachine gun. Subgenres of the gangster film were the prison film (e.g., *The Big House*, 1930; Hawks's *The Criminal Code*, 1931; LeRoy's [I Am a Fugitive from a Chain Gang](#), 1932) and the newspaper picture (e.g., Milestone's *The Front Page*, 1931; LeRoy's *Five Star Final*, 1931; John Cromwell's *Scandal Sheet*, 1931; [Frank Capra's *Platinum Blonde*](#), 1931), both of which relied on authentic-sounding vernacular speech.

The public's fascination with speech also accounted for the new popularity of historical biographies, or “biopics.” These films were modeled on the Universum Film AG's (UFA's) silent *Kostümfilm*, but dialogue enhanced their verisimilitude. Several actors with impressive speaking voices were often associated with the genre, notably [George Arliss](#) (*Disraeli*, 1929; *The House of Rothschild*, 1934) and [Paul Muni](#) (*The Life of Emile Zola*, 1937; *Juarez*, 1939) in the United States and [Charles Laughton](#) ([Alexander Korda's *The Private Life of Henry VIII*](#), 1933; *Rembrandt*, 1936) in England.

In the realm of comedy, pure slapstick could not and did not survive, predicated as it was on purely visual humour. It was replaced by equally vital—but ultimately less surreal and abstract—sound comedies: the anarchic dialogue comedies of the [Marx Brothers](#) (*The Cocoanuts*, 1929; *Animal Crackers*, 1930; *Monkey Business*, 1931; *Horse Feathers*, 1932; *Duck Soup*, 1933) and [W.C. Fields](#) (*The Golf Specialist*, 1930; *The Dentist*, 1932; *Million Dollar Legs*, 1932) and the fast-paced wisecracking “screwball” comedies of directors such as [Capra](#) (*Lady for a Day*, 1933; [It Happened One Night](#), 1934; [Mr. Deeds Goes to Town](#), 1936), [Hawks](#) (*Twentieth Century*, 1934; [Bringing Up Baby](#), 1938), Gregory La Cava (*My Man Godfrey*, 1936), Mitchell Leisen (*Easy Living*, 1937), and [Leo McCarey](#) ([The Awful Truth](#), 1937).

The [horror-fantasy](#) genre, traditionally rooted in German Expressionism, was greatly enhanced by sound, which not only permitted the addition of eerie sound effects but also restored the dimension of literary dialogue present in so many of the original sources. Appropriately, Universal Pictures' three great horror classics—[Tod Browning's *Dracula*](#) (1931), [James Whale's *Frankenstein*](#) (1931), and [Karl Freund's *The Mummy*](#) (1932)—were all early sound films.

One significant genre whose emergence was obviously contingent upon sound was the [musical](#). Versions of Broadway musicals were among the first sound films made (including,

of course, the catalyst for the conversion, Warner Brothers' *The Jazz Singer*), and by the early 1930s the movie musical had developed in formal sophistication to become perhaps the major American genre of the decade. Among the formidable artists who helped to achieve this sophistication were director Ernst Lubitsch at Paramount (*The Love Parade*, 1929; *Monte Carlo*, 1930; *The Smiling Lieutenant*, 1931), dance director [Busby Berkeley](#) at Warner Brothers (*42nd Street*, 1933; *Gold Diggers of 1933*, 1933; *Footlight Parade*, 1933; *Dames*, 1934), and dancer-star [Fred Astaire](#), who choreographed and directed his own integrated dance sequences at RKO (*The Gay Divorcee*, 1934; *Roberta*, 1935; *Top Hat*, 1935; *Swing Time*, 1936). [Ginger Rogers](#) was Astaire's dancing partner in these and six other films during the 1930s.

[Walt Disney](#) pioneered a genre that might be called the [animated](#) musical with *The Skeleton Dance* (1929), the first entry in his “Silly Symphony” series. Unburdened by the awkward logistics of live-action shooting, Disney was free to combine sound and image asynchronously or with perfect frame-by-frame synchronization in such classic [cartoons](#) as *Steamboat Willie* (1928—Mickey Mouse's debut) and *The Three Little Pigs* (1933). To enhance their fantasy-like appeal, both the musical and the animated film made early use of the two-colour imbibition process introduced by the Technicolor Corporation in 1928, during the conversion to sound. Animated films also pioneered the use of [Technicolor](#)'s three-colour, three-strip imbibition process, introduced in 1932.

Introduction of [colour](#)

Photographic colour entered the cinema at approximately the same time as sound, although, as with sound, various colour effects had been used in films since the invention of the medium. [Georges Méliès](#), for example, employed 21 women at his Montreuil studio to hand-colour his films frame by frame, but hand-colouring was not cost-effective unless films were very short. In the mid-1900s, as films began to approach one reel in length and more prints of each film were sold, mechanized [stenciling](#) processes were introduced. In Pathé's Pathécolor system, for example, a stencil was cut for each colour desired (up to six) and aligned with the print; colour was then applied through the stencil frame by frame at high speeds. With the advent of the feature and the conversion of the industry to mass production during the 1910s, frame-by-frame stenciling was replaced by mechanized tinting and toning. Tinting coloured all the light areas of a picture and was achieved by immersing a black-and-white print in dye or by using coloured film base for printing. The toning process involved chemically treating film emulsion to colour the dark areas of the print. Each process produced monochrome images, the colour of which was usually chosen to correspond to the mood or setting of the scene. Occasionally, the two processes were combined to produce elaborate two-colour effects. By the early 1920s, nearly all American features included at least one coloured sequence; but after 1927, when it was discovered that tinting or toning film stock interfered with the transmission of optical sound, both practices were temporarily abandoned, leaving the market open to new systems of colour photography.

Photographic colour can be produced in motion pictures by using either an [additive](#) process or a [subtractive](#) one. The first systems to be developed and used were all additive ones, such as Charles Urban's [Kinemacolor](#) (c. 1906) and Gaumont's Chronochrome (c. 1912). They achieved varying degrees of popularity, but none was entirely successful, largely because all additive systems involve the use of both special cameras and projectors, which ultimately makes them too complicated and costly for widespread industrial use.

One of the first successful subtractive processes was a two-colour one introduced by Herbert Kalmus's [Technicolor](#) Corporation in 1922. It used a special camera and a complex procedure to produce two separate positive prints that were then cemented together into a single print. The final print needed careful handling but could be projected by means of ordinary equipment. This “cemented positive” process was used successfully in such features as *Toll of the Sea* (1922) and Fairbanks's *The Black Pirate* (1926). In 1928 Technicolor introduced an improved process in which two gelatin positives were used as relief matrices to “print” colour onto a single strip of film. This printing process, known as imbibition, or [dye-transfer](#), made it possible to mass-produce sturdy, high-quality prints. Its introduction resulted in a significant rise in Technicolor production between 1929 and 1932. Colour reproduction in the two-colour Technicolor process was good, but, because only two of the three primary colours were used, it was still not completely lifelike. Its popularity began to decline sharply in 1932, and Technicolor replaced it with a three-colour system that employed the same basic principles but included all three primary colours.

For the next 25 years almost every colour film made was produced by using [Technicolor's three-colour system](#). Although the quality of the system was excellent, there were drawbacks. The bulk of the camera made location shooting difficult. Furthermore, Technicolor's virtual monopoly gave it indirect control of the production companies, which were required to rent—at high rates—equipment, crew, consultants, and laboratory services from Technicolor every time they used the system. In the midst of the [Depression](#), therefore, conversion to colour was slow and never really complete. After three-colour Technicolor was used successfully in Disney's cartoon short [The Three Little Pigs](#) (1933), the live-action short *La Cucaracha* (1934), and Rouben Mamoulian's live-action feature [Becky Sharp](#) (1935), it gradually worked its way into mainstream feature production ([The Garden of Allah](#), 1936; [Snow White and the Seven Dwarfs](#), 1937; [The Adventures of Robin Hood](#), 1938; [The Wizard of Oz](#), 1939; [Gone with the Wind](#), 1939), although it remained strongly associated with fantasy and spectacle.

[The Hollywood studio system](#)

If the coming of sound changed the aesthetic dynamics of the filmmaking process, it altered the economic structure of the industry even more, precipitating some of the largest mergers in motion-picture history. Throughout the 1920s, [Paramount](#), [MGM](#), [First National](#), and other studios had conducted ambitious campaigns of vertical integration by ruthlessly acquiring first-run theatre chains. It was primarily in response to those aggressive maneuvers that [Warner Brothers](#) and [Fox](#) sought to dominate smaller exhibitors by providing prerecorded musical accompaniment to their films. The unexpected success of their strategy forced the industrywide conversion to sound and transformed Warner Brothers and Fox into major corporations. By 1929, Warner Brothers had acquired the Stanley theatre circuit, which controlled nearly all the first-run houses in the mid-Atlantic states, and the production and distribution facilities of its former rival First National to become one of the largest studios in Hollywood. Fox went even farther, building the multimillion-dollar Movietone City in Westwood, Calif., in 1928 and acquiring controlling shares of both Loew's, Inc., the parent corporation of MGM, and Gaumont British, England's largest producer-distributor-exhibitor. Its holdings were surpassed only by those of Paramount, which controlled an international distribution network and the vast Publix theatre chain. In an effort to become even more powerful, Paramount in 1929 acquired one-half of the newly formed [Columbia Broadcasting System](#) and proposed a merger with Warner Brothers. It was then that the U.S. Department of

Justice intervened, forbidding Paramount's merger with Warner Brothers and divorcing Fox from Loew's.

Without government interference, “Paramount-Vitaphone” and “Fox-Loew's” might have divided the entertainment industries of the entire English-speaking world between them. As it was, by 1930, 95 percent of all American production was concentrated in the hands of only eight studios—five vertically integrated major companies, which controlled production, distribution, and exhibition, and three horizontally integrated minor ones that controlled production and distribution. Distribution was conducted at both a national and an international level: since about 1925, foreign rentals had accounted for half of all American feature revenues, and they would continue to do so for the next two decades. Exhibition was controlled through the major studios' ownership of 2,600 first-run theatres, which represented 16 percent of the national total but generated three-fourths of the revenue. Film production throughout the 1930s and '40s consumed only 5 percent of total corporate assets, while distribution accounted for another 1 percent. The remaining 94 percent of the studios' investment went to the exhibition sector. In short, as film historian Douglas Gomery pointed out, the five major studios of the time can best be characterized as “diversified theater chains, producing features, shorts, cartoons, and newsreels to fill their houses.”

Each studio produced a distinctive style of entertainment, depending on its corporate economy and the personnel it had under contract. [MGM](#), the largest and most powerful of the major studios, was also the most “American” and was given to the celebration of middle-class values in a visual style characterized by bright, even, high-key lighting and opulent production design. Paramount, with its legions of UFA-trained directors, art directors, and cameramen, was thought to be the most “European” of the studios. It produced the most sophisticated and visually baroque films of the era. Conditioned by its recent experience as a struggling minor studio, Warner Brothers was the most cost-conscious of the major companies. Its directors worked on a quota system, and a flat, low-key lighting style was decreed by the studio to conceal the cheapness of its sets. Warner Brothers' films were often targeted for working-class audiences. [Twentieth Century-Fox](#) was formed in 1935 by the merger of Fox Film Corporation and Joseph M. Schenck's Twentieth Century Pictures after [William Fox](#) was bankrupted through his financial manipulations. The studio acquired a reputation for its tight budget and production control, but its films were noted for their glossy attractiveness and state-of-the-art special effects. [RKO Radio](#) was the smallest of the major companies and never achieved complete financial stability during the studio era; it became prominent, however, as the producer of *King Kong* (1933), the Astaire-Rogers dance cycle, and [Orson Welles's](#) *Citizen Kane* (1941) and also as the distributor of Disney's features.

The minor studios were Carl Laemmle's [Universal Pictures](#), which became justly famous for its horror films; [Harry Cohn's](#) [Columbia Pictures](#), whose main assets were director Frank Capra and screenwriter Robert Riskin; and [United Artists](#), which functioned as a distributor for independent American features and for Alexander Korda's London Film Productions. In terms of total assets, the five major studios were about four times as big as the three minor ones, with MGM, Paramount, Warner Brothers, and Twentieth Century-Fox all about the same size and RKO approximately 25 percent smaller than its peers. At the very bottom of the film industry hierarchy were a score of poorly capitalized studios, such as Republic, Monogram, and Grand National, that produced cheap formulaic hour-long “[B movies](#)” for the second half of double bills. The double feature, an attraction introduced in the early 1930s to counter the [Depression](#)-era box-office slump, was the standard form of exhibition for about 15 years. The larger studios were, for the most part, not interested in producing B movies for

double bills, because, unlike the main feature, whose earnings were based on box-office receipts, the second feature rented at a flat rate, which meant that the profit it returned, though guaranteed, was fixed at a small amount. At their peak, the B-film studios produced 40–50 movies per year and provided a training ground for such stars as [John Wayne](#). The films were made as quickly as possible, and directors functioned as their own producers, with complete authority over their projects' minuscule budgets.

An important aspect of the studio system was the [Production Code](#), which was implemented in 1934 in response to pressure from the Legion of Decency and public protest against the graphic violence and sexual suggestiveness of some sound films (the urban gangster films, for example, and the films of [Mae West](#)). The Legion had been established in 1933 by the American bishops of the [Roman Catholic church](#) (armed with a mandate from the Vatican) to fight for better and more “moral” motion pictures. In April 1934, with the support of both Protestant and Jewish organizations, the Legion called for a nationwide boycott of movies it considered indecent. The studios, having lost millions of dollars in 1933 as the delayed effects of the Depression caught up with the box office, rushed to appease the protesters by authorizing the MPPDA to create the Production Code Administration. A prominent Catholic layman, Joseph I. Breen, was appointed to head the administration, and under Breen's auspices Father Daniel A. Lord, a Jesuit priest, and Martin Quigley, a Catholic publisher, coauthored the code whose provisions would dictate the content of American motion pictures, without exception, for the next 20 years.

In a swing away from the excesses of the “new morality” of the Jazz Age, the Production Code was monumentally repressive, forbidding the depiction on-screen of almost everything germane to the experience of normal human adults. It prohibited showing “scenes of passion,” and adultery, illicit [sex](#), seduction, and rape could not even be alluded to unless they were absolutely essential to the plot and severely punished by the film's end. The code demanded that the sanctity of marriage be upheld at all times, although sexual relations were not to be suggested between spouses. It forbade the use of profanity, vulgarity, and racial epithets; prostitution, miscegenation, sexual deviance, or drug addiction; nudity, sexually suggestive dancing or costumes, and “lustful kissing”; and excessive drinking, cruelty to animals or children, and the representation of surgical operations, especially childbirth, “in fact or silhouette.” In the realm of [violence](#), it was forbidden to display or to discuss contemporary weapons, to show the details of a [crime](#), to show law-enforcement officers dying at the hands of criminals, to suggest excessive brutality or slaughter, or to use murder or suicide except when crucial to the plot. Finally, the code required that all criminal activity be shown to be punished; under no circumstances could any crime be represented as justified. Studios were required to submit their scripts to Breen's office for approval before beginning filming, and completed films had to be screened for the office, and altered if necessary, in order to receive a Production Code Seal, without which no film could be distributed in the United States. Noncompliance with the code's restrictions brought a fine of \$25,000, but the studios were so eager to please that the fine was never levied in the 22-year lifetime of the code.

The studio heads were willing not merely to accept but also to institutionalize this system of de facto censorship and prior restraint because they believed it was necessary for the continued success of their business. The economic threat of a national boycott during the worst years of the [Depression](#) was real, and the film industry, which depends on pleasing a mass audience, could not afford to ignore public opinion. Producers found, moreover, that they could use the code to increase the efficiency of production. By rigidly prescribing and proscribing the kinds of behaviour that could be shown or described on the screen, the code

could be used as a [scriptwriter](#)'s blueprint. A love story, for example, could move in only one direction (toward marriage); adultery and crime could have only one conclusion (disease or horrible death); dialogue in all situations had well-defined parameters; and so forth. The code, in other words, provided a framework for the construction of screenplays and enabled studios to streamline what had always been (and still is) one of the most difficult and yet most essential tasks in the production process—the creation of filmable continuity scripts. Furthermore, the Depression was a time of open political anti-Semitism in the United States, and the men who controlled the American motion-picture industry were mainly Jewish; it was not a propitious moment for them to antagonize their predominantly non-Jewish audience.

Between 1930 and 1945, the studio system produced more than 7,500 features, every stage of which, from conception through exhibition, was carefully controlled. Among these assembly-line productions are some of the most important American films ever made, the work of gifted directors who managed to transcend the mechanistic nature of the system to produce work of unique personal vision. These directors include [Josef von Sternberg](#), whose exotically stylized films starring [Marlene Dietrich](#) (*Shanghai Express*, 1932; *The Scarlet Empress*, 1934) constitute a kind of painting with light; [John Ford](#), whose vision of history as moral truth produced such mythic works as *Stagecoach* (1939), *Young Mr. Lincoln* (1939), *The Grapes of Wrath* (1940), *My Darling Clementine* (1946), and *She Wore a Yellow Ribbon* (1949); [Howard Hawks](#), a master of genres and the architect of a tough, functional “American” style of narrative exemplified in his films *Scarface* (1932), *Twentieth Century* (1934), *Only Angels Have Wings* (1939), and *The Big Sleep* (1946); British émigré [Alfred Hitchcock](#), whose films appealed to the popular audience as suspense melodramas but were in fact abstract visual psychodramas of guilt and spiritual terror (*Rebecca*, 1940; *Suspicion*, 1941; *Shadow of a Doubt*, 1943; *Notorious*, 1946); and [Frank Capra](#), whose cheerful screwball comedies (*It Happened One Night*, 1934) and populist fantasies of good will (*Mr. Smith Goes to Washington*, 1939) sometimes gave way to darker warnings against losing faith and integrity (*It's a Wonderful Life*, 1946). Other significant directors with less-consistent thematic or visual styles were [William Wyler](#) (*Wuthering Heights*, 1939; *The Little Foxes*, 1941), [George Cukor](#) (*Camille*, 1936; *The Philadelphia Story*, 1940), [Leo McCarey](#) (*The Awful Truth*, 1937; *Going My Way*, 1944), [Preston Sturges](#) (*Sullivan's Travels*, 1941; *The Miracle of Morgan's Creek*, 1944), and [George Stevens](#) (*Gunga Din*, 1939; *Woman of the Year*, 1942).

International cinema

Having created large new markets for their sound-recording technologies in the United States, [Western Electric](#) and [RCA](#) were eager to do the same abroad. Their objective coincided with the desire of the major American film studios to extend their control of the international motion-picture industry. Accordingly, the studios began to export sound films in late 1928, and [ERPI](#) and RCA began installing their equipment in European theatres at the same time. Exhibitors in the United Kingdom converted the most rapidly, with 22 percent wired for sound in 1929 and 63 percent by the end of 1932. Continental exhibitors converted more slowly, largely because of a bitter patents war between the German cartel Tobis-Klangfilm, which controlled the European rights to sound-on-film technology, and Western Electric. The dispute was finally resolved at the 1930 German-American Film Conference in Paris, where Tobis, ERPI, and RCA agreed to pool their patents and divide the world market among themselves. The language problem also delayed the conversion to sound on the Continent. Because dubbing was all but impossible in the earliest years of the transition, films had to be shot in several different languages (sometimes featuring a different cast for each version) at

the time of production in order to receive wide international distribution. Paramount therefore built a huge studio in the Paris suburb of Joinville in 1930 to mass-produce multilingual films. The other major American studios quickly followed suit, making the region a factory for the round-the-clock production of movies in as many as 15 separate languages. By the end of 1931, however, the technique of [dubbing](#) had been sufficiently perfected to replace multilingual production, and Joinville was converted into a dubbing centre for all of Europe.

[Great Britain](#)

Because of the lack of a language barrier, the United Kingdom became Hollywood's first major foreign market for sound films. The British motion-picture industry was protected from complete American domination, however, by the Cinematograph Films Act passed by Parliament in 1927. The act required that a certain minimum proportion of the films exhibited in British theatres be of domestic origin. Although most of the films made to fulfill this condition were low-budget, low-standard productions known as “quota quickies,” the British cinema produced many important film artists (most of whom were soon lured to Hollywood). One of the first major British talents to emerge after the introduction of sound was [Alfred Hitchcock](#), who directed a series of stylish thrillers for British International Pictures and Gaumont British before he moved to Hollywood in 1939. His first sound film, [Blackmail](#) (1929), marked the effective beginning of sound production in England. The film was already in production as a silent when the director was ordered to make it as a “part-talkie.” It was especially noted for the expressive use of both naturalistic and nonnaturalistic sound, which became a distinguishing feature of Hitchcock's later British triumphs (*The Man Who Knew Too Much*, 1934; [The Thirty-nine Steps](#), 1935; *Sabotage*, 1936), as well as of the films of his American career. Among the significant British filmmakers who remained based in London were the Hungarian-born brothers [Alexander](#), [Zoltán](#), and [Vincent Korda](#), who founded London Films in 1932 and collaborated on some of England's most spectacular pre-World War II productions (e.g., [The Private Life of Henry VIII](#), 1933; *Rembrandt*, 1936; *Elephant Boy*, 1937; *The Four Feathers*, 1939), and John Grierson, who produced such outstanding documentaries as Robert Flaherty's *Industrial Britain* (1933) and Basil Wright's *Song of Ceylon* (1935) for the Empire Marketing Board Film Unit and its successor, the General Post Office (GPO) Film Unit.

[France](#)

In France during the 1920s, as a result of the post-World War I decline of the Pathé and Gaumont film companies, a large number of small studios leased their facilities to independent companies, which were often formed to produce a single film. This method of film production lent itself readily to experimentation, encouraging the development of the [avant-garde](#) film movement known as [Impressionism](#) (led by Germaine Dulac, Jean Epstein, Marcel L'Herbier, and Fernand Léger) and the innovative films of Abel Gance (*La Roue*, 1923; *Napoléon vu par Abel Gance*, 1927) and Dmitri Kirsanoff (*Ménilmontant*, 1926). Because the French film industry had evolved no marketable technology for sound recording, however, the coming of sound left producers and exhibitors alike vulnerable to the American production companies at Joinville and to the German Tobis-Klangfilm, which had been purchasing large studios in the Paris suburb of Epinay since 1929. In the face of this threat, the French industry attempted to regroup itself around what was left of the Pathé and Gaumont empires, forming two consortia—Pathé-Natan and Gaumont-Franco-Film-Aubert—for the production and distribution of sound films. Although neither group was financially successful, they seem to have created an unprecedented demand for French-language films

about French subjects, reinvigorating the country's cinema. Between 1928 and 1938, French film production doubled from 66 to 122 features, and, in terms of box-office receipts, the French audience was considered to be second only to the American one.

Many filmmakers contributed to the prominence of French cinema during the 1930s, but the three most important were [René Clair](#), Jean Vigo, and [Jean Renoir](#). Clair was a former avant-gardist whose contributions to the aesthetics of sound, although not so crucial as Hitchcock's, were nevertheless significant. His *Sous les toits de Paris* (*Under the Roofs of Paris*, 1930), frequently hailed as the first artistic triumph of the sound film, was a lively musical comedy that mixed asynchronous sound with a bare minimum of dialogue. Clair used the same technique in *Le Million* (1931), which employed a wide range of dynamic contrapuntal effects. *À nous la liberté* (*Freedom for Us*, 1931) was loosely based on the life of Charles Pathé and dealt with more serious themes of industrial alienation, although it still used the musical-comedy form. The film's intelligence, visual stylization, and brilliant use of asynchronous sound made it a classic of the transitional period.

[Jean Vigo](#) completed only two features before his early death: *Zéro de conduite* (*Zero for Conduct*, 1933) and *L'Atalante* (1934). Both are lyrical films about individuals in revolt against social reality. Their intensely personal nature is thought to have influenced the style of poetic realism that characterized French cinema from 1934 to 1940 and that is exemplified by Jacques Feyder's *Pension mimosas* (1935), Julien Duvivier's *Pépé le Moko* (1937), and Marcel Carné's *Quai des brumes* (*Port of Shadows*, 1938) and *Le Jour se lève* (*Daybreak*, 1939). Darkly poetic, these films were characterized by a brooding pessimism that reflected the French public's despair over the failure of the Popular Front movement of 1935–37 and the seeming inevitability of war.

[Jean Renoir](#), the son of the Impressionist painter [Pierre-Auguste Renoir](#), made nine films before he directed the grimly realistic *La Chienne* (*The Bitch*, 1931) and *La Nuit du carrefour* (*Night at the Crossroads*, 1932), his first important essays in sound. Renoir subsequently demonstrated a spirit of increasing social concern in such films as *Boudu sauvé des eaux* (*Boudu Saved from Drowning*, 1932), a comic assault on bourgeois values; *Toni* (1934), a realistic story of Italian immigrant workers; *Le Crime de Monsieur Lange* (*The Crime of Monsieur Lange*, 1935), a political parable about the need for collective action against capitalist corruption; and *La Vie est à nous* ("Life Is Ours"; English title *The People of France*, 1936), a propaganda film for the French Communist Party that contains both fictional and documentary footage. The strength of his commitment is most clearly expressed, however, by the eloquent appeal he makes for human understanding in his two pre-World War II masterworks. *La Grande Illusion* (*Grand Illusion*, 1937), set in a World War I prison camp, portrays a civilization on the brink of collapse because of national and class antagonisms; in its assertion of the primacy of human relationships and the utter futility of war (the "grand illusion"), the film stands as one of the greatest antiwar statements ever made. In *La Règle du jeu* (*The Rules of the Game*, 1939), set in contemporary France, the breakdown of civilization has already occurred. European society is shown to be an elegant but brittle fabrication in which feeling and substance have been replaced by "manners," a world in which "the terrible thing," to quote the protagonist Octave (played by Renoir), "is that everyone has his reasons." In both films Renoir continued his earlier experiments with directional sound and deep-focus composition. His technical mastery came to influence the American cinema when he immigrated to the United States to escape the Nazis in 1940.

Germany and Italy

Because of its ownership of the Tobis-Klangfilm patents, the German film industry found itself in a position of relative strength in the early years of sound, and it produced several important films during that period, including Josef von Sternberg's *Der blaue Engel* (*The Blue Angel*, 1930), [G.W. Pabst](#)'s two antiwar films, *Westfront 1918* (1930) and *Kameradschaft* (1931), and his adaptation of Bertolt Brecht's *Die Dreigroschenoper* (*The Threepenny Opera*, 1931). The most influential of the early German sound films, however, was [Fritz Lang](#)'s *M* (1931), which utilized a dimension of aural imagery to counterpoint its visuals in the manner of Alfred Hitchcock's *Blackmail*. *M* has no musical score but makes expressive use of nonnaturalistic sound, as when the child murderer (played by [Peter Lorre](#)) is heard to whistle a recurring theme from Grieg's *Peer Gynt* before committing his crimes offscreen.

After Adolf Hitler took power in 1933, the German film industry came under the complete control of the [Nazi](#) Ministry of Popular Enlightenment and Propaganda. Its head, [Joseph Goebbels](#), believed ideological indoctrination worked best when conveyed through entertainment, so Nazi cinema put forth its political propaganda in the form of genre films such as comedies, musicals, and melodramas. The most famous and controversial films produced in Nazi Germany were documentaries by [Leni Riefenstahl](#), whom Hitler recruited to record a Nazi party rally for *Triumph des Willens* (*Triumph of the Will*, 1935) and the 1936 Olympic Games in Berlin for *Olympia* (1938).

The situation was similar in Italy, where popular genre films as well as historical epics carried the messages of the Fascist government of [Benito Mussolini](#). Italy also sought to strengthen its film culture during this era by establishing a national film school, the Centro Sperimentale di Cinematografia (founded 1935; “Experimental Centre of Cinematography”), and a major new studio complex in Rome, [Cinecittà](#) (opened 1937). Both of these institutions continued in operation after World War II and played a significant role in subsequent film history.

Soviet Union

Although the Soviet engineers P.G. Tager and A.F. Shorin had designed optical sound systems as early as 1927, neither was workable until 1929. Sound was slow in reaching the Soviet Union: most Soviet transitional films were technically inferior to those of the West, and Soviet filmmakers continued to make silent films until the mid-1930s. As in Germany and Italy, however, sound reemphasized film's propaganda value, and, through the authoritarian government's policy of Socialist Realism, the Soviet cinema became an instrument of mass indoctrination as never before. The filmmakers most affected by the new policy were the great montage artists of the 1920s. Each of them made admirable attempts to experiment with sound—Lev Kuleshov's *The Great Consoler* (1933), Dziga Vertov's *Symphony of the Donbas* (1931) and *Three Songs About Lenin* (1934), Sergey Eisenstein's *Bezhin Meadow* (1935; terminated by Boris Shumyatsky in midproduction), Vsevolod Illarionovich Pudovkin's *A Simple Case* (1932) and *Deserter* (1933), and Aleksandr Dovzhenko's *Ivan* (1932)—but their work was ultimately suppressed or defamed by the party bureaucracy. Only Eisenstein was powerful enough to reassert his genius: in the nationalistic epic *Alexander Nevsky* (1938), whose contrapuntal sound track is a classic of its kind, and in the operatically stylized *Ivan the Terrible, Parts I and II* (1944–46), a veiled critique of Stalin's autocracy. Most of the films produced at the time were propaganda glorifying national heroes.

[Japan](#)

As in the United States, the introduction of sound enabled the major Japanese film companies ([Nikkatsu](#), founded 1912; [Shochiku](#), 1920; [Toho](#), c. 1935) to acquire smaller companies and form vertical monopolies controlling production, distribution, and exhibition. Japan's major directors turned to works of social criticism called “tendency” films.

[India](#)

In India, sound created a major industrial boom by reviving a popular 19th-century theatrical form: the folk-music drama based on centuries-old religious myths. Despite the fact that films had to be produced in as many as 10 regional languages, the popularity of these “all-talking, all-singing, all-dancing” mythologicals or historicals played an enormous role in winning acceptance for sound throughout the subcontinent and in encouraging the growth of film industry. An average of 230 features were released per year throughout the 1930s, almost all for domestic consumption.

PARIS IN THE EPOCH 1820-1939

(based primarily on entries in Encyclopedia Britannica and Wikipedia)

INTRODUCTION

In 1850 Paris had approximately 600,000 inhabitants. It then grew rapidly as industrial expansion attracted a constant stream of people from the provinces. By 1870 the population had surpassed 1,000,000, and by 1931 the conurbation contained some 5,000,000 people, more than half of them living in the city of Paris, the administrative city within the old gates.

Industrialization, in progress in the Napoleonic period, advanced rapidly under the [Restoration](#) (1814–30) and the [July Monarchy](#) (1830–48). Gas lighting was introduced; omnibus services began in 1828; and Paris got its first railway, which ran to Le Pecq, near Saint-Germain-en-Laye, in 1837. New districts grew up on the outskirts of Paris. Although the wall of the farmers-general remained the administrative boundary of Paris until 1859, it was decided in 1840 to refortify the capital with a longer military wall.

Even by the mid-19th century, some areas of Paris had not been improved substantially for hundreds of years. Access from one centre to another and to the railway stations (which had become in effect the gateways of Paris) was difficult; moreover, overpopulation and rapid industrialization had brought squalor and misery, which account in part for the dominant role of Paris in the revolutions of both 1830 and 1848. Napoleon III, emperor from 1852 to 1870, enjoined his prefect of the Seine, Baron Haussmann, to remedy these problems.

Haussmann was the creator of modern Paris. A planner on the grand scale, he advocated straight arterial thoroughfares, symmetry, and advantageous vistas. He slashed the boulevards through the tangles of slums, began the modern sewer and water systems, gutted the Île de la Cité, rebuilt the ancient market of the Halles, and added four new Seine bridges and rebuilt three old ones. The brilliance and prosperity of Paris under Napoleon III were exemplified in the exhibitions held there in 1855 and 1867.

The Franco-German War (1870–71), which brought the fall of the Second Empire and the siege of Paris, was followed by the Commune (1871). Under the Third Republic, Haussmann's projects were continued. Further international exhibitions (1878, 1889, 1900, and 1937) were the occasions for the building of monuments such as the Trocadéro (1878), the Eiffel Tower (1889), and the Grand Palais and Petit Palais, with the Alexandre III Bridge (1900), and for the reconstruction of the Trocadéro as the Chaillot Palace (1937). The Métro was constructed, commerce and industry annexed formerly residential districts, and the ever-expanding population overflowed the old limits of Paris. Louis-Philippe's fortifications were abolished by a law of April 1919.

During the [Restoration](#), the bridges and squares of Paris were returned to their pre-Revolution names, but the [July Revolution](#) of 1830 in Paris, (commemorated by the [July Column](#) on [Place de la Bastille](#)), brought a constitutional monarch, [Louis Philippe I](#), to power. The first railway line to Paris opened in 1837, beginning a new period of massive migration from the [provinces](#) to the city. Louis-Philippe was overthrown by a popular uprising in the streets of Paris in 1848. His successor, [Napoleon III](#), and the newly appointed prefect of the

Seine, [Georges-Eugène Haussmann](#), launched a gigantic public works project to build wide new boulevards, a new opera house, a central market, new aqueducts, sewers, and parks, including the [Bois de Boulogne](#) and [Bois de Vincennes](#). In 1860, Napoleon III also annexed the surrounding towns and created eight new arrondissements, expanding Paris to its current limits.

During the [Franco-Prussian War](#) (1870–1871), Paris was besieged by the [Prussian Army](#). After months of blockade, hunger, and then bombardment by the Prussians, the city was forced to surrender on 28 January 1871. On 28 March, a revolutionary government called the [Paris Commune](#) seized power in Paris. The Commune held power for two months, until it was harshly suppressed by the French army during the "Bloody Week" at the end of May 1871.

Late in the 19th century, Paris hosted two major international expositions: the [1889 Universal Exposition](#), was held to mark the centennial of the French Revolution and featured the new Eiffel Tower; and the [1900 Universal Exposition](#), which gave Paris the [Pont Alexandre III](#), the [Grand Palais](#), the [Petit Palais](#) and the first [Paris Métro](#) line. Paris became the laboratory of [Naturalism](#) ([Émile Zola](#)) and [Symbolism](#) ([Charles Baudelaire](#) and [Paul Verlaine](#)), and of [Impressionism](#) in art ([Courbet](#), [Manet](#), [Monet](#), [Renoir](#)).

By 1901, the population of Paris had grown to 2,715,000. At the beginning of the century, artists from around the world including [Pablo Picasso](#), [Modigliani](#), and [Henri Matisse](#) made Paris their home. It was the birthplace of [Fauvism](#), [Cubism](#) and [abstract art](#), and authors such as [Marcel Proust](#) were exploring new approaches to literature.

During the [First World War](#), Paris sometimes found itself on the front line; 600 to 1,000 Paris taxis played a small but highly important symbolic role in transporting 6,000 soldiers to the front line at the [First Battle of the Marne](#). The city was also bombed by [Zeppelins](#) and shelled by German [long-range guns](#). In the years after the war, known as [Les Années Folles](#), Paris continued to be a mecca for writers, musicians and artists from around the world, including [Ernest Hemingway](#), [Igor Stravinsky](#), [James Joyce](#), [Josephine Baker](#), [Eva Kotchever](#), [Henry Miller](#), [Anaïs Nin](#), [Sidney Bechet](#), [Allen Ginsberg](#) and the [surrealist Salvador Dalí](#).

In the years after the [peace conference](#), the city was also home to growing numbers of students and activists from [French colonies](#) and other Asian and African countries, who later became leaders of their countries, such as [Ho Chi Minh](#), [Zhou Enlai](#) and [Léopold Sédar Senghor](#).

PARIS IN 1830-1848

[Paris](#) during the reign of King [Louis-Philippe](#) (1830-1848) was the city described in the novels of [Honoré de Balzac](#) and [Victor Hugo](#). Its population increased from 785,000 in 1831 to 1,053,000 in 1848, as the city grew to the north and west, while the poorest neighborhoods in the center became even more crowded.^[1]

The heart of the city, around the [Île de la Cité](#), was a maze of narrow, winding streets and crumbling buildings from earlier centuries; it was picturesque, but dark, crowded, unhealthy and dangerous. A cholera outbreak in 1832 killed 20,000 people. [Claude-Philibert de Rambuteau](#), prefect of the Seine for fifteen years under Louis-Philippe, made tentative efforts to improve the center of the city: he paved the quays of the Seine with stone paths and planted trees along the river. He built a new street (now the [Rue Rambuteau](#)) to connect

the [Marais](#) district with the markets and began construction of [Les Halles](#), the famous central food market of Paris, finished by [Napoleon III](#).^[2]

Louis-Philippe lived in his old family residence, the [Palais-Royal](#), until 1832, before moving to the [Tuileries Palace](#). His chief contribution to the monuments of Paris was the completion in 1836 of the [Place de la Concorde](#), which was further embellished on 25 October 1836 by the placement of the [Luxor Obelisk](#). In the same year, at the other end of the [Champs-Élysées](#), Louis-Philippe completed and dedicated the [Arc de Triomphe](#), which had been begun by [Napoleon I](#).^[2]

The [ashes of Napoleon were returned to Paris](#) from [Saint Helena](#) in a solemn ceremony on 15 December 1840, and Louis-Philippe built an impressive tomb for them at the [Invalides](#). He also placed the statue of Napoleon on top of the column in the [Place Vendôme](#). In 1840, he completed a column in the [Place de la Bastille](#) dedicated to the July 1830 revolution which had brought him to power. He also sponsored the restoration of the Paris churches ruined during the [French Revolution](#), a project carried out by the ardent architectural historian [Eugène Viollet-le-Duc](#); the first church slated for restoration was the [Abbey of Saint-Germain-des-Prés](#). Between 1837-1841, he built a new [Hôtel de Ville](#) with an interior salon decorated by [Eugène Delacroix](#).^[3]

The first railway stations in Paris (then called *embarcadères*) were built under Louis-Philippe. Each belonged to a different company, and they were not connected to each other; all were located outside the city center. The first, the *Embarcadère Saint-Germain*, was opened on 24 August 1837 on the Place de l'Europe. An early version of the [Gare Saint-Lazare](#) was started in 1842, and the first lines from Paris to [Orléans](#) and to [Rouen](#) were inaugurated on 1–2 May 1843.^[4]

As the population of Paris grew, so did discontent in the working-class neighborhoods. There were riots in 1830, 1831, 1832, 1835, 1839, and 1840. The 1832 uprising, which followed the funeral of a fierce critic of Louis-Philippe, General [Jean Maximilien Lamarque](#), was immortalized by Victor Hugo in his novel [Les Misérables](#).^[5]

The growing unrest finally exploded on 23 February 1848, when a large demonstration was broken up by the army. Barricades went up in the eastern working-class neighborhoods. The king reviewed his soldiers in front of the Tuileries Palace, but instead of cheering him, many shouted "Long Live Reform!" Discouraged, he abdicated and departed for exile in England.

The population of Paris grew rapidly during the reign of Louis-Philippe, from 785,866 recorded in the 1831 census, to 899,313 in 1836, and 936,261 in 1841. By 1846, it had grown to 1,053,897. Between 1831 and 1836, it grew by 14.4% within the city limits and by 36.7% in the villages around the city that became part of Paris in 1860.^[6] The largest number of immigrants came from the twelve departments around Paris: 40% came from [Picardy](#) and the [Nord department](#); 13% from [Normandy](#); and 13% from [Burgundy](#). A smaller number came from [Brittany](#) and [Provence](#), and they had greater difficulties assimilating, since few of them spoke French. They tended to settle in the poorest neighborhoods between the [Hôtel de Ville](#) and [Les Halles](#).^[7]

Following earlier foreign immigration, a large wave of immigrants from Poland, including [Frédéric Chopin](#), arrived after the failed Polish revolutions of 1830 and 1848.^[7]

The most densely populated neighborhoods were in the center, where the poorest Parisians lived: Les Arcis, Les Marchés, Les Lombards and Montorgueil, where the population density reached between 1000 and 1500 persons per hectare. However, during the reign of Louis-Philippe, the middle class gradually moved away from the center toward the west and north of the [Grands Boulevards](#). Between 1831 and 1836, the population of the 23 neighborhoods of

the center dropped from 42.7% to 24.5% of the city's population, while the corresponding percentage for the outer neighborhoods grew from 27.3% to 58.7%. The population of the [Left Bank](#) remained steady at about 26% of the total.^[8]

The nobility, composed of several hundred families, continued to occupy their palatial town houses in the [Faubourg Saint-Germain](#) and held a prominent place in society, but exercised a much smaller role in the government and business of the city. Their place at the top of the social order was taken by the bankers, financiers and industrialists. The novelist [Stendhal](#) wrote: "The bankers are at the heart of the State. The [bourgeoisie](#) has taken the place of the Faubourg Saint-Germain, and the bankers are the nobility of the bourgeoisie."^[9] The new leaders of Paris lived on the [Right Bank](#), between the Palais Royal and the [Madeleine](#) to the north and west of the city. The [Rothschild family](#) and the bankers [Jacques Laffitte](#) and [Casimir Perier](#) lived on the [Rue de la Chaussée-d'Antin](#), north of the [Place Vendôme](#), just outside the boulevards. The industrialist [Benjamin Delessert](#) lived on the Rue Montmartre. The upper middle class, those who paid more than 200 francs in direct taxes each year, numbered 15,000 families in a city of about a million inhabitants. The growing middle class also included owners of shops, merchants, artisans, notaries, doctors, lawyers, and government officials.

The reign of Louis-Philippe also saw a large increase in the number of working-class Parisians employed in the new factories and workshops created by the [Industrial Revolution](#). A skilled worker earned three to five francs a day. An unskilled worker, such as those employed to use wheelbarrows to move earth during the construction of new streets, earned 40 sous, or two francs, a day.^[10] The workers were mostly from the provinces and rented rooms in crowded *hôtels garnis*, or lodging houses. The population of the lodging houses grew from 23,000 to 50,000 between 1831 and 1846. They constituted the class most subject to the fluctuations of the [business cycle](#) and were the principal participants in the growing number of strikes and confrontations with the government.^[8]

There was also a growing under-class in Paris of the unemployed or marginally employed. These included such occupations as the [chiffonniers](#), who searched the trash at night for rags or old shoes that could be resold. Their number was estimated at 1800 in 1832.^[11] There was also a very large number of orphans who lived by any means they could find in the streets of Paris. They are memorably described by Victor Hugo in *Les Misérables*.

A new social type appeared in Paris in the 1840s; *le bohème*, or the "[Bohemian](#)". They were usually students or artists, and were generally described as joyous, careless about the future, somewhat lazy, boisterous, and scornful of middle-class standards. They wore a distinct costume, careless and flamboyant, to stand out from the crowd. The name was taken from the [Romani people](#) who originally immigrated to France from eastern Europe in the 15th century and were mistakenly believed to come specifically from [Bohemia](#); they were numerous in Paris at the time. The character was first introduced into literature by [Henri Murger](#) in a series of stories called [Scènes de la vie de Bohème](#) (Scenes of Bohemian Life) published in Paris between 1845 and 1849, which in 1896 was made into the opera [La Bohème](#) by [Puccini](#). The term spread from Paris to the rest of Europe, and came to be used for anyone who lived an artistic and unconventional life.^[12]

Prostitution was common in Paris. Beginning in 1816, prostitutes were required to register with the police. Between 1816 and 1842, their numbers grew from 22,000 to 43,000. They were mostly young women from the French provinces who had come to Paris seeking regular work, but were unable to find it. At the beginning of the reign of Louis-Philippe, the prostitutes were usually found in the arcades of the Palais-Royal, but they were gradually moved by the police to the sidewalks of the [Rue Saint-Denis](#), the [Rue Saint-Honoré](#), the Rue

Sainte-Anne, and the [Rue du Faubourg Saint-Honoré](#). Houses of prostitution, marked with red lanterns, were called *maisons de tolerance* or *maisons closes*. They were mostly found on the boulevards at the edges of the city, in [Belleville](#), [Ménilmontant](#), [La Villette](#), [La Chapelle](#), [Grenelle](#), [Montparnasse](#), and at the Place du Trône. They numbered 200 in 1850, just after the fall of Louis-Philippe.^[13]

Louis-Philippe had a very different style from previous monarchs; he did not move from his residence in the [Palais-Royal](#) to the [Tuileries Palace](#) until 1 October 1831. Except on ceremonial occasions, he dressed like a banker or industrialist rather than a king, with a blue coat, white [waistcoat](#) and top hat, and carried an umbrella. Formal court dress was no longer required at receptions. The royal guards were replaced by soldiers from the [National Guard](#). His children attended the best Paris schools, rather than having tutors. He spent as little time as possible in Paris, preferring the royal residences at [Fontainebleau](#), [Versailles](#) and the [Château de Neuilly](#).^[14]

As soon as he came to power, Louis-Philippe dismissed the old Prefect of the Seine, the Prefect of Police, the mayors of the arrondissements and their deputies, and the 24 members of the General Council of the Seine. On 29 July, he appointed a temporary municipal commission to run the city, under the authority of the Minister of the Interior. The new council was named on 17 September, and was made up mainly of bankers, industrialists, magistrates and senior government officials. The successive French governments since the [Ancien Régime](#) had feared the fury of the Parisians, and a repeat of the [Reign of Terror](#). Parisians had not been allowed to elect a city government from 1800 until 1830; it was always directly under the rule of the national government. In 1831, Louis-Philippe organized the first municipal elections, but under conditions that ensured that the Parisians would not get out of control. Under a law of 30 April 1831, the Chamber of Deputies created a new General Council of the Seine, with 36 elected members from Paris, three per arrondissement, and eight from the neighboring arrondissements of [Saint-Denis](#) and [Sceaux](#). Only Parisians who paid more than 200 francs a year in direct taxes were allowed to vote, although they numbered less than 15,000 in a city with a population of more than 800,000 persons. A few other selected categories of Parisians were also allowed to vote, including judges, notaries, members of the [Institut de France](#), retired officers who received a pension of at least 1200 francs, and doctors who had practiced in Paris more than ten years. This added another 2000 to the number of eligible voters.^[15]

Even with all these limitations on who could vote, Louis-Philippe's government feared that Paris could run out of control. The president and vice-president of the Council were named by the king from among the members of the Council. Only the Prefect of the Seine, appointed by the king, could bring business before the Council. Furthermore, a new parallel council was created, made up of the mayors and deputy mayors, which served to bypass the Municipal Council when needed. Despite all these efforts, the Council still demonstrated its independence on occasion. It forced the resignation of the first new Prefect of the Seine, [Pierre-Marie Taillepied, Comte de Bondy](#), who rarely consulted the Council and disregarded their opinions. The new prefect, [Claude-Philibert Barthelot de Rambuteau](#), learned the lesson and treated the Council with great courtesy, summoning them for meetings every week.^[15]

The other key figure in the government of Paris was the Prefect of Police. There were two of these during the reign of Louis-Philippe: [Henri Gisquet](#) (1831-1836) and [Gabriel Delessert](#) (1836-1848). The Prefect of Police oversaw the municipal police, the gendarmes in the city, and the firemen. He administered the prisons, hospitals, hospices, and public assistance; was responsible for public health and stopping industrial pollution; and was in

charge of street lighting and street cleaning. He was also responsible for traffic circulation, making sure that building façades met city requirements, that unsafe buildings were demolished, and that the city's markets and bakeries were supplied with food and bread.^[16]

On 16 August 1830, soon after Louis-Philippe assumed the throne, the royal police force of Paris, the *gendarmerie royale*, was abolished and replaced by the *garde municipale de Paris*, a force of 1,510 men originally composed of two battalions of infantry and two squadrons of cavalry. They were responsible for suppressing the numerous uprisings and riots between 1831 and 1848. Their numbers were doubled during that time, but their harsh tactics earned them the hatred of the insurgent Parisians; a substantial number of police were massacred by the crowds during the [Revolution of 1848](#). The *garde municipale* was abolished in 1848 and replaced by the *Garde Republicaine*.^[17]

The second corps responsible for maintaining order in the city was the [Garde Nationale](#). At the end of the reign of [Charles X](#), it had rebelled against the monarchy and helped overthrow the king. It was composed largely of the bourgeoisie of Paris, and members provided their own weapons. It had 60,000 members in Paris, though only 20,000 had income high enough to be eligible to vote. The Garde Nationale helped suppress the armed uprisings of 1832 and 1834, but from 1840 they were increasingly hostile to the government of Louis-Philippe. When the Revolution of 1848 broke out, they took the side of the insurgents and helped bring the regime to an end.^[18]

The first great crisis to strike Paris during the reign of Louis-Philippe was an epidemic of [cholera](#) in 1832. It was the first such epidemic in France, and the disease was little known or understood. It originated in Asia and spread through Russia, Poland, and Germany before reaching France. The first victim in Paris died on 19 February 1832. At first, the disease was not believed to be contagious, and the epidemic was not officially recognized until 22 March. As news of it spread, thousands of Parisians fled the city. 12,733 Parisians died in April, with a decrease in May and June, and a new surge in July, before the epidemic receded in September. Between March and September, it killed 18,402 Parisians, including [Casimir Périer](#), the president of Louis-Philippe's Council of Ministers, who caught the disease after visiting cholera patients in hospital.

The disease was most fatal in the overcrowded neighborhoods of the center of Paris. As one measure of how crowded conditions were, there is record of one lodging house at 26 [Rue Saint-Lazare](#) where 492 persons lived in the same building, with less than one square meter of space per person. A rumor spread in the poor areas that the cholera had been spread deliberately to "assassinate the people". One of the victims of the epidemic was [General Lamarque](#), a former general of the Napoleonic era, who died on June 1. He was seen as a defender of popular causes, and his funeral was the scene of a large anti-government demonstration, with some barricades going up in the streets. These events were immortalized in Victor Hugo's novel *Les Misérables*.^[19]

The incumbent Prefect of the Seine was dismissed largely because of his inept handling of the epidemic, and the new Prefect, the Count of Rambuteau, declared his intention to bring "air and light" to the center of the city to prevent future epidemics. This was the beginning of the program to open up the center of the city, not fully realized until the time of [Napoleon III](#) and [Baron Haussmann](#).

One of the great architectural projects of the reign of Louis-Philippe was the remaking of the [Place de la Concorde](#). An equestrian statue of King [Louis XV](#) had originally been the centerpiece of the Place; during the Revolution the statue was pulled down and replaced by a statue of [the Goddess of Liberty](#) and the place was the site of the execution of King Louis XVI and Marie Antoinette. Louis Philippe wanted to erase all the revolutionary associations

of site. He selected [Jacques Ignace Hittorff](#) to design a new master plan, which was carried out in stages between 1833 and 1846. First the moat of the [Tuileries Palace](#) was filled in. Then Hittorff designed the two [Fontaines de la Concorde](#), one commemorating river navigation and commerce, the other maritime navigation and commerce. On 25 October 1836, a new centerpiece was put in place: a stone [obelisk](#) from [Luxor](#) that weighed 250 tons and was brought to France on a specially-built ship from [Egypt](#). It was slowly hoisted into place in the presence of Louis-Philippe and a huge crowd.^[20] At each angle of the square's extended octagon Hittorff placed a statue representing a French city: Bordeaux, Brest, Lille, Lyon, Marseille, Nantes, Rouen and Strasbourg. The face of the statue of [Strasbourg](#), by the sculptor [James Pradier](#), was said to be modeled after [Juliette Drouet](#), the companion of Victor Hugo.^[21]

In the same year, the [Arc de Triomphe](#), begun in 1804 by Napoleon, was finally completed and dedicated. Many old soldiers from the Napoleonic armies were in the crowd, and they called out "Vive l'Empereur", but Louis-Philippe was unperturbed. The [ashes of Napoleon](#) were returned to Paris from [Saint Helena](#) in 1840, and were placed with great ceremony in a tomb designed by [Louis Visconti](#) beneath the church of [Les Invalides](#).

Another Paris landmark, the [July Column](#) on the [Place de la Bastille](#), was inaugurated on 28 July 1840, on the anniversary of the [July Revolution](#), and dedicated to those killed during the uprising.

Several older monuments were put to new purposes: the [Élysée Palace](#) was purchased by the French state and became an official residence; and under later governments, it has served as the residence of the [Presidents of the French Republic](#). The Basilica of Sainte-Geneviève, originally built as a church beginning in the 1750s, then made into a mausoleum for great Frenchmen during the French Revolution, then a church again during the [Bourbon Restoration](#), once again became the [Panthéon](#), dedicated to the glory of great Frenchmen.

During the reign of Louis-Philippe a movement was launched to preserve and restore some of the earliest landmarks of Paris, many of which had been badly damaged during the Revolution. It was inspired in large part by Victor Hugo's hugely successful novel [The Hunchback of Notre Dame](#) (*Notre-Dame de Paris*), published in 1831. The leading figure of the restoration movement was [Prosper Mérimée](#), named by Louis-Philippe as the inspector General of [Historic Monuments](#). In 1842, he compiled the first official list of classified historical monuments, now known as the [Base Mérimée](#). In addition to saving architectural landmarks, he participated with his friend the novelist [George Sand](#) in the discovery of [The Lady and the Unicorn](#) tapestries at the [Château de Boussac](#) in the [Limousin](#) in central France; they are now the best-known possessions of the [Cluny Museum](#) in Paris. He also wrote the novella [Carmen](#) on which [the opera of Bizet](#) was based.

The first structure to be restored was the nave of the [church of Saint-Germain-des-Prés](#), the oldest in the city. Work also began in 1843 on the cathedral of [Notre Dame](#), which had been stripped of the statues on its facade and of its spire. Much of the work was directed by the architect and historian [Eugene Viollet-le-Duc](#) who sometimes admitted that he was guided by his own scholarship of the "spirit" of [medieval](#) architecture, rather strict historical accuracy. The other major restoration projects were devoted to the medieval [Sainte Chapelle](#) and the [Hôtel de Ville](#), which dated from the 17th century. The old buildings that pressed up against the back of the Hôtel de Ville were cleared away, two new wings were added, the interiors were lavishly redecorated, and the ceilings and walls of the *grands salons* were painted with murals by [Eugène Delacroix](#). Unfortunately, all the interiors were burned in 1871 by the [Paris Commune](#).^[20]

Rambuteau, during this fifteen years as Prefect of the Seine, made attempts to solve the blockage of traffic and the unhealthiness of the streets in the center, particularly after the cholera epidemic in the heart of the city. He opened the Rue d'Arcole and the [Rue Soufflot](#) and built what is now the [Rue Rambuteau](#), thirteen meters wide, to connect the [Le Marais](#) district to the markets of [Les Halles](#). He rebuilt what became known as the [Pont Louis-Philippe](#) from the [Place de Grève](#) to the [Île Saint-Louis](#) and completely rebuilt the [Pont des Saints-Pères](#). The [île Louviers](#), just east of the Île Saint-Louis, used as a lumber yard, was attached to the Right Bank, and the Boulevard Morland replaced the narrow branch of the Seine that had separated the island from the city. The [Pont d'Austerlitz](#), originally named for a Napoleonic military victory, the renamed the Pont du Jardin du Roi during the [Bourbon Restoration](#), took back its Napoleonic name. The Quai de la Tournelle and the banks of the Seine at the Louvre and Quai des Grands-Augustins were walled with stone and planted with trees.^[22]

At the beginning of the reign of Louis-Philippe, the old ramparts and bastions of [Louis XIV](#) were still visible in many places around the city, with a footpath running along the top. Rambuteau had them leveled in order to widen and straighten the [Grands Boulevards](#). Only short sections of raised sidewalks on the Boulevard Saint-Martin and Boulevard de Bonne-Nouvelle showed how the ramparts formerly appeared (and they still show this today). Rambuteau also began rebuilding the old central market of Les Halles, but the new buildings, heavy and old-fashioned, did not please the Parisians. The project was later stopped by Napoleon III when he was still prince-president of France (1848-1851). New glass and iron buildings were designed and built in their place by the architect [Victor Baltard](#).

At the beginning of the reign of Louis-Philippe, Paris sidewalks in the center of the city, if they existed at all, were very narrow, rarely wide enough for two persons to walk side by side. Travelers described the adventure of trying to walk through the streets of the Île-de-la-Cité on a narrow, crowded sidewalk, the danger of stepping into the street in the path of carts, wagons and carriages, and the noise of the carriage wheels echoing on the walls of the street.^[10] Sidewalks were common only in the new neighborhoods to the west and north and on the Grands Boulevards. In 1836, Rambuteau launched a project to build sidewalks in more neighborhoods and replace the old sidewalks made of [lava stone](#) with asphalt. By the end of the reign of Louis-Philippe, a majority of Paris streets were paved. Under Napoleon III, Haussmann completed the sidewalks by adding granite edges.^[23]

Rambuteau also addressed the absence of public urinals, which gave the side streets and parks a particular and unpleasant smell. The first public urinals had been installed during the Bourbon Restoration, just before the Revolution of July 1830, but they were dismantled and used for barricades during the street fighting. In July 1839, Rambuteau authorized the construction of a new circular type of urinal, ten to twelve feet high, made of masonry with a pointed roof and posters displayed on the outside. The first ones were placed on the [Boulevard Montmartre](#) and the [Boulevard des Italiens](#). By 1843, there were 468 urinals in place. They became known as *vespasiennes* after the Roman Emperor [Vespasian](#), who was said to have installed public toilets in ancient Rome. They were all replaced during the [Second Empire](#) by a newer cast-iron design.^[24]

The city walls of Paris had been demolished during the reign of Louis XIV, and in 1814, the city was easily captured near the end of the [War of the Sixth Coalition](#), since it had no fortifications. Debates began in Paris as early as 1820 about the necessity of building a new wall. In 1840, as the result of tensions between France, Britain and the German states, the discussion was renewed, and a plan was put forward by [Adolphe Thiers](#), the President of the Council and the Minister of Foreign Affairs. The [Thiers Wall](#), approved on 3 April 1841, was

34 kilometers long and composed of a belt of ramparts and trenches 140 meters wide. The highest rampart was ten meters high and three meters wide, and a road six meters wide ran the full length of the wall. It was forbidden to build any structure in a space 250 meters wide in front of the wall. The wall was reinforced at regular intervals with a series of bastions and 16 large forts around the city. In 1860, the route of the wall marked the official city limits of Paris, and it remains so, with a few changes, today. A number of the bastions still exist, and vestiges of the wall can still be seen at the Porte d'Arcueil (in the [14th arrondissement](#)) and the point at which the [Canal Saint-Denis](#) passed through the wall. The [Boulevard Périphérique](#) around the city follows the route of the old Thiers wall.^[25]

Rambuteau also made attempts to improve the social institutions of the city. He built a new prison, [La Roquette](#), for criminals, while the mentally ill and sick were separated and left in the [Bicêtre Hospital](#). Women prisoners were sent to the Enclos Saint-Lazare. Rambuteau began building the [Lariboisière Hospital](#) (in the 10th arrondissement), and he reorganized the [Mont-de-Piété](#), a charitable organization which gave low-cost loans to the poor. In addition, he increased the number of savings banks for workers and middle-class Parisians. Primary education had previously been the responsibility of the Church, and many children remained illiterate. Under Louis-Philippe's minister of education, [François Guizot](#), primary school was made obligatory as of 28 June 1833. A system of communal and mutual schools was created, as well as two higher primary schools: the [Collège Chaptal](#) (now Lycée Chaptal) and the Turgot School (1839). All of the primary schools, both Catholic and secular, were put under the authority of a central committee on education, with the Prefect as president.^[26]

The canals that brought drinking water to Paris, begun by Napoleon, were extended, and Rambuteau increased the number of *borne-fontaines*, small water fountains 50 centimeters high with a simple spout, from 146 in 1830 to 2,000 in 1848.^[27] Despite the rapid growth of the city, no new sources of water were developed. The wealthiest Parisians had wells in their residences, usually in the basement. Most Parisians obtained their drinking water in a traditional way by visiting the city's fountains, sending servants to the fountains, or buying water from the water porters, mostly men from [Auvergne](#) and [Piedmont](#), who carried large buckets balanced on a pole on their shoulders.

During the reign of Louis-Philippe, five new monumental fountains were erected in the center of the city: the two fountains designed by Jacques Ignace Hittorff in the Place de la Concorde; the [Fontaine Molière](#) on the [Rue de Richelieu](#) designed by [Louis Visconti](#) (who also designed the tomb of Napoleon); the [Fontaine Louvois](#) on the Square Louvois, designed by Visconti on the site of the old opera house; and the [Fontaine Saint-Sulpice](#), also by Visconti, at the center of the [Place Saint-Sulpice](#).^[22]

The most important economic and social event of the reign of Louis-Philippe was the arrival in Paris of the railroad. The first successful passenger railway line in France had opened between [Saint-Étienne](#) and Lyon in 1831. The financiers, the [Péreire brothers](#), built the first line from Paris to [Saint-Germain-en-Laye](#) between 1835 and 1837, largely in order to persuade the banking community and the Parisians that such a means of transport was feasible and profitable. The line between Paris and [Versailles](#) was approved on 9 July 1836; it was the site of the first railroad accident in France on 8 May 1842, in which at least 55 passengers were killed and between 100 and 200 injured,^[28] The accident did not slow down the growth of the railroads: the Paris-Orléans line opened on 2 May 1843, and the line between Paris and Rouen was inaugurated the next day.^[29]

The first train stations in Paris were called *embarcadères* (a term borrowed from river navigation)), and their location was a source of great contention, since each railroad line was owned by a different company, and each went in a different direction. The

first *embarcadère* was built by the Péreire brothers for the line Paris-Saint-Germain-en-Laye, at the Place de l'Europe; it opened on 26 August 1837. It became so successful that it was quickly replaced by a larger building on the Rue de Stockholm, and then an even larger structure, the beginning of the [Gare Saint-Lazare](#), built between 1841 and 1843. It was the station for the trains to [Saint-Germain-en-Laye](#), Versailles and [Rouen](#).

The Péreire brothers argued that Gare Saint-Lazare should be the only railway station in Paris, but the owners of the other lines each insisted on having their own station. The first Gare d'Orléans, now known as the [Gare d'Austerlitz](#), was opened on 2 May 1843 and was greatly expanded in 1848 and 1852. The first [Gare Montparnasse](#) opened on 10 September 1840 on the [Avenue du Maine](#) and was the terminus of the new Paris-Versailles line on the Left Bank of the Seine. It was quickly found to be too small and was rebuilt between 1848 and 1852 at the junction of the Rue de Rennes and [Boulevard du Montparnasse](#), its present location.^[30]

The banker [James Mayer de Rothschild](#) received the permission of the government to build the first railroad line from Paris to the Belgian border in 1845, with branch lines to [Calais](#) and [Dunkerque](#). The first *embarcadère* of the new line opened on the Rue de Dunkerque in 1846. It was replaced by a much grander station, the [Gare du Nord](#), in 1854. The first station of the line to eastern France, the [Gare de l'Est](#), was begun in 1847, but not finished until 1852. Construction of a new station for the line to the south, from Paris to [Montereau-Fault-Yonne](#) began in 1847 and was finished in 1852. In 1855, it was replaced by a new station, the first [Gare de Lyon](#), on the same site.^[30]

The [Industrial Revolution](#) steadily changed the economy and the appearance of Paris, as new factories were built along the Seine and in the outer neighborhoods of the city. The textile industry was in decline, but the chemical industry was expanding around the edges of the city, at [Javel](#), [Grenelle](#), [Passy](#), [Clichy](#), [Belleville](#) and [Pantin](#). It was joined by mills and factories that made steel, machines and tools, especially for the new railroad industry. Paris ranked third in France in metallurgy, after [Saint-Étienne](#) and the [Nord department](#). Between 1830 and 1847, twenty percent of all the steam engines produced in France were made in Paris. Many of these were produced at the locomotive factory built by [Jean-François Cail](#) in 1844, first at [Chaillot](#), then at Grenelle, which became one of the largest enterprises in Paris.

One example of the new factories in Paris was the cigarette and cigar factory of Philippon, between the [rue de l'Université](#) and the [Quai d'Orsay](#). Napoleon's soldiers had brought the habit of smoking from Spain, and it had spread among all classes of Parisians. The government had a monopoly on the manufacture of tobacco products, and the government-owned factory opened in 1812. It employed 1,200 workers, a large number of them women, and also included a school and laboratory, run by the École Polytechnique, to develop new methods of tobacco production.^[31]

Despite the surge of industrialization, most Parisian workers were employed in small workshops and enterprises. In 1847, there were 350,000 workers in Paris employed in 65,000 businesses. Only seven thousand businesses employed more than ten workers. For example, in 1848 there were 377 small workshops in Paris that made and sold umbrellas, employing a total of 1,442 workers.^[32]

With the surge of industrialization, the importance of banking and finance in the Paris economy also grew. As [Stendhal](#) wrote at the time, the bankers were the new aristocracy of Paris. In 1837, [Jacques Laffitte](#) founded the first business bank in Paris, the Caisse Générale du Commerce et de l'Industrie. In 1842, Hippolyte Ganneron founded a rival commercial bank, the Comptoir Général du Commerce. The banks provided the funding for the most important economic event of the reign of Louis-Philippe: the arrival of the railroads. The

brothers Émile and Issac Péreire, the grandchildren of an immigrant from [Portugal](#), founded the first railway line to Paris.

[James Mayer de Rothschild](#), the chief rival of the Péreire brothers, was the most famous banker of during the reign of Louis-Philippe. He gave loans to the royal government and played a key role in the construction of the French mining industry and railroad network. In 1838, he purchased the house of [Charles Maurice de Talleyrand](#) at 2 Rue Saint-Florentin on the Place de la Concorde for his Paris residence. He became a leading figure in Paris society and the arts; his personal *chef* was [Marie-Antoine Carême](#), one of the most famous names in French cuisine.^[33] He patronized many of the leading artists of the time, including [Gioacchino Rossini](#), [Frédéric Chopin](#), [Honoré de Balzac](#), [Eugène Delacroix](#), and [Heinrich Heine](#). Chopin dedicated his [Ballade No. 4 in F minor, Op. 52](#) (1843), and his [Valse in C-sharp minor, Op. 64, N° 2](#) (1847), to Rothschild's daughter [Charlotte](#). In 1848, [Jean Auguste Dominique Ingres](#) painted his wife's portrait.

The reign of Louis-Philippe became known as "the reign of the boutique". During this period, Paris continued to be the marketplace of luxury goods for the wealthiest customers in Europe, and the leader in fashion. The perfumer [Pierre-François-Pascal Guerlain](#) had opened his first shop on the [Rue de Rivoli](#) in 1828. In 1840, he opened a larger shop at 145 [Rue de la Paix](#), which was also the first street in Paris to be lit with gaslight. The porcelain factory at [Sèvres](#), which had long made table settings for the royal courts of Europe, began to make them for the bankers and industrialists of Paris.

The [Passage des Panoramas](#) and other covered shopping galleries were ancestors of the modern shopping center. Another new kind of store was the *magasin de nouveautés*, or novelty store. The "Grand Colbert" in the Galerie Colbert on the Rue Vivienne was decorated and organized like an oriental *bazaar*; it had large [plate-glass](#) windows and window displays, fixed prices and price tags, and sold a wide variety of products for women, from cashmere and lace to hosiery and hats. It was an ancestor of the first modern department stores, which appeared in Paris in the 1850s. Other novel marketing techniques were introduced in Paris at this time: the illuminated sign, and advertising goods in newspapers. The arrival of the railroad made it possible for people from the provinces to come to Paris simply to shop.^[34]

The first means of public transport, the [omnibus](#), had been introduced in Paris in January 1828, and it enjoyed great success. It used large horse-drawn coaches, was entered from the rear, and could carry between twelve and eighteen passengers. The fare was 25 centimes. The omnibuses operated between seven in the morning and seven in the evening in most location, but operated until midnight on the Grands Boulevards. In 1830, there were ten omnibus companies; by 1840, the number had increased to thirteen operating omnibuses on 23 different lines, though half of the passengers were carried by one company, Stanislas Baudry's *Entreprise Générale des Omnibus de Paris* (EGO).^[35]

The other common means of transport was the [fiacre](#), the taxicab of its day. It was a small box-like coach that carried as many as four passengers; it could be hired at designated stations around Paris. A single journey cost 30 sous, regardless of distance; or they could be hired at the rate of 45 sous for an hour. The drivers expected a tip, and, according to a guidebook of 1842, became extremely unpleasant if they did not receive one.^[10]

The staples of the Parisian diet, unchanged since the 18th century, were bread, meat and wine. Upper-class Parisians began the day with coffee and bread, then they had their *déjeuner* (lunch) at mid-day, often at a [café](#); they often started with oysters, followed by beefsteaks, vegetables, fruit, dessert and coffee. The meal was accompanied by wine, often diluted with water. They had their dinner at six or seven in the evening, with a larger number

of dishes. They often went to the theater afterwards, then went to a café following the performance for coffee and drinks or a light supper.

For working-class Parisians, bread composed seven-eighths of their diet. They accompanied it with whatever fruit might be in season, some white cheese, and, in winter, some pieces of pork or bacon, along with stewed pears or roasted apples. They usually had some sort of soup each night, and on Sunday traditionally ate a stew called [*pot-au-feu*](#). The meals were always accompanied by wine, usually with water added.^[10]

The economic difficulties for ordinary Parisians during the reign of Louis-Philippe can be illustrated by their meat consumption; between 1772 and 1872, Parisians consistently ate about sixty kilograms of meat per year per person, but meat consumption between 1831 and 1850 fell to about fifty kilograms.^[36]

Only a small number of Parisians had indoor plumbing or bathtubs; for most, water for washing had to be carried from a fountain or purchased from a water-bearer and stored in a container, and was used sparingly. Paris had a number of bath houses, including some, such as the Chinese Baths on the [*Boulevard des Italiens*](#), which catered to upper-class customers.

For the working class, there was a row of floating baths along the Seine between the [*Pont d'Austerlitz*](#) and the [*Pont d'Iéna*](#) that operated during the summer. These were basins of river water surrounded by fences and usually by floating arcades of changing rooms. They were open day and night for an admission fee of four sous or twenty centimes. They had separate sections for men and women, and bathing costumes could be rented. They were often condemned by the church and in the press as an offense to public morality, but were always crowded with young working-class Parisians on hot summer days. Some of the floating baths were designed for wealthier patrons, some were used as schools to teach swimming, and some were reserved for women only; one was located in front of the [*Hôtel Lambert*](#) on the Quai d'Anjou.^[37]

At the beginning of the reign of Louis-Philippe, the city's newspapers were expensive, had very small circulations, contained very little news, and were read mostly at cafés. That changed dramatically on 1 July 1836 with the debut of [*La Presse*](#), the first inexpensive daily newspaper in Paris. It soon inspired many imitators. Between 1830 and 1848, the circulation of newspapers in Paris doubled; in 1848, there were 25 newspapers in the city with a total circulation of 150,000. Despite official censorship, they played an increasing role in French politics and in the events that culminated in the [*Revolution of 1848*](#). The press also began to play a novel role in commerce: Paris stores and shops began to advertise their products in the newspapers.^[38]

Illustrated newspapers, often with satirical cartoons, also became popular and influential. The journalist [*Charles Philipon*](#) started an illustrated weekly magazine called [*La Caricature*](#) in 1830. He used the new technique of [*lithography*](#) to reproduce cartoons and employed a young caricaturist from Marseille, [*Honoré Daumier*](#). [*Balzac*](#), a friend of Philipon, also contributed to the magazine, using a pseudonym. In 1832, encouraged by the success of the magazine, he began a more popular daily four-page illustrated satirical newspaper called [*Le Charivari*](#) with caricatures by Daumier. It began with social satire, but soon veered into politics, ridiculing, among other targets, the king. In 1832, Daumier published a caricature of Louis-Philippe as [*Gargantua*](#) eating the wealth of the nation, and another of the king's face in the shape of a pear. Daumier was arrested and served six months in prison. Philipon also served six months in prison for "contempt of the king's person." By 1835, the newspaper staff had been taken to court seven times and convicted four times. *La Caricature* ceased publication and *Charivari* switched from political to social satire, but the ridicule of the regime by the press continued to undermine public support for Louis-Philippe.

Numerous revolutionary newspapers were published in Paris by exiled political activists, then smuggled into their own countries. From 1843 to 1845, [Karl Marx](#) lived in Paris as editor of two radical German newspapers: [Deutsch–Französische Jahrbücher](#) and [Vorwärts!](#). It was in a café at the Palais-Royal that he met his future collaborator, [Friedrich Engels](#). He was expelled from France in 1845 at the request of the Prussian government and moved to Brussels.

On 8 November 1833, a new museum of coins and medals was opened inside the [Hôtel des Monnaies](#), the 18th-century French mint on the Left Bank.

Interest in the Middle Ages increased greatly in Paris after the publication of Victor Hugo's [Notre-Dame de Paris](#) and the first restoration of the cathedral. [Alexandre Du Sommerard](#) was a former soldier in Napoleon's army who became a counselor at the [Cour des Comptes](#). He assembled and classified a large collection of art objects from the Middle Ages and Renaissance and purchased the Hôtel de Cluny, which he made his residence and private gallery to display his collection. After Du Sommerard's death in 1843, the French state bought the building and his collection, and the Hôtel de Cluny and the Roman baths adjacent to it became the [Museum of the Middle Ages](#).

Many of the greatest and most popular works of French literature were written and published in Paris during the reign of Louis-Philippe.

- [Victor Hugo](#) published four volumes of poetry, and in 1831 published *Notre-Dame de Paris* (the [Hunchback of Notre-Dame](#)), which was quickly translated into English and other European languages. The great popularity of the novel launched a movement for the restoration of the cathedral and other medieval monuments in Paris. In 1841, Louis-Philippe made Hugo a peer of France, a ceremonial position with a seat in the upper house of the French parliament (the [Chamber of Peers](#)). Hugo spoke out against the death penalty and for freedom of speech. While living in his house on the Place Royale (now the [Place des Vosges](#)), he began working on his next novel, [Les Misérables](#).
- [François-René de Chateaubriand](#) refused to swear allegiance to Louis-Philippe and instead secluded himself in his apartment at 120 [Rue du Bac](#), where he wrote his most famous work, the [Mémoires d'outre-tombe](#), which was not published until after his death. He died in Paris on 4 July 1848, during the [French Revolution of 1848](#).
- After writing several novels, [Honoré de Balzac](#) in 1832 conceived the idea of a series of books that would paint a panoramic portrait of "all aspects of society," eventually called [La Comédie Humaine](#). He declared to his sister, "I am about to become a genius." He published [Eugénie Grandet](#), his first bestseller, in 1833, followed by [Le Père Goriot](#) in 1835, the two-volume [Illusions perdues](#) in 1843, [Splendeurs et misères des courtisanes](#) and [Le Cousin Pons](#) in 1847 and [La Cousine Bette](#) 1848. In each of the novels, Paris is the setting and a major participant.
- The highly prolific [Alexandre Dumas, père](#), published [The Three Musketeers](#) in 1844; [Twenty Years After](#) and [La Reine Margot](#) in 1845; [The Count of Monte Cristo](#) in 1845–1846; [La Dame de Monsoreau](#) in 1846; [The Vicomte de Bragelonne](#) in 1847; [The Vicomte de Bragelonne](#) in 1847; and many more novels in addition to many theatrical versions of his novels for the Paris stage.
- [Stendhal](#) published his first major novel, [Le Rouge et le Noir](#), in 1830, and his second, [La Chartreuse de Parme](#), in 1839.

Other major Paris writers of the July Monarchy included [George Sand](#), [Alfred de Musset](#), and [Alphonse de Lamartine](#). The poet [Charles Baudelaire](#), born in Paris, published his first works, essays of art criticism.

The [Paris Salon](#), held every year at the Louvre, continued to be the most important event in the French art world, establishing both prices and reputations of artists. It was dominated for most of the reign of Louis-Philippe by the [romantic](#) painters. The most prominent figure in painting was [Eugène Delacroix](#), whose romantic paintings portrayed historical, patriotic and religious subjects. His most famous painting of the period, [Liberty Leading the People](#) (*La Liberté guidant le peuple*), an allegory of the 1830 revolution, was purchased by the French state, but was considered to be too inflammatory to be shown in public until 1848. Other prominent artists whose work appeared in the Paris Salon included [Théodore Chassériau](#) and [Jean-Auguste-Dominique Ingres](#), who had been a prominent figure in French painting since the reign of Napoleon I.

A new generation of artists made their appearance in the 1840s, led by [Gustave Courbet](#), who exhibited his *Self-Portrait with a Black Dog* at the Paris Salon in 1844. His arrival as the leader of the [realist](#) movement did not come until after the 1848 Revolution.

Paris was the home of some of the world's most renowned musicians and composers during the July Monarchy. The most famous was [Frédéric Chopin](#), who arrived in Paris from Poland in September 1831 at the age of twenty-one and never returned to his homeland after the [Polish uprising against Russian rule in October 1831](#) was crushed. Chopin gave his first concert in Paris at the [Salle Pleyel](#) on 26 February 1832 and remained in the city for most of the next seventeen years, until his death in October 1849. He gave just 30 public performances during those years, preferring to give recitals in private salons instead. He earned his living mainly from commissions given by wealthy patrons, including the wife of [James Mayer de Rothschild](#), the publication of his compositions, and from private piano lessons. Chopin lived at different times at 38 [Rue de la Chaussée-d'Antin](#) and at 5 [Rue Tronchet](#). He had a ten-year relationship with the writer [George Sand](#) between 1837 and 1847. In 1842, they moved together to the [Square d'Orléans](#), at 80 Rue Taitbout, where the relationship ended.

[Franz Liszt](#) also lived in Paris during this period, composing music for the piano and giving concerts and music lessons. He lived at the Hôtel de France on the [Rue La Fayette](#), not far from Chopin. The two men were friends, but Chopin did not appreciate the manner in which Liszt played variations on his music. The violinist [Niccolò Paganini](#) was a frequent visitor and performer in Paris. In 1836, he made an unfortunate investment in a Paris casino and went bankrupt. He was forced to sell his collection of violins to pay his debts.

The French composer [Hector Berlioz](#) had come to Paris from [Grenoble](#) in 1821 to study medicine, which he abandoned for music in 1824, attending the [Paris Conservatory](#) in 1826; he won the [Prix de Rome](#) for his compositions in 1830. He was working on his most famous work, the [Symphonie Fantastique](#), at the time of the July 1830 revolution. It had its premiere on 4 December 1830.

[Charles Gounod](#), born in Paris in 1818, was studying composition during the reign of Louis-Philippe, but had not yet written the opera [Faust](#) and his other best known works.

Paris was the birthplace of modern photography. A process for capturing images on plates coated with light-sensitive chemicals had been discovered by [Nicéphore Niépce](#) in 1826 or 1827 in rural France. After this death in 1833, the process was refined by the Paris artist and entrepreneur [Louis Daguerre](#), who had invented the Paris [Diorama](#). His new method of photography, called the [daguerrotype](#), was publicly announced to a joint meeting of the [French Academy of Sciences](#) and the [Academy of Fine Arts](#) in Paris on 19 August 1839. Daguerre gave the rights to the invention to the French nation, which offered them for free to any user in the world. In exchange, Daguerre received a pension from the French state. The daguerrotype became the most common method of photography during the 1840s and 1850s.

Parisians of all classes frequented the theater during the July Monarchy, lining up to see operas, dramas, comedies, [melodramas](#), [vaudeville](#) and [farce](#). Tickets ranged in price from ten francs for the best seats at the Italian Opera to 30 sous for a seat in the "[paradis](#)" the highest balcony, in one of the popular melodrama or variety theaters. These were the most important venues for theater in Paris in the 1830s and 1840s:

- Italian opera was performed under the auspices of the [Théâtre-Italien](#) at the [Théâtre de la Renaissance](#) on the Rue Méhul and Rue Neuve des Petits-Champs. It had two thousand seats, and all the singers and musicians were Italian.
- French opera was performed under the auspices of the [Académie Royale de Musique](#) on the Rue Le Pelletier, near the Théâtre-Italien.
- The [Opéra-Comique](#) performed at the Salle Favart, located on what is now called the [Place Boieldieu](#), and presented lighter operatic works.
- The [Comédie Française](#) performed at the Salle Richelieu on the Rue Richelieu. Its most famous dramatic star during the reign of Louis-Philippe was Mademoiselle Rachel (see below).
- The [Odéon](#) theater presented classical drama and comedy in competition with the Comédie Française. In the 1840s, its most famous star was [Mademoiselle Georges](#) who had been the leading actress of Paris theater during the [First Empire](#) and the Bourbon Restoration.
- The [Théâtre du Gymnase](#) on the Boulevard Bonne Nouvelle specialized in farce. Its most famous actor was Bouffé, considered the greatest comic actor of the period.
- The [Théâtre du Vaudeville](#) stood on the Place de la Bourse, facing the stock exchange, and was known for light comedy.
- The [Théâtre de la Porte Saint-Martin](#), located on the Boulevard Saint-Martin, was known for melodrama and burlesque; its most famous star in the 1830s and 1840s was [Frédéric Lemaître](#).
- The [Théâtre de l'Ambigu-Comique](#) on the Boulevard Saint-Martin specialized in melodrama and vaudeville.

In addition to these stages, there was a separate group of five theaters, mostly for working class audiences, together on the Boulevard du Temple: the [Cirque Olympique](#), the [Folies-Dramatiques](#), the [Théâtre de la Gaîté](#), the [Théâtre des Funambules](#), and the Théâtre Saqui. They were best known for melodramas, giving that section of the street the nickname the [Boulevard du Crime](#). The most famous theater of that group was the Funambules, known for its performances of the [Pierrot](#) mime [Jean-Gaspard Debureau](#), who performed there from 1819 until 1846. He and his cultural milieu were memorably portrayed in the 1945 film by [Marcel Carné](#), [Les Enfants du Paradis](#) (*The Children of the Paradise*).

The most famous female dramatic star of the Paris theater was [Rachel Félix](#), better known as "Mademoiselle Rachel", a German actress who had come to the Comédie Française in Paris in 1830, and became celebrated for her dramatic roles in works of [Jean Racine](#), [Voltaire](#), and [Pierre Corneille](#), particularly as [Phèdre](#) in Racine's play of the same name. The most famous male actor was [Frédéric Lemaître](#), who gained fame by transforming a serious dramatic role, that of [Robert Macaire](#), into a burlesque role. During the reign of Louis-Philippe, he starred in Victor Hugo's play [Ruy Blas](#), and in the Balzac's play [Vautrin](#). The latter play was promptly banned by royal censors, because his wig closely resembled that of Louis-Philippe.

At the beginning of the reign of Louis-Philippe, the most celebrated restaurants were found in the arcades of the Palais-Royal, but by 1845, the Grands Boulevards, where the theaters were located, had become the main restaurant district. The most famous and expensive restaurants in the city were lined up along the Boulevard des Italiens: the [Café Anglais](#) at no. 13; the Café Riche at no. 16; the [Maison dorée](#) at no. 20; and the Café de Paris at no. 22. It was also the home of the Café Tortoni, known for its Italian ice creams and pastries. The Café Anglais was a frequent meeting place of the characters in Balzac's series of novels, [La Comédie humaine](#).^[39]

[Guinguettes](#) created popular diversions for all classes of Parisians, especially on Sundays. They were taverns or cabarets mostly located just outside the city limits, where taxes on wine and spirits were lower; the greatest concentrations were in [Montmartre](#), [Belleville](#), [Montrouge](#), and just outside the city customs tollhouses of [Barrière d'Enfer](#), [Maine](#), [Montparnasse](#), [Courtille](#), [Trois Couronnes](#), [Ménilmontant](#), [Les Amandiers](#), and [Vaugirard](#). They usually had musicians and dancing on Sundays, and Parisians often brought their whole families. There were 367 in 1830, of which 138 were in the city itself and 229 in the suburbs. In 1834, there were 1496, of which 235 were in Paris and 261 outside the city limits.^[40]

Amusement parks had been very popular during the Bourbon Restoration, but went into a decline during the reign of Louis-Philippe. They were summer gardens that offered food, drinks, music, dancing, acrobats, fireworks and other entertainments for an entry fee. They went into a decline as real estate prices rose and the valuable land was sold for building lots. The best known, the [Nouveau Tivoli](#), at 88 Rue de Clichy, closed in 1842. The [Jardin Turc](#) on the Rue du Temple, a popular café and summer garden, continued until the early 20th century.

A [panorama](#) was a very large realistic painting of a city or natural wonder, displayed in a circular building so that viewers, on a platform in the center, felt they were seeing real thing. The first panoramas had been introduced by the American engineer and entrepreneur [Robert Fulton](#) in the [Passage des Panoramas](#) on the Rue Montmartre in 1799. In 1831, the French inventor [Jacques Daguerre](#) invented the [diorama](#), a display of two similar paintings lit by a moving lamp in such a way as to create the illusion of three dimensions. The building in which the diorama was located burned in 1839, and Daguerre turned his attention to developing the new technology of photography. A new theater for panoramas was built in 1839 by the architect [Jacques Ignace Hittorff](#) at the [Carré Marigny](#) on the Champs-Élysées to display [Jean-Charles Langlois](#)'s monumental historical painting, *The Burning of Moscow in 1812*. The building, still standing, is now a theater located next to the [Grand Palais](#).^[41]

Despite his popularity with many Parisians at the beginning of his reign, Louis-Philippe almost immediately faced fierce opposition from those who wanted to replace the monarchy with a republic and press for radical social reforms; opposition was strongest among students, the working class and members of the new [socialist](#) movement. The first riot took place in December 1830, after the trial of the ministers of King Charles X; the crowd was furious that they were given life sentences instead of the death penalty. More riots took place in 1831 to protest a memorial service held at the church of [Saint-Germain-l'Auxerrois](#) for the [Duke of Berry](#), a prominent monarchist who had been assassinated on 14 February 1820 during the reign of King [Louis XVIII](#). The interior of the church was pillaged, and the next day, the rioters attacked the church of [Notre-Dame de Bonne-Nouvelle](#) and the palace of the archbishop of Paris, next to the cathedral of Notre-Dame. The archbishop's residence was badly damaged and ultimately demolished.^[42]

On 4 June 1832, the funeral procession of [General Lamarque](#), an anti-monarchist army officer popular with the students who had died of cholera, was turned into a massive demonstration

against the government; the protesters chanted "Long live the Republic!" and "Down with the Bourbons!". About 4000 students, workers and their supporters put up barricades in the narrow streets of the quarters of Les Lombards, Arcis, Sainte-Avoye and the Hôtel de Ville. They took control of the area of the city between Bastille and Les Halles, but there was little public support outside these neighborhoods. Despite fierce resistance from the students and workers, the rebellious area was gradually reduced by the army to the streets around cloister of [Saint-Merri](#) and crushed on 6 June. The state of emergency lasted until 29 June. 5000 persons were arrested, but only 82 were sentenced; seven were sentenced to death, with the sentences finally reduced to deportation. This event became a dramatic episode in Victor Hugo's novel *Les Misérables*. There were more demonstrations the following year, with the red flag raised on the [Pont d'Austerlitz](#), more barricades raised in the Saint-Merri neighborhood and two days of fighting between government forces and revolutionaries. There were more riots and barricades in the same neighborhood in the spring of 1834; soldiers attacked a building from which they said shots had been fired and killed many of the demonstrators inside.^[42]

The most dramatic attack on the government took place on 28 July 1835, the anniversary of the July Revolution of 1830. Louis-Philippe and his generals conducted a grand review of the army and National Guard lined up along the Grand Boulevards. At one o'clock in the afternoon, as Louis-Philippe and his entourage were passing the Café Turc on the Boulevard du Temple, an "infernal machine" of multiple gun barrels was fired from a window. [Maréchal Mortier, duc de Trévise](#), riding with the king, was killed, and six generals, two colonels, nine officers and 21 spectators were wounded, some mortally. The king was grazed by a projectile, but gave the order to continue the parade. The organizer of the attack, [Giuseppe Marco Fieschi](#), and his two accomplices were arrested and later guillotined.^[42] These were not the last attacks on the Louis-Philippe: there was another attempt to shoot him in 1836, two in 1840, and two more in 1846, including one shooting attempt by a gunman while he was greeting the crowd in the Tuileries gardens from the balcony of the palace.

An attempted *coup d'état* took place in May 1839 in the center of the city, led by the radical republican [Armand Barbès](#) and the socialist [Auguste Blanqui](#). On the afternoon of 12 May, about a thousand revolutionaries took up weapons and set out to seize the prefecture of police, the Châtelet, the Palais de Justice, and the Hôtel de Ville. They failed to capture the prefecture of police, and by the end of the afternoon, the regular army, municipal police and national guard had arrested most of the revolutionaries. The leaders were imprisoned until the end of the regime.^[43]

Paris under Louis-Philippe also became a magnet for revolutionaries from other countries. [Karl Marx](#) moved to Paris in October 1843, and lived at 23 Rue Vaneau, where his daughter Jenny was born, and later at no. 38 on the same street. He became the editor of radical leftist German newspapers *Deutsch–Französische Jahrbücher* and *Vorwärts!*. The famous Russian anarchist and revolutionary [Mikhail Bakunin](#) was also an editor of the *Jahrbücher*. On 28 August 1844, Marx met for the first time his future collaborator [Friedrich Engels](#) at the [Café de la Régence](#) at the Palais-Royal, a café renowned for the international chess masters who regularly played there. At the request of [Frederick William IV, King of Prussia](#), Marx was expelled from France in April 1845. He then moved to Brussels.

The workers of Paris, especially those who had come from the provinces, were also increasingly dissatisfied with the government of Louis-Philippe. They complained of rising prices, low wages, and unemployment, and began to organize and go on strike. The workers on the new sewers were the first to strike, on 4 August 1832, followed by carpenters, then

those working in wallpaper and garment factories. A period of economic growth calmed the unrest for a time but, in 1846-1847, a new economic crisis hit France in the form of a shortage of credit and money for investment caused by excessive speculation in the new railroads. Unemployment and the number of strikes increased, and confidence in the government's promises of prosperity fell.

The dominant issue that brought many Parisians into conflict with the government was the right to vote, which was limited only to the wealthiest citizens. Only a third of the members of the [National Guard](#), the main defense force of the regime in Paris, had the right to vote. The conservative government, with Louis-Philippe's support, refused to broaden the number of voters. In the elections for the Chamber of Deputies in July 1842, conservatives and monarchists retained their majority, but in Paris, ten of the twelve new members belonged to the opposition, two of them republicans. In the elections of 1846, more than 9000 votes went to opposition candidates out of 14,000 cast. Increasingly, the Parisians were more critical of Louis-Philippe's government than the rest of the country.^[44]

On 9 July 1847, the members of the opposition launched a new tactic to demand change in the electoral system: they held a large banquet in the park of the Château Rouge (now in the [Quartier du Château Rouge](#)) on the Rue de Clignancourt. The banquet was attended by 1200 persons, including 86 deputies. After this event, other opposition banquets were held in each of the arrondissements, and in cities around the country. One banquet was followed by a march of two to three thousand students under rain from the Madeleine and the Place de la Concorde. The government, under [François Guizot](#), the Minister of the Interior, banned any further banquets and similar demonstrations and called on the National Guard to enforce the order. The National Guard, sympathetic to the opposition, refused to move, and instead chanted "Long live reform!" and "Down with Guizot!"

In the evening of 23 February 1848, a large crowd supporting the opposition gathered at the corner of the Rue Neuve des Capucines (since 1861, the Rue des Capucines) and [Boulevard des Capucines](#) in front of the now demolished Hôtel de Wagram, which housed the Ministry of Foreign Affairs. At ten o'clock, at the sound of a gunshot, the battalion of soldiers guarding the building opened fire, killing 52 persons. At the news of the shooting, the leaders of the opposition called for an immediate uprising. On 24 February 1500 barricades went up all over Paris, many of them manned by soldiers of the National Guard. The commander of the regular army in Paris, [Marshal Bugeaud](#), refused to give the order to open fire on the barricades. As a result, and on the same day, Louis-Philippe abdicated in favor of his nine-year-old grandson, [Prince Philippe, Count of Paris](#). Simultaneously, a large crowd had invaded the Chamber of Deputies and called for a provisional government. A republican, [Louis-Antoine Garnier-Pagès](#), was named the new mayor of Paris. On 25 February 1848, the poet [Alphonse de Lamartine](#) proclaimed the [Second Republic](#) and urged the crowd to keep the [tricolor](#), rather than adopting the red flag as the national symbol. Another crowd invaded the Tuileries Palace, seized the royal throne, carried it to [Place de la Bastille](#), and burned it at the foot of [July Column](#). Louis-Philippe (in disguise as "Mr. Smith") and his family left the palace on foot through the garden of the Tuileries and reached the Place de la Concorde. There, they climbed into two carriages, and, with Louis-Philippe driving one carriage with three of his sons, fled Paris and took refuge in [Dreux](#). On 2 March, the ex-king embarked at [Le Havre](#) for England, where he lived in exile with his family until his death on 26 August 1850.^[45]

PARIS IN 1852-1870

During the [Second French Empire](#), the reign of Emperor [Napoleon III](#) (1852–1870), [Paris](#) was the largest city in continental [Europe](#) and a leading center of finance, commerce, fashion, and

the arts. The population of the city grew dramatically, from about one million to two million persons, partly because the city was greatly enlarged, to its present boundaries, through the annexation of eleven surrounding [communes](#) and the subsequent creation of eight new [arrondissements](#).

In 1853, Napoleon III and his prefect of the Seine, [Georges-Eugène Haussmann](#), began a massive public works project, constructing new boulevards and parks, theaters, markets and monuments, a project that Napoleon III supported for seventeen years until his downfall in 1870, and which was continued afterward under the [Third Republic](#). The street plan and architectural style of Napoleon III and Haussmann are still largely preserved and manifestly evident in the center of Paris.

[Napoleon III](#), the nephew of [Napoleon Bonaparte](#), was born in Paris, but spent very little of his life there until he assumed the presidency of the [French Second Republic](#) in 1848. Earlier, he had lived most of his life in exile in [Switzerland](#), [Italy](#), the [United States](#), and [England](#). At the time of his election as the French president, he had to ask [Victor Hugo](#) where the [Place des Vosges](#) was located. He was greatly influenced by [London](#), where he had spent years in exile; he admired its squares, wide streets, sidewalks, and especially [Hyde Park](#) with its lake and winding paths, which he later copied in the [Bois de Boulogne](#) and other Paris parks.

In 1852, Paris had many beautiful buildings; but, according to many visitors, it was not a beautiful city. The most significant civic structures, such as the [Hôtel de Ville](#) and the [Cathedral of Notre Dame](#), were surrounded and partially hidden by slums. Napoleon wanted to make them visible and accessible.^[1] Napoleon III was fond of quoting the utopian philosopher [Charles Fourier](#): "A century which does not know how to provide luxurious buildings can make no progress in the framework of social well-being... A barbarian city is one composed of buildings thrown together by hazard, without any evident plan, and grouped in confusion between twisting, narrow, badly-made and unhealthy streets." In 1850, he declared: "Let us make every effort to embellish this great city. Let us open new streets, make healthy the crowded arrondissements which are lacking air and daylight, and let the healthy sunlight penetrate every corner within our walls."^[2]

When Napoleon III staged a *coup d'état* to become [Emperor](#) in December 1852, he began to transform Paris into a more open, healthier, and more beautiful city. He immediately attacked the major flaws of the city: overcrowded and unhealthy slums, particularly on the [Île de la Cité](#); the shortage of drinking water; sewers that emptied directly into the [Seine](#); the absence of parks and green spaces, especially in the outer parts of the city; congestion in the narrow streets; and the need for easier travel between the new train stations.

In 1853, Napoleon III assigned his new prefect of the [Seine department](#), [Georges-Eugène Haussmann](#), the task of bringing more water, air, and light into the city center, widening the streets to make traffic circulation easier, and making it the most beautiful city in Europe.

Haussmann worked on his vast projects for seventeen years, employing tens of thousands of workers. He rebuilt the sewers of Paris so they no longer emptied into the Seine and built a new [aqueduct](#) and [reservoir](#) to bring in more fresh water. He demolished most of the old medieval buildings on the [Île de la Cité](#) and replaced them with a new [hospital](#) and government buildings.

In the city center, he conceived four [avenues](#) arranged as a huge cross: a north–south axis connecting the [Gare de Paris-Est](#) in the north with the [Paris Observatory](#) in the south, and an east–west axis from the [Place de la Concorde](#) along the [Rue de Rivoli](#) to the [Rue Saint-Antoine](#). He built new, wide avenues, including the [Boulevard Saint-Germain](#), the [Avenue de l'Opéra](#), [Avenue Foch](#) (originally Avenue de l'impératrice), Avenue Voltaire, the [Boulevard](#)

[de Sébastopol](#) and Avenue Haussmann. He planted more than one hundred thousand trees along the new avenues. Where they intersected, he built new squares, fountains, and parks, to give a more harmonious appearance to the city. He imposed strict architectural standards for the buildings along the new boulevards: they all had to be the same height, follow a similar design, and be faced with the same cream-hued stone. This gave the Paris boulevards the distinctive appearance they retain to the present day.^[3]

For the recreation and relaxation of all classes of Parisians, Napoleon III created four new parks at the cardinal points of the compass: the [Bois de Boulogne](#) to the west, the [Bois de Vincennes](#) to the east, the [Parc des Buttes-Chaumont](#) to the north, and [Parc Montsouris](#) to the south.^[4]

To better connect his capital with the rest of France, and to serve as the grand gateways to the city, Napoleon III built two new train stations, the [Gare du Nord](#) and the [Gare d'Austerlitz](#), and rebuilt the [Gare de Paris-Est](#) and the [Gare de Lyon](#). To revitalize the cultural life of the city, he demolished the old theater district, the "Boulevard du Crime", replaced it with five new theaters, and commissioned a new opera house, the [Palais Garnier](#), as the new home of the [Paris Opera](#), and the centerpiece of his downtown reconstruction. He also completed the Louvre, left unfinished since the [French Revolution](#), built a new central market of gigantic glass and iron pavilions at [Les Halles](#), and constructed new markets in each of the arrondissements.^[5]

In 1859, Napoleon III issued a decree annexing the suburban communes around Paris: [La Villette](#), [Belleville](#), [Montmartre](#), [Vaugirard](#), [Grenelle](#), [Auteuil](#), [Passy](#), [Batignolles](#), [La Chapelle](#), [Charonne](#), [Bercy](#), and parts of [Neuilly](#), [Clichy](#), [Saint-Ouen](#), [Aubervilliers](#), [Pantin](#), [Le Pré-Saint-Gervais](#), [Saint-Mandé](#), [Bagnolet](#), [Ivry-sur-Seine](#), [Gentilly](#), [Montrouge](#), [Vanves](#), and [Issy-les-Molineaux](#). All of them became part of the city of Paris in January 1860. Their residents were not consulted and were not entirely pleased, since it meant having to pay higher taxes; but there was no legal recourse available to them. The area of the city expanded to its present boundaries and jumped in population from 1,200,000 to 1,600,000. The annexed areas were organized into eight new arrondissements; Haussmann enlarged his plans for Paris to include new city halls, parks and boulevards to connect the new arrondissements to the center of the city.^[6]

The population of Paris was recorded as 949,000 in 1851. It grew to 1,130,500 by 1856 and was just short of two million by the end of Second Empire, including the 400,000 residents of the suburbs annexed to Paris in 1860.^[7] According to a census made by the city of Paris in 1865, Parisians lived in 637,369 apartments or residences. Forty-two percent of the city population, or 780,000 Parisians, were classified as indigent, and thus too poor to be taxed. Another 330,000 Parisians, who occupied 17 percent of the housing of the city, were classified as lower middle class, defined as individuals who paid rents of less than 250 francs. 32 percent of the lodgings in Paris were occupied by the upper-middle class, defined as individuals who paid rents of between 250 and 1500 francs. Three percent of Parisians, or fifty thousand people, were classified as wealthy individuals who paid more than 1500 francs for rent.^[8]

In the early part of the 19th century, the majority of Parisians were employed in commerce and small shops; but by the mid-19th century, conditions had changed. In 1864, 900,000 of the 1,700,000 inhabitants of Paris were employed in workshops and industry. These workers were typically employed in manufacturing, usually for the luxury market and on a small scale. The average [atelier](#), or workshop, employed only one or two workers.^[9] Similar types of manufacturing tended to be located in particular areas of the city. Furniture-makers and

craftsmen who worked with bronze were located in the [Faubourg Saint-Antoine](#); makers of tassels were found in the Faubourg Saint-Denis; shops that specialized in fabric trimming and fringes (*passementerie*) were found (and are still found) in the [Temple](#) area. Often the workshops were found in old houses on side streets. Thousands of crafts worked at home, making everything from watch chains to shoes and clothing. A large garment business could employ four thousand men and women, most working at home. In the Temple area, twenty-five thousand workers worked for five thousand employers.^[10]

The market for Parisian products changed during the Second Empire. Previously, the clientele for luxury goods had been very small, mostly restricted to the nobility; and to meet their needs a small number of craftsmen had worked slowly and to very high standards. During the Second Empire, with the growth of the number of wealthy and upper middle class clients, lower-paid specialist craftsmen began to make products in greater quantity and more quickly, but of poorer quality than before. Craftsmen with nineteen different specialties were employed to make high-quality Moroccan leather goods. To make fine dolls, separate craftsmen and women, working separately and usually at home, made the body, the head, the arms, the teeth, the eyes, the hair, the lingerie, the dresses, the gloves, the shoes, and the hats.^[11]

Between 1830 and 1850, more heavy industry began to locate in Paris. One tenth of all the steam engines in France were made in the capital. These industrial enterprises were usually located in the outer parts of the city, where there was land and access to the rivers or canals needed to move heavy goods. The metallurgy industry established itself along the Seine in the eastern part of the city. The chemical industry was located near La Villette, in the outer part of the city, or at Grenelle. Factories were established to make matches, candles, rubber, ink, gelatine, glue, and various acids. A thousand workers were employed by the Gouin factory in Batignolles to make steam engines. Fifteen hundred were employed by the Cail factories in Grenelle and Chaillot to make rails and ironwork for bridges. At [Levallois-Perret](#), a young engineer, [Gustave Eiffel](#), started an enterprise to make the frames of iron buildings. The eastern part of the city was subjected to noise, smoke, and the smells of industry. Wealthier Parisians moved to the west end of the city, which was quieter and where the prevailing winds kept out the smoke from the east. When the wealthy and middle-class people deserted the eastern areas, most of the small shops also closed and relocated elsewhere, leaving the outer suburbs of eastern Paris with only factories, and housing occupied by the poor.^[12]

The artisans and workers of Paris had a precarious existence. 73% of the residents of the working-class areas earned a daily salary between 3.25 and 6 francs; 22% earned less than three francs; only 5% had a salary between 6.5 and 20 francs. Food cost a minimum of one franc a day, and the minimum necessary for lodging was 75 centimes a day. In most industries, except those connected with food, there was a long *morte-saison* ("dead season"), when the enterprises closed down and their workers were unpaid. To support a family properly, either the wife and children had to work, or the husband had to work on Sundays or longer hours than normal. The situation for women was even worse; the average salary for a woman was only two francs a day. Women workers also faced increasing competition from machines: two thousand sewing machines, just coming into use, could replace twelve thousand women sewing by hand. Women were typically laid off from work before men.^[13]

The workday at three-quarters of the enterprises in Paris was twelve hours, with two hours allowed for lunch. Most workers lived far from their place of employment, and public transport was expensive. A train on the inner circle line cost 75 centimes round-trip, so most workers walked to work with a half-kilogram loaf of bread for their lunch. Construction workers on Haussmann's grand projects in the city center had to leave home at 4 a.m. to arrive

at work by 6 a.m., when their workday began. Taverns and wine merchants near the work sites were open at a very early hour; it was common for workers to stop for a glass of white wine before work to counter the effects of what they had drunk the night before.

Office workers were not paid much better than artisans or industrial workers. The first job of novelist [Émile Zola](#), in May 1862, was working as a mail clerk for the book publisher [Louis Hachette](#); he put books into packets and mailed them to customers, for which he was paid 100 francs a month. In 1864, he was promoted to head of publicity for the publisher at a salary of 200 francs a month.^[14]

The [chiffonniers](#) (sometimes translated "rag-pickers" in English) were the lowest class of Paris workers; they sifted through trash and garbage on the Paris streets for anything that could be salvaged. They numbered about twelve thousand at the end of the Second Empire. Before the arrival of the *poubelle*, or [rubbish bin](#), during the [Third Republic](#), trash and garbage were simply dumped onto the street. The lowest level of chiffonniers searched through the common refuse; they had to work very quickly, because there was great competition, and they feared that their competitors would find the best objects first. The *placier* was a higher class of chiffonnier, who took trash from the houses of the upper classes, usually by arrangement with the [concierge](#). The *placier* provided certain services, such as beating carpets or cleaning doorways, and in exchange was able to get more valuable items, from silk and satin to old clothing and shoes to leftovers from banquets. Six houses on the Champs-Élysées were enough to provide for the family of a *placier*. The next level up was the *chineur*, a merchant who bought and resold trash, such as old bottles and corks from taverns, old clothes and bits of iron. At the top of the hierarchy were the *maître-chiffonniers*, who had large sheds where trash was sorted and then resold. Almost everything was re-used: old corks were sold to wine-merchants; orange peels were sold to distillers; bones were used to make dominoes, buttons, and knife handles; cigar butts were resold; and stale bread was burned and used to make a cheap coffee substitute. Human hair was collected, carefully sorted by colour, length, and texture, and used to make wigs and hair extensions.^[15]

Twenty-two percent of Parisians earned less than three francs a day, and daily life was a struggle for them. Their numbers grew as new immigrants arrived from other regions of France. Many came to the city early in the Empire to perform the unskilled work needed in demolishing buildings and moving earth for the new boulevards. When that work ended, few of the new immigrants left. The city established *bureaux de bienfaisance*—or charity bureaus, with an office in each arrondissement—to provide temporary assistance, usually in the form of food, to the unemployed, the sick, the injured, and women who were pregnant. The assistance ended when the recipients recovered; the average payment was 50 francs per family per year. Those who were old or had incurable illnesses were sent to a [hospice](#). 130,000 people received this assistance, three-quarters of them immigrants from outside Paris. The public aid was supplemented by private charities, mostly operated by the church, which established a system of [crèches](#) for poor children and weekly visits by [nuns](#) to the homes of the sick and new mothers.^[16]

For those working-class Parisians who had been laid off or were temporarily in need of money, a special institution existed: the Mont-de-Piété. Founded in 1777, it was a sort of pawn shop or bank for the poor, with a main office on the [Rue des Francs-Bourgeois](#) and bureaus in twenty arrondissements. The poor could bring any piece of property, from jewels or watches to old sheets, mattresses, and clothing, and receive a loan. In 1869, it received more than 1,500,000 deposits in exchange for loans, two-thirds of which were of less than ten francs. The interest rate on the loans was 9.5 percent, and any object not claimed within a year was sold. The institution collected between 1000 and 1200 watches a day. Many clients used

the same watch or object to borrow money every month, when money ran short. Workers would often pawn their tools during a slow season without work.

Below the poor, there was an even lower class, of beggars and vagabonds. A law passed in 1863 made it a crime to be completely without money; those without any money at all could be taken to jail, and those unlikely to get any money were taken to the *Dépôt de mendicité*, or beggar's depot, located in [Saint-Denis](#), where about a thousand beggars were put to work making rope or straps, or sorting rags. They were paid a small amount, and when they had earned a certain sum, they were allowed to leave, but most soon returned; and the majority died at the depot.^[17]

During the Second Empire, Paris had five main cemeteries: [Père Lachaise](#), [Montparnasse](#), [Montmartre](#), [Saint-Ouen](#), and Ivry-sur-Seine. In addition, there were several smaller communal cemeteries. Funeral parlors offered seven different styles of burial, ranging in price from 18 francs to more than 7,000 francs for an elaborate individual monument. Two thirds of Parisians, however, were buried in collective graves in a corner of the cemeteries, with the cost paid by the city. Before Napoleon III, the corpses of indigents were simply piled into trenches in seven layers, each covered with a thin layer of earth and lime. Napoleon III had the process made somewhat more dignified, with the corpses laid side-by-side in a single layer in a trench. The city would pay for a priest who, if requested, would provide a short service and scatter holy water on the trench. Indigents who died in hospitals and those whose bodies had been dissected in medical schools continued to be buried in the more crowded trenches. For all indigent burials, the bodies remained in the trenches only long enough for them to decompose, no longer than five years. After that time, all remains were dug up and transferred to an [ossuary](#), so that the space could be used for new burials.^[20]

In 1860, Haussmann complained that the cemeteries inside the city posed a serious threat to public health, and proposed to ban burials in the city. His alternative was to have all burials take place in a very large new cemetery, outside the city, served by special funeral trains that would bring the remains and the mourners from the city. Haussmann quietly began acquiring land for the new cemetery. The project ran into strong opposition in the French Senate in 1867, however, and Napoleon decided to postpone it indefinitely.^[21]

In 1863, Paris had eight passenger train stations that were run by eight different companies, each with rail lines connecting to a particular part of the country: the [Gare du Nord](#) connected Paris to Great Britain via ferry; the Gare de Strasbourg—now the [Gare de l'Est](#)—to Strasbourg, Germany, and eastern Europe; the [Gare de Lyon](#)—run by the Company Paris-Lyon-Méditerranée—to Lyon and the south of France; the Gare d'Orléans—now the [Gare d'Austerlitz](#)—to Bordeaux and southwest France; the [Gare d'Orsay](#); the Gare de Vincennes; the Gare de l'Ouest Rive Gauche—on the [Left Bank](#) where the [Gare Montparnasse](#) is today—to Brittany, Normandy, and western France; and the Gare de l'Ouest—on the [Right Bank](#), where the [Gare Saint-Lazare](#) is today—also connecting to the west. In addition, there was a huge station just outside the fortifications of the city where all freight and merchandise arrived.^[22]

The owners and builders of the railroad stations competed to make their stations the most palatial and magnificent. The owner of the Gare du Nord, [James Mayer de Rothschild](#), stated that arriving at his station would have "an imposing effect, due to the grandeur of the station."^[23] He completely demolished the old station and hired [Jacques Hittorff](#), a classical architect who had designed the Place de la Concorde, to create the new station. The monumental facade included twenty-three statues by famous sculptors, representing the cities of northern France served by the company. At its opening in 1866, it was described as "a veritable temple of steam."^[24]

The Gare de l'Ouest, on the right bank, the busiest of the stations, occupied eleven hectares and was home to a fleet of 630 locomotives and 13,686 passenger coaches, including those for first class, second class, and third class. 70 trains a day operated in the peak season and during the Paris expositions. If passengers needed to make a connection, a service of 350 horse-drawn omnibuses operated by the railroad carried passengers to the other stations.

The journey from Paris to Orléans, a distance of 121 kilometers, cost 13 francs 55 centimes for a first-class ticket; 10 francs 15 centimes for a second class ticket; and 7 francs 45 centimes for a 3rd class ticket.^[25]

The engineers or drivers of the locomotives, called *mechaniciens*, had a particularly difficult job; the cabs of the locomotives had no roofs and no sides, and were exposed to rain, hail, and snow. In addition, it was scorching hot, since they had to work in front of the boiler. A locomotive driver earned 10 francs a day.^[26]

The new train stations welcomed millions of tourists, including those who came for the two Universal Expositions during the Second Empire. They also welcomed hundreds of thousands of immigrants from other parts of France who came to work and settle in Paris. Immigrants from different regions tended to settle in areas close to the station that served their old region: [Alsatians](#) tended to settle around the Gare de l'Est and [Bretons](#) around the Gare de l'Ouest, a pattern still found today.^[citation needed]

From 1828 to 1855, Parisian public transport was provided by private companies that operated large horse-drawn wagons with seats, a vehicle called an [omnibus](#). The omnibuses of each company had distinct [liveries](#) and picturesque names: the Favorites, the Dames Blanches, the Gazelles, the Hirondelles, the Citadines. They served only the city center and wealthier areas, ignoring the working-class areas and the outer suburbs of the city. In 1855, Napoleon III's prefect of police, Pierre-Marie Piétri, required the individual companies to merge under the name *Compagnie général de omnibus*. This new company had the exclusive rights to provide public transport. It established 25 lines that expanded to 31 with the annexation of the outer suburbs, about 150 kilometers in total length. A ticket cost 30 centimes and entitled the passenger to one transfer. In 1855, the company had 347 cars and carried 36 million passengers. By 1865, the number of cars had doubled and the number of passengers had tripled.^[27]

The Paris omnibus was painted in yellow, green, or brown. It carried fourteen passengers on two long benches and was entered from the rear. It was pulled by two horses and was equipped with a driver and conductor dressed in royal blue uniforms with silver-plated buttons, decorated with the gothic letter O, and with a black necktie. The conductor wore a [kepi](#) and the driver a hat of varnished leather. In summer, they wore blue and white striped trousers and black straw hats. The omnibus was required to stop any time a passenger wanted to get on or off, but with time, the omnibus became so popular that passengers had to wait in line to get a seat.

The other means of public transport was the [fiacre](#), a box-like coach drawn by one horse that could hold as many as four passengers, plus the driver, who rode on the exterior. In 1855, the many different enterprises that operated fiacres were merged into a single company, the *Compagnie impériale des voitures de Paris*. In 1855, the company had a fleet of 6,101 fiacres with the emblem of the company on the door, and the drivers wore uniforms. The fiacres carried lanterns that indicated the area in which their depot was located: blue for Belleville, [Buttes-Chaumont](#), and Popincourt; yellow for Rochechouart and the [Pigalle](#); green for the Left Bank; red for Batignolles, Les Ternes, and [Passy](#). The color of the lantern allowed customers leaving the theaters to know which fiacres would take them to their own area. The fare was 1.80 francs for a journey, or 2.50 francs for an hour. A wait of more than five

minutes allowed the driver to demand payment for a full hour. The drivers were paid 1.5 francs per day for a working day that could last 15 to 16 hours. The company maintained a special service of plain-clothes agents to keep an eye on the drivers and make certain they submitted all the money they had collected. The fiacre was enclosed and upholstered inside with dark blue cloth. Fiacres figured prominently in the novels and poetry of the period; they were often used by clandestine lovers.^[28]

The gas lights that illuminated Paris at night during the Second Empire were often admired by foreign visitors and helped give the city its nickname *Ville-Lumière*, the City of Light. At the beginning of the Empire, there were 8,000 gas lights in the city; by 1870, there were 56,573 used exclusively to light the city streets.^[29]

The gas was produced by ten enormous factories—located around the edge of the city, near the circle of fortifications—and was distributed in pipes installed under the new boulevards and streets. Haussmann placed street lamps every twenty meters on the boulevards. Shortly after nightfall, a small army of 750 *allumeurs* in uniform, carrying long poles with small lamps at the end, went out into the streets, turned on a pipe of gas inside each lamppost, and lit the lamp. The entire city was illuminated within forty minutes. The amount of light was greatly enhanced by the white stone walls of the new Haussmann apartment buildings, which reflected the brilliant gaslight. Certain buildings and monuments were also illuminated: the [Arc de Triomphe](#) was crowned with a ring of gaslights, and they outlined the [Hôtel de Ville](#). The [Champs-Élysées](#) was lined with ribbons of white light. The major theaters, cafés, and department stores were also brightly lit with gaslight, as were some rooms in apartments in the new Haussmann buildings. The concert gardens, in which balls were held in summer, had gas lighting, as well as small gas lamps in the gardens, where gentlemen could light their cigars and cigarettes.^[30]

The central market of Paris, [Les Halles](#), had been in the same location on the Right Bank between the Louvre and the Hôtel de Ville since it was established by King [Philip II of France](#) in 1183. The first market had walls and gates, but no covering other than tents and umbrellas. It sold food, clothing, weapons, and a wide range of merchandise. By the middle of the 19th century, the open-air market was overcrowded, unsanitary, and inadequate for the needs of the growing city. On September 25, 1851, Napoleon III, then Prince-President, placed the first stone for a new market. The first building looked like a grim medieval fortress and was criticised by the merchants, public, and the Prince-President himself. He stopped construction and commissioned a different architect, [Victor Baltard](#), to come up with a better design. Baltard took his inspiration from [The Crystal Palace](#) in London, a revolutionary glass-and-cast-iron structure that had been built in 1851. Baltard's new design had fourteen enormous pavilions with glass and cast-iron roofs resting on brick walls. It covered an area of 70 hectares and cost 60 million francs to build. By 1870, ten of the fourteen pavilions were finished and in use. Les Halles was the major architectural achievement of the Second Empire and became the model for covered markets around the world.^[31]

Each night, 6000 wagons converged on Les Halles, carrying meat, seafood, produce, milk, eggs, and other food products from the train stations. The wagons were unloaded by 481 men wearing large hats called *les forts* (the strong), who carried the food in baskets to the pavilions. Pavilion no. 3 was the hall for meat; no. 9 for seafood; no. 11 for birds and game. Merchants in the pavilions rented their stalls for between one and three francs a day. Fruits and vegetables also arrived at night, brought by carts from farms and gardens around Paris; the farmers rented small spaces of one by two meters on the sidewalk outside the pavilions to sell their produce. The meat was carved, the produce put out on the counters, and the sellers—called "counter criers"—were in place by 5 a.m., when the market opened.

The first buyers in the morning were from institutions: soldiers with large sacks buying food for the army barracks; cooks buying for colleges, monasteries, and other institutions; and owners of small restaurants. Between six and seven in the morning, the fresh seafood arrived from the train stations, mostly from Normandy or Brittany, but some from England and Belgium. The fish were cleaned and put on the eight counters in hall no. 9. They were carefully arranged by sixteen *verseurs* ("pourers" or "spillers") and advertised in loud voices by 34 counter criers. As soon as the fish appeared, it was sold.

From September 1 until April 30, oysters were sold in pavilion no. 12 for ten centimes each, which was too expensive for most Parisians. The oysters were shipped from Les Halles to customers as far away as Moscow and Saint Petersburg. Butter, cheese, and eggs were sold in pavilion no. 10, the eggs having arrived in large packages containing a thousand eggs each. The butter and milk was checked and tasted by inspectors to make sure it matched advertised quality, and 65 inspectors verified the size and quality of the eggs.

Pavilion no. 4 sold live birds: chickens, pigeons, ducks, and pheasants, as well as rabbits and lambs. It was by far the noisiest and the worst-smelling pavilion, because of the live animals; and it had a special ventilating system. No. 8 sold vegetables, and no. 7 sold fresh flowers. No. 12 had bakers and fruit sellers, and also sold what were known as *rogations*; these were leftovers from restaurants, hotels, the Palace, and government ministries. The leftovers were sorted and put on plates; and any that looked acceptable were sold. Some leftovers were reserved for pet foods; old bones were collected to make bouillon; uneaten bread crusts from schools and restaurants were used to make croutons for soup and bread-coating for cutlets. Many workers in Les Halles got their meals at this pavilion.

Cooks from good restaurants arrived in the mid-morning to buy meat and produce, parking fiacres in rows in front of the [Church of Saint-Eustache](#). Most of the food was sold by 10 a.m.; seafood remained on sale until noon. The rest of the day was used for recording orders, and for resting until whatever market opened again late that night.^[32]

Thanks to the growing number of wealthy Parisians and tourists coming to the city and the new network of railroads that delivered fresh seafood, meat, vegetables, and fruit to Les Halles every morning, Paris during the Second Empire had some of the best restaurants in the world. The greatest concentration of top-class restaurants was on the [Boulevard des Italiens](#), near the theaters. The most prominent of these at the beginning the Empire was the Café de Paris, opened in 1826, which was located on the ground floor of the Hôtel de Brancas. It was decorated in the style of a grand apartment, with high ceilings, large mirrors, and elegant furniture. The director of the Paris Opéra had a table reserved for him there, and it was a frequent meeting place for characters in the novels of [Balzac](#). It was unable to adapt to the style of the Second Empire, however; it closed too early, at ten in the evening, the hour when the new wealthy class of Second Empire Parisians were just going out to dinner after the theatre or a ball. As a result, it went out of business in 1856.^[33]

The most famous newer restaurants on the Boulevard des Italiens were the [Maison Dorée](#), the Café Riche, and the [Café Anglais](#), the latter two of which faced each other across the boulevard. They, and the other cafés modelled after them, had similar interior arrangements. Inside the door, the clients were welcomed by the *dame de comptoir*, always a beautiful woman who was very elegantly dressed. Besides welcoming the clients, she was in charge of the distribution of pieces of sugar, two for each [demitasse](#) of coffee. A demitasse of coffee cost between 35 and 40 centimes, to which clients usually added a tip of two *sous*, or ten centimes. An extra piece of sugar cost ten centimes. The floor of the café was lightly covered with sand, so the hurrying waiters would not slip. The technology of the coffee service was greatly improved in 1855 with the invention of the hydrostatic coffee percolator, first

presented at the [Paris Universal Exposition of 1855](#), which allowed a café to produce 50,000 demitasses a day.^[34]

The Maison Dorée was decorated in an extravagant [Moorish](#) style, with white walls and gilded furnishings, balconies and statues. It had six dining salons and 26 small private rooms. The private dining rooms were elegantly furnished with large sofas as well as tables and were a popular place for clandestine romances. They also featured large mirrors, where women had the tradition of scratching messages with their diamond rings. It was a popular meeting place between high society and what was known as the *demimonde* of actresses and courtesans; it was a favorite dining place of [Nana](#) in the novel of that name by [Émile Zola](#).^[35]

The Café Riche, located at the corner of the Rue Le Peletier and the Boulevard des Italiens, was richly decorated by its owner, [Louis Bignon](#), with a marble and bronze stairway, statues, tapestries, and [velour](#) curtains. It was the meeting place of bankers, actors, actresses, and successful painters, journalists, novelists, and musicians. The upstairs rooms were the meeting places of the main characters in Émile Zola's novel *La Curée*.

The Café Anglais, across the street from the Café Riche, had a famous chef, [Adolphe Dugléré](#), whom the composer [Gioachino Rossini](#), a frequent customer, described as "the Mozart of French cooking". The café was also famous for its cave containing two hundred thousand bottles of wine. The café occupied the ground floor; on the first floor there were twelve small private dining rooms and four larger dining salons decorated in white and gold. The largest and most famous was the *Grand Seize*, or "Grand Sixteen", where the most famous bankers, actors, actresses, aristocrats, and celebrities dined. In 1867, the "Grand Seize" was the setting for the [Three Emperors Dinner](#), a sixteen-course dinner with eight wines consumed by [Kaiser Wilhelm I](#) of Germany, Czar [Alexander II of Russia](#), his son the future Czar [Alexander III of Russia](#), and the Prussian chancellor [Otto von Bismarck](#).

The Boulevard des Italiens also featured the Café Foy, at the corner of the [Rue de la Chaussée-d'Antin](#), and the Café Helder, a popular rendezvous for army officers. The cafés on the boulevard opened onto terraces, which were used in good weather. The Café Tortoni, at 22 Boulevard des Italiens, which had been in place since the reign of Louis-Philippe, was famous for its ice cream. On summer days, carriages lined up outside on the boulevard as wealthy Parisians sent their servants into Tortoni to buy ice cream, which they consumed in their carriages. It was also a popular place to go after the theatre. Its regular clients included [Gustave Flaubert](#) and [Eduard Manet](#).^[36]

Just below the constellation of top restaurants, there were a dozen others that offered excellent food at less extravagant prices, including the historic [Ledoyen](#), next to the Champs-Élysées, where the famous painters had a table during the Salon; others listed in a guidebook for foreign tourists were the cafés Brébant, Magny, Veron, [Procope](#) and Durand.^[37] According to Émile Zola, a full-course dinner in such a restaurant cost about 25 francs.^[38]

According to Eugene Chavette, author of an 1867 restaurant guide, there were 812 restaurants in Paris, 1,664 cafés, 3,523 *debits de vin*, 257 *crémeries*, and 207 *tables d'hôtes*.^[39] The latter were inexpensive eating places, often with a common table, where a meal could be had for 1.6 francs, with a bowl of soup, a choice of one of three main dishes, a dessert, bread, and a half-bottle of wine. As a guidebook for foreign visitors noted, "A few of these restaurants are truly good; many others are bad." Ingredients were typically of poor quality. The soup was a thin broth of bouillon; as each spoonful of soup was taken from the pot, an equal amount of water was usually added, so the broth became thinner and thinner.^[40]

Bread was the basic diet of the Parisian workers. There was one bakery for every 1349 Parisians in 1867, up from one bakery for every 1800 in 1853. However, the per capita daily

consumption of bread of Parisians dropped during the Second Empire, from 500 grams per day per person in 1851 to 415 grams in 1873. To avoid popular unrest, the price of bread was regulated by the government and fixed at about 50 centimes per kilo. The fast-baked [baguette](#) was not introduced until 1920, so bakers had to work all night to bake the bread for the next day. In order to make a profit, bakers created a wide variety of what were known as "fantasy" breads, made with better quality flours and with different grains; the price of these breads ranged from 80 centimes to a franc per kilo.^[41]

The consumption of wine by Parisians increased during the Second Empire, while the quality decreased. It was unusual for women to drink; but, for both the workers and the middle and upper classes, wine was part of the daily meal. The number of *debts de boissons*, bars where wine was sold, doubled. Ordinary wine was produced by mixing several different wines of different qualities from different places in a cask and shaking it. The wine sold as ordinary [Mâcon](#) was made by mixing wine from [Beaujolais](#), [Tavel](#), and [Bergerac](#). The best wines were treated much more respectfully; in 1855, Napoleon III ordered the classification of [Bordeaux wines](#) by place of origin and quality, so that they could be displayed and sold at the [Paris Universal Exposition](#).

Wine was bought and sold at the Halle aux Vins, a large market established by [Napoleon I](#) in 1811, but not finished until 1845. It was located on the Left Bank of the Seine, on the Quai Saint Bernard, near the present-day [Jardin des Plantes](#). It was on the river so that barrels of wine could be delivered by barge from [Burgundy](#) and other wine regions, and unloaded directly into the depot. The hand-made barrels were enormous and were of slightly different sizes for each region; barrels of [Burgundy wine](#) held 271 liters each. The Halle aux Vins covered fourteen hectares, and contained 158 wine cellars at ground level. It sold not only wine, but also liquors, spirits, vinegar, and olive oil. Wine merchants rented space in the cellars and halls that were located in four large buildings. All the wine and spirits were taxed; inspectors in the halls opened all the barrels, tested the wine to be certain it did not contain more than 18 percent alcohol, and one of 28 tasters employed by the Prefecture de Police tasted each to verify that it was, in fact, wine. Wine that contained more than 18 percent alcohol was taxed at a higher rate. The Halle sold 956,910 hectoliters of wine to Parisian cafés, bars, and local wine merchants in 1867.^[42]

[Absinthe](#) had made its appearance in Paris in the 1840s, and it became extremely popular among the "[Bohemians](#)" of Paris: artists, writers, and their friends and followers. It was known as the "Goddess with green eyes," and was usually drunk with a small amount of sugar on the edge of the glass. The hour of 5 p.m. was called *l'heure verte* ("the green hour"), when the drinking usually began, and it continued until late at night.

Before the Second Empire, smoking had usually been limited to certain rooms or salons of restaurants or private homes, but during the Empire, it became popular to smoke on all occasions and in every location, from salons to the dining rooms of restaurants. Cigars imported from [Havana](#) were smoked by the Parisian upper class. To meet the growing demand for cigars, the government established two cigar factories in Paris. The one at Gros-Caillou was located on the banks of the Seine near the Palais d'Orsay; it was the place in which ordinary cigars were made, usually with tobacco from Virginia, Maryland, Kentucky, Mexico, Brazil, or Hungary. The cigars from Gros-Caillou sold for between 10 and 20 centimes each. Another factory, at [Reuilly](#), made luxury cigars with tobacco imported directly from Havana; they sold for 25 to 50 centimes each. The Reuilly factory employed a thousand workers, of whom 939 were women, a type of work culture in the tobacco industry depicted in the opera [Carmen](#) (1875) by [Georges Bizet](#). One woman worker could make between 90 and 150 cigars during a ten-hour workday.^[43]

The Second Empire saw a revolution in retail commerce, as the Paris middle class and consumer demand grew rapidly. The revolution was fuelled in large part by Paris fashions, especially the [crinoline](#), which demanded enormous quantities of silk, satin, velour, [cashmere](#), [percale](#), [mohair](#), ribbons, lace, and other fabrics and decorations. Before the Second Empire, clothing and luxury shops were small and catered to a very small clientele; their windows were covered with shutters or curtains. Any who entered had to explain their presence to the clerks, and prices were never posted; customers had to ask for them.

The first novelty stores, which carried a wide variety of goods, appeared in the late 1840s. They had larger, glass windows, made possible by the new use of cast iron in architecture. Customers were welcome to walk in and look around, and prices were posted on every item. These shops were relatively small, and catered only to a single area, since it was difficult for Parisians to get around the city through its narrow streets.

Innovation followed innovation. In 1850, the store named Le Grand Colbert introduced glass show windows from the pavement to the top of the ground floor. The store Au Coin de la Rue was built with several floors of retail space around a central courtyard that had a glass skylight for illumination, a model soon followed by other shops. In 1867, the store named La Ville Saint-Denis introduced the hydraulic elevator to retail.

The new Haussmann boulevards created space for new stores, and it became easier for customers to cross the city to shop. In a short time, the commerce in novelties, fabrics, and clothing began to be concentrated in a few very large department stores. [Bon Marché](#) was opened in 1852, in a modest building, by [Aristide Boucicaut](#), the former chief of the Petit Thomas variety store. Boucicaut's new venture expanded rapidly, its income growing from 450,000 francs a year to 20 million. Boucicaut commissioned a new building with a glass and iron framework designed in part by [Gustave Eiffel](#). It opened in 1869 and became the model for the modern department store. The Grand Magasin du Louvre opened in 1855 inside the vast luxury hotel built by the [Péreire brothers](#) next to the Louvre and the Place Royale. It was the first department store that concentrated on luxury goods, and tried both to provide bargains and be snobbish. Other department stores quickly appeared: [Printemps](#) in 1865, the Grand Bazar de l'Hôtel de Ville (BHV) in 1869, and [La Samaritaine](#) in 1870. They were soon imitated around the world.^[44]

The new stores pioneered new methods of marketing, from holding annual sales to giving bouquets of violets to customers or boxes of chocolates to those who spent more than 25 francs. They offered a wide variety of products and prices: Bon Marché offered 54 kinds of crinolines, and 30 different kinds of silk. The Grand Magasin du Louvre sold shawls ranging in price from 30 francs to 600 francs.^[45]

During the Second Empire, the [Paris Salon](#) was the most important event of the year for painters, engravers, and sculptors. It was held every two years until 1861, and every year thereafter, in the [Palais de l'Industrie](#), a gigantic exhibit hall built for the Paris Universal Exposition of 1855. A medal from the Salon assured an artist of commissions from wealthy patrons or from the French government. Following rules of the [Academy of Fine Arts](#) established in the 18th century, a hierarchy of painting genres was followed: at the highest level was [history painting](#), followed in order by [portrait painting](#), [landscape painting](#), and [genre painting](#), with [still-life painting](#) at the bottom. Painters devoted great effort and intrigue to win approval from the jury to present their paintings at the Salon and arrange for good placement in the exhibition halls.

The Paris Salon was directed by the Count [Émilien de Nieuwerkerke](#), the Superintendent of Fine Arts, who was known for his conservative tastes. He was scornful of the new school of [Realist](#) painters led by [Gustave Courbet](#). One of the most successful Salon artists

was [Alexandre Cabanel](#), who produced a famous full-length portrait of Napoleon III, and a painting *The Birth of Venus* that was purchased by the Emperor at the Salon of 1863. Other successful academic painters of the Second Empire included [Jean-Louis-Ernest Meissonier](#), [Jean-Léon Gérôme](#), and [William-Adolphe Bouguereau](#).^[46]

The older generation of painters in Paris during the Second Empire was dominated by [Jean Auguste Dominique Ingres](#) (1780-1867), the most prominent figure for history and [neoclassical](#) painting; [Eugène Delacroix](#) (1798-1863), the leader of the [romantic](#) school of painting; and [Jean-Baptiste Camille Corot](#) (1796-1875), who was widely regarded as the greatest French landscape painter of the 19th century.^[47]

Ingres had begun painting during the reign of Napoleon I, under the teaching of [Jacques-Louis David](#). In 1853, during the reign of Napoleon III, he painted a monumental *Apotheosis of Napoleon I* on the ceiling of the Hotel de Ville of Paris, which was destroyed in May 1871 when the [Communards](#) burned the building. His work combined elements of neoclassicism, romanticism, and innocent [eroticism](#). He painted his famed *Turkish Bath* in 1862, and he taught and inspired many of the [academic](#) painters of the Second Empire.

Delacroix, as the founder of the Romantic school, took French painting in a very different direction, driven by emotion and colour. His friend the poet [Charles Baudelaire](#) wrote, "Delacroix was passionately in love with passion, but coldly determined to express passion as clearly as possible". Delacroix decorated the Chapelle des Saints-Anges at the [Church of Saint-Sulpice](#) with his [frescoes](#), which were among his last works.

Jean-Baptiste-Camille Corot began his career with study at the [École des Beaux-Arts](#) as an academic painter, but gradually began painting more freely and expressing emotions and feelings through his landscapes. His motto was "never lose that first impression which we feel." He made sketches in the forests around Paris, then reworked them into final paintings in his studio. He was showing paintings in the Salon as early as 1827, but he did not achieve real fame and critical acclaim before 1855, during the Second Empire.^[48]

[Gustave Courbet](#) (1819-1872) was the leader of the school of realist painters during the Second Empire who depicted the lives of ordinary people and rural life, as well as landscapes. He delighted in scandal and condemned the art establishment, the [Academy of Fine Arts](#), and Napoleon III. In 1855, when his submissions to the Salon were rejected, he set up his own exhibit in a nearby building and displayed forty of his paintings there. In 1870, Napoleon III proposed giving the [Legion of Honour](#) to Courbet, but he publicly rejected it.

[Édouard Manet](#) was one of the first non-academic artists to achieve both popular and critical success during the Second Empire, thanks in part to a little help from Napoleon III. Manet's painting *The Luncheon on the Grass (Le déjeuner sur l'herbe)* was rejected by the jury of the 1863 [Paris Salon](#), along with many other non-academic paintings by other painters. Napoleon III heard complaints about the rejection and directed the Academy of Fine Arts to hold a separate exhibit, known as the [Salon des Refusés](#) (Salon of the Rejected), in the same building as the Salon. The painting was criticized and ridiculed by critics but brought Manet's work to the attention of a vast Parisian public.

While the official art world was dominated by the Salon painters, another lively art world existed in competition with and opposition to the salon. In an earlier period, this group included the painters [Gustave Courbet](#), [Édouard Manet](#), [Claude Monet](#), [Edgar Degas](#), and [Alfred Sisley](#); then, later, [Pierre-August Renoir](#), [Frédéric Bazille](#), and [Henri Fantin-Latour](#). Their frequent meeting place was the [Café Guerbois](#) at 11 Avenue de Clichy.^[49] The café was close to the foot of Montmartre, where many of the artists had their studios. The artists interested in the new popularity of [Japanese prints](#) frequented the gallery of Édouard

Desoye or the Léger gallery on the Rue le Peletier. The painters also frequented the galleries that exhibited the new style of art, such as those of [Paul Durand-Ruel](#), [Ambroise Vollard](#), and Alexandre Bernheim on the [Rue Laffitte](#) and Rue le Peletier, or the gallery of Adolphe Goupil on the [Boulevard Montmartre](#), where [Théo van Gogh](#), the brother of [Vincent Van Gogh](#), worked. The paintings of Manet could be seen at the gallery of Louis Martinet at 25 [Boulevard des Italiens](#).

The term "[Impressionist](#)" was not invented until 1874; but during the Second Empire, all the major impressionist painters were at work in Paris, inventing their own personal styles. [Claude Monet](#) exhibited two of his paintings, a landscape and a portrait of his future wife [Camille Doncieux](#), at the Paris Salon of 1866.

[Edgar Degas](#) (1834-1917), the son of a banker, studied academic art at the École des Beaux-Arts and travelled to Italy to study the [Renaissance](#) painters. In 1868, he began to frequent the Café Guerbois, where he met Manet, Monet, Renoir, and the other artists of a new, more natural school, and began to develop his own style.^[50]

The most famous Paris writer of the Second Empire, [Victor Hugo](#), spent only a few days in the city during the entire period of the Second Empire. He was exiled shortly after [Napoleon III](#) seized power in 1852, and he did not return until after Napoleon's fall in 1870. The emperor stated publicly that Hugo could return whenever he wanted; but Hugo refused as a matter of principle, and while in exile wrote books and articles ridiculing and denouncing Napoleon III. His novel [Les Misérables](#) was published in Paris in April and May 1862 and was a huge popular success, though it was criticized by [Gustave Flaubert](#), who said he found "no truth or greatness in it".^[51]

[Alexandre Dumas](#) (1802-1870) left Paris in 1851, just before the Second Empire was proclaimed, partly because of political differences with Napoleon III, but largely because he was deeply in debt and wanted to avoid creditors. After travelling to Belgium, Italy, and Russia, he returned to Paris in 1864 and wrote his last major work, [The Knight of Sainte-Hermine](#), before he died in 1870.

The son of Dumas, [Alexandre Dumas fils](#) (1824-1895), became the most successful playwright of the Second Empire. His 1852 drama [The Lady of the Camellias](#) ran for one hundred performances and was transformed into an opera, [La Traviata](#) by [Giuseppe Verdi](#) in 1853.

After Victor Hugo, the most prominent writer of the Second Empire was [Gustave Flaubert](#) (1821-1880). He published his first novel, [Madame Bovary](#), in 1857, and followed it with [Sentimental Education](#) and [Salammbô](#) in 1869. He and his publisher were charged with immorality for *Madame Bovary*. Both were acquitted, and the publicity from the trial helped make the novel a notable artistic and commercial success.

The most important poet of the Second Empire was [Charles Baudelaire](#) (1821-1867), who published [Les fleurs du mal](#) in 1860. He also ran into trouble with the censors, and was charged with an offense to public morality. He was convicted and fined, and six poems were suppressed, but he appealed, the fine was reduced, and the suppressed poems eventually appeared. His work was attacked by the critic of [Le Figaro](#), who complained that "everything in it which is not hideous is incomprehensible", but Baudelaire's work and innovation had an enormous influence on the poets who followed him.

The most prominent of the younger generation of writers in Paris was [Émile Zola](#) (1840-1902). His first job in Paris was as a shipping clerk for the publisher [Hachette](#); later, he served as the director of publicity for the firm. He published his first stories in 1864, his first novel in 1865, and had his first literary success in 1867 with his novel [Thérèse Raquin](#).

Another important writer of the time was [Alphonse Daudet](#) (1840-1897), who became private secretary to the half-brother and senior advisor of Napoleon III, [Charles de Morny](#). His book *Lettres de mon moulin* (1866) became a French classic.

One of the most popular writers of the Second Empire was [Jules Verne](#) (1828-1905), who lived on what is now Avenue Jules-Verne. He worked at the [Théâtre Lyrique](#) and the Paris stock exchange (the [Paris Bourse](#)), while he did research for his stories at the [National Library](#). He wrote his first stories and novels in Paris, including *Journey to the Center of the Earth* (1864), *From the Earth to the Moon* (1864), and *Twenty Thousand Leagues Under the Sea* (1865).

The dominant architectural style of the Second Empire was [eclecticism](#), drawing liberally from the [Gothic](#) and [Renaissance](#) styles, and the styles dominant during the reigns of [Louis XV](#) and [Louis XVI](#). The style was described by [Émile Zola](#), not an admirer of the Empire, as "the opulent bastard child of all the styles".^[52] The best example was the [Opera Garnier](#), begun in 1862 but not finished until 1875. The architect was [Charles Garnier](#) (1825-1898), who won the competition for the design when he was only thirty-seven. When asked by the Empress Eugénie what the style of the building was called, he replied simply, "Napoleon III". At the time, it was the largest theater in the world, but much of the interior space was devoted to purely decorative spaces: grand stairways, huge foyers for promenading, and large private [boxes](#). Another example was the [Mairie](#), or city hall, of the 1st arrondissement of Paris, built in 1855-1861 in a [neo-Gothic](#) style by the architect [Jacques-Ignace Hittorff](#) (1792-1867).^[53]

The industrial revolution was beginning to demand a new kind of architecture: bigger, stronger, and less expensive. The new age of railways, and the enormous increase in travel that it caused, required new train stations, large hotels, exposition halls, and department stores in Paris. While the exteriors of most Second Empire monumental buildings usually remained eclectic, a revolution was taking place; based on the model of [The Crystal Palace](#) in London (1851), Parisian architects began to use [cast-iron](#) frames and walls of glass in their buildings.^[54]

The most dramatic use of iron and glass was in the new central market of Paris, [Les Halles](#) (1853-1870), an ensemble of huge iron and glass pavilions designed by [Victor Baltard](#) (1805-1874) and [Felix-Emmanuel Callet](#) (1792-1854). Jacques-Ignace Hittorff also made extensive use of iron and glass in the interior of the new [Gare de Nord](#) train station (1842-1865), although the facade was perfectly [neoclassical](#), decorated with classical statues representing the cities served by the railway. Baltard also used a steel frame in building the largest new church built in Paris during the Empire, the [Church of Saint Augustine](#) (1860-1871). While the structure was supported by cast-iron columns, the facade was eclectic. [Henri Labrouste](#) (1801-1875) also used iron and glass to create a dramatic cathedral-like reading room for the [National Library](#), Richelieu site (1854-1875).^[55]

The Second Empire also saw the completion or restoration of several architectural treasures: the wings of the [Louvre](#) Museum were finally completed; the famed stained glass windows and structure of the [Sainte-Chapelle](#) were restored by [Eugène Viollet-le-Duc](#); and the [Cathedral of Notre Dame](#) underwent extensive restoration. In the case of the Louvre, in particular, the restorations were sometimes more imaginative than historically authentic.

Comfort was the first priority of Second Empire furniture. Chairs were elaborately upholstered with fringes, tassels, and expensive fabrics. Tapestry work on furniture was very much in style. The structure of chairs and sofas was usually entirely hidden by the upholstery or had copper, shell, or other decorative elements as ornamentation. Novel and exotic new materials—such as [bamboo](#), [papier-mâché](#), and [rattan](#)—were used for the first time in

European furniture, along with [polychrome](#) wood, and wood painted with black [lacquer](#). The upholstered [pouffe](#), or footstool, appeared, along with the angle sofa and unusual chairs for intimate conversations between two persons (*Le confident*) or three people (*L'indiscret*).

Women's fashion during the Second Empire was set by the Empress Eugénie. Until the late 1860s, it was dominated by the [crinoline](#) dress, a bell-shaped dress with a very wide, full-length skirt supported on a frame of hoops of metal. The dress's waist was extremely narrow, its wear facilitated by wearing a corset with whalebone stays underneath, which also pushed up the bust. The shoulders were often bare or covered by a shawl. The Archbishop of Paris noted that women used so much material in the skirt that none seemed to be left to cover their shoulders. Paris church officials also noted with concern that the pews in a church, which normally could seat one hundred people, could seat only forty women wearing such dresses, thus the Sunday intake of donations fell. In 1867, a young woman was detained at the church of [Notre-Dame-des-Victoires](#) for stealing umbrellas and hiding them under her skirt.^[56] The great expanse of the skirt was covered with elaborate lace, embroidery, fringes, and other decoration. The decoration was fantastic and eclectic, borrowing from the era of Louis XVI, the ancient Greeks, the Renaissance, or Romanticism.

In the 1860s, the crinoline dress began to lose its dominance, due to competition from the more natural "style Anglais" (English style) that followed the lines of the body. The English style was introduced by the British [couturier Charles Frederick Worth](#) and Princess [Pauline von Metternich](#). At the end of the 1860s, the empress herself began to wear the English style.^[57]

In men's fashion, the long [redingote](#) of the era of Louis-Philippe (the name came from the English term "riding-coat") was gradually replaced by the *jacquette*, and then the even shorter *veston*. The shorter jacket allowed a man to put his hands into his trouser pockets. The trousers were wide at the waist, and very narrow at the cuffs. Men wore a neutral-colored vest, usually cut low to show off highly decorated shirts with frills and buttons of [paste jewellery](#). Men had gloves, but carried them in their hands, according to Gaston Jolivet, a prominent fashion observer of the time, in order "to prove to the population that they had the means to buy a pair of gloves without using them."^[58]

By the end of the Second Empire, Paris had 41 theaters that offered entertainment for every possible taste: from grand opera and ballet to dramas, melodramas, operettas, vaudeville, farces, parodies, and more. Their success was in part a result of the new railroads, which brought thousands of spectators from the French provinces and abroad. A popular drama that would have had a run of fifteen performances for a purely Parisian audience could now run for 150 performances with new audiences every night. Of these theaters, five had official status and received substantial subsidies from the Imperial treasury: the [Opéra](#) (800,000 francs a year); the [Comédie-Francaise](#) (240,000 francs); the [Opéra-Comique](#) (140,000 francs); the [Odéon](#) (60,000 francs), and the [Théâtre Lyrique](#) (100,000 francs).^[59]

At the top of the hierarchy of Paris theaters was the Théâtre Impérial de l'Opéra (Imperial Opera Theater). The first stone of the new Paris opera house, designed by [Charles Garnier](#), was laid in July 1862, but flooding of the basement caused the construction to proceed very slowly. Garnier himself had his office on the site to oversee every detail. As the building rose, it was covered with a large shed so that the sculptors and artists could create the elaborate exterior decoration. The shed was taken off on 15 August 1867, in time for the Paris Universal Exposition. Visitors and Parisians could see the building's glorious new exterior, but the inside was not finished until 1875, after the fall of the Empire in 1870. Opéra performances were held in the [Salle Le Peletier](#), the theater of the Académie Royale de Musique, on the Rue Le Peletier. It was at that opera house that, on 14 January 1858, a group

of Italian extreme nationalists attempted to kill Napoleon III at the entrance, by setting off several bombs that killed eight people, injured 150, and splattered the empress with blood, although the emperor was unharmed.

The opera house on the Rue Le Peletier could seat 1800 spectators. There were three performances a week, scheduled so as not to compete with the other major opera house in the city, the [Théâtre-Italien](#). The best seats were in the forty boxes on the first balcony, which could each hold four or six persons. One of the boxes could be rented for the entire season for 7500 francs. One of the major functions of the opera house was to be a meeting place for Paris society, and for this reason the performances were generally very long, with as many as five intermissions. Ballets were generally added in the middle of operas to create additional opportunities for intermissions. Operas by the major composers of the time, notably [Giacomo Meyerbeer](#) and [Richard Wagner](#), had their first French performances in this theater.^[60]

The first French performance of Wagner's opera [Tannhäuser](#), in March 1861, (with ballets choreographed by [Marius Petipa](#)) caused a scandal; most of the French critics and audience disliked both the music and personality of Wagner, who was present in the theater. Each performance was greeted with whistles and jeers from the first notes of overture; after three performances, the opera was pulled from the repertoire.^[61] Wagner got his revenge. In February 1871, he wrote a poem, "To the German Army before Paris", celebrating the German siege of the city, which he sent to German Chancellor [Otto von Bismarck](#). Bismarck wrote back to Wagner, "you too have overcome the resistance of the Parisians after a long struggle."^[62]

Besides the Imperial Opera Theater, Paris had three other important opera houses: the [Théâtre Italien](#), the [Opéra-Comique](#), and the [Théâtre-Lyrique](#).

The [Théâtre Italien](#) was the oldest opera company in Paris. During the Second Empire, it was based in the [Salle Ventadour](#) and hosted the French premieres of many of Verdi's operas, including [Il Trovatore](#) (1854), [La Traviata](#) (1856), [Rigoletto](#) (1857), and [Un ballo in maschera](#) (1861). Verdi conducted his [Requiem](#) there, and [Richard Wagner](#) conducted a concert of selections from his operas. The soprano [Adelina Patti](#) had an exclusive contract to sing with at the Théâtre Italien when she was in Paris.

The [Théâtre-Lyrique](#) was originally located on the Rue de Temple, the famous "[Boulevard du Crime](#)" (so-called for all of the crime melodramas that were staged there); but when that part of the street was demolished to make room for the [Place de la République](#), Napoleon III built the company a new theater at the [Place du Châtelet](#). The Lyrique was famous for putting on operas by new composers. It staged the first French performance of [Rienzi](#) by [Richard Wagner](#); the first performance of [Les pêcheurs de perles](#) (1863), the first opera by the 24-year-old [Georges Bizet](#); the first performances of the operas [Faust](#) (1859) and [Roméo et Juliette](#) (1867) by [Charles Gounod](#); and the first performance of [Les Troyens](#) (1863) by [Hector Berlioz](#).

The [Opéra-Comique](#) was located in the Salle Favart and produced both comedies and serious works. It staged the first performances of [Mignon](#) by [Ambroise Thomas](#) (1866) and of [La grand'tante](#), the first opera of [Jules Massenet](#) (1867).

[Operetta](#) was a speciality of the Second Empire, and its master was the German-born composer and conductor [Jacques Offenbach](#). He composed more than a hundred operettas for the Paris stage, including [Orphée aux enfers](#) (1858), [La Belle Hélène](#) (1864), [La Vie parisienne](#) (1866), and [La Grande-Duchesse de Gérolstein](#) (1867). His operettas were performed with great success at the [Théâtre des Variétés](#) and the [Théâtre des Bouffes-Parisiens](#), and he was given French citizenship and awarded the [Legion of Honour](#) by

Napoleon III. The soprano [Hortense Schneider](#) was the star of his most famous operettas and was one of the most popular actresses on the stages of the Second Empire. One Paris operetta melody by Offenbach, *Couplets des deux Hommes d'Armes*, sung by two policemen in the operetta *Geneviève de Brabant* (1868), won fame in an entirely different context: it became the melody of the [Marine's Hymn](#), the song of the [United States Marine Corps](#), in 1918.

At the beginning of the Second Empire, seven popular theaters were grouped side-by-side along the upper part of the [Boulevard du Temple](#), an area known as the [Boulevard du Crime](#) because of the lurid [melodramas](#) that played there. Coming from the Place Château d'Eau, the first theater was the Théâtre Lyrique, which had originally been built in 1847 by [Alexander Dumas](#) to stage plays based on his stories, but became an opera house. Next to it was the [Cirque Olympique](#), which specialized in tableaux of romantic fairy tales and the battles of Napoleon. Farther down the street was the [Théâtre des Folies-Dramatiques](#), which alternated melodramas and [vaudeville](#), and whose most famous star was the actor [Frédéric Lemaître](#). Next to that theater was the [Théâtre de la Gaîté](#), which also alternated vaudeville and melodrama.

The next theater was the [Théâtre des Funambules](#). It was ancient, long, dark, and cramped. It had been made famous in 1828 from portrayals of the sad clown [Pierrot](#) by the [mime Jean-Gaspard Debureau](#), whose story is told in the 1945 film *The Children of Paradise* (*Les Enfants de Paradis*). Next to the Funambules was the [Théâtre des Délassements-Comiques](#), famous for vaudeville, [pantomime](#), and dancing by beautiful women in costumes as scant as the censors would allow, including performing the *Rigolboche*, later known as the French [can-can](#). The last theater in the group was Petit Lazary, the least expensive theater in Paris. It offered two shows a day, each of four vaudeville acts, as well as pantomime. For 15 [centimes](#), a spectator could have a place in the *Paradis*, the upper balcony.^[63]

The [Cirque d'Hiver](#), or Cirque Napoléon, was located about 100 meters further down the street. It was huge and new, built in 1852 to hold 4000 spectators. Beginning in 1859, it also featured performances by [Jules Léotard](#), a 28-year-old gymnast from Toulouse, who invented the [flying trapeze](#) and has been immortalized by the athletic garment named for him: the [leotard](#).

Performances on the boulevard began at 6 o'clock, but spectators began lining up outside several hours before. The popularity of an actor or theater was measured by the length of the line outside. Street merchants sold oranges, bouquets of flowers, baked apples, and ice cream to those waiting in line. Some spectators, particularly students, obtained discounted tickets by serving as part of the [claque](#), applauding furiously when signalled by a theatre employee.^[64]

The Boulevard du Crime came to an end by a decree of the Emperor in May 1862, because Haussmann's plan called for the enlargement of the neighboring Place du Château-d'Eau (now [Place de la République](#)) and the building of a new Boulevard Prince-Eugène (now the Boulevard de la République). The largest theaters were relocated: the Gaîté was moved to the Square des Arts-et-Métiers, the Théâtre Lyrique moved to the enlarged Place du Châtelet, as did the Cirque Olympique, which moved to the other side of the square and became the [Théâtre du Châtelet](#). The demolition of the Boulevard du Crime began on 15 July 1862. The night before, the son of the famous mime Debureau performed in the final show at the Funambules dressed in a Pierrot costume that was black instead of white.^[65]

The [Théâtre du Vaudeville](#) was located outside the theater district on the Place de la Bourse. It hosted the first performance of one of the most famous plays of the period, *The Lady of the Camellias* by [Alexandre Dumas fils](#), on 2 February 1852. It ran for 100

performances. [Giuseppe Verdi](#) attended one performance, and later created an opera, [La Traviata](#), based on the story.

During the Second Empire, the promenade was an art form and a kind of street theater in which all classes of Parisians participated. It constituted a walk, a horseback ride, or a ride in a carriage entirely for pleasure, in order to see and be seen. It generally took place on the new boulevards, which had wide sidewalks and rows of trees, and in the new parks, which were designed exactly for that purpose. In 1852, Napoleon III created a new department, the Service des Promenades et Plantations, directly under the prefect Haussmann. The first director was [Jean-Charles Adolphe Alphand](#), who designed all the new parks, avenues, small squares, and gardens in the city, including planting trees along the boulevards.^[66]

The most popular promenade for the wealthier Parisians began at the [Place de la Concorde](#), went up the [Champs-Élysées](#) to the [Place de l'Étoile](#), and then turned onto the Avenue de l'Impératrice (today the [Avenue Foch](#)), the widest avenue in the city, which was the ceremonial entry to the new [Bois de Boulogne](#). Once in the park, the promenaders usually went to the cascade, or to one of the elegant new cafés in the park. On a fine day, the route was entirely filled with carriages, and there were often traffic jams. A promenade on this route opens and closes the novel [La Curée](#) by [Émile Zola](#).

Balls and theater were the major social events for Parisians during the Second Empire. The most prestigious of all were the balls held at the [Tuileries Palace](#) by the Emperor Napoleon III and the Empress Eugénie. They gave three or four grand balls with 600 guests each year early in the new year. During [carnival](#), there was a series of very elaborate costume balls on the themes of different countries and different historical periods, for which guests sometimes spent small fortunes on their costumes. During [Lent](#), the balls were replaced by concerts by both professionals and amateurs. After [Easter](#), the empress hosted a series of smaller balls for her friends until May.

The masked balls at the Paris Opera on the Rue Le Peletier were the most famous. They were held about a dozen times during each season, on each Saturday evening during carnival. Their purpose was to raise funds for the Académie de la Musique, which ran the opera house. Entry for men cost ten francs, while women were admitted for half-price. Women looking for the opportunity to meet a wealthy banker or nobleman spent ten times or more on their costumes than the admission price. The seats were taken out of the [parterre](#), and the doors opened at midnight. Those who merely wanted to watch the spectacle could rent boxes in the balcony. The attraction was to meet mysterious and interesting masked strangers. There were numerous anecdotes of surprises: a daughter who unknowingly tried to seduce her father, or a mother who tried to seduce her son.^[67]

The [Bal Mabille](#) was an outdoor ball that rivalled the Opera Ball. It took place on the [Avenue Montaigne](#), near the *rond-point* (roundabout) of the Champs-Élysées, in a large garden lit by hundreds of gas lamps. It was open on Saturday and Sunday evenings with an admission price of 5 francs on Saturday and 1.5 francs on Sunday. It was attended by aristocrats—such as the Princess Pauline von Metternich—by artists and musicians, and by wealthy foreign tourists. It introduced new dances to Paris, including the [polka](#).^[68]

Haussmann's renovation of Paris was a vast public works program commissioned by Emperor [Napoléon III](#) and directed by his [prefect](#) of [Seine](#), [Georges-Eugène Haussmann](#), between 1853 and 1870. It included the demolition of medieval neighborhoods that were deemed overcrowded and unhealthy by officials at the time; the building of wide avenues; new parks and squares; the annexation of the suburbs surrounding [Paris](#); and the construction of new sewers, fountains and aqueducts. Haussmann's work was met with fierce opposition, and he was finally dismissed by Napoleon III in 1870; but work on his projects continued

until 1927. The street plan and distinctive appearance of the center of Paris today are largely the result of Haussmann's renovation.

In the middle of the nineteenth century, the center of Paris was viewed as overcrowded, dark, dangerous, and unhealthy. In 1845, the French social reformer [Victor Considerant](#) wrote: "Paris is an immense workshop of putrefaction, where misery, pestilence and sickness work in concert, where sunlight and air rarely penetrate. Paris is a terrible place where plants shrivel and perish, and where, of seven small infants, four die during the course of the year."^[1] The street plan on the [Île de la Cité](#) and in the neighborhood called the "quartier des Arcis", between the [Louvre](#) and the "Hôtel de Ville" (City Hall), had changed little since the Middle Ages. The population density in these neighborhoods was extremely high, compared with the rest of Paris; in the neighborhood of Champs-Élysées, population density was estimated at 5,380 per square kilometer (22 per acre); in the neighborhoods of Arcis and Saint-Avoye, located in the present [Third Arrondissement](#), there was one inhabitant for every three square meters (32 sq ft).^[2] In 1840, a doctor described one building in the Île de la Cité where a single 5-square-meter room (54 sq ft) on the fourth floor was occupied by twenty-three people, both adults and children.^[3] In these conditions, disease spread very quickly. [Cholera](#) epidemics ravaged the city in 1832 and 1848. In the epidemic of 1848, five percent of the inhabitants of these two neighborhoods died.^[1]

Traffic circulation was another major problem. The widest streets in these two neighborhoods were only five meters (16 feet) wide; the narrowest were one or two meters (3–7 feet) wide.^[3] Wagons, carriages and carts could barely move through the streets.^[4]

The center of the city was also a cradle of discontent and revolution; between 1830 and 1848, seven armed uprisings and revolts had broken out in the centre of Paris, particularly along the [Faubourg Saint-Antoine](#), around the Hôtel de Ville, and around Montagne Sainte-Geneviève on the left bank. The residents of these neighborhoods had taken up pavement stones and blocked the narrow streets with barricades, which had to be dislodged by the army.^[5]

The medieval core and plan of Paris changed little during the restoration of the monarchy through the reign of King [Louis-Philippe](#) (1830–1848). It was the Paris of the narrow and winding streets and foul sewers described in the novels of [Balzac](#) and [Victor Hugo](#). In 1833, the new [prefect](#) of the Seine under Louis-Philippe, [Claude-Philibert Barthelot, comte de Rambuteau](#), made modest improvements to the sanitation and circulation of the city. He constructed new sewers, though they still emptied directly into the Seine, and a better water supply system. He constructed 180 kilometres of sidewalks, a new street, rue Lobau; a new bridge over the Seine, the [pont Louis-Philippe](#); and cleared an open space around the Hôtel de Ville. He built a new street the length of the Île de la Cité and three additional streets across it: rue d'Arcole, rue de la Cité and rue Constantine. To access the central market at [Les Halles](#), he built a wide new street (today's [rue Rambuteau](#)) and began work on the Boulevard Malesherbes. On the Left Bank, he built a new street, rue Soufflot, which cleared space around the Panthéon, and began work on the rue des Écoles, between the [École Polytechnique](#) and the [Collège de France](#).^[9]

Rambuteau wanted to do more, but his budget and powers were limited. He did not have the power to easily expropriate property to build new streets, and the first law which required minimum health standards for Paris residential buildings was not passed until April 1850, under Louis-Napoléon Bonaparte, then president of the Second French Republic.^[10]

King Louis-Philippe was overthrown in the [February Revolution of 1848](#). On 10 December 1848, [Louis-Napoléon Bonaparte](#), the nephew of Napoléon Bonaparte, won the first direct

presidential elections ever held in France with an overwhelming 74.2 percent of the votes cast. He was elected largely because of his famous name, but also because of his promise to try to end poverty and improve the lives of ordinary people.^[11] Though he had been born in Paris, he had lived very little in the city; from the age of seven, he had lived in exile in Switzerland, England, and the United States, and for six years in prison in France for attempting to overthrow King Louis-Philippe. He had been especially impressed by London, with its wide streets, squares and large public parks. In 1852 he gave a public speech declaring: "Paris is the heart of France. Let us apply our efforts to embellishing this great city. Let us open new streets, make the working class quarters, which lack air and light, more healthy, and let the beneficial sunlight reach everywhere within our walls".^[12] As soon as he was President, he supported the building of the first subsidised housing project for workers in Paris, the Cité-Napoléon, on the rue Rochechouart. He proposed the completion of the rue de Rivoli from the Louvre to the Hôtel de Ville, completing the project begun by his uncle Napoléon Bonaparte, and he began a project which would transform the [Bois de Boulogne](#) (Boulogne Forest) into a large new public park, modelled after [Hyde Park](#) in London but much larger, on the west side of the city. He wanted both these projects to be completed before the end of his term in 1852, but became frustrated by the slow progress made by his prefect of the Seine, Berger. The prefect was unable to move the work forward on the rue de Rivoli quickly enough, and the original design for the Bois de Boulogne turned out to be a disaster; the architect, [Jacques Ignace Hittorff](#), who had designed the [Place de la Concorde](#) for Louis-Philippe, followed Louis-Napoléon's instructions to imitate Hyde Park and designed two lakes connected by a stream for the new park, but forgot to take into account the difference of elevation between the two lakes. If they had been built, the one lake would have immediately emptied itself into the other.^[13]

At the end of 1851, shortly before Louis-Napoléon Bonaparte's term expired, neither the rue de Rivoli nor the park had progressed very far. He wanted to run for re-election in 1852, but was blocked by the new Constitution, which limited him to one term. A majority of members of parliament voted to change the Constitution, but not the two-thirds majority required. Prevented from running again, Napoléon, with the help of the army, staged a [coup d'état](#) on 2 December 1851 and seized power. His opponents were arrested or exiled. The following year, on 2 December 1852, he declared himself Emperor, adopting the throne name Napoléon III.^[14]

Napoléon III dismissed Berger as the Prefect of the Seine and sought a more effective manager. His minister of the interior, [Victor de Persigny](#), interviewed several candidates, and selected Georges-Eugène Haussmann, a native of [Alsace](#) and Prefect of the [Gironde](#) (capital: Bordeaux), who impressed Persigny with his energy, audacity, and ability to overcome or get around problems and obstacles. He became Prefect of the Seine on 22 June 1853, and on 29 June, the Emperor showed him the map of Paris and instructed Haussmann to *aérer, unifier, et embellir* Paris: to give it air and open space, to connect and unify the different parts of the city into one whole, and to make it more beautiful.^[15]

Haussmann went to work immediately on the first phase of the renovation desired by Napoléon III: completing the *grande croisée de Paris*, a great cross in the centre of Paris that would permit easier communication from east to west along the rue de Rivoli and rue Saint-Antoine, and north-south communication along two new Boulevards, Strasbourg and Sébastopol. The grand cross had been proposed by the Convention during the Revolution, and begun by Napoléon I; Napoléon III was determined to complete it. Completion of the rue de Rivoli was given an even higher priority, because the Emperor wanted it finished before the opening of the [Paris Universal Exposition of 1855](#), only two years away, and he wanted the

project to include a new hotel, the [Grand Hôtel du Louvre](#), the first large luxury hotel in the city, to house the Imperial guests at the Exposition.^[16]

Under the Emperor, Haussmann had greater power than any of his predecessors. In February 1851, the French Senate had simplified the laws on expropriation, giving him the authority to expropriate all the land on either side of a new street; and he did not have to report to the Parliament, only to the Emperor. The French parliament, controlled by Napoléon III, provided fifty million francs, but this was not nearly enough. Napoléon III appealed to the [Péreire brothers](#), Émile and Isaac, two bankers who had created a new investment bank, [Crédit Mobilier](#). The Péreire brothers organised a new company which raised 24 million francs to finance the construction of the street, in exchange for the rights to develop real estate along the route. This became a model for the building of all of Haussmann's future boulevards.^[17]

To meet the deadline, three thousand workers laboured on the new boulevard twenty-four hours a day. The rue de Rivoli was completed, and the new hotel opened in March 1855, in time to welcome guests to the Exposition. The junction was made between the rue de Rivoli and rue Saint-Antoine; in the process, Haussmann restyled the Place du Carrousel, opened up a new square, Place Saint-Germain l'Auxerrois facing the colonnade of the Louvre, and reorganized the space between the Hôtel de Ville and the [place du Châtelet](#).^[18] Between the Hôtel and Ville and the [Bastille square](#), he widened the rue Saint-Antoine; he was careful to save the historic [Hôtel de Sully](#) and Hôtel de Mayenne, but many other buildings, both medieval and modern, were knocked down to make room for the wider street, and several ancient, dark and narrow streets, rue de l'Arche-Marion, rue du Chevalier-le-Guet and rue des Mauvaises-Paroles, disappeared from the map.^[19]

In 1855, work began on the north-south axis, beginning with Boulevard de Strasbourg and Boulevard Sébastopol, which cut through the center of some of the most crowded neighborhoods in Paris, where the cholera epidemic had been the worst, between the rue Saint-Martin and rue Saint-Denis. "It was the gutting of old Paris," Haussmann wrote with satisfaction in his *Memoires*: of the neighborhood of riots, and of barricades, from one end to the other."^[20] The Boulevard Sébastopol ended at the new Place du Châtelet; a new bridge, the Pont-au-Change, was constructed across the Seine, and crossed the island on a newly built street. On the left bank, the north-south axis was continued by the Boulevard Saint-Michel, which was cut in a straight line from the Seine to the Observatory, and then, as the rue d'Enfer, extended all the way to the route d'Orléans. The north-south axis was completed in 1859.

The two axes crossed at the Place du Châtelet, making it the center of Haussmann's Paris. Haussmann widened the square, moved the [Fontaine du Palmier](#), built by Napoléon I, to the center and built two new theaters, facing each other across the square; the Cirque Impérial (now the Théâtre du Châtelet) and the Théâtre Lyrique (now Théâtre de la Ville).^[21]

In the first phase of his renovation Haussmann constructed 9,467 metres (6 miles) of new boulevards, at a net cost of 278 million francs. The official parliamentary report of 1859 found that it had "brought air, light and healthiness and procured easier circulation in a labyrinth that was constantly blocked and impenetrable, where streets were winding, narrow, and dark."^[22] It had employed thousands of workers, and most Parisians were pleased by the results. His second phase, approved by the Emperor and parliament in 1858 and begun in 1859, was much more ambitious. He intended to build a network of wide boulevards to connect the interior of Paris with the ring of grand boulevards built by [Louis XVIII](#) during the restoration, and to the new railroad stations which Napoleon III considered the real gates of the city. He planned to construct 26,294 metres (16 miles) of new avenues and streets, at a cost of 180 million francs.^[23] Haussmann's plan called for the following:

On the right bank:

- The construction of a large new square, *place du Chateau-d'Eau* (the modern [*Place de la République*](#)). This involved demolishing the famous theater street known as "*le boulevard du Crime*", made famous in the film [*Les Enfants du Paradis*](#); and the construction of three new major streets: the *boulevard du Prince Eugène* (the modern *boulevard Voltaire*); the *boulevard Magenta* and *rue Turbigo*. Boulevard Voltaire became one of the longest streets in the city, and became the central axis of the eastern neighborhoods of the city. It would end at the *place du Trône* (the modern [*Place de la Nation*](#)).
- The extension of *boulevard Magenta* to connect it with the new railway station, the [*Gare du Nord*](#).
- The construction of *boulevard Malesherbes*, to connect the *place de la Madeleine* to the new *Monceau* neighborhood. The construction of this street obliterated one of the most sordid and dangerous neighborhoods in the city, called *la Petite Pologne*, where Paris policemen rarely ventured at night.
- A new square, [*place de l'Europe*](#), in front of the [*Gare Saint-Lazare*](#) railway station. The station was served by two new boulevards, *rue de Rome* and *rue Saint-Lazaire*. In addition, the *rue de Madrid* was extended and two other streets, *rue de Rouen* (the modern [*rue Auber*](#)) and *rue Halevy*, were built in this neighborhood.
- [*Parc Monceau*](#) was redesigned and replanted, and part of the old park made into a residential quarter.
- The *rue de Londres* and *rue de Constantinople*, under a new name, [*avenue de Villiers*](#), was extended to *porte Champerret*.
- The [*Étoile*](#), around the [*Arc de Triomphe*](#), was completely redesigned. A star of new avenues radiated from the *Étoile*; *avenue de Bezons* (now [*Wagram*](#)); *avenue Kleber*; *avenue Josephine* (now *Monceau*); *avenue Prince-Jerome* (now *Mac-Mahon* and *Niel*); *avenue Essling* (now *Carnot*); and a wider *avenue de Saint-Cloud* (now [*Victor-Hugo*](#)), forming with *Champs-Élysées* and other existing avenues a star of 12 avenues.^[24]
- *Avenue Daumesnil* was built as far as the new [*Bois de Vincennes*](#), a huge new park being constructed on the east edge of the city.
- The hill of [*Chaillot*](#) was leveled, and a new square created at the *Pont d'Alma*. Three new boulevards were built in this neighborhood: *avenue d'Alma* (the present [*George V*](#)); *avenue de l'Empereur* (the present *avenue du President-Wilson*), which connected the *places d'Alma*, *d'Iena* and *du Trocadéro*. In addition, four new streets were built in that neighborhood: *rue Francois-I^{er}*, *rue Pierre Charron*, *rue Marbeuf* and *rue de Marignan*.^[25]

On the left bank:

- Two new boulevards, *avenue Bosquet* and *avenue Rapp*, were constructed, beginning from the *pont de l'Alma*.
- The *avenue de la Tour Maubourg* was extended as far as the [*pont des Invalides*](#).
- A new street, *boulevard Arago*, was constructed, to open up *place Denfert-Rochereau*.
- A new street, *boulevard d'Enfer* (today's *boulevard Raspail*) was built up to the intersection [*Sèvres-Babylone*](#).
- The streets around the *Panthéon* on [*Montagne Sainte-Geneviève*](#) were extensively changed. A new street, *avenue des Gobelins*, was created, and part of *rue Mouffetard* was expanded. Another new street, *rue Monge*, was created on the east, while another new street, *rue Claude Bernard*, on the south. *Rue Soufflot*, built by *Rambuteau*, was entirely rebuilt.

On the *Île de la Cité*:

The island became an enormous construction site, which completely destroyed most of the old streets and neighborhoods. Two new government buildings, the *Tribunal de Commerce* and the *Prefecture de Police*, were built, occupying a large part of the island. Two new streets were also built, the *boulevard du Palais* and the *rue de Lutèce*. Two bridges, the *pont Saint-Michel* and the *pont-au-Change* were completely rebuilt, along with the embankments near them. The *Palais de Justice* and *place Dauphine* were extensively modified. At the same time, Haussmann preserved and restored the jewels of the island; the square in front of the *Cathedral of Notre Dame* was widened, the spire of the Cathedral, pulled down during the Revolution, was restored, and *Sainte-Chapelle* and the ancient *Conciergerie* were saved and restored.^[26]

The grand projects of the second phase were mostly welcomed, but also caused criticism. Haussmann was especially criticized for his taking large parts of the *Jardin du Luxembourg* to make room for the present-day *boulevard Raspail*, and for its connection with the *boulevard Saint-Michel*. The *Medici Fountain* had to be moved further into the park, and was reconstructed with the addition of statuary and a long basin of water.^[27] Haussmann was also criticized for the growing cost of his projects; the estimated cost for the 26,290 metres (86,250 ft) of new avenues had been 180 million francs, but grew to 410 million francs; property owners whose buildings had been expropriated won a legal case entitling them to a larger payments, and many property owners found ingenious ways to increase the value of their expropriated properties by inventing non-existent shops and businesses, and charging the city for lost revenue.^[28]

On 1 January 1860 Napoleon III officially annexed the suburbs of Paris out to the ring of fortifications around the city. The annexation included eleven communes; Auteuil, Batignolles-Monceau, Montmartre, La Chapelle, Passy, La Villette, Belleville, Charonne, Bercy, Grenelle and Vaugirard,^[29] along with pieces of other outlying towns. The residents of these suburbs were not entirely happy to be annexed; they did not want to pay the higher taxes, and wanted to keep their independence, but they had no choice; Napoleon III was Emperor, and he could arrange boundaries as he wished. With the annexation Paris was enlarged from twelve to twenty arrondissements, the number today. The annexation more than doubled the area of the city from 3,300 hectares to 7,100 hectares, and the population of Paris instantly grew by 400,000 to 1,600,000 people.^[30] The annexation made it necessary for Haussmann to enlarge his plans, and to construct new boulevards to connect the new arrondissements with the center. In order to connect Auteuil and Passy to the center of Paris, he built *rues Michel-Ange*, *Molitor* and *Mirabeau*. To connect the plain of Monceau, he built *avenues Villers*, *Wagram*, and *boulevard Malesherbes*. To reach the northern arrondissements he extended *boulevard Magenta* with *boulevard d'Ornano* as far as the *Porte de la Chapelle*, and in the east extended the *rue des Pyrénées*.^[31]

The third phase of renovations was proposed in 1867 and approved in 1869, but it faced much more opposition than the earlier phases. Napoleon III had decided to liberalize his empire in 1860, and to give a greater voice to the parliament and to the opposition. The Emperor had always been less popular in Paris than in the rest of the country, and the republican opposition in parliament focused its attacks on Haussmann. Haussmann ignored the attacks and went ahead with the third phase, which planned the construction of twenty-eight kilometers (17 miles) of new boulevards at an estimated cost of 280 million francs.^[23]

The third phase included these projects on the right bank:

- The renovation of the gardens of the Champs-Élysées.

- Finishing the place du Château d'Eau (now Place de la République), creating a new avenue des Amandiers and extending avenue Parmentier.
- Finishing the place du Trône (now Place de la Nation) and opening three new boulevards: avenue Philippe-Auguste, avenue Taillebourg, and avenue de Bouvines.
- Extending the rue Caulaincourt and preparing a future Pont Caulaincourt.
- Building a new rue de Châteaudon and clearing the space around the church of Notre-Dame de Lorette, making room for connection between the gare Saint-Lazare and the gare du Nord and gare de l'Est.
- Finishing the place in front of the Gare du Nord. Rue Maubeuge was extended from Montmartre to the boulevard de la Chapelle, and rue Lafayette was extended to the porte de Pantin.
- The place de l'Opéra had been created during the first and second phases; the opera itself was to be built in the third phase.
- Extending [Boulevard Haussmann](#) from the place Saint-Augustin to rue Taitbout, connecting the new quarter of the Opera with that of Etoile.
- Creating the place du Trocadéro, the starting point of two new avenues, the modern President-Wilson and Henri-Martin.
- Creating the place Victor Hugo, the starting point of avenues Malakoff and Bugeaud and rues Boissière and Copernic.
- Finishing the Rond-Point of the Champs-Élysées, with the construction of avenue d'Antin (now Franklin Roosevelt) and rue La Boétie.

On the left bank:

- Building the boulevard Saint-Germain from the pont de la Concorde to rue du Bac; building rue des Saints-Pères and rue de Rennes.
- Extending the rue de la Glacière and enlarging place Monge.^[32]

Haussmann did not have time to finish the third phase, as he soon came under intense attack from the opponents of Napoleon III.

In 1867, one of the leaders of the parliamentary opposition to Napoleon, [Jules Ferry](#), ridiculed the accounting practices of Haussmann as *Les Comptes fantastiques d'Haussmann* ("The fantastic (bank) accounts of Haussmann"), a play-on-words based on the "Les Contes d'Hoffman" [Offenbach](#) operetta popular at the time.^[33] In the parliamentary elections of May 1869, the government candidates won 4.43 million votes, while the opposition republicans won 3.35 million votes. In Paris, the republican candidates won 234,000 votes to 77,000 for the Bonapartist candidates, and took eight of the nine seats of Paris deputies.^[34] At the same time Napoleon III was increasingly ill, suffering from [gallstones](#) which were to cause his death in 1873, and preoccupied by the political crisis that would lead to the Franco-Prussian War. In December 1869 Napoleon III named an opposition leader and fierce critic of Haussmann, [Emile Ollivier](#), as his new prime minister. Napoleon gave in to the opposition demands in January 1870 and asked Haussmann to resign. Haussmann refused to resign, and the Emperor reluctantly dismissed him on 5 January 1870. Eight months later, during the [Franco-Prussian War](#), Napoleon III was captured by the Germans, and the Empire was overthrown.

In his memoirs, written many years later, Haussmann had this comment on his dismissal: "In the eyes of the Parisians, who like routine in things but are changeable when it comes to people, I committed two great wrongs: Over the course of seventeen years, I disturbed their daily habits by turning Paris upside down, and they had to look at the same face of the Prefect in the Hotel de Ville. These were two unforgivable complaints."^[35]

Hausmann's successor as prefect of the Seine appointed [Jean-Charles Adolphe Alphand](#), the head of Hausmann's department of parks and plantations, as the director of works of Paris. Alphand respected the basic concepts of his plan. Despite their intense criticism of Napoleon III and Hausmann during the Second Empire, the leaders of the new Third Republic continued and finished his renovation projects.

- 1875 – completion of the Paris Opéra
- 1877 – completion of the boulevard Saint-Germain
- 1877 – completion of the avenue de l'Opéra
- 1879 – completion of the boulevard Henri IV
- 1889 – completion of the avenue de la République
- 1907 – completion of the boulevard Raspail
- 1927 – completion of the boulevard Hausmann^[36]

Prior to Hausmann, Paris had only four public parks: the [Jardin des Tuileries](#), the [Jardin du Luxembourg](#), and the [Palais Royal](#), all in the center of the city, and the [Parc Monceau](#), the former property of the family of King Louis Philippe, in addition to the [Jardin des Plantes](#), the city's botanical garden and oldest park. Napoleon III had already begun construction of the Bois de Boulogne, and wanted to build more new parks and gardens for the recreation and relaxation of the Parisians, particularly those in the new neighborhoods of the expanding city.^[37] Napoleon III's new parks were inspired by his memories of the parks in London, especially [Hyde Park](#), where he had strolled and promenaded in a carriage while in exile; but he wanted to build on a much larger scale. Working with Hausmann, [Jean-Charles Adolphe Alphand](#), the engineer who headed the new Service of Promenades and Plantations, whom Hausmann brought with him from Bordeaux, and his new chief gardener, [Jean-Pierre Barillet-Deschamps](#), also from Bordeaux, laid out a plan for four major parks at the cardinal points of the compass around the city. Thousands of workers and gardeners began to dig lakes, build cascades, plant lawns, flowerbeds and trees, construct chalets and grottoes. Hausmann and Alphand created the [Bois de Boulogne](#) (1852–1858) to the west of Paris; the [Bois de Vincennes](#) (1860–1865) to the east; the [Parc des Buttes-Chaumont](#) (1865–1867) to the north, and [Parc Montsouris](#) (1865–1878) to the south.^[37] In addition to building the four large parks, Hausmann and Alphand redesigned and replanted the city's older parks, including [Parc Monceau](#), and the [Jardin du Luxembourg](#). Altogether, in seventeen years, they planted six hundred thousand trees and added two thousand hectares of parks and green space to Paris. Never before had a city built so many parks and gardens in such a short time.^[38]

Under Louis Philippe, a single public square had been created, at the tip of the Ile-de-la-Cité. Hausmann wrote in his memoirs that Napoleon III instructed him: "do not miss an opportunity to build, in all the arrondissements of Paris, the greatest possible number of squares, in order to offer the Parisians, as they have done in London, places for relaxation and recreation for all the families and all the children, rich and poor."^[39] In response Hausmann created twenty-four new squares; seventeen in the older part of the city, eleven in the new arrondissements, adding 15 hectares (37 acres) of green space.^[40] Alphand termed these small parks "green and flowering salons." Hausmann's goal was to have one park in each of the eighty neighborhoods of Paris, so that no one was more than ten minutes' walk from such a park. The parks and squares were an immediate success with all classes of Parisians.^[41]

Napoleon III and Hausmann commissioned a wide variety of architecture, some of it traditional, some of it very innovative, like the glass and iron pavilions of [Les Halles](#); and some of it, such as the [Opéra Garnier](#), commissioned by Napoleon III, designed by [Charles Garnier](#) but not finished until 1875, is difficult to classify. Many of the buildings were

designed by the city architect, [Gabriel Davioud](#), who designed everything from city halls and theaters to park benches and kiosks.

His architectural projects included:

- The construction of two new railroad stations, the [Gare du Nord](#) and the [Gare de l'Est](#); and the rebuilding of the [Gare de Lyon](#).
- Six new mairies, or town halls, for the 1st, 2nd, 3rd, 4th, 7th and 12th arrondissements, and the enlargement of the other mairies.
- The reconstruction of [Les Halles](#), the central market, replacing the old market buildings with large glass and iron pavilions, designed by [Victor Baltard](#). In addition, Haussmann built a new market in the neighborhood of the Temple, the [Marché Saint-Honoré](#); the [Marché de l'Europe](#) in the 8th arrondissement; the [Marché Saint-Quentin](#) in the 10th arrondissement; the [Marché de Belleville](#) in the 20th; the [Marché des Batignolles](#) in the 17th; the [Marché Saint-Didier](#) and [Marché d'Auteuil](#) in the 16th; the [Marché de Necker](#) in the 15th; the [Marché de Montrouge](#) in the 14th; the [Marché de Place d'Italie](#) in the 13th; the [Marché Saint-Maur-Popincourt](#) in the 11th.
- The Paris Opera (now [Palais Garnier](#)), begun under Napoleon III and finished in 1875; and five new theaters; the [Châtelet](#) and [Théâtre Lyrique](#) on the [Place du Châtelet](#); the [Gaîté](#), [Vaudeville](#) and [Panorama](#).
- Five lycées were renovated, and in each of the eighty neighborhoods Haussmann established one municipal school for boys and one for girls, in addition to the large network of schools run by the Catholic church.
- The reconstruction and enlargement of the city's oldest hospital, the [Hôtel-Dieu de Paris](#) on the [Île-de-la-Cité](#).
- The completion of the last wing of the [Louvre](#), and the opening up of the [Place du Carousel](#) and the [Place du Palais-Royal](#) by the demolition of several old streets.
- The building of the first railroad bridge across the Seine; originally called the [Pont Napoleon III](#), now called simply the [Pont National](#).

Since 1801, under Napoleon I, the French government was responsible for the building and maintenance of churches. Haussmann built, renovated or purchased nineteen churches. New churches included the [Saint-Augustin](#), the [Eglise Saint-Vincent de Paul](#), the [Eglise de la Trinité](#). He bought six churches which had been purchased by private individuals during the French Revolution. Haussmann built or renovated five temples and built two new synagogues, on [rue des Tournelles](#) and [rue de la Victoire](#).^[42]

Besides building churches, theaters and other public buildings, Haussmann paid attention to the details of the architecture along the street; his city architect, [Gabriel Davioud](#), designed garden fences, kiosks, shelters for visitors to the parks, public toilets, and dozens of other small but important structures.

The most famous and recognizable feature of Haussmann's renovation of Paris are the Haussmann apartment buildings which line the boulevards of Paris. Street [blocks](#) were designed as homogeneous architectural wholes. He treated buildings not as independent structures, but as pieces of a unified urban landscape.

In 18th-century Paris, buildings were usually narrow (often only six meters wide [20 feet]); deep (sometimes forty meters; 130 feet) and tall—as many as five or six stories. The ground floor usually contained a shop, and the shopkeeper lived in the rooms above the shop. The upper floors were occupied by families; the top floor, under the roof, was originally a storage place, but under the pressure of the growing population, was usually turned into a low-cost

residence.^[43] In the early 19th century, before Haussmann, the height of buildings was strictly limited to 22.41 meters (73 ft 6 in), or four floors above the ground floor. The city also began to see a demographic shift; wealthier families began moving to the western neighborhoods, partly because there was more space, and partly because the prevailing winds carried the smoke from the new factories in Paris toward the east.

In Haussmann's Paris, the streets became much wider, growing from an average of twelve meters (39 ft) wide to twenty-four meters (79 ft), and in the new arrondissements, often to eighteen meters (59 ft) wide.

The interiors of the buildings were left to the owners of the buildings, but the façades were strictly regulated, to ensure that they were the same height, color, material, and general design, and were harmonious when all seen together.

The reconstruction of the [rue de Rivoli](#) was the model for the rest of the Paris boulevards. The new apartment buildings followed the same general plan:

- ground floor and basement with thick, [load-bearing walls](#), fronts usually parallel to the street. This was often occupied by shops or offices.
- [mezzanine](#) or entresol intermediate level, with low ceilings; often also used by shops or offices.
- second, [piano nobile](#) floor with a balcony. This floor, in the days before elevators were common, was the most desirable floor, and had the largest and best apartments.
- third and fourth floors in the same style but with less elaborate stonework around the windows, sometimes lacking balconies.
- fifth floor with a single, continuous, undecorated balcony.
- [mansard](#) roof, angled at 45°, with [garret](#) rooms and [dormer](#) windows. Originally this floor was to be occupied by lower-income tenants, but with time and with higher rents it came to be occupied almost exclusively by the concierges and servants of the people in the apartments below.

The Haussmann façade was organized around horizontal lines that often continued from one building to the next: [balconies](#) and [cornices](#) were perfectly aligned without any noticeable alcoves or projections, at the risk of the uniformity of certain quarters. The [rue de Rivoli](#) served as a model for the entire network of new Parisian boulevards. For the building façades, the technological progress of stone sawing and (steam) transportation allowed the use of massive stone blocks instead of simple stone facing. The street-side result was a "monumental" effect that exempted buildings from a dependence on decoration; sculpture and other elaborate stonework would not become widespread until the end of the century.

Before Haussmann, most buildings in Paris were made of brick or wood and covered with plaster. Haussmann required that the buildings along the new boulevards be either built or faced with cut stone, usually the local cream-colored [Lutetian limestone](#), which gave more harmony to the appearance of the boulevards. He also required, using a decree from 1852, that the façades of all buildings be regularly maintained, repainted, or cleaned, at least every ten years. under the threat of a fine of one hundred francs.^[44]

While he was rebuilding the boulevards of Paris, Haussmann simultaneously rebuilt the dense labyrinth of pipes, sewers and tunnels under the streets which provided Parisians with basic services. Haussmann wrote in his *mémoires*: "The underground galleries are an organ of the great city, functioning like an organ of the human body, without seeing the light of day; clean and fresh water, light and heat circulate like the various fluids whose movement and

maintenance serves the life of the body; the secretions are taken away mysteriously and don't disturb the good functioning of the city and without spoiling its beautiful exterior."^[45]

Hausmann began with the water supply. Before Hausmann, drinking water in Paris was either lifted by steam engines from the Seine, or brought by a canal, started by Napoleon I, from the river [Ourcq](#), a tributary of the river [Marne](#). The quantity of water was insufficient for the fast-growing city, and, since the sewers also emptied into the Seine near the intakes for drinking water, it was also notoriously unhealthy. In March 1855 Hausmann appointed [Eugene Belgrand](#), a graduate of the [École Polytechnique](#), to the post of Director of Water and Sewers of Paris.^[46]

Belgrand first addressed the city's fresh water needs, constructing a system of [aqueducts](#) that nearly doubled the amount of water available per person per day and quadrupled the number of homes with running water.^[47]^[page needed] These aqueducts discharged their water in reservoirs situated within the city. Inside the city limits and opposite [Parc Montsouris](#), Belgrand built the largest water reservoir in the world to hold the water from the River [Vanne](#).

At the same time Belgrand began rebuilding the water distribution and sewer system under the streets. In 1852 Paris had 142 kilometres (88 mi) of sewers, which could carry only liquid waste. Containers of solid waste were picked up each night by people called *vidangeurs*, who carried it to waste dumps on the outskirts of the city. The tunnels he designed were intended to be clean, easily accessible, and substantially larger than the previous Parisian underground.^[48] Under his guidance, Paris's sewer system expanded fourfold between 1852 and 1869.^[49]

Hausmann and Belgrand built new sewer tunnels under each sidewalk of the new boulevards. The sewers were designed to be large enough to evacuate rain water immediately; the large amount of water used to wash the city streets; waste water from both industries and individual households; and water that collected in basements when the level of the Seine was high. Before Hausmann, the sewer tunnels (featured in Victor Hugo's *Les Misérables*) were cramped and narrow, just 1.8 m (5 ft 11 in) high and 75 to 80 centimeters (2 ft 6 in) wide. The new tunnels were 2.3 meters (7 ft 6 in) high and 1.3 meters (4 ft 3 in) wide, large enough for men to work standing up. These flowed into larger tunnels that carried the waste water to even larger collector tunnels, which were 4.4 m (14 ft) high and 5.6 m (18 ft) wide. A channel down the center of the tunnel carried away the waste water, with sidewalks on either side for the *égoutiers*, or sewer workers. Specially designed wagons and boats moved on rails up and down the channels, cleaning them. Belgrand proudly invited tourists to visit his sewers and ride in the boats under the streets of the city.^[50]

The underground labyrinth built by Hausmann also provided gas for heat and for lights to illuminate Paris. At the beginning of the Second Empire, gas was provided by six different private companies. Hausmann forced them to consolidate into a single company, the *Compagnie parisienne d'éclairage et de chauffage par le gaz*, with rights to provide gas to Parisians for fifty years. Consumption of gas tripled between 1855 and 1859. In 1850 there were only 9000 gaslights in Paris; by 1867, the Paris Opera and four other major theaters alone had fifteen thousand gas lights. Almost all the new residential buildings of Paris had gaslights in the courtyards and stairways; the monuments and public buildings of Paris, the [arcades](#) of the Rue de Rivoli, and the squares, boulevards and streets were illuminated at night by gaslights. For the first time, Paris was the City of Light.^[51]

Hausmann's renovation of Paris had many critics during his own time. Some were simply tired of the continuous construction. The French historian [Léon Halévy](#) wrote in 1867, "the work of Monsieur Hausmann is incomparable. Everyone agrees. Paris is a marvel, and M. Hausmann has done in fifteen years what a century could not have done. But that's enough

for the moment. There will be a 20th century. Let's leave something for them to do."^[52] Others regretted that he had destroyed a historic part of the city. The brothers Goncourt condemned the avenues that cut at right angles through the center of the old city, where "one could no longer feel in the world of Balzac."^[53] [Jules Ferry](#), the most vocal critic of Haussmann in the French parliament, wrote: "We weep with our eyes full of tears for the old Paris, the Paris of Voltaire, of Desmoulins, the Paris of 1830 and 1848, when we see the grand and intolerable new buildings, the costly confusion, the triumphant vulgarity, the awful materialism, that we are going to pass on to our descendants."^[54]

The 20th century historian of Paris René Héron de Villefosse shared the same view of Haussmann's renovation: "in less than twenty years, Paris lost its ancestral appearance, its character which passed from generation to generation... the picturesque and charming ambiance which our fathers had passed onto us was demolished, often without good reason." Héron de Villefosse denounced Haussmann's central market, Les Halles, as "a hideous eruption" of cast iron. Describing Haussmann's renovation of the Île de la Cité, he wrote: "the old ship of Paris was torpedoed by Baron Haussmann and sunk during his reign. It was perhaps the greatest crime of the megalomaniac prefect and also his biggest mistake...His work caused more damage than a hundred bombings. It was in part necessary, and one should give him credit for his self-confidence, but he was certainly lacking culture and good taste...In the United States, it would be wonderful, but in our capital, which he covered with barriers, scaffolds, gravel, and dust for twenty years, he committed crimes, errors, and showed bad taste."^[55]

The Paris historian, Patrice de Moncan, in general an admirer of Haussmann's work, faulted Haussmann for not preserving more of the historic streets on the Île de la Cité, and for clearing a large open space in front of the Cathedral of Notre Dame, while hiding another major historical monument, [Sainte-Chapelle](#), out of sight within the walls of the Palais de Justice. He also criticized Haussmann for reducing the Jardin de Luxembourg from thirty to twenty-six hectares in order to build the rues Medici, Guynemer and Auguste-Comte; for giving away a half of [Parc Monceau](#) to the Pereire brothers for building lots, in order to reduce costs; and for destroying several historic residences along the route of the Boulevard Saint-Germain, because of his unwavering determination to have straight streets.^[56]

Some of Haussmann's critics said that the real purpose of Haussmann's boulevards was to make it easier for the army to maneuver and suppress armed uprisings; Paris had experienced six such uprisings between 1830 and 1848, all in the narrow, crowded streets in the center and east of Paris and on the left bank around the Pantheon. These critics argued that a small number of large, open intersections allowed easy control by a small force. In addition, buildings set back from the center of the street could not be used so easily as fortifications.^[57] [Emile Zola](#) repeated that argument in his early novel, *La Curée*; "Paris sliced by strokes of a saber: the veins opened, nourishing one hundred thousand earth movers and stone masons; criss-crossed by admirable strategic routes, placing forts in the heart of the old neighborhoods."^[58]

Some real-estate owners demanded large, straight avenues to help troops manoeuvre.^[59] The argument that the boulevards were designed for troop movements was repeated by 20th century critics, including the French historian, René Héron de Villefosse, who wrote, "the larger part of the piercing of avenues had for its reason the desire to avoid popular insurrections and barricades. They were strategic from their conception."^[60] This argument was also popularized by the American architectural critic, [Lewis Mumford](#).

Haussmann himself did not deny the military value of the wider streets. In his memoirs, he wrote that his new boulevard Sebastopol resulted in the "gutting of old Paris, of the quarter of

riots and barricades."^[61] He admitted he sometimes used this argument with the Parliament to justify the high cost of his projects, arguing that they were for national defense and should be paid for, at least partially, by the state. He wrote: "But, as for me, I who was the promoter of these additions made to the original project, I declare that I never thought in the least, in adding them, of their greater or lesser strategic value."^[61] The Paris urban historian Patrice de Moncan wrote: "To see the works created by Haussmann and Napoleon III only from the perspective of their strategic value is very reductive. The Emperor was a convinced follower of Saint-Simon. His desire to make Paris, the economic capital of France, a more open, more healthy city, not only for the upper classes but also for the workers, cannot be denied, and should be recognised as the primary motivation."^[62]

There was only one armed uprising in Paris after Haussmann, the [Paris Commune](#) from March through May 1871, and the boulevards played no important role. The Communards seized power easily, because the French Army was absent, defeated and captured by the Prussians. The Communards took advantage of the boulevards to build a few large forts of paving stones with wide fields of fire at strategic points, such as the meeting point of the Rue de Rivoli and Place de la Concorde. But when the newly organized army arrived at the end of May, it avoided the main boulevards, advanced slowly and methodically to avoid casualties, worked its way around the barricades, and took them from behind. The Communards were defeated in one week not because of Haussmann's boulevards, but because they were outnumbered by five to one, they had fewer weapons and fewer men trained to use them, they had no hope of getting support from outside Paris, they had no plan for the defense of the city; they had very few experienced officers; there was no single commander; and each neighborhood was left to defend itself.^[63]

As Paris historian Patrice de Moncan observed, most of Haussmann's projects had little or no strategic or military value; the purpose of building new sewers, aqueducts, parks, hospitals, schools, city halls, theaters, churches, markets and other public buildings was, as Haussmann stated, to employ thousands of workers, and to make the city more healthy, less congested, and more beautiful.^[64]

Haussmann was also blamed for the social disruption caused by his gigantic building projects. Thousands of families and businesses had to relocate when their buildings were demolished for the construction of the new boulevards. Haussmann was also blamed for the dramatic increase in rents, which increased by three hundred percent during the Second Empire, while wages, except for those of construction workers, remained flat, and blamed for the enormous amount of speculation in the real estate market. He was also blamed for reducing the amount of housing available for low income families, forcing low-income Parisians to move from the center to the outer neighborhoods of the city, where rents were lower. Statistics showed that the population of the first and sixth arrondissements, where some of the most densely populated neighborhoods were located, dropped, while the population of the new 17th and 20th arrondissements, on the edges of the city, grew rapidly.

Arrondissement	1861	1866	1872
1st	89,519	81,665	74,286
6th	95,931	99,115	90,288
17th	75,288	93,193	101,804
20th	70,060	87,844	92,712

Haussmann's defenders noted that he built far more buildings than he tore down: he demolished 19,730 buildings, containing 120,000 lodgings or apartments, while building

34,000 new buildings, with 215,300 new apartments and lodgings. French historian Michel Cremona wrote that, even with the increase in population, from 949,000 Parisians in 1850 to 1,130,500 in 1856, to two million in 1870, including those in the newly annexed eight arrondissements around the city, the number of housing units grew faster than the population.^[65]

Recent studies have also shown that the proportion of Paris housing occupied by low-income Parisians did not decrease under Haussmann, and that the poor were not driven out of Paris by Haussmann's renovation. In 1865 a survey by the prefecture of Paris showed that 780,000 Parisians, or 42 percent of the population, did not pay taxes due to their low income. Another 330,000 Parisians or 17 percent, paid less than 250 francs a month rent. Thirty-two percent of the Paris housing was occupied by middle-class families, paying rent between 250 and 1500 francs. Fifty thousand Parisians were classified as rich, with rents over 1500 francs a month, and occupied just three percent of the residences.^[66]

Other critics blamed Haussmann for the division of Paris into rich and poor neighborhoods, with the poor concentrated in the east and the middle class and wealthy in the west. Haussmann's defenders noted that this shift in population had been underway since the 1830s, long before Haussmann, as more prosperous Parisians moved to the western neighborhoods, where there was more open space, and where residents benefited from the prevailing winds, which carried the smoke from Paris's new industries toward the east. His defenders also noted that Napoleon III and Haussmann made a special point to build an equal number of new boulevards, new sewers, water supplies, hospitals, schools, squares, parks and gardens in the working class eastern arrondissements as they did in the western neighborhoods.

A form of vertical stratification did take place in the Paris population due to Haussmann's renovations. Prior to Haussmann, Paris buildings usually had wealthier people on the second floor (the "etage noble"), while middle class and lower-income tenants occupied the top floors. Under Haussmann, with the increase in rents and greater demand for housing, low-income people were unable to afford the rents for the upper floors; the top floors were increasingly occupied by concierges and the servants of those in the floors below. Lower-income tenants were forced to the outer neighborhoods, where rents were lower.^[67]

The Baron Haussmann's transformations to Paris improved the quality of life in the capital. Disease epidemics (save [tuberculosis](#)) ceased, traffic circulation improved and new buildings were better-built and more functional than their predecessors.

The [Second Empire](#) renovations left such a mark on Paris' urban history that all subsequent trends and influences were forced to refer to, adapt to, or reject, or to reuse some of its elements. By intervening only once in Paris's ancient districts, pockets of insalubrity remained which explain the resurgence of both hygienic ideals and radicalness of some planners of the 20th century.

The end of "pure Haussmannism" can be traced to urban legislation of 1882 and 1884 that ended the uniformity of the classical street, by permitting staggered façades and the first creativity for roof-level architecture; the latter would develop greatly after restrictions were further liberalized by a 1902 law. All the same, this period was merely "post-Haussmann", rejecting only the austerity of the Napoleon-era architecture, without questioning the urban planning itself.

A century after Napoleon III's reign, new housing needs and the rise of a new voluntarist [Fifth Republic](#) began a new era of Parisian urbanism. The new era rejected Haussmannian ideas as a whole to embrace those represented by architects such as [Le Corbusier](#) in abandoning unbroken street-side façades, limitations of building size and dimension, and even closing the

street itself to automobiles with the creation of separated, car-free spaces between the buildings for pedestrians. This new model was quickly brought into question by the 1970s, a period featuring a reemphasis of the Haussmann heritage: a new promotion of the multifunctional street was accompanied by limitations of the building model and, in certain quarters, by an attempt to rediscover the architectural homogeneity of the Second Empire street-block.

Certain suburban towns, for example [Issy-les-Moulineaux](#) and [Puteaux](#), have built new quarters that even by their name "Quartier Haussmannien", claim the Haussmanian heritage.

PARIS IN 1871-1914

Paris in the *Belle Époque* was a period in the history of the city between the years 1871 to 1914, from the beginning of the [Third French Republic](#) until the First World War. It saw the construction of the [Eiffel Tower](#), the [Paris Métro](#), the completion of the [Paris Opera](#), and the beginning of the [Basilica of Sacré-Cœur](#) on [Montmartre](#). Three lavish "universal expositions" in 1878, 1889 and 1900 brought millions of visitors to Paris to sample the latest innovations in commerce, art and technology. Paris was the scene of the first public projection of a motion picture, and the birthplace of the [Ballets Russes](#), [Impressionism](#) and [Modern Art](#).

The expression *Belle Époque* ("beautiful era") came into use after the First World War; it was a nostalgic term for what seemed a simpler time of optimism, elegance and progress.

After the violent end of the [Paris Commune](#) in May 1871, the city was governed by [martial law](#) under the strict surveillance of the national government. At the time, Paris was not actually the capital of France. The government and parliament had moved to [Versailles](#) in March 1871 once the Paris Commune took power, and they did not return to Paris until 1879, although the Senate returned earlier to its home in the [Luxembourg Palace](#).^[1]

The end of the Commune left the city's population deeply divided. [Gustave Flaubert](#) described the atmosphere in the city in early June 1871: "One half of the population of Paris wants to strangle the other half, and the other half has the same idea; you can read it in the eyes of people passing by."^[2] This sentiment soon became secondary to the need to reconstruct the buildings that had been destroyed in the last days of the Commune. The [Communards](#) had burned the [Hôtel de Ville](#) (including all the city archives), the [Tuileries Palace](#), the [Palais de Justice](#), the [Prefecture of Police](#), the Ministry of Finances, the [Cour des Comptes](#), the State Council building at the [Palais-Royal](#), and many others. Several streets, particularly the [Rue de Rivoli](#), had also been badly damaged by the fighting. Besides the cost of reconstruction, the new government was obliged to pay an [indemnity](#) of 210 million francs in gold to the victorious [German Empire](#) as reparations for the disastrous [Franco-Prussian War](#) of 1870. On 4 August 1871, at the first meeting of the city council after the Commune, the new Prefect of the Seine, [Léon Say](#), put forward a plan to borrow 350 million francs for reconstruction and indemnity payments. The city's bankers and businessmen quickly raised the money, and the reconstruction was soon underway.

The [Conseil d'État](#) and [Palais de la Légion d'Honneur](#) (Hôtel de Salm) were rebuilt in their original style. The new Hôtel de Ville was built on the lines of a more picturesque [Neo-Renaissance](#) style than the original that was based on the appearance of the [Château de Chambord](#) in the [Loire Valley](#), with a façade decorated with statues of outstanding personages who contributed to the history and fame of Paris. The destroyed Ministry of Finance on the Rue de Rivoli was replaced by a grand hotel, while the Ministry moved into the Richelieu wing of the [Louvre](#), where it remained until 1989. The ruined Cour des Comptes on the [Left Bank](#) was replaced by the Gare d'Orléans, also known under the name [Gare d'Orsay](#), now

the [Musée d'Orsay](#). The one difficult decision was the Tuileries Palace, originally built in the 16th century by [Marie de' Medici](#) as a royal residence. The interior had been entirely destroyed by fire, but the walls were still largely intact. The walls remained standing for ten years while the fate of the ruins was debated. [Baron Haussmann](#), in retirement, appealed for a restoration of the building as a historic monument, and there was a proposal to turn it into a new museum of modern art. In 1881, however, a new [Chamber of Deputies](#) more sympathetic to the Commune than previous governments decided that it was too much a symbol of the monarchy and had the walls pulled down.^[3]

On 23 July 1873, the National Assembly (the legislature of the early French [Third Republic](#) that was replaced by the Chamber of Deputies and a Senate in 1875) endorsed the project of building a basilica at the site where the uprising of the Paris Commune had begun. The gesture was intended as a symbolic means to atone for the sufferings of Paris during the Franco-Prussian War and the Commune. The [Basilica of Sacré-Cœur](#) was subsequently built in a [Neo-Byzantine](#) style and paid for by public subscription. It quickly became one of the most recognizable landmarks in Paris during construction, but was not finished until 1919.^[4]

The population of Paris was 1,851,792 in 1872, at the beginning the *Belle Époque*. By 1911, it reached 2,888,107, higher than the population today. Near the end of the [Second Empire](#) and the beginning of the *Belle Époque*, between 1866 and 1872, the population of Paris grew only 1.5 percent. Then the population surged by 14.09 percent between 1876 and 1881, only to slow down again to a 3.3 percent growth between 1881 and 1886. After that, it grew very slowly until the end of the *Belle Époque*. It reached a historic high of almost three million persons in 1921 before beginning a long decline until the early 21st century.^[5]

In 1886, about one-third of the population of Paris (35.7 percent) had been born in Paris. More than half 56.3 percent) had been born in other [departments of France](#) and about eight-percent outside France.^[6] In 1891, Paris was the most cosmopolitan of European capital cities, with seventy-five foreign-born residents for every thousand inhabitants. In comparison, there were only twenty-four per thousand in [Saint Petersburg](#), twenty-two in London and Vienna, and eleven in Berlin. The largest communities of immigrants were Belgians, Germans, Italians and Swiss, with between twenty and twenty-eight thousand persons from each country. Followed by these were about ten thousand from Great Britain and an equal number from Russia; eight thousand from Luxembourg; six thousand South Americans; and five thousand Austrians. There were also 445 Africans, 439 Danes, 328 Portuguese and 298 Norwegians. Certain nationalities were concentrated in specific professions: Italians were concentrated in the businesses of making ceramics, shoes, sugar and preserves, whereas Germans were concentrated in leather-working, brewing, baking and [charcuterie](#). Swiss and Germans were predominant in businesses making watches and clocks and also accounted for a large proportion of the domestic servants.^[7]

The remnants of old Paris [aristocracy](#) and the new aristocracy of bankers, financiers and entrepreneurs mostly had their residences in the [8th arrondissement](#), from the [Champs-Élysées](#) to the [Madeleine](#) church; in the "[Quartier de l'Europe](#)" and "Butte Chaillot" (now the area of the [Place Charles de Gaulle](#); the [Faubourg Saint-Honoré](#); the "[Quartier Saint-Georges](#)", from the Rue Vivienne and the Palais-Royal to Roule; and the [Plain of Monceau](#). On the [Right Bank](#), they lived in [Le Marais](#). On the Left Bank, they lived on the south of the [Latin Quarter](#), at [Notre-Dame-des-Champs](#) and [Odéon](#); near [Les Invalides](#); and at the [École Militaire](#). The less affluent shop owners lived from the [Porte Saint-Denis](#) to [Les Halles](#) to the west of the [Boulevard de Sébastopol](#). The middle class employees of enterprises, small businesses and government lived closer to the center of the city along the "[Grands](#)

[Boulevards](#)"; in the [10th arrondissement](#); in the [1st](#) and [2nd arrondissements](#) near the [Paris Bourse](#) (Stock Exchange); in the [Sentier](#) quarter near Les Halles; and in Le Marais.^[8]

Under [Napoleon III](#), Baron [Haussmann](#) demolished the poorest, most crowded and historical neighborhoods in the center of the city to make room for the new boulevards and squares. The working-class Parisians moved out of the center toward the edges of the city, particularly to [Belleville](#) and [Ménilmontant](#) in the east; to [Clignancourt](#) and the [Quartier des Grandes-Carrières](#) to the north; and on the Left Bank to the area around the [Gare d'Austerlitz](#), [Javel](#) and [Grenelle](#), usually to neighborhoods that were close to their places of work. Small quarters of working-class Parisians still remained in the center of the city, mainly on the sides of the [Montagne Sainte-Geneviève](#) in the Latin Quarter near the [Sorbonne](#) and the [Jardin des Plantes](#), and along the covered [Bièvre River](#), where the tanneries had been located for centuries.^[9]

Paris was both the richest and poorest city in France. Twenty-four percent of the wealth in France was found in the [Seine department](#), but fifty-five percent of burials of Parisians were made in the section for those unable to pay. In 1878, two-thirds of Parisians paid less than 300 francs a year for their lodging, a very small amount at the time. An 1882 study of Parisians, based on funeral costs, concluded that twenty-seven percent of Parisians were upper or middle class, while seventy-three percent were poor or indigent. Incomes varied greatly according to the neighborhood: in the 8th arrondissement, there were eight poor persons for ten upper or middle class residents; in the [13th](#), [19th](#) and [20th](#) arrondissements, there were seven or eight poor for every well-off resident.^[10]

[Apaches](#) was a term that was introduced by Paris newspapers in 1902 for young Parisians who engaged in petty crime and sometimes fought each other or the police. They usually lived in [Belleville](#) and [Charonne](#). Their activities were described in lurid terms by the popular press, and they were blamed for all varieties of crime in the city. In September 1907, the newspaper [Le Gaulois](#) described an *Apache* as "the man who lives on the margin of society, ready to do anything, except to take a regular job, the miserable who breaks in a doorway, or stabs a passer-by for nothing, just for pleasure."^[11]

After the Commune took over the municipal government of Paris in March 1871, the French national government concluded that Paris was too important to be run by the Parisians alone. On 14 April 1871, just before the end of the Commune, the National Assembly, meeting in Versailles, passed a new law giving Paris a special status different from other French cities and subordinate to the national government. All male Parisians could vote. The city was given a municipal council of eighty members, four from each arrondissement, for a term of three years. The council could meet for four sessions a year, none longer than ten days, except when considering the budget, when six weeks were allowed. There was no elected mayor. The real powers in the city remained the Prefect of the Seine and the Prefect of Police, both appointed by the national government.^[12]

The first legislative elections after the Commune, on 7 January 1872, were won by the conservative candidates. [Victor Hugo](#), running as an independent candidate on the side of the radical republicans, was soundly defeated.^[13] In the Paris municipal elections of 1878, however, the radical Republicans were overwhelmingly victorious, winning 75 of the 80 municipal council seats. In 1879, they changed the name of many of the Paris streets and squares. The "Place du Château-d'Eau" became the [Place de la République](#), and a statue of the Republic was placed in the center in 1883. The avenues "de la Reine-Hortense" (named for the mother of Napoleon III, [Hortense de Beauharnais](#)), "Joséphine" (name for the wife of Napoleon I, [Joséphine de Beauharnais](#)), and "Roi-de-Rome" (named for [Napoleon II](#)), were renamed [Avenue Hoche](#), Avenue Marceau, and [Avenue Kléber](#), after generals who served

during the period of the [French Revolution](#): [Lazare Hoche](#), [François Séverin Marceau-Desgraviers](#), and [Jean-Baptiste Kléber](#).

The burning of the Tuileries Palace by the Commune meant that there was no longer a residence for the French [head of state](#). The [Élysée Palace](#) was chosen as the new residence in 1873. It was built between 1718 and 1722 by the architect Armand-Claude Mollet for [Louis Henri de La Tour d'Auvergne](#), [Count of Évreux](#), then purchased in 1753 by King [Louis XV](#) for his mistress, the [Marquise de Pompadour](#). During the period of the [French Consulate](#), it was owned by [Joachim Murat](#), one of Napoleon's marshals. In 1805, [Napoleon](#) made it one of his imperial residences, and it became the official presidential residence when his nephew, [Louis-Napoléon](#), the future Emperor Napoleon III, became President of the [Second Republic](#). During the [Bourbon Restoration](#) of 1815–30, the Élysée gardens were a popular amusement park. The Élysée Palace had no large room for ceremonial events, so a large ballroom was added during the [Third Republic](#).

The most memorable Parisian civic event during the period was the funeral of [Victor Hugo](#) in 1885. Hundreds of thousands of Parisians lined the [Champs-Élysées](#) to see the passage of his coffin. The [Arc de Triomphe](#) was draped in black. The remains of the writer were placed in the [Panthéon](#), formerly the Church of Saint-Geneviève, which had been turned into a [mausoleum](#) for great Frenchmen during the French Revolution, then turned back into a church in April 1816, during the Bourbon Restoration. After several changes during the 19th century, it was secularized again in 1885 for the occasion of Victor Hugo's funeral.^[14]

The *Belle Époque* was spared the violent uprisings that brought down two French regimes in the 19th century, but it had its share of political and social conflicts and occasional violence. Labor unions and strikes had been legalized during the regime of Napoleon III. The first labor union congress in Paris took place in October 1876,^[15] and the socialist party recruited many members among the Paris workers. On May 1, 1890, the socialists organized the first celebration of [May Day](#), the international day of labor. Since it was an unauthorized celebration, it led to confrontations between police and demonstrators.

The majority of political violence came from the [anarchist](#) movement of the 1890s. The first attack was organized by an anarchist named [Ravachol](#), who set off bombs at three residences of wealthy Parisians. On April 25, he set off a bomb at the Restaurant Véry at the Palais-Royal and was arrested. On 8 November, anarchists planted a bomb in the office of the Compagnie Minière et Métallurgique, a mining company, on the [Avenue de l'Opéra](#). The police found the bomb, but when it was taken to the police headquarters, it exploded, killing six persons. On 6 December, an anarchist named [Auguste Vaillant](#) set off a bomb in the building of the National Assembly that wounded forty-six persons. On 12 February 1894, an anarchist named [Émile Henry](#) set off a bomb at the café of the Hôtel Terminus next to the [Gare Saint-Lazare](#) that killed one person and wounded seventy-nine.^[16]

Another political crisis shook Paris beginning on 2 December 1887, when the president of the republic, [Jules Grévy](#), was forced to resign when it was discovered that he had been selling the nation's highest award, the [Legion of Honour](#). A popular general, [Georges Ernest Boulanger](#), had his name put forward as a potential new leader. He became known as "the man on horseback" because of images of him on his black horse. He was supported by ardent nationalists who wanted a war with Germany to take back [Alsace](#) and [Lorraine](#), which were lost in the [1870 Franco-Prussian War](#). Monarchist politicians began to promote Boulanger as a potential new leader who could dissolve the parliament, become president, recover the lost provinces and restore the French monarchy. Boulanger was elected to parliament in 1888, and his followers urged him to go to the Élysée Palace and declare himself president; but he refused, saying that he could win the office legally in a few months. However, the wave of

enthusiasm for Boulanger quickly faded away, and he went into voluntary exile. The government of the Third Republic remained firmly in place.^[17]

The Paris police force was completely re-organized after the fall of Napoleon III and the Commune; the *sergents de ville* were replaced by the *gardiens de la paix publique* (Guardians of the Public Peace), which by June 1871 had 7,756 men under the authority of the Prefect of Police named by the national government. Following a series of anarchist bombings in 1892, the number was increased to 7,000 guardians, 80 *brigadiers* and 950 *sous-brigadiers*. In 1901, under the prefect [Louis Lépine](#), in order to keep up with the technology of the time, a unit of policemen on bicycles (called the *hirondelles* after the brand of the bicycles) was formed. They numbered 18 per arrondissement and reached 600 by 1906 for the whole city. A unit of river police, the *brigade fluviale*, was organized in 1900 for the [Universal Exposition](#), as well as a unit of traffic police who wore a symbol of a Roman chariot embroidered on the sleeve of their uniform. The first six motorcycle policemen appeared on the streets in 1906.^[18]

In addition to the *gardiens de la paix publique*, Paris was guarded by the [Garde républicaine](#) under the military command of the [Gendarmerie](#) Nationale. Gendarmes had been a particular target of the Commune; 33 had been taken hostages and were executed by a (Communard) firing squad on Rue Haxo on 23 May 1871 in the last days of the Commune. In June 1871, they provided security in the damaged city. They numbered 6,500 men in two regiments, plus a unit of [cavalry](#) and a dozen cannon. The number was reduced in 1873 to 4,000 men in a single regiment, called the *Légion de la Garde républicaine* (Legion of the Republican Guard), with its headquarters on the Quai de Bourbon and troops quartered in several barracks around the city. The Republican Guard was given the duty of providing security for the president of the republic at the Élysée Palace, the National Assembly and the Senate, at the prefecture of police, and also at the [Opéra](#), theaters, public balls, racetracks, and other public places. A unit of bicyclists was formed on 6 June 1907. When World War I began, the entire unit of Paris gendarmes was mobilized and fought at the front during war; 222 of them lost their lives.^[19]

By a decree of 29 June 1912, to assure the security of Paris by fighting organized criminals such as the *Apaches* and the [bande à Bonnot](#), a criminal section called the *Brigade criminelle* was created.^[20]

Paris in the *Belle Époque* witnessed a long and sometimes bitter dispute between the Catholic Church and governments of the Third Republic. During the Commune, the Church was particularly targeted for attack; 24 priests and the Archbishop of Paris were taken hostages and shot by firing squads in the final days of the Commune. The new government after 1871 was conservative and Catholic, and provided substantial funding for the Church establishment through the Ministère des Cultes, which approved the building of the Basilica of Sacré-Cœur on Montmartre without government funds as an act of expiation for the events of 1870–1871. The anti-clerical Republicans took power in 1879, and one of their leaders, [Jules Ferry](#), declared: "My objective is to organize humanity without God and without kings."^[21] In March 1880, the Assembly outlawed religious congregations not authorized by the State, and on 30 June had the police expel the Jesuits from their building at 33 Rue de Sèvres. 260 monasteries and convents were closed in Paris and the rest of France. A new law was passed declaring that all public education should be non-religious (*laïque*) and obligatory. In 1883, new laws were passed to forbid public prayers and forbid soldiers to attend religious services in uniform. In 1881, twenty-seven cadets from the [École spéciale militaire de Saint-Cyr](#) (Military Academy of Saint-Cyr) were expelled for attending a mass at the [church of Saint-Germain-des-Prés](#). The law against working on Sunday was repealed in 1880 (it was reinstated in 1906 to assure workers a day of rest), and in 1885, divorce was authorized.

The new Municipal Council of Paris, also dominated by radical republicans, had little formal power, but it took many symbolic measures against the Church. Nuns and other religious figures were forbidden to have official positions in hospitals, statues were put up to honor [Voltaire](#) and [Diderot](#), and the Panthéon was secularized in 1885 to receive the remains of Victor Hugo. Several of the streets of Paris were renamed for republican and socialist heroes, including [Auguste Comte](#) (1885), [François-Vincent Raspail](#) (1887), [Armand Barbès](#) (1882), and [Louis Blanc](#) (1885). Specifically forbidden by the Catholic Church, cremation was authorized at [Père Lachaise Cemetery](#). In 1899, the [Dreyfus affair](#) divided Parisians (and the whole of France) even more; the Catholic newspaper [La Croix](#) published virulent anti-Semitic articles against the army officer.^[22]

The new National Assembly of 1901 had a strongly anti-clerical majority. At the urging of the socialist members, the Assembly officially voted the separation of Church and State on 9 December 1905. The budget of 35 million francs a year given to the Church was cut off, and disputes took place over the official residences of the clergy. On December 17, the police evicted the Archbishop of Paris from his official residence at 127 Rue de Grenelle; the Church responded by banning midnight masses in the city. A law of 1907 finally resolved the issue of property; churches built before that date, including the cathedral of Notre Dame, became the property of the French state, while the Catholic Church was given the right to use them for religious purposes. Despite the cutoff of government assistance, the Catholic Church was able to build 24 new churches, including 15 in the suburbs of Paris, between 1906 and 1914. Official relations between Church and State were almost non-existent to the end of the *Belle Époque*.^[23]

The Jewish community in Paris had grown from 500 in 1789, or one percent of the Jewish community in France, to 30,000 in 1869, or 40 percent. Beginning in 1881, there were new waves of immigration from Eastern Europe that brought 7 to 9,000 new arrivals each year, and French-born Jews in the 3rd and 4th arrondissements were soon outnumbered by new arrivals, whose numbers increased from 16 percent of the population in those arrondissements to 61 percent. The [pogroms](#) in the [Russian Empire](#) between 1905 and 1914 provoked a new wave of immigrants arriving in Paris. The community faced a strong current of [antisemitism](#), exemplified by the Dreyfus Affair. With the arrival of the great number of [Ashkenazi Jews](#) from Eastern Europe and Russia, the Paris community became more and more secular and less religious.^[24]

There was no [mosque](#) in Paris until after the First World War. In 1920, the National Assembly voted to honor the memory of the estimated one hundred thousand Muslims from the French colonies in the Maghreb and black Africa who died for France during the war, and gave a credit of 500,000 francs to build the [Grand Mosque of Paris](#).^[25]

The economy of Paris suffered an economic crisis in the early 1870s, followed by a long, slow recovery that led to a period of rapid growth beginning in 1895 until the First World War. Between 1872 and 1895, 139 large enterprises closed their doors in Paris, particularly textile and furniture factories, metallurgy concerns, and printing houses, four industries had been the major employers in the city for sixty years. Most of these enterprises had employed between 100 and 200 workers each. Half of the large enterprises on the center of the city's Right Bank moved out, in part because of the high cost of real estate, and also to get better access to transportation on the river and railroads. Several moved to less-expensive areas at the edges of the city, around [Montparnasse](#) and La Salpêtrière, while others went to the [18th arrondissement](#), [La Villette](#) and the [Canal Saint-Denis](#) to be closer to the river ports and the new railroad freight yards. Still others relocated to Picpus and [Charonne](#) in the southeast, or near [Grenelle](#) and [Javel](#) in the southwest. The total number of enterprises in Paris dropped

from 76,000 in 1872 to 60,000 in 1896, while in the suburbs their number grew from 11,000 to 13,000. In the heart of Paris, many workers were still employed in traditional industries such as textiles (18,000 workers), garment production (45,000 workers), and in new industries which required highly skilled workers, such as mechanical and electrical engineering and automobile manufacturing.^[26]

Three major new French industries were born in and around Paris at about the turn of the 20th century, taking advantage of the abundance of skilled engineers and technicians and financing from Paris banks. They produced the first French automobiles, aircraft, and motion pictures. In 1898, [Louis Renault](#) and his brother Marcel built their first automobile and founded a new company to produce them. They established their first factory at [Boulogne-Billancourt](#), just outside the city, and made the first French truck in 1906. In 1908, they built 3,595 cars, making them the largest car manufacturer in France. They also received an important contract to make taxicabs for the largest Paris taxi company. When the first World War began in 1914, the Renault taxis of Paris were mobilized to carry French soldiers to the front at the [First Battle of the Marne](#).

The French aviation pioneer [Louis Blériot](#) also established a company, Blériot Aéronautique, on the Boulevard Victor-Hugo in [Neuilly](#), where he manufactured the first French airplanes. On 25 July 1909, he became the first man to fly across the [English Channel](#). Blériot moved his company to [Buc](#), near [Versailles](#), where he established a private airport and a flying school. In 1910, he built the *Aérobis*, one of the first passenger aircraft, which could carry seven persons, the most of any aircraft of the time.

The [Lumière brothers](#) had given the first projected showing of a motion picture, *La Sortie de l'usine Lumière*, at the [Salon Indien du Grand Café](#) of the Hôtel Scribe on the [Boulevard des Capucines](#), on 28 December 1895. A young French entrepreneur, [Georges Méliés](#), attended the first showing and asked the Lumière brothers for a license to make films. The Lumière Brothers politely declined, telling him that the cinema was for scientific purposes and had no commercial value. Méliés persisted and established his own small studio in 1897 in [Montreuil](#), just east of Paris. He became a producer, director, scenarist, set designer and actor, and made hundreds of short films, including the first science-fiction film, *A Trip to the Moon* (*Le Voyage dans la Lune*), in 1902. Another French cinema pioneer and producer [Charles Pathé](#), also built a studio in Montreuil, then moved to the Rue des Vignerons in [Vincennes](#), east of Paris. His chief rival in the early French film industry, [Léon Gaumont](#), opened his first studio at about the same time at the Rue des Alouettes in the 19th arrondissement, near the Buttes-Chaumont.^[27]

The *Belle Époque* in Paris was the golden age of the *Grand magasin*, or [department store](#). The first modern department store in the city, [Le Bon Marché](#), was originally a small variety store with a staff of twelve when it was taken over by [Aristide Boucicaut](#) in 1852. Boucicaut expanded it, and by deft discount pricing, advertising, and innovative marketing (a mail order catalog, seasonal sales, fashion shows, gifts to customers, entertainment for children) turned it into a hugely successful enterprise with a staff of eleven hundred employees and income that increased from 5 million francs in 1860 to 20 million in 1870, then reached 72 million at the time of his death in 1877. He built an enormous new building near the site of the original shop on the Left Bank, with an iron structure designed with the help of the engineering firm of [Gustave Eiffel](#).

The success of Bon Marché inspired many competitors. The [Grands Magasins du Louvre](#) opened in 1855 with an income of 5 million francs that rose to 41 million by 1875 and 2400 employees in 1882. The [Bazar de l'Hôtel de Ville](#) (BHV) opened in 1857 and moved into a larger store in 1866. [Printemps](#) was founded in 1865 by a former department head of

Bon Marché; [La Samaritaine](#) was opened in 1870; and La Ville de Saint-Denis, the first building in France to have an elevator, in 1869. Alphonse Kahn opened his [Galeries Lafayette](#) in 1895.^[28]

At the beginning of the *Belle Époque*, the industry of *haute couture* (high fashion) was dominated by the [House of Worth](#). [Charles Worth](#) had designed the clothes of the [Empress Eugénie](#) during the [Second Empire](#) and turned high fashion into an industry. His shop at 7 [Rue de la Paix](#) helped make that street the center of fashion in Paris. By 1900, there were more than twenty houses of *haute couture* in Paris, led by designers including [Jeanne Paquin](#), [Paul Poiret](#), [Georges Doeuillet](#), Margaine-Lacroix, [Redfern](#), Raudnitz, Rouff, [Callot Sœurs](#), Blanche Lebouvier, and others, including sons of Charles Worth. Most of these houses had fewer than fifty employees, but the top six or seven firms each had between four hundred and nine hundred employees. They were concentrated on Rue de la Paix and around the Place Vendôme, with a few on the nearby Grands Boulevards. At the [Universal Exposition of 1900](#), an entire building was devoted to fashion designers. The first fashion show with models had taken place in London in 1908; the idea was quickly copied in Paris. [Jeanne Lanvin](#) became a member of the [Chambre syndicale de la haute couture](#) (Syndicate of fashion designers) in 1909. [Coco Chanel](#) opened her first shop in Paris in 1910, but her fame as a designer came after the First World War.^{[29][30]}

The growth of the department stores and tourism created a much larger market for luxury goods, such as perfumes, watches and jewelry. The perfumer [François Coty](#) began making scents in 1904, and achieved his first success selling through department stores. He discovered the importance of elegant bottles in marketing perfume and commissioned [Baccarat](#) and [René Lalique](#) to design bottles in the [Art Nouveau](#) style. He realized the desire of middle class consumers to have luxury goods and sold a range of less-expensive perfumes. He also invented the fragrance set, a box of perfume, powder soap, cream and cosmetics with the same scent. He was so successful that in 1908 he built a new laboratory and factory, La Cité des Parfums ("The City of Perfume"), at [Suresnes](#) in the Paris suburbs. It had 9,000 employees and made one hundred thousand bottles of perfume a day.^{[31]:24}

The watchmaker Louis-François Cartier opened a shop in Paris in 1847. In 1899, his grandchildren moved the shop to the Rue de la Paix and made the shop international, opening branches in London (1902), Moscow (1908) and New York (1909). His grandson [Louis Cartier](#) designed one of the first purpose-built [wristwatches](#) for the Brazilian aviation pioneer [Alberto Santos-Dumont](#), who made the first aircraft flight in Paris in 1906. The "Santos watch" went on sale in 1911 and was a huge success for the company.

The industry of mass tourism and large luxury hotels had arrived in Paris under Napoleon III, driven by new railroads and the huge crowds that had come for the first international expositions. The expositions and the crowds grew even larger during the *Belle Époque*; twenty-three million visitors came to Paris for the [1889 exposition](#), and the [1900 exposition](#) welcomed forty-eight million visitors. The [Grand Hôtel du Louvre](#), built for the [universal exposition of 1855](#), opened that same year. The Grand Hôtel on the Boulevard des Capucines opened in 1862. More luxury hotels appeared near the train stations and in the city center during the *Belle Époque*; the Hôtel Continental opened in 1878 on the Rue de Rivoli on the site of the old Ministry of Finance, which had been burned by the Paris Commune. The [Hôtel Ritz](#) on the Place Vendôme opened in 1898, and the [Hôtel de Crillon](#) on the [Place de la Concorde](#) opened in 1909.^[32]

The growing number of visitors to Paris required the enlargement of the main train stations to handle all the passengers. The [Gare Saint-Lazare](#) had been covered with a forty-meter high

shed between 1851 and 1853; it was further enlarged for the 1889 exposition, and a new hotel, the Terminus, was built next to it. The station and its huge shed became a popular subject for painters, among them [Claude Monet](#), during the period. A brand-new station, the Gare d'Orsay, designed by [Victor Laloux](#), opened on 4 July 1900; it was the first station designed for electrified trains. The line was not profitable, and the station was almost demolished in 1971, but between 1980 and 1986 it was turned into the Musée d'Orsay. The [Gare Montparnasse](#), serving western France, had been built between 1848 and 1852. It was also enlarged between 1898 and 1900 to serve the growing number of passengers. The [Gare de l'Est](#) and [Gare du Nord](#) were both expanded, and the [Gare de Lyon](#) was completely rebuilt between 1895 and 1902 and given a new restaurant in the ornate style of the period, Le buffet de la Gare de Lyon, renamed the [Train Bleu](#) in 1963. ^[33]

In the first part of the *Belle Époque*, the [fiacre](#) was the most common form of public transport for individuals; it was a box-line small horse-drawn coach with driver carrying two passengers that could be hired by the hour or by the distance of the trip. In 1900, there were about ten thousand fiacres in service in Paris; half belonged to a single company, the *Compagnie générale des voitures de Paris*; the other five thousand belonged to about five hundred small companies. The first two automobile taxis entered service in 1898, at a time when there were just 1,309 automobiles in Paris. The number remained very small at first; there were just eighteen in service during the Exposition of 1900, only eight in 1904, and 39 in 1905. However, by the end of 1905, the automobile taxi began to take off; there were 417 on the streets of Paris in 1906, and 1,465 at the end of 1907. Most were made by the Renault company in their factory on the [Île Seguin](#), an island on the Seine between [Boulogne-Billancourt](#) and [Sèvres](#). There were four large taxi companies; the largest, the *Compagnie française des automobiles de place* owned more than a thousand taxis. Beginning 1898, the automobile taxis were equipped with a meter to measure the distance and calculate the fare. First called a *taxamètre*, it was renamed *taximètre* on 17 October 1904, which gave birth to the name "taxi". In 1907, Renault began building three thousand specially-built taxis; some were exported to London and others to New York City. The ones that went into service in New York were named "taxi cabriolets", which was shortened in America to "taxicab". By 1913, there were seven thousand taxis on the streets of Paris. ^[34]

At the beginning of the *Belle Époque*, the horse-drawn [omnibus](#) was the primary means of public transport. In 1855, Haussmann consolidated ten private omnibus companies into a single company, the C.G.O. (*Compagnie générale des Omnibus*) and gave it the monopoly on public transport. The coaches of the CGO carried twenty-four to twenty-six passengers and ran on thirty-one different lines. The omnibus system was overwhelmed by the number of visitors at the [1867 Exposition](#), thus the city began to develop a new system of tramways in 1873. The omnibus continued to run, with larger cars that could carry forty passengers in 1880, and then, in 1888–89, a lighter vehicle that could carry thirty passengers, called an *omnibus à impériale*. The horse-drawn tramway gradually replaced the horse-drawn omnibus. In 1906, the first motorized omnibuses began to run on Paris streets. The last horse-drawn omnibus run took place on January 11, 1913 between Saint-Sulpice and La Villette. ^[35]

The horse-drawn [tramway](#), running on a track flush with the street, had been introduced in New York in 1832. A French engineer living in New York, Loubat, brought the idea to Paris and opened the first tramway line in Paris, between the Place de la Concorde and the Barrière de Passy in November 1853. He extended the line, known as the *Chemin de fer américain* ("American rail line"), all the way across Paris from [Boulogne](#) to Vincennes in 1856. But then it was purchased by the CGO, the main omnibus line, and remained simply a curiosity. Only in 1873 did the tramway begin to gain importance, when the CGO lost its monopoly on city transport and two new companies, Tramways Nord and Tramways Sud, one

financed by Belgian banks and the other by British banks, began operating from the center of Paris to the suburbs. The CGO responded by opening two new lines, one from the Louvre to Vincennes, the other following the line of fortifications around the city. By 1878, forty different lines were operating, half by the CGO. The companies tried a brief experiment with steam-powered tramways in 1876, but abandoned them in 1878. The electric-powered tramway, in service in Berlin since 1881, did not arrive in Paris until 1898, with a line from Saint-Denis to the Madeleine.^[36]

When the [1900 Universal Exposition](#) was announced in 1898 in anticipation of millions of visitors coming to Paris, most of the public transport in Paris was still horse-drawn; forty-eight lines of omnibuses and thirty-four tramway lines still used horses, while there were just thirty-six lines of electric tramways. The last horse-drawn tramways were replaced with electric trams in 1914.

Other cities were well ahead of Paris in introducing underground or elevated metropolitan railways: London (1863), New York (1868), Berlin (1878), Chicago (1892), Budapest (1896) and Vienna (1898) all had them before Paris. The reason for the delay was a fierce battle between the French railway companies and national government, which wanted a metropolitan system based on the existing railroad stations that would bring passengers in from the suburbs (like the modern [RER](#)). The Municipal Council of Paris, in contrast, wanted an independent underground metro only in the twenty arrondissements of the city that would support the tramways and omnibuses on the streets. The plan of the municipality won and was approved on 30 March 1898; it called for six lines totaling sixty-five kilometers of track. They chose the Belgian method of construction, with the lines just under the surface of the street, rather than the deep tunnels of the London system.

The first line, which connected the [Porte de Vincennes](#) with the [Grand Palais](#) and the other exposition sites, was built the most rapidly (just twenty months) and opened on 19 July 1900, three months after the opening the exposition. It carried more than sixteen million passengers between July and December. Line 2, between [Porte Dauphine](#) and [Nation](#), opened in April 1903, and the modern Line 6 was finished at the end of 1905. The earliest lines used viaducts to cross over the Seine, at [Bercy](#), [Passy](#) and [Austerlitz](#). The first line under the Seine, Line 4 between Châtelet and the Left Bank, was built between 1905 and 1909. By 1914, the metro was carrying five hundred million passengers a year.^[37]

Most of the notable monuments of the *Belle Époque* were constructed for use at the Universal Expositions, for example the [Eiffel Tower](#), the [Grand Palais](#), the [Petit Palais](#), and the [Pont Alexandre III](#). The chief architectural legacy of the Third Republic was a large number of new schools and local city halls, all inscribed with the slogans of the republic and statues of allegorical symbols of the republic; representations of scientists, writers and political figures were placed in parks and squares. The largest monument was an allegorical statue of the republic erected in the center of the Place du Château-d'Eau, renamed the [Place de la République](#) in 1879. It was an enormous bronze figure 9.5 meters high of the republic holding an olive branch and standing on a pedestal 15 meters high. On 14 July 1880, the Place du Trône was renamed the [Place de la Nation](#), and a group of statues by [Jules Dalou](#), called *Triumph of the Republic*, was placed in the center. In the middle was [Marianne](#) in a chariot drawn by two lions surrounded by allegorical figures of Liberty, Work, Justice and Abundance. A plaster version was put in place in 1889, the bronze version in 1899. A 29-meter tall monument with a statue of another republican hero, [Leon Gambetta](#), surmounted by a [pylon](#) crowned by an eagle, was placed in the Cour Napoléon of the Louvre in 1888. It was taken down in 1954 to clear the view of the Louvre, but was put back up in 1982, without the

pylon and eagle, on the Square Édouard-Vaillant ([20th arrondissement](#)) by the socialist president [François Mitterrand](#).^[38]

The construction of the new boulevards and streets begun by Napoleon III and Haussmann had been much criticized by Napoleon's opponents near the end of the Second Empire, but the government of the Third Republic continued his projects. The [Avenue de l'Opéra](#), [Boulevard Saint-Germain](#), Avenue de la République, Boulevard Henry-IV and Avenue Ledru-Rollin were all completed by 1889 essentially as Haussmann had planned them before his death. After 1889, the pace of construction slowed down. The [Boulevard Raspail](#) was finished, the Rue Réaumur was extended, and several new streets were created on the left bank: the Rue de la Convention, Rue de Vouillé, [Rue d'Alésia](#), and Rue de Tolbiac. On the Right Bank, the Rue Étienne-Marcel was the last of the Haussmann projects to be completed before the First World War.^[37]

While the streets planned by Haussmann were completed, the strict uniformity of façades and building heights imposed by him was gradually modified. Buildings became much larger and deeper, with two apartments on each floor facing the street and others facing only onto the courtyard. The new buildings often had ornamental rotundas or pavilions on the corners and highly ornamental roof designs and gables. In 1902, maximum building heights were increased to 52 meters. With the advent of elevators, the most desirable apartments were no longer on the lowest floors, but on the highest floors, where there was more light, nicer views and less noise. With the arrival of automobiles and the beginning of traffic noise on the streets, the bedrooms moved to the back of the apartment, overlooking the courtyard.^[39]

The façades also changed from the strict symmetry of Haussmann: undulating façades appeared, as did bay and bow windows. Eclectic façades became popular; they often mixed the styles of [Louis XIV](#), [Louis XV](#) and [Louis XVI](#), and then, with the advent of [Art nouveau](#) style, floral patterns could be incorporated. The most striking examples of the new architecture were the [Castel Béranger](#) on the Rue La Fontaine and the [Hôtel Lutetia](#). Between 1898 and 1905, the city organized eight competitions for the most imaginative building façades; variety was given precedence over uniformity. .^[39]

The architectural style of the *Belle Époque* was eclectic and sometimes combined elements of several different styles. While the structures of the new buildings were resolutely modern, using iron frames and reinforced concrete, the façades ranged from the [Romano-Byzantine style](#) of the Basilica of Sacré-Cœur on Montmartre, to the strange [neo-Moorish Palais du Trocadéro](#), to the [neo-Renaissance style](#) of the new Hôtel de Ville, to the exuberant reinvention of [French classicism of the 17th and 18th centuries](#) in the [Grand Palais](#), [Petit Palais](#) and Gare d'Orsay, decorated as they are with [domes](#), [colonnades](#), [mosaics](#) and statuary. The most innovative buildings of the period were the [Gallery of Machines](#) at the 1889 exposition and the new railroad stations and department stores: their classical exteriors concealed very modern interiors with large open spaces and large glass skylights made possible by the new engineering techniques of the period. The Eiffel Tower shocked many traditional Parisians, both because of its appearance and because it was the first building in Paris taller than the cathedral of Notre-Dame.

[Art Nouveau](#) became the most striking stylistic innovation of the period in architecture. It is associated particularly with the metro station entrances designed by [Hector Guimard](#) and a handful of buildings, including Guimard's [Castel Beranger](#) (1889) at 14 Rue La Fontaine and the Hôtel Mezzara (1910) in the [16th arrondissement](#).^[40] The enthusiasm for Art Nouveau metro station entrances did not last long; in 1904 it was replaced at the [Opéra](#) metro station by a less exuberant "modern" style. Beginning in 1912, all the Guimard metro entrances were replaced with functional entrances without decoration.^[41]

A revolutionary new building material, [reinforced concrete](#), appeared at the beginning of the 20th century and quietly began to change the face of Paris. The first church built in the new material was [Saint-Jean-de-Montmartre](#), at 19 Rue des Abbesses at the foot of Montmartre. The architect was [Anatole de Baudot](#), a student of [Viollet-le-Duc](#). The nature of the revolution was not evident, because Baudot faced the concrete with brick and ceramic tiles in a colorful Art Nouveau style with stained glass windows in the same style.

The [Théâtre des Champs-Élysées](#) (1913) is another architectural landmark of the period, one of the few Paris buildings in the [Art deco](#) style. Designed by [Auguste Perret](#), it was also built of reinforced concrete and decorated by some of the leading artists of the era: [bas-reliefs](#) on the façade by [Antoine Bourdelle](#), a dome by [Maurice Denis](#), and paintings in the interior by [Édouard Vuillard](#). It was the setting in 1913 for one of the major musical events of the *Belle Époque*: the premiere of [Igor Stravinsky's](#) *The Rite of Spring*.

Eight new bridges were put across the Seine during the *Belle Époque*. The [Pont Sully](#), built in 1876, replaced two foot bridges that had connected the [Île Saint-Louis](#) to the Right and Left Bank. The [Pont de Tolbiac](#) was built in 1882 to connect the Left Bank with [Bercy](#). The [Pont Mirabeau](#), made famous in a poem by [Apollinaire](#), was dedicated in 1895. Three bridges were built for the 1900 Exposition: the [Pont Alexandre-III](#), dedicated by Czar [Nicholas II of Russia](#) in 1896, which connected the Left Bank with the grand exposition halls of the [Grand Palais](#) and [Petit Palais](#); the [Passerelle Debilly](#), a foot bridge that linked two sections of the Exposition; and a railroad bridge between Grenelle and Passy. Two more bridges were dedicated in 1905: the Pont de Passy (now the [Pont de Bir-Hakeim](#)), and the [Viaduc d'Austerlitz](#), crossed by the metro.^[42]

The work of creating parks, squares and promenades during the *Belle Époque* continued in the Second Empire style. The projects were managed at first by [Jean-Charles Adolphe Alphand](#), who had been the head of department of parks and promenades under Haussmann and was elevated to the post of Director of Public Works of Paris, a position he held until his death in 1891. He was also the director of works of the 1889 Universal Exposition, responsible for building the exposition's gardens and pavilions.^[43] Alphand finished several of the projects begun under Haussmann: the [Parc Montsouris](#) (1869–78), the Square Boucicaut (1873), and the Square Popincourt (later renamed Parmentier, and still later Maurice-Gardette), which replaced a demolished slaughterhouse and opened in 1872. Alphand's first major project of the *Belle Époque* was the [Jardins du Trocadéro](#), the site of the Universal Exposition of 1878 that surrounded the enormous Palais de Trocadéro, which served as the main building for the exposition. He filled the park with a grotto, fountains, gardens and statues (the statues can now be seen on the parvis of the [Musée d'Orsay](#)). The park also displayed the full-sized head of the [Statue of Liberty](#) before the statue was completed and shipped to [New York City](#). The grotto and much of the park are still preserved as they were. It was used again for the Universal Exposition of 1889 Exposition, and with new fountains and a new palace added, it was also used for the Universal Exposition of 1937.^[43]

During the exposition of 1878, Alphand used the [Champ de Mars](#) as the site of a huge iron-framed exhibit hall, 725 meters long, surrounded by gardens. For the 1889 exposition, the same site was occupied by the Eiffel Tower and the huge Gallery of Machines, plus two large exhibit halls: the Palace of Liberal Arts and the Palace of Fine Arts. The two palaces were designed by [Jean-Camille Formigé](#), the chief architect of Paris. The two palaces and the Gallery of Machines were demolished after the exposition, but in 1909, Formigé was given the task of transforming the exposition site around the Eiffel Tower into a park with broad lawns, promenades and groves of trees in the form it is today.^[43]

Between 1895 and 1898, Formigé created another *Belle Époque* landmark, the [Serres d'Auteuil](#), a complex of large greenhouses designed to grow trees and plants for all the gardens and parks of Paris. The largest structure, one hundred meters long, was designed to grow tropical plants. The greenhouses still exist today and are open to the public.

Other than the parks of the expositions, no other large Paris parks were created in the *Belle Époque*, but several squares of about one hectare each were created. They all had the same basic design: a bandstand in the center, a fence, groves of trees and flower beds, and often also statues. These included the Square Édouard-Vaillant in the 20th arrondissement (1879), the Square Samuel-de-Champlain in the 20th arrondissement (1889), the Square des Épinettes in the 17th arrondissement (1893), the Square Scipion in the 5th arrondissement (1899), the Square Paul-Painlevé in the 5th arrondissement (1899) and the Square Carpeaux in the 18th arrondissement (1907).^[43]

The best-known and most picturesque park of the period is that composed of the Squares Willette and Nadar on the slope directly below the Basilica of Sacré-Cœur on Montmartre. It was begun by Formigé in 1880, but not completed until 1927 by another architect, Léopold Bévière, after the death of Formigé in 1926. The park features terraces and slopes dropping eighty meters from the Basilica to the street below, and has one of the best-known views in Paris.

At the beginning of the *Belle Époque*, Paris was lit by a constellation of thousands of [gaslights](#) that were often admired by foreign visitors and helped give the city its nickname *La Ville-Lumière*: the "City of Light". In 1870, there were 56,573 gaslights used exclusively to illuminate the streets of the city.^[44] The gas was produced by ten enormous factories around the edge of the city that were located near the circle of fortifications. It was distributed in pipes installed under the new boulevards and streets. The street lights were placed every twenty meters on the Grands Boulevards. At a predetermined minute after nightfall, a small army of 750 uniformed *allumeurs* ("lighters") carrying long poles with small lamps at the end went out into the streets to turn on a pipe of gas inside each lamppost and light the lamp. The entire city was illuminated within forty minutes. The Arc de Triomphe was crowned with a ring of gaslights, and the [Champs-Élysées](#) was lined with ribbons of white light.^[44]

One of the major urban innovations in Paris was the introduction of [electric street lights](#) to coincide with the opening of the Universal Exposition of 1878. The first streets lit were the Avenue de l'Opéra and the Place de l'Étoile around the Arc de Triomphe. In 1881, electric street lights were added along the Grands Boulevards. Electric lighting came much more slowly for residences and businesses in some Paris neighborhoods. While electric lights lined the Champs-Élysées in 1905, there was no electric lines for any households in the 20th arrondissement.^[45]

The three "universal expositions" that took place in Paris during the *Belle Époque* attracted millions of visitors from around the world and displayed the newest innovations in science and technology, from the [telephone](#) and [phonograph](#) to electric street lighting.

The [Universal Exposition of 1878](#), which lasted from 1 May to 10 November 1878, was designed to advertise the recovery of France from the 1870 [Franco-German War](#) and the destruction of the period of the [Paris Commune](#). It took place on both sides of the Seine, in the [Champ de Mars](#) and the heights of [Trocadéro](#), where the first [Palais du Trocadéro](#) was built. Many of the buildings were made of new inexpensive material called [staff](#), which was composed of jute fiber, plaster of Paris, and cement. The main exposition hall was an enormous rectangular structure, the Palace of Machines, where the Eiffel Tower is located today. Inside, [Alexander Graham Bell](#) displayed his new telephone and [Thomas](#)

[Edison](#) presented his [phonograph](#). The head of the newly finished [Statue of Liberty](#) (*Liberty Enlightening the World*) was displayed before it was sent to New York City to be attached to the body. Important congresses and conferences took place on the margins of the exposition, including the first congress on [intellectual property](#), led by [Victor Hugo](#), whose proposals led eventually to the first [copyright](#) laws, and a conference on education for the blind, which led to the adoption of the [Braille](#) system of reading for the blind. The exposition attracted thirteen million visitors, and was a financial success.

The [Universal Exposition of 1889](#) took place from 6 May until 31 October 1889 and celebrated the centenary of the beginning of the [French Revolution](#); one of the structures on the grounds was a replica of the [Bastille](#). It took place on the Champ de Mars, the hill of [Chaillot](#), and along the Seine at the [Quai d'Orsay](#). The most memorable feature was the [Eiffel Tower](#), 300 meters tall when it opened (now 324 with the addition of broadcast antennas), which served as the gateway to the exposition.^[46] The Eiffel Tower remained the world's tallest structure until 1930.^[47] It was not popular with everyone; its modern style was denounced in a public letter by many of France's most prominent cultural figures, including [Guy de Maupassant](#), [Charles Gounod](#) and [Charles Garnier](#).^[48] The largest building was the iron-framed [Gallery of Machines](#), at the time the largest covered interior space in the world. Other popular exhibits included the first musical fountain, lit with colored electric lights that changed in time to music. [Buffalo Bill](#) and sharpshooter [Annie Oakley](#) drew large crowds to their [Wild West Show](#) at the exposition.^[49] The exposition welcomed 23 million visitors.^[50]

The [Universal Exposition of 1900](#) took place from 15 April until 12 November 1900. It celebrated the turn of the century and was by far the largest in scale of the Expositions; its sites included the [Champ de Mars](#), [Chaillot](#), the [Grand Palais](#) and the [Petit Palais](#). Beside the Eiffel Tower, it featured the world's largest [ferris wheel](#), the "Grande Roue de Paris", one hundred metres high, that could carry sixteen hundred passengers in forty cars. Inside the exhibit hall, [Rudolph Diesel](#) demonstrated his new engine, and one of the first [escalators](#) was on display. The Exposition coincided with the [1900 Paris Olympics](#), the first Olympic games held outside of Greece. The Exposition popularized a new artistic style, the [Art nouveau](#), to the world.^[51] Two architectural legacies of the Exposition, the Grand Palais and Petit Palais, are still in place in the city.^[52] Though it was a great popular success, attracting an estimated forty-eight million visitors, the 1900 exposition lost money and was the last such exposition in Paris on such a grand scale.^[50]

Paris was already famous for its restaurants in the first half of the 19th century, particularly the Café Riche, the Maison Dorée and the Café Anglais on the Grands Boulevards, where the wealthy personalities of Balzac's novels would dine. The Second Empire had added more luxury restaurants, particularly in the center near the new grand hotels: Durand at the Madeleine; Voisin on the Rue Cambon and [Rue Saint-Honoré](#); Magny on the Rue Mazet; Foyot near the Luxembourg Gardens; and Maire at the corner of the [Boulevard de Strasbourg](#) and Boulevard Saint-Denis, where [lobster thermidor](#) was invented. During the *Belle Époque*, many more prestigious restaurants could be found, including Laurent, [Fouquet's](#) and the Pavillon de l'Élysée on the Champs-Élysées; the [Tour d'Argent](#) on the Quai de la Tournelle; Prunier on the Rue Duphot; [Drouant](#) on the Place Gaillon; Lapérouse on the Quai des Grands-Augustins; Lucas Carton at the Madeleine, and Weber on the [Rue Royale](#). The most famous restaurant of the period, [Maxim's](#), also opened its doors on the Rue Royale. Two luxury restaurants were found by the lakes in the Bois de Boulogne: the Pavillon d'Armenonville and the Cascade.^[53]

For those with more modest budgets, there was the [Bouillon](#), a type of restaurant begun by a butcher named Duval in 1867. These establishment served simple and inexpensive food and were popular with students and visitors. One from this period, Chartier, near the Grands Boulevards, still exists.

A new type of restaurant, the [Brasserie](#), appeared in Paris during the 1867 Universal Exposition. The name originally meant a place that brewed beer, but in 1867 it was a type of café where young women in the national costumes of different countries served different drinks of those countries, including beer, ale, chianti, and vodka. The idea was continued after the Exposition by the Brasserie de l'Espérance on the Rue Champollion on the Left Bank, and was soon imitated by others. By 1890, there were forty-two brasseries on the Left Bank, with names including the Brasserie des Amours, the Brasserie de la Vestale, the Brasserie des Belles Marocaines, and the Brasserie des Excentriques Polonais (brasserie of the eccentric Poles), and they were often used as a place to meet prostitutes.^[53]

Paris played a central role in the organization of international sports and in the professionalization of sports. The first efforts to revive the [Olympic Games](#) were led by a French educator and historian, [Pierre de Coubertin](#). The first meeting to organize the games took place at the [Sorbonne](#) in 1894, resulting in the creation of the [International Olympic Committee](#) and the holding of the first modern Olympic Games in [Athens](#) in 1896. The second games, the first Olympics held outside of Greece, were the [1900 Summer Olympics](#) in Paris, from 14 May until 28 October 1900, organized in conjunction with the Paris Universal Exposition of 1900. There were 19 sports included in the event, and women competed in the Olympics for the first time. The swimming events took place in the Seine. Some of the sports were unusual by modern standards; they included automobile and motorcycle racing, [cricket](#), [croquet](#), underwater swimming, tug-of-war, and shooting live pigeons.

Cycling also became an important professional sport, with the opening in 1903 of the first cycling stadium, the [Vélodrome d'hiver](#), on the site of the demolished Palace of Machinery from the 1900 Exposition on the Champ de Mars. The first stadium was demolished and moved in 1910 to *boulevard de Grenelle*. The first [Tour de France](#), the most famous of all French cycling events, took place in 1903, with the finish line at the [Parc des Princes](#) stadium.

In September 1901, Paris hosted the first European [lawn tennis](#) championship in 1901, and on June 1, 1912, hosted the first world championship of tennis, at the stadium of the Faisanderie in the [Domaine national de Saint-Cloud](#).

The first championship of France in [football](#) took place in 1894, with six teams competing. It was won by the team [Standard Athletic Club of Paris](#); the team had one French player and ten British players. The first [rugby](#) match between England and France took place on 26 March 1906 at the [Parc des Princes](#), with the victory of England.

Paris also hosted several of the world's earliest automobile races. The first, in 1894, was the Paris-Rouen race, organized by the newspaper [Le Petit Journal](#). The first Paris-Bordeaux race took place on 10–12 June 1895, and the first race from Paris to Monte-Carlo in 1911.^[54]

Scientists in Paris played a leading role in many of major scientific developments of the period, particularly in [bacteriology](#) and [physics](#). [Louis Pasteur](#) (1822-1895) was a pioneer in [vaccination](#), microbacterial fermentation and [pasteurization](#). He developed the first vaccines against [anthrax](#) (1881) and [rabies](#) (1885), and the process for stopping bacterial growth in milk and wine. He founded the [Pasteur Institute](#) in 1888 to carry on his work, and his tomb is located at the institute.^[55]

The physicist [Henri Becquerel](#) (1852-1908), while studying the fluorescence of uranium salts, discovered [radioactivity](#) in 1896, and in 1903 was awarded the [Nobel Prize](#) in physics for his

discovery. [Pierre Curie](#) (1859-1906) and [Marie Curie](#) (1867-1934) jointly carried on Becquerel's work, discovering [radium](#) and [polonium](#) (1898). They jointly received the Nobel Prize for physics in 1903. Marie Curie became the first female professor at the University of Paris and won the Nobel Prize for chemistry in 1911. She was the first woman to be buried in the Panthéon.^[55]

The [neon light](#) was used for the first time in Paris on 3 December 1910 in the Grand Palais. The first outdoor neon advertising sign was put up on [Boulevard Montmartre](#) in 1912.^[20]

During the *Belle Époque*, Paris was the home and inspiration for some of France's most famous writers. [Victor Hugo](#) was sixty-eight when he returned to Paris from Brussels in 1871 and took up residence on the Avenue d'Eylau (now [Avenue Victor Hugo](#)) in the [16th arrondissement](#). He failed to be re-elected to the National Assembly, but in 1876, he was elected to the French Senate.^[56] It was a difficult period for Hugo; his daughter [Adèle](#) was placed in an [insane asylum](#), and his longtime mistress, [Juliette Drouet](#), died in 1883. When Hugo died 28 May 1885 at the age of eighty-three, hundreds of thousands of Parisians lined the streets to pay tribute as his coffin was taken to the Panthéon on 1 June 1885.

[Émile Zola](#) was born in Paris in 1840, the son of an Italian engineer. He was raised by his mother in [Aix-en-Provence](#), then returned to Paris in 1858 with his friend [Paul Cézanne](#) to attempt a literary career. He worked as a mailing clerk for the publisher [Hachette](#) and began attracting literary attention in 1865 with his novels in the new style of [naturalism](#). He described in intimate details the workings of Paris department stores, markets, apartment buildings and other institutions, and the lives of the Parisians. By 1877, he had become famous and wealthy from his writing. He took a central role in the [Dreyfus affair](#), helping win justice for [Alfred Dreyfus](#), a French artillery officer of [Alsatian Jewish background](#), who had falsely been accused of treason.

[Guy de Maupassant](#) (1850-1893) moved to Paris in 1881 and worked as a clerk for the [French Navy](#), then for the [Ministry of Public Education](#), as he wrote short stories and novels at a furious pace. He became famous, but also became ill and depressed, then paranoid and suicidal. He died at the asylum of Saint-Esprit in [Passy](#) in 1893.

Other writers who made a mark in the Paris literary world of the Third Republic's *Belle Époque* included [Anatole France](#) (1844-1924); [Paul Claudel](#) (1868-1955); [Alphonse Allais](#) (1854-1905); [Guillaume Apollinaire](#) (1880-1918); [Maurice Barrès](#) (1862-1923); [René Bazin](#) (1853-1932); [Colette](#) (1873-1954); [François Coppée](#) (1842-1908); [Alphonse Daudet](#) (1840-1897); [Alain Fournier](#) (1886-1914); [André Gide](#) (1869-1951); [Pierre Louÿs](#) (1870-1925); [Maurice Maeterlinck](#) (1862-1949); [Stéphane Mallarmé](#) (1840-1898); [Octave Mirbeau](#) (1848-1917); [Anna de Noailles](#) (1876-1933); [Charles Péguy](#) (1873-1914); [Marcel Proust](#) (1871-1922); [Jules Renard](#) (1864-1910); [Arthur Rimbaud](#) (1854-1891); [Romain Rolland](#) (1866-1944); [Edmond Rostand](#) (1868-1918); and [Paul Verlaine](#) (1844-1890). Paris was also the home of one of the greatest Russian writers of the period, [Ivan Turgenev](#).

Paris composers during the period had a major impact on European music, moving it away from romanticism toward [impressionism in music](#) and [modernism](#).

[Camille Saint-Saëns](#) (1835-1921) was born in Paris and admitted to the [Paris Conservatory](#) when he was thirteen. When he finished the Conservatory, he became organist at the church of [Saint-Merri](#), and later at [La Madeleine](#). His most famous works included the *Danse Macabre*, the opera *Samson et Dalila* (1877), the *Carnival of the Animals* (1877), and his *Symphony No. 3* (1886). On 25 February 1871, he co-founded the [Société Nationale de Musique](#) with [Romain Bussine](#) to promote French contemporary and chamber music. His

students included [Maurice Ravel](#) and [Gabriel Fauré](#), two of the foremost French composers of the late 19th- and early 20th centuries.^[57]

[Georges Bizet](#) (1838-1875), born in Paris, was admitted to the Paris Conservatory when he was only ten years old. He finished his most famous work, *Carmen*, written for the [Opéra-Comique](#), in 1874. Even before its première, *Carmen* was criticized as immoral. Furthermore, the musicians complained that it could not be played, and the singers complained that it could be not be sung. The reviews were mixed, and the audience cold. When Bizet died in 1875, he considered it a failure. Nonetheless, *Carmen* soon became one of the best-known and beloved operas in the repertoire worldwide.^[58]

The most famous French composer of the late *Belle Époque* in Paris was [Claude Debussy](#) (1862-1918). He was born at [Saint-Germain-en-Laye](#), near Paris, and entered the Conservatory in 1872. He became part of the Parisian literary circle of the symbolist poet Mallarmé. At first an admirer of [Richard Wagner](#), he went on to experiment with [impressionism in music](#), [atonal](#) music and [chromaticism](#). His most famous works include *Clair de Lune* for piano (written ca. 1890, published 1905), *La Mer* for orchestra (1905) and the opera *Pelléas et Mélisande* (1903-1905).^[59]

The most revolutionary composer to work in Paris during the *Belle Époque* was the Russian-born [Igor Stravinsky](#). He first achieved international fame with three ballets commissioned by the [impresario Sergei Diaghilev](#) and first performed in Paris by Diaghilev's [Ballets Russes](#): *The Firebird* (1910), *Petrushka* (1911) and *The Rite of Spring* (1913). The last of these transformed the way in which subsequent composers thought about rhythmic structure and [dissonance](#) treatment.

Other influential composers in Paris during the period included [Jules Massenet](#) (1842-1912), author of the operas *Manon* and *Werther*, and [Eric Satie](#) (1866-1925), who made his living as a pianist at *Le Chat Noir*, a cabaret on Montmartre, after leaving the Conservatory. His most famous works are the *Gymnopédies* (1888).^[60]

Paris was the home and the frequent subject of the [Impressionists](#), who tried to capture the city's light, its colors, and its motion. They survived and flourished because of the support of Paris art dealers, such as [Ambroise Vollard](#) and [Daniel-Henry Kahnweiler](#), and wealthy patrons, including [Gertrude Stein](#),

The first exhibit of the Impressionists took place from April 15 to May 15, 1874 in the studio of the photographer [Nadar](#). It was open to any painter who could pay a fee of sixty francs. There, [Claude Monet](#) exhibited the painting *Impression: Sunrise* (*Impression, soleil levant*), which gave the movement its name. Other artists who took part included [Pierre-Auguste Renoir](#), [Berthe Morisot](#), [Edgar Degas](#), [Camille Pissarro](#), and [Paul Cézanne](#).

[Henri de Toulouse-Lautrec](#) (1864-1901) spent much of his short life in Montmartre painting and drawing the dancers in cabarets. He produced 737 canvases in his lifetime, thousands of drawings and a series of posters made for the cabaret *Moulin Rouge*. Many other artists lived and worked in *Montmartre*, where rent was low and the atmosphere congenial. In 1876, [Auguste Renoir](#) rented space at 12 Rue Cartot to paint his *Bal du moulin de la Galette*, which depicts a popular ball at Montmartre on a Sunday afternoon. [Maurice Utrillo](#) lived at the same address from 1906 to 1914, [Suzanne Valadon](#) lived and had her studio there, and [Raoul Dufy](#) shared an atelier there from 1901 to 1911. The building is now the *Musée de Montmartre*.^[61]

A new generation of artists arrived in Montmartre at the turn of the century. Drawn by the reputation of Paris as the world capital of art, [Pablo Picasso](#) came from *Barcelona* in 1900 to share an apartment with the poet [Max Ernst](#) and began by painting the cabarets and prostitutes

of the neighborhood. [Amedeo Modigliani](#) and other artists lived and worked in a building called [Le Bateau-Lavoir](#) during the years 1904–1909. In 1907, Picasso painted one of his most important masterpieces, *Les Femmes d'Alger*, in [Le Bateau-Lavoir](#). Led by Picasso and [Georges Braque](#), the artistic movement [cubism](#) was born in Paris.^[62]

[Henri Matisse](#) came to Paris in 1891 to study at the [Académie Julien](#) in the class of painter [Gustave Moreau](#), who advised him to copy paintings in the Louvre and study [Islamic art](#), which Matisse did. He also made the acquaintance of [Raoul Dufy](#), [Cézanne](#), [Georges Rouault](#) and [Paul Gauguin](#), and began to paint in the style of Cézanne. Matisse visited [Saint-Tropez](#) in 1905, and when he returned to Paris, he painted a revolutionary work, *Luxe, Calme et Volupté*, using bright colors and bold dabs of paint.^[62] Matisse and artists such as [André Derain](#), [Raoul Dufy](#), [Jean Metzinger](#), [Maurice de Vlaminck](#) and [Charles Camoin](#) revolutionized the Paris art world with "wild", multi-colored, expressive landscapes and figure paintings that the critics called [Fauvism](#). Henri Matisse's two versions of *The Dance* (1909) signified a key point in the development of modern painting.^[63]

The [Paris Salon](#), which had established the reputations and measured the success of painters throughout the Second Empire, continued to take place under the Third Republic until 1881, when a more radical French government denied it official sponsorship. It was replaced by a new Salon sponsored by the [Société des Artistes Français](#). In December 1890, the leader of the society, [William-Adolphe Bouguereau](#), propagated the idea that the new Salon should be an exhibition of young, yet not awarded, artists. [Ernest Meissonier](#), [Puvis de Chavannes](#), [Auguste Rodin](#) and others rejected this proposal and made a secession. They created the [Société Nationale des Beaux-Arts](#) and its own exhibition, immediately referred to in the press as the Salon du Champ de Mars^[64] or the Salon de la Société Nationale des Beaux-Arts;^[65] it was soon also widely known as the "Nationale". In 1903, in response to what many artists at the time felt was a bureaucratic and conservative organization, a group of painters and sculptors led by [Pierre-Auguste Renoir](#) and [Auguste Rodin](#)

The *Belle Époque* was a golden age for sculptors; the government of the Third Republic commissioned very few monumental buildings, but did commission a large number of statues to French writers, scientists, artists and political figures that soon filled the city's parks and squares. The most prominent sculptor of the period was [Auguste Rodin](#) (1840-1917). Born in Paris into a working-class family, he was rejected for entry into the [École des Beaux-Arts](#) and rejected by the Paris Salon. He had to struggle for many years to win recognition, supporting himself as a decorator and later as a designer for the [Sèvres porcelain factory](#). He gradually won attention for his design for the *Gates of Hell*, a museum of decorative art which was never built; its plan included what became his most famous work, *The Thinker*. He was commissioned by the city of [Calais](#) to make a monument, *The Burghers of Calais* (1884), to commemorate an event that took place in that city in 1347, during the [Hundred Years' War](#). He was also commissioned to create a *Monument to Balzac* (now on the [Boulevard Raspail](#)), which caused a scandal and made him a celebrity. Rodin's work was exhibited near the 1900 Exposition, which won him many foreign clients. In 1908, he moved from [Meudon](#) to Paris, renting the ground floor of a private mansion in the [7th arrondissement](#), the Hôtel Biron, now the [Musée Rodin](#). By the time of his death, he was the most famous sculptor in France, perhaps in the world.^[66]

Other more traditional sculptors whose work won acclaim in Paris during the *Belle Époque* included [Jules Dalou](#), [Antoine Bourdelle](#) (also a former assistant of Rodin), and [Aristide Maillol](#). Their works decorated theaters, parks, and were featured at the International Expositions. The more [avant-garde](#) artists organized themselves into the [Société des Artistes Indépendants](#). They held annual Salons that helped set the course of modern art.

At the turn of the century, Paris attracted sculptors from around the world. [Constantin Brâncuși](#) (1876-1957) moved from [Bucharest](#) to [Munich](#) to Paris, where he was admitted, in 1905, to the École des Beaux-Arts. He worked for two months in the workshop of Rodin, but left, declaring that "Nothing grows under big trees", and went in his own direction into modernism. Brâncuși won fame at the 1913 "Salon des indépendants" and became one of the pioneers of modern sculpture.^[67]

The Paris flood of 1910 reached the height of 8.5 meters on the scale measuring the river's level on the [Pont de la Tournelle](#). The Seine rose above its banks and flooded along the course it had followed in prehistoric times; the water reached as far as the [Gare Saint-Lazare](#) and the Place du Havre. It was the second-highest flood recorded in the history of Paris (the highest was in 1658), and was the third major flood of the *Belle Époque* (the others were in 1872 and 1876). Nonetheless, it received much more attention than earlier floods, largely because of the advent of photography and the international press. Postcards and other images of the flood spread around the world. The municipal authorities made a special survey of the city to measure exactly its extent. It also demonstrated the vulnerability of the city's new infrastructure: the flood stopped the Paris Metro and shut down the city's electricity and telephone system. Afterwards, new dams were constructed along the Seine and its major tributaries. No comparable floods have taken place since.^[68]

On 28 June 1914, the news reached Paris of the assassination of the Archduke [Franz Ferdinand of Austria](#) by [Serbian](#) nationalists in [Sarajevo](#). [Austria-Hungary](#) declared war on [Serbia](#) on 28 July, and following the terms of their alliances, Germany joined Austria-Hungary, while Russia, Britain and France went to war against Austria-Hungary and Germany. France declared a general mobilization on 1 August 1914. On the day before the mobilization, the leader of the French socialists, [Jean Jaurès](#), was assassinated by a mentally-disturbed man in the Café du Croissant near the headquarters of the socialist newspaper [L'Humanité](#) in Montmartre. The new war was supported by both French nationalists, who saw an opportunity to gain back Alsace and Lorraine from Germany, and by most on the left, who saw an opportunity to overthrow the monarchies in Germany and Austria-Hungary. Parisian men of military age were ordered to report to mobilization points in the city; only one percent did not appear.^[69]

The German army rapidly approached Paris. On 30 August, a German plane dropped three bombs on the Rue des Récollets, the Quai de Valmy and the Rue des Vinaigriers, killing one woman. Planes dropped bombs on 31 August and 1 September. On 2 September, a bulletin of the military governor of Paris announced that the French government had left the city "in order to give a new impulsion to the defense of the nation." On 6 September, six hundred Parisian taxis were called upon to carry soldiers to the front lines of the [First Battle of the Marne](#). The offensive of the Germans was stopped and their army pulled back. Parisians were urged to leave the city; by 8 September, the population of the city had fallen to 1,800,000, or 63 percent of the population in 1911. For the Parisians, four more years of war and hardship lay ahead. The *Belle Époque* became just a memory.^[69]

PARIS IN 1919-1939

After the [First World War](#) ended in November 1918, to jubilation and profound relief in Paris, unemployment surged, prices soared, and rationing continued. Parisian households were limited to 300 grams of bread per day, and meat only four days a week. A general strike paralyzed the city in July 1919. The [Thiers wall](#), 19th-century fortifications surrounding the

city, were demolished in the 1920s and replaced by tens of thousands of low-cost, seven-story public housing units, filled by low-income blue-collar workers. ^[1] Paris struggled to regain its old prosperity and gaiety. ^[2]

The French economy boomed from 1921 until the [Great Depression](#) reached Paris in 1931. This period, called *Les années folles* or the "Crazy Years", saw Paris reestablished as a capital of art, music, literature and cinema. The artistic ferment and low prices attracted writers and artists from around the world, including [Pablo Picasso](#), [Salvador Dali](#), [Ernest Hemingway](#), [James Joyce](#), and [Josephine Baker](#).

Paris hosted the 1924 Olympic Games, major international expositions in 1925 and 1937, and the Colonial Exposition of 1931, all of which left a mark on Paris architecture and culture.

The worldwide [Great Depression](#) hit Paris in 1931, bringing hardships and a more somber mood. The population declined slightly from its all-time peak of 2.9 million in 1921 to 2.8 million in 1936. The *arrondissements* in the city's center lost as much as 20% of their population, while the outer neighborhoods, or *banlieus*, grew by 10%. The low birth rate of Parisians was made up by a wave of new immigration from Russia, Poland, Germany, eastern and central Europe, Italy, Portugal and Spain. Political tensions grew in Paris, as seen in strikes, demonstrations and confrontations between the Communists and [Front populaire](#) on the extreme left and the [Action Française](#) on the extreme right. ^[3]

1919 in Paris was a time of celebration and optimism. An enormous military parade was held on July 14, 1919 from [Porte Maillot](#) to the [Place de la Republique](#), celebrating victory in the Great War. World leaders, including President [Woodrow Wilson](#), arrived in Paris to join the celebrations and negotiate the terms of the new peace and a new map of Europe. Wilson was the first American President to visit Paris while in office and remained in Paris from December 1918, except a three-week visit back to the US, until June 1919, when the Treaty of Versailles was finished.

The contents of the enormous warehouses at Vilgrain, where food rations for the army were stored, were sold at low prices to Parisians. In June 1919, bread rationing finally ended, and the food supply gradually returned to normal. In April, to create jobs for demobilized soldiers, the government decided to demolish the [Thiers Wall](#), the ring of fortifications that had been built around the city between 1840 and 1844. There was discussion of turning the wide strip of land into a new park, but instead it was used for the construction of low-cost housing for Parisian workers. Demolition began on May 5, and construction of seven-story public housing units began soon afterwards. ^[4]

Another great ceremony was held October 16, 1919 to celebrate the consecration of the [Basilica of Sacré-Coeur](#) on Montmartre, completed just before the war. February 1919 saw the opening of the first commercial airline service in the world, between Paris and London. On August 19, 1920, the [French National Assembly](#) approved an allocation of 500,000 francs for the construction of the first mosque in Paris, to honor the sacrifice of tens of thousands of Muslim soldiers from the French colonies of Africa who had been killed in the War. ^[5]

The population of Paris had been 2,888,107 in 1911, before the war. It grew to 2,906,472 in 1921, its historic high. ^[6] Many young Parisians were killed in the First World War, though a smaller proportion than from the rest of France, but this ended the steady population growth Paris had had before the war, and caused an imbalance in the population between men and women, which lowered both the marriage rate and the birth rate, and a greatly increased the number of widows, orphans, and veterans handicapped by war injuries. ^[7] The population of Paris was 2,871,429 in 1926; it rose to 2,891,020 in 1931, then dropped to 2,829,746 in 1936,

and continued to drop slightly at each census until the 1960s, when the mass exodus of the Parisian middle class to the suburbs began.^[8]

Even before the First World War, Paris had had a higher proportion of foreign-born inhabitants than other European cities; in 1891 there were 67 foreign-born Parisians for every one thousand inhabitants, compared with twenty-four in Saint-Petersburg, twenty-two in London and Vienna, and eleven in Berlin. Between 1919 and 1939, the number of Italian-born Parisians tripled in the Parisian region, although most settled in Île-de-France, outside the city limits. Two-thirds of the Italian-born Parisians were employed in construction and public works. Ten thousand Czechs and Slovaks moved into Paris in the same period. A large number of Armenians, survivors of the 1915 massacres, moved to the Paris region in the same period; poorer families moved to the suburbs, while wealthier families settled in the 9th *arrondissement*. Parisians born on the French islands of the Caribbean numbered about ten thousand, and there were between one and two thousand Parisians from the French colonies in Africa. During the [Spanish Civil War](#), several thousand refugees from the Spanish Republic moved to Paris, though many more settled in the southeast of France. Large numbers of Poles came to France in the same period, though most settled in the mining regions of the north and east. There was a significant migration of Russians to Paris after the 1917 Russian Revolution. Many former Russian aristocrats, who spoke French and were familiar with the city, found jobs as Paris taxi drivers.^[9]

Some of the immigrants to Paris in this period later returned to their native countries and had an important impact on world history. The future leader of Vietnam, [Ho Chi Minh](#), worked as a pastry chef in Paris from 1919 to 1923, studying nationalism and socialism. [Leopold Senghor](#) arrived in 1928 to study, and eventually became a university professor, a member of the [Académie Française](#), and the first president of [Senegal](#).

Since the time of Louis XIV, the French government considered Paris too important to be governed only by the Parisians. In 1919 the city had no elected mayor. The two most powerful figures, the prefect of the département and the prefect of police, were named by the national government. Paris did elect representatives to the National Assembly and to the municipal council. The greater part of the Parisian population were also moderates or conservatives, as the first elections after the war, in November and December 1919, showed. Two-thirds of the seats of the National Assembly from Paris were won by the Bloc National, which included conservative republicans, radicals and socialists who refused any alliance with the Communists. In the elections for the municipal council, the Bloc National won forty-seven seats, against twenty socialists from the SFIO, three independent socialists, three radicals and seven conservatives. The new government took what measures they could to lessen the hardships of working-class Parisians. They opened '*crèches*', day-care centers for the children of working women, and in 1923 and 1924 obtained a loan of 300 million francs to build public housing for low-income Parisians. Between 1920 and 1949, 22,000 new low-income housing units were built for 129,000 persons.^[10]

In the 1924 elections for the National Assembly, Parisians expressed their discontent with high prices and new taxes by voting for a coalition of the left called the *Cartel des gauches*. The left won 356 seats, including 103 by socialists and 28 communists. However, in the municipal elections, where the rules were different, the Bloc National and conservatives won twenty-two seats, while the leftist front won just fifteen, including seven communists. The communists came in first in nineteen quarters of the east Paris, in the 12th, 13th, 18th, 19th and 20th *arrondissements*, and established themselves as the most active and visible opposition party. In the 1928 elections, the communists took 11 of the votes in France, and 18.5 percent of the votes in Paris. The 1928 elections were won by the Union National, led

by [Raymond Poincaré](#), a coalition of the radicals and the right, which took thirty seats in the Paris council, against two-radical socialists, two socialists and five communists.^[11]

The municipal council had little power over major issues, which were decided by the national government, but it did have fierce debates over many symbolic issues, such as the names of Paris streets; in 1930 a council dominated by the left renamed a Paris street after [Charles Delescluze](#), one of the leaders of the Paris Commune, and tried, unsuccessfully, to have all the streets named after saints given new names. Between 1929 and 1936, many streets were renamed in honor of the Allies in the war; cours Albert I; avenue George-V, avenue Victor-Emmanuel-III, Avenue Pierre-I-de-Serbie, Avenue des Portugais, and Avenue de Tokyo (which was renamed Avenue de New-York in 1945). Other streets were renamed for France's victorious war leaders; Joffre, Foch, Pétain (also changed after World War II); Poincaré and Clemenceau.^[12]

Open and sometimes violent conflicts broke out between the socialists and communists. On October 5, 1929 a meeting of young socialists in a gymnasium was attacked by young communists, causing a hundred injuries.^[13] In the 1932 municipal elections, the left won a slight majority of the votes, but won only sixteen seats in the council, including one communist and three from the Party of Proletarian Unity, with a program almost identical with the communists. compared with twenty-eight from the right.

The rise of fascism in Italy and Germany, and the influence of Stalin and the Communist international, saw greater agitation in Paris on the extreme left and right. In January and February 1934, large and violent demonstrations against corruption in the parliament and government took place around the building of the National Assembly. On 6 February they turned into a riot; eleven persons were killed, and more than three hundred injured.^[14] The two extremes of the political spectrum confronted each other in Paris; the Communists on the left, and new movements of the extreme right; the Croix de Feu, Jeunesse patriotes, Solidarité Française. The movements on the far left and far right each organized own semi-military formations.

At the 14th of July celebration in Paris 1935, the parties of the left marched together for the first time; this was the beginning of the [Popular Front](#). In the elections of April 26 and May 3, 1936 the Popular Front, led by [Leon Blum](#), won the national elections in France and the municipal elections in Paris. For the first time since 1919, the left won a majority of the votes in Paris and twenty-three of the thirty-nine seats on the municipal council. The Communists were the big winners, taking 27.5 percent of the vote.^[15]

On May 26, even before the new government had taken office, the large labor unions declared a strike to push their demands; strikers used a new tactic, occupying the factories of the metallurgy and aviation industry in the Paris suburbs. They were joined by the construction workers, transport workers, and employees of the department stores, insurance companies, and cafes and restaurants. Over a million workers were on strike. As soon as he was formal chosen Prime Minister by the National Assembly on June 6, Immediately after being chosen prime minister by the National Assembly, Blum presented his program; a forty-hour week, paid holidays, and collective bargaining contracts for all workers. It was passed immediately by the Assembly. The new government also outlawed the military formations of the parties of the extreme right, while communists and socialists kept their militias. Despite these measures, new extreme right parties appeared, including the Parti Populaire Française, led by former communists, which was both fascist and anti-semitic. By 1938 it had more than three hundred thousand members.. Another extreme right party, Parti Social Français, gathered more than a million members.

The unity of communists and socialists within the Popular Front did not last long; the Communists wanted France to intervene in the [Spanish Civil War](#) and to outlaw the Parti Social Francais, moves which the socialists opposed. The communists and socialists split. On March 16, 1937, in Clichy, a communist crowd attacked a meeting of the Parti Social Francais, and battled police. Six persons were killed and two hundred injured. A wave of strikes hit the city; work on the 1937 Exposition was halted the Communist-led strikes; only the pavilion of the Soviet Union was finished on time. At the end of December, 1937, the gas supply, electricity supply and transport in Paris was stopped by strikes. In March 1938, communist-led strikers occupied the factories of Citroën and other large enterprises. In April 1938, the strike was joined by the telephone workers and taxi drivers. On April 10, Blum and his government were forced to resign, and were replaced by a center-right government led by [Edouard Daladier](#). The new government began to prepare for a war the which began to appear inevitable. Paris factories increased the pace of the defense industry factories, which had been largely stopped by strikes. At the end of 1938, while German aircraft factories were producing 300 military aircraft per month, French factories in the Paris region produced only 150. The first defense exercise was held in Paris on February 2, 1939; and Parisian workers began digging twenty kilometers of trenches to use as shelters in the event of bombing attacks. ^[16] ^[17]

As a result of the war, the French government was deeply in debt; the debt had multiplied six times from what it was before the War. Inflation was rampant; the amount of money in circulation had increased by five times during the War. The low value of the Franc against the dollar made the city attractive for foreign visitors such as Ernest Hemingway, who found prices for housing and food affordable, but it was difficult for the Parisians. Energy was in short supply; before leaving their front lines, the Germans had flooded the coal mines of northern France; coal production was not fully restored for five years. A large part of the government budget went to repaying the war debts, and another large part went to paying the pensions of widows, orphans, and wounded soldiers.

One of the biggest problems immediately after the war was finding jobs for the demobilized soldiers. To encourage greater employment, in May 1919 the French Senate ratified a law shortening the work day to eight hours and the week to forty-eight hours. The unions of Paris demanded more. The CGT, the largest union, organized a huge demonstration at the Gare de l'Est and the Place de la République, which led to violent confrontations between worker and the police. Immediately afterwards there were strikes of bank employees and garment workers, and strikes at many of the major factories, including the automobile factories of Renault and Panhard, the aircraft factory of Blériot and the film studio of Pathé. The typographers and workers at the Bon Marché and Louvre department stores went on strike in November. ^[18] Conflicts between the labor unions and employers continued throughout entire the period from 1919 to 1939. ^[19]

The weak franc was helpful for the major enterprises of Paris, which converted to making new products which had been developed during the war; automobiles, electric generators and motors, and chemical products. Due to low French costs, exports jumped by forty-two percent between 1923 and 1927. ^[7]

A good example of a successful new Paris enterprise was the automobile company founded in 1919 by [André Citroën](#) (1878-1935). He was an industrial engineer who developed assembly lines to produce armaments during the First World War. In 1919 he put these technologies to work to mass-produce automobiles on a site next to Seine; he created the first automobile assembly line outside the United States. By 1927 Citroën was the leader car manufacturer in Europe, and fourth in the world. In addition to his engineering talents, he was also a skilled

publicist. He organized a series of highly publicized automobile expeditions to remote parts of Africa, Asia and Australia, and, from 1925 until 1934, had a large illuminated Citroën sign on the side of the Eiffel Tower. The site of Citroën's old factory is now the [Parc André Citroën](#).

During the early 20th century, the inner eleven arrondissements of Paris (with the exception of the 7th) became the centers of commerce; their populations were a smaller and smaller share of the total population of the city. About a quarter of Paris workers were engaged in commerce, wholesale and retail. The motors of the city economy were the great department stores, founded in the Belle Époque; [Bon Marché](#), [Galeries Lafayette](#), [BHV](#), [Printemps](#), [La Samaritaine](#), and several others, grouped in the center. They employed tens of thousands of workers, many of them women, and attracted customers from around the world.

The 1920s were a glorious period for Parisian high fashion. The [International Exhibition of Modern Decorative and Industrial Arts](#) in 1925 featured 72 Parisian fashion designers including [Paul Poiret](#), [Jeanne Lanvin](#), who opened a boutique in 1909 on the Rue du Faubourg Saint-Honoré, and also branched out into perfume, introducing a fragrance called Arpège in 1927 and the [House of Worth](#), which also introduced perfumes, with bottles designed by [René Lalique](#). New designers challenged the old design houses was challenged, notably [Coco Chanel](#) who put her own perfume, [Chanel No. 5](#), on the market in 1920. She introduced the "little black dress" in 1925. Other major designers of the period included [Jean Patou](#), [Elsa Schiaparelli](#), [Madeleine Vionnet](#), [Cristobal Balenciaga](#), who fled the Spanish Civil War and opened a shop on the Avenue George V in 1937 [Jacques Heim](#), and [Nina Ricci](#), who opened her shop in Paris in 1932.

By the late 1930s, a dismal economy had greatly reduced the number of customers. The fashion house of Paul Poiret, which had dominated Paris fashion before World War I, closed in 1929. In the Pavilion of Elegance at the 1937 Exposition, only 29 designers remained to show their collections. The center of the Paris high fashion world gradually moved west from the city center, closer to its wealthy clients, and became established around the Champs-Élysées, particularly on avenue Montaigne, rue François-I, rue Marbeuf and the rue du Faubourg-Saint-Honoré.^[20]

The stock market crash in New York in 1929 was the beginning of a series of economic downturns which reached Paris in 1931 and 1932. Paris factories produced more goods than European or American consumers could buy, and exports declined. As other European countries devalued their currencies to meet the crisis, French exports became too expensive, and factories cut back production and laid off workers. Fewer wealthy tourists came to Paris, reducing the demand for luxury goods. A socialist prime minister, [Leon Blum](#), was elected in 1936, and formed a [Popular Front](#) government. He introduced a forty-hour week and two weeks of paid vacation for French workers, and devalued the Franc by 29 percent, but industrial production continued to fall and inflation erased the gains in salaries. A new government under radical politician [Édouard Daladier](#) took office in August 1938, and changed economic policies, encouraging investment and raising prices. Inflation stopped, the Franc stabilized, and production increased by 15 percent between November 1938 and June 1939. As the threat of war loomed, the government increased military spending, stimulating the economy further and increasing employment, until the beginning of the war in September 1939.^[21]

The Parisian diet was basically unchanged from it had been in the 19th century and earlier, based on meat, wine, and bread. Wine arrived in barrels, transported by river barge from the different regions of France, at the Halles aux vins, on the Quai Saint-Bernard of the Left Bank, next to the Jardin des Plantes, where it was taxed and resold. It also arrived in huge quantities at the depot of Bercy, on the right bank, which was the largest wholesale center for wine and

spirits in Europe. Meat was processed at the huge slaughterhouses built in the 19th century around the edges of the city; the largest was at [La Villette](#). Fish, fruits and vegetables arrived by truck very early in the morning at the huge iron and glass pavilions of [Les Halles](#), where they were arranged and sold to buyers from markets and restaurants.

New technology brought fresher food products to the Paris table; In 1921, the first train station for the arrival of refrigerated railway cars was opened at Paris-Ivry, allowing the easier transportation of perishable fruits and vegetables and other food products. The first delivery by air of food products took place between Nice and Le Bourget in 1920. In 1921, the first refrigerated food depots were opened at the markets of Les Halles. In August 1935, the first aerial shipment of fresh fish took place from La Baule to Paris; sardines caught that morning were on sale in Paris by seven in the evening.^[22]

Because of the economic crisis and the decline of the Paris population, little new housing was built between the wars. There were some notable changes to the interiors of apartment buildings: thanks to the introduction of elevators, the apartments of the wealthiest tenants moved to the upper floors, where the air was believed to be more healthy, while the servants moved down from the small rooms under the roof to the mezzanine or the ground floor. The old double-cage elevators were gradually replaced by more modern elevators. The hallways of the new buildings became narrower and less decorated. Beginning in the late 1930s, as the threat of war became more real, many new apartment buildings had basements which could also serve as bomb shelters.

One important addition to the housing of Paris was the *Habitation à Bon Marché*, or HBM, an apartment building built by the state for low-income Parisians. Beginning in 1920, hundreds of HBMs were built in the zone around the city cleared by the destruction of the old [Thiers Wall](#) of fortifications. Others were built in neighborhoods which the city administration identified as particularly unhealthy due to overcrowding, where epidemics of tuberculosis and other contagious diseases had been reported. Seventeen such neighborhoods were identified. One area was at porte de Clignancourt, where an outbreak of plague had taken place in 1920. The old buildings were torn down and replaced in 1933 with HBMs. The new buildings were usually made of concrete and red brick, and were solidly constructed, with large windows and ornamental ironwork. Between 1929 and 1949, the government built 22,000 low-income housing units in Paris, for 129,000 residents.^[23]

Between 1919 and 1939, seven of the original lines of the [Paris Metro](#) were gradually extended out from the center toward the suburbs, while two new lines, 9 and 11, were completed. Between 1927 and 1930 the number 7 line was extended as far as Sully-Morland, In 1934 the first line reached the suburbs at the pont de Sèvres. By 1939, the network within the city was essentially complete, with 159 kilometers of track and three hundred thirty-two stations, carrying more than a half million passengers a year.^[24]

From 1919 to 1929, the electric tramway was the major form of surface transport in Paris; there were 1,100 kilometers of tram lines on all the major streets of the city, except for the Champs-Élysées, the avenue de l'Opera and the Grands Boulevards. However, the motor bus and the growing number of automobiles threatened the existence of the tram; automobile drivers complained that the trams blocked traffic. In 1929, the Municipal Council decided to eliminate the trams within the city, and replace them with buses. On May 15, 1937, the last Paris tram made its journey from porte de Vincennes to porte de Saint-Cloud.^[25]

In 1921, the Société des transports en commun de la région Parisienne (STCRP) was formed, and took charge of surface public transport. It operated 258 kilometers of auto bus lines. Sixteen different models of bus were introduced between 1921 and 1939, mostly from

Renault. There were two thousand buses in service on the Paris streets in 1932, four thousand by 1937.

The number of taxicabs in Paris reached twenty-one thousand in 1931, many of them driven by White Russian emigres fleeing the Russian Revolution, who spoke French and new the city. With the Depression, the number of taxis fell to fourteen thousand in 1937.

The number of private cars also grew rapidly. The wide boulevards built by Haussmann enabled the city to keep traffic moving more successfully than many other cities. The first traffic lights in Paris were installed at the intersection of the rue de Rivoli and the boulevard de Sébastopol.

The most important innovation in Paris transport was the arrival of aviation and the first airport. In October 1914 a squadron of seven airplanes had been established on an airstrip at Le Bourget to protect Paris, after German planes had dropped bombs on the city. In August 1918, the first postal delivery by air arrived at this airport, carrying letters to American soldiers serving in France. The first commercial aviation line in the world, between London and Paris, opened on February 8, 1919. The first air cargo service began in 1920, with perishable food products flowed from Nice to Le Bourget. On May 21, 1927, [Charles Lindbergh](#) made his historic transatlantic flight between New York and Le Bourget. In August 1933, a national airline, [Air France](#), was organized. Le Bourget received 6,421 plane passengers in 1920, and 112 tons of freight. In 1938 it received 138,267 passengers, and 2,303 tons of freight. A second airport, Orly, was built, but was used only by the military and by flying clubs. ^[26]

Paris was well behind many other large cities in the installation of telephones. Telephones were rare, equipment was antiquated, and service was poor. By 1953, there were only 1.7 million telephones in France. As of 1928 telephone numbers began with the three letters of the central switchboard for that neighborhood (there were ten for Paris); for example, LOU for Louvre, followed by the four digit number of the subscriber. This system was in use until 1963.

The first experimental radio transmission were made in Paris in 1908, between the Pantheon and a station on the third stage of the Eiffel Tower, a distance of four kilometers. The first musical broadcast took place in November 1921, when a banquet of electric engineers at the Hotel Lutetia was entertained by musicians performing three songs at a station in the Seine-et-Marne department. An experimental broadcasting station, called Radiona, began regular broadcasts in 1922. A state broadcasting radio station, Paris-P.T.T. was created in January 1923, the first private station, founded by the newspaper *Le Petit Parisien* began broadcasting in March 1924. All the radio stations were nationalized in 1945, and were not privatized until 1982.

The first experimental television transmission in France was made at the Olympia Theater on November 3, 1930, and the first public broadcast made in April 1931, between a laboratory at Montrouge and the amphitheater of the École supérieure d'électricité. The first broadcast with sound took place in 1923, and the first broadcast of a theatrical event from the Lido theater on the Champs-Élysées in February 1933. The first official government broadcast was organized by Minister [Georges Mandel](#) on April 26, 1935. The audience for television in Paris at this time was extremely small; there were between five hundred and one thousand receivers. Like radio, it became a state monopoly in 1945, and remained so until 1982. ^[27]

Despite the hardships, Paris resumed its place as the capital of the arts during what became known as *les années folles*, or "the crazy years." The center of artistic ferment moved from Montmartre to the neighborhood of [Montparnasse](#), around the intersection of [Boulevard](#)

Raspail, to the cafés *Le Jockey*, *Le Dôme*, *La Rotonde*, and after 1927, *La Coupole*. The writers [Ernest Hemingway](#), [W.B. Yeats](#), and [Ezra Pound](#) came to Paris to take part in the *fête*. New artistic movements, including [dadaism](#), [surrealism](#), [cubism](#) and [futurism](#) flourished in Paris; It was the home and studio of [Pablo Picasso](#), [Hans Arp](#), [Max Ernst](#), [Amedeo Modigliani](#), [Marcel Duchamp](#), [Maurice Utrillo](#), [Alexander Calder](#), [Kees Van Dongen](#), and [Alberto Giacometti](#).^[28] Paris also welcomed new music and new composers, including [Erik Satie](#), [Maurice Ravel](#) and [Igor Stravinsky](#).^[29] [George Gershwin](#) came to Paris in 1928 and stayed at the [Majestic Hotel](#), where he composed *An American in Paris*, capturing the sound of the horns of the Paris taxis as they circled the *Place de l'Étoile*.^[30]

The music hall had been a popular Paris institution since the 19th century; the most famous early halls were the [Moulin Rouge](#), the [Olympia](#) and the Alhambra Music-Hall (1903). Others were the [Folies-Bergere](#) and the Casino-de-Paris. They all faced stiff competition between the Wars from the most popular new form of entertainment, the cinema. They responded by offering more complex and lavish shows. In 1911 the Olympia had introduced the giant stairway as a set for its productions, an idea copied by other music halls. The singer [Mistinguett](#) made her debut the Casino de Paris in 1895 and continued to appear regularly in the 1920s and 1930s at the [Folies Bergère](#), [Moulin Rouge](#) and Eldorado. Her risqué routines captivated Paris, and she became one of the most highly-paid and popular French entertainers of her time.^[31]

One of the most popular entertainers in Paris during the period was the American singer, [Josephine Baker](#). Baker sailed to [Paris](#), France. She first arrived in Paris in 1925 to perform in a show called "*La Revue Nègre*" at the [Théâtre des Champs-Élysées](#).^[32] She became an immediate success for her [erotic dancing](#), and for appearing practically nude on stage. After a successful tour of Europe, she to France to star at the [Folies Bergère](#). Baker performed the 'Danse sauvage,' wearing a costume consisting of a skirt made of a string of artificial bananas.

The music-halls suffered growing hardships in the 1930s. The Olympia was converted into a movie theater, and others closed. Others continued to thrive; In 1937 and 1930 the Casino de Paris presented shows with [Maurice Chevalier](#), who had already achieved success as an actor and singer in Hollywood.

In 1935, a twenty-year old singer named [Edith Piaf](#) was discovered in the [Pigalle](#) by nightclub owner [Louis Leplée](#), whose club *Le Gerny*, off the Champs-Élysées, was frequented by the upper and lower classes alike. He persuaded her to sing despite her extreme nervousness. Leplée taught her the basics of stage presence and told her to wear a black dress, which became her trademark apparel. Leplée ran an intense publicity campaign leading up to her opening night, attracting the presence of many celebrities, including Maurice Chevalier. Her nightclub appearance led to her first two records produced that same year, and the beginning of a legendary career.^[33]

In the early 1920s, during the era of silent films, the largest movie theater in Paris was the [Gaumont Palace](#) [fr], built in 1911 with six thousand seats, located on the [Place de Clichy](#). There were 190 movie theaters in the city in 1930, when the arrival of sound films caused movie attendance to jump; the number of theaters increased to 336 by 1940. The greatest concentration of movie theaters was on the [Grands Boulevards](#), and the [Champs-Élysées](#). The most impressive new movie theater was the [Grand Rex](#), built in 1932 in the [Art Deco](#) style. The Gaumont Palace was rebuilt in 1930 to rival the Rex, in the even more modern international style. Other great movie palaces of the period included the Marignan on the Champs-Élysées (1933), the [Eldorado](#) [fr] on [Boulevard de Strasbourg](#) (1933); and the Victor Hugo on Rue Saint-Didier.(1931).^[34]

Paris hosted the [1924 Summer Olympics](#) from May 4 to July 27, 1924. It was the second time (the first was in 1900) that Paris hosted the Games. The [Stade Olympique Yves-du-Manoir](#) in the Paris suburbs was the main venue. Forty-four nations took part in 126 different events in 17 sports. [Pierre de Coubertin](#), the founder of the modern Olympics, took part for the last time, and personally awarded the medals. Winners included British runners [Eric Liddell](#) and [Harold Abrahams](#), whose participation was the subject of the film *[Chariots of Fire](#)*. The American [Johnny Weissmuller](#), who later became famous as a film actor playing [Tarzan](#), won three gold medals and one bronze in swimming. de Coubertin also personally awarded 21 Gold medals to members of the [1922 British Mount Everest Expedition](#) including 12 Britons, 7 Indians, 1 Australian and 1 Nepalese, who had tried but failed to reach the summit of the mountain.^{[35][36]} The Paris 1924 Olympics were the first games to have an Olympic Village for the participants.

The [International Exposition of Modern Industrial and Decorative Arts](#) (*L'Exposition internationale des arts décoratifs et industriels modernes*) took place from April to October 1925, between the Esplanade of Les Invalides and the Grand and Petit Palais on the opposite bank. It was much more modest in scale than the pre-war expositions. It gave birth to the term "[Art Deco](#)", a shortened version of the words *Arts Décoratifs* in the title of the Exposition. One memorable feature was a crystal fountain made by glass designer [René Lalique](#). Unlike the earlier expositions, whose buildings were in the pure [Beaux-Arts](#) style, this Exposition featured by some of the most avant-garde architects of the time, including [Le Corbusier](#) and two architects from Soviet Russia, [Konstantin Melnikov](#), who designed the Soviet Pavilion, for which he won a gold medal, and the architect [Alexander Rodchenko](#); their buildings, in the new constructivist style, were noted for their assertive modernity and lack of ornament. The pavilion designed by Le Corbusier was called the *Esprit Nouveau* (New Spirit) and contained his design for the Paris of the future. His vision called for replacing a large part the right bank of Paris with two-hundred-meter tall skyscrapers and giant, rectangular apartment blocks.^[37]

The [Paris Colonial Exposition](#) took place in 1931 in the Bois de Vincennes. Its purpose was to highlight and economic contributions and cultures of France's colonies in Africa, Asia and the Caribbean. The United States, the UK, Germany and several other European countries also had pavilions. The Exposition was immensely popular, attracting millions of visitors. The Communist Party sponsored a counter-exhibit in the city, denouncing French imperialism, but it attracted only a few thousand visitors. A few vestiges of the Exhibit still remain; the Port Doré monument, at what used to be the entrance of the Exposition; the [Cité nationale de l'histoire de l'immigration](#) or museum of the history of immigration; the foundations the [Parc zoologique de Vincennes](#); and the [Pagode de Vincennes](#), the former pavilion of [Cameroon](#), which is now the only Buddhist Temple in Paris.

Paris hosted its last international exposition between May 24 and November 25, 1937. It had a very long title; the [Exposition internationale des " Arts et des Techniques appliqués à la Vie moderne "](#) ("International Exposition of arts and technology in modern life"). It suffered from the political tensions of the period; the communist-led unions organized strikes, so that only the pavilion of the Soviet Union was finished on schedule. It was held on both sides of the Seine at the *Champ de Mars* and the *colline de Chaillot*. The pavilions of the Soviet Union, crowned by a hammer and sickle, and of Germany, with an eagle and swastika on its summit, faced each other in the center of the exhibition. The Exposition attracted far fewer visitors than expected, and ran up a large deficit.

A few important vestiges of the Exposition remain: The [Palais de Tokyo](#), now the museum of modern art of the City of Paris; and the [Palais de Chaillot](#), with its large terrace and views of

the Eiffel Tower. The building now contains the museum of architectural monuments. The gardens and water cannons and fountains at the base of the Palais de Chaillot are also vestiges of the Exposition.^[38]

The [Art Nouveau](#) had its moment of glory in Paris beginning in 1898, but was out of fashion by 1914. The [Art Deco](#), which appeared just before the war, became the dominant style for major buildings between the wars. The primary building material of the new era was reinforced concrete. The structure of the buildings was clearly expressed on the exterior, and was dominated by horizontal lines, with rows of bow windows and small balconies. They often had classical features, such as rows of columns, but these were expressed in a stark modern form; ornament was kept to a minimum; and statuary and ornament was often applied, as a carved stone plaque on the facade, rather than expressed in the architecture of the building itself.^[39]

The leading proponent of the art deco was [Auguste Perret](#), who had designed the [Théâtre des Champs-Élysées](#), the first art deco building in Paris, in 1913, just before the War. His major achievements between the wars were the building of the *Mobilier National* (1936) and the Museum of Public Works (1939), now the Economic and Social Council, located on place d'Iéna, with its giant rotunda and columns inspired by ancient Egypt.^[40]

Some Paris buildings were transformed from Art Nouveau to art deco; the department store [La Samaritaine](#), which originally had a colorful Art-Nouveau interior and facades, was expanded and remade with characteristic art-deco features in 1933 by [Henri Sauvage](#).

The modernist architect [Le Corbusier](#), who at the age of twenty-one had worked as an assistant to Auguste Perret, opened his own architectural office with his cousin [Pierre Jeanneret](#) in 1922 and built some of his first houses in Paris. The [Villa La Roche](#), built for a Swiss pharmaceuticals magnate, was constructed in 1925, and introduced many of the themes found in Corbusier's later work. He also designed the furniture for the house.^[41] The international expositions of the 1920s and 1930s left fewer architectural landmarks than the earlier exhibitions. The 1925 Exposition of decorative arts had several very modern buildings, the Russian pavilions, the art deco *Pavillon du Collectionneur* by Ruhlmann and the *Pavillon d'Esprit* by [Le Corbusier](#), but they were all torn down when the exhibit ended. One impressive art deco building from the 1934 Colonial Exposition survived; the Museum of the Colonies at la Port Dorée, by Albert Laprade, 89 meters long, with a colonnade and a front wall entirely covered with a bas-relief by [Alfred Janniot](#) on the animals, plants, and cultures the theme the cultures of the French colonies. The interior was filled with sculpture and murals from the period, still visible today. Today the building is the [Cité nationale de l'histoire de l'immigration](#), or museum of the history of immigration.^[40]

Several new churches were built in Paris between the wars. The most prominent was the [Église du Saint-Esprit](#), located at 186 Avenue Daumesnil in the 12th arrondissement, designed by Paul Tournon. It was very modern in its construction, built of reinforced concrete covered with red bricks from Burgundy, and featured a very large cupola, 22 meters in diameter, and a clock tower 75 meters high. The design, like that of the Basilica of Sacre-Coeur, was inspired by Byzantine churches, particularly Saint-Sofia in Istanbul. The interior was decorated with murals by several notable artists, including [Maurice Denis](#).^[42]

The [Grand Mosque of Paris](#) was one of the more unusual buildings constructed during the period. Intended to honor the Muslim soldiers from the French colonies who died for France during the war, it was designed by the architect [Maurice Tranchant de Lunel](#), and built and decorated with the assistance of craftsmen from North Africa. The project was funded by the National Assembly in 1920, construction began in 1922, and it was completed in 1924, and dedicated by the President of France, [Gaston Doumergue](#), and the Sultan of Morocco, [Moulay](#)

[Youssef](#). The style was termed "Hispano-Moorish" and the design was largely influenced by the Grand Mosque of [Fez](#), Morocco.^[39]

Paris in the 1920s and 1930s was the home and meeting place of some of the world's most prominent painters, sculptors, composers, dancers, poets and writers. For those in the arts, it was, as Ernest Hemingway described it, "A moveable feast". Paris offered an exceptional number of galleries, art dealers, and a network of wealthy patrons who offered commissions and held salons. The center of artistic activity shifted from the heights of Montmartre to the neighborhood of [Montparnasse](#), where colonies of artists settled. They met at the cafes there, around the intersection of Boulevard Montparnasse and [Boulevard Raspail](#), at the cafés "Le Jockey", [Le Dôme](#), [La Rontaine](#), and after 1927, "La Coupole".

[Pablo Picasso](#) was perhaps the most famous artist in Paris, but he shared the spotlight with a remarkable group of others, including the Romanian sculptor [Constantin Brâncuși](#), the Belgian [René Magritte](#), the Italian [Amedeo Modigliani](#), the Russian émigré [Marc Chagall](#), the Catalan and Spanish artists [Salvador Dalí](#), [Joan Miró](#), [Juan Gris](#), and the German surrealist and Dadaist [Max Ernst](#). Several major artistic movements flourished in Paris at this time, including [Cubism](#), [Surrealism](#), and [Art Deco](#). The American art patron [Gertrude Stein](#), resident in Paris, played an important role in encouraging and buying works of Picasso and other artists of the period.

[Crystal Cubism](#) was featured in major exhibitions at [Léonce Rosenberg's](#) Galerie de L'Effort Moderne.^[43] Rosenberg became the official dealer of the Cubists, purchasing works, in addition to those he already owned, by artists such as [Jean Metzinger](#), [Albert Gleizes](#), [Fernand Léger](#), [Joseph Csaky](#), [Henry Laurens](#), [Georges Valmier](#) and [Henri Hayden](#).^[44] Picasso eventually switched to his brother [Paul Rosenberg's](#) gallery, who would become his dealer [Entre Deux Guerres](#).^[44]

The first museum of modern art in Paris, the [Palais de Tokyo](#), opened during the 1937 international exposition.

Between the Wars, Paris was home to the major French publishing houses and literary journals, and of France's most important writers. [Marcel Proust](#) was living at 102 Boulevard Haussmann, editing his most important work, [In Search of Lost Time](#), which he had begun in 1909 but was not finished by the time of his death in 1922. It was finally published in 1929. [Anatole France](#) won the Nobel Prize for Literature for his novels and poetry in 1921; the philosopher [Henri Bergson](#), won the Nobel Prize in 1927. Paris was the home of [Colette](#), who lived in an apartment in the [Palais Royal](#); of novelist [André Gide](#), and of the playwright-author-filmmaker [Jean Cocteau](#).

It was also home to a large community of expatriate writers from around the world. [Ernest Hemingway](#), hired as a foreign correspondent for the [Toronto Star](#), moved to Paris with his first wife Hadley in 1922 and made his first residence in a small upstairs apartment at 74 rue du Cardinal Lemoine. He remained until 1928, when he left with his second wife, Pauline. While there he wrote and published his first novel, [The Sun Also Rises](#). Others in the literary expatriate community included the poet [Ezra Pound](#), the writer and art patron [Gertrude Stein](#), and the English poet, critic novelist and editor [Ford Madox Ford](#).

In 1920, the Irish author [James Joyce](#) received an invitation from the poet Ezra Pound to spend a week with him in Paris. He ended up remaining for twenty years, writing two of his major works, [Ulysses](#) and [Finnegans Wake](#). After the war began, in late 1940, he moved to Zurich, where he died. The Russian émigré [Vladimir Nabokov](#) lived in Paris from 1937 until 1940, when he left for the United States. Eric Arthur Blair, better known under his pen name [George Orwell](#), lived in 1928 and 1929 on the rue du Pot de Fer in the fifth

arrondissement, where he worked as a dishwasher in a Paris restaurant, an experience he immortalized in [*Down and Out in Paris and London*](#).

An important meeting point for expatriate writers was the bookstore [Shakespeare and Company](#) (not to be confused with the modern bookstore of that name near Place Saint-Michel), first located at 8 rue Dupuytren from 1919 to 1922, and then from 1922 to 1940 at 12 rue de l'Odeon. It was run by the American [Sylvia Beach](#). Hemingway first met Ezra Pound here, and Beach published James Joyce's *Ulysses*, which was banned in Britain and the United States.

Prominent composers working in Paris between the Wars were [Maurice Ravel](#), [Eric Satie](#), [Francis Poulenc](#), and Igor Stravinsky. Ravel was born in 1875; one of his last works, *Boléro*, written in 1928, became his most famous and most-often performed. It was written on a commission from the Russian dancer [Ida Rubinstein](#), who had been a member of the [Ballets Russes](#) before starting her own company. The composition was a sensational success when it was premiered at the [Paris Opéra](#) on November 22, 1928, with choreography by [Bronislava Nijinska](#) and designs by [Alexandre Benois](#). Satie (1866-1925) was in poor health, due largely to a long life of excessive drinking. Nonetheless he established connections with the [Dadaist](#) movement, and wrote the music for two ballets shortly before his death.^[45]

[Igor Stravinsky](#) (1888-1971) first achieved fame in Paris just before World War I with his revolutionary compositions for the Ballets Russes. In 1920 he returned for a production of a new ballet, *Pulcinella*, with sets designed by Pablo Picasso. He, his wife and daughter were invited by designer [Coco Chanel](#) to stay in her new house in the Paris suburb of [Garches](#). Struggling for money, he obtained a contract with the Paris piano company [Pleyel et Cie](#) to re-arrange his music for their popular [player pianos](#). In February 1921 he met the Russian dancer [Vera de Bosset](#) and began a long affair with her, both in Paris and on tours around Europe. He became a French citizen in 1931 and moved into a house on the rue de Faubourg-Saint-Honoré. It was a very unhappy period for him; both his daughter and wife died of tuberculosis. In 1939, as the war approached, he left Paris for the United States; he married Vera in 1940 and settled in Los Angeles.

Many composers from around the world came to Paris in this period to take part in the city's energetic musical life. They included the American [Aaron Copland](#), the Brazilian [Heitor Villa-Lobos](#), the Hungarian [Béla Bartók](#), the Spaniard [Manuel de Falla](#), and the Russian [Sergei Prokofiev](#).^[46]

Despite its name, the most famous Parisian dance^[dubious – discuss] company, the [Ballets Russes](#), never performed in Russia. Founded by [Sergei Diaghilev](#) in 1909, it performed in Paris and internationally until Diaghilev's death in 1929. Its set designers included Picasso, [Henri Matisse](#), [Georges Braque](#), [Joan Miro](#), and [Salvador Dalí](#). Its choreographers included [Bronislava Nijinska](#) (1891-1972), the younger sister of the star dancer [Vaslav Nijinsky](#), and a young [George Balanchine](#) (1904-1983). In 1924, Balanchine, then a dancer, fled a Soviet dance company on tour in Germany and came to Paris, where Diaghilev hired him as a choreographer.^[47]

A new three-thousand seat concert hall, the [Salle Pleyel](#), was built in Paris between the wars. It was commissioned in 1927^[48] by piano manufacturer [Pleyel et Cie](#) and designed by Gustave Lion.^[48] The inauguration concert by the [Orchestre de la Société des Concerts du Conservatoire](#), featured [Robert Casadesu](#) as soloist and [Igor Stravinsky](#), [Maurice Ravel](#), and [Philippe Gaubert](#) as conductors. A fire ravaged the interior of the hall on 28 June 1928, and it was extensively renovated, and the number of seats reduced to 1,913.

RUSSIAN WRITERS, COMPOSERS AND PAINTERS IN PARISTchaikovsky in Paris (source Tchaikovsky Research)

Tchaikovsky visited Paris more frequently than any other city outside Russia, and it was one of his favourite cities. The composer's visits were as follows:

From	Until	Notes
2/14 August 1861	mid/late September 1861	On his first trip to western Europe, travelling as an interpreter and secretary to a friend of his father. "In Paris one cannot help becoming giddy and forgetting oneself", he wrote home. On the whole, life in Paris is extremely agreeable. In this place you can do anything you like, the only impossible thing being to feel bored. You only have to go out into the boulevards for your spirits immediately to rise" ^[1] .
mid/late June	late July/early August 1868	As part of his summer vacation. Here he orchestrated the overture to his new opera <i>The Voyevoda</i> .
late May 1870	early June 1870	Spending three "pleasant" days, taking in "three theatres and many walks" ^[2]
late December 1871	early January 1872	Spending just one day in Paris, on his way to <i>Nice</i> .
21 July/2 August 1873	early/mid August 1873	As part of his summer vacation.
3/15 January 1876	10/22 January 1876	Travelling with his brother <i>Modest</i> , he began work on the <i>String Quartet No. 3</i> .
27 June/9 July 1876	29 July/10 August 1876	Staying at the <i>Hôtel de Hollande</i> , before travelling to the first <i>Bayreuth</i> Festival.

1/13 November 1877	3/15 November 1877	Returning to the <i>Hôtel de Hollande</i> , after leaving Clarens in Switzerland.
18/30 December 1878	28 December 1878/9 January 1879	Staying again at the <i>Hôtel de Hollande</i> , he paid frequent visits to the <i>Comédie Française</i> .
6/18 February 1879	28 February/12 March 1879	Staying at the <i>Hôtel Meurice</i> on Rue de Rivoli, he worked on the opera The Maid of Orleans , finishing the sketches completely on 22 February/5 March.
13/25 November 1879	5/17 December 1879	While at the <i>Hôtel Meurice</i> , he completed the sketches of his Piano Concerto No. 2
28 February/11 March 1880	2/14 March 1880	Meeting his old friend Nikolay Kondratyev .
13/25 March 1881	21 March/2 April 1881	Attending the funeral of Nikolay Rubinstein (14/26 March). "I always valued Nikolay Grigoryevich highly as an artist, but did not maintain (especially recently) an affection for the man. Now it goes without saying that everything is forgotten apart from his good side, which was far greater than his weaknesses" ^[3]
2/14 January 1883	11/23 May 1883	The main purpose for Tchaikovsky's extended stay at the <i>Hôtel Richepanse</i> was to care for his niece, Tatyana Davydova , who gave birth to an illegitimate child, Georges-Léon , in Paris on 26 April/8 May. He also completed the orchestration of the opera Mazepa , and wrote the Coronation March and cantata Moscow .
9/21 February 1884	29 February/12 March 1884	To attend the christening of Georges-Léon , at the Bicêtre Hospital (12/24 February).
23 November/5	5/12 December	Writing five of the Six Romances, Op. 57 .

December 1884	1884	
15/27 May 1886	12/24 June 1886	Working on the opera The Enchantress .
4/16 August 1887	4/16 August 1887	Visiting Félix Mackar and Anatoly Brandukov .
12/24 February 1888	7/19 March 1888	To rehearse and conduct three concerts of his own works (see below). He also attended numerous events held in his honour. "In Paris I found many glories, but little money" ^[4]
8/20 March 1889	28 March/9 April 1889	To attend the 20th Châtelet concert (19/31 March), conducted by Édouard Colonne , which included the <i>Theme and Variations</i> from Suite No. 3 .
10/22 March 1891	25 March/6 April 1891	To rehearse and conduct a concert of his own works (see below).
3/15 April 1891	4/16 April 1891	Visiting Paris from Rouen , Tchaikovsky learned of the death of his sister Aleksandra from a Russian newspaper.
9/21 January 1892	19/31 January 1892	Working on the sextet Souvenir de Florence .
5/17 June 1892	11/23 June 1892	Stopping on his way from Berlin to Vichy .
4/16 July 1892	6/18 July 1892	Calling on his return from Vichy to Saint Petersburg .
22 December 1892/3 January	9/21 January 1893	Travelling from Montbéliard to Brussels , and after his return from Brussels stopping in Paris again before

1893		travelling on to Odessa .
2/14 June 1893	6/18 June 1893	Returning from England, where he had received an honorary doctorate at Cambridge University.

Concerts

Tchaikovsky's conducting engagements in Paris were as follows:

16/28 February 1888	At the home of Nicolas and Marie de Benardaky , with members of Édouard Colonne 's orchestra. The programme consisted of the 2nd and 3rd movements of the Serenade for String Orchestra , Op. 48; the Nocturne , Op. 19, No. 4 (arranged for cello with orchestra) and Pezzo capriccioso , Op. 62 (cellist: Anatoly Brandukov); the piano pieces <i>Humoresque</i> (No. 2 of the Two Pieces, Op. 10), <i>Chant sans paroles</i> (No. 2 from Souvenir de Hapsal , Op. 2), and Franz Liszt 's transcription of the Polonaise from Yevgeny Onegin (pianist: Louis Diémer); the songs <i>It Was in the Early Spring</i> (No. 2 of the Six Romances, Op. 38) and <i>Bitterly and Sweetly</i> (No. 3 of the Six Romances, Op. 6), sung by Marie de Benardaky ; <i>The Terrible Moment</i> (No. 6 of the Six Romances, Op. 28), <i>None But the Lonely Heart</i> (No. 6 of the Six Romances, Op. 6), sung by Jean Louis Lassale; <i>Cradle Song</i> (No. 1 of the Six Romances, Op. 16), <i>Why?</i> (No. 3 of the Six Romances, Op. 28), sung by Olga Leibrock; <i>Don Juan's Serenade</i> (No. 1 of the Six Romances, Op. 38) and <i>Why?</i> (No. 5 of the Six Romances, Op. 6), sung by Edouard de Reszke; <i>Does the Day Reign?</i> (No. 6 of the Seven Romances, Op. 47), specially arranged for soprano and orchestra by Tchaikovsky, sung by Marie de Benardaky ; and the Andante cantabile from String Quartet No. 1 , in an arrangement for cello and string orchestra (soloist Anatoly Brandukov).
21 February/4 March 1888	The 16th Châtelet concert, including the Serenade for String Orchestra , the Andante cantabile and Nocturne (soloist Anatoly Brandukov), the Concert Fantasia (soloist Louis Diémer) and the <i>Theme and Variations</i> from his Suite No. 3 .
28 February/11 March 1888	The 18th Châtelet concert, including the <i>Theme and Variations</i> from Suite No. 3 , the first movement of the Violin Concerto (soloist Martin Pierre Marsick), Francesca da Rimini , Nocturne (soloist Anatoly Brandukov), and two movements from the Serenade for String Orchestra .

24 March/5
April 1891

The 23rd Châtelet concert, including the [Suite No. 3, Piano Concerto No. 2](#) (soloist [Vasily Sapelnikov](#)), [Sérénade mélancolique](#) (soloist Johann Wolf), the *Andante cantabile* from his [String Quartet No. 1](#) (arranged for string orchestra), [The Tempest](#), and the [Slavonic March](#).

Stravinsky in Paris (Source Wikipedia)

In June 1920, Stravinsky and his family left Switzerland for France, first settling in [Carantec, Brittany](#) for the summer while they sought a permanent home in Paris.^{[54][55]} They soon heard from [couturière Coco Chanel](#), who invited the family to live in her Paris mansion until they had found their own residence. The Stravinskys accepted and arrived in September.^[56] Chanel helped secure a guarantee for a revival production of *The Rite of Spring* by the Ballets Russes from December 1920 with an anonymous gift to Diaghilev that was claimed to be worth 300,000 francs.^[57]

In 1920, Stravinsky signed a contract with the French piano manufacturing company [Pleyel](#). As part of the deal, Stravinsky transcribed most of his compositions for their [player piano](#), the Pleyela. The company helped collect Stravinsky's [mechanical royalties](#) for his works and provided him with a monthly income. In 1921, he was given studio space at their Paris headquarters where he worked and entertained friends and acquaintances.^{[58][59][60]} The [piano rolls](#) were not recorded, but were instead marked up from a combination of manuscript fragments and handwritten notes by Jacques Larmanjat, musical director of Pleyel's roll department. During the 1920s, Stravinsky recorded [Duo-Art](#) piano rolls for the [Aeolian Company](#) in London and New York City, not all of which have survived.^[61]

Stravinsky met [Vera de Bosset](#) in Paris in February 1921,^[62] while she was married to the painter and stage designer [Serge Sudeikin](#), and they began an affair that led to Vera leaving her husband.^[63]

In May 1921, Stravinsky and his family moved to [Anglet](#), a town close to the Spanish border.^[64] Their stay was short-lived as by the autumn, they had settled to nearby [Biarritz](#) and Stravinsky completed his *Trois mouvements de Petrouchka*, a piano transcription of excerpts from *Petrushka* for [Artur Rubinstein](#). Diaghilev then requested orchestrations for a revival production of Tchaikovsky's ballet *The Sleeping Beauty*.^[65] From then until his wife's death in 1939, Stravinsky led a double life, dividing his time between his family in Anglet, and Vera in Paris and on tour.^[66] Katya reportedly bore her husband's infidelity "with a mixture of magnanimity, bitterness, and compassion".^[67]

In June 1923, Stravinsky's ballet *Les noces* (*The Wedding*) premiered in Paris and performed by the Ballets Russes.^[68] In the following month, he started to receive money from an anonymous patron from the US who insisted to remain anonymous and only identified themselves as "Madame". They promised to send him \$6,000 in the course of three years, and sent Stravinsky an initial cheque for \$1,000. Despite some payments not being sent, [Robert Craft](#) believed that the patron was famed conductor [Leopold Stokowski](#), whom Stravinsky had recently met, and theorised that the conductor wanted to win Stravinsky over to visit the US.^{[68][69]}

In September 1924, Stravinsky bought a new home in [Nice](#).^[70] Here, the composer re-evaluated his religious beliefs and reconnected with his Christian faith with help from a Russian priest, Father Nicholas.^[71] He also thought of his future, and used the experience of

conducting the premiere of his *Octet* at one of [Serge Koussevitzky](#)'s concerts the year before to build on his career as a conductor. Koussevitzky asked for Stravinsky to compose a new piece for one of his upcoming concerts; Stravinsky agreed to a piano concerto, to which Koussevitzky convinced him that he be the soloist at its premiere. Stravinsky agreed, and the *Concerto for Piano and Wind Instruments* was first performed in May 1924.^[72] The piece was a success, and Stravinsky secured himself the rights to exclusively perform the work for the next five years.^[73] Following a European tour through the latter half of 1924, Stravinsky completed his first US tour in early 1925 which spanned two months.^[73]

In May 1927, Stravinsky's opera-oratorio *Oedipus Rex* premiered in Paris. The funding of its production was largely provided by [Winnaretta Singer, Princesse Edmond de Polignac](#), who paid 12,000 francs for a private preview of the piece at her house. Stravinsky gave the money to Diaghilev to help finance the public performances. The premiere received a reaction,^[clarification needed] which irked Stravinsky, who had started to become annoyed at the public's fixation towards his early ballets.^[74] In the summer of 1927 Stravinsky received a commission from [Elizabeth Sprague Coolidge](#), his first from the US. A wealthy patroness of music, Coolidge requested a thirty-minute ballet score for a festival to be held at the [Library of Congress](#), for a \$1,000 fee. Stravinsky accepted and wrote *Apollo*, which premiered in 1928.^[75]

From 1931 to 1933, the Stravinskys lived in [Voreppe](#), a commune near [Grenoble](#) in southeastern France.^[76] In June 1934, the couple acquired French citizenship. Later in that year, they left Voreppe to live on [rue du Faubourg Saint-Honoré](#) in Paris, where they stayed for five years.^{[77][78]} The composer used his citizenship to publish his memoirs in French, entitled *Chroniques de ma Vie* in 1935, and underwent a US tour with [Samuel Dushkin](#). His only composition of that year was the *Concerto for Two Solo Pianos*, which was written for himself and his son Soulima using a special double piano that Pleyel had built. The pair completed a tour of Europe and South America in 1936.^[77] Stravinsky made his American debut as conductor in April 1937 in New York City, directing his three-part ballet *Jeu de cartes*, itself a commission for [Lincoln Kirstein](#)'s ballet company with choreography by [George Balanchine](#).^[79] Stravinsky later remembered this last European address as his unhappiest. Upon his return to Europe, Stravinsky left Paris for [Annemasse](#) near the Swiss border to be near his family, after his wife and daughters Ludmila and Milena had contracted tuberculosis and were in a sanatorium. Ludmila died in late 1938, followed by his wife of 33 years, in March 1939.^[80] Stravinsky himself spent five months in hospital at [Sancellemoz](#), during which time his mother also died.^[81]

During his later years in Paris, Stravinsky had developed professional relationships with key people in the United States: he was already working on his *Symphony in C* for the [Chicago Symphony Orchestra](#)^[82] and he had agreed to accept the Charles Eliot Norton Chair of Poetry of 1939–1940 at [Harvard University](#) and while there, deliver six lectures on music as part of the prestigious [Charles Eliot Norton Lectures](#).

[Tolstoy and Turgenev in Paris](#) (source – [arussianaffair.worldpress.com](#))

Pauline Viardot

Turgenev came to live in Paris (actually he lived there off and on for 36 years) to be close to his objet d'amour, Pauline Viardot. He had been hopelessly in love with her since 1843, but she was the wife of his good friend Louis Viardot (see <http://wp.me/p5zzbs-1R>). After staying

at the Viardots' as a 'family friend' for a really long time, he decides in 1847 that it's more appropriate to rent his own apartment, close to the Tuileries Garden.

Depressed

Around 1857, the year that Tolstoy came to visit, Turgenev lives on the Rue de Rivoli 208 or 210 (most sources say 210) with his daughter Paulinette. At that time his relationship with Pauline is not so good, and that depresses him.

50 Rue de Douai

In 1871, however, when he is 53 years old, he moves in with the Viardots at the 50 Rue de Douai. There he occupies four rooms on the third floor. By then he has become some sort of honorary consul of Russia in Paris. Ilya Repin comes to paint his portrait, and he takes part in weekly get togethers with Maupassant, Zola, Flaubert and Georges Sand (to name but a few) in former restaurant Magny on the Rue Mazet.

After his death in 1883 in the Viardots' country house, his body is transported to Russia to be buried there. But before the coffin gets on the train, it is sent to the Russian Cathedral in the Rue Daru to get censed, even though Ivan was not religious.

Rue de Rivoli

With Tolstoy, of course, it's a different story. Not love, but adventure calls him to Paris. He arrives at the Gare du Nord on February 9th 1857. Turgenev and the writer Nekrasov, who he knows well, receive him. The first night he sleeps in the Hôtel Meurice in the Rue de Rivoli, but the next day he rents a furnished apartment in the same street on number 206.

Madness

On the evening of his arrival Tolstoy is taken to a costumed ball in the Opéra by Turgenev. Before he goes to bed that night Tolstoy writes only one word in his diary, that typifies his stay in Paris: "Madness."

Turgenev, who knows the city really well, shows him numerous places of interest. But also when Tolstoy is alone he keeps a busy schedule. He goes to lectures at the Sorbonne, to concerts, to evenings with fellow countrymen. Obviously he thinks Napoleon's grave is a disgusting display of misplaced worship. Through Turgenev he could have met a number of acclaimed French writers, but typically he doesn't think that's necessary.

The Guillotine

Tolstoy is enjoying himself tremendously until he decides one unfortunate day to attend an execution by guillotine. But seeing the infamous machine in action with his own eyes terrifies him, it disgusts him, he is disgusted with himself for going, he is disgusted with the French for inventing it and can't sleep for nights. He leaves Paris soon after.

Love-hate

In Paris too the relationship between the two writers is not always good (see <http://wp.me/p5zzbs-1Y>). Their diaries and letters clearly show that:

Turgenev, February 16 – His creaking and groaning have a very bad effect on a man like me, whose nerves are already overstrained.

Tolstoy, February 21 – Spent another pleasant evening with Turgenev and a bottle of wine by the fireside.

Tolstoy, March 4 – Dropped in on Turgenev. He is a cold and useless man, but intelligent and his art is inoffensive.

Turgenev, March 8 – I cannot establish any lasting friendship with Tolstoy, our views are too different.

Kandinsky in Paris (source – Claudine Colin Communication)

Taking refuge in Paris after leaving Germany in 1933, when the Nazis had just closed the Bauhaus school, where he had been teaching since 1922, Kandinsky set up home, with his wife Nina, in an apartment in Neuilly-sur-Seine. This is where he would develop a thoroughly original style, combining the geometric vocabulary of the Bauhaus years with random and

undulating compositions from the previous decade. What is more, influenced by his readings of scientific books about the evolution of life, a whole repertory of biomorphic motifs hailing from the world of cells and embryology began to all his works and lend a very special flavour to this latter-day style.

This period in the artist's life, which remains the least well-known to the general public, enhanced by Kandinsky's exchanges with the artistic circles of Paris, his heightened interest in the sciences, and a keener form of spirituality, was gradually marked by a sense of exile which deeply affected his art. It is the interaction between these differing factors that this exhibition intends to shed light on. To do so, thanks to a precise selection of paintings and drawings, every year of this final decade will be represented. This chronological path, sprinkled with all the biographical facts which stake it out - meetings, exhibition, and more specifically from the outbreak of World War II on, turned a political exile - his flight from Nazism—into an inner exile, informed by all sorts of both artistic and autobiographical reminiscences.

Marc Chagall in Paris and France (source – Wikipedia)

In 1910, Chagall relocated to Paris to develop his artistic style. Art historian and curator James Sweeney notes that when Chagall first arrived in Paris, Cubism was the dominant art form, and French art was still dominated by the "materialistic outlook of the 19th century". But Chagall arrived from Russia with "a ripe color gift, a fresh, unashamed response to sentiment, a feeling for simple poetry and a sense of humor", he adds. These notions were alien to Paris at that time, and as a result, his first recognition came not from other painters but from poets such as [Blaise Cendrars](#) and [Guillaume Apollinaire](#).^{[26]:7} Art historian [Jean Leymarie](#) observes that Chagall began thinking of art as "emerging from the internal being outward, from the seen object to the psychic outpouring", which was the reverse of the Cubist way of creating.^[27]

He therefore developed friendships with [Guillaume Apollinaire](#) and other [avant-garde](#) luminaries such as [Robert Delaunay](#) and [Fernand Léger](#).^[28] Baal-Teshuva writes that "Chagall's dream of Paris, the city of light and above all, of freedom, had come true."^{[13]:33} His first days were a hardship for the 23-year-old Chagall, who was lonely in the big city and unable to speak French. Some days he "felt like fleeing back to Russia, as he daydreamed while he painted, about the riches of Slavic folklore, his [Hasidic](#) experiences, his family, and especially Bella".

In Paris, he enrolled at [Académie de La Palette](#), an [avant-garde](#) school of art where the painters [Jean Metzinger](#), [André Dunoyer de Segonzac](#) and [Henri Le Fauconnier](#) taught, and also found work at another academy. He would spend his free hours visiting galleries and salons, especially [the Louvre](#); artists he came to admire included [Rembrandt](#), the [Le Nain](#) brothers, [Chardin](#), [van Gogh](#), [Renoir](#), [Pissarro](#), [Matisse](#), [Gauguin](#), [Courbet](#), [Millet](#), [Manet](#), [Monet](#), [Delacroix](#), and others. It was in Paris that he learned the technique of [gouache](#), which he used to paint Belarusian scenes. He also visited [Montmartre](#) and the [Latin Quarter](#) "and was happy just breathing Parisian air."^[13] Baal-Teshuva describes this new phase in Chagall's artistic development:

Chagall was exhilarated, intoxicated, as he strolled through the streets and along the banks of the Seine. Everything about the French capital excited him: the shops, the smell of fresh bread

in the morning, the markets with their fresh fruit and vegetables, the wide boulevards, the cafés and restaurants, and above all the Eiffel Tower. Another completely new world that opened up for him was the kaleidoscope of colours and forms in the works of French artists. Chagall enthusiastically reviewed their many different tendencies, having to rethink his position as an artist and decide what creative avenue he wanted to pursue.^{[13]:33}

During his time in Paris, Chagall was constantly reminded of his home in Vitebsk, as Paris was also home to many painters, writers, poets, composers, dancers, and other émigrés from the Russian Empire. However, "night after night he painted until dawn", only then going to bed for a few hours, and resisted the many temptations of the big city at night.^{[13]:44} "My homeland exists only in my soul", he once said.^{[27]:viii} He continued painting Jewish motifs and subjects from his memories of Vitebsk, although he included Parisian scenes— the Eiffel Tower in particular, along with portraits. Many of his works were updated versions of paintings he had made in Russia, transposed into [Fauvist](#) or [Cubist](#) keys.^[7]

Chagall developed a whole repertoire of quirky motifs: ghostly figures floating in the sky, ... the gigantic fiddler dancing on miniature dollhouses, the livestock and transparent wombs and, within them, tiny offspring sleeping upside down.^[7] The majority of his scenes of life in Vitebsk were painted while living in Paris, and "in a sense they were dreams", notes Lewis. Their "undertone of yearning and loss", with a detached and abstract appearance, caused Apollinaire to be "struck by this quality", calling them "surnaturel!" His "animal/human hybrids and airborne phantoms" would later become a formative influence on [Surrealism](#).^[7] Chagall, however, did not want his work to be associated with any school or movement and considered his own personal language of symbols to be meaningful to himself. But Sweeney notes that others often still associate his work with "illogical and fantastic painting", especially when he uses "curious representational juxtapositions".^{[26]:10}

Sweeney writes that "This is Chagall's contribution to contemporary art: the reawakening of a poetry of representation, avoiding factual illustration on the one hand, and non-figurative abstractions on the other". [André Breton](#) said that "with him alone, the metaphor made its triumphant return to modern painting".^{[26]:7}

In 1923, Chagall left Moscow to return to France. On his way he stopped in Berlin to recover the many pictures he had left there on exhibit ten years earlier, before the war began, but was unable to find or recover any of them. Nonetheless, after returning to Paris he again "rediscovered the free expansion and fulfillment which were so essential to him", writes Lewis. With all his early works now lost, he began trying to paint from his memories of his earliest years in Vitebsk with sketches and oil paintings.^[7]

He formed a business relationship with French art dealer [Ambroise Vollard](#). This inspired him to begin creating etchings for a series of illustrated books, including [Gogol's Dead Souls](#), the Bible, and the [La Fontaine's Fables](#). These illustrations would eventually come to represent his finest printmaking efforts.^[7] In 1924, he travelled to [Brittany](#) and painted *La fenêtre sur l'Île-de-Bréhat*.^[32] By 1926 he had his first exhibition in the United States at the Reinhardt gallery of New York which included about 100 works, although he did not travel to the opening. He instead stayed in France, "painting ceaselessly", notes Baal-Teshuva.^[13] It was not until 1927 that Chagall made his name in the French art world, when art critic and historian [Maurice Raynal](#) awarded him a place in his book *Modern French Painters*. However, Raynal was still at a loss to accurately describe Chagall to his readers:

Chagall interrogates life in the light of a refined, anxious, childlike sensibility, a slightly romantic temperament ... a blend of sadness and gaiety characteristic of a grave view of life. His imagination, his temperament, no doubt forbid a Latin severity of composition.^{[8]:314}

ANNEES FOLLES – THE CRAZY YEARS OF THE 1920s IN PARIS

(source – Wikipedia)

The term *Années folles* ("crazy years" in French) refers to the decade of the 1920s in [France](#). It was coined to describe the rich social, artistic, and cultural collaborations of the period.^[1] The same period is also referred to as the [Roaring Twenties](#) or the [Jazz Age](#) in the [United States](#). In Germany, it is sometimes referred to as the [Golden Twenties](#) because of the economic boom that followed [World War I](#). The [Utopian positivism](#) of the 19th century and its progressive creed led to unbridled [individualism](#) in France. [Art nouveau](#) extravagance began to evolve into [Art Deco](#) geometry after [the First World War](#). [André Gide](#), who founded the [Nouvelle Revue Française](#) literary review in 1908, influenced [Jean-Paul Sartre](#) and [Albert Camus](#). [Tristan Tzara](#)'s 1918 Dada manifesto and the resulting Dada movement were very much a product of the [interbellum](#): "Dadaists both embraced and critiqued modernity, imbuing their works with references to the technologies, newspapers, films, and advertisements that increasingly defined contemporary life".^[2] All these served as the precursors for the *Années folles*.

Cafés around Paris became places where artists, writers, and others gathered. On the [Rive Gauche](#) (left bank) the scene centered around cafés in Montparnasse while on the [Rive Droite](#) (right bank), the Montmartre area. The *Années folles* in [Montparnasse](#) featured a thriving art and literary scene centered on cafés such as [Brasserie La Coupole](#), [Le Dôme Café](#), [Café de la Rotonde](#), and [La Closerie des Lilas](#) [\[fr\]](#) as well as salons like [Gertrude Stein](#)'s in the [rue de Fleurus](#) [\[fr\]](#). The [Rive Gauche](#), or left bank, of the [Seine](#) in [Paris](#), was and is primarily concerned with the arts and the sciences.^[3] Many artists settled there and frequented cabarets like [Le Boeuf sur le Toit](#) and the large [brasseries](#) in Montparnasse. American writers of the [Lost Generation](#), like [F. Scott Fitzgerald](#) and [Ernest Hemingway](#), met and mingled in Paris with exiles from dictatorships in Spain and [Yugoslavia](#).

The painters of the [School of Paris](#) for example included among others [Chaim Soutine](#), [Amedeo Modigliani](#) and [Marc Chagall](#), Lithuanian, Italian, and Russian, respectively. Later the American [Henry Miller](#), like many other foreigners, gravitated to the [rue Vavin](#) [\[fr\]](#) and [Boulevard Raspail](#). Montparnasse was, he said, "the navel of the world".^[4] [Gertrude Stein](#) also lived in Montparnasse during this period. Montmartre was a major center of Paris nightlife and had been famous for its cafés and dance halls since the 1890s. Trumpeter [Arthur Briggs](#) played at *L'Abbaye* and transvestites frequented *La Petite Chaumière*.^[5] After World War I, the artists who had inhabited the [guinguettes](#) and cabarets of Montmartre, invented [post-Impressionism](#) during the *Belle Époque*. In 1926, the facade of the [Folies Bergère](#) building was redone in [Art Deco](#) style by the artist [Maurice Pico](#) [\[fr\]](#), adding it to the many Parisian theatres of the period in this architectural style.^[6]

[Surrealism](#) came to the forefront in the 1920s cultural scene, bringing new forms of expression to poetry with authors like [André Breton](#), whose *Surrealist Manifesto* appeared in 1924, [Louis Aragon](#), [Paul Éluard](#), and [Robert Desnos](#). Émigré artists had created [Post-Impressionism](#), [Cubism](#), and [Fauvism](#) in Paris before World War I, and included [Pablo Picasso](#), Marc Chagall, Amedeo Modigliani, and [Piet Mondrian](#), along with French artists [Pierre Bonnard](#), [Henri Matisse](#), [Jean Metzinger](#), and [Albert Gleizes](#). Surrealists also included artists like [Max Ernst](#), [Joan Miró](#), [Salvador Dalí](#), and [Francis Picabia](#), sculptors like [Jean Arp](#), [Germaine Richier](#) and even early film-makers, like [Luis Buñuel](#) and [René](#)

[Clair](#). [Jean Cocteau](#), while he denied belonging to the surrealists, was unquestionably avant-garde and collaborated with many of its members.

In the 1920s, Parisian nightlife was greatly influenced by American culture. One of its greatest influences was the [ragtime](#) called [jazz](#), which became very popular in Paris. "Ragtimitis" came to Paris with a rendition of "[The Memphis Blues](#)" by a U.S. Army band led by New York Army National Guard Lieutenant [James Reese Europe](#). The band, known as the [Harlem Hellfighters](#) of the [369th Infantry Regiment](#), "... started ragtimitis in France".^[7] According to band member [Noble Sissle](#). It was very successful in 1925 at the [Théâtre des Champs-Élysées](#) where the *Revue Nègre* also was playing, led first by [Florence Mills](#), known by her stage name as Flossie Mills, and later by [Josephine Baker](#).

In 1926, Baker, an African-American expatriate singer, dancer, and entertainer, caused a sensation at the [Folies Bergère](#). In a new revue, *La Folie du Jour*, in which she danced the number "Fatou" wearing a costume revealing all but a skirt made of a string of artificial bananas. Wearing only her [loincloth](#) of bananas, Baker suggestively performed "[danse sauvage](#)" to a [Charleston tempo](#) – a genre still new to Europe. Her French producer Jacques-Charles produced her dance numbers with French preconceptions of eroticized savages in mind.^[8] Baker performed the piece mostly nude with her partner, Joe Alex.^[9] This dance inspired a 1929 [tempera](#) painting titled *Josephine Baker*, first shown by the painter [Ivanhoe Gambini](#) in an exhibition of the *Radiofuturista Lombardo* group he founded.^[10]

The scandal which erupted over Baker's dancing gave way to enthusiasm and quickly generated excitement among Parisians for [jazz](#) and [black music](#). The Charleston can be danced solo, in pairs or in groups, to the rhythms of jazz. It is based on the movements of the body weight from one leg to the other, with the feet turned inward and knees slightly bent.

Of all the fashionable [cabarets](#), the most famous was called [Le Boeuf sur le Toit](#) where the pianist and French composer [Jean Wiener](#) played. Such entertainment reached only a tiny part of the French population, the elite. Nevertheless, it gave the impulse, created the event.

American culture of the [Roaring Twenties](#) had a substantial influence on France, which imported jazz, the [Charleston](#), and the [shimmy](#), as well as [cabaret](#) and [nightclub](#) dancing. Interest in American culture increased in the Paris of the 1920s, and shows and stars of [Broadway theatre](#) introduced as innovations for the élite and were imitated thereafter.

This was the case for the famous *Revue Nègre* in 1925 at the [Théâtre des Champs-Élysées](#). [Josephine Baker](#) danced the [Charleston](#) almost naked, with provocative gestures set to music by [Sidney Bechet](#). Important Paris designers like [Paul Poiret](#) fought to design clothes for her.^[11] Inspired and influenced by the [French Colonial Empire](#), Josephine Baker put on *La Folie du Jour* in 1926, and from the [cafés chantants](#), also successfully picked up popular songs such as [La Petite Tonkinoise](#) [fr] by [Vincent Scotto](#). In 1927 she starred in the silent film *Siren of the Tropics*, which opened to rave reviews. The 1930 song [J'ai deux amours](#) [fr] enshrined Baker as a full-featured star of Parisian nightlife, who not only danced, but also commented on the music and did comedy. While she appeared at the [Folies Bergère](#), Baker opened her own nightclub, called "Chez Joséphine", in the rue Fontaine. [Paul Guillaume](#) in 1919 organized a "Negro festival" at the Théâtre des Champs-Élysées. Six years later, he also produced the Paris *Revue nègre* [fr]. On rue Blomet, the *Bal Nègre* [cabaret](#) attracted both aesthetes and the curious.

The 1920s also marked a renewal in ballet. The [Ballets Russes](#) were based in Paris during this time. In 1921 the [Ballets suédois](#) offered *L'Homme et son désir* by [Paul Claudel](#), with music by [Darius Milhaud](#). The company then presented *Les mariés de la tour Eiffel*, written by Jean Cocteau. Alas, it did not meet with public success. In 1923 another ballet was born, *La*

création du monde; [Darius Milhaud](#) wrote the music, and [Blaise Cendrars](#) the scenario. [Fernand Léger](#) designed the costumes and put onto the stage gigantic animals, birds, insects and totemic gods. The adventure of the [Ballets suédois](#) ended in 1924 with a ballet called *Relâche* written by [Erik Satie](#) and sets by [Francis Picabia](#).

[Salon gatherings](#) were another important form of entertainment. [Princess de Polignac's](#) gatherings continued to be important to avant-garde music. The circles of Madame de [Noailles](#) included Proust, [Francis Jammes](#), [Colette](#), Gide, [Frédéric Mistral](#), [Robert de Montesquiou](#), [Paul Valéry](#), Cocteau, [Pierre Loti](#), [Paul Hervieu](#), and [Max Jacob](#).

During this period the [music hall](#) permanently replaced the [café-chantant](#). People often went to the [Casino de Paris](#), the Paris concert, the [concert Mayol](#) and the theater; spectacles, attractions, and songs occurred at a rapid pace. Artistic productions had a meteoric rise. Some of the best-known examples were American-influenced shows at the [Casino de Paris](#) -- *Paris qui dance* (1919), *Cach' ton piano* (1920), and *Paris qui jazz* (1920–21), *Mon homme* and *Dans un fauteuil* gave rise to stardom for [Maurice Chevalier](#) and [Mistinguett](#). American influences such as [musicals](#) underlay the success of the [Folies Bergère](#), the famous "Mad Berge", inaugurated with *Les Folies raging* in 1922.

A number of classical music composers, such as those of the [School of Paris](#) and [Les Six](#), also flourished at this time. "The musical influence of Paris, dominated first by Debussy and then by Stravinsky, seems to have been almost inescapable for composers in the first four decades of the century."^[12]

[Operetta](#) had a turning point on 12 November 1918 with the premiere of [Phi-Phi](#) by [Henri Christiné](#) and [Albert Willemetz](#). Up to a thousand performances were played in just two years. The popular [Dédé](#) was staged in 1921 by [Maurice Chevalier](#). Operetta attracted talented composers such as [Marseille's Vincent Scotto](#), and also [Maurice Yvain](#) (a composer of Mistinguett's signature song *Mon Homme*), and author [Sacha Guitry](#), who wrote the [libretto](#) for *L'amour masqué*. In the [Olympia](#) at the [Bobino](#), the [Théâtre de la Gaîté-Montparnasse](#) showcased [Marie Dubas](#) and [Georgius](#), who inaugurated the Singing Theatre by staging popular songs. From 1926, American titles such as [No, No, Nanette](#), [Rose-Marie](#) and [Show Boat](#) began to be adapted for French viewers.

Silent film, called "cinéma", rose to popularity in the 1920s. Scientists of the time were predicting little future for it. Silent film is considered by some as the carefree innocence of years or 7th Art. [Max Linder](#), after being discovered by [Charles Pathé](#), became integral in making the film a cultural phenomenon. European film production almost completely stopped during World War I, as most actors were drafted into the war. The public took refuge in theaters trying to forget the horrors of the front with films such as [Charlie Chaplin's A Dog's Life](#). [Hollywood](#) films saw massive growth in demand thanks to a sharp decline in European production; it exported an increasing number of films. In 1919, films from the United States accounted for about 90% of films screened in Europe. Some films showed the influence of surrealism, with director [Luis Buñuel](#) collaborating with Salvador Dalí on his first short film, *Un Chien Andalou*. [René Clair's](#) silent films blended comedy and fantasy.

In the Paris of the 1920s, the theater was essentially dominated by four directors -- [Louis Jouvet](#), [Georges Pitoëff](#), [Charles Dullin](#) and [Gaston Baty](#). They decided in 1927 to join efforts to create the "Cartel of Four." However, they had much less success than [Sacha Guitry](#) in [Théâtre des Variétés](#). There are also parts of [Alfred Savoir](#), comedies of [Édouard Bourdet](#) and those of [Marcel Pagnol](#) that met with some success. Specifically, the theatrical performance was a great success with audiences and had an undeniable renewal in 1920, first at the stage performance. Around the "Cartel" develops a creative effort to bring in staging the concerns and aspirations of the time. The change is also reflected in the choice of themes and

atmosphere that emerges from the works presented. But parallel to this, the educated public is interested elites increasingly to authors and works that combine classical in the form and the opposition reality/dream at the theatrical atmosphere. Also, the theater [Jean Cocteau](#), the first pieces of [Jean Giraudoux](#) such as *Siegfried* in 1928 and the works of Italian [Luigi Pirandello](#) are famous examples that were very successful. In 1920 post-impressionist painter [Nils Dardel](#) and de Maré together created *Ballets suédois* at the Théâtre des Champs-Élysées. In the autumn of 1924, [Giorgio de Chirico](#) curated the scenography and costumes for [Pirandello's](#) *La Giara*.

Along with the elite culture that characterized the 1920s, there arose at the same time in Paris, a popular culture. The [First World War](#) upset many things, even in song. After four years without *Belle Époque*, new artists emerged in fashionable places. The music hall, for example, while attracting artists and intellectuals in search of novelty, also gives the popular media. There certainly has the exotic big fees journals [Moulin Rouge](#). In the same period were the beginnings of [Maurice Chevalier](#), the ultimate illustration of good French mood through one of his songs, "[Valentine](#)". The lead dancer [Mistinguett](#), nicknamed *La Miss*, had successful popular tunes such as *Always on the grind, I'm fed up*. All shows, however, does not reduce as the [review](#).

The *garçonne* ([flapper](#)) look in women's fashion emerged in Paris, promoted especially by [Coco Chanel](#). The boyish look was characterized by a loose, streamlined, androgynous silhouette where neither the bust nor the waist are evident, accompanied by a short hairdo. It became the symbol of the emancipated woman: free and autonomous, and expressing a new social freedom for a woman—she goes out on the town, smokes, dances, engages in sports or outdoor activities, drives a car, goes on trips—and, flying in the face of moral conventions of the day, she flaunts an extra-marital liaison, perhaps even her homo- or bisexuality, or cohabits openly with a partner.

Also by Chanel, the celebrated [little black dress](#) came out in 1926. A straight sheath with 3/4 sleeves and no collar, the [crêpe de Chine](#) tube all in black (a color previously reserved for bereavement) was the perfect evocation of *garçonne* style, erasing the forms of the female body. Copied many times over, this "Ford signed 'Chanel'" as [Vogue magazine](#) dubbed it, referring to the mass-produced American car, would become a classic item of [womenswear of the 1920s](#) and beyond.^[13]

The *Années folles* were also a period of strong economic growth. New products and services in booming markets boost the economy: radio, automobile, aviation, oil, electricity. French production of [hydropower](#) increases eightfold during the decade.^[14] Cheaper electricity favored industrial companies, which in 1928 had three of the top five highest [market capitalizations](#) on the [Paris stock exchange](#) and five out of the top ten, in a decade where total stock market [valuation](#) soared by a factor of 4.4.^[15] The 6th is a young innovative company, which is only fifteen [Air Liquide](#), already has a global stature. The manufacturing production index reached in 1928 the level of 139 for a 100 in 1914,^[16] with very strong sectoral disparities: it is only 44 for the index [shipbuilding](#) 100 to steel and 422 to the [automobile](#).^[17] The French overall index fell to 57 in 1919 and 50 in 1921, but already risen to 104 in 1924. It took 6 years to clear the [shortage](#) of energy caused by the reconstruction of the northern mines, that the Germans had drowned during the [World War I](#).

[Radio](#) played a leading role, becoming a preferred vehicle for the new [mass culture](#). It provided greater information on news and culture to an increasing number of people, especially the working classes. Radio quickly propelled [Mistinguett](#) and [Maurice Chevalier](#) to the rank of national and international stardom, and they quickly become icons of Parisian lifestyle.

JAZZ AGE

(source – Wikipedia)

The **Jazz Age** was a period in the 1920s and 1930s in which [jazz](#) music and dance styles rapidly gained nationwide popularity in the United States. The Jazz Age's cultural repercussions were primarily felt in the United States, the birthplace of jazz. Originating in [New Orleans](#) as mainly sourced from culture of the [diaspora](#). Jazz played a significant part in wider cultural changes in this period, and its influence on [popular culture](#) continued long afterward. The Jazz Age is often referred to in conjunction with the [Roaring Twenties](#), and in the United States it overlapped in significant cross-cultural ways with the [Prohibition Era](#). The movement was largely affected by the introduction of [radios](#) nationwide. During this time, the Jazz Age was intertwined with the developing cultures of young people. The movement also helped start the beginning of the European Jazz movement. American author [F. Scott Fitzgerald](#) is widely credited with coining the term, first using it in his 1922 short story collection titled [Tales of the Jazz Age](#).^[1]

[Jazz](#) is a music genre that originated in the African-American communities of [New Orleans](#), United States,^[2] in the late 19th and early 20th centuries, and developed from roots in [blues](#) and [ragtime](#).^[3] New Orleans provided a great opportunity for the development of jazz because it was a port city with many cultures and beliefs intertwined.^[4] While in New Orleans, jazz was influenced by [Creole music](#), ragtime, and blues.^[5] Jazz is seen by many as "America's classical music".^[6] In the beginning of the 20th century, [dixieland](#) jazz developed as an early form of jazz.^[7] In the 1920s, jazz became recognized as a major form of musical expression. It then emerged in the form of independent [traditional](#) and popular musical styles, all linked by the common bonds of African-American and European-American musical parentage with a performance orientation.^[8] From Africa, jazz got its rhythm, "blues", and traditions of playing or singing in one's own expressive way. From Europe, jazz got its harmony and instruments. Both used improvisation, which became a large part of jazz.^[4]

[Louis Armstrong](#) brought the improvisational solo to the forefront of a piece.^[5] Jazz is generally characterized by [swing](#) and [blue notes](#), [call and response vocals](#), [polyrhythms](#) and [improvisation](#). From 1919, [Kid Ory](#)'s Original Creole Jazz Band of musicians from New Orleans played in San Francisco and Los Angeles, where in 1922 they became the first black jazz band of New Orleans origin to make recordings.^{[18][19]} The year also saw the first recording by [Bessie Smith](#), the most famous of the 1920s blues singers.^[20] Chicago, meanwhile, was the main center developing the new "[Hot Jazz](#)", where [King Oliver](#) joined [Bill Johnson](#). [Bix Beiderbecke](#) formed The Wolverines in 1924.

The same year, [Louis Armstrong](#) joined the [Fletcher Henderson](#) dance band^[21] as featured soloist, leaving in 1925. The original New Orleans style was polyphonic, with theme variation and simultaneous collective improvisation. Armstrong was a master of his hometown style, but by the time he joined Henderson's band, he was already a trailblazer in a new phase of jazz, with its emphasis on arrangements and soloists. Armstrong's solos went well beyond the theme-improvisation concept, and extemporized on chords, rather than melodies. According to Schuller, by comparison, the solos by Armstrong's bandmates (including a young [Coleman Hawkins](#)), sounded "stiff, stodgy," with "jerky rhythms and a grey undistinguished tone quality."^[22] The following example shows a short excerpt of the straight melody of "Mandy, Make Up Your Mind" by [George W. Meyer](#) and Arthur Johnston (top), compared with

Armstrong's solo improvisations (below) (recorded 1924).^[23] (The example approximates Armstrong's solo, as it does not convey his use of swing.)

Armstrong's solos were a significant factor in making jazz a true 20th-century language. After leaving Henderson's group, Armstrong formed his virtuosic [Hot Five](#) band, which included instrumentalist's Kid Ory (trombone), Johnny Dodds (clarinet), Johnny St. Cyr (banjo), and wife Lil on piano, where he popularized [scat singing](#).^[24]

[Jelly Roll Morton](#) recorded with the [New Orleans Rhythm Kings](#) in an early mixed-race collaboration, then in 1926 formed his [Red Hot Peppers](#). There was a larger market for jazzy dance music played by white orchestras, such as [Jean Goldkette](#)'s orchestra and [Paul Whiteman](#)'s orchestra. In 1924, Whiteman commissioned [Gershwin](#)'s *Rhapsody in Blue*, premiered by Whiteman's Orchestra. By the mid-1920s, Whiteman was the most popular bandleader in the U.S. His success was based on a "rhetoric of domestication" according to which he had elevated and rendered valuable a previously inchoate kind of music.^[25] Other influential large ensembles included Fletcher Henderson's band, Duke Ellington's band (which opened an influential residency at the [Cotton Club](#) in 1927) in New York, and [Earl Hines](#)' Band in Chicago (who opened in The Grand Terrace Cafe there in 1928). All significantly influenced the development of big band-style swing jazz.^[26] By 1930, the New Orleans-style ensemble was a relic, and jazz belonged to the world.^[27] Several musicians grew up in musical families, where a family member would often teach how to read and play music. Some musicians, like [Pops Foster](#), learned on homemade instruments.^[28]

Urban radio stations played African-American jazz more frequently than suburban stations, due to the concentration of African Americans in urban areas such as New York and Chicago. Younger demographics popularized the black-originated dances such as the Charleston as part of the immense cultural shift the popularity of jazz music generated.^[29]

The 1930s belonged to popular [swing](#) big bands, in which some virtuoso soloists became as famous as the band leaders. Key figures in developing the "big" jazz band included bandleaders and arrangers [Count Basie](#), [Cab Calloway](#), [Jimmy](#) and [Tommy Dorsey](#), [Duke Ellington](#), [Benny Goodman](#), [Fletcher Henderson](#), [Earl Hines](#), [Harry James](#), [Jimmie Lunceford](#), [Glenn Miller](#) and [Artie Shaw](#). Although it was a collective sound, swing also offered individual musicians a chance to "solo" and improvise melodic, thematic solos which could at times be complex "important" music.

Over time, social strictures regarding racial segregation began to relax in America: white bandleaders began to recruit black musicians and black bandleaders recruit white ones. In the mid-1930s, Benny Goodman hired pianist [Teddy Wilson](#), vibraphonist [Lionel Hampton](#) and guitarist [Charlie Christian](#) to join small groups. In the 1930s, Kansas City Jazz as exemplified by tenor saxophonist [Lester Young](#) marked the transition from big bands to the bebop influence of the 1940s. An early 1940s style known as "jumping the blues" or [jump blues](#) used small combos, uptempo music and blues chord progressions, drawing on [boogie-woogie](#) from the 1930s. The introduction of large-scale radio broadcasts enabled the rapid national spread of jazz in 1932. The radio was described as the "sound factory." Radio made it possible for millions to hear music for free — especially people who never attended expensive, distant big city clubs.^[30] These broadcasts originated from clubs in leading centers such as New York, Chicago, Kansas City, and Los Angeles. There were two categories of live music on the radio: concert music and big band dance music. The concert music was known as "potter palm" and was concert music by amateurs, usually volunteers.^[31] Big band dance music is played by professionals and was featured from nightclubs, dance halls, and ballrooms.^[32]

Musicologist [Charles Hamm](#) described three types of jazz music at the time: black music for black audiences, black music for white audiences, and white music for white

audiences.^[33] Jazz artists like Louis Armstrong originally received very little airtime because most stations preferred to play the music of white American jazz singers. Other jazz vocalists include Bessie Smith and [Florence Mills](#). In urban areas, such as Chicago and New York, African-American jazz was played on the radio more often than in the suburbs. Big-band jazz, like that of [James Reese Europe](#) and Fletcher Henderson in New York, attracted large radio audiences.^[32]

Young people in the 1920s used the influence of jazz to rebel against the traditional culture of previous generations. This youth rebellion of the 1920s included such things as [flapper](#) fashions, women who smoked cigarettes in public, a willingness to talk about sex freely, and radio concerts. Dances like the [Charleston](#), developed by African Americans, suddenly became popular among the youth. Traditionalists were aghast at what they considered the breakdown of morality.^[34] Some urban middle-class African Americans perceived jazz as "devil's music", and believed the improvised rhythms and sounds were promoting promiscuity.^[35]

With women's [suffrage](#)—the right for women to vote—at its peak with the ratification of the [Nineteenth Amendment](#) on August 18, 1920, and the entrance of the free-spirited flapper, women began to take on a larger role in society and culture. With women now taking part in the work force after the end of the First World War there were now many more possibilities for women in terms of social life and entertainment. Ideas such as equality and open sexuality were very popular during the time and women seemed to capitalize on these ideas during this period. The 1920s saw the emergence of many famous women musicians, including Bessie Smith. Bessie Smith also gained attention because she was not only a great singer but also an African-American woman. She has grown through the ages to be one of the most well respected singers of all time. Singers such as [Billie Holiday](#) and [Janis Joplin](#) were inspired by Bessie Smith.^[36] [Lovie Austin](#) (1887–1972) was a Chicago-based bandleader, session musician (piano), composer, singer, and arranger during the 1920s [classic blues](#) era. She and [Lil Hardin Armstrong](#) often are ranked as two of the best female [jazz blues](#) piano players of the period.^{[37][38]} Piano player Lil Hardin Armstrong was originally a member of King Oliver's band with Louis, and went on to play piano in her husband's band the [Hot Five](#) and then his next group called the [Hot Seven](#).^[39] It was not until the 1930s and 1940s that many women jazz singers, such as Bessie Smith and Billie Holiday were recognized as successful artists in the music world.^[39] Another famous female vocalist, dubbed "The First Lady of Song," Ella Fitzgerald was the one of the more popular female jazz singers in the United States for more than half a century. In her lifetime, she won 13 Grammy awards and sold over 40 million albums. Her voice was flexible and wide-ranging. She could sing ballads, jazz, and imitate every instrument in an orchestra. She worked with all the jazz greats, including Duke Ellington, Count Basie, Nat King Cole, Frank Sinatra, Dizzy Gillespie and Benny Goodman.^[40] These women were persistent in striving to make their names known in the music industry and to lead the way for many more women artists to come.^[39]

The birth of jazz is credited to African Americans.^[41] But it was modified to become socially acceptable to middle-class white Americans. Those critical of jazz saw it as music from people with no training or skill.^[42] White performers were used as a vehicle for the popularization of jazz music in America. Although jazz was taken over by the white middle-class population, it facilitated the mesh of African American traditions and ideals with white middle-class society.^[32] The migration of African Americans from the American South introduced the culture born from a repressive, unfair society to the American north where navigating through a society with little ability to change played a vital role in the birth of jazz.^[43] Some famous black artists of the time were [Louis Armstrong](#), [Duke Ellington](#), and [Count Basie](#).^[44]

CONCLUSION

“You are free and that is why you are lost.” – Franz Kafka

Kafka perceived as no one else the Zeitgeist, the Spirit of the Age, the characteristics of the twelfth, as Europe achieved freedom but it got lost. We have achieved the apex of culture, of arts, of literature, of music, of science, but we lost it all in World War II and the Holocaust. Then, we received a second chance after the war, but after obtaining freedom we lost the vision again in the journey, our compass has lost its direction, the world has become literate without culture, no ethics, no social justice. When we loose our way, we usually come back to the starting point and try to find what went wrong. That is what I tried to do in my book, trying to find what happened in the twelfth, how we had all the answers, but got lost.

About 300,000 people came out in Atlanta for the film *Gone with the Wind*'s premiere at the [Loew's Grand Theatre](#) on December 15, 1939. It was the climax of three days of festivities which included a parade of limousines featuring stars from the film, receptions, and a costume ball. Black cast members were prevented from attending the premiere due to Georgia's laws, which kept them from sitting with their white colleagues. In the meanwhile, in Paris in anticipation of air raids the stained glass windows of the Sainte-Chapelle were taken down. At the Louvre the major works of art were put into crates and were carried in slow convoys of trucks, with headlights off to observe the blackout, to the chateaux of the Loire Valley. The architectural landmarks of the city were protected by sandbags. The French Army waited in the fortifications of the Maginot Line while in Paris ration cards for gasoline were issued.

On the same day or two of *Gone with the Wind*'s premiere three light cruisers of the British Navy had met and mastered Germany's powerful pocket battleship Admiral Graf Spee near Montevideo, Uruguay. Soviet Union was expelled from the League of Nations because of its invasion of Finland, but Finnish troops stood firm against the invaders, unlike most of the other European nations that capitulated under Germany and the Soviet Union's invasions. Quite lively engagements between French and German reconnaissance troops took place. We can see in *Le Matin* of Friday December 15, 1939, an article “Woe to the isolates – in the Europe of Hitler and Stalin a small state is lost. May those who condemn crime but are afraid of the criminal draw the conclusion in due time.” Exceptionally moving was the intervention of Poland in the League of Nations. Sick, half paralyzed, a living image of his people, the composer and pianist Ignacy Jan Paderewski, recently appointed Chief of the National Council of Poland, former Prime Minister of Poland, had been carried into the hall of the League of Nations and approved with his bleached head every sentence of the Polish delegate, describing the cruel fate of Poland conquered by Nazi Germany & Communist Soviet Union.

The most exhilarating twelfth in the history of culture 1820-1939 is about to end and it is *Götterdämmerung; Twilight of the Gods*, as in the last of [Richard Wagner](#)'s cycle of 4 [music dramas](#) titled *Der Ring des Nibelungen*, which received its premiere at the [Bayreuth Festspielhaus](#) on 17 August 1876. The title is a translation into German of the [Old Norse](#) phrase *Ragnarök*, which in [Norse mythology](#) refers to a prophesied war among various beings and gods that ultimately results in the burning, immersion in water, and renewal of the world. But the New World was not the Third Reich, as Hitler a great admirer of the anti-

Semitic Wagner wanted to be, nor a Communist world. Both extremist ideologies did not prevail – Nazism ended in 1945, Fascism took a little longer to disappear, and Communism lasted until the end of the twentieth century. Is our world “significantly” better than the world that prevailed in the twelfth of this book? In what aspects – culture, rights, welfare, freedom?

In many aspects yes – there is almost no illiteracy, most of the nations are free, many more states are democracies, culture has become accessible to almost everybody, quality of living has increased by far. But other dangers are ahead of us, we may not be illiterate but we are much less cultural than what we were in the book’s twelfth, at least among the elites. We don’t seize the opportunities that are available to us, Europe is succumbing once more to extremism – Muslim fundamentalism, lack of cultural and ethos integration by a large proportion of the masses of refugees, populism, neoliberalism, quasi democracies, rising of extreme right parties, separationism, returning to religion and fanaticism, overlooking mass murder taking place in Asia and Africa, not reacting firmly against terrorism and a coalition of hell between extreme left, extreme right, anti-Semitism, vindicating Ayatullahs’ Iran and Terrorist Hamas, Hizaballah and Holocaust denier Palestinians, backed in many instances by the International Organizations, so-called Human Rights Organizations, Hague International Criminal Court and even by European States, condemning the only countries opposing terrorism as the United States and Israel, and overlooking the war crimes and mass murders of Syria, Iran, African and Asian states, the denial of basic human rights to most of humanity.

My purpose in writing this book was to try and find the moral of the greatest and wasted twelfth of all 1820-1939. Last time, in 1939, it ended in *Götterdämmerung*, can we find today in 2021, 82 years later, a way to translate the pinnacles of culture into pinnacles of prosperity – qualitative and quantitative? A few countries managed to do it – Scandinavia, Netherlands, New Zealand, Canada, Australia, Switzerland – becoming the most ethical and prosperous countries in the world, while adopting the pinnacles of culture that originated in less prosperous and ethical countries – France, UK, US, Germany, Spain, Russia and Italy. I have given in my book all the keys for finding the solutions, Each in His Own Way, Ciascuno a suo modo, like in the famous play by Luigi Pirandello, premiered on May 22, 1924, and forming with Six Characters in Search of an Author part of his trilogy of the theatre in the theatre.

With thousands of premieres of plays, operas, classical masterpieces, films, painting exhibitions, Nobel Prize ceremonies, mentioning and linking over 5,000 literary masterpieces, over a 1,000 important authors, analyzing many of the works and lives of the leading cultural pillars in the twelfth 1820-1939 in literature, arts, music, films, science, theater, philosophy... Many of the entries and statistics of this 2,400-pages book are not original, yet the original survey and dissertation encompasses at least a few hundred pages, as in most of the academic books, but even the non-original entries are screened by my preferences and choices, as the purpose of the book is to give a „[guide for the perplexed](#)“ for every culture loving audiences who want to be emerged by the most significant culture of humanity, at least the European culture in 1820-1939, with an emphasis on France & Paris, the most cultural capital on earth.

Gone with the Wind ends with Scarlet O’Hara’s immortal sentence „Tomorrow is another day!“, when something bad happened the situation might improve, we hope that the future will be better than the past. Immediately after the twelfth ending with Gone with the Wind in December 1939, the situation deteriorated and subsequently improved, with Welfare State, democracies, decolonization, a drastic improvement in ethics and prosperity, and then deteriorated once more with populism, neoliberalism, terrorism, fundamentalism, and we have reached an impasse, and this is probably the reason why I have decided to write this book.

Why me? Czech's founding father Tomas Masaryk, one of the most cultural and ethical men of our twelfty, was born to a poor working-class family. He said apparently that because he had a literary talent his environment wanted to make him an apprentice locksmith. That is exactly what happened to me, as at the age of 11, being a brilliant pupil, it was decided against my will and my family's will to make me an apprentice locksmith. I dared to revolt and left the vocation school until I was admitted to high school. But being a couple of years on my own, ostracized by society, I learned to think outside the box, to find unconventional solutions to difficult problems. Masaryk's motto was – Nebat se a nekrašt, do not fear and do not steal, and this became also my motto, not to be afraid of anything and anybody, and keeping my integrity, my ethics, my vision. And one more analogy, to conclude Tomas Masaryk's mentorship, he said "As many languages you know, as many times you are a human being", and that is how I learned more than 50 languages, cultures, literatures, fields of interest, focusing in European culture, languages, literature, & especially in the culture of our twelfty.

My book started as a 4-page divertimento on an alternative biography set in the twelfty inside the Parisian cultural salons, as an anti-thesis to the world I live in – a world that I perceive is much less creative in culture, but still with pandemics, wars, populism, with social media in a cultural desert, Wikipedia where the entries most visited are Taylor Swift & Miley Cyrus. The books Harry Potter, 50 Shades of Grey, rather than Of Mice & Men and The Picture of Dorian Gray in our twelfty. Jennifer Aniston, Megan of Sussex and Shakespeare on the same level...

Being from a Portuguese descent I feel mostly moved by my „compatriot“ Fernando Pessoa, another poet from our twelfty, who wrote in the Book of Disquiet: „Ah, it's my longing for whom I might have been that distracts and torments me!“, who were the paragons of culture in my lifetime that can compare to the giants of the book's twelfty: Zola, Hugo, Balzac, Tolstoy, Shaw, Wilde, Joyce, Chekhov, Ibsen, Strindberg, Andersen, Thomas and Heinrich Mann, Brecht, Pirandello, Lorca, Hemingway, Scott Fitzgerald, Pagnol, Virginia Woolf, Geogre Eliot, Dickens, Verne, Dumas, Goethe, Renoir, Monet, Picasso, Modigliani, Klimt, Beethoven, Brahms, Offenbach, Verdi, Gershwin, Puccini, Mahler, Bizet, Gounod, Tchaikovsky, Rachmaninoff, Rossini, Grieg, where are they? Who can compare now to them?

In case you are lost, dear reader, what is the cultural identity of the author of this book – Portuguese, Spanish, Israeli, Jewish, Greek, Turkish, Egyptian, Scandinavian, French, English, American, Latin American, Czech, Russian, Italian, German, Dutch, Swiss, Irish, Romanian, Australian, Canadian, from New Zealand or Singapore, to mention just a few of my role models of significant cultures, or ethical and prosperous countries, or family origins, business and academic environment, countries that I liked most in my frequent travels, languages that I learned, it is all of them, an amalgam, a combination, a union, a blend, a mixture, a fusion, a merger, a mingling, a synthesis, a composition, a mosaic of all of them. I know it is an arduous task, maybe unprecedented, combining different forms of literature – novel, poetry, drama, music, arts, academic, philosophic, scientific, but at least focusing in one twelfty 1820-1939, one city Paris, one culture European – mainly French, but also English, German, Spanish, Russian and Italian cultures, the most and more significant cultures in our twelfty, but also influenced by other important cultures – Scandinavian, Portuguese, Czech, Greek, Hebrew, Dutch, Arabic, from Eastern Asia, etc., trying to find the common denominators of all of them, attempting to focus, while extending the vision to all. I hope to have made accessible to you, my reader, with this book which is an ode to culture, all those elements of culture and contributed by that, at least slightly, to your cultural life!

Set Design by Alexandre Benois for the premiere of Igor Stravinsky's *Petrushka* with Vaslav Nijinsky's Ballets Russes (1911) at Theatre du Chatelet, Paris (Wiki Commons)

Gone with the Wind's Atlanta Premiere (1939) at the Loews Grand Theater (Wiki Commons)
